This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software" or "commercial computer software documentation" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

Dashboards Overview

You can create a unique dashboard setup to ensure maximum efficiency and ease when you use NetSuite. For each user, NetSuite shows a different set of tabbed pages, called a **center**. The center is based on the user's assigned role. Each NetSuite center provides the pages and links that users with the same role need to do their jobs. For more information about roles in NetSuite, see the help topic [NetSuite Roles Overview](#).

Most tabbed pages in each center show real-time data that's relevant to the page and to the role of the user viewing the page. This collection, called a **dashboard**, provides a visual workspace that gives users instant, uninterrupted access to accurate information. You can use a dashboard on your home page and on every page in NetSuite, except for the Documents, Setup, and Customization pages. On your dashboards, you can see the data you need to make decisions and edit records.

Dashboard content appears in different **portlets**, which are dynamic data display windows. Some portlets give you direct access to raw data, while others show important business metrics like key performance indicators (KPIs), performance scorecards, trend graphs, chart-based workbooks, and report snapshots. Other portlets let you display data from website RSS feeds.

For each page, NetSuite gives you a default dashboard setup that you can change to fit your business needs. Administrators can personalize dashboards for one or more pages and **publish** them for a group of users so everyone sees the same interface. The dashboards that you see depends on your role. Administrators can decide if users can personalize their own dashboards even more.

To set up dashboards, you need to understand the following:

- There are different types of dashboard content available. For more information, see [Dashboard Portlets](#).
- You might be able to change a default dashboard to include the content you need. See [Dashboard Personalization](#).

Note: NetSuite dashboards include functionality provided by HighCharts JS, which is software owned by and licensed through Highsoft Solutions AS.

Dashboard Portlets

NetSuite offers many types of content for dashboard portlets. To see the content available on a particular page, click **Personalize Dashboard** in the Settings portlet or **Personalize** in the upper right corner of the

page. The Personalize Dashboard panel displays the content that you can add to your dashboard on the Standard Content tab. The portlets that you're currently using appear on the Currently Used tab.

Custom dashboard pages have the same limits on portlets as the standard Home page.

For descriptions of dashboard content, see [Portlet Types Table](#).

Using portlets

Portlet controls are hidden until you move your pointer over the portlet.

If a dashboard has a portlet that's extremely slow to load, the first time it opens, NetSuite may show a popup suggesting you minimize the portlet to speed up loading.

To minimize a portlet, click its title bar. When you move your pointer over the title bar, it changes to crossed arrows as shown.

Click the title bar again to expand the portlet's content.

Portlets with content that is calculated from current data include a Refresh icon  on the right of the title bar. Click the icon to refresh the portlet content and ensure it includes the latest data.

You can expand certain portlets to full-screen view. This option is available for Trend Graph, Report Snapshots, List, Custom Search, Tasks, and Phone Calls portlets. In full-screen view, the portlet shows more columns and rows in the search results for List, Custom Search, Tasks, and Phone Calls portlets.

To maximize the portlet into full-screen view, click the double arrow icon  in the upper right corner of the portlet.

Portlet Types Table

The following table describes content available for display in dashboard portlets, and notes how you can set up content after adding portlets to your dashboard.

Note: Not all content is available on every page. To see what's available for a specific page, click **Personalize** in the upper right corner or **Personalize Dashboard** in the Settings portlet. The Personalize Dashboard panel lists the content you can add. Some portlets have task links, like a Set Up link, under icons in their upper right corner. For details, see [Setting Up Dashboard Portlet Content](#).

For most content, you can display one portlet per dashboard on a standard NetSuite tab. The table also notes content you can display in multiple portlets. Custom NetSuite tabs may also have multiple portlets with other content.

Content	Description
Bank Reconciliation Summary	Lists your bank and credit card accounts and displays the key data for matching and reconciliation activities. For each account, you'll see the currency, GL account balance, last reconciled balance and date, bank (imported) statement balance and date, and the number of items that need matching. To view the Bank Register Report for one of the listed accounts, click the hyperlinked account name. If your user role has permission for the Reconcile Account Statement page, this portlet is on your dashboard by default. If you remove it, it's available in the Personalize Dashboard panel. For details on account reconciliation, see the help topic Bank Data Matching and Reconciliation.
Analytics	(Can display up to 10.) Shows one workbook chart, pivot table, or table view per portlet.

Content	Description
	In the portlet, click Set Up to select a workbook visualization from the list. You can also define layout options for the displayed portlets, such as the portlet title and specific options for charts, pivot tables, and table views. For more information, see Workbooks.
Calendar	Lists activities for a selected period ordered by date and time, with links to drill down into individual activity records. In the portlet, you can choose a daily, weekly, monthly, or agenda view. You can show your own calendar or a public calendar for another entity in your organization. Click the Set Up menu in the portlet to open a popup where you can choose which activities to show in the calendar. You can also expand the portlet to full-screen by clicking the double arrow icon. ↗ In full-screen view, the portlet shows more columns and rows in the search results.  Note: The Calendar portlet is supported by the Copy to Account feature. If the portlet is included in a published dashboard and the dashboard is copied to another account, the portlet is also copied. For more information, see the help topics Copy to Account and Copying a Published Dashboard to Another Account. For more details, see Calendar Portlets.
Custom Portlet	(Can display up to six.) Shows results from a portlet SuiteScript, which can be lists, data entry forms, free-form HTML, or links to external data. In the portlet, click Set Up to select the source file for the SuiteScript results.  Note: The Custom portlet is supported by the Copy to Account feature. If the portlet is included in a published dashboard and the dashboard is copied to another account, the portlet is also copied. You can also use the Copy to Account feature to copy an individual script to another of your accounts. For more information, see the help topics Copy to Account and Copying a Published Dashboard to Another Account. For information about creating scripts, see the help topic SuiteScript 2.x Portlet Script Type.
Custom Search	(Can display up to six on the Home page.) Shows results from a saved search. In the portlet, click Set Up to select the saved search, set a custom title, choose how many results to show, and decide if you want to drill down in the portlet or on a new page. If Inline Editing is enabled, you can also turn on inline editing for search results. Additionally, you can expand the portlet to full-screen view by clicking the double arrow icon ↗. The full-screen view of the portlet displays more columns and rows in the search results.

Content	Description
	Note: When custom search portlets are in the right or left columns, they show only the first 4 results columns. In the center column, they show the first 9 results columns. Custom search portlets also include New, Edit, and View columns with links for each result record. Note: The Custom Search portlet is supported by the Copy to Account feature. If the portlet is included in a published dashboard and the dashboard is copied to another account, the portlet is also copied. You can also use the Copy to Account feature to copy an individual saved search to another of your accounts. For more information, see the help topics Copy to Account and Copying a Published Dashboard to Another Account. For more details, see the help topic Displaying Saved Search Results in Dashboard Portlets.
Goals	Shows actions to take on goals and an overview of goals that are in progress. You can see your own goals that are starting soon, due soon, or overdue. You can also check the progress and time elapsed for your top three goals in progress. If you're assigned as a supervisor to at least one employee in NetSuite, you can view goal information for your direct reports. You can see goals that need approval or reflection and those that are overdue. As a manager, you can also check the progress and time elapsed for your direct reports' goals in progress. For more information, see the help topic Viewing Goals in the Goals Portlet. Note: To use the Goals portlet, the Performance Management feature must be enabled in your account. For more information, see the help topic Goal Management and Performance Reviews.
KPI Meter	(Can display up to three.) Shows up to three graphical meters of key performance indicator (KPI) data. The KPI meter also displays the currency symbol of the data for values represented by currencies. In the portlet, select a KPI from the dropdown list. Click Set Up to choose date ranges, highlighting, and comparison options. You also can click menu options to print the KPI meter or download it to a PNG, JPG, PDF, or SVG file. You can only select KPIs that are shown in the dashboard's Key Performance Indicators portlet, plus Actual vs. Forecast, Actual vs. Quota, and Forecast vs. Quota. Note: The KPI Meter portlet is supported by the Copy to Account feature. If the portlet is included in a published dashboard and the dashboard is copied to another account, the portlet is also copied. You can also use the Copy to Account feature to copy an individual saved search to another of your accounts. For more information, see the help topics Copy to Account and Copying a Published Dashboard to Another Account. For more information, see KPI Meters.
KPI Scorecard	Shows a performance scorecard with comparisons of selected key performance indicator (KPI) data. In the portlet, click Set Up to select a KPI Scorecard and layout options. For more information, see KPI Scorecards.
Key Performance Indicators	Shows key business metrics. These metrics are summary data from reports or saved searches for selected date ranges, with options to show comparisons between date ranges and to highlight results not meeting defined thresholds. You can set up to eight KPIs as headlines. Each headline appears in bold and is shown in a trend graph. The lower panel lists the rest of the KPIs, and you can collapse or expand the list as needed.

Content	Description
	In the portlet, click Refresh to update all KPIs, or click the Refresh icon next to a KPI to update it individually. If available, click the Trend Graph icon next to a KPI to see a popup trend graph. Click Set Up to select standard KPIs or custom KPIs based on saved searches. You can also set comparison and highlighting options, and choose how popup trend graphs look. The KPI Portlet can go in a wide or narrow column. If it's in a narrow column, the headlines aren't shown in a trend graph because of the compact format. You can see a popup trend graph by clicking the Trend Graph icon next to a KPI in the list, if available. This option is on by default.  Note: The Key Performance Indicator (KPI) portlet is supported by the Copy to Account feature. If the portlet is included in a published dashboard and the dashboard is copied to another account, the portlet is also copied. You can also use the Copy to Account feature to copy an individual saved search to another of your accounts. For more information, see the help topics Copy to Account and Copying a Published Dashboard to Another Account. For more information, see Key Performance Indicators.
Links	Shows links to pages that NetSuite has defined as related. This portlet is available on the Activities, Cases, Customers, Lists, Reports, and Transactions pages. Unlike other portlets, which are column-oriented and sorted top to bottom, the Links portlet is row-oriented and sorted left to right.
List	Shows a list of records of a selected type, with links to view and, if you have permission, edit individual records. It shows 9 columns in the center column of the dashboard and 4 columns in the right or left column. In the portlet, click Set Up to select a type of record and how many records to show. If the Inline Editing feature is enabled and you have permission, you can edit records directly in the portlet. See the help topic Using Inline Editing. You can also expand the portlet to full-screen by clicking the double arrow icon . In full-screen view, the portlet shows more columns and rows in the search results.  Note: On some tabs, List portlets are set up to show certain types of records. For example, the Activities page offers Tasks and Phone Calls list portlets.  Note: The List portlet is supported by the Copy to Account feature. If the portlet is included in a published dashboard and the dashboard is copied to another account, the portlet is also copied. You can also use the Copy to Account feature to copy an individual list view to another of your accounts. For more information, see the help topics Copy to Account and Copying a Published Dashboard to Another Account.
My Login Audit	Shows info about your login activity. You can add the My Login Audit portlet to your dashboard to track your last successful login, last failed login, the IP address for your login activity, when your password will expire, and other login information.  Note: The date and time in the My Login Audit portlet are based on the Time Zone preference you set on the General subtab at Home > Set Preferences. For more information, see the help topic General Personal Preferences. For more information, see the help topic My Login Audit Portlet.

Content	Description
New Release	Shows a summary of new features from the latest release of NetSuite, with links to more detailed descriptions.
Phone Calls	Shows a list of upcoming phone calls, with links to view and, if you have permission, edit individual records. In the portlet, select a view and sorting method, then click Set Up to choose how many phone calls to show. If the Inline Editing feature is enabled and you have permission, you can edit records directly in the portlet list. You can also expand the portlet to full-screen by clicking the double arrow icon . In full-screen view, the portlet shows more columns and rows in the search results. For more information, see Phone Calls Portlet.
Project Tasks	(Available when the Project Management feature is enabled. To learn how to enable Project Management, see the help topic Enabling Project Features.) This portlet is available on the Projects tab. Shows a list of project tasks with links to view and, if you have permission, edit individual records. It shows project tasks assigned to you and other project resources. In the portlet, select a view and sorting method. Click Set Up to choose how many tasks to show. For more information, see the help topic Tasks and Project Tasks Portlets on Your Dashboard.
Quick Add	Shows a form where you can quickly add records of a selected type. In the portlet, click Set Up if you want to change the type of records to add. For more information, see Quick Add Portlet.
Quick Search	Shows a form where you can quickly search for records of a selected type, using one filter field and keywords. In the portlet, click Set Up to select the type of records to search, then enter keywords in the text box and select a field name from the Search For dropdown list.  Note: The Quick Search portlet is supported by the Copy to Account feature. If the portlet is included in a published dashboard and the dashboard is copied to another account, the portlet is also copied. For more information, see the help topics Copy to Account and Copying a Published Dashboard to Another Account. For more information about Quick Search, see the help topic Quick Search Portlet.
RSS/Atom Feed	(Can display up to two.) Shows RSS or Atom feed URL content, from an external website or HTML document. In the portlet, click Set Up to select display options and a URL. NetSuite provides several standard RSS feed URLs, or you can choose Custom and enter another URL. For more information, see RSS/Atom Feed Portlets.
Recent Records	Shows a list of records you've recently created, modified, or viewed. In the portlet, click the record to view it. If you have permission, an Edit link is also available. You can click it to open the record in Edit mode.

