Account Administration Overview Guide

2025.2

January 7, 2026

Copyright © 2005, 2025, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software" or "commercial computer software documentation" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. Account Administration Setup Guide Summaries

Account administration for your NetSuite account requires setup in several areas. The following summaries describe what you can find in each Account Administration setup guide.

- [Account Administration Overview Guide](#)
- [Account Setup Guide](#)
- [Managing Users and Roles Guide](#)
- [NetSuite OneWorld Guide](#)
- [Email for Administrators Guide](#)
- [Authentication Guide](#)
- [CSV Imports Guide](#)
- [Auditing and Data Management Guide](#)
- [System Notes Guide](#)
- [Cloud Infrastructure Guide](#)
- [NetSuite Account Types Guide](#)
- [Application Performance Management Guide](#)
- [Optimizing System Performance Guide](#)
- [File Cabinet for Administrators Guide](#)

Account Administration Overview Guide

In the Account Administration Overview Guide, you can find basic information and guidelines for administrators.

Account Administration Overview	See documentation for administrators about setting up and maintaining NetSuite. For more information, see the help topic Account Administration .
Guidelines for Administrators	Learn about NetSuite set up and maintenance, customer-scheduled maintenance and NetSuite upgrades. For more information, see Guidelines for NetSuite Administrators .

Account Setup Guide

In the Account Setup Guide, you'll find information about enabling features, setting company preferences, defining classifications for NetSuite records, managing NetSuite roles and permissions, and adding approval routing.

Centers Overview	For each user, NetSuite displays a set of tabbed pages, called a center, that varies based on the user's assigned role. Find out more about each center NetSuite provides. For more information, see the help topic Centers Overview .
-------------------------	--

Enabling Features	Use the Enable Features page to turn on or off NetSuite features. For more information, see the help topic Enabling Features .
NetSuite Company Settings	You can set up company information, general preferences, language, location, rename records and transactions, and set communication preferences. You can also handle duplicate detection, get administrative notifications, add plug-ins, choose service tiers, and more. For more information, see the help topic NetSuite Company Settings .
Manage AI in NetSuite	Set up Text Enhance, Prompt Studio, and configure generative AI settings. For more information, see the help topic Manage AI in NetSuite .
Classifications in NetSuite	Classifications help you organize your data and keep it accurate. Find out more about department, class, and location classifications that you can use to identify and categorize records in your NetSuite account. For more information, see the help topic Classifications in NetSuite .
Approval Routing	NetSuite Approval Routing helps your organization define who can approve employee purchase transactions and limit approval amounts by authorizer level and department. For more information, see the help topic Approval Routing .

Managing Users and Roles Guide

In the Managing Users and Roles Guide, you'll find information about how to manage NetSuite roles and permissions so your users get the access they need.

NetSuite Roles Overview	Learn about standard roles in NetSuite, how to create customized roles, and tools for managing them. For more information, see the help topic NetSuite Roles Overview .
NetSuite Users Overview	Learn how to work with the different kinds of users that can access NetSuite, such as employee, vendor, partner, and customer. For more information, see the help topic NetSuite Users Overview .
NetSuite Permissions Overview	NetSuite provides many permissions that control what data and features users can access. For more information about tips for working with permissions, see the help topic NetSuite Permissions Overview .

NetSuite OneWorld Guide

In the NetSuite OneWorld Guide, you'll find information about managing different parts of your multinational, multicompany business, including financials, customers, commerce, Services Resource Planning (SRP), business intelligence, and tax and compliance.

Subsidiaries in OneWorld	NetSuite OneWorld lets you manage data for a hierarchy of separate legal entities, or subsidiaries. Learn about the hierarchy, setting up subsidiaries, using the settings manager, linking subsidiaries to entities and items, and the subsidiary navigator. For more information, see the help topic Subsidiaries in OneWorld .
Set up NetSuite OneWorld	Follow six steps to set up NetSuite OneWorld. You can also learn about account setup, inventory, multiple vendors, and logos in OneWorld. For more information, see the help topic Set up NetSuite OneWorld .
Intercompany features	You can manage your intercompany workflows with the Intercompany Framework feature, which has several components. For more information, see the help topic Intercompany Framework .

