Benchmark 360

2025.2

December 17, 2025

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at https://www.oracle.com/corporate/accessibility.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info or visit http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is” and “as available”, for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer’s use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle’s other customers, Oracle may slow down or throttle Customer’s excess use until such time that Customer’s use stays within reasonable limits. If Customer’s particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer’s actual usage pattern.

Beta Features

Table of Contents

Benchmark 360

The Benchmark 360 SuiteApp lets you compare your company's key metrics with others in your industry and region to boost your performance. The SuiteApp has a dashboard where you can see industry benchmark data like Top 25%, Median, and Bottom 25% for five preselected KPIs.

NetSuite gets the industry benchmarks for these KPIs from the American Productivity and Quality Center (APQC).

You can use the Benchmark 360 SuiteApp to:

- Review industry benchmark for five KPIs included in the dashboard
- Define performance metrics and set adjustable target values for each metric
- Compare performance metrics against other companies in the same industry and region
- Map different subsidiaries to the corresponding industry and region to view benchmark data
- View quarterly benchmark data by region for a selected subsidiary
- View NetSuite products and features relative to your industry and region to improve your KPIs
- Use NetSuite contents and articles as guides to implement best business practices

Read the following topics for more information about Benchmark 360 SuiteApp:

- Setting Up Benchmark 360 SuiteApp
- Prerequisites for Benchmark 360 SuiteApp
- Installing the Benchmark 360 SuiteApp
- Access and Permissions for Benchmark 360
- Setting Benchmark 360 Preferences
- Benchmark 360 Dashboard Portlets
- Benchmark 360 Limitations

The Benchmark 360 SuiteApp is available in all languages that NetSuite supports. For more information, read the help topics Configuring Multiple Languages and Choosing a Language for Your NetSuite User Interface.

Setting Up Benchmark 360 SuiteApp

You must complete the following steps to start the benchmarking process:

Step	Related Help Topic
1. Enable the required features.	Prerequisites for Benchmark 360 SuiteApp
2. Install the SuiteApp	Installing the Benchmark 360 SuiteApp
3. Configure the access and permissions	Access and Permissions for Benchmark 360
4. Set up the Benchmark 360 preferences.	Setting Benchmark 360 Preferences

Prerequisites for Benchmark 360 SuiteApp

The Benchmark 360 SuiteApp requires a OneWorld account. If you do not have a NetSuite OneWorld account, contact your NetSuite account manager.

There are no other features required to install the Benchmark 360 SuiteApp. To continue with the installation process, see Installing the Benchmark 360 SuiteApp.

Installing the Benchmark 360 SuiteApp

The Benchmark 360 SuiteApp is a public and managed SuiteApp. You can install the SuiteApp from the SuiteApp Marketplace using the Administrator role.

To install the Benchmark 360 SuiteApp:

1. Go to SuiteApps.
2. In the Search field, enter **Benchmark 360**.
3. Click the SuiteApp tile.
4. On the SuiteApp detail page, click **Install**.
5. Click **OK**.

Access and Permissions for Benchmark 360

The SuiteApp does not require custom roles to access the Benchmark 360 dashboard. Users with an Administrator role can edit any standard roles in NetSuite and assign an access.

To give an access to a standard or custom role, go to Setup > Users/Roles > Manage Roles and click **Edit** beside the role. Under the Authentication section, check the box **Benchmark 360 Access**.

Access to Benchmark 360 Dashboard

Any standard and custom NetSuite roles with sufficient permissions can access the Benchmark 360 dashboard using the following navigation path:

Center	Navigation
Classic Center	Lists> Benchmark 360> Benchmark 360
Executive Center	Sales/Marketing> Lists> Benchmark 360

The Benchmark 360 dashboard supports only the NetSuite standard centers listed on the table.

Permissions for Benchmark 360

To assign permissions, an Administrator can go to Setup > Users/Roles > Manage Roles and click **Edit** beside the role. Under Permissions subtab, make sure you include the following permissions and access levels to the user's role:

Subtab	Permission	Access Level
Transactions	Item Fulfillment	View
	Cash Sale	View

Subtab	Permission	Access Level
	Invoice	View
	Statement Charge	View
	Credit Card	View
	Customer Payment	View
	Customer Deposit	View
	Deposit	View
	Customer Refund	View
	Credit Memo	View
	Cash Sale Refund	View
	Credit Card Refund	View
	Credit Returns	View
	Item Receipt	View
	Bills	View
	Enter Vendor Credits	View
	Check	View
	Make Journal Entry	View
	Expense Report	View
Reports	SuiteAnalytics Workbook	Edit
Setup	Custom Lists	View
Custom Record	Benchmarking 360 KPI List	View
	Benchmarking 360 Preferences	View

Setting Benchmark 360 Preferences

Use the Benchmark 360 preferences page to set how benchmark data shows up on your dashboard. The data you see on your dashboard depends on the industry, region, and workbooks you select.