Content	Description
	 Important: Recent record links also appear in a menu under the clock icon, left of the Home tab on every NetSuite page. For more information, see Recent Records Portlet.
Recent Reports	(Available on the Reports tabbed page.) Shows a list of reports you've recently created, modified, or viewed. In the portlet, click the report name to view the individual report.
Reminders	Shows important tasks of selected types, usually those that are past due or due soon. In the portlet, click Set Up to select reminder types and set how many days in advance reminders should show. Click a reminder to go to the page where you need to take action. For more information, see Setting Up Reminders.
Report Snapshots	(Can display up to 10.) Each portlet gives a graphical or list summary of a selected standard or custom report's data, with a link to view the full report. In the portlet, select a date range for data and click thumbnails to choose chart types. Click Set Up to select the display type and other layout options, including chart themes. You can also print the report snapshot chart, download it as a PNG, JPG, PDF, or SVG file, or view the full report results. You can also expand the portlet to full-screen by clicking the double arrow icon ↗. Report snapshot list text is cut off at 25 characters when the portlet is in the left or right column. To avoid this, place the portlet in the middle column. Report snapshot list amounts are rounded to the nearest whole number and don't show decimal places. For more information, see Report Snapshots.
Saved Searches	Shows the top ten saved searches in your account, including run time and how many users have accessed the search during a set period. In the portlet, you can sort the searches by most requested, most timeouts, most users, or highest run time. For more information, see the help topic Using the Saved Searches Portlet.
Scheduler	(Available on the Activities page.) Shows an interface where you can view others' schedules and add activities.  Note: This portlet cannot be removed or modified. In the portlet, you can select the date and use the View Group dropdown menu to select others' schedules. Click the buttons to create new events, add invitees or resources.
Search Form	Shows a form to search for records of a selected type. Filter fields are based on system defaults or a custom search form you've set as preferred. In the portlet, click Set Up to select the search form to use. Click Full Search to go to the default search page for the selected record type. Click Edit to open the definitions page for the search form and make changes. See the help topic Adding Personalized Search Forms to NetSuite Pages.

Content	Description
	 Note: The Search Form portlet is supported by the Copy to Account feature. If the portlet is included in a published dashboard and the dashboard is copied to another account, the portlet is also copied. You can also use the Copy to Account feature to copy an individual saved search to another of your accounts. For more information, see the help topics Copy to Account and Copying a Published Dashboard to Another Account.
Settings	Shows links to user-level setup tasks.  Important: The contents of this portlet are system-defined. This portlet cannot be removed or modified. For more information, see Settings Portlet.
Shortcuts	Shows links to selected pages, so you can go to frequently used pages quickly. In the portlet, click Set Up to reorder shortcut links or click New Shortcut to add one if you know the page's URL. If you don't know the URL, go to the upper right corner of that page, then from the More list, select Add to Shortcuts. For more information, see Shortcuts Portlet.
SMT Links	The Site Management Tools Links portlet shows links to all available domains in your administrator role. In the portlet, use the dropdown menu to choose from your available websites. After you've chosen the website, you can choose to Preview or Edit any of the available domains. For more information, see SMT Links Portlet.
Tasks	Shows a list of upcoming CRM tasks assigned to you, with links to view and, if you have permission, edit individual records. In the portlet, select a view and a sorting method, and click Set Up to define the number of tasks shown. Additionally, you can expand the portlet to full-screen view by clicking the double arrow icon . The full-screen view of the portlet displays more columns and rows in the search results. For more information, see the help topic Tasks and Project Tasks Portlets on Your Dashboard.
Trend Graphs	(Can display up to five.) Shows up to three Key Performance Indicators (KPIs) in a single chart with a time-based X axis. In the portlet, click thumbnails to choose among different chart types. You can enter a title for your portlet to quickly identify it. You also can change the graph's X axis scale by selecting different time intervals from the dropdown list. Click Set Up to select the KPIs to be graphed and layout options, including chart themes. You also can click menu options to print the trend graph chart or download it to a PNG, JPG, PDF, or SVG file. You can also expand the portlet to full-screen by clicking the double arrow icon .  Note: The Trend Graph portlet is supported by the Copy to Account feature. If the portlet is included in a published dashboard and the dashboard is copied to another account, the portlet is also copied. For more information, see the help topics Copy to Account and Copying a Published Dashboard to Another Account. For more information, see Trend Graphs.

Note: You can set chart theme preferences that define the default look and feel for dashboard charts, including report snapshots and trend graphs. The Chart Theme preference sets the shape and colors for chart data. The Chart Background preference sets the display behind the data. See the help topic [Personal Preferences for Appearance](#).

Dashboard Personalization

NetSuite gives you a default set of dashboard portlets for each tab in each center. Depending on your role, you can personalize most default dashboard configurations. The Settings portlet and a few other portlets are required on many dashboards and can't be removed.

You might want to personalize only your home page dashboard, or you might want to change dashboards on other pages you use often. Besides changing page content, you can set personal preferences for all pages by going to Home > Set Preferences. For example, use Set Preferences to specify your preferred color scheme and number formatting. For information, see the help topic [Setting Personal Preferences](#).

Dashboard Personalization for Users

If your administrator has published a dashboard for one of your NetSuite tabs, you may not be able to personalize that page's dashboard yourself. Personalization options depend on the mode of the published dashboard. The available modes are:

- **Locked mode** – If the published dashboard is in Locked mode, you can't change its content or layout. However, you can change the viewing options by clicking the Viewing Link at the top right of the home page. When the popup window appears, you can select the Date Range for all your portlet content at one time. If you use multi-book accounting, you can also select the Accounting Book in this window. When you close the popup window, the link updates to display your viewing options.
- **Add/Move Content mode** – If the dashboard is in Add/Move Content mode, you can add or move portlets. You can also remove portlets you've added, but not the predefined ones or those added as part of the published dashboard. You can still change the layout options. For more information, see [Dashboard Layouts](#).
- **Unlocked mode** – If the published dashboard is in Unlocked mode, you can change content and move, add or remove portlets. You can also change the layout options. For more information, see [Dashboard Layouts](#).

Dashboard Personalization for Administrators

If you're an administrator, you can personalize your dashboard and then share it with users whose roles share your center. For information, see [Publishing Dashboards](#).

- [Adding a Portlet to a Dashboard](#)
- [Setting Up Dashboard Portlet Content](#)
- [Arranging Dashboard Portlets](#)
- [Selecting an Existing Search to be a Custom KPI](#)

Dashboard Layouts

You can choose among four layout types for every page that supports dashboards. Choose your preference from the Layout dropdown list in the upper right.

The available layout options are:

- Two-column, narrow on the left.
- Two-column, narrow on the right.
- Three-column, wide in the middle. For this layout, you'll need a screen that's at least 1400 pixels wide.
- One-column.

Adding a Portlet to a Dashboard

You can add a portlet to a dashboard at any time, unless your administrator has published that dashboard in Locked mode. If a dashboard is locked, you can't personalize it by adding or removing portlets.

Some portlet types let you add more than one to your home dashboard. For example, you can add up to five Trend Graph portlets. When you open the Personalize Dashboard palette, you'll see the number of available portlets on the upper-right corner of each portlet type by hovering over the icon.

To add a portlet to a dashboard:

1. Click **Personalize Dashboard** in the Settings portlet or the **Personalize** link in the top right corner of the page. The **Personalize Dashboard** palette opens at the top of the page.

When you click the **Currently Used** tab, you'll see portlets that already appear on your dashboard. If you hover over a portlet in the **Currently Used** tab, that portlet is highlighted on your dashboard.

2. In the other tabs, click a portlet icon to add it to the top of the page. The portlet automatically selects the column with the width that is best suited to its content. If you prefer, you can drag the portlet to a specific location.
 - The **Standard Content** tab includes all standard portlets. The available portlet types vary based on the features you've enabled in your account.
 - Rest your pointer over a portlet icon to see popup help and the number of available portlets.

- The **SuiteApps** tab includes available SuiteApps and is only visible if you've installed a dashboard-compatible SuiteApp in your account. For more information, see [SuiteApp Portlets](#).
- To learn more about portlet types, see [Portlet Types Table](#) and [Dashboard Portlets](#).

After you've added a portlet, you can modify its contents and layout and move it to another location on the dashboard. For information, see [Setting Up Dashboard Portlet Content](#) and [Arranging Dashboard Portlets](#).

Deleting a Portlet from a Dashboard

You can remove portlets in three ways:

- Click **Remove** in the portlet menu.

- Click the portlet icon in the **Currently Used** tab of the Personalize Dashboard palette. As you move your pointer over the portlet icons, the corresponding portlet on your page is outlined.

- Click **Personalize Dashboard** in the Settings portlet or the **Personalize** link in the top right corner of the page.

The **Personalize Dashboard** palette opens. Move your pointer to the title of the portlet that you want to remove. When the pointer changes to crossed arrows, drag the portlet to the Personalize Dashboard palette.

Note: If you remove an Activities, Reminders, Key Performance Indicators, or Report Snapshot portlet from your home page, alert emails won't include information from the removed portlet. For more information, see the help topic [Setting Personal Preferences](#).

Some portlets can't be removed from a dashboard. One of these is the Settings portlet. Your administrator can also prohibit you from deleting a portlet.

Arranging Dashboard Portlets

You can arrange the portlets on your dashboard to best fit your needs. You can move portlets up or down and from one column to another. For more information about Dashboard Layouts, see [Dashboard Layouts](#).

To move a portlet on the dashboard:

1. Move your pointer to the title of the portlet.
2. When the pointer changes to crossed arrows, drag the portlet to its new location.

Portlet content may change if you move a portlet from a wide column to a narrow one.

- The Key Performance Indicators portlet displays more data and options when it is placed in the wide column than when in a narrow column. For more details, see [Setting Up the Key Performance Indicators Portlet](#).
- Custom search and list portlets show only the first 4 results columns in a narrow column, but show the first 9 in a wide column.
- Report snapshot text is cut off at 25 characters when the portlet's in a narrow column. To avoid this, place it in the wide column.

Setting Up Dashboard Portlet Content

As you add portlets to your dashboard, you can check the data and layout for each one. At first, portlets show default data or no data because you need to set them up after adding them to your dashboard.

Most portlets have a menu that includes a Set Up link. When you click Set Up, a popup window opens where you can set up data and layout. The menu is located on the right side of the title bar:

Some portlets, like the KPI Meter, also have dropdown lists where you choose portlet content.

Note: If a portlet doesn't have a dropdown list or a Set Up link, you can't change its data or layout.

Most portlet setup options are self-explanatory. Here are some quick tips for setting up different portlets, with links to more details as needed.

- **Analytics** – Click Set Up to select the workbook visualization (chart, pivot table, or table view) you want to show from the list. After you choose the visualization, you can set layout options like portlet size and title. For more information, see the help topic [Workbook-based Portlets](#).
- **Calendar** – Select a calendar to display. By default, your calendar is shown. For details, see [Calendar Portlets](#).
- **Custom Portlet** – Click Set Up to select the source file for the SuiteScript results you want to display. For more information, see the help topic [SuiteScript 2.x Portlet Script Type](#).
 - **Dashboard Tiles** – Click Set Up and select Dashboard Tiles from the **Source** field. For more information, see [Dashboard Tiles](#).
 - **Navigation Portlet** – Click Set Up to select Navigation Portlet from the **Source** field. For more information, see [Navigation Portlet](#).
- **Custom Search** – Click Set Up to select the saved search and how many results to display. You can also give your portlet a custom title and choose whether to drill down into search results in the portlet or on a new page. If the Inline Editing feature is enabled, you can also turn on inline editing for search results. For more information, see [Custom Search Portlets](#).