	Handle intercompany transactions and automatically create elimination journal entries with the Automated Intercompany Management feature. For more information, see the help topic Automated Intercompany Management. When an administrator enables the Intercompany Framework or Automated Intercompany Management feature, NetSuite gives you access to the Intercompany Preferences page, where you can set intercompany preferences. For more information, see the help topic Intercompany Preferences. You can compare the open accounts payable balance in one subsidiary to the open accounts receivable in the paired subsidiary on the Intercompany Balance Overview page. For more information, see the help topic Viewing Open Intercompany Balances.
Consolidated Reporting in OneWorld	See data from multiple subsidiaries combined in many reports. For more information, see the help topic Consolidated Reporting in OneWorld .
OneWorld ERP Accounting	See specific help topics for details about how NetSuite OneWorld affects accounting and ERP functions. For more information, see the help topic OneWorld ERP Accounting .
OneWorld CRM	Learn about consolidated quotas and forecasts, employee and partner commissions, and how to set subsidiaries on online forms in OneWorld. For more information, see the help topic OneWorld CRM .
OneWorld and SuiteCommerce	When you use SuiteCommerce in a NetSuite OneWorld account, you can link multiple subsidiaries to a Site Builder or to a SuiteCommerce Advanced website. For more information, see the help topic OneWorld and SuiteCommerce .

Email for Administrators Guide

In the Email Guide for Administrators Guide, you'll find information about DomainKeys Identified Mail (DKIM), email blocklists and spamlists, scriptable templates, and DMARC-Compliant messaging in NetSuite. For more information, see the help topic [Email Best Practices](#).

DomainKeys Identified Mail (DKIM)	DKIM lets you digitally sign your email so it can be authenticated, protecting customers from unsolicited email. For more information, see the help topic DomainKeys Identified Mail (DKIM) .
Email Blocklists and Spamlists	Learn how NetSuite monitors outbound mail servers to make sure they're not on major, reputable blocklists. For more information, see the help topic Email Blocklists and Spamlists .
Scriptable Templates	Create personalized email messages and control how your messages look. For more information, see the help topic Scriptable Templates .
DMARC-Compliant Messaging in NetSuite	Learn more about DMARC, or Domain-based Authentication, Reporting, and Conformance. A DMARC policy specifies how to handle messages that can't be authenticated. The domain owner specifies how the receiving mail server handles messages that claim to be sent from their domain, but can't be authenticated. For more information, see the help topics DMARC-Compliant Messaging in NetSuite and Email Best Practices .

Authentication Guide

In the Authentication Guide, you'll find information about password requirements and policies in NetSuite. NetSuite supports several authentication methods, including two-factor authentication, token-based

authentication, OAuth 2.0, Device ID authentication, Single Sign-on, Digital Signing, SSH Keys, and RESTlet authentication.

Overview	Learn general information about password requirements, session management, login pages, and setting IP address rules for your account. For more information, see the help topic Authentication Overview .
Two-Factor Authentication (2FA)	Two-factor authentication adds another layer of security when logging in to NetSuite and helps protect your company from unauthorized access. For more information, see the help topic Two-Factor Authentication (2FA) .
Token-based Authentication (TBA)	Token-based authentication boosts security and lets client applications use a token to access NetSuite through APIs, so you don't need to store user credentials. For more information, see the help topic Token-based Authentication (TBA) .
OAuth 2.0	OAuth 2.0 lets client applications use a token to access NetSuite through REST web services and RESTlets. For more information, see the help topic OAuth 2.0 .
Device ID Authentication	Device ID authentication lets account administrators restrict logins to only approved devices registered in NetSuite. For more information, see the help topic Device ID Authentication .
Single Sign-On	Single Sign-On lets you to log in with a single ID and password. NetSuite supports SAML Single Sign-on , and OpenID Connect (OIDC) Single Sign-on .
Digital Signing	Digital Signing authenticates documents or messages so that you can trust the sender and the document contents. For more information, see the help topic Digital Signing .
SSH Keys for SFTP	Use SSH keys to set up an SFTP connection and manage files and directories with the SSH file transfer (SFTP) protocol. For more information, see the help topic SSH Keys for SFTP .
RESTlet authentication	RESTlets require authentication and process calls synchronously. Learn more about RESTlet authentication, setting up token-based authentication and OAuth 2.0 for a RESTlet integrations, and using user credentials. For more information, see the help topic RESTlet Authentication .

CSV Imports Guide

In the CSV Imports Guide, you'll find information about the CSV import, the most common way to transfer small to medium-sized data sets from other applications into NetSuite. Learn details about importing CSV files with the Import Assistant, guidelines for CSV files, CSV import error messages, and other import and export options.

Importing CSV Files with the Import Assistant	Import CSV data to NetSuite in five steps with the Import Assistant. For more information, see the help topic Importing CSV Files with the Import Assistant .
Guidelines for CSV Import Files	Set up your CSV files and review their formatting to avoid errors and make sure your data imports correctly. For more information, see the help topic Guidelines for CSV Import Files .
CSV Import Error Messages	See some common CSV import errors, such as general, employee, or transaction errors, and how you can fix them. For more information, see the help topic CSV Import Error Messages .
Additional Import and Export Options	Learn about other ways to import and export data without the CSV Import Assistant, like importing from third-party software, exporting lists and reports, or extracting data from NetSuite. For more information, see the help topic Additional Import and Export Options .

