This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software" or "commercial computer software documentation" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. Advanced Localization Features

The following topics describe the features that are included in the Advanced Localization Features (ALF) SuiteApp:

- [Advanced Localization Features Overview](#)
 - [Known Limitations of the Advanced Localization Features SuiteApp](#)
- [Enabling Required Features for Advanced Localization Features](#)
- [Installing the Advanced Localization Features SuiteApp](#)
- [Setting Up the Advanced Localization Features Templates](#)
- [Roles and Permissions Setup for Advanced Localization Features](#)
- [ALF Additional Features and Configuration](#)
 - [New Fields on Subsidiary, Customer, and Vendor Records](#)
 - [Transaction Bank Details](#)
 - [Method of Payment](#)
 - [Tax Compliance Text](#)
 - [Color Scheme and Layout](#)
 - [Labels and Notes Customization](#)
 - [Printing Preferences](#)
 - [Adding External Labels](#)
 - [Invoice Locking](#)
 - [Service Period](#)
- [Printing Transactions](#)
- [Commercial Invoice](#)

Advanced Localization Features Overview

The purpose of this SuiteApp is to create the following localized printable transactions that comply with tax regulations and meet common business needs of NetSuite users. To achieve this, the SuiteApp delivers advanced PDF/HTML templates. To learn more about these templates, see [Setting Up the Advanced Localization Features Templates](#).

- Invoices
- Credit Memos
- Sales Orders

Page 1 of 1

Additional features of the Advanced Localization Features SuiteApp work in conjunction with these PDF/HTML templates, making them available for customization.

Note: The additional features only work with the templates provided by this SuiteApp and don't automatically interact with any other existing invoice, credit memo, sales order, or purchase order layout.

With the following additional features you can:

- Fill in additional fields added to subsidiary, customer, or vendor records. The content of these fields will then be used on printed transaction forms. To learn more, see [New Fields on Subsidiary, Customer, and Vendor Records](#).

- Create Transaction Bank Details records with the content for printed invoices, credit memos, sales orders, or purchase orders. These records can be assigned to subsidiaries, customers, vendors, or individual transactions. To learn more, see [Transaction Bank Details](#).
- Create Method of Payment records to specify the texts to be printed (at customer, vendor, or transaction level). To learn more, see [Method of Payment](#).
- Create Tax Compliance Text records with tax-related texts. To learn more, see [Tax Compliance Text](#).
- Customize your template's color scheme and layout. To learn more, see [Color Scheme and Layout](#).
- Replace the default texts with your customized texts (for every supported language). To learn more, see [Labels and Notes Customization](#).
- Set the invoice locking level for each subsidiary to prevent editing of approved or sent invoices. To learn more, see [Invoice Locking](#).
- Print transaction drafts and view the printing history of every transaction (containing the original of the printed transaction and all subsequent copies). To learn more, see [Printing Transactions](#).

Known Limitations of the Advanced Localization Features SuiteApp

The currently known limitations of the Advanced Localization Features SuiteApp are as follows:

- If you print an invoice, credit memo, sales order, or purchase order created before the Advanced Localization Features SuiteApp installation, the Issuer (the subsidiary) entry on it'll remain empty. The Advanced Localization Features SuiteApp can't identify the issuers retrospectively.
- The Item Groups feature is currently not supported. Any item group printed on an invoice, credit memo, sales order, or purchase order will contain incomplete information. To learn more about this feature, see the help topic [Item Groups](#).
- In the **Labels and Notes** subtab of the Customize Document Template page, the **Custom Text** field under **Labels & Text** sublist has a character limit. The allowable character limit is 200 characters including spaces and special characters. However, you can enter up to 4000 characters for subsidiary translatable fields in the **Custom Notes** field under the **Notes** sublist.

 **Note:** For duplicate custom text, the character limit of the **Custom Text** field under **Labels & Text** subtab is 175 characters including spaces and special characters.

- The Service Period feature is available for item groups that have service items with the **Reference Start/End Lines On Picking Ticket** box cleared on an item record. If the **Reference Start/End Lines On Picking Ticket** box is checked then the service period dates are not available for the service items. For more information about service period dates, see [Service Period](#).

The following limitations apply only to transactions with accounting periods closed before Advanced Localization SuiteApp version 1.04.0 update :

- Invoices, credit memos, sales orders, and purchase orders from closed periods with the **Allow Non-GL Changes** box not checked can only be printed with the following limitations:

 **Note:** You should enable **Allow Non-GL Changes** permission to avoid the limitations. For more information, see the help topic [Accounting Period Management](#). Role with Allow Non G/L Changes permissions is required.

- If the original document has not been printed before closing the period, all its printouts are marked as originals, not as duplicates.
- The **Preview PDF** and **Print a PDF Copy** buttons are disabled, preventing draft and copy printing.

- The printing history doesn't get updated and may therefore display incorrect data.

Enabling Required Features for Advanced Localization Features

Before installing the Advanced Localization Features SuiteApp, go to Setup > Company > Setup Tasks > Enable Features, and make sure that the following features are enabled:

Note: All the required fields in the Company Information page and the primary subsidiary record must be filled before you install the Advanced Localization Features SuiteApp. For more information, see [Installing the Advanced Localization Features SuiteApp](#).

- On the **Company** subtab:
 - Multi-Language
 - Multiple Currencies
- On the **SuiteCloud** subtab:
 - Custom Records
 - Advanced PDF/HTML Templates
 - Client SuiteScript
 - Server SuiteScript
 - SOAP Web Services
 - SuiteCloud Development Framework

Installing the Advanced Localization Features SuiteApp

The Advanced Localization Features SuiteApp enables you to create the following localized printable transactions that comply with tax regulations and meet common business needs of NetSuite users.

- *Invoices*
- *Credit memos*
- *Sales orders*
- *Purchase orders*

To install the Advanced Localization Features SuiteApp:

1. Go to Customization > SuiteBundler > Search & Install Bundles (Administrator).

Note: Read the Installation Terms of Service on the use of the NetSuite SuiteBundler. Click **I Agree** if you agree, and **I Disagree** if you don't agree with the terms.

2. In the Keywords field, enter **Advanced Localization Features**, or the Bundle ID **359132**.
3. Click **Search**.
4. In the **Name** column, click **Advanced Localization Features**.

5. On the Bundle Details page, click **Install**.

For more information about installing SuiteApps, see the help topic [Installing a Bundle](#).

The Advanced Localization Features SuiteApp is a managed bundle, and is automatically updated whenever improvements or new features are added.

Important: The update applies to the following PDF/HTML templates only:

- ALF Credit Memo PDF/HTML Template
- ALF Invoice PDF/HTML Template
- ALF Proforma Invoice PDF/HTML Template
- ALF Sales Order PDF/HTML Template
- ALF Purchase Order PDF/HTML Template

Any update will overwrite any user-made changes to these templates. To avoid overwriting changes during updates, save them using the **Save as** button when modifying templates..

Setting Up the Advanced Localization Features Templates

With the Advanced Localization Features SuiteApp, advanced PDF/HTML templates for invoices, credit memos, and sales orders are installed to your NetSuite account. To use them, you should assign them to your transaction forms first.

To assign the ALF template to an invoice transaction form:

1. Go to Customization > Forms > Transaction Forms.
2. On the Custom Transaction Forms page, locate an invoice type transaction form (for example, Standard Product Invoice). Click **Edit** for a custom form, or click **Customize** for a standard form.
3. Ensure the **Printing Type** is set to **Advanced** for this transaction form.
4. From the **Print Template**, **Email Template** or both dropdown lists, select **ALF Invoice PDF/HTML Template**.
5. (Optional) Check the **Form Is Preferred** box to make the form template the default for this transaction type.
6. (Optional) Use the **Name** field to name this custom transaction form (for example, ALF Product Invoice).
7. Click **Save**.

To assign the ALF template to a credit memo transaction form:

1. Go to Customization > Forms > Transaction Forms.
2. On the Custom Transaction Forms page, locate a credit memo type transaction form (for example, Standard Credit Memo). Click **Edit** for a custom form, or click **Customize** for a standard form.
3. Make sure that for this transaction form, the **Printing Type** is set to **Advanced**.

4. From the **Print Template, Email Template** or both dropdown lists, select **ALF Credit Memo PDF/HTML Template**.
5. (Optional) Check the **Form Is Preferred** box to make the form template the default for this transaction type.
6. (Optional) Use the **Name** field to name this custom transaction form (for example, ALF Credit Memo).
7. Click **Save**.

To assign the ALF template to a sales order transaction form:

1. Go to Customization > Forms > Transaction Forms.
2. On the Custom Transaction Forms page, locate a sales order type transaction form (for example, Standard Sales Order). Click **Edit** for a custom form, or click **Customize** for a standard form.
3. Make sure that for this transaction form, the **Printing Type** is set to **Advanced**.
4. From the **Print Template, Email Template** or both dropdown lists, select **ALF Sales Order PDF/HTML Template**.
5. (Optional) Check the **Form Is Preferred** box to make the form template the default for this transaction type.
6. (Optional) Use the **Name** field to name this custom transaction form (for example, ALF Sales Order).
7. Click **Save**.

To assign the ALF Proforma Invoice template to a sales order transaction form:

1. Go to Customization > Forms > Transaction Forms.
2. On the Custom Transaction Forms page, locate a proforma invoice type transaction form (for example, Standard Proforma Invoice). Click **Edit** for a custom form, or click **Customize** for a standard form.
3. Make sure that for this transaction form, the **Printing Type** is set to **Advanced**.
4. From the **Print Template, Email Template** or both dropdown lists, select **ALF Proforma Invoice PDF/HTML Template**.
5. (Optional) Check the **Form Is Preferred** box to make the form template the default for this transaction type.
6. (Optional) Use the **Name** field to name this custom transaction form (for example, ALF Proforma Invoice).
7. Click **Save**.

To assign the ALF Purchase Order template to a sales order transaction form:

1. Go to Customization > Forms > Transaction Forms.
2. On the Custom Transaction Forms page, locate a purchase order type transaction form (for example, Standard Purchase Order) and click **Edit** for a custom form, or click **Customize** for a standard form.
3. Ensure the **Printing Type** is set to **Advanced** for this form.
4. Select the **ALF Credit Memo PDF/HTML Template** from the **Print Template, Email Template**, or both dropdowns.
5. (Optional) To make the form template as default for this transaction type, check the **Form Is Preferred** box.

6. (Optional) To name this custom transaction form (for example, ALF Purchase Order), use the **Name** field.
7. Click **Save**.

If you want to make sure that every new invoice, credit memo, sales order, or purchase order custom form uses the templates provided by the Advanced Localization Features SuiteApp, set these templates as preferred. When you choose the Advanced printing type for a custom form (see step 3 of the procedures above), the preferred advanced template is selected by default as the template for that form.

1. Go to Customization > Forms > Advanced HTML/PDF Templates.
2. Locate the following templates:
 - **ALF Invoice PDF/HTML Template**
 - **ALF Credit Memo PDF/HTML Template**
 - **ALF Sales Order PDF/HTML Template**
 - **ALF Proforma Invoice PDF/HTML Template**
 - **ALF Purchase Order PDF/HTML Template**
 - **ALF Transfer Order PDF/HTML Template**
 - **ALF Item Receipt PDF/HTML Template**
 - **ALF Commercial Invoice PDF/HTML Template**
3. Make sure that for the located templates, the box in the **Preferred** column is checked.

For more information, see the help topic [Setting Custom Forms to Use Advanced Templates](#) or [Reviewing Available Advanced Templates](#).