- **KPI Meter** – From the dropdown list, select a KPI to display. Click Set Up to select date ranges, comparison, and highlighting options. For more information, see [KPI Meter Portlets](#).
- **KPI Scorecard** – Click Set Up to select a KPI scorecard and set layout options. For more information, see [KPI Scorecard Portlet](#).
- **Key Performance Indicators** – Click Set Up to select standard KPIs or custom KPIs based on custom saved searches. After you select the KPIs, you can select comparison and highlighting options. For more information, see [Key Performance Indicators Portlet](#).
- **List** – Click Set Up to select the type of record and the number of records to show. To edit records directly in the portlet, enable the Inline Editing feature. See the help topic [Using Inline Editing](#). For more information about List portlets, see [List Portlets](#).
- **My Login Audit** – Click Set up to set display options for monitoring your own login activity. For more information, see the help topic [My Login Audit Portlet](#).
- **Phone Calls** – Click Set Up to enter the number of records to show. For more information, see [Phone Calls Portlet](#).
- **Project Tasks** – Add a List portlet to your dashboard, click Set Up in the portlet menu and choose Project Task as List Type. For more information, see [Project Tasks Portlets](#).
- **Quick Add** – Click Set Up to select the type of record to be added. For more information, see [Quick Add Portlet](#).
- **Quick Search** – Click Set Up to define the type of records to search, then enter keywords in the portlet's text box and select a field name from the Search For dropdown list. For more information, see [Quick Search Portlet](#).
- **RSS/Atom Feed** – Click Set Up to select a feed and set display options. NetSuite provides several standard feeds, or you can choose custom and enter a URL for another feed. For more information, see [RSS/Atom Feed Portlets](#).
- **Reminders** – Click Set Up to select types of reminders and how many days in advance that reminders should be shown. For more information, see [Setting Up Reminders](#).
- **Report Snapshot** – Select a date range for graphed data. If available, click Set Up to select a type of display and other layout options. For more information, see [Report Snapshot Portlets](#).
- **Search Form** – If any of your saved searches are set as the preferred search form for a record type, you can show this search form in a portlet on your dashboard. For more information, see [Search Form Portlet](#).
- **SMT Links** – Select a website and domain to preview or edit. For more information, see [SMT Links Portlet](#).
- **Shortcuts** – Click Set Up to reorder your existing shortcut links. Click New Shortcut to add one if you know the URL of the page. If you don't know the URL, go to the page, and then from the More list, select Add to Shortcuts. For more information, see [Shortcuts Portlet](#).
- **Tasks** – Select the Basic view to display tasks assigned to other users in your system. For details, see [Tasks Portlet](#).
- **Trend Graph** – Click Set Up to select up to 3 KPIs to graph and set layout options. To change the graph's X axis scale, click on time period options in the portlet. For more information, see [Trend Graph Portlets](#).

Calendar Portlets

Calendar portlets list your activities ordered by date and time, with links to drill down into individual activity records. The calendar portlet is displayed by default on the Activities tab, and you can add it to dashboards on other tabs.

You can add multiple calendar portlets to each dashboard. They work independently, so you can show different calendars and time frames on the same page.

- 1 – Calendar portlets are standalone items. You can set them up to display other calendars and date periods. For example, you may choose to display a Group calendar in the **Monthly** view to help with meeting scheduling.
- 2 – The center portlet displays a **Weekly** view of your personal calendar, providing a snapshot of the week ahead.

In each calendar portlet, you can select a daily, weekly, monthly, or agenda view. You can also display your own calendar or the public calendar for another entity in your organization. See [Toggling Calendar Portlet Settings](#).

To change the types of activities listed in a calendar portlet, click the **Set Up** menu option for the portlet. See [Choosing the Activities Shown in a Calendar Portlet](#).

You can print the details from a calendar portlet by clicking its **Print** menu option.

You can also expand the portlet to full-screen view by clicking the double arrow icon ↗. In full-screen view, the portlet displays more columns and rows in the search results.

To add a Calendar portlet to a dashboard:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **Calendar** icon or drag it onto the dashboard.

Toggling Calendar Portlet Settings

In each calendar portlet, you can toggle the following settings:

- Displayed Calendar: By default, the calendar portlet displays **My Calendar**, which includes your own activities. To display activities for another entity in your organization that has a public calendar, click **My Calendar** and select that entity from the list. Entities with private calendars are not listed. To learn how to make a calendar public, see the help topic [Setting Calendar Preferences](#).

- Calendar View: **Daily, Weekly, Monthly, or Agenda.**

If you want to change the default values for these settings, click **Calendar Preferences** in the upper right corner of the Activities tab. For details about setting calendar preferences, see the help topic [Setting Calendar Preferences](#).

You can move the calendar forward and backward in time by clicking the > and < buttons.

Choosing the Activities Shown in a Calendar Portlet

Click the **Set Up** menu option for a calendar portlet to open a popup window where you can set the types of activity records to show in the portlet. The Calendar popup may include the following options:

- **Show Events** – Enabled by default.
- **Show Blocking Tasks** – Enabled by default.
- **Show Non-Blocking Tasks** – Enabled by default. Non-blocking tasks that don't reserve time. They appear first on your calendar for the day they're scheduled.
- **Show Blocking Phone Calls** – Enabled by default.
- **Show Non-Blocking Phone Calls** – Enabled by default. Non-blocking phone calls that don't reserve time. They appear first on your calendar for the day they're scheduled.
- **Show Canceled Events** – Disabled by default. If you turn this on, canceled events appear in the calendar with strikethrough text.
- **Show Campaign Events** – Disabled by default. This is available if your role enables you to access Campaign records.
- **Show Resource Allocations** – Disabled by default. This appears if you're designated as a project resource and have active allocations. If you turn it on, you'll see the project name for each allocation on the days you're assigned.
- **Show Weekends in Monthly View** – Enabled by default.
- **Records to Display in Agenda View** – Set to **Today's Activities Only** by default. Can be set to **Today's and Upcoming Activities**.
- **Number of Records to Display in Agenda View** – Set to **7** by default. This field needs a value.
- **Number of Records to Display in Maximized Agenda View** – Set to **15** by default. This field needs a value.

Custom Portlets

Custom portlets enable you to display SuiteScript results on your dashboard. You can add the following custom portlets on your dashboard:

- **Dashboard Tiles** – For more information, see [Dashboard Tiles](#).
- **Navigation Portlet** – For more information, see [Navigation Portlet](#).

To use custom portlets, you first need to create a SuiteScript portlet script. To learn how to create portlet scripts, see the help topic [SuiteScript 2.x Portlet Script Type](#).

To add a custom portlet to your dashboard:

1. Click **Personalize** in the upper right corner of your dashboard, or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **Custom Portlet** icon or drag it onto the dashboard.

3. To specify the script to be used by the portlet, click **Set Up** in the portlet or the portlet menu, select the script from the **Source** list, and click **Save**.

Dashboard Tiles

Overview

Dashboard Tiles lets you build a dashboard with tiles that display business critical KPIs in a bold, visual layout with images and blinking alerts. The blinking alerts remind you when metrics don't meet certain conditions. You can configure the content of the tiles based on how you want them to be displayed or translated on your dashboard.

Using this SuiteApp, you can create and customize the following tile types:

- Static
- Reminder
- Scorecard

For more information, see [Types of Dashboard Tiles](#).

Availability

Dashboard Tiles is a managed SuiteApp that automatically updates whenever there are enhancements or new features added.

For instructions on installing this SuiteApp, see [Installing the Dashboard Tiles SuiteApp](#).

Multi-Language Support

Dashboard Tiles is available in all languages that NetSuite supports. For more information, read the help topics [Configuring Multiple Languages](#) and [Choosing a Language for Your NetSuite User Interface](#).

The only exception to multi-language support are entries for the **Name**, **Prefix**, **Display Value**, and **Suffix** fields. If you're an Administrator or a user with edit permissions to dashboard tile records, you need to enter translations for these fields in all the languages NetSuite supports. For more information about entering dashboard tile translations, see [Entering Dashboard Tile Translations](#).

Read the following topics to help you get started in using Dashboard Tiles:

- [Installing the Dashboard Tiles SuiteApp](#)
- [Granting Permissions to Use Dashboard Tiles](#)
- [Types of Dashboard Tiles](#)
- [Creating a Static Tile](#)
- [Creating a Reminder Tile](#)
- [Creating a Scorecard Tile](#)
- [Entering Dashboard Tile Translations](#)
- [Modifying the Appearance of a Dashboard Tile](#)
- [Applying Conditional Alerts to a Dashboard Tile](#)
- [Modifying the Title and Font Sizes of the Dashboard Tiles Portlet](#)
- [Adding Roles That Can View Dashboard Tiles](#)

Installing the Dashboard Tiles SuiteApp

Only users with an Administrator role can install this SuiteApp.

To install the Dashboard Tiles SuiteApp:

1. Go to Customization > SuiteBundler > Search & Install Bundles.
2. On the Search and Install Bundles page, use this information to search for the SuiteApp:
 - **Bundle Name:** Dashboard Tiles
 - **Bundle ID:** 185219
3. Click **Dashboard Tiles** to display its Bundle Details page.
For more information, see the help topic [Bundle Details](#).
4. Click **Install**.
If asked, indicate your agreement to allow NetSuite to automatically upgrade the SuiteApp in your account when updates become available.
During installation, click **Refresh** to get the latest status.

Granting Permissions to Use Dashboard Tiles

When Dashboard Tiles is installed, the dashboard tiles custom record becomes available. The following table lists the permissions required to access the dashboard tiles custom record.

An Administrator needs to add the required permissions to roles that will use the SuiteApp. For information about customizing roles, see the help topic [Customizing or Creating NetSuite Roles](#).

Custom Record	Minimum Permission Level	Maximum Permission Level
Dashboard Tiles	View	Full

Types of Dashboard Tiles

Here are the three tile types that you can create and customize:

- Static tile
- Reminder tile
- Scorecard tile

Note: Creating dashboard tiles using a saved search for wave transactions is not supported.

Static Tile

A static tile displays a fixed value, like a percentage rate and target amount. You can use a SuiteScript to update the value if you need to handle complex metrics that may require more than one saved search. For example, a static tile can be created for Target Revenue This Quarter.

Reminder Tile

A reminder tile displays numbers pulled from a saved search. The values displayed in a reminder tile are based on the number of results in a saved search record. For example, you can create a reminder tile for Opportunities to Close, Sales Orders to Fulfill, and so on.

Scorecard Tile

A scorecard tile displays the sum of the values in the first available numeric column of a saved search. Numeric columns can contain currencies, integers, floats, or decimals.

For example, you select Cash Sale by Customer as the saved search to use for your scorecard tile. The saved search contains the following numeric and non-numeric fields: Customer Name, Sum of Amounts, Average of Quantity, and Count of Account Type. In this example, Sum of Amounts is listed as the first numeric column of the saved search. After you save the record, the scorecard tile displays the sum of all rows in the Sum of Amounts column.

Note: If the saved search doesn't contain a numeric column, you can't save the record.

Comparison Scorecard Tile

A comparison scorecard tile is a scorecard tile that you can use to compare a static value to a saved search result or to compare two saved search results.

For example, you can use a comparison scorecard tile to compare sales of the current month to the sales from the previous month. The tile displays the comparison results based on the comparison type you select, along with the current and previous values used in the calculation.

You can select from these comparison types based on the result you want to display in the tile:

Comparison Type	Computation
Difference	$\text{Difference} = \text{Current} \div \text{Previous}$ The Difference is calculated by dividing the current value (from the source saved search) by the previous value (from the compare saved search).
Variance Percentage	$\text{Variance Percentage} = ((\text{Current} - \text{Previous}) \div \text{Previous}) \times 100$ The Variance Percentage is calculated as the current value minus the previous value divided by the previous value, then multiplied by 100.
Absolute Ratio	$\text{Absolute Ratio} = \text{Current} - \text{Previous}$

Comparison Type	Computation
	The Absolute Ratio is calculated as the current value minus the previous value.

Note the following when using a comparison scorecard tile:

- Columns that contain IDs (such as internal and external IDs) and document numbers aren't considered as numeric columns.
- The system displays **N/A** in the tile if there's a calculation error. Errors are caused by one of the following scenarios:
 - The saved search you're using contains an invalid expression or formula.
 - The denominator in the calculation is 0. For example, the current value is 100 and the previous value is 0.
- To avoid errors when saving a record, select a custom saved search and not a standard saved search.
- You can only display up to 30 comparison scorecard tiles in the portlet. For example, if you create 50 comparison scorecard tiles, only the first 30 are displayed correctly.

Creating a Static Tile

A static tile displays a fixed value. For more information about the types of dashboard tiles, see [Types of Dashboard Tiles](#).

To create a static tile:

1. Go to Setup > Dashboard Tiles > Manage Dashboard Tiles > New.
2. On the Dashboard Tile page, specify values for the following fields:
 - **Name** – Enter a name that describes the static value you want to display in the tile, like Target Revenue This Quarter.
 - **Inactive** – Clear this box to display the tile on the dashboard.
 - **Tile Type** – Select **Static**.
 - **Display to All Roles** – Check this box to make the tile visible to all roles. When you check this box, the **Roles** field becomes read-only.
 - **Roles** – Select at least one role that can access the tile. To select multiple roles, press and hold down the Ctrl key.