Auditing and Data Management Guide

In the Auditing and Data Management Guide, you'll find information about tracking changes in NetSuite, internal controls, managing transactions, removing personal information, auditing data changes with searches, and avoiding duplicates.

Tracking Changes in NetSuite	Learn about auditing primary data and configuration changes in NetSuite, auditing account preferences, documenting changes, and enabling audits. For more information, see the help topic Tracking Changes in NetSuite .
Internal Controls in NetSuite	Lists internal controls that are readily available in NetSuite. Use this list as a reference to help you build strong internal controls in your NetSuite setup. Find out more about standard internal controls and internal controls that require basic configuration, see the help topic Internal Controls in NetSuite .
Managing Transactions	NetSuite has features that let you record reasons for deleting transactions and view transaction history. For more information, see the help topic Managing Transactions .
Personal Information (PI) Removal	Lets NetSuite users with the appropriate permissions to remove personal information from fields, records, and audit logs. To find out how to address privacy regulations related to data subject requests, see the help topic Personal Information (PI) Removal .
Auditing Data Changes using Searches	To track changes in NetSuite data, search system notes records. Learn how to search system notes, view audit trails for record types, search for deleted records, and understand the context for changes. See the help topic Auditing Data Changes using Searches .
Avoiding Duplicates	Avoid unintended duplicate entries in NetSuite. You can avoid duplicate transaction numbers, handle duplicate transaction number warnings, and use auto-generated numbering for transactions. You can also prevent duplicate processing of memorized transactions during bulk updates. For more information, see the help topic Avoiding Duplicates .

System Notes Guide

In the System Notes Guide, you'll find information about the NetSuite System Notes to help you track changes made to a record. Find out more about System Notes, System Notes v2, the System Notes v2 workbook, terminology, documentation, and comparison of System Notes and System Notes v2.

System Notes	The original NetSuite system notes track changes made to a record. These system notes are available for records or configuration settings with a System Notes subtab on the NetSuite page. For more information, see the help topic System Notes Overview .
System Notes v2	System Notes v2 captures detailed changes for supported records and groups them by high-level actions such as create, change, deleted, set, update, and unset. For more information, see the help topic System Notes v2 Overview .
System Notes v2 Workbook	Use the System Notes v2 workbook to analyze your data. You can create custom workbooks with charts, pivots, and tables to view configuration details in your account. For more information, see the help topic System Notes v2 Workbook .
System Notes Terminology and Documentation	See the terms used for system notes in NetSuite and documentation about auditing, system notes, and transaction history. For more information, see the help topics System Notes Terminology and System Notes Documentation .
Comparison of System Notes and System Notes v2	See the differences between System Notes and System Notes v2, separate systems for tracking changes made to NetSuite records. For more information, see the help topic System Notes and System Notes v2 .

Cloud Infrastructure Guide

In the Cloud Infrastructure Guide, you'll find best practices for accessing NetSuite, supported cipher protocols, and more.

NetSuite Accounts in a Cloud Environment	NetSuite accounts are hosted in various data centers worldwide. It's important to use best practices for NetSuite account access. For more information, see the help topic Best Practices for Cloud Accounts .
NetSuite IP Addresses	Provides safer ways to access NetSuite than using IP address rules. For more information, see the help topic NetSuite IP Addresses .
Understanding NetSuite URLs	Make sure your NetSuite accounts and integrations aren't bound to a specific data center. For more information, see the help topics Understanding NetSuite URLs , URLs for Account-Specific Domains and Dynamic Discovery of URLs .
Supported TLS Protocol and Cipher Suites	See which versions of TLS and cipher suites are supported for different NetSuite services. For more information, see the help topic Supported TLS Protocol and Cipher Suites .
Secure HTTPS Outbound Communication and SSL Certificates	Find out where to buy SSL certificates and how to use them for secure outbound communication with NetSuite. See the help topic Secure HTTPS Outbound Communication and SSL Certificates .
VPN Configuration for User Access to NetSuite	Learn how to set up VPN access to NetSuite. For more information, see the help topic VPN Configuration for User Access to NetSuite .
Traffic Health	Helps you find data center-specific URLs in your account. For more information, see the help topic Traffic Health .

NetSuite Account Types Guide

In the NetSuite Account Types Guide, you'll find summaries of the different NetSuite account types, such as sandbox and development accounts.

NetSuite Sandbox	Use NetSuite sandbox accounts to test and train your employees on integrations and processes without affecting your production data. The sandbox data is a copy of your production data and you can refresh it to bring in new data and customizations. For more information, see the help topic NetSuite Sandbox .
NetSuite development Accounts	NetSuite development accounts provide a better experience for developing customizations. They never contain production data. This separation keeps your in-progress customizations safe and lets you control access to sensitive, restricted, and financial data. For more information, see the help topic NetSuite Development Accounts .