Editing Templates in the Template Editor

The HTML/PDF templates provided by the Advanced Localization Features SuiteApps are fully tailored to meet common business requirements of NetSuite users. However, you can still adjust them to make them even more suitable for your needs.

Important: Before editing the templates, you should read the help topic [Advanced Templates Customization in the Template Editor](#) (as well as other related help topics) carefully. Also, you should save templates using the **Save as** button to keep the original templates unchanged and avoid overwriting the user-modified templates during automatic bundle updates.

To edit a template in the Template Editor:

1. Go to Customization > Forms > Advanced HTML/PDF Templates.
2. Locate the following templates:
 - **ALF Invoice PDF/HTML Template**
 - **ALF Credit Memo PDF/HTML Template**
 - **ALF Sales Order PDF/HTML Template**
 - **ALF Proforma Invoice PDF/HTML Template**
 - **ALF Purchase Order PDF/HTML Template**
3. Click the **Edit** link next to one of these templates.
4. After you're done editing, save the template by clicking **Save as** from the **Save** dropdown menu.

Note: If you save the changes by clicking **Save**, the changes will be overwritten by the next SuiteApp update.

Fields and Placeholders in ALF Templates

The templates provided by the Advanced Localization Features SuiteApp contain FreeMarker placeholder tags for sourcing and displaying required information as well as setting the layout of the transaction document when printed. The following information is available when printed to PDF or HTML.

Note: The Advanced Localization Features SuiteApp enables you to customize the invoice, credit memo, and sales order default labels. To learn more about this feature, see [Labels and Notes Customization](#).

Header Area:

Field	Default Label	Placeholder or Value in Default Template	Invoice, Credit Memo, Sales Order, or Purchase Order	Description
Title	—	The applicable transaction type is displayed on the template header area. - Invoice - Credit Memo - Sales Order - Purchase Order	All	The document type.
Logo	—	<code>\${subsidiary.logo@url}</code> If you're not using a OneWorld account, the placeholder is <code>\${companyinformation.logoUrl}</code>	All	Reference to the image that you want to place as the company logo.
Customer name and address	Bill To	<code>\${record.billaddress}</code>	All	The name and the billing address of the customer.
Customer VAT Registration Number	VAT/TAX/GST Reg. Number:	If you're using Legacy Tax: <code>\${record.vatregnum}</code> If you're using SuiteTax: <code>\${record.entitytaxregnum}</code>	All	Displays the following tax type registration number that you select for your customer. - VAT - TAX - GST If you're using Legacy Tax, it is sourced from the Customer record (Financial subtab, Tax Information section). If you are using SuiteTax, it is sourced from the Customer record (Tax Registrations subtab under the Financial subtab).
Invoice Number	Invoice Number:	<code>\${record.tranid}</code>	All	The invoice number sourced from the transaction.

Field	Default Label	Placeholder or Value in Default Template	Invoice, Credit Memo, Sales Order, or Purchase Order	Description
Subsidiary name and address	Issuer:	<code>\${subsidiary.legalname}</code> or <code>\${subsidiary.name}</code>	All	The name and address of the subsidiary that issued the invoice.  Important: If you print an invoice, credit memo, or sales order created before the Advanced Localization Features SuiteApp installation, this entry will remain empty. The SuiteApp can't identify the issuers retrospectively.
Subsidiary VAT Registration Number	VAT/TAX/GST Reg. Number:	If you're using Legacy Tax: <code>\${subsidiary.federalidnumber}</code> If you're using SuiteTax: <code>\${record.subsidiarytaxregnum}</code>	All	Displays the following tax type registration number that you select for a subsidiary. ■ VAT ■ TAX ■ GST If you're using Legacy Tax, it is sourced from the subsidiary VAT Registration No. If you're using SuiteTax, it is sourced from the transaction record (Tax Details subtab).
Customer Name	Name	<code>\${entity.firstname}+\${entity.middlename}+\${entity.lastname}</code>	Sales order	Name of the customer.
Vendor Name	Name	<code>\${ entity.firstname}+\${ entity.middlename}+\${ entity.lastname}</code>	Purchase order	Name of the vendor.
Company	Company Name	<code>\${entity.companyname}</code>	Sales order and purchase order	Company Name of the customer or vendor.
Subsidiary Email	Email	<code>\${subsidiary.email}</code>	Sales order and purchase order	Return email address of the subsidiary.
Subsidiary Address	Address	<code>\${subsidiary.address}</code>	Sales order and purchase order	Address of the subsidiary.
Subsidiary VAT Registration Number	VAT/TAX/GST Reg. Number:	If you're using Legacy Tax: <code>\${subsidiary.federalidnumber}</code> If you're using SuiteTax: <code>\${record.subsidiarytaxregnum}</code>	All	Displays the following tax type registration number that you select for a subsidiary. ■ VAT ■ TAX ■ GST If you're using Legacy Tax, it is sourced from the subsidiary VAT Registration No.

Field	Default Label	Placeholder or Value in Default Template	Invoice, Credit Memo, Sales Order, or Purchase Order	Description
				If you're using SuiteTax, it is sourced from the transaction record (Tax Details subtab).
Transaction Date	Date:	<code>\${record.trandate}</code>	All	The transaction date, in DD/MM/YYYY format.
Due Date	Due Date:	<code>\${record.duedate}</code>	Invoice and purchase order	The due date of the invoice, in DD/MM/YYYY format.
Currency	Currency:	<code>\${record.currency.symbol}</code> If you're not using a OneWorld account, the placeholder is <code>\${companyinformation.displaysymbol}</code>	All	The code of the currency used by the customer (for example, EUR).
Customer Number	Customer Number:	<code>\${record.entity.entityid}</code>	All	The number set for the customer. This only prints if Auto-Numbering is enabled for customers.
Project Reference	Project:	<code>\${record.job}</code>	All	The project that this invoice, credit memo, or sales order applies to. It is only printed if you're using the Projects feature and this customer is assigned to a specific project.
Credit – Applied Invoice	Applied To:	<code>\${record.apply.refnum}</code>	Credit memo	The number of an invoice that this credit memo applies to. If it applies to multiple invoices, their names are all listed, separated by a comma.
Purchase Order #	Purchase Order:	<code>\${record.otherrefnum}</code>	Invoice, credit memo, and sales order	The number of a purchase order assigned to this invoice, credit memo, or sales order (if any such purchase order exists). For more information, see the help topic Purchase Order Management .
Sales Order #	Sales Order:	<code>\${record.createdfrom}</code>	Invoice	The number of sales orders assigned to this invoice (if any such sales order exists). For more information, see the help topic Sales Orders .
Customer Company registration number	Registration Number:	<code>\${record.entity.custentity_alf_company_reg_num}</code>	All	The registration number for this customer (for example, it can be the Chamber of Commerce registration number, SIRET, or HVB number). For more information, see List of Fields Added to the Customer or Vendor Record .
Shipping Address	Ship To	<code>\${record.shipaddress}</code>	All	The shipping address sourced from the transaction record (Shipping subtab).

Field	Default Label	Placeholder or Value in Default Template	Invoice, Credit Memo, Sales Order, or Purchase Order	Description
				 Note: If the shipping address is the same as the billing address (Customer name and address) or if it is not filled, the placeholder remains hidden and this section is not printed.
Total	Total	\${record.total}	All	The total invoice, credit memo, or sales order amount. The same value is also displayed in the Subtotals area of the template.

Lines Area:

Field	Default Label	Placeholder or Value in Default Template	Invoice, Credit Memo, Sales Order, or Purchase Order	Description
Line #	Ln.	—	All	The line counter.
Item #	Item	\${item.item}	All	Line item name.
Item description	Description	\${item.description}	All	Transaction line description.
Quantity	Qty.	\${item.quantity}	All	Line item quantity.
Unit of Measure	U.M.	\${item.units}	All	Line item unit of measure.
Rate	Unit Price	\${item.rate}	All	Line item rate.
Line Amount Excluding VAT	Net Amount	\${item.amount}	All	Line item amount.
VAT or TAX or GST %	VAT or TAX or GST %	If you're using Legacy Tax: \${item.taxrate1} If you're using SuiteTax: \${item.taxrate}	All	VAT, TAX or GST rate for this line item. See tables below for US and Canada-specific information.
VAT or TAX or GST Amount	VAT or TAX or GST	If you're using Legacy Tax: \${item.tax1amt} If you're using SuiteTax: \${item.taxamount}	All	VAT, TAX or GST amount for this line item (calculated from the Line Amount and VAT %).
Lot Number	Lot Number	—	All	Lot number of the lot inventory type item.
Serial Number	Serial Number	—	All	Serial number of the serialized inventory type item.
Expiration Date	Expiration Date	—	All	Expiration Date of the lot inventory type item.

Field	Default Label	Placeholder or Value in Default Template	Invoice, Credit Memo, Sales Order, or Purchase Order	Description
Total Line Amount	Total incl. VAT or TAX or GST	$\{item.grossamt\}$ or $\{item.grossamt\}$ plus the discount (see below)	All	The total amount for this line item (calculated from the Line Amount, VAT, TAX or GST Amount, and the discount).
Discounts	Discount	$\{item.grossamt\}$ (calculated as sum of $record.item[i].grossamt$ in which $record.item[i].itemtype$ is the value of the discount)	All	The discount assigned to this line item. Only printed when Print Discounts in separate column option is checked in Invoice Customization .

Subtotals Area

Field	Default Label	Placeholder or Value in Default Template	Invoice, Credit Memo, Sales Order, or Purchase Order	Description
Shipping and Handling	Shipping	$\{record.shippingcost\}$	All	Sum of the shipping cost and the handling cost (excluding VAT).
Header Discounts	Invoice Discount	$\{record.discounttotal\}$	All	Transaction discount as entered into discount body field.
Exchange Rate	Exchange Rate	$\{record.exchangerate\}$	All	This amount is displayed if the transaction is in a foreign currency. Foreign currency is converted to the base currency.
Tax Total	VAT or TAX or GST Amount	$\{record.taxtotal\}$	All	This amount includes VAT, TAX or GST on discounts and additional costs (like shipping and handling).
GST/HST	GST or HST	$\{record.taxtotal\}$	All	This amount includes the tax amount attributed to GST or HST. This is specific for Canada nexus.
PST	PST	$\{record.tax2total\}$	All	This amount includes the tax amount attributed to PST. This is specific for Canada nexus.
Amount Due	Amount Due	$\{record.amountremaining\}$	Invoice	The remaining amount to be paid in the invoice. This will only be printed if there already has been some amount paid on the invoice. If the due amount equals the total amount, this placeholder will not be used.
VAT or TAX or GST Summary	VAT or TAX or GST Summary	VAT or TAX or GST %: $\{tax.taxrate\}$ Net Amount: $\{exchrate\}$ * $\{tax.taxbasis\}$	All	This table indicates the amounts with applied tax rates. This table contains one line per each tax rate in the VAT % column. For each rate, you will also see the net amount,

Field	Default Label	Placeholder or Value in Default Template	Invoice, Credit Memo, Sales Order, or Purchase Order	Description
		VAT or TAX or GST Amount: $\${\text{exchrte}} * \${\text{tax.taxamount}}$ Amount incl. VAT or TAX or GST: $\${\text{exchrte}} * (\${\text{tax.taxbasis}} + \${\text{tax.taxamount}})$		VAT amount, and the total amount including VAT.  Note: To display VAT Summary of an individual item's VAT in a template, check the Display Components on Transactions box under the Purchasing/Inventory subtab on the Item Group page.  Note: For the VAT %, VAT Amount and Amount incl. VAT columns, VAT is replaced with one of the following tax types based on the type of tax selected in a subsidiary: ■ GST ■ VAT ■ TAX
Subtotal	Subtotal	$\${\text{record.subtotal}}$	All	The sum of all invoice lines. If any line discounts exist, they are already reflected in the subtotal.
Total (excluding VAT)	Total (exc. VAT)	$\${\text{record.total}}$ minus $\${\text{record.taxtotal}}$	All	Sum of the subtotal, shipping and handling costs, and the discounts (excluding VAT).
Total	Total	$\${\text{record.total}}$	All	The total invoice, credit memo, or sales order amount. The same value is also displayed in the Header area of the template.