 **Note:** To display the tile in the portlet, you need to select at least one role in the **Roles** field or check the **Display to All Roles** box.

- **Display Order** – Enter a number to define the order where the tile is displayed in the portlet. For example, enter **1** to display the tile as the first tile in the portlet.

 **Note:** If two or more tiles have the same display order value, the system displays the tiles in alphabetical order.

You can only display 50 tiles in the portlet. If you create more than 50 tiles, the portlet displays only the first 50 depending on the display order value.

3. On the **Data** subtab, specify values for the following fields:
 - **Display Value** – Enter the static value you want to display in the tile.
 - **Link** – (Optional) Enter a URL to use for the tile, like a saved search URL. When you click the tile, the system launches that page.
 - **Prefix** – Enter text or characters to append before the tile value. For example, you can use a currency symbol as a prefix.

- **Suffix** – Enter text or characters to append after the tile value. For static tiles, the **Saved Search** field is read-only.
- 4. (Optional) Modify the tile appearance or apply conditional alerts.
For more information, see [Modifying the Appearance of a Dashboard Tile](#) or [Applying Conditional Alerts to a Dashboard Tile](#).
- 5. Click **Save**.

Creating a Reminder Tile

A reminder tile displays numbers pulled from a saved search. The values displayed in a reminder tile are based on the number of results in a saved search record. For more information about the types of dashboard tiles, see [Types of Dashboard Tiles](#).

To create a reminder tile:

1. Go to Setup > Dashboard Tiles > Manage Dashboard Tiles > New.
2. On the Dashboard Tile page, specify values for the following fields:
 - **Name** – Enter a name that describes the metrics you want to display in the tile. For example: Target Revenue This Quarter, Sales Order YTD, POs Pending Receipt, Sales and Marketing Expense.
 - **Inactive** – Clear this box to display the tile on the dashboard.
 - **Tile Type** – Select **Reminder**.
 - **Display to All Roles** – Check this box to make the tile visible to all roles. When you check this box, the **Roles** field becomes read-only.
 - **Roles** – Select at least one role that can access the tile. To select multiple roles, press and hold down the Ctrl key.

Note: To display the tile in the portlet, you need to select at least one role in the **Roles** field or check the **Display to All Roles** box.

- **Display Order** – Enter a number to define the order where the tile is displayed in the portlet. For example, enter **1** to display the tile as the first tile in the portlet.

Note: If two or more tiles have the same display order value, the system displays the tiles in alphabetical order.

You can only display 50 tiles in the portlet. If you create more than 50 tiles, the portlet displays only the first 50 depending on the display order value.

3. On the **Data** subtab, specify values for the following fields:
 - **Saved Search** – Select the name of the saved search you want to use for the tile.

Important: Saved searches are not validated by the system. If a saved search isn't working properly, the dashboard displays the tile incorrectly or display N/A in the tile.

Ensure that the saved search you select is a SuiteScript supported record. For more information about SuiteScript supported records, see the help topic [SuiteScript Supported Records](#).

- **Link** – (Optional) Enter a URL to use for the tile, like a saved search URL. When you click the tile, the system launches that page.

- **Prefix** – Enter text or characters to append before the tile value. For example, you can use a currency symbol as a prefix.
 - **Suffix** – Enter text or characters to append after the tile value. For reminder tiles, the **Display Value** and **Scorecard Summary Type** fields are read-only.
4. (Optional) Modify the tile appearance or apply conditional alerts.
- For more information, see [Modifying the Appearance of a Dashboard Tile](#) or [Applying Conditional Alerts to a Dashboard Tile](#).
5. Click **Save**.

Creating a Scorecard Tile

A scorecard tile displays the sum of the values in the first available numeric column of the selected saved search. If the selected saved search does not contain a numeric column, you will not be able to save the record. For more information about the types of dashboard tiles, see [Types of Dashboard Tiles](#).

To create a scorecard tile:

1. Go to Setup > Dashboard Tiles > Manage Dashboard Tiles > New.
2. On the Dashboard Tile page, specify values for the following fields:
 - **Name** – Enter a name that describes the scorecard results you want to display in the tile. For example, Sum of Company Sales Orders.
 - **Inactive** – Clear this box to display the tile on the dashboard.
 - **Tile Type** – Select **Scorecard**.
 - **Display to All Roles** – Check this box to make the tile visible to all roles. When you check this box, the **Roles** field becomes read-only.
 - **Roles** – Select at least one role that can access the tile. To select multiple roles, press and hold down the Ctrl key.

Note: To display the tile in the portlet, you need to select at least one role in the **Roles** field or check the **Display to All Roles** box.

- **Display Order** – Enter a number to define the order where the tile is displayed in the portlet. For example, enter **1** to display the tile as the first tile in the portlet.

Note: If two or more tiles have the same display order value, the system displays the tiles in alphabetical order.

You can only display 50 tiles in the portlet. If you create more than 50 tiles, the portlet displays only the first 50 depending on the display order value.

3. In the Data Source section of the **Data** subtab, specify values for the following fields:

- **Saved Search** – Select a custom saved search to use for the scorecard tile.

Important: Ensure that the custom saved search you select is a SuiteScript supported record that contains a numeric column. Otherwise, the system will not let you create the scorecard tile. For more information about SuiteScript supported records, see the help topic [SuiteScript Supported Records](#).

- **Link** – (Optional) Specify the URL to use for the tile. For example, you can enter a saved search URL. When you click the tile, the system launches the URL page.

- **Prefix** – Enter text or characters to append before the tile value. For example, you can use a currency symbol as a prefix.
- **Suffix** – Enter text or characters to append after the tile value. For scorecard tiles, the **Display Value** field is read-only.

The **Scorecard Summary Type** field automatically displays **Sum**. It is the default summary type for scorecard tiles.

4. (Optional) Modify the tile appearance or apply conditional alerts.
For more information, see [Modifying the Appearance of a Dashboard Tile](#) or [Applying Conditional Alerts to a Dashboard Tile](#).
5. Click **Save**.

Creating a Comparison Scorecard Tile

You can use a comparison scorecard tile to compare a static value to a saved search result, or compare two saved search results. For more information about the types of dashboard tiles, see [Types of Dashboard Tiles](#).

To create a comparison scorecard tile:

1. Go to Setup > Dashboard Tiles > Manage Dashboard Tiles > New.
2. On the Dashboard Tile page, specify values for the following fields:
 - **Name** – Enter a name that describes the scorecard results you want to display in the tile. For example, Sum of Company Sales Orders.
 - **Inactive** – Clear this box to display the tile on the dashboard.
 - **Tile Type** – Select **Scorecard**.
 - **Display to All Roles** – Check this box to make the tile visible to all roles. When you check this box, the **Roles** field becomes read-only.
 - **Roles** – Select at least one role that can access the tile. To select multiple roles, press and hold down the Ctrl key.

 **Note:** To display the tile in the portlet, you need to select at least one role in the **Roles** field or check the **Display to All Roles** box.

- **Display Order** – Enter a number to define the order where the tile is displayed in the portlet. For example, enter **1** to display the tile as the first tile in the portlet.

 **Note:** If two or more tiles have the same display order value, the system displays the tiles in alphabetical order.
You can only display 50 tiles in the portlet. If you create more than 50 tiles, the portlet displays only the first 50 depending on the display order value.

3. In the Data Source section of the **Data** subtab, specify values for the following fields:

- **Saved Search** – Select a custom saved search to use for the scorecard tile.

 **Important:** Ensure that the custom saved search you select is a SuiteScript supported record that contains a numeric column. Otherwise, the system will not let you create the scorecard tile. For more information about SuiteScript supported records, see the help topic [SuiteScript Supported Records](#).

- **Link** – (Optional) Specify the URL to use for the tile. For example, you can enter a saved search URL. When you click the tile, the system launches the URL page.

- **Prefix** – Enter text or characters to append before the tile value. For example, you can use a currency symbol as a prefix.
- **Suffix** – Enter text or characters to append after the tile value. For scorecard tiles, the **Display Value** field is read-only.

The **Scorecard Summary Type** field automatically displays **Sum**. It is the default summary type for scorecard tiles.

4. In the Comparison section of the **Data** subtab, specify values for the following fields:

- **Compare** – Check this box to enable comparison for the scorecard tile. When you check this box, the scorecard tile displays the result of the comparison along with the current and previous values used in the computation.

 **Note:** If you clear the **Compare** box, all fields in the Comparison section become read-only and the tile becomes an ordinary scorecard tile.

- **Compare Value** – Enter a static value. This displays the previous value on the scorecard tile. If you enter a value in this field, the **Compare Saved Search** field becomes read-only.
- **Compare Saved Search** – Select a custom saved search to use for the comparison. If you use a custom saved search for comparison, the **Compare Value** field becomes read-only.

 **Important:** Ensure that you select a custom saved search and not a standard saved search. Otherwise, the system will not let you create the scorecard tile.

 **Note:** The sum of the values in the first numeric column of the saved search you select in this field is displayed as the previous value in the tile. The system then compares the previous value to the sum of the values in the first numeric column of the saved search selected in the Data Source section.

- **Comparison Type** – Select the comparison type you want to use for the scorecard tile. Select from the following comparison types based on the result you want to display in the tile:

Comparison Type	Computation
Difference	Difference = Current ÷ Previous The Difference is calculated by dividing the current value (from the source saved search) by the previous value (from the compare saved search).
Variance Percentage	Variance Percentage = ((Current – Previous) ÷ Previous) × 100 The Variance Percentage is calculated as the current value minus the previous value divided by the previous value then multiplied by 100.
Absolute Ratio	Absolute Ratio = Current – Previous The Absolute Ratio is calculated as the current value minus the previous value.

5. (Optional) Modify the tile appearance or apply conditional alerts.

For more information, see [Modifying the Appearance of a Dashboard Tile](#) or [Applying Conditional Alerts to a Dashboard Tile](#).

6. Click **Save**.

Entering Dashboard Tile Translations

Dashboard Tiles is available in all languages that NetSuite supports. The only exception to the multi-language support are the values for the **Name**, **Prefix**, **Display Value**, and **Suffix** fields. If you're an

Administrator or a user with edit permissions to dashboard tile records, you need to enter translations for the values in these fields in the languages supported by NetSuite. Translations for these fields can be entered for all tile types.

Note: You need to create the tile first before you can enter translations for it.

To enter dashboard tile translations:

1. Ensure you have enabled the entry of translation strings for other languages.

For more information, see the help topic [Enabling the Entry of Translation Strings for a Specific Language](#).

Note: You can only enter tile translations for languages where you enabled the entry of translations strings. For example, if you enabled the entry of translations strings for French and German, you can only enter tile translations in French and German and not in other languages.

2. Ensure the **Multi-Language** feature is enabled.

To verify, go to Setup > Company > Setup Tasks > Enable Features and ensure the **Multi-Language** box is checked.

3. Go to Setup > Dashboard Tiles > Manage Dashboard Tiles.
4. On the Dashboard Tile List page, click **Edit** on the tile you want to add translations to.
5. On the Dashboard Tile page, click the **Translations** subtab.

The Translations subtab becomes available only after you create the tile.

6. Enter translations for the following fields:
 - a. **Name** – Enter a name for the tile in your chosen language.
 - b. **Prefix** – Enter text or characters to append at the beginning of the tile in your chosen language.
 - c. **Display Value** – Enter a display value for the tile in your chosen language.
 - d. **Suffix** – Enter text or characters to append at the end of the tile in your chosen language.

Repeat this step for any other languages you want to add translation entries for.

Note: Ensure **Prefix** or **Suffix** field on the **Data** subtab is not left blank. When left blank, translation entries for the Prefix or Suffix fields will not be saved.

7. Click **Save**.

You need to change your language preference to see the translations you entered for the tile. For more information about setting the language preference, see the help topic [Choosing a Language for Your NetSuite User Interface](#).

Modifying the Appearance of a Dashboard Tile

Only users with an Administrator role or users with edit permissions can modify the appearance of a dashboard tile.

Read the following help topics if you want to modify the appearance for Classic theme or Redwood Experience theme:

- [To modify the dashboard tile's Classic theme appearance:](#)

■ To modify the dashboard tile's Redwood theme appearance:

The Redwood Experience theme is a new user interface layout that offers new colors, icons, and fonts for the page headers, forms, and dashboards. If you have an existing NetSuite account, the system automatically maps the supported colors when you enable the Redwood theme. New accounts use the same Redwood theme as the default. See, [Personal Preferences for Appearance](#).

After you install or upgrade the SuiteApp, a map/reduce script maps Classic icons and colors to their Redwood versions. If you create a new tile in Redwood after the script runs, that tile displays a default icon and color when you switch back to Classic mode.

Note: If the **Dashboard Tiles Redwood Data Migration** script fails during migration, the tiles will display the default Redwood colors and icons.