Application Performance Management Guide

In the Application Performance Management Guide, you'll find information about the Application Performance Management (APM) SuiteApp, which lets you monitor and manage NetSuite performance for business-critical operations.

Application Performance Management (APM)	Lets you see and manage how your NetSuite customizations and business-critical operations are performing. Use the Performance Health Dashboard to watch for issues, then investigate the performance of record pages, scripts, workflows, plug-ins, jobs
---	--

handled by SuiteCloud Processors, SOAP and REST web services, saved searches, and RESTlet integrations with dedicated tools. For more information, see the help topic [Application Performance Management \(APM\)](#).

Optimizing System Performance Guide

In the Optimizing System Performance Guide, you'll find information about optimizing performance for users, troubleshooting performance issues, and best practices.

Optimizing Performance for Users	Helps administrators improve NetSuite performance and fix issues their users may experience. For more information, see the help topic Optimizing NetSuite Performance .
Troubleshooting Performance Issues	See specific troubleshooting issues and how to solve them. For more information, see the help topic Troubleshooting Performance Issues .
Performance Best Practices	Find best practices for troubleshooting, the SuiteApp Architectural Fundamentals & Examples (SAFE) Guide, SuiteCloud Plus, SOAP Web Services, CSV Import, SuiteBundler, SuiteScript, SuiteFlow, Customization, SuiteAnalytics Connect, and SuiteCommerce. For more information, see the help topic Performance Best Practices .

File Cabinet for Administrators Guide

In the File Cabinet for Administrators guide, you'll find information about common tasks for users with the Administrator role.

Making Web Site Hosting Files Always Available	Learn how to use the Available Without Login and Company-Wide Usage boxes on file records to allow or restrict access to individual files. For more information, see the help topic Making Web Site Hosting Files Always Available .
Hiding Attachment Folders	Learn about the Hide Attachment Folders preference. For more information, see the help topic Hiding Attachment Folders .
Enabling the Use of Employee-Specific Expense Folders	Set up dedicated folders where employee expense report attachments are saved automatically. For more information, see the help topic Enabling the Use of Employee-Specific Expense Folders. Move existing attachments to the new folder structure, manage the Expense Report Attachments Tool, and schedule or cancel migrations. For more information, see the help topic Expense Report Attachments Migration Tool.
Uploading Your Logo	Upload your logo and use it on forms, your Site Builder website, and your SuiteCommerce (SC) or SuiteCommerce Advanced (SCA) websites. For more information, see the help topic Uploading and Setting Your Logo .

Guidelines for NetSuite Administrators

NetSuite account administrators are important contacts for NetSuite. For each account, users with the Administrator role:

- Oversee the initial implementation of the NetSuite application, including setup, security, user roles, and data migrations
- Configure and customize NetSuite during implementation and as your needs change
- Manage NetSuite day-to-day, help users, and keep the system running smoothly
- Refresh sandbox accounts when required
- Handle NetSuite releases

Refer to the following sections for some of the key tasks performed by administrators:

- [Set Up NetSuite](#)
 - [Account Setup](#)
 - [Security and Authentication Setup](#)
 - [Users, Roles, and Permissions Setup](#)
 - [System Integrations Setup](#)
 - [Data Migrations Setup](#)
 - [Customizations Setup](#)
 - [Sandbox Management](#)
- [Maintain Your NetSuite Account](#)
 - [Help Users and Maintain User Access](#)
 - [Ensure System Health](#)
- [Customer-Scheduled Maintenance](#)
- [Get Ready for Your NetSuite Upgrade](#)
 - [Release Delivery](#)
 - [Release Preparation](#)

For links to other NetSuite help topics for account administrators, see the help topic [Account Administration](#).

Initial Implementation of NetSuite

Users with the Administrator role oversee the initial implementation of the NetSuite application, working with the NetSuite team. Implementation tasks include:

- [Account Setup](#)
- [Security and Authentication Setup](#)
- [Users, Roles, and Permissions Setup](#)
- [System Integrations Setup](#)
- [Data Migrations Setup](#)
- [Customizations Setup](#)
- [Sandbox Management](#)

Account Setup

Setup tasks for your NetSuite account are described in the following table.

Task	More Information
Create a login page that shows your company's branding on the NetSuite account login page.	Displaying Login Fields on Your Web Page
Make sure that your NetSuite account and integrations don't contain data center-specific identifiers.	Best Practices for Cloud Accounts
Decide what customizations your organization needs based on your business.	SuiteCloud Platform Customization
Make sure your global subscription status follows the regulations in the email recipient's jurisdiction. The email opt-in status in the Global Subscription Status field shows if customers can get email messages from your campaigns and email merges.	Subscription Management

Security and Authentication Setup

NetSuite administrators determine how users and client applications access NetSuite.