Notes Area

Field	Default Label	Placeholder or Value in Default Template	Invoice, Credit Memo, Sales Order, or Purchase Order	Description
Method of Payment	Method of Payment:	$\${\text{record.custbody_alf_mop}}$	All	The method of payment used for this invoice, credit memo, or sales order. To learn more about setting the methods of payment in the Advanced Localization Features SuiteApp, see Method of Payment .

Field	Default Label	Placeholder or Value in Default Template	Invoice, Credit Memo, Sales Order, or Purchase Order	Description
Payment Reference	Payment Reference:	\${record.custbody_alf_payment_reference}	Invoice, sales order, and purchase order	A specific reference that your customer should add to the payment. It is sourced from the Invoice Configuration subtab of the Invoice record.
Payment Terms	Payment Terms:	\${record.terms}	Invoice	The payment terms that apply to this invoice. They are sourced from the Billing subtab of the Invoice Record.
Installment Number	Installment Number	—	Invoice	The installment number of the installment payment term.
Amount	Amount	—	Invoice	The installment amount of the installment payment term.
Due Date	Due Date	—	Invoice	The installment due date of the installment payment term.
Due Amount	Due Amount	—	Invoice	The installment due amount of the installment payment term.
Status	Status	—	Invoice	The installment status of the installment payment term.
Payment Discount Amount	Payment Disc. Amount:	\${record.discountamount}	Invoice	The discount amount. This will only be printed if the discount amount is filled for this invoice.
Payment Discount Date	Payment Disc. Date:	\${record.discountdate}	Invoice	The discount date. This will only be printed if the discount date is filled for this invoice.
Tax Compliance Text	—	\${record.custbody_alf_tax_compliance_text}	All	The tax-related text to be printed on this invoice, credit memo, or sales order. To learn more about creating the tax compliance texts in the Advanced Localization Features SuiteApp, see Tax Compliance Text .
Invoice/Credit Memo Notes	—	\${subsidiary.custrecord_alf_custom_notes}	Invoice and credit memo	The subsidiary-related notes. This text is sourced from the Subsidiary record (Invoice Configuration subtab). For more information, see List of Fields Added to the Subsidiary Record .
Sales Order Notes	—	\${subsidiary.custrecord_alf_so_notes}	Sales Order	The subsidiary-related notes. This text is sourced from the Subsidiary record (Invoice Configuration subtab). For more information, see List of Fields Added to the Subsidiary Record .
Proforma Invoice Notes	—	\${subsidiary.custrecord_alf_proforma_notes}	Sales Order	The subsidiary-related notes. This text is sourced from the subsidiary record (Invoice Configuration subtab). For more information, see List of Fields Added to the Subsidiary Record .
Purchase Order Notes	—	\${subsidiary.custrecord_alf_po_notes}	Purchase Order	The subsidiary-related notes. This text is sourced from the subsidiary record (Invoice Configuration subtab). For

Field	Default Label	Placeholder or Value in Default Template	Invoice, Credit Memo, Sales Order, or Purchase Order	Description
				more information, see List of Fields Added to the Subsidiary Record .
Late Payment Note	Late Payment:	<code>\${subsidiary.custrecord_alf_notes_late_pay}</code>	Invoice	Notes regarding the late payment policy of this subsidiary. This text is sourced from the Subsidiary record (Invoice Configuration subtab). Field not translated. For more information, see List of Fields Added to the Subsidiary Record .
No prompt payment discount applies	No payment discount	<code>\${subsidiary.custrecord_alf_no_payment_discount_applies}</code>	Invoice	Note added if no discount applies to invoice. Automatically added upon checking the Print Note if There's no Payment Discount box is checked. This text is sourced from the Subsidiary record (Invoice Configuration subtab). Field not translated. For more information, see List of Fields Added to the Subsidiary Record

Quick Response Code

The Quick Response (QR) code on the ALF invoice PDF/HTML file enables the customers to scan and access additional details related to the invoice. You can also add payment resources using a QR code.

To include QR code on an invoice template, the hidden transaction body field **custbody_alf_qr_code** must be populated to have QR code on the generated Invoice PDF file. Users can populate the field using scripts or workflows

Here is the code sample with the QR code string:

```

1  // Add additional code
2  ...
3
4  function getQRCodeString(data) {
5      //write QR Code generation logic and return QR string
6  }
7
8  // Load a Invoice
9  var invRecord = record.load({
10     type: record.Type.INVOICE,
11     id: 1,
12     isDynamic: true,
13 });
14
15 var qrCodeString = getQRCodeString(data);
16
17 // Set the field
18 invRecord.setValue('custbody_alf_qr_code',qrCodeString);
19 // Save the record
20 invRecord.save();
21 ...
22

```

For assistance on QR code string details, contact NetSuite Technical Support.

Note: The QR Code feature is available only for ALF Invoice template.

Footer Area

Note: If the fields are left unpopulated, they will not be included in the printout.

Field	Default Label	Placeholder or Value in Default Template	Invoice, Credit Memo, Sales Order, or Purchase Order	Description
Bank Details	—	\${record.custbody_alf_bank_det_to_print} or \${record.custbody_alf_bank_det_dd_details}	All	Company bank details or direct debit details to be printed on this transaction. To be used by the customer when processing a payment. To learn more about setting the transaction bank details in the Advanced Localization Features SuiteApp, see Transaction Bank Details .
Company Details	—	\${subsidiary.mainaddress.addrphone} \${subsidiary.fax} \${subsidiary.email} \${record.subsidiary.url}	All	The phone number, the fax number, the email address, and the web site of the company that issued the transaction.
Other Legal Info	—	\${record.custbody_alf_subsidiary_address}	All	Additional information to be printed (typically, it can be the legal information of this company's tax registration). For more information, see List of Fields Added to the Subsidiary Record .
Share Capital	Share Capital:	\${subsidiary.custrecord_alf_share_capital}	All	The value and the currency of the company share capital. For more information, see List of Fields Added to the Subsidiary Record .
Managing Director	Managing Director:	\${subsidiary.custrecord_alf_managing_director}	All	Name of the managing director of this company. For more information, see List of Fields Added to the Subsidiary Record .
SIC Code	SIC Code:	\${subsidiary.custrecord_alf_sic_code}	All	The Standard Industrial Classification (SIC) code of this company. For more information, see List of Fields Added to the Subsidiary Record .
Page Numbering	—	—	All	A counter for numbering the pages of this invoice, credit memo, or sales order.

Roles and Permissions Setup for Advanced Localization Features

To use the Advanced Localization Features SuiteApp, you should perform several steps related to NetSuite roles and permissions.

Note that you need no additional permissions if you want to use the advanced PDF/HTML templates (for invoices, credit memos, and sales orders) delivered by the Advanced Localization Features SuiteApp. The permissions are only required to access the additional features that work in conjunction with the templates. However, since these additional features improve the templates significantly (making them available for customizations), you should prefer to use them.

Permission	Description	Activation	Minimum Level
Customize Document Template	This page serves as the single place where you can view or edit all Advanced Localization Features SuiteApp settings. Activating this permission simplifies SuiteApp use therefore you should activate this permission. To access the page, go to Setup > Accounting > Customize Document Template.	1. Go to Customization > Scripting > Script Deployments (filter out the Suitelet script type and make sure the Show Undeployed box is selected). 2. In the list, locate the customdeploy_alf_su_configuration script, and click the corresponding Edit link. 3. In the Audience subtab, select the role that you would like to give access to the Customize Document Template page (click the name of the role while pressing the Ctrl key). 4. Click Save.	-
Subsidiary Restrictions	The Subsidiary-specific Setup subtab of the Customize Document Template page displays only those subsidiaries your role can access.	1. Go to Setup > Users/Roles > User Management > Manage Roles. Locate the role that you would like to adjust the subsidiary restrictions for, and click the corresponding Edit or Customize link. The system displays a page that lets you edit the role. 2. In the Subsidiary Restrictions, adjust the Accessible Subsidiaries settings (All/Active/User Subsidiary/Selected). 3. Click Save.	-
Manage Translation	Enables you to create and edit notes and labels in the Labels & Notes subtab of the Customize Document Template page. For more information, see Labels and Notes Customization.	1. Go to Setup > Users/Roles > User Management > Manage Roles. Locate the role that you would like to grant this permission to, and click the corresponding Edit or Customize link. The system displays a page that lets you edit the role. 2. On the Permissions subtab of the Role page, select the Setup subtab.	-

Permission	Description	Activation	Minimum Level
		3. Select Manage Translation and click Add. 4. Click Save.	
Tax Compliance Text	Displays the Tax Compliance Text subtab of the Customize Document Template page and gives you access to the Tax Compliance Text record (Lists > Accounting > Tax Compliance Text). You can use this tab/record to print a text on the transaction depending on your tax/VAT scenario (for example, reverse charge text). For more information, see Tax Compliance Text.	1. Go to Setup > Users/Roles > User Management > Manage Roles. Locate the role that you would like to grant this permission to, and click the corresponding Edit or Customize link. The system displays a page that lets you edit the role. 2. On the Permissions subtab of the Role page, select the Custom Record subtab. 3. Select Tax Compliance Text, choose a permission level for it, and click Add. 4. Click Save.	View
Transaction Bank Details	Displays the Bank Details subtab of the Customize Document Template page and gives you access to the Transaction Bank Details record (Lists > Accounting > Transaction Bank Details). For more information, see Transaction Bank Details.	1. Go to Setup > Users/Roles > User Management > Manage Roles. Locate the role that you would like to grant this permission to, and click the corresponding Edit or Customize link. The system displays a page that lets you edit the role. 2. On the Permissions subtab of the Role page, select the Custom Record subtab. 3. Select Transaction Bank Details, choose a permission level for it, and click Add. 4. Click Save.	View
Method of Payment	Displays the Method of Payment subtab of the Customize Document Template page and gives you access to the Method of Payment record (Lists > Accounting > Method of Payment). For more information, see Method of Payment.	1. Go to Setup > Users/Roles > User Management > Manage Roles. Locate the role that you would like to grant this permission to, and click the corresponding Edit or Customize link. The system displays a page that lets you edit the role. 2. On the Permissions subtab of the Role page, select the Custom Record subtab. 3. Select Method of Payment, choose a permission level for it, and click Add. 4. Click Save.	View
ALF Printing Configuration	This custom record can be accessed only by using SuiteScript, not from NetSuite. This permission	1. Go to Setup > Users/Roles > User Management > Manage Roles. Locate the role that you would	Edit

Permission	Description	Activation	Minimum Level
	enables the Preview PDF and Print a PDF Copy buttons for sales orders, invoices, and credit memo transactions.	like to grant this permission to, and click the corresponding Edit or Customize link. The system displays a page that lets you edit the role. - On the Permissions subtab of the Role page, select the Custom Record subtab. - Select ALF Printing Configuration, choose a permission level for it, and click Add. - Click Save.	