To resolve this, rerun the script. Go to Customization > Scripting > Script Deployments. Locate the script, click **Edit**, and then click **Save and Execute**. If the script run fails again, contact your Administrator.

If you're using the Classic theme and want to switch to the Redwood Experience theme, go to Home > Set Preferences. On the **Appearance** tab in the Redwood Experience area, click **Enable**.

Note: The tile preference always takes precedence over the portlet preference. For information about the setting the dashboard tiles portlet preferences, see [Modifying the Title and Font Sizes of the Dashboard Tiles Portlet](#).

To modify the dashboard tile's Classic theme appearance:

1. Hover over the tile that you want to edit and click the **Edit** icon.

The **Edit** icon is only available if you have an Administrator role. If you're not an Administrator but have edit permissions, go to Setup > Dashboard Tiles > Manage Dashboard Tiles and select the tile that you want to edit.

2. On the Dashboard Tile page, under the **Appearance** subtab, specify values for the following fields:

- **Tile Color** – Select a color for the tile.
- **Font Color** – Select a font color for the tile.
- **Icon** – Select an icon to use for the tile or click the + icon to upload a new image.
For better performance, you can upload an image with a small file size.
- **KPI Font Size (PT)** – Enter a font size for the tile KPI from 0 to 18 points.
If you leave this field blank, the default KPI font size is 13. If you enter 0, the tile KPI is removed.
- **Label Font Size (PT)** – Enter a font size for the tile label from 0 to 16 points.
If you leave this field blank, the default label font size is 10. If you enter 0, the tile label is removed.
- **KPI Wrapping** – Select a wrapping option for the KPI text. Select from the following options:
 - **None** – No wrapping is applied.
 - **Word Wrap** – This option wraps overflowing text into a new line without breaking words.
 - **Word Break** – This option maximizes the tile width and may result in breaking of words.
- **Apply Flex Layout** – Check this box to apply flexible layout to the tiles. When you check this box, the texts in the tiles automatically adjust for optimal space usage.

The image below shows an example. The tile on the right uses the flexible layout option, while the tile on the left doesn't.

Cash Earnings for October ... Earnings - Cash Sale Current ...	Cash Earnings for September 2023 12,872,082.50 Earnings - Cash Sale Previous Month
---	---

The **Apply Flex Layout** box is checked by default.

3. Click **Save**.

To modify the dashboard tile's Redwood theme appearance:

1. Place the cursor over the tile that you want to edit and click the **Edit** icon.
The **Edit** icon is only available to users with an Administrator role. If you are not an administrator but have edit permissions, go to Setup > Dashboard Tiles > Manage Dashboard Tiles and select the tile that you want to edit.
2. On the Dashboard Tile page, under the **Appearance** subtab, specify values for the following fields:
 - **Redwood Color** - The default color is Ocean. When you select a color from the fixed set of Redwood options in the list, you'll see a preview of your selected color.
 - **Redwood Icon** - Select an icon to use for the tile from the fixed set of Redwood icons. You'll see a preview of your selected icon at the bottom of the Redwood icon field.
3. Click **Save**.

After you switch from Classic to Redwood, the KPI and label fonts adopt a fixed size in alignment with Redwood's standards. You can't change these font sizes, but you can make limited modifications on select field by modifying the field value. For more information, [Modifying the Title and Font Sizes of the Dashboard Tiles Portlet](#)

SuiteSuccess accounts automatically map Classic theme colors and icons to their corresponding Redwood versions. Non-SuiteSuccess accounts use the default Redwood colors and icons.

Applying Conditional Alerts to a Dashboard Tile

You can only use conditional alerts on reminder and scorecard tiles. When you apply a conditional alert to a reminder or scorecard tile, the tile icon blinks when the metrics meet your specified conditions for the tile. Only users with an Administrator role or users with edit permissions can apply conditional alerts.

Note: Conditional alerts are not supported in Redwood theme.

Important: You need to specify an icon for the reminder or scorecard tile before applying conditional alerts. For more information about specifying a tile icon, see [Modifying the Appearance of a Dashboard Tile](#).

To apply conditional alerts to a tile:

1. Hover over the tile that you want to edit and click the **Edit** icon.
The **Edit** icon is only available if you're an Administrator. If you are not an Administrator but have edit permissions, go to Setup > Dashboard Tiles > Manage Dashboard Tiles and select the tile that you want to edit.

2. On the Dashboard Tile page, under the **Alerts** subtab, specify values for the following fields:

- a. **Blink When** – Select a condition that will trigger an alert.

You can select from the following conditions:

- **Greater Than Threshold**
- **Less Than Threshold**
- **Greater Than Or Equal Threshold**
- **Less Than Or Equal Threshold**

- b. **Threshold** – Enter a threshold value for the tile.

The combination of the **Threshold** and **Blink When** values determine when the icon in the tile blinks.

3. Click **Save**.

Modifying the Title and Font Sizes of the Dashboard Tiles Portlet

When you log in to NetSuite, the portlet displays the default title and fonts sizes. You can modify the title and font sizes of the Dashboard Tiles portlet to fit your preferences.

 **Note:** The tile preference always takes precedence over the portlet preference. For information about setting dashboard tile preferences, see [Modifying the Appearance of a Dashboard Tile](#).

To modify the title and font sizes of the Dashboard Tiles portlet:

1. In the Tiles portlet, click the **Menu** icon  and select **Edit**.
2. In the Custom Content dialog, fill in the following fields:

 **Note:** If you're using the Redwood theme and you go to the Portlet settings, entering 0 in the **KPI Font** or **Label Font** fields removes the corresponding text from the tiles. Entering any other number does not affect the text display on both fields.

Additionally, the **Blink Delay** field isn't supported in Redwood Theme right now.

- **Title** – Enter a name for the portlet. If you leave this field blank, the default name Tiles is displayed.
- **KPI Font Size (PT)** – Enter a font size for the tile KPI from 0 to 18 points. If you leave this field blank, the default KPI font size is 13.
- **Label Font Size (PT)** – Enter a font size for the tile label from 0 to 16 points.
If you leave this field blank, the default label font size is 10. If you enter 0, the tile label is removed.
- **Blink Delay (MS)** – Enter a value in milliseconds from 300 to 3000. If you don't enter any value, the default 530 milliseconds is used.

This field only sets the blink delay for reminder and scorecard tiles.

Adding Roles That Can View Dashboard Tiles

When you create a dashboard tile, you assign roles that can view the tile. After tile creation, you can still add roles that can view the dashboard tile. The original role associated with the dashboard tile creation is called the source role, and any new roles for which you want to grant additional access are called target

roles. When you add a target role, the tiles that the source role can view also become available for viewing to the target roles.

To add roles that can view dashboard tiles:

1. Go to Setup > Dashboard Tiles > Roles Update.
2. On the Dashboard Tiles Roles Update page, specify values for the following fields:
 - a. **Target Role** – Select a target role. To select multiple roles, press and hold down the Ctrl key.
 - b. **Source Role** – Select a source role.
3. Click **Run Update**.
4. Click **OK**.
5. On the Schedule Script Status page, click **Refresh** to check the status of the update.
The **Status** column displays Complete after the update.

After the update, the tiles that the source role can view also become available for viewing to the target roles.

Navigation Portlet

Overview

Navigation Portlet lets you simplify navigation to commonly used menus in NetSuite. Using this SuiteApp, you can create groups and categories for shortcuts or links that you frequently use in NetSuite. The shortcuts and categories are displayed in the custom portlet and can be configured using a custom record.

To get started with this SuiteApp, you need to add the navigation portlet custom portlet. For more information about adding custom portlets, see [Custom Portlets](#). You can add multiple navigation portlets to your dashboard.

Navigation Portlet is available in all languages that NetSuite supports. For more information, read the help topics [Configuring Multiple Languages](#) and [Choosing a Language for Your NetSuite User Interface](#).

Availability

Navigation Portlet is a managed SuiteApp that automatically updates whenever there are new features or enhancements added.

For instructions on installing this SuiteApp, see [Installing the Navigation Portlet SuiteApp](#).

Read the following topics to get you started in using Navigation Portlet:

- [Overview](#)
- [Installing the Navigation Portlet SuiteApp](#)
- [Navigation Portlet Permissions](#)
- [Creating a Navigation Category](#)
- [Creating a Shortcut Group](#)
- [Adding Shortcuts to an Existing Shortcut Group](#)

- [Modifying the Display of the Navigation Portlet](#)
- [Adding Roles That Can View Shortcut Groups](#)

Installing the Navigation Portlet SuiteApp

Only users with an Administrator role can install this SuiteApp.

To install the Navigation Portlet SuiteApp:

1. Go to Customization > SuiteBundler > Search and Install Bundles.
2. On the Search and Install Bundles page, use the following information to search for the SuiteApp:
 - **Bundle Name:** Navigation Portlet
 - **Bundle ID:** 186103
3. Click **Navigation Portlet** to display its Bundle Details page.
For more information, see the help topic [Bundle Details](#).
4. Click **Install**.

If asked, indicate your agreement to allow NetSuite to automatically upgrade the SuiteApp in your account when updates become available.

During the installation, click **Refresh** to get the latest status.

Navigation Portlet Permissions

After the Navigation Portlet is installed, custom records become available. See the following table for the list of custom records and the permission levels required to access them.

An Administrator needs to add the required permissions to roles that will use the SuiteApp.

Custom Record	Minimum Permission Level	Maximum Permission Level
Navigation Categories	View	Full
Navigation Shortcut	View	Full
Navigation Shortcut Group	View	Full
Navigation Shortcut Tooltip	View	Full

Creating a Navigation Category

In the navigation portlet, you'll see links organized by shortcut groups and navigation categories. A navigation category contains shortcuts within shortcut groups. The shortcuts you see in the navigation portlet depend on the navigation category you select.

An Administrator can provide role access to certain navigation categories.

To create a navigation category:

1. Go to Setup > Navigation Portlet > Manage Shortcut Group > New.

2. In the **Assign to Category** field, select **New** from the list or click the **+** icon.
3. In the **Name** field, enter a name for the navigation category.
4. Clear the **Inactive** box to display the navigation category in the navigation portlet.
5. Click **Save**.

 **Note:** You can only create 25 categories with a full set of shortcut groups and links.

Creating a Shortcut Group

A shortcut group is a collection of shortcuts or links. When you create a shortcut group, you need to assign it to a navigation category.

To create a shortcut group:

1. Go to Setup > Navigation Portlet > Manage Shortcut Group > New.
2. Provide values for the following fields:
 - **Name** – Enter a name for the shortcut group.

 **Note:** If you create shortcut groups with the same name, the first one you create is used. If you create shortcut groups with the same name but assign them to different navigation categories, all of the shortcut groups are displayed in the portlet.

- **Assign to Category** – Select a navigation category where you want to assign the shortcut group. To create a new navigation category, select **New** from the list.

For information about creating navigation categories, see [Creating a Navigation Category](#).

- **Shortcut Group Display Order** – Enter a numeric value to define the display order of the shortcut group.

For example, if you enter 1, the shortcut group is shown as the first column in the navigation portlet. The display order of the shortcut groups depends on the available columns. If two or more shortcut groups have the same display order, the system displays the shortcut groups in alphabetical order.

 **Note:** The navigation portlet can only display up to 8 shortcut groups. If you enter a display order value that's over the limit, the shortcut group is created but is not displayed in the navigation portlet.

- **Icon** – Select an icon for the shortcut group.

You need to upload image files to the File Cabinet. If possible, use a square image. The system automatically adjusts the size to 60 × 60 pixels. You can only upload image files when you're in Classic mode.

When Redwood Experience is enabled, this field is referred to as the **Redwood Icon**. This field has a fixed set of supported icons which you can choose from when creating or updating an icon. See [Modifying the Display of the Navigation Portlet](#).

After you install or upgrade the bundle, a map/reduce script maps Classic icons to their Redwood versions. If you create a new shortcut group in Redwood after this script runs, that Redwood Icon displays a default icon when you switch back to Classic mode. If the Classic **Icon** field is blank, a default icon displays after you switch.

- **Inactive** – Clear this box to display the shortcut group in the navigation portlet.

- **Display Shortcut Groups to All Roles** – Check this box to make the shortcut group visible to all roles.

When you check this box, the **Role** field becomes read-only.

- **Role** – Select at least one role that can access this shortcut group.

To select multiple roles, press and hold down the Ctrl key.

3. Add shortcuts to the shortcut group:

- a. **Navigation Shortcut Name** – Enter the shortcut name.
- b. **Shortcut Display Order** – Enter a numeric value to determine the display order of the shortcut in the shortcut group.
- c. **Link** – Enter the URL of the shortcut.

Important: The system doesn't validate the URL. Ensure that you enter the correct URL for the link to open.

- d. **Tooltip** – (Optional) Enter a tooltip for the shortcut or select from the available tooltips in the list.