Task	More Information
Set a strong password policy for users who access your account.	Password Settings That Can Be Modified
Set the right password requirements for your organization.	Password Requirements and Policies in NetSuite
Set up two-factor authentication for users who handle confidential data.	Two-Factor Authentication (2FA)
Set up token-based authentication so client applications can access NetSuite through APIs.	Token-based Authentication (TBA)
Select and set up the right single sign-on option for your organization.	Authentication Overview

Users, Roles, and Permissions Setup

Employees, vendors, partners, and customers might need access to your NetSuite account. Create custom roles for your organization and add the right permissions and restrictions.

Task	More Information
Give employees only the access they need.	NetSuite Access Overview

Task	More Information
Don't assign standard roles to users. Customize standard roles and assign them instead. Create roles for each job function. Assign more than one role if someone has multiple jobs.	Showing Role Permission Differences Customizing or Creating NetSuite Roles
Think carefully about the permissions for each role and use restrictions when you need more control.	Permissions and Restrictions
Don't use the Full Access role.	Full Access Role (Deprecated)
Assign Core Administration Permissions to roles when needed.	Core Administration Permissions
Don't use the Global Permissions Feature unless you have to. Whenever you can, use permissions and restrictions instead.	Using the Global Permissions Feature
 Note: Global permissions apply to every role an employee has.	
Set preferences to tailor NetSuite to each role if needed.	Setting Role-Based Preferences
Assign the Financial History permission to any role that needs access to customer or vendor transactions.	Granting User Access to Transaction History
Make sure you know how the Advanced Employee Permissions feature changes access to employee records.	Before Enabling the Advanced Employee Permissions Feature
Assign each role to yourself and test it. Make sure it has all permissions and access needed for the whole process.	Permissions Documentation
Assign custom roles to users before they start using the account.	Assigning Roles to an Employee
Create user records.	NetSuite Users Overview Working with Records
Give new users access.	Giving an Employee Access to NetSuite Giving Customers Access
Make sure users know how to get help.	 Tips for Help Center and SuiteAnswers Getting Help
Remove employees' NetSuite access right away when they leave.	Employee Termination

System Integrations Setup

To integrate NetSuite with information from other systems, you can use:

- [CSV Import](#)
- [Web Services](#)
- [RESTlets](#)

CSV Import

Use the Import Assistant for small or medium data imports with CSV files. If you save your import mapping, you can reuse it for future imports and to import CSV data programmatically. For more information, see [Data Migrations Setup](#).

Web Services

Use web services for large or ongoing data migrations, and when you need to migrate record types that CSV import doesn't support.

Use SOAP web services to move large amounts of data in or out of NetSuite. With SuiteTalk SOAP Web Services, you can build your integration in any language you like.

REST web services let you interact with NetSuite through a REST-based interface without coding.

RESTlets

A RESTlet is a SuiteScript that runs when called by an external application or by another SuiteScript. RESTlets are often used by developers who are familiar with SuiteScript.

RESTlets can retrieve, add, or manipulate data from an external source, so NetSuite requires authentication for RESTlets. The RESTful integration supports stateless communication between client and server.

Refer to the following table for more information about the system integration tools.

Tool	More Information
CSV import for small or medium data imports.	CSV Imports Overview
Web services for large or ongoing data migrations.	SuiteTalk SOAP Web Services Platform Overview Overview of SuiteTalk REST Web Services
RESTlets to create custom logic and share it with external applications over HTTP.	SuiteScript 2.x RESTlet Script Type

Data Migrations Setup

You'll need to move some company information from your other system into NetSuite. Besides system integrations, comma-separated value (CSV) import is the most way to move small or medium data sets from other applications into NetSuite. CSV import saves time and helps prevent errors since you can add or update many records at one time, instead of entering them manually.

Use web services for large or ongoing data migrations and for migrating record types that CSV import doesn't support. For information, see [System Integrations Setup](#).

Review the following tasks and the detailed information available to prepare for migrating your company's data.

Task	More Information
Clean up your data before importing, and make sure your CSV files match NetSuite file conventions and record types.	Guidelines for CSV Import Files
Save related data in separate CSV files, for example, save employee data in one file. There is one exception to this guideline: import customers, prospects, and leads with contacts.	Importing Entities and Contacts Together
Follow these best practices when performing CSV imports: Start with a test import using a couple of records.	—

Task	More Information
- Break large jobs into smaller chunks to help things run smoothly. Each import file can have up to 25,000 records. - Run imports during off-peak hours.	
When importing transactions: - Don't import lots of historical transactions – your storage may be limited. For information about how much space you have, contact your account manager. - Imported transactions behave like those you create in the user interface. For example, an imported vendor bill with inventory items affects your inventory. When you import open accounts payable and accounts receivable transactions, make sure the amounts are not duplicated in the account balances you import later.	Transactions Import Type

Customizations Setup

To support your business processes, you may need to add customizations to NetSuite before you go live. After your initial implementation of NetSuite, administrators need to keep providing technical and system support to users. You may need more configuration and integration as your organization's needs change.