Standard NetSuite Roles and Default Permissions

The Advanced Localization Features SuiteApp assigns default permission levels to certain standard NetSuite roles after installation. These levels enable them to access several custom records delivered by the Advanced Localization Features SuiteApp. If necessary, you can adjust these levels.

The following table lists the standard NetSuite roles and their default permission levels:

Record / Permission Level	Edit	Full
Customize Document Template page (Setup > Accounting > Customize Document Template)	-	- Administrator - CFO
ALF Printing Configuration	-	- Accountant - Administrator - A/R Clerk - CFO
Tax Compliance Text (Lists > Accounting > Tax Compliance Text)	-	- Accountant - Administrator - CFO
Transaction Bank Details (Lists > Accounting > Transaction Bank Details)	-	- Accountant - Administrator - A/R Clerk - CFO
Method of Payment (Lists > Accounting > Method of Payment)	-	- Accountant - Administrator - A/R Clerk - CFO

ALF Additional Features and Configuration

The main feature delivered by the Advanced Localization Features SuiteApp consists of the advanced PDF/HTML templates for the following transactions. The templates comply with tax regulations and meet

common business needs of NetSuite users. To learn more about these templates, see [Setting Up the Advanced Localization Features Templates](#).

- Invoices
- Credit Memos
- Sales Orders
- Purchase Orders
- Transfer Orders
- Item Receipts

This main feature is enhanced by several additional features. They work in conjunction with the PDF/HTML templates, making them available for customizations. Note that the additional features only work with the templates provided by this SuiteApp and don't automatically interact with any other existing invoice, credit memo, sales order, or purchase order layout.

Configure and adjust additional features of the Advanced Localization Features SuiteApp using the Customize Document Template page (Setup > Accounting > Customize Document Template).

For more information, see the following topics describing new features, records, and fields added to your NetSuite account by the Advanced Localization Features SuiteApp:

- [New Fields on Subsidiary, Customer, and Vendor Records](#)
- [Transaction Bank Details](#)
- [Method of Payment](#)
- [Tax Compliance Text](#)
- [Color Scheme and Layout](#)
- [Labels and Notes Customization](#)
- [Printing Preferences](#)
- [Adding External Labels](#)
- [Invoice Locking](#)

Note: Installing the Advanced Localization Features SuiteApp also enhances the process of printing your transactions. It enables you to print transaction drafts and to view the printing history of every transaction having the original copy of the printed transaction and all subsequent copies. For more information, see [Printing Transactions](#).

New Fields on Subsidiary, Customer, and Vendor Records

The Advanced Localization Features SuiteApp adds several new fields to subsidiary, customer, and vendor records.

Note: The fields will only be used by the ALF invoice, credit memo, proforma, sales order, or purchase order PDF/HTML templates. The templates don't automatically work with standard templates or other custom templates. For more information, see [Setting Up the Advanced Localization Features Templates](#).

- To access the Subsidiary record, go to Setup > Company > Classifications > Subsidiary and edit one of your existing subsidiaries. Fields added to this record are located under the **Invoice Configuration** subtab. To learn more, see the help topic [Creating Subsidiary Records](#) or [Editing Subsidiary Records](#).
You can also use the Customize Document Template page to adjust the content of these fields for already existing subsidiaries. Go to Setup > Accounting > Customize Document Template and click the Subsidiary-specific Setup subtab.

- To access the customer record, go to Lists > Relationships > Customers and either create a new customer or edit an existing one. Fields added to this record are located under the **Invoice Configuration** subtab. Use these fields to override any settings that newly-created customer records inherit from their assigned subsidiary.
- To access the vendor record, go to Lists > Relationships > Vendors and either create a new vendor or edit an existing one. Fields added to this record are located under the **Invoice Configuration** subtab. Use these fields to override any settings that newly-created vendor records inherit from their assigned subsidiary.

List of Fields Added to the Subsidiary Record

Field	Description
Print VAT Summary in Base Currency	If you check this box, the VAT summary on the PDF printout of an invoice, credit memo, sales order, or purchase order issued in foreign currency will be printed in your base currency (that is, the currency selected for this subsidiary).
Print "Bill To" on Right (For Envelope Format)	The "Bill To" (customer or vendor address) section is printed to the left side of invoices, credit memos, sales orders, or purchase orders by default. Check this box to print it on the right side instead (for this subsidiary). Adjust this setting based on the envelope type used in individual countries.
Mark Documents as Copy or Duplicate	Use this box to allow marking printed invoices, credit memos, sales orders, and purchase orders as duplicates or copies. Each time you print an invoice, credit memo, sales order, or purchase order after its original has already been printed, the Duplicate mark appears on it. Similarly, printing using the Print a PDF Copy button adds a Copy mark on the printout. Leaving this box unchecked turns off this marking and hides the Print a PDF Copy button, while leaving all other functions unchanged. Box checked by default.
Print Note if There's No Payment Discount	Use this box to add a note to be printed on your invoice if no payment discount is available for the payment. Box unchecked by default.
Hide Total Incl. VAT Column	Use this box to hide the Total incl. VAT (Gross Amount) column in the Item Detail section of printed documents created under the selected subsidiary. The selected value for this preference on a Subsidiary record will default into all newly created customer or vendor records that have this subsidiary set as a Primary subsidiary. Box unchecked by default.
Invoice/Credit Memo Notes	Enter any additional notes to be printed in the memo section of the printed invoice or credit memo. For example, you can highlight changes in contact or bank details or specify payment references. Text is not translated for the printout.
Sales Order Notes	Enter any additional notes to be printed in the Memo section on the sales order. You can describe any changes to the contact or bank details, or specify payment references. The notes will only appear on printed sales orders that use the ALF Sales Order PDF/HTML Template. Text is not translated for the printout.
Proforma Invoice Notes	Enter any additional notes to be printed in the Memo section on the proforma invoice. You can describe any changes to the contact or bank details, or specify payment references. The notes will only appear on printed proforma invoices that use the ALF Pro Forma invoice PDF/HTML Template. Text is not translated for the printout.
Purchase Order Notes	Enter any additional notes to be printed in the Memo section on the purchase order. You can describe any changes to the contact or bank details, or specify payment references. The notes will only appear on printed purchase orders that use the ALF Purchase Order PDF/HTML Template. Text is not translated for the printout.

Field	Description
Transfer Order Notes	Enter any additional notes to be printed in the Memo section on the transfer order. You can describe any changes to the contact or bank details, or specify payment references. The notes will only appear on printed transfer orders that use the ALF Transfer Order PDF/HTML Template. Text is not translated for the printout.
Late Payment Note	Enter any notes regarding your late payment policy. Text is not translated for the printout.
Other Legal Info	Enter any additional information to be printed on your transaction. For example, this could be the legal information of your company's tax registration. Text is not translated for the printout.
Managing Director	Enter the name of the managing director of your company (or subsidiary). If it is necessary to enter multiple names, separate them by commas.
Share Capital	Enter the value and the currency of your share capital (for example EUR 25 000).
SIC Code	Enter the Standard Industrial Classification (SIC). This is a four-digit code to identify the industry a company belongs to.
Transaction Bank Details	Use this field to assign a Transaction Bank Details record to this subsidiary. The content of this record will be used on printed transaction forms. If required, this value can also be modified at customer, vendor or transaction level. For more information, see Transaction Bank Details.
Default Invoice Language	Use this dropdown list to select a language that will become the default preferred language for every customer or vendor newly assigned to this subsidiary. This determines the language used on printed transaction forms. You can view (or manually change) each customer's preferred language on the Customer record. Use the Language dropdown menu under the Preferences subtab.  Note: You can't set preferred language on the vendor record.
Lock Invoice	Use this dropdown list to set the invoice locking level for this subsidiary. For more information, see Invoice Locking .
Company Registration Number	Use this field to enter a registration number for this subsidiary. For example, you can use the Chamber of Commerce registration number, SIRET, or HVB number. Don't enter the VAT registration number into this field. There is a separate field for it in the system.  Note: This field is not located under the Invoice Configuration subtab (or any other subtab). You can find it among the main subsidiary fields (such as Name or Language).
Tax Type	Use this field to customize regional tax terminology, by choosing from any of the following tax types: ■ VAT ■ TAX ■ GST

List of Fields Added to the Customer or Vendor Record

Note: Installing Advanced Localization Features will not overwrite existing customer or vendor records. For newly-created customer or vendor records, the content of these fields is inherited from the subsidiary that the customer or vendor is assigned to. However, you can also adjust these settings at customer or vendor level, if necessary.

Field	Description
Default Method of Payment	Specify the method of payment (direct debit, bank transfer, cheque, and so on) that will be used on all invoices, credit memos, sales orders, and purchase orders for this customer or vendor. Note that this setting can be modified at transaction level. For more information, see Method of Payment.
Company Registration Number	Use this field to enter a registration number for this customer. For example, you can use the Chamber of Commerce registration number, SIRET, or HVB number. Don't enter the VAT registration number into this field. There is a separate field for it in the system. Note: This field is not located under the Invoice Configuration subtab (or any other subtab). You can find it among the main subsidiary fields (such as Name or Language).
Hide Total Incl. VAT Column	Use this box to hide the Total incl. VAT (Gross Amount) column in the Item Detail section of printed documents created under the selected customer or vendor. Box unchecked by default.
Transaction Bank Details	Use this field to assign a Transaction Bank Details record to this customer or vendor. The content of this record will be used on printed transaction forms. If required, this value can also be modified at transaction level. For more information, see Transaction Bank Details.
Save Printed PDFs	Check this box to save the printed PDFs of transactions. You can access the PDF files from the Printing History subtab of a customer's transactions. All the printed PDFs are saved in the File Cabinet.
EORI	Use this field to enter the Economic Operators Registration and Identification (EORI) number that is assigned to importers and exporters by the customs. The EORI number is required for importing and exporting goods between UK and European Union (EU). Note: EORI field is available only on the customer record and not on the vendor record. This field is not available on the custom forms by default. You must customize the custom forms to add the EORI field.

Selecting Logos for PDFs of Transactions

In NetSuite, you can use the Subsidiary record to select the logo image to be used on all transactions.

To set the logo you want displayed on PDFs of transactions, select from the **Subsidiary Logo (Forms)** field.

 **Note:** The logo size is calculated when the subsidiary information is saved.

Transaction Bank Details

Every Transaction Bank Details record contains several fields. The content of some of these fields is printed on invoices, credit memos, sales orders, or purchase orders if you're using the PDF/HTML templates provided by the Advanced Localization Features SuiteApp. The purpose of other fields is to provide additional configuration such as assigning the Transaction Bank Details record to a certain subsidiary only.

Transaction Bank Details records can be assigned at subsidiary, customer, or vendor level. You can also assign it to individual transactions.. For more information, see [New Fields on Subsidiary, Customer, and Vendor Records](#).

To assign Transaction Bank Detail records to individual transactions:

1. Go to an Invoice, Credit Memo, Sales Order, or Purchase Order page.
2. Select the **Invoice Configuration** subtab.
3. Select a record from the **Transaction Bank Details**.
4. Click **Save**.

For more information, see the following help topics:

- [Creating an Invoice](#)
- [Customer Credit Memos](#)
- [Creating a Sales Order](#)
- [Entering a Purchase Order](#)

The default Transaction Bank Details record is always inherited from a higher instance. This means that if you assign a certain Transaction Bank Details record to a subsidiary, it'll be automatically used for all newly-created customers or vendors of this subsidiary and their transactions. If you want some customer, vendor or transaction to use different bank details, you must go to that customer, vendor or transaction record and change them manually.