The tooltip list is a custom record that supports multiple languages.

- e. Click **Add**.
- f. Repeat steps a through e to add more shortcuts to the shortcut group.

You can add up to 5 shortcuts to each shortcut group.

4. Click **Save**.

Adding Shortcuts to an Existing Shortcut Group

You can add shortcuts when you create a shortcut group, or add them to an existing group.

To add shortcuts to an existing shortcut group:

1. Go to Setup > Navigation Portlet > Manage Shortcut Group.
2. Select the shortcut group you want to add shortcuts to and click **Edit**.
3. On the Navigation Shortcut Group page, enter values for the following columns:

- a. **Navigation Shortcut Name** – Enter the shortcut name.
- b. **Shortcut Display Order** – Enter a numeric value to determine the display order of the shortcut in the shortcut group.
- c. **Link** – Enter the URL of the shortcut.

Important: The system doesn't check the URL. Ensure that you enter the correct URL for the link to open.

- d. **Tooltip** – (Optional) Enter a tooltip for the shortcut or select from the available tooltips in the list.

The tooltip list is a custom record that supports multiple languages.

- e. Click **Add**.
- f. Repeat steps a through e to add more shortcuts to the shortcut group.

You can add up to 5 shortcuts to each shortcut group.

4. Click **Save**.

Modifying the Display of the Navigation Portlet

When you log in to NetSuite, the navigation portlet displays the default name and column display. You can modify the display depending on your preference.

You can also switch to the Redwood Experience theme by going to Home > Set Preferences. On the **Appearance** subtab in the Redwood Experience area, click **Enable**.

To modify the content of the navigation portlet:

1. On your dashboard, click the menu icon in the Navigation Shortcut Group, and select **Edit**.
 2. In the Custom Content dialog, specify values for the following fields:
 - **Title** – Enter a name for the portlet.
If you leave it blank, then the default name Navigation Shortcut Group is displayed as the portlet name.
 - **No. of Category Columns to Display** – Enter the number of columns that you want to display in the portlet. The maximum number is 4.
-  **Note:** When you move the portlet to the side of the dashboard, it will automatically display only one column.
- **Default Category** – (Optional) Select a category to display as the default.
If you leave it blank, the portlet displays the shortcut groups according to the display order defined in the navigation category.
 3. Click **Save**.

Adding Roles That Can View Shortcut Groups

When you created a shortcut group, you assigned roles that can view it. After you create the shortcut group, you can still add roles that can view it. The original role you assigned when creating the shortcut group is called the source role. Any new roles you want to give access to are called target roles. When you add a target role, the shortcut groups that the source role can view also become available for viewing to the target roles.

To add roles that can view shortcut groups:

1. Go to Setup > Navigation Portlet > Roles Update.
2. On the Navigation Portlet Roles Update page, specify values for the following fields:
 - a. **Target Role** – Select a target role.
To select multiple roles, press and hold down the Ctrl key.
 - b. **Source Role** – Select a source role.
3. Click **Run Update**.

 **Note:** Inactive source roles are not updated.

4. Click **OK**.
5. On the Schedule Script Status page, click **Refresh** to check the status of the update.
The **Status** column displays Complete after the update.

After the update, the shortcut groups that the source role can view also become available for viewing to the target roles.

Custom Search Portlets

You can configure custom search portlets to display saved search results on the home page dashboard. You can use up to six custom search portlets on your home page dashboard.

To add a Custom Search portlet to your dashboard:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **Custom Search** icon or drag it onto the dashboard.

3. To pick which saved search to display, click **Set Up** in the portlet or menu, choose your search from the list, and click **Save**.

You can also add a custom portlet title and pick other display options. For more details, see the help topic [Displaying Saved Search Results in Dashboard Portlets](#).

If you place custom search portlets in the right or left columns, they show only the first 4 results columns of the search. In the center column, they show the first 9 columns. Custom search portlets also include New, Edit, and View columns with links for each result record. You can also expand the portlet to full-screen by clicking the double arrow icon ↗. The full-screen view shows more columns and rows in your search results.

KPI Meter Portlets

A KPI meter portlet shows data for one of the KPIs from the Key Performance Indicators portlet.

Before you can add a KPI meter, you'll need to add and set up a Key Performance Indicators portlet first. For more information, see [Setting Up the Key Performance Indicators Portlet](#).

To add a KPI Meter portlet to your dashboard:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **KPI Meter** icon or drag it onto the dashboard.

3. In the portlet's dropdown menu, choose the KPI you want to show as a meter.

4. For more display options, click **Set Up** in the portlet menu. You can change the time period, comparison, and highlighting for your KPI meter.

To learn more about KPI meter portlets, see [KPI Meters](#).

KPI Scorecard Portlet

KPI Scorecard portlets let you compare data across multiple KPIs. NetSuite stores these comparisons as separate KPI Scorecard records. You need to create a KPI scorecard before you can add it to your dashboard. To learn how to set up a KPI scorecard, see [Creating a KPI Scorecard](#).

To add a KPI Scorecard portlet to your dashboard:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **KPI Scorecard** icon or drag it onto the dashboard.

3. Click **Set Up** in the portlet or menu to configure it.
4. Choose the KPI scorecard to display and click **Save**. You can also set filters, pick the orientation, and choose whether to show the date row or trend graph icon.

For more information about adding KPI Scorecard portlets, see [Adding a KPI Scorecard Portlet to a Dashboard](#).

Key Performance Indicators Portlet

Key Performance Indicators (KPIs) summarize your forecast, pipeline, orders, cases, and financial data right on your dashboard. Each KPI compares data from reports across different time ranges. You can use standard KPIs or create custom ones based on saved searches.

To add a Key Performance Indicators portlet to your dashboard:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **Key Performance Indicators** icon or drag it onto the dashboard.

3. To set which KPIs to display, click **Set Up** in the portlet menu.

For more information about KPIs, see [Key Performance Indicators](#). To learn how to set up custom KPIs, see [Custom KPIs](#).

List Portlets

List portlets let you display records for a specific record type. You can choose from standard record types (like employees, activities, or transactions) or custom types created by you or other users. You can also use this portlet to add new records for the type you select. Besides viewing records, you can also have this portlet show results from saved searches for your selected record type.

The List portlet shows nine columns when placed in the center column of the dashboard and four columns when placed in the right or left.

If you have permission and Inline Editing is enabled, you can edit records right in the portlet. See the help topic [Using Inline Editing](#).

To add a List portlet to your dashboard:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **List** icon or drag it onto the dashboard.

3. To choose which records to show, click **Set Up** in the portlet or the portlet menu, select the record type from the **List Type** menu, and click **Save**.

To show saved search results for your selected record type, use the portlet's View menu.

To create a new record for the selected type, use the link in the portlet menu.

You can also expand the portlet to full-screen by clicking the double arrow icon ↗. Full-screen view shows more columns and rows in the search results.

Phone Calls Portlet

The Phone Calls portlet lets you see your upcoming calls in a list. You can also view and edit individual records if you have the permission.

You can see your upcoming calls in either the Dashboard view or the Default view. The Default view lets you filter calls by status and organizer.

In both views, you can sort calls by Phone Call Date, End Date, Recently Created, Recently Modified, or Recently Viewed. You can also expand the portlet to full screen by clicking the double arrow icon ↗. Full-screen view shows more columns and rows in your search results.

You're limited to 50 phone calls in the portlet. If you have permission and Inline Editing is enabled, you can edit records right in the portlet list.

For instructions on how to add the Phone Calls portlet to a page, see [Adding a Portlet to a Dashboard](#).

Quick Add Portlet

You can use the Quick Add portlet to quickly add new records of a selected type right from your dashboard, without switching pages. For example, a Sales Rep could create a new customer record from the Home page, or a new task from a customer page.

You can set up the Quick Add portlet for several standard record types or for a custom type that you've made available for Quick Add. You also can edit which fields are available in the portlet for data entry.

Important: For the Quick Add portlet work, you need to have the Inline Editing feature enabled. For more information, see the help topic [Using Inline Editing](#).

To add a Quick Add portlet to a dashboard:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **Quick Add** icon or drag it onto the dashboard.

3. To choose a different default record type, click **Set Up** in the portlet menu, select the record type from the **Quick Add: Type** list, and click **Save**.

For more information, see [Using Quick Add for Standard Records](#) and [Using Quick Add for Custom Records](#).

Using Quick Add for Standard Records

Quick Add is available for the following standard record types:

- Case
- Contact

- Customer
- Event
- Lead
- Opportunity
- Partner
- Phone Call
- Prospect
- Task
- Vendor

The fields in the Quick Add portlet for each standard record type come from the Quick Add fields set for the user's preferred form on the Role setup page for their login role. Quick Add fields on standard forms are system-defined.

Important: For the Quick Add portlet to work, you need to have the Inline Editing feature enabled. For more information, see the help topic [Using Inline Editing](#).

The following table lists the default Quick Add fields for each supported record type. Fields listed in the middle column cannot be removed from the Quick Add portlet. Note that field names may be slightly different in your user interface.

Record Type	Fields Required in Quick Add Portlet	Other Default Quick Add Fields
Case	Subject, Company, Incident Date	Message, Contact
Contact	Contact, Subsidiary (OneWorld only)	Company, Job Title, Email, Phone
Customer	Company Name, Subsidiary (OneWorld only)	Customer ID, Web Address, Email, Phone
Event	Title, Date, Start Time, End Time	Location, Message
Lead	Subsidiary (OneWorld only)	Customer ID, Company Name, Web Address, Email, Phone
Opportunity	Company, Status, Expected Close, Projected Total	Estimated Budget, Sales Readiness, Buying Time Frame, Buying Reason, Title, Details
Partner	Partner ID, Partner Code, Subsidiary (OneWorld only)	Company Name, Phone, Email
Phone Call	Subject, Organizer, Date	Phone Number, Transaction
Prospect	Company Name, Subsidiary (OneWorld only)	Phone, Email, Web Address
Task	Title, Priority, Start Date, Due Date	Insert Before
Vendor	Vendor ID, Company Name, Subsidiary (OneWorld only)	Email, Phone, Default Expense Account

Using Quick Add for Custom Records

You can set up custom records so they're available to add from the Quick Add portlet. Users with the right permissions can edit Quick Add fields on custom forms. You need to enable the Allow Quick Add option for any custom record type if you want it to show up in the Quick Add Type dropdown list.

Important: For the Quick Add portlet to work, you need to have the Inline Editing feature enabled. For more information, [Using Inline Editing](#).

To enable Quick Add for a custom record:

1. Open the custom record type that you would like to use in the Quick Add portlet. Custom record types are available at Customization > Lists, Records, & Fields > Record Types.
2. Select the **Allow Quick Add** box.

Important: If the custom record has a preferred form, you'll also need to enable Quick Add for each field on the form to let users enter data from the Quick Add portlet. For more information about configuring form fields, see the help topic [Configuring Fields or Screens](#).

4. Click **Save** to save the custom record type settings.

After you have enabled the Allow Quick Add option for the custom record type, you may need to refresh the page to display the enabled fields in the Quick Add portlet.

Quick Search Portlet

You can add a Quick Search portlet so you can search for general or transaction records right from your dashboard.

To add a Quick Search portlet:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **Quick Search** icon or drag it onto the dashboard.

3. By default, the portlet searches general records like customers, vendors, items, activities, and more.
To make the portlet search transaction records like cash sales, purchase orders, or customer refunds, click **Set Up** in the portlet menu and select **Transaction** from the **Search Type** menu.

To learn more about the Quick Search portlet, see the help topic [Quick Search Portlet](#).

Project Tasks Portlets

If you use Project Management, you can add the Project Tasks portlet to show project tasks on your dashboard. The portlet shows project tasks assigned to all resources and gives quick access to each task's information.

To add a Project Tasks portlet:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **List** icon or drag it onto the dashboard.

3. Click **Set Up** in the portlet or the portlet menu and select **Project Task** from the **List Type** list.
4. Click **Save** to update the portlet content.

If you use the Inline Editing feature, you can change a project task's status in the Project Tasks portlet. When you update a task in the portlet, the changes are automatically saved to the task record. For more information about inline editing, see the help topic [Using Inline Editing](#).

You can also click **Edit** next to a task to update its information. Use the portlet filter options to select which tasks to display. Filter selections stay the same until you change them.

RSS/Atom Feed Portlets

You can publish information from news sources on your dashboard. By default, NetSuite offers feeds from CNN, Reuters, Yahoo, CBS Market Watch, and more. Besides the predefined feeds, you can add custom RSS feeds from other sites, or create your own feed to publish messages with other NetSuite users in your account. Generally, you can have up to two RSS/Atom feeds per page.

Note: Currently, you can add only two RSS feeds each on the home tab and Issues tab (if available), but there's no limitation on custom tabs. For information, see the help topic [Creating Center Tabs](#).