Users with an Administrator role can set the preferences for Benchmark 360 dashboard.

To set the Benchmark 360 preferences:

1. Go to Lists> Benchmark 360 > Benchmark 360. Then, click **Preferences** on the left navigation panel.
2. Under the **Account Preferences** section, select a value for the following required fields:
   - **Industry**- Select the type of business of your company.
   - **Region**- Select the region where your company operates.

- **Company Size**- This field is optional. Select the approximate size of your company.

3. Under the **Classification** section, on the **Key Performance Indicator** subtab, verify that the fields for Key Performance Indicator and KPI Workbook columns have values:
    1. **Key Performance Indicator** - The KPIs listed under this column are preselected and can't be edited:
        - Days Cash on Hand
        - Days Sales Outstanding
        - Days Payable Outstanding
        - Employee Turnover Rate
        - Revenue per FTE
        - COGS as a Percentage of Revenue
        - Gross Margin Percentage
        - Average Revenue Per Customer
        - Average Revenue Per Sales Order
        - Inventory Turns (Finished Goods)
    2. (Optional) Customize your dashboard using the following configuration options:
        - In the Key Performance Indicator column, select the metrics you want to appear on your dashboard by checking the boxes next to each KPI.
        - To change the order of displayed metrics, click the hand icon next to the serial number and drag the row up or down to suit your preferences.
    3. **KPI Workbook**- This column shows all the preselected workbook for each KPI except for Employee Turnover Rate which does not require a workbook.

        If you do not select a workbook or have selected an incorrect workbook, no data can be shown in the dashboard.

        You can change the workbook by selecting from the dropdown list or create a custom workbook. To view the guidelines for creating a custom workbook, see Guidelines for Creating a Custom Workbook for Benchmark 360.
    4. **Target**-Enter numerical values for the KPI target. The values you enter only applies to the parent subsidiary.

        If a **Target** field is blank, the system fetches the Median value from the benchmark data sourced from APQC. Then it populates data only for the same Industry and Region combination.
4. Click **Save**.
5. On the **Subsidiary** subtab, add values for the following columns for each subsidiary:
    - Region
    - Industry
    - KPI Workbook
    - Target

> **Note:** The Target fields are disabled on new installs, on preferences that are not yet set, and when there no benchmark data available.
>
> If the benchmark data becomes available, the Target fields get updated and become editable.

This field does not require a thousands separator but requires a period (.) as a decimal separator.

The system shows all the active subsidiaries available in your account except for parent subsidiary.

6. Click **Save**.

> **Note:** When you update the target values under Subsidiary subtab the values do not subsequently change on the Key Performance Indicator subtab.
>
> Blank **Target** fields on the Subsidiary subtab inherit the values from the Key Performance Indicator subtab if the following conditions are met after clicking **Save**:
>
> - the **Industry** and **Region** fields for the Parent Subsidiary and Subsidiary are the same.
> - the **Industry** and **Region** fields on the **Subsidiary** subtab are blank.
>
> Subsidiaries with Industry and Region that are different from the Parent Subsidiary fetch the values for the blank **Target** fields from APQC.

Guidelines for Creating a Custom Workbook for Benchmark 360

The Benchmark 360 SuiteApp provides predefined workbooks and their corresponding datasets for the following KPIs upon installation:

- B360 Days Cash on Hand (DCOH)
- B360 Days Sales Outstanding (DSO)
- B360 Days Payable Outstanding (DPO)
- B360 Revenue per FTE

You can also create a new workbook and customize its dataset according to the filters and criteria you need to create a query. To create a custom workbook and dataset for your benchmark dashboard, see the help topics Creating a Workbook and Defining a Dataset.

Ensure that the following guidelines are met when you create a new workbook and dataset:

- B360 The Days Cash on Hand (DCOH) workbook must contain two workbook pivots arranged in the following order:
    1. Days Cash on Hand- Bank Balance and Other Current Assets

       Within this pivot, the **Bank Balance** and **Other Current Assets** columns must be included.
    2. Days Cash on Hand- Operating Expense

       This pivot must include a column for **Operating Expense**.
- All workbooks must have their own datasets defined. Datasets are the basis for all workbook visualizations in your account.
- The criteria filters within each dataset for a workbook must start with **Date** column followed by the **Transaction Line Subsidiary** column.

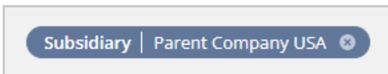
  This column order lets the system run the query properly for a dataset. Any succeeding columns after the first two columns mentioned can be arranged according to your preference.

Benchmark 360 Dashboard Portlets

The Benchmark 360 dashboard contains KPI tiles and portlets. Users with an Administrator roles must set the preferences for the data to display in the dashboard. See, Setting Benchmark 360 Preferences.