Before you customize, identify what is unique about your business and what you need to support your processes. Then check if NetSuite already has that functionality.

Task	More Information
Plan and review before you build customizations to meet user needs. The SuiteCloud platform gives you several tools to adapt NetSuite for your organization: - Customize the NetSuite UI and business logic with scripts or point-and-click options . - Search and report on NetSuite data. - Create custom roles so users only see the tasks and pages they need. - Share your customizations with other accounts. - Bring information from other systems into your NetSuite accounts.	SuiteCloud Platform Customization
Limit who can add customizations.	Permissions Documentation
Set up naming conventions for your customizations so users can find the right object.	Conventions for Naming Custom Objects
Custom fields: - Suggested naming convention: <code>_abbreviation_description</code>. - Use the Description field to explain why the field exists, who requested it, and any notes. - Enter field level help in the Help field on the Display subtab to instruct users on what to enter.	Custom Fields
Custom forms: - Use the standard forms in NetSuite as templates for custom forms that fit your business needs. For example, you may want to reorganize subtabs or rename fields to match your workflow. After you create custom forms, set them as your preferred forms. - Specify a custom field as required on a specific custom form only if it's not always required.	Custom Forms Setting Validation and Defaulting Properties

Task	More Information
Custom records: ■ Create and save your custom record first, and then add fields. ■ Test incrementally as you work with custom records and objects. ■ Set permissions only when the record is ready to use.	Custom Records
Build functional tests to check your business processes in NetSuite.	Suggested Test Plan

Sandbox Management

A NetSuite sandbox is a safe, separate test account where you can develop and test new applications and customizations without affecting your production account. Your sandbox has the same configuration, data, and customizations as your production account.

The administrator requests a sandbox refresh when needed to ensure developers are working in an up-to-date account.

Task	More Information
Monitor sandbox and coordinate refreshes from production as required.	Refreshing Sandbox Accounts
Make sure everyone at your company knows about and is ready for the refresh from production before you request it.	NetSuite Sandbox
Refresh your sandbox only when you're ready. A refresh completely replaces the sandbox account with your production data. After your sandbox is refreshed, it can't be restored to its prior state.	Requesting a Refresh
Monitor sandbox expiry dates.	When a Sandbox Account Expires
Set up the Send Email To option on the Email Preferences page for Sandbox and Release Preview so email messages go to the correct addresses.	Setting Preferences for Sandbox Email

Getting Help for Administrators

NetSuite offers a variety of resources for administrators, from communities and international resources to educational services.

The following resources are available:

Support Resources

- [NetSuite Support](#) - a summary of the customer support resources NetSuite provides.
- [NetSuite Communities \(User Groups\)](#) - details on the online communities where you can connect with other NetSuite users.

- [Voting for Enhancements](#) - a description of SuiteIdeas, where you can vote for the enhancements you'd like to see in future NetSuite versions.
- [Checking NetSuite System Status](#) - steps for checking the status of the NetSuite service and information about potential outages or service disruptions.

International Resources

- [Country-Specific Features](#) - a list of documentation for NetSuite features worldwide.
- [Release Notes](#) - PDF release notes are available in several languages. When the latest translated release notes are ready, you can get them from this page.

Additional Resources

- [SuiteSuccess](#) - learn how SuiteSuccess can help you implement NetSuite quickly.
- [SuiteApp.com](#) - browse and choose SuiteApps to install in your NetSuite account.
- [NetSuite Education Services](#) - a summary of available training and certification resources.

 **Note:** For information about resources for users, see the help topic [Getting Help](#).

Customer-Scheduled Maintenance

NetSuite lets you reschedule some planned maintenance for your account to a date and time that works best for your organization.

 **Note:** The Customer-Scheduled Maintenance feature requires View permissions and only a user with the Administrator role or the Set Up Company permission can use it.

About the Customer-Scheduled Maintenance Page

When you get a notification about a maintenance type that can be rescheduled, you can reschedule the date and time of the maintenance.

Reschedule a Maintenance

1. Go to Setup > Company > Customer-Scheduled Maintenance and select **Reschedule** beside the maintenance you want to reschedule.
2. In the popup window, select a new date, start time, and reason for the change, then click **Reschedule**.

Note: You'll see some dates and times greyed out because of conflicting maintenance that can't be moved. Choose any available date and time in the Reschedule popup calendar.