To add an RSS/Atom feed portlet to a page:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **RSS/Atom Feed** icon or drag it onto the dashboard.

To set up an RSS/AtomFeed portlet:

1. Click **Set Up** in the portlet menu to open the setup popup window.

2. Select an RSS feed from the **Source** list.
If you select one of the sources that NetSuite provides, the **Feed URL** field automatically contains the correct URL.

If you select **Custom**, enter the URL of the feed in the **Feed URL** field. This URL can be from a website or your own HTML pages used as an RSS feed.

To find the URL for a website's feed:

1. Go to the website and look for an RSS/XML link or  icon.
2. Click the link or icon to open the feed page.
3. Copy and paste this page's URL into the setup window's **Feed URL** field.

To learn how to create your own custom RSS feed, see [Creating Custom RSS/Atom Feeds](#).

3. In **Number of Links**, type the number of links you want to appear in the portlet.
4. If you only want to see links without additional details, clear the **Show Details** box. The details that you see depend on the RSS feed.
5. Click **Save**.

You'll now see the feed information in your dashboard portlet.

If the portlet takes up too much space on your dashboard, click Set Up again and reduce the number of links or clear the Show Details box.

Creating Custom RSS/Atom Feeds

You can create your own custom RSS/Atom feeds to publish information to users in dashboard portlets. In this case, the RSS/Atom Feed portlet shows links to HTML pages in the File Cabinet, with a short description for each page.

To create a custom feed, first make HTML documents with the information you want to link to from the RSS/Atom Feed portlet. Then, upload these files to the File Cabinet. Finally, create an RSS Feed record in NetSuite that lists links to your HTML files. This record also lets you define the audience for the file. The audience may include different roles, employees, customers, and more.

To create a custom RSS/Atom feed:

1. Create HTML documents outside of NetSuite that you'll link to from the RSS/Atom Feed portlet.
2. Go to Documents > Files > File Cabinet. Upload your HTML files.
3. For each file, click **Edit** and copy the file's URL.
4. Go to Setup > Intranet > RSS Feeds or Commerce > Site Builder > Marketing/Upsell > RSS Feeds. Click **New**. The RSS Feed record stores the links and information to display in your custom RSS/Atom Feed portlet.
5. In the **Title** field, enter a title for your feed. This title is displayed as the portlet title.
6. In the **Alias** field, enter a name to describe this feed in the custom RSS Feeds list.
7. In the **Description** field, enter a description for the feed.
8. Check or clear the **Available Externally** box to define the audience for your feed:
 - If you clear this box, the RSS feed is only for users with login access to your account, and you'll need to choose who can access it on the **Audience** subtab.
 - If you check this box, all users will have access to this feed.
9. On the **Items** subtab, add the titles, descriptions, and URLs for each of your HTML files.
 - The **Title** appears as the link text in the RSS/Atom Feed portlet.
 - The **Description** field contains details about what's on the linked HTML page.
 - The **URL** field should contain the URL for the linked HTML file.

10. When you've added titles, descriptions, and URLs for all your HTML files, click **Save**.

Now, users you've chosen as the audience can display the custom feed in an RSS/Atom Feed portlet on their dashboard. For information, see [RSS/Atom Feed Portlets](#). If you are an administrator, you can publish your dashboard with this feed to users with other related roles. For information, see [Publishing Dashboards](#).

Note: Currently, you can add only two RSS feeds each on the **Home** tab and **Issues** tab (if available). You can get around this limitation by creating a custom tab, where there is no limitation on the number of RSS feeds. For information, see the help topic [Creating Center Tabs](#).

Recent Records Portlet

The Recent Records portlet displays a list of records that you've recently created, changed, or viewed with quick links to access them. Recent records are also listed on the recent records menu, , on the left of the navigation menu.

The Recent Records portlet doesn't have a Set Up link, so you can't change its contents.

In this portlet, like others, the controls are hidden until you move your cursor over it. Each record has a link to view it. If you have edit permission for the record, you'll also see an Edit link on the right.

 Lunch with Brian (Event Series)	>

To add a Recent Records portlet to your dashboard:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **Recent Records** icon or drag it onto the dashboard.

Setting Up Reminders

You can set up reminders for important data or tasks in NetSuite. Reminders appear in the Reminders portlet on dashboards. Click a reminder to see more details and take action if needed.

For example, Wolfe Electronics sets up a reminder for receiving orders. When there are orders to receive, a reminder shows up in the Reminders portlet. A user clicks it to go to the Receive Orders page.

To add a Reminders portlet:

1. If you don't see the Reminders portlet on your dashboard, click **Personalize** in the upper right corner of your dashboard, or click **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **Reminders** icon or drag it onto the dashboard.

To set up the Reminders portlet:

1. In the Reminders portlet's menu, click **Set Up**.
2. Click a reminder in the left list or drag it to the **Current Selections** list on the right.

The reminders are arranged alphabetically. To view custom reminders, select **Custom** from the **Type** list.

The available system-defined reminders depend on your role and the features enabled in your account. For a list of the reminders NetSuite offers, see [System-Defined Reminders Table](#). Custom reminders are available when saved searches to which you have access are marked as available for reminders. For information, see [Creating Custom Reminders](#).

Save **Cancel**

3. You can rearrange reminders in the portlet by dragging them up or down the list.
4. If you want a reminder to be used as a headline reminder, drag it under the **Headline**. Headline reminders show up at the top and stand out more.
5. If you want the reminders to be shown even when there are no results, select **Show reminders with zero results**.
6. When ready, click **Save**.
For each reminder with results, you'll see a count and a link. Click the reminder to see the matching task or search results.

Note: To keep reminders updated, refresh the portlet periodically.

You can add highlighting rules to any reminder. Each rule adds a color when a certain threshold is reached.

To set up highlighting rules:

1. In the Reminders portlet, point to a reminder you want to edit and click the edit icon .
2. To add a highlighting rule, click **Add Rule**, choose the color to use, and specify the threshold.
You can add as many rules as you want.

Edit Reminder: Orders to Receive ✕

3. Click **Save** to apply your highlighting rules.

Reminder alerts

The Reminders portlet displays a yellow triangle icon if a standard or custom saved search gets interrupted for any reason.

All other saved searches that finish successfully show a reminder count as expected. If you point to the icon, you'll see a hint based on your role, permissions, and saved search ownership.

- For Administrators, the message for errors for standard reminders appears as **Unable to load. Please contact Support.**
- For non-Administrators, a message of **Unable to load. Please contact your Administrator** will appear.
- For Administrators who are also owners, the message of **Unable to load. Please modify your search** will appear.
- For Administrators who are not owners, the message of **Unable to load. Please contact the owner or create a new reminder** will appear.
- For non-Administrators who are owners, the message of **Unable to load. Please modify your search** will appear.
- For non-Administrators who are owners and can perform search, the message **View: Unable to load. Please change to a role with sufficient permissions and modify your search** will appear.

- For non-Administrators who are not owners but can perform Search, the message **Full: Unable to load. Please contact the owner or create a new reminder** will appear.
- For non-Administrators who are not owners and cannot perform search, the message **View: Unable to load. Please contact your Administrator** will appear.

System-Defined Reminders Table

The following table describes reminders you might see, depending on your role and which features are turned on in your account.

 **Note:** You might also have custom reminders. See [Creating Custom Reminders](#).

For more information about setting reminders, see [Setting Up Reminders](#).

Reminder	Description
Allocation Schedules due	Reminds you of allocation schedules that are due.
Amortization Entries pending	Reminds you of amortization entries that are pending. Clicking this reminder takes you to the Amortization Journal Entries page filtered to show only transactions for the current period.
Assemblies to Build	Reminds you of assembly work orders you need to enter.
Assemblies to Order	Reminds you of assembly work orders to order.
Bills to Pay	Reminds you of bills you need to pay. You can customize this reminder by choosing how many days before the due date you would like this reminder to appear. Clicking this reminder takes you to the page.
Calls that are overdue	Reminds you of phone calls that are overdue. Clicking this reminder takes you to a list of phone calls filtered to show only calls that are overdue.
Calls to complete	Reminds you of phone calls that are not complete. Clicking this reminder takes you to a list of phone calls filtered to show only calls you need to complete.
Campaigns to Email	Reminds you of campaigns you need to email. Clicking this reminder takes you to the Campaign Calendar page.
Campaigns to Print	Reminds you of marketing campaigns you need to print.
Cases to respond to	Reminds you of cases you need to resolve. Clicking this reminder takes you to the Cases page. The number corresponds to the number of open or escalated cases assigned to you and awaiting support reply.
Checks to Print	Reminds you of checks you need to print. Clicking this reminder takes you to the Print Checks and Forms page.
Commissions Rejected by Accounting	Shows the number of commissions that have been rejected by the your company's accounting department. Clicking this reminder takes you to the Commissions list filtered to show only commissions that have been rejected by accounting.
Credit Cards to Approve	Reminds you of credit card payments you need to approve. Clicking this reminder takes you to the Unapproved Payments Register.
Credit Memos to Print	Reminds you of credit memos you need to print. Clicking this reminder takes you to the Print Credit Memos page.

Reminder	Description
Customers to Bill	Reminds you of customers that need to be billed. Clicking this reminder takes you to the page you use for billing, which varies according to how you process customer billing.
Customers to Renew	Reminds you of the number of customers you need to renew. Clicking this reminder takes you to the Customers & Projects page.
Direct Deposits Returned	Reminds you of the number of returned Direct Deposits. Clicking this reminder takes you to the View Direct Deposit Status page filtered to list all payments returned with an Unreachable or Unknown Error status.
Direct Deposits to Approve	Reminds you of direct deposits you need to approve. Clicking this reminder takes you to the Approve Direct Deposit Payments page filtered to list all payments pending approval.
Direct Deposits to Print	Reminds you of direct deposit vouchers you need to print. Clicking this reminder takes you to the Print Checks and Forms page.
Electronic Funds Transfers Returned	Reminds you of the number of returned electronic funds transfers. Clicking this reminder takes you to the View Electronics Funds Transfer Status page filtered to list all payments returned with a Failed, Unreachable or Unknown Error status.
Electronic Funds Transfers to Approve	Reminds you of electronic funds transfer you need to approve. Clicking this reminder takes you to the Approve Electronic Funds Transfers page filtered to list all transfers pending approval.
Employees to Pay	Reminds you of the number of employees awaiting a payroll run. You can customize this reminder by choosing how many days before the next pay period you would like this reminder to appear. Clicking this reminder takes you to the Payroll Run page.
Employees to Review	Reminds you of the number of employees you need to review. Clicking this reminder takes you to your Employees list.
Employees with an Expiring Authorization	Reminds you of employees who have authorizations expiring.
Employees with an Expiring Visa	Reminds you of employees who have visas expiring.
Employees with an Upcoming Anniversary	Reminds you of employees who have upcoming anniversaries.
Employees with an Upcoming Birthday	Reminds you of employees who have upcoming birthdays.
Estimates to Print	Reminds you of estimates you need to print. Clicking this reminder takes you to the Print Estimates page.
Event Invitations to respond to	Reminds you of invitations you need to respond to. Clicking this reminder takes you to the Events List page.
Expense Reports to Approve	Reminds you of expense reports you need to approve. Clicking this reminder takes you to the Approve Expense Reports page.
Invoices Overdue	Reminds you of overdue invoices. You can customize this reminder by choosing how many days after the due date you would like this reminder to appear. Clicking this reminder takes you to the Open Invoices report filtered to show only invoices that are overdue.
Invoices Rejected	Reminds you of invoices that were rejected.
Invoices to Approve Due to Credit Hold	Reminds you of invoices that you must approve due to credit hold.