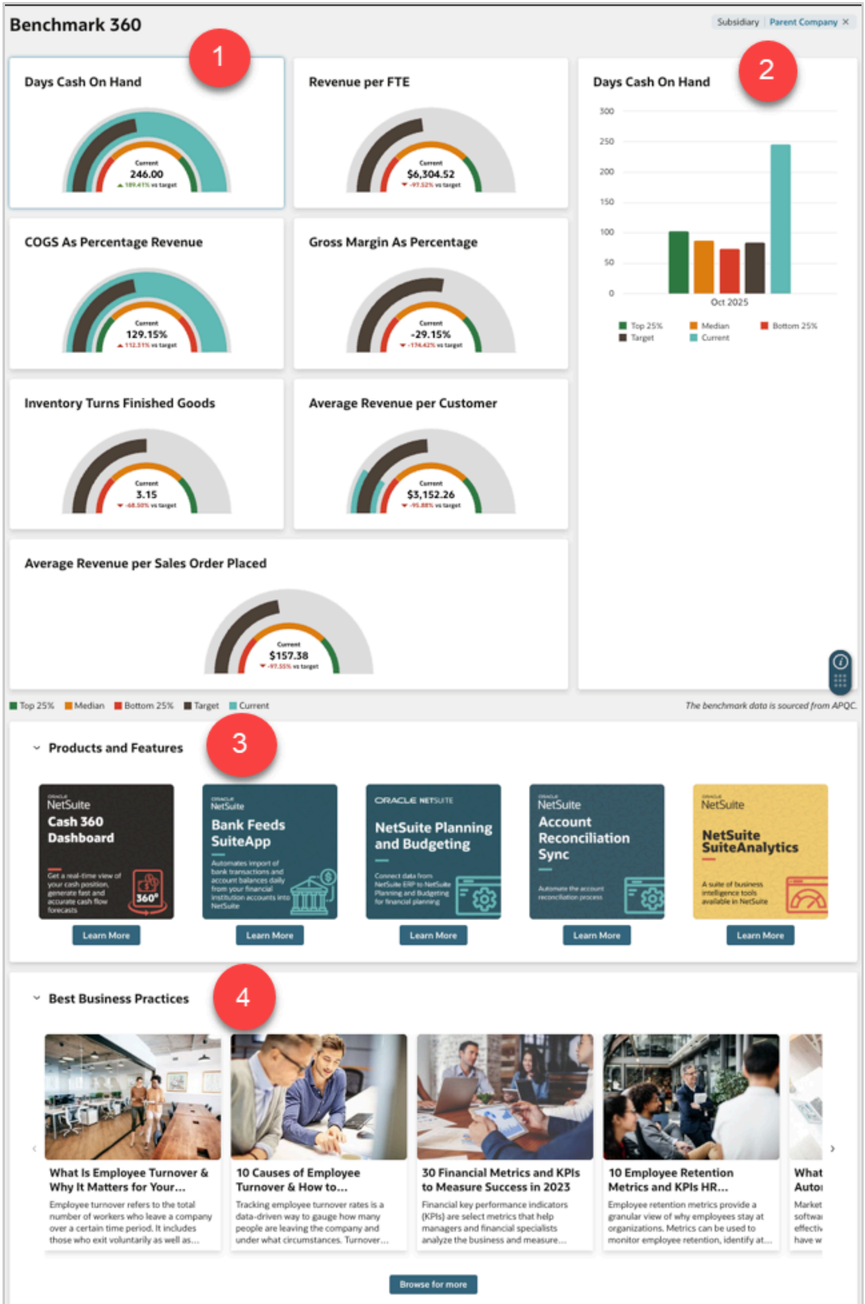
Subsidiary Selector

On the top-right side of the dashboard, prior to the dashboard portlets, the **Subsidiary** dropdown button shows your current selection of a subsidiary. You can click the subsidiary selector to show the parent subsidiary and all other available subsidiaries of that company.



When you change the subsidiary, the data on the benchmark dashboard also changes to display the corresponding data for the selected subsidiary.

The Benchmark 360 portlets are arranged in dashboard in the following order:



Click the link to the following help topics to view the descriptions for each portlets in the Benchmark 360 dashboard:

Item	Portlet	Description
1	Benchmark 360 Key Performance Indicators	This portlet shows the five preselected KPIs which includes Days Cash on Hand, Days Sales Outstanding, Days Payable Outstanding, Employee Turnover Rate, and Revenue per FTE.
2	Benchmark 360 KPI Graph	This portlet shows a KPI graph which displays a bar graph representation of the KPIs you select from the KPI portlet.