Similarly, if you assign a Transaction Bank Details record to a customer or vendor, the record can be automatically used on all newly-entered invoices, credit memos, sales orders, and purchase orders for this customer or vendor. If no Transaction Bank Details record is assigned to the customer or vendor, then the value will be retrieved in the following order:

1. The value is retrieved from the matching transaction bank details record with same subsidiary and currency as mentioned in the transaction.
2. If more than one bank details or duplicate records are found, then the value is retrieved from subsidiary record.
3. If no value is found, then the value is retrieved from subsidiary record.

However, for conditions 2 and 3 you can override the derivation at the transaction level.

To create a new Transaction Bank Details record, go to Setup > Accounting > Customize Document Template, select the Bank Details subtab, and click the **New Bank Details** button. The Bank Details subtab also displays all already existing Transaction Bank Details records. You can view or edit them. Use the respective links.

Alternatively, you can access these records without using the Customize Document Template page. In that case, go to Lists > Accounting > Transaction Bank Details.

The Transaction Bank Details record contains the following fields:

Field	Description
Name	Enter a name for this Transaction Bank Details record to easily identify the bank details to be selected for subsidiaries, customers, vendors, or transactions. Examples: UK Subsidiary GBP account UK Subsidiary EUR account
Subsidiary	Use this field to select the subsidiary that these bank details will be available for.
Transaction Currency	Use this field to select the transaction currency that these bank details will be available for.
Bank Details to Print	Enter the text that will be printed on transactions assigned to this Transaction Bank Details record. Note that it'll not be translated. Example: Please remit payment to: IBAN ING12NL12345678 BIC INGB0333 Note that in the Method of Payment dropdown list on the transaction record (in the Invoice Configuration subtab), the following option for Print on invoice, credit memo, sales order, or purchase order must be selected: Bank Details. Otherwise, this text will not be printed. For more information, see Method of Payment.
Direct Debit Details to Print	Enter the text that will be printed on transactions assigned to this Transaction Bank Details record. Note that it'll not be translated. Example: Payment will be taken automatically from your account 14 days after this invoice. Note that in the Method of Payment dropdown list on the transaction record (in the Invoice Configuration subtab), the following option for Print on invoice, credit memo, sales order, or purchase order must be selected: Direct Debit. Otherwise, this text will not be printed. For more information, see Method of Payment.
IBAN	Enter the International Bank Account Number for this Transaction Bank Details record. The content of this field can be used if more detailed and structured information is required (like in electronic invoicing). Text is not printed in an invoice, credit memo, sales order, or purchase order.
BIC	Enter the Bank Identifier Code for this Transaction Bank Details record. The content of this field can be used if more detailed and structured information is required (like in electronic invoicing). Text is not printed in an invoice, credit memo, sales order, or purchase order.
Local Bank Account	Enter the local bank account for this Transaction Bank Details record. The content of this field can be used if more detailed and structured information is required (like in electronic invoicing).

Field	Description
	Text is not printed in an invoice, credit memo, sales order, or purchase order.
Local Branch Code	Enter the local branch code for this Transaction Bank Details record. The content of this field can be used if more detailed and structured information is required (like in electronic invoicing). Text is not printed in an invoice, credit memo, sales order, or purchase order.

Method of Payment

The Method of Payment record enables you to specify the content of the Transaction Bank Details record to be used on printed transaction forms separately for invoices, credit memos, sales orders, and purchase orders. It also indicates to the customer or vendor how the payment should be made: by direct debit, bank transfer, cheque, and so on.

Method of Payment records can be assigned to individual customers, vendors or transactions.

- Go to a Customer or Vendor page, click the Invoice Configuration subtab, and select a record from the **Default Method of Payment** list. To learn more about accessing this page, see the help topic [Customers](#) or [Vendors](#).
- Go to an Invoice, Credit Memo, Sales Order, or Purchase Order page, click the Invoice Configuration subtab, and select a record from the **Method of Payment** list.

To learn more about accessing these pages, see the following help topics:

- [Creating an Invoice](#)
- [Customer Credit Memos](#)
- [Creating a Sales Order](#)
- [Entering a Purchase Order](#)

If you assign a certain Method of Payment record to a customer or vendor, it'll be automatically used on all invoices, credit memos, sales orders, and purchase orders for this customer or vendor. However, you can still override this setting at transaction level.

To create a new Method of Payment record, go to Setup > Accounting > Customize Document Template, select the Methods of Payment subtab, and click the **New Method of Payment** button. The Methods of Payment subtab also displays all already existing Method of Payment records. You can view or edit them. Use the respective links.

Alternatively, you can access these records without using the Customize Document Template page. In that case, go to Lists > Accounting > Method of Payment.

The Method of Payment record contains the following fields:

Field	Description
Name	Enter a name for this method of payment (for example Bank Transfer or Direct Debit).
Print on Invoice	Use this dropdown menu to select the content to be printed on every invoice with this method of payment assigned to it. To adjust the texts, edit one of your Transaction Bank Details records (or create a new one). To learn more, see Transaction Bank Details . ■ Bank details – Select this option if you want the content of the Bank Details to Print field to be printed. ■ Direct Debit Details – Select this option if you want the content of the Direct Debit Details to Print field to be printed. ■ Don't Print – Select this option if you don't want the Bank Details nor Direct Debit Details to be printed on an invoice assigned to this method of payment.

Field	Description
Print on Credit Memo	Use this dropdown menu to select the content to be printed on every credit memo with this method of payment assigned to it. To adjust the texts, edit one of your Transaction Bank Details records (or create a new one). To learn more, see Transaction Bank Details. ■ Bank details – Select this option if you want the content of the Bank Details to Print field to be printed. ■ Direct Debit Details – Select this option if you want the content of the Direct Debit Details to Print field to be printed. ■ Don't Print – Select this option if you don't want the Bank Details nor Direct Debit Details to be printed on a credit memo assigned to this method of payment.
Default	Check this box to make this your default method of payment. When creating a new customer (Lists > Relationships > Customers > New) or a new vendor (Lists > Relationships > Vendors > New), this method will be the default value selected in the Default Method of Payment dropdown list (in the Invoice Configuration subtab). You can only use one default method of payment at the same time.

Tax Compliance Text

If you're using either or [SuiteTax](#) in your NetSuite account, you can apply the Tax Compliance Text records to add various tax-related texts to be printed on your invoices, credit memos, sales orders, or purchase orders.

Every Tax Compliance Text record consists of the text itself and several conditions (filters) for this text to be printed. This text will be printed on every invoice, credit memo, sales order, or purchase order but only if all specified conditions are met.

To create a new Tax Compliance Text record, go to Setup > Accounting > Customize Document Template, select the Tax Compliance Text subtab, and click the **New Tax Compliance Text** button. The Tax Compliance Text subtab also displays all already existing Tax Compliance Text records. You can view or edit them. Use the respective links.

Alternatively, you can access these records without using the Customize Document Template page. In that case, go to Lists > Accounting > Tax Compliance Text.

The Tax Compliance Text record contains the following required field:

Field	Description
Text to Print	Enter the tax-related text. It'll be printed on your invoice, credit memo, sales order, or purchase order if all defined conditions are met.

The optional fields (filters) are as follows:

Field (Filter)	Description
Language	Use this filter to specify the language in which the text is defined. Note the text in the Text to Print field must also be in this language. The setting must match customer or vendor, transaction, or subsidiary language setting.
Nexus	Use this filter to specify the nexus that the tax compliance text should apply to.
Tax Code	Use this filter to specify the tax code that the tax compliance text should apply to.
Tax Transaction Type	This option is only applicable if you're using SuiteTax (otherwise, this field is not visible). Use this filter to specify the tax transaction type that the tax compliance text should apply to.
Tax Item Type	This option is only applicable if you're using SuiteTax (otherwise, this field is not visible). Use this filter to specify the tax item type that the tax compliance text should apply to.

Color Scheme and Layout

With the Advanced Localization Features SuiteApp, you can customize the background and text colors used in your printed invoices, credit memos, sales orders, and purchase orders, and adjust the layout.

To do so, go to Setup > Accounting > Customize Document Template and edit the following fields in the upper part of the screen:

Field	Description
Primary Color	Use this field to set the primary color of your invoice, credit memo, sales order, or purchase order. This color will be used to highlight headers and other important sections of your transaction. Enter the hex code of the color into this field. The default value is #E9E9E9 (light gray). You can preview the selected color in a frame next to this field. Also, note that a color based on the primary color (with 15% of its opacity) will be automatically used in your printed invoice, credit memo, sales order, or purchase order to highlight alternate rows.
Footer Color	Use this field to set the color for the footer of an invoice, credit memo, sales order, or purchase order. Enter the hex code of the color into this field. The default value is #E9E9E9 (light gray). You can preview the selected color in a frame next to this field.
Contrasting Text for Primary Color	Use this field to select the color of text printed in areas using primary color as a background. It can be either black or white (the default value is black). You should use the white font option when the primary color is too dark, to achieve necessary contrast.
Contrasting Text for Footer Color	Use this field to select the color of text printed in the footer. It can be either black or white (the default value is black).
Print Discounts in a Separate Column	If you check this box, line discounts will be displayed in a separate Discounts column along with the line item the discount is applied to. If you leave this box unchecked, discounts will be displayed as standalone line items.

Labels and Notes Customization

The Advanced Localization Features SuiteApp delivers a set of default texts (for each supported language) to be used in your printed invoices, credit memos, sales orders, or purchase orders. You can access this text from Setup > Accounting > Customize Document Template. Click **Labels & Notes** subtab to view the **Default Text** column. If you want to see the default text in different languages, you can switch between them using the **Languages** list. You can enable Customization for a particular language by adding the preferred language in the **Language** subtab by going to Setup > Company > General Preferences.

You can also provide translations to custom values provided for subsidiary text fields.

If you have the Manage Translations permission, you can also replace the default text with your custom text. You can add custom texts on the **Labels & Notes** subtab in the following locations:

- On the **Labels & Text** sublist, in the **Custom Text** field, you can add a text up to 200 characters.
- On the **Notes** sublist, in the **Custom Notes** field, you can add a text up to 4000 characters.

 **Note:** **Notes** subtab includes only translatable subsidiary fields.

The SuiteApp uses the following sequence to display custom text on the printed transactions:

- The notes added in the **Custom Notes** field under **Notes** subtab.
- If the **Custom Notes** field is empty, the SuiteApp uses the text added in the **Custom Text** field under **Labels & Text** subtab.

3. If the **Custom Text** field is empty, the SuiteApp uses the default notes added in the **Subsidiary-specific Setup** subtab.

Note: For every language, you must add the custom text separately. After you're done adding the custom text, click the **Save** button or the **Reset** button to discard all your changes.

If you don't have the Manage Translations permission, you can only view custom text and labels, but you're not allowed to edit them. If you need to edit custom text, ask your account administrator to grant you this permission.

Note: Language of the e-mail is determined by customer language preferences in Customer record. For more information, see the help topic [Setting Preferences on the Customer Record](#).

To print the invoices, credit memos, or sales orders transactions in customer's preferred language, select **Print in Customer's Locale** from the **Print** list. Print language will be taken from the customer record.

To print purchase order transactions in subsidiary specific language, select **Print in Customer's Locale** from the **Print** list. Print language will be retrieved from the subsidiary record.

Purchase order transactions can be printed only in NetSuite supported languages.

You can also use the custom **Print in Customer's Locale** button to print the invoice, credit memo, or sales order transactions in the customer's preferred language. This button is displayed only if the **Print** list doesn't display the **Print in Customer's Locale** option.