Customer-Scheduled Maintenance has a limited number of timeslot openings available. If the scheduled date or time doesn't work for you, select another available timeslot.

If you decide to reschedule, select your alternative timeslot carefully. Oracle NetSuite doesn't check the suitability of the new date and time and isn't responsible for any impact to your business.

After you reschedule, the new date and time for the maintenance is displayed on the Customer-Scheduled Maintenance page automatically. No approvals are needed.

You can reschedule maintenance as many times as you want until the schedule is locked (between 72 to 24 hours before the maintenance). After the schedule is locked, changes can no longer be made. To see the rescheduling history, select Show rescheduling history under the new start date and time.

Maintenance Statuses Explained

Users with the Administrator role receive email reminders about maintenance. The following table describes each status.

Status	Description
Scheduled	Important maintenance must be performed on your account. The maintenance is scheduled for a date and time that should cause the least disruption, but you can reschedule if necessary.
Rescheduled	Maintenance was rescheduled for one of the following reasons: ■ An administrator chose a different date and time for the maintenance. ■ Oracle NetSuite had to move the maintenance because it conflicted with other important work on your account.
Cancelled	Maintenance was canceled because of an internal issue. It will be rescheduled when the issue is resolved. OR Oracle NetSuite approved an exception requested by your administrator to cancel the maintenance. The maintenance will be rescheduled for a future date.
Rolled Back	Some tasks couldn't be completed during the maintenance, so all changes were reversed and is back to how it was before the maintenance began. No data was lost. You can continue using your account, and the maintenance will be rescheduled.
Extended	The maintenance is taking longer than expected to complete. You'll get a notification when it's done.
Completed	Maintenance finished successfully.

Customer-Scheduled Maintenance FAQ

How does the Customer-Scheduled Maintenance page work?

The Customer-Scheduled Maintenance page lets you pick the date and time for planned maintenance so it has less impact on your business.

How will I know when my account has a maintenance that I can reschedule?

When a maintenance is planned, all account administrators signed up for notifications (Setup > Company > Company Management > Administrative Notifications) receive an email. If you can reschedule the maintenance, the email includes a link to the Customer-Scheduled Maintenance page.

What time format and time zone are used for my Customer-Scheduled Maintenances?

The Customer-Scheduled Maintenance page shows all dates and times in a 12-hr HH:MM AM/PM format, using the time zone you set in User Preferences.

Maintenance notifications use the date and time format and time zone recipients set in their User Preferences.

When I reschedule a maintenance, are the date and time options based on the NetSuite maintenance window to which my account is assigned?

You're not limited by the usual NetSuite maintenance windows (APAC: 9:00 AM PST, EU: 2:00 PM PST, NA: 12:01 AM PST). You can reschedule your maintenance to any available date and time. Unavailable dates and times are greyed out in the Reschedule Maintenance Date/Time selector.

What is the deadline for rescheduling a maintenance?

You can reschedule the maintenance before it starts (between 72-24 hours before the maintenance, depending on the maintenance type). The Customer-Scheduled Maintenance page shows when rescheduling is locked.

How long do I have to wait for the request to be approved?

Reschedule requests are automatically processed right away. No approvals are required.

Will I receive a notification if a planned maintenance is canceled?

If maintenance is canceled, users who log in with the Administrator role see an in-account notification.

How are planned maintenances initially scheduled?

NetSuite chooses the initial maintenance time based on your account activity.

The available dates and types in the Customer-Scheduled Maintenance page's Rescheduling Date/Time selector depend on what's available when you reschedule.

Who can access the Customer-Scheduled Maintenance page?

Users with the Administrator role can access the Customer-Scheduled Maintenance page and reschedule planned maintenance.

Who receives automated communications about planned maintenances?

All account administrators and anyone else signed up to receive administrative notifications at Setup > Company > Company Management > Administrative Notifications for particular communication types will get these messages.

What types of automated communications are included with customer-scheduled maintenances?

You'll get in-account notifications and email messages about customer-scheduled maintenances.

Does the Customer-Scheduled Maintenance feature support non-production accounts like sandbox, Release Preview, and development accounts?

Customer-Scheduled Maintenance works with production and sandbox accounts. For supported maintenance types, see [Types of Customer-Scheduled Maintenance](#).

Currently, development and Release Preview accounts aren't supported, but support is coming in future releases.

Will the Customer-Scheduled Maintenance page in the production account display maintenance for sandbox accounts?

Yes. The Customer-Scheduled Maintenance page in your production account will now show sandbox maintenances, and allow you to reschedule your sandbox maintenances. The Customer-Scheduled Maintenance page in your sandbox account is view only.

How is the Estimated End Time in the Reschedule Maintenance popup calculated?

Estimated End Time is the planned maintenance duration added to the rescheduled start date and time.

Can a maintenance be canceled or rescheduled even if a customer does not request it?