ORACLE NetSuite

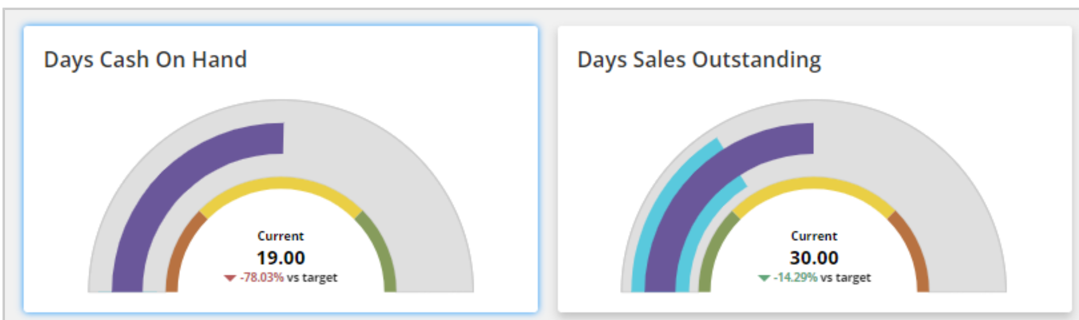
Item	Portlet	Description
3	Benchmark 360 Products and Features	This portlet shows NetSuite products and features relative to the KPIs you select from the KPI portlet.
4	Benchmark 360 Best Business Practices	This portlet shows NetSuite articles that contain informative topics and best business practices.

Graph Legends

Each KPI contains two semi-circle graphs with multiple colors. Each color represents a value which corresponds to the performance of a metric. The parts of the semi-circle graph include:

- **Outer Graph**- The outer graph which displays colors purple and blue represents your Target value and Current value respectively.
- **Inner Graph**- The inner graph which displays color amber, yellow, and green represents industry benchmarks such as Top 25%, Median, and Bottom 25% sourced from APQC.

The following screenshot shows the graph colors and values for two of Benchmark 360 KPI tiles:



Use the following table as a guide for the representation of colors in the semi-circle graphs:

Color	Description
Purple	Purple represents the **Target** value you set in the preferences record. If you do not set a target value, this color represents a default Median value from the benchmark data sourced from APQC.
Blue	Blue represents the **Current** value of a metric. The maximum current value is computed based on the value of the Top 25% target.
Green	Green represents the **Top 25%** of the Target value which comes after amber and yellow on the graph. For DSO and Employee Turnover Rate KPIs, green comes before yellow and amber, which means the top 25% is shown first.
Yellow	Yellow graph represents the **Median** of the Target value. The size of inner graphs remains the same regardless of the values.
Amber	Amber represents the **Bottom 25%** of the Target value.
Gray	Gray indicates that a Current value is the same with a Target value for a specific metric. A value of 0 with no icon is shown on the graph.

The KPIs also include text and numerical values shown in the middle section of the semi-circle graph. Use the following table as a guide for the representation of the symbols and other values:

Text/Symbol	Description
Current Value	The scope of data calculation for Current value for each KPI varies. NetSuite calculates the value DPO and DSO for the current month. For DCOH, RPFTE, and ETR, the Current value is calculated annually based on the previous year's data. For example, the current date is May 28, 2024. The calculation includes data from May 29, 2023 to May 28, 2024. The current value is shown inside the innermost semi-circle.
Variance Value	Variance is the percentage difference between the current value and the target value. If the target value is zero, the variance also shows an em dash. The variance value is shown at the bottom center of a semi-circle graph in either red or green text.
Green Arrow	The green arrow pointing upward or downward along with a percentage value represents an increase or decrease on variance. The up arrow in green symbol means that the current value is higher than the target value. This is an indicator of a good performance for Days Cash On Hand, Days Payable Outstanding, and Revenue per FTE KPIs. On the contrary, a satisfactory indicator for Days Sales Outstanding (DSO) and Employee Turnover Rate must show a down arrow in green.
Red Arrow	The red arrow pointing upward or downward along with a percentage value also represents the Variance. The down arrow in red symbol means that the current value is lower than the target value. It is an indicator of an unfavorable performance for Days Cash On Hand, Days Payable Outstanding, and Revenue per FTE KPIs. The opposite is true for Days Sales Outstanding (DSO) and Employee Turnover Rate KPIs. These KPIs show a red arrow pointing upwards if a current value goes above the target value.
Em Dash	An em dash is shown in KPI tiles for the following scenarios: ▪ There are no transactions related to the KPI ▪ There are errors in the workbook ▪ There is no workbook selected for a KPI ▪ If the target value is negative ▪ If the currency of the benchmark data is different from the KPI currency.