To print the transaction in company's preferred language, select **Print**. Print language is taken from the company record. For more information, see the help topic [Setting Language Preferences](#).

Printing Preferences

The **Printing Preferences** subtab in the Customize Document Template page allows you to specify the watermark configuration on a printed transaction. You can define the number of copies to generate for a transaction record. The supported transaction types are invoice, a credit memo, a purchase order, and a sales order. The following fields are available on the **Printing Preferences** subtab:

■ Enable Multiple Copies

Check this box to allow printing of multiple copies of a transaction.

Clicking the **Preview PDF** or **PDF Copy** buttons applies the watermark settings from the **Printing Preferences** subtab, by replacing the default **Draft** and **Copy** watermarks.

For example, selecting **Duplicate** in the **Number of Copies with Watermark** field and clicking **Preview PDF** on transaction, generates two PDF copies with **Original** and **Duplicate** watermarks instead of **Draft**.

Note: When **Enable Multiple Copies** box is checked, the subsidiary level box **Mark Documents as Copy or Duplicate** on the transaction is not available.

■ Number of Copies with Watermark

Select the number of copies you want to print with the watermark. Following are the available options:

- **Original:** One copy of PDF is generated with the watermark as **Original**.
- **Duplicate:** Two copies of PDFs are generated, one with the watermark as **Original** and other with the watermark as **Duplicate**.
- **Triplicate:** Three copies of PDFs are generated, one with the watermark as **Original**, second copy with the watermark as **Duplicate**, and the third copy with the watermark as **Triplicate**.
- **Quadruplicate:** Four copies of PDFs are generated, one with the watermark as **Original**, second copy with the watermark as **Duplicate**, third copy with the watermark as **Triplicate**, and the fourth with the watermark as **Quadruplicate**.

 **Note:** **Number of Copies with Watermark** field is enabled only when you check the **Enable Multiple Copies** box.

■ Watermark Position

Select the position of the watermark on the printed PDF. Following are the available options:

- **Top Left**
- **Center**
- **Top Right**

Adding External Labels

The Map Reduce (MR) script deployment provisions the addition of custom or external labels on the transaction templates that are utilized by the different localization SuiteApps. This functionality helps the localization SuiteApps that consume ALF templates to customize and generate templates with the required labels along with the standard labels as per the business requirements.

You can use the Script Deployment page to deploy MR script from the NetSuite account that handles the deployments.

 **Note:** To perform the script deployment, your NetSuite account must have ALF SuiteApp installed.

To Deploy MR Script with External Labels:

1. Go to Customization > Scripting > Script Deployments.
2. From the script deployment records, select the script id **customdeploy_alf_mr_save_ext_labels** and click **Edit**.
3. On the Script Deployment page's **Parameters** subtab, enter the string data for the custom labels. Following is the sample string data:

```
[
{
label: "Test Field",
id: "custbody_test_field_${position}",
action: 'create'
},
{
label: "Test Field Modified",
```

```

id: "custbody_test_field_${position}",
action: 'update'
},
{
label: "Test Field",
id: "custbody_test_field_${position}",
action: 'delete'
},
{
label: "Test Field 1",
id: "custbody_test_field1_${position}"
}
]

```

- The **label** refers to the section of the template such as header or body.
- The **Id** parameter uses the respective field value.
- Following are the place holders for the placement of the content on the printed template:
 - 01 – Header position
 - 02 – Body position
 - 03 – Footer position
- The **Action** parameter refers to the accomplishment of the provided string.

Note: **Action** parameter is optional for creating a new field on the transaction template. Without the **Action** parameter, the default action that takes place is **Create**.

4. Click **Save and run** to run the MR script. This script deployment updates all the ALF templates (Invoice, Credit Memo, Sales Order, and Purchase Order) with the custom labels.

Invoice Locking

With the Advanced Localization Features SuiteApp, you can set the invoice locking level for each subsidiary. Invoice locking prevents you from editing an already approved or sent invoice.

To turn on the invoice locking for a certain subsidiary, go to Setup > Company > Classifications > Subsidiary and select a subsidiary. To learn more, see the help topic [Creating Subsidiary Records](#) or [Editing Subsidiary Records](#). Use the **Lock Invoice** dropdown list to select the locking level and click **Save**.

You can also view and adjust locking levels for existing subsidiaries using the Customize Document Template page.. Go to Setup > Accounting > Customize Document Template, click the Subsidiary-specific Setup subtab, and check the values in the Lock Invoice column.

The following locking levels are available:

- No Lock – No editing restrictions apply (the default setting).
- When Posting – Approved / GL impacting invoices can't be edited.
- When Submitted – Invoices printed and submitted (posted or emailed) to customers can't be edited.

If you try to edit a locked invoice, a warning message will be displayed and you will not be allowed to proceed.

Service Period

With the Advanced Localization Features SuiteApp, you can now print the service period start date and end date on an invoice of a billed service item. You can also choose to not print the service start date and end date on a printed invoice.

Before using the service period feature, you must do the following:

- Ensure Advanced Billing is enabled in your account.. To enable the feature, see the help topic [Enabling Advanced Billing](#).
- Make sure you fulfill the Advanced Localization Features SuiteApp requirements and prerequisites.

Important: The scope for service period date calculation is available in the Advanced Localization Features SuiteApp version 1.2 and above. This is supported for new sales orders created on or after the SuiteApp version 1.2 release on August 22, 2023. Any sales orders in pending approval status before the SuiteApp version 1.2 release is also included for service period date calculation. Sales orders which are in partially billed or approved statuses are not eligible for service period date calculation.

Important: The **Hide Service Periods** box is cleared by default and therefore the Service Period feature is enabled by default. To disable the Service Period feature manually, you must check the **Hide Service Periods** box under the **Invoice configuration** subtab on customer or subsidiary records.

You can also manually disable the Service Period feature for multiple subsidiaries.

To manually disable the Service Period feature for multiple subsidiaries:

1. From your Administrator account, go to Setup > Accounting > Customize Document Template.
2. Under the **Subsidiary-specific Setup** subtab, check the **Hide Service Periods** box for the required subsidiaries.
3. Click **Save**.

Note: The service period start dates and end dates are not printed on the billed invoices for the following conditions:

- If the invoices are not created from a sales order. For invoices that are not created from sales order, there is no service period calculation.
- If you clear the **Hide Service Periods** box after the billing of a service item.

Billing schedule is set to monthly recurrence for all transactions. For special dates, you must use the following dates format for the year 2020 as an example for calculating the service period date:

First Service Period Start Date	Current Service Period Start Date	Next Service Period Start Date
31.1.2020	29.2.2020	31.3.2020
30.1.2020	29.2.2020	30.3.2020
29.1.2020	29.2.2020	29.3.2020
28.2.2020	28.3.2020	28.4.2020

First Service Period Start Date	Current Service Period Start Date	Next Service Period Start Date
29.2.2020	29.3.2020	29.4.2020
1.1.2020	1.2.2020	1.3.2020

Note: When a sales order generated invoice with service items is deleted, then the next invoice generation starts with the first available date during the same period.

For example:

A sales order with service item has a monthly billing schedule starting from January. If the invoices are generated from January to April, and if you delete February month's invoice, then:

- The newly generated invoice takes the next available service dates of February.
- The invoice with the service items must have a billing schedule.

Printing Transactions

Note: Before printing any invoices, credit memos, sales orders, or purchase orders using the templates delivered by the Advanced Localization Features SuiteApp, make sure that the templates and individual features are properly configured. For more information, see [Setting Up the Advanced Localization Features Templates](#) and [ALF Additional Features and Configuration](#).

Note: Invoices, credit memos, and sales orders that are printed in Arabic and Hebrew languages are rendered in right-to-left direction.

Note: The printout type is always original for item receipt and transfer order prints.

Printing invoices, credit memos, sales orders, and purchase orders (as well as other records) is a native feature of NetSuite. To learn more, see the following help topics:

- [Printing an Invoice](#)
- [Printing a Customer Credit Memo](#)
- [Printing a Sales Order](#)
- [Printing a Single Purchase Order](#)
- [Printing a Transfer Order](#)
- [Printing an Item Receipt](#)
- [Printing a Commercial Invoice of an Item Fulfillment Record](#)

However, the Advanced Localization Feature SuiteApp enhances the printing capability by providing additional fields that can be printed on invoices, credit memos, sales orders, and purchase orders to support compliance or common business requirements.

Several new subtabs, buttons and transaction body fields have been added to every invoice, credit memo, sales order, and purchase order record.

The new subtabs are as follows:

- **Invoice Configuration** – Under this subtab, you can adjust print-related information for each particular invoice, credit memo, sales order, or purchase order. The following fields are available:
 - **Payment Reference** – Use this field to insert a reference that your customer or vendor should add to the payment. This is mainly used in cases when structured payment references are required.
 - **Transaction Bank Details** – Use this dropdown list to assign a Transaction Bank Details record to this transaction. Every Transaction Bank Details record contains different data to be printed on an invoice, credit memo, sales order, or purchase order. For more information, see [Transaction Bank Details](#).
 - **Method of Payment** – Use this dropdown list to assign a Method of Payment record to this transaction. The Method of Payment records specify the content of the Transaction Bank Details record for invoices or a credit memos. For more information, see [Method of Payment](#).
 - **Hide Total Incl. VAT Column**– Use this box to hide the Total incl. VAT (Gross Amount) column in the Item Detail section of printed invoice, credit memo, sales order, or purchase order.
- **Printing History** – Under this subtab, you can view the printing history of the transactions. The following columns are available:
 - **Printout Type** – Displays if the printout type is Original or a Copy.
 - **Date** – Displays the date and time of printing the transaction.
 - **Issued By** – Displays the name of the user printed the transaction.
 - **Printed PDFs** – Displays a link from which you can access and download a copy of the printed PDF files.

The **Printed PDFs** column is available only if you check the **Save Printed PDFs** box on the customer record.

Note: Every copy made by the **Print a PDF Copy** button is also recorded. However, drafts and duplicates are not listed here. For more information, see [Transaction Print Marks](#).

For invoices, credit memos, sales orders, and purchase orders printed using the script, the Issued By column in the table under this subtab contains the word System (instead of the issuer's name).

The set of available print-related buttons depends on the status of your invoice, credit memo, sales order, or purchase order:

Status	Status Description	Available Buttons	Button Description
Pending Approval	The invoice, credit memo, sales order, or purchase order is waiting to be approved.	Print	Prints the PDF and marks it as Draft.
		Preview PDF	Prints the PDF and marks it as Draft.
Approved	The invoice, credit memo, sales order, or purchase order has been approved but hasn't been printed yet (or there is no approval process).	Print	Prints the original PDF. A record is created under the Printing History subtab.
		Preview PDF	Prints the PDF and marks it as Draft.
Approved and Printed	The invoice, credit memo, sales order, or purchase order has already been printed (original record exists in the printing history).	Print	Prints the PDF. Marks it as Duplicate if Mark Document as Copy or Duplicate box is checked.
		Print a PDF Copy	Prints the PDF. Marks it as Copy if Mark Document as Copy or Duplicate box is checked.

Status	Status Description	Available Buttons	Button Description
			Duplicate box is checked. A record is created under the Printing History subtab.

The **EORI** transaction body field is used to enter the Economic Operators Registration and Identification (EORI) number that is assigned to importers and exporters by the customs. The EORI number is required for importing and exporting goods between UK and European Union (EU). This field is sourced from the customer record. If no value is available in the customer record, the value is retrieved from the subsidiary record.