Yes. The NetSuite Operations team can cancel a customer-scheduled maintenance if necessary. If that happens, account administrators are notified and can select a new date and time for the maintenance.

What does it mean if my maintenance has been rolled back?

During the maintenance, not all required tasks could be completed. Because of this, everything was reversed and your account was set back to how it was before the maintenance began. No data was lost. You can continue to use your account and the maintenance will be rescheduled. All administrators are notified of the roll back and when the maintenance is rescheduled.

Does my service tier determine if I can reschedule a maintenance?

No. Customer-scheduled maintenance is available to all NetSuite customers, regardless of service tier.

NetSuite Version Upgrade FAQ

As you prepare for your NetSuite version upgrade, the following questions and answers will help you to get ready.

- [NetSuite Pre-Upgrade Maintenance](#)
- [NetSuite Version Upgrade Maintenance](#)

NetSuite Pre-Upgrade Maintenance

Is the planned maintenance for the new features in the NetSuite Release the same as the NetSuite Version Upgrade?

No. The planned maintenance or the NetSuite pre-upgrade maintenance implements preparation work into your account in advance of the new features that will be added in the NetSuite Version Upgrade.

How long will the NetSuite pre-upgrade maintenance take?

The NetSuite pre-upgrade maintenance should take approximately 1 hour.

NetSuite Version Upgrade Maintenance

What should I do to prepare for my NetSuite upgrade?

Check the New Release Portal on your Home page to verify your NetSuite version upgrade date.

Note: The New Release portlet is located on the home page of your production account. If you do not see the portlet, click **Personalize** on your home page and on the **Standard Content** tab, select **New Release**.

Request a Release Preview account and test your critical business processes in the new NetSuite version before your production account is upgraded. If you encounter any issues, report them to NetSuite Customer Support.

For information about how to request a Release Preview account, see the help topic [Requesting a Release Preview Account](#).

What features are included in the new release?

For information about the new release, see the [Release Notes](#).

How does Customer-Scheduled Maintenance work?

You'll schedule and reschedule your NetSuite upgrade using Customer-Scheduled Maintenance.

For details about Customer-Scheduled Maintenance, see [Customer-Scheduled Maintenance FAQ](#).

When will my sandbox be upgraded?

Your sandbox account will be upgraded within 7 days after your production account is upgraded. You'll receive a separate notification related to your sandbox upgrade schedule.

You can change your sandbox upgrade dates from the Customer-Scheduled Maintenance page in your production account.

Can I use Customer-Scheduled Maintenance to reschedule my NetSuite upgrade?

Yes, regardless of your service tier, you can use Customer-Scheduled Maintenance to reschedule your upgrade. Your administrator will get a notification after your rescheduled upgrade is confirmed.

Whom should I contact if I want an upgrade date and time that is not available in Customer-Scheduled Maintenance?

Contact NetSuite Customer Support before the scheduled maintenance (between 72-24 hours, depending on the maintenance type) and provide a justification for your request.

For more information about maintenance types, see [Types of Customer-Scheduled Maintenance](#).

Who will be notified of the date and time for our NetSuite upgrade?

Automated email notifications and in-account notifications are sent to the account administrators.

If I reschedule my upgrade, is the new date and time guaranteed?

If you reschedule your upgrade using the Customer-Scheduled Maintenance page, administrators receive a confirmation email and NetSuite will upgrade your account at the new date and time. In rare cases, NetSuite may need to reschedule your upgrade, but account administrators will be notified and can reschedule the upgrade if needed.

How long will the NetSuite upgrade take?

Four hours are reserved for the NetSuite upgrade maintenance, but many upgrades are completed much faster (within 60 minutes).

How will I know when my NetSuite upgrade has completed?

After your account is upgraded to the latest NetSuite version, account administrators will receive an email notification.

What does it mean if my maintenance has been rolled back?

If your maintenance is rolled back, it means not all tasks were finished, so everything was reversed and your account is back to how it was before. No data is lost. You can keep using your account, and the maintenance will be rescheduled. All administrators will be notified about the rollback and when it's rescheduled.

Release Delivery

NetSuite delivers changes to customers in one of three ways:

- **Major release** – NetSuite has two major releases each year. For all major releases of NetSuite, customers are upgraded in phases over a period of a few months.
Before the upgrade, you can request a Release Preview account to test the new features with your own data and business processes. For more information, see the [Requesting a Release Preview Account](#).
- **Minor release** – A minor release is a scheduled update to resolve customer-reported issues that aren't urgent but should be fixed before the next major release. All customers get minor releases at the same time.
- **Hot push** – A hot push is an update that occurs outside of the release schedule to fix critical customer-reported issues that cannot wait for the next scheduled minor release. A hot push is typically rolled out to a specific customer or set of customers.