Benchmark 360 Key Performance Indicators

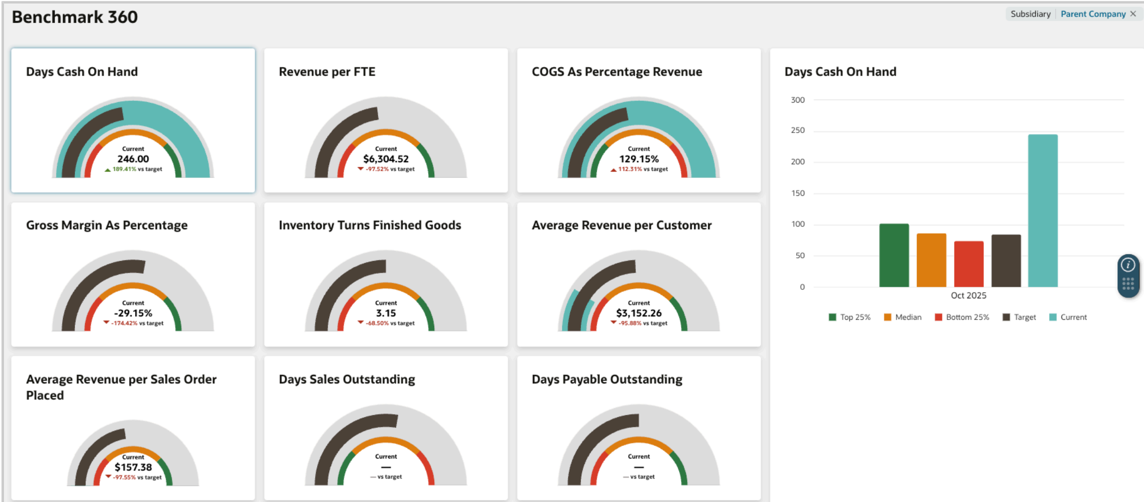
Benchmark KPIs help you see how your company stacks up against others in your industry. The dashboard shows the Top 25%, Median, and Bottom 25% for each KPI.

The benchmark KPIs include Days Cash on Hand, Days Sales Outstanding, Days Payable Outstanding, Employee Turnover Rate, and Revenue per FTE.

On a quarterly basis, the benchmark data refreshes for these dashboard KPIs to provide the latest benchmark information for your industry and region.

> **Note:** The KPIs included in the dashboard are fixed and cannot be customized.

The following screenshot shows the Benchmark 360 KPI tiles:



See the following help topics for more information about how the system calculates the value for the KPIs:

- Days Cash on Hand Calculation
- Days Sales Outstanding Calculation
- Days Payable Outstanding Calculation
- Employee Turnover Rate Calculation
- Revenue per FTE Calculation
- COGS as a Percentage of Revenue
- Gross Margin Percentage
- Average Revenue Per Customer
- Average Revenue Per Sales Order
- Inventory Turns (Finished Goods)

Variance Calculation for Benchmark Data

Variance is the percentage difference between the current value and the target value. Each KPI includes a calculated value for variance which uses the following formula:

Variance = ((Current Value- Target Value)/ Target Value) 100

A sample calculation for variance is shown as:

Variance = ((92- 84.5)/ 84.5) 100

(7.5/ 84.5) 100

(0.08875739) 100

8.87

Number Formatting

You can set the number format preferences for how you want the numbers, thousand separators, or decimal places to display on the dashboard.

To set the number format preference, go to Home> Set Preferences. In the **Number Format** field, select your desired number format.

To use default number formatting per currency, clear the **Override Currency Format** box on the **Currency** record.

Support for Multiple Currencies

The Benchmark 360 dashboards supports currency conversion when you enable the **Multiple Currencies** feature in your account.

The benchmark data from APQC uses USD, and NetSuite converts it to your subsidiary's currency.

Not all currencies have available exchange rate in the system which affects how some values are displayed. See Benchmark 360 Limitations.

To enable the **Multiple Currencies** feature. See the help topic Enabling the Multiple Currencies Feature.

Days Cash on Hand Calculation

The Days Cash on Hand (DCOH) metric shows how many days your company can cover its operating expenses. A higher DCOH means a lower risk for your company.

NetSuite calculates the annual Days Cash on Hand using the following formula:

Days Cash on Hand (DCOH)	=	(Bank Balance + Other Current Asset)/ (Operating Expense/Number of Days)

> **Note:** The number of days in a year has 365 days but 366 in a leap year. The calculation for DCOH uses either 365 or 366 depending on the applicable length of a given year.

For example, Company A has $150,000 cash on hand with additional $5,000 other current asset. Their yearly operating expense is $60,000. To determine the number of days estimated to fund or pay for its operation, the DCOH is calculated as:

Days Cash on Hand (DCOH)	=	$150, 000+ $5,000/ ($60, 000/366)
	=	$155, 000/ $163.93
	=	945.52

Days Sales Outstanding Calculation

This Days Sales Outstanding (DSO) metric shows the average number of days that customers take to pay your invoices. A lower DSO means your company collects payments faster, which means better cash flow and liquidity.

The value shown on the dashboard comes from the selected workbook on the preference page.