Note: This field is not available on the custom form by default. You must customize the custom forms to add the **EORI** field.

Sending Transactions Through Email

You can send invoice, credit memo, sales order, and purchase order PDFs through email to your contacts.

To send PDF of a transaction record through email:

1. Go to a record.
2. To send an email, do any of the following:
 - From the **Actions** dropdown list, select **Email**.
 - On the **Communication** subtab, under **Messages** subtab, click **Email**.
3. On the **Recipients** subtab, from the **Recipient** field, select the contact you want to email the PDF file.
4. In the **Email** field, enter the recipient email address if the contact doesn't have one preset already.
5. On the **Attachments** subtab, check the **Include Transaction** box.
6. In the **Type** field, select **PDF** as format type.
7. Perform one of the following:
 - Enter other relevant details and click **Send**.
 - If you use the Mail Merge feature, click **Merge & Send**.

For more information, see the help topic [Working with Mail Merge](#).

For more information, see the help topic [Sending Email from Records](#).

Transaction Print Marks

Note: This feature is only available if you're using the advanced PDF/HTML templates provided by the Advanced Localization Features SuiteApp.

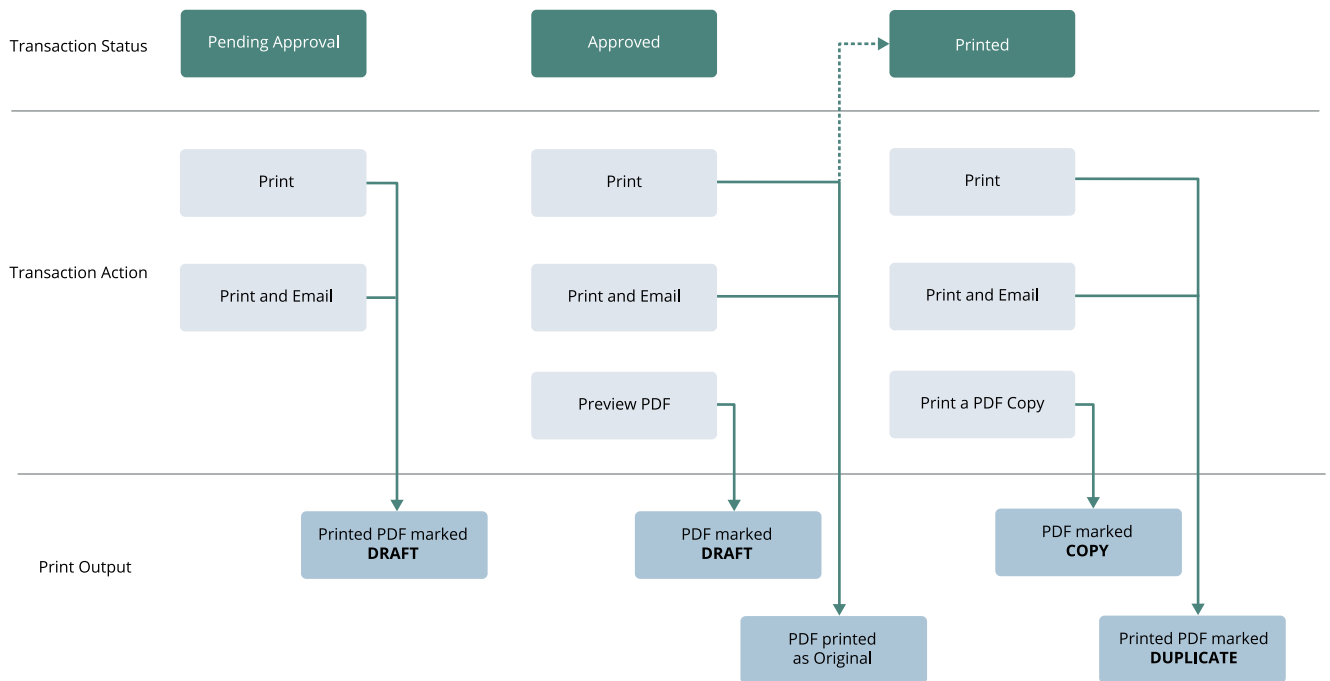

If you print a transaction in a certain status, a short text will be added to the printed PDF (depending on the button or link that you've used to print it). These marks serve to identify and categorize every printed invoice. The following marks are available:

- **None (Original)** – Approved transactions printed for the first time (originals) bear no mark.
- **Draft** – Mark on all transactions that you're previewing, that is:
 - All transactions are printed while in the Pending Approval status.
 - Already approved transactions are displayed using the **Preview PDF** button.

- **Duplicate** – Mark a transaction that has been already approved and printed (using **Print** or **Print and Email** link). Duplicate transactions are intended for information, or reminder purposes only.
- **Copy** – Mark a transaction that has been approved and printed using the **Print a PDF Copy** button. Unlike duplicate transactions, the transaction copies are due for payment. Typically, they are issued if the original printed transaction is lost.

Note: For sales order transaction, only **Draft** and **None (Original)** type prints are supported. Therefore, the **Print a PDF Copy** button will not available.

The following diagram summarizes the transaction printing statuses, actions available for each of them, and marks on printed transactions:

Printing a Transfer Order

You can print a transfer order PDF from a transfer order record

To Print a Transfer Order

1. Go to Transactions> Inventory> Transfer Orders.
2. Go to an existing transfer order or create a new transfer order.
3. Enter the required information and click **Save**.
4. On the saved transfer order record, click **Print Transfer Order**. The printed transfer order PDF opens in a new tab of your browser.

The Printing History subtab of transfer order record shows the printing activity details

The following columns are available on the **Printing History** subtab :

- **Date**- Displays the date and time of printing the transaction.
- **Issued By**- Displays the name of the user who printed the transaction.

- **Printed PDFs**- Displays a link from which you can access and download a copy of the printed PDF files.

Fields and Placeholders in Transfer Order Template

The transfer order template contains FreeMarker placeholder tags for sourcing and displaying required information as well as setting the layout of the transfer order document when printed. The following information is available when you print transfer order template to PDF or HTML.

Advanced PDF Field Sourcing – Header Fields

Field	Default Label	Placeholder or value in Default Template	Description
Subsidiary Logo	Logo	{subsidiary.pagelogo}	If the account is OneWorld, logo is sourced from the fulfilling subsidiary.
_	Transfer Order	N/A	The transfer order is hard coded at the top of Advanced PDF.

Field	Default Label	Placeholder or value in Default Template	Description
Date	Order Date	{record.trandate}	Transaction date of the transfer order.
Order#	Order No.	{record.tranid}	Order number of the transfer order.
Address	Address	{subsidiary.mainaddress_text}	Address of the subsidiary.
Phone	Phone	{subsidiary.addrphone}	Phone number of the subsidiary.
Return Email Address	Email	{subsidiary.email}	Email address of the subsidiary.
VAT Registration No	VAT Registration No ABN (Australia Country) NABN (New Zealand Country)	{subsidiary.federalidnumber}	Tax identification number of the subsidiary.

Advanced PDF Field Sourcing - Body Fields

Field	Default Label	Placeholder or Value in Default Template	Description
Address: From Location	Pickup Address	{location.mainaddress_text}	Address of the source location.
Address: To Location	Delivery Address	{location.mainaddress_text}	Address of the transfer location.
Ship Date	Ship Date	{record.shipdate}	Shipping date of the transfer order.
Additional Tracking Number	Tracking #	{record.trackingnumbers}	Additional tracking number of the transfer order.
Shipping Method	Ship Via	{record.shipmethod}	Shipping Method.
Item	Item No.	{item.item}	Item number.
Description	Description of Goods	{item.description}	Item description.
Options	Options	{item.options}	Options
Quantity	Ordered Qty	{item.itemquantity}	Number of items ordered.
Units	Units	{item.units}	Units
Inventory Detail	Inventory Detail	{item.inventorydetail}	Inventory details of the item.
Back Ordered	Back Ordered	{item.quantitybackordered}	Quantity of the items back ordered.
Fulfilled	Ship Qty	{item.quantityfulfilled}	Quantity of the items fulfilled.

Printing an Item Receipt

You can print an item receipt PDF from an item receipt record

To Print an Item Receipt

1. Go to Transactions> Purchases> Receive Orders.
2. Enter the information as required.
3. Click **Save** to save the information.
4. On the saved item receipt record, click **Print Item Receipt**. The printed item receipt PDF opens in a new tab of your browser.

The **Printing History** subtab on the item receipt record shows the printing activity details.

The following columns are available on the **Printing History** subtab:

- **Date**- Displays the date and time of printing the transaction.
- **Issued By**- Displays the name of the user who printed the transaction.
- **Printed PDFs**- Displays a link from which you can access and download a copy of the printed PDF files.

The following is a sample of item receipt PDF:

Fields and Placeholders in Item Receipt Template

The item receipt template contains FreeMarker placeholder tags for sourcing and displaying required information as well as setting the layout of the item receipt document when printed. The following information is available when you print item receipt template to PDF or HTML.

Advanced PDF Field Sourcing - Header Fields

Field	Deafult Label	Placeholder or Value in Default Template	Description
Subsidiary Logo	Logo	{subsidiary.pagelogo}	If the account is OneWorld,{subsidiary.logo} is sourced from the fulfilling subsidiary.
	Item Receipt	N/A	Item receipt is hard coded at the top of Advanced PDF.

Field	Default Label	Placeholder or Value in Default Template	Description
Date	Date	{record.trandate}	Transaction date of the item receipt.
Order#	No.	{record.tranid}	Order number of the item receipt.
Address	Address	{subsidiary.mainaddress_text}	Address of the subsidiary.
Phone	Phone	{subsidiary.addrphone}	Phone number of the Subsidiary.
Return Email Address	Email	{subsidiary.email}	Email address of the subsidiary.

Advanced PDF Sourcing - Body Fields

Field	Default Label	Placeholder or Value in Default Template	Description
Vendor	Vendor	{purchaseorder.entity}	Name of the Vendor. This is applicable to the item receipt created from purchase order.
Customer	Customer	{returnauthorizations.entity}	Name of the customer. This is applicable to the item receipt created from customer returns.
Location	Location	{purchaseorder.location} {returnauthorizations.location}	Location taken from either purchase order or customer returns.
Posting Period	Posting Period	{record.postingperiod}	Period you want to post this transaction.
From Location	From Location	{transferorder.location}	Source location of the transfer order. This is applicable to the item receipt created from transfer order.
Item	Item No.	{item.item}	Item number.
Description	Description of Goods	{item.description}	Description of the item.
To Location	To Location	{item.location}	Location where the item will be received.
Quantity	Quantity	{item.itemquantity}	Number of Items.
Rate	Rate	{item.rate}	Unit price of the item.
Amount	Amount	{item.inventorydetail}	Price of total units.

 **Note:** The printout type is always original for transfer order and item receipt prints.

For the transactions that are created before installing the Advanced Localization Features SuiteApp, you must run the **ALF MR Copy Print Details – customdeploy_alf_mr_copy_print_details** MR script to add the print marks on documents. You must make sure that the printed documents and email transactions have the correct watermarks and the printing history is updated.

To run the ALF MR Copy Print Details MR script:

1. Go to Customization > Scripting > Script Deployments.
2. Click **Edit** next to the **ALF MR Copy Print Details** MR script.
3. Select the value of the **Concurrency Limit** list to 2 or the next available higher value.
4. Click **Save & Execute** from the **Save** list.

 **Note:** The MR script takes a few hours to execute based on the number of the transactions present in the account. You must not stop or halt the script execution until it is successfully completed.