NetSuite calculates the monthly Days Sales Outstanding using the following formula:

Days Sales Outstanding (DSO)	=	Average Days Open of Fully Paid Invoices for the Month

For example, Company B has three invoices closed on May 31st with the following details:

Invoice	Transaction Date	Date Closed	Number of Days Open
Invoice A	April 25, 2024	May 31, 2024	36
Invoice B	May 1, 2024	May 31, 2024	30
Invoice C	May 13, 2024	May 31, 2024	18

The DSO is calculated for May 2024 as:

Days Sales Outstanding (DSO)	=	(36 + 30 + 18)/ 3
	=	84/3
	=	28

Days Payable Outstanding Calculation

The Days Payable Outstanding (DPO) metric evaluates how many days, on average, your company takes to pay your creditors. A higher DPO can mean your company delays payments to use funds for short-term investments and boost cash flow. Or, it can show that resource funds might not be used efficiently.

NetSuite calculates the monthly Days Payable Outstanding using the following formula:

Days Payable Outstanding (DPO)	=	Average Days Open of Fully Paid Bills for the Month

Similar to the Days Sales Outstanding calculation, if Company B has two vendor bills settled for the month of May:

Vendor Bills	Transaction Date	Date Closed	Number of Days Open
Vendor Bill A	May 5, 2024	May 31, 2024	26
Vendor Bill B	May 15, 2024	May 31, 2024	16

The DPO is calculated for May 2024 as:

Days Payable Outstanding (DPO)	=	(26+16)/ 2
	=	42/ 2
	=	21

Employee Turnover Rate Calculation

The employee turnover metric shows the percentage of employees who leave the company for the current month. Employee turnover happens for different reasons like termination, resignation, or retirement. A lower turnover rate can mean your employees are satisfied and motivated, which helps your company perform better.

NetSuite calculates the monthly turnover rate using the following formula:

Employee Turnover Rate	=	(# of Employees Leaving from Start to End of a Month/# of Active Employees from Start to End of a Month) 100

This KPI does not require a workbook to show data on the dashboard. The values used in the calculation is sourced from the **Hire Date** and the **Termination/Release Date** fields of an **Employee** record.

The formula for calculating the number of active employees for the month is:

Number of Active Employees for the Month	=	(Number of Active Employees at the Start of the Month + Number of Active Employees at the End of the Month)/2

For example, on May 1st, Department A has 50 employees. Halfway through the month, 2 senior employees retired and 3 other employees resigned. At the end May, Department A has 45 employees. The employee turnover rate is calculated as:

Employee Turnover Rate	=	(5/47.5) 100
	=	(0.105) 100
	=	10.52%

Revenue per FTE Calculation

This metric shows your company's profit generated per employee during a period. A higher value for this KPI indicates an effective workforce for your company.

Like the other KPIs, the values for this KPI update when you change the subsidiary. When you switch subsidiaries, the calculated value uses that subsidiary's currency.

The annual data for the current month covers from the same month last year up to today. For example, if today is March 5, 2024, the data covers March 6, 2023 to March 5, 2024.

NetSuite calculates the revenue per FTE annually using the following formula:

Revenue per FTE	=	Revenue / Average Number of Active Employees

Note: The revenue comes from the **Income** and **Other Income** accounts. The average number of active employees is calculated using the following formula:

Average Number of Active Employees = (Running Total from the Previous Year plus 1 day + Running Total Today) / 2

For example, Company A's revenue in 2023 is $3,500,000 and their total FTEs for the same year is 150. The annual revenue per FTE is calculated as:

Revenue per FTE	=	$3,500,000/ 150
	=	$23,333

COGS as a Percentage of Revenue

Cost of Goods Sold (COGS) represents the expenses involved in purchasing raw materials and manufacturing finished products. Calculating COGS as a percentage of revenue helps measure cost efficiency and compare organizational performance to industry standards.

NetSuite calculates COGS as a percentage of revenue using the following formula:

COGS as a Percentage of Revenue	=	(Cost of goods sold (COGS) / Total business entity revenue) * 100

The result is displayed as a percentage with two decimal places.

For example, Company A has $20,000,000 revenue for the year and the COGS for the year is $12,500,000. To calculate COGS as a percentage of revenue:

COGS as a Percentage of Revenue	=	($12,500,000 / $20,000,000) * 100
	=	0.625 * 100
	=	62.5%

Gross Margin Percentage

Gross Margin Percentage is a profitability metric that shows the percentage of revenue that remains after you subtract the Cost of Goods Sold (COGS). This value indicates how efficiently your company produces and delivers its goods or services.

NetSuite calculates the Gross Margin Percentage using the following formula:

Gross Margin %	=	100% - COGS as a % of Revenue

Note: If COGS as a percentage of revenue is unavailable or invalid, the gross margin will be displayed as '-'.