As an alternative to running **ALF MR Copy Print Details – customdeploy_alf_mr_copy_print_details**, you can edit and save any specific transaction record to add print marks and update printing history. The supported transaction types are invoice, credit memo, sales order, and purchase order.

 **Important:** For the new transactions created after installing the Advanced Localization Features SuiteApp, it is not required to run or perform the MR script.

Commercial Invoice

The commercial invoice is a legal document between the supplier and the customer, detailing information about the sold goods. It is used by the customs for determining customs duties. You can use commercial invoice template for an item fulfillment record of a sales order and print commercial invoice PDF of it.

The following graphic is a sample of commercial invoice:

Prerequisites for Using Commercial Invoice Template

Set up the following configurations to use commercial invoice template:

- Set up labels in the item fulfillment form
- Set up labels in the sales order form
- Set up price level

To set Labels in the Item Fulfillment Form:

1. Go to Customization > Forms > Transaction Forms.
2. On the Custom Transaction Forms page, locate the standard item fulfillment form and click **Customize**.
3. On the Custom Transaction Form page, in the **Sublist Fields** subtab, in the **Show** column, check the boxes next to the labels you want to display on the Item Fulfillment record. Check the boxes next to the following labels that are required for commercial invoice template:

- Rate col
 - Package code
 - Net weight
 - Item weight
 - Gross weight
 - Package height
 - Package length
 - Package width
 - Tariff/HTS code
 - Tariff code
4. Click the **Screen Fields** subtab and in the **Show** column, check the box next to **Ship to Country** label to display it on the Item Fulfillment record.
 5. (Optional) To make the form template as default for this transaction type, check the **Form Is Preferred** box.
 6. (Optional) To name this custom transaction form (for example, ALF Commercial Invoice), use the **Name** field.
 7. Click **Save**.

For more information, see the help topic [Creating Custom Entry and Transaction Forms](#).

To set Labels in the Sales Order Form:

1. Go to Customization > Forms > Transaction Forms.
2. On the Custom Transaction Forms page, locate sales order type of transaction form. Click **Edit** for a custom sales order form, or click **Customize** for a standard sales order form.
3. On the **Screen Fields** subtab, in the **Show** column, check the boxes next to the fields you want to display on the Sales Order record. Check the boxes next to the following labels that are required for commercial invoice template:
 - Delivery terms
 - Export rate on commercial invoice
 - Ship to country
4. On the **Sublist Fields** subtab, in the **Show** column, check the box next to the **Item Weight** label.
5. (Optional) To make the form template as default for this transaction type, check the **Form Is Preferred** box.
6. Click **Save**.

For more information, see the help topic [Creating Custom Entry and Transaction Forms](#).

To set Price Level:

1. Go to Setup > Accounting > Accounting Lists > New.
2. Click **Price Level** category.
3. On the **Price Level** page, enter name as **Export Price Level** in the **Price Level** field. This name should describe the price level you're creating for export price level.
4. Click **Save**.

Note: You should only have one price level with the name as Export Price Level. If the account has multiple price levels with the same name, the SuiteApp might not show correct or expected unit rate on the commercial invoice.

For more information, see the help topic [Creating Price Levels](#).

Note: You can only use commercial invoice template for Item Fulfillment records that are created from a sales order.

Enabling Commercial Invoice Feature for Subsidiaries

Enable the commercial invoice feature for subsidiaries from either the custom document template or the subsidiary record.

To Enable Commercial Invoice Feature from a Custom Document Template:

1. Go to Setup > Accounting > Customize Document Template.
2. On the **Subsidiary-specific Setup** subtab, in the **Enable Commercial Invoice** column, check the boxes next to the subsidiaries for whom you want to enable the commercial invoice feature.
3. Click **Save**.

To Enable Commercial Invoice Feature from a Subsidiary Record:

1. Go to Setup > Company > Subsidiaries.
2. From the list of subsidiary records, click **Edit** on the required subsidiary record.
3. On the Subsidiary page, in the **Invoice Configuration** subtab, check the **Enable Commercial Invoice** box.
4. Click **Save**.

Printing a Commercial Invoice of an Item Fulfillment Record

The following procedure explains to print commercial invoice PDF from an Item Fulfillment record:

To Print a Commercial Invoice:

1. Go to Transactions > Sales > Enter Sales Orders.
2. On the Sales Order form, in the Primary Information section, add the following details:
 - In the **Custom Form** field, select the sales order type.
 - In the **Customer** field, select a customer.
 - In the **Status** field, select the status of the transaction. Your company's accounting preferences determine the default status.
3. In the Classification section, from the **Location** dropdown list, select a location.
4. In the **Items** subtab, add items to the sales order.
 1. To add an item, select it in the **Item** column, enter the quantity, and then click **Add**. You can enter additional details for each line item such as an inventory commitment setting, order

priority, or expected ship date. See the help topic [Adding Items on a Sales Transaction](#) for more information.

5. Enter additional information as necessary.
6. Click **Save & Fulfill** to save the information and immediately open a fulfillment form for this order.
For more information, see the help topic [Creating Sales Orders](#).
7. On the Item fulfillment record, check for the location and quantities for added items. If they are missing for any item, select the item and add following details:
 - In the **Location** field, select a location.
 - In the **Quantity** field, enter quantity.
 For more information, see the help topic [Fulfilling Orders](#).
8. (Optional) On the **Items** subtab, enter package details for line items such as package Code, package height, package length, package width, gross weight (weight of the package) for an item.
9. Click **Save**.
10. On the saved transaction record, click **Print Commercial Invoice**. The printed commercial invoice PDF opens in a new tab of your browser.

The **Printing History** subtab on the Item Fulfillment record, shows the printing activity details.

The following columns are available on the **Printing History** subtab:

- **Date** – Displays the date and time of printing the transaction.
- **Issued By** – Displays the name of the user printed the transaction.
- **Printed PDFs** – Displays a link from which you can access and download a copy of the printed PDF files.

Note: To view **Print Commercial Invoice** option and **Printing History** subtab on the Item Fulfillment record, you must enable commercial invoice feature for the required subsidiary.

Fields and Placeholders in Commercial Invoice Templates

The commercial invoice template contains FreeMarker placeholder tags for sourcing and displaying required information as well as setting the layout of the transaction document when printed. The following information is available when you print commercial invoice template to PDF or HTML.

Advanced PDF Field Sourcing – Header Level

Field	Default Label	Placeholder or Value in Default Template	Description
-	Commercial Invoice	N/A	The commercial invoice is hard coded at the top of advanced PDF.
Subsidiary Logo	Logo	{subsidiary.pagelogo}	If the account is OneWorld, logo is sourced from the fulfilling subsidiary.
Address	Ship To Address	{record.shipaddress}	Shipping address of the item fulfillment.
Customer ID	Importer Number	{entity.entityid}	Entity ID.

Field	Default Label	Placeholder or Value in Default Template	Description
Customer	Importer Name	{record.entity}	Name of the entity.
EORI	Importer EORI	{entity.custentity_alf_comin_eori}	Entity's EORI.
Tax Reg. Number	Importer VAT Reg. No	{entity.vatregnumber}	Entity's VAT registration number.
Date	Shipping Date	{record.trandate}	Shipping date.
Created From	Sales Order Number	{record.createdfrom}	Sales order ID that is assigned to this item fulfillment.
Delivery Terms	Incoterms	{salesorder.custbody_alf_comin_delivery_terms}	Specific terms related to this delivery.
Export Contact	Export Contact	{location.custrecord_export_contact}	Contact number of the person handling the exports.
Export Contact Email	Export Contact Email	{location.custrecord_export_contact_email}	Email address of the person handling the exports.
Address	Ship From Address	{subsidiary.mainaddress_text}	Subsidiary address.

Advanced PDF Field Sourcing – Line Level

Field	Default Label	Placeholder or Value in Default Template	Description
Item	Item No	{item.item}	Item number
Description	Description of Goods	{item.description}	Item description
Tariff / HTS Code	Tariff / HTS Code	{item.custcol_alf_cominv_hts} or {item.custcol_alf_tariff_code}	If shipping address is United States, the value is displayed in {custcol_alf_cominv_hts} or custcol_alf_tariff_code. The value of custcol_alf_cominv_hts is sourced from Item record field (Tariff / HTS Code) The value of custcol_alf_tariff_code is sourced from Item field (Tariff Code).  Note: These fields must have a maximum character limit of 10.
Manufacture Country	Country of Origin	{item.countryofmanufacture}	Item's country code of manufacture.
Quantity	Quantity	{item.itemquantity}	Number of items.
Rate	Unit Price	{item.custcol_alf_cominv_itemratedisp}.	The label value is retrieved from any of the following settings:  This label value can be unit price of the item from the sales order record, if the Export Rate on Commercial Invoice box is not checked on the sales order record.

Field	Default Label	Placeholder or Value in Default Template	Description
			Export price level's price from the Item record that is assigned to that specific transaction currency. Note: If the export price level is not populated for the required currency, unit price is populated as zero on the Commercial Invoice PDF.
Amount	Amount	N/A	The label value is shown from the PDF logic that calculates amount from {custcol_alf_cominv_itemrate} * {quantity}.
Packaging Summary	Packaging Summary	{item.custcol_alf_cominv_package_code}	Package code.
Length	Length	{item.custcol_alf_package_length}	Package length. Length is only displayed when the package code is assigned to the item.
Width	Width	{item.custcol_alf_package_width}	Package width. Width is only displayed when the package code is assigned to the item.
Height	Height	{item.custcol_alf_package_height}	Package height. Height is only displayed when the package code is assigned to the item.
Gross Weight	Total Gross Weight (KG)	SUM {record.package_grossweight}	The value is retrieved from the string {custcol_alf_package_grossweight}. This is total sum of all the items.
Net Weight	Total Net Weight (KG)	SUM {record.item_netweight}	The value is retrieved from the string {custcol_alf_item_netweight}. This is total sum of all the items.
Package Number	Total No of Packages	COUNT {record.package}	Total number of packages.

Advanced PDF Field Sourcing – Footer Level

Field	Default Label	Placeholder or Value in Default Template	Description
Commercial Invoice Declaration	Declaration Statement	{subsidiary.custrecord_alf_cominv_dec_state} Example: I declare all the information to be true to the best of my knowledge.	This value is sourced from fulfilling subsidiary record. The customer has the ability to change declaration within this custom field.
Subsidiary	Exporter Name	{salesorder.subsidiary}	Subsidiary name.
N/A	Signature	{user.name}	Name of the user.
EORI	EORI	{subsidiary.custrecord_alf_cominv_eori}	Subsidiary EORI.
Vat Registration No	Vat Reg No	{subsidiary.federalidnumber}	Registration number of the tax type that is selected for a subsidiary.
Ship To Country	Destination Country	{salesorder.custbody_alf_cominv_shiptocountry}	Default shipping country code of the customer.

Field	Default Label	Placeholder or Value in Default Template	Description
Total	Invoice Total	{salesorder.subtotal}	Subtotal of the sales order.
Currency	Currency	{salesorder.currency}	Currency of the transaction record.
Net Weight	Total Net Weight (KG)	SUM {record.item_netweight}	The value is retrieved from the string {custcol_alf_item_netweight}. This is total sum of all the items.
Gross Weight	Total Gross Weight (KG)	SUM {record.package_grossweight}	The value is retrieved from the string {custcol_cominv_grossweight}. This is total sum of all items.
Package Number	Total No of Packages	COUNT {record.package}	The value is retrieved from the string {custcol_cominv_package}. It is count of total number of individual lines.