For example, Company A has $20,000,000 revenue for the year and COGS for the year is $12,500,000. First, calculate COGS as a percentage of revenue:

COGS as a Percentage of Revenue	=	($12,500,000 / $20,000,000) * 100
	=	0.625 * 100
	=	62.5%

Then, use this value to calculate Gross Margin Percentage:

Gross Margin %	=	100 - COGS as a % of Revenue
	=	100 – 62.5
	=	27.5%

Average Revenue Per Customer

Average Revenue Per Customer (ARPC) measures the average amount of revenue a company earns from each customer during a specific period, usually monthly or annually. This metric helps assess cost effectiveness by evaluating how much revenue each active customer contributes over the year.

NetSuite calculates the Average Revenue Per Customer using the following formula:

Average Revenue Per Customer	=	Total Revenue / Number of Active Customers (12-month period).

For example, Company A has $20,000,000 revenue for the year and the number of active customers (within the last 12 months) with any orders is 300. To calculate Average Revenue Per Customer:

Average Revenue Per Customer	=	$20,000,000 / 300
	=	$66,666.67

Average Revenue Per Sales Order

Average Revenue Per Sales Order measures the average revenue generated from each sales order. This metric shows the revenue earned per order and highlights the efficiency of the sales process.

NetSuite calculates the Average Revenue Per Sales Order using the following formula:

Average Revenue Per Sales Order	=	Total Revenue / Number of Sales Orders Placed

> **Note:** Sales orders from the last 12 months are considered in the calculation.

For example, Company A has $20,000,000 revenue for the year and the number of sales orders placed is 4,000. The Average Revenue Per Sales Order is calculated as:

Average Revenue per Sales Order	=	$20,000,000 / 4000
	=	$5,000

Inventory Turns (Finished Goods)

Inventory Turns, also known as the Inventory Turnover Ratio, measures how many times a company sells and replaces its finished goods inventory during a specific period (typically annually).

This metric helps companies compare their inventory efficiency against industry peers or established benchmarks.

NetSuite calculates the Inventory Turns (Finished Goods) using the following formulas:

Inventory Turns	=	COGS / Average Value of Finished Goods Inventory
Average Value of Finished Goods Inventory	=	(Inventory at beginning of year + Inventory at end of year) / 2

COGS: Derived from financial records (general ledger or income statement).

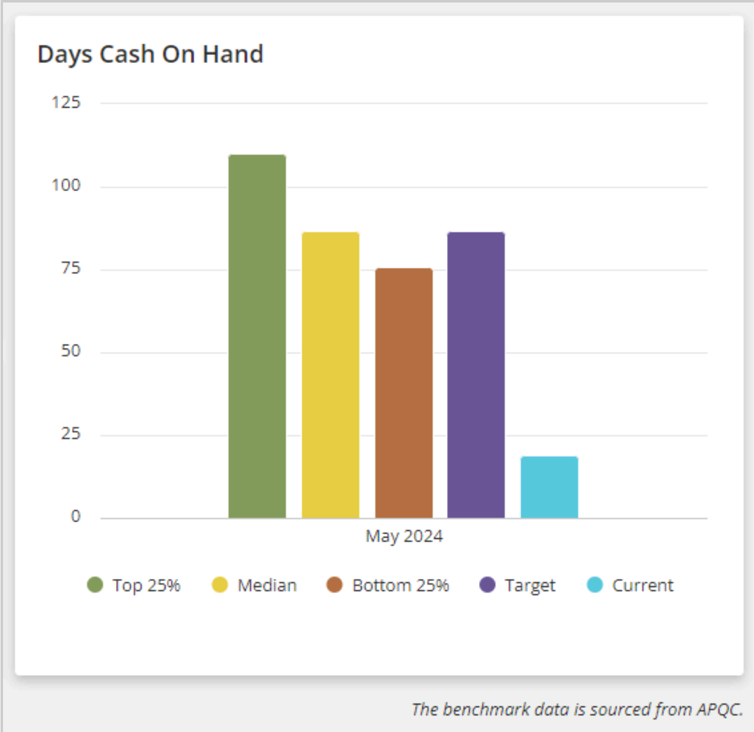
For example, Company A has COGS for the year of $12,500,000. The average inventory of finished goods for the year is $500,000. The Inventory Turns (Finished Goods) is calculated as:

Inventory Turns	=	$12,500,000 / $500,000
	=	$25

Benchmark 360 KPI Graph

The Benchmark 360 dashboard shows KPI data as a bar graph, so you can spot patterns affecting your business. The graph shows benchmark data for the current month, based on the KPI you pick from the tiles.

The following screenshot shows the Benchmark 360 KPI Graph portlet:



The x–axis on the graph represents the current month of a year for the selected KPI such as May 2024 or June 2024.

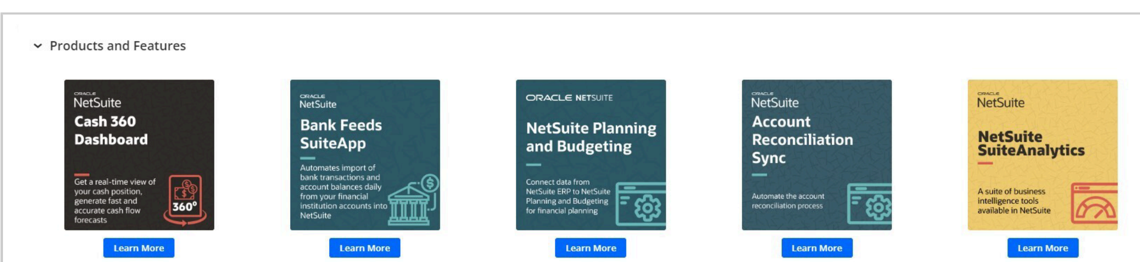
The y-axis represents the numerical range for a selected KPI. FFor example, if you pick the Revenue per FTE tile, the range shows revenue amounts. The KPI graph shows the currency that matches the value's currency.

Refer to the Graph Legends for the color codes shown on the KPI Graph portlet.

Benchmark 360 Products and Features

The Benchmark 360 Products and Features portlet lets you see NetSuite products and features that relate to your KPIs and can help improve your processes. If your values fall short of your targets, you can use a NetSuite feature or product to make changes and boost your process.

The following screenshot shows the Benchmark 360 Products and Features portlet:



When you click on a KPI tile, this portlet shows a maximum of 5 NetSuite products and features which you can install in your account.

> **Note:** Some SuiteApps are only available in certain countries or regions. When you view products or features for a KPI, NetSuite checks your account's country or region and only shows what's available.
>
> The list of products and features for the Revenue per FTE KPI also takes your account's industry and region into account.

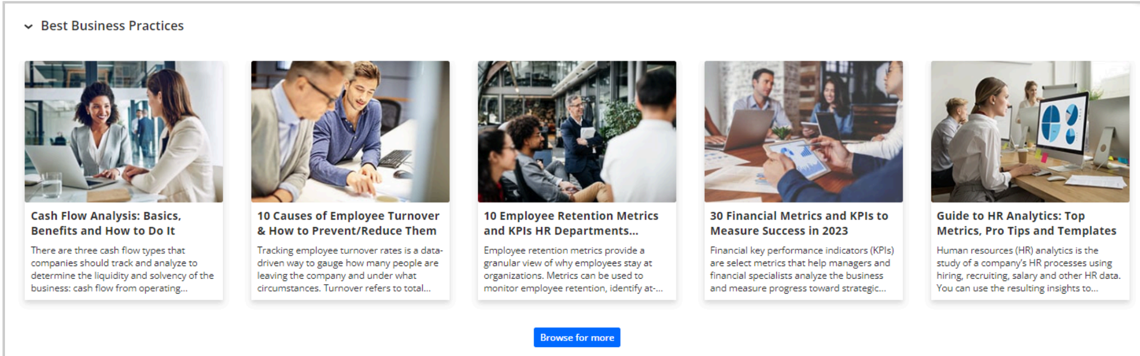
Benchmark 360 Best Business Practices

The Best Business Practices portlet shows business articles relevant to the SuiteApp. Business articles give you information and insights to help you review and improve your processes.

The following screenshot shows the Benchmark 360 Best Business Practices portlet:



Clicking a link of an article takes you to NetSuite Educational Resources page where various business solutions articles are available.

Benchmark 360 Error Messages

The following table lists the error messages that appear on the Preferences page. Use this table as a reference to review the error and take an appropriate action.

Message	Description/Required Action
No available subsidiaries. Please contact your Administrator.	Contact your Administrator to add applicable subsidiaries in your account.
There was an error while loading Benchmark 360 dashboard. Contact your Administrator or try again.	This is an error message shown if a problem occurred while fetching benchmark data for the dashboard.
You do not have access to view this page. Check if Benchmark 360 Access is enabled on your current role or contact your Account Administrator.	An Administrator must check the Benchmark 360 Access box located in your NetSuite standard or custom role to gain access to the Benchmark 360 dashboard. See Access and Permissions for Benchmark 360.
Enter numeric values which includes either zero, positive, or negative numbers.	The Target fields only consider values such as zero, positive, or negative numbers.
Enter the correct values for the highlighted fields.	This is an error message shown if you enter invalid values then clicked Save on the Preferences page.
There was an error while saving your preferences. Contact your Administrator or try again.	A possible server error occurred. Refresh the page to see if it fixes the issue or contact the Administrator.

Benchmark 360 Limitations

Read this section to view the known limitations when you use the Benchmark 360 SuiteApp.

The Benchmark 360 SuiteApp has the following limitations:

- The KPIs included in the dashboard are fixed and cannot be customized.
- Currency conversion does not happen for currencies with no available exchange rate in NetSuite. If your subsidiary's currency isn't supported, the Revenue per FTE KPI target shows an amount in USD. The values in the Subsidiary subtab also appear in USD.