Reminder	Description
Invoices to Approve Due to Inconsistent Payment Terms	Reminds you of invoices that you must approve due to inconsistent payment terms.
Invoices to Approve Due to Unknown Tax Amount	Reminds you of invoices that you must approve due to unknown tax amount.
Invoices to Approve	Reminds you of invoices that you must approve.
Invoices to Print	Reminds you of invoices you need to print. Clicking this reminder takes you to the Print Invoices page.
Items to Order	Reminds you of items you need to order. Clicking this reminder takes you to the Inventory Stock Status By Item list filtered to show only items you need to order or build.
Journals to Approve	Reminds you of journal entries to approve.
Memorized Transactions due	Reminds you of memorized transactions that are due. You can customize this reminder by choosing how many days before the due date you would like this reminder to appear. Clicking this reminder takes you to the Memorized Transactions page.
NetSuite System Alerts to Acknowledge	Reminds you of problems encountered in processing transactions and provides suggestions on how to resolve the problem.
Opportunities to Close	Reminds you of the number of open opportunities. You can customize this reminder by entering the number of days before the expected close date you would like this reminder to appear. Clicking this reminder takes you to a list of your open opportunities.
Orders to Fulfill	Reminds you of sales orders you need to fulfill. Clicking this reminder takes you to the Fulfill Sales Order page.
Orders to Pack	Reminds you of sales orders you need to pack. Clicking this reminder takes you to the Pack Orders page.
Orders to Receive	Reminds you of the number of purchase orders you need to receive. Clicking this reminder takes you to the Receive Purchase Orders page.
Orders to Ship	Reminds you of sales orders you need to ship. Clicking this reminder takes you to the Mark Orders Shipped page.
Overdue Projects	Reminds you of projects that are overdue. You can customize this reminder by choosing how many days before the estimated end date you would like this reminder to appear. Clicking this reminder takes you to the Customer & Projects page filtered to show only the overdue projects.
Paychecks to Print	Reminds you of paychecks you need to print. Clicking this reminder takes you to the Print Checks and Forms page.
Payments to Deposit	Reminds you of payments you need to deposit. Clicking this reminder takes you to the Deposit page filtered to show deposits you need to make.
Payroll Batches to Commit	Reminds you of payroll batches you need to commit. Clicking this reminder takes you to the Payroll batch list where you can view or edit each uncommitted payroll before committing.
Periods to Close	Reminds you of accounting periods you need to close. You can customize this reminder to remind you to close a period in a specific number of days after the period ends. Clicking this reminder takes you to the Manage Accounting Periods page.

Reminder	Description
Purchase Orders to Bill	Reminds you of the number of purchase orders you need to bill. Clicking this reminder takes you to the Bill Purchase Orders page.
Purchase Orders to Print	Reminds you of purchase orders you need to print. Clicking this reminder takes you to the Print Purchase Orders page.
Purchase Requests to Approve	Reminds you of purchase requests entered by employees that you need to approve. Clicking this reminder takes you to the Approve Purchase Requests page.
Receipts to Print	Reminds you of receipts to print.
Rejected Intercompany Purchase Orders	Reminds you of the rejected intercompany purchase orders.
Rejected Intercompany Vendor Returns	Reminds you of the rejected intercompany vendor returns.
Resource Allocations to Approve	Reminds you of resource allocations that you need to approve.
Return Authorization Requiring Revenue Commitment Reversals	Reminds you of the number of sales orders that need revenue commitments. Drills down to the Generate Revenue Commitment page.
Return Authorizations to Approve	Reminds you of returns you need to approve. Clicking this reminder takes you to the Approve Return Authorizations page filtered to show only returns you need to approve.
Return Authorizations to Print	Reminds you of return authorizations you need to print. Clicking this reminder takes you to the Return Authorizations page where you can select the authorization that needs to be printed.
Return Authorizations to Receive	Reminds you of returns you need to receive. Clicking this reminder takes you to the Receive Returns page.
Return Authorizations to Refund	Reminds you of returns you need to refund. Clicking this reminder takes you to the Credit Returns page.
Revenue Recognition Entries pending	Reminds you of revenue recognition entries that are pending. Clicking this reminder takes you to the Revenue Recognition Journal Entries page filtered to show only transactions for the current period.
Sales Orders Requiring Revenue Commitments	Reminds you of the number of sales orders that need revenue commitments. Drills down to the Generate Revenue Commitment page.
Sales Orders to Approve	Reminds you of sales orders you need to approve. Clicking this reminder takes you to the Approve Sales Orders page filtered to show only sales orders you need to approve.
Sales Orders to Bill	Reminds you of sales orders you need to bill. Clicking this reminder takes you to the Bill Sales Order page.
Sales Orders to Print	Reminds you of sales orders you need to print. Clicking this reminder takes you to the Print Sales Order page.
Solutions to Approve	Reminds you of knowledge base solutions you need to approve.
SuiteBundles to Update	Reminds you that one or more installed bundles have an updated version available. Clicking this reminder takes you to the Installed Bundles page, where you can click links to update bundles.

Reminder	Description
	This reminder is added by default for an account's administrators and users with SuiteApp Marketplace permission when the first bundle is installed in the account.
Tasks due today	Reminds you of tasks assigned to you that are due today. Clicking this reminder takes you to a tasks lists filtered to show only tasks due today.
Tasks that are overdue	Reminds you of tasks assigned to you that are overdue. Clicking this reminder takes you to a tasks list filtered to show only your overdue tasks.
Tasks to complete	Reminds you of tasks assigned to you that are not complete. Clicking this reminder takes you to a tasks list filtered to show only tasks you need to complete.
Time Records to Approve	Reminds you if you need to approve the time of subordinates. Clicking this reminder takes you to the Approve Time task.
Transfer Orders to Approve	Reminds you of transfer orders due to be processed. All transfer orders that are pending approval or pending fulfillment are included in this count. Clicking this reminder takes you to the Approve Transfer Orders page.
Vendor Return Authorizations to Approve	Reminds you of vendor returns you need to approve. Clicking this reminder takes you to the Approve Return Authorizations page filtered to show only returns you need to approve.
Vendor Return Authorizations to Refund	Reminds you of vendor returns you need to refund. Clicking this reminder takes you to the Refund Vendor Return Authorization page.
Vendor Return Authorizations to Return	Reminds you of vendor returns you need to send. Clicking this reminder takes you to the Ship Vendor Return Authorization page.
Work Orders to Build	Reminds you of assembly work orders you need to build.
Work Orders to Close	Reminds you of assembly work orders to close.

Creating Custom Reminders

If the reminders NetSuite provides don't meet all your needs, you can create your own and add them to the Reminders portlet on your dashboard. Each reminder is based on a count of the results of a saved search.

To create a custom reminder, enable the Available for Reminders option on the saved search definition page. Once you do, the saved search is listed as a reminder on the Set Up Reminders page, and you can choose to show it in the Reminders portlet.

To create a custom reminder:

1. Create a new saved search or edit an existing saved search. See the help topic [Defining a Saved Search](#).
2. On the saved search definition page, check the **Available for Reminders** box.

Saved Case Search

Save Cancel Preview Pivot Report Actions

Search Title *
Reopened Cases

ID

☒ Public

☐ Available as List View

☐ Available as Dashboard View

☐ Available as Sublist View

☒ Available for Reminders

☐ Show In Menu

3. Make sure the search name is something you'll recognize in the Reminders portlet.
The search name is displayed in the Reminders portlet, with the format: <number_of_results> <saved_search_name>
4. On the **Results** subtab of the saved search, check whether any summary types that group search results are included.
 - Custom reminders work best for saved searches with no grouped results, since reminders are based on a count of the number of results and only display when there's a non-zero count.
 - If you set up a reminder for a saved search that groups results by a summary type other than a count, the reminder won't display.
 - You can add a count for a grouped field so the reminder displays, but grouping may affect what's shown, so it might not be a true total.
 - It's usually best to remove summary types or make a separate search without them for reminders.
 - For information about grouping search results with summary types, see the help topic [Summary Types for Search Results](#).
5. Click **Save** to save the search.

To add a custom reminder to the Reminders portlet:

1. Go to your home page. If this page does not include a Reminders portlet, click **Personalize Dashboard** and add it. See [Setting Up Reminders](#).
2. In the Reminders portlet menu, click **Set Up**.
3. In the **Type** list, select **Custom**.
You'll see your available custom reminders listed
All saved searches you can access are listed if **Available for Reminders** is checked. The list isn't limited to only searches you created. See the help topic [Accessing a Saved Search](#).
4. Click a reminder in the left list or drag it to the **Current Selections** list on the right.
5. You can change the reminder order by dragging them up or down in the Reminders portlet.
6. If you want a reminder to be a headline, drag it under Headline.
Headline reminders are displayed in the upper part of the portlet and use a more prominent layout.
7. If you want reminders to show up even with zero results, check **Show reminders with zero results**.
8. When ready, click **Save**.

The Reminders portlet displays a count of search results. Click a custom reminder to see detailed search results and complete related tasks.

Note: If a custom reminder causes an error that prevents the Reminders portlet from displaying reminder links properly, click Set Up in the Reminders portlet's menu, remove the reminder from the Current Selections list, and click Save. Optionally, you can edit the related saved search and clear the Available for Reminders box. After you save this change, the problematic reminder is removed, and the portlet should be able to display. Note that you may need to refresh the page.

Example Custom Reminder

Custom reminders are based on saved search results, which enables you to include more fine-tuned reminders in your dashboard. This can be especially helpful when you need reminders for custom record types, because system-defined reminders are not provided for custom records.

For example, if your account has an Equipment custom record with a Last Service field, and you're in charge of service scheduling, you can create a saved search and custom reminder to track if Equipment was serviced in the last Fiscal Year.

To set a custom reminder for servicing Equipment:

1. Go to Reports > Saved Searches > All Saved Searches > New, and choose **Equipment**.
2. A saved search definition page opens.
3. Enter a meaningful name for the search.
4. Check the **Available for Reminders** box.
5. On the **Criteria** subtab, define a filter for the Last Service field to include equipment records with a Last Service is within last fiscal year.
6. On the **Results** subtab, choose the columns to be displayed in search results.
7. Save the search.

The screenshot displays the 'Saved Equipment Service Search' configuration page. At the top, there are tabs for 'List', 'Search', and 'More'. Below these are buttons for 'Save', 'Cancel', 'Preview', 'Pivot Report', and 'Actions'. The 'Search Title' is 'Last Equipment Service'. There are checkboxes for 'Public', 'Available as List View', 'Available as Dashboard View', 'Available as Sublist View', 'Available for Reminders', and 'Show In Menu'. The 'Criteria' subtab is selected, showing a note: 'Use this tab to indicate columns to be included in the search results as well as sort order.' The 'Results' subtab is also visible, showing sorting options (Sort By: Name, Then By: Service date) and output options (Output Type: Normal, Show Totals, Max Results, Run Unrestricted, My Preferred Search Results). The 'Columns' section shows a table with columns: Field, Summary Type, Function, Formula, When Ordered By Field, Custom Label, Custom Label Translation, Summary Label, and Summary Label Translation. The 'Name' column is currently empty. At the bottom, there are buttons for 'Save', 'Cancel', 'Preview', 'Pivot Report', and 'Actions'.

8. Go to your Home page. If this page does not include a Reminders portlet, click **Personalize Dashboard** and add it. See [Setting Up Reminders](#).
9. In the Reminders portlet, click **Set Up**.
10. Click the new reminder on the left to move it to the right, and then click **Save**.
11. Review the Reminders portlet on your Home page.
12. Click **Reminder** to see the list of expiring warranties and the information you need to renew them.

Report Snapshot Portlets

Report Snapshot portlets show summaries of some reports you can access. You can pick from standard report snapshots or create your own custom snapshots.

To add a Report Snapshot to your dashboard:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **Report Snapshots** icon or drag it onto the dashboard.

3. Click **Set Up** in the portlet menu and select the report snapshot you want to display from the **Snapshot** list.
4. Click **Save** to update the portlet content.

You can also expand the portlet to full screen by clicking the double arrow icon ↗.

For a list of standard report snapshots, see [Standard Report Snapshots Table](#).

To learn how to create custom report snapshots, see [Creating Custom Report Snapshots](#).

For more information about report snapshots, see [Report Snapshots](#).

Search Form Portlet

If you have a saved search set as your preferred search form, you can add it as a portlet to your dashboard. To learn how to define a saved search as a preferred search form, see the help topic [Defining a Saved Search as a Preferred Search Form](#).

To add a Search Form portlet to your dashboard:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **Search Form** icon or drag it onto the dashboard.

3. Click **Set Up** in the portlet or the portlet menu and use the **Search** list to select the search form you want to display in the portlet.

You can also display personalized search forms on your dashboard. For details, see the help topics [Personalizing a Search Form](#) and [Adding Personalized Search Forms to NetSuite Pages](#).

Settings Portlet

The Settings portlet shows links to user-level setup tasks. These links are system-defined and can't be edited, and you can't remove the portlet from your dashboard.

The links that appear in the portlet depend on your role and may include the following:

- **Personalize Dashboard** — Opens the Standard Content tab of the Personalize Dashboard palette, which lets you add portlets to the dashboard. For more information, see [Dashboard Personalization](#).
- **Set Preferences** — Opens the Set Preferences page, which lets you edit your preferences for different areas of NetSuite. For more information, see the help topic [Setting Personal Preferences](#).
- **Change Email** — Opens the Change Email page, which lets you change the email address associated to your NetSuite account. For more information, see the help topic [Change Email Link](#).
- **Change Password** — Opens the Change Password page, which lets you change the password you use to access NetSuite. For more information, see the help topic [Change Password Link](#).
- **Update Security Questions** — Opens the Update Security Questions screen, which lets you change the security questions associated to your NetSuite account. For more information, see the help topic [Update Security Questions Link](#).

Other links that may appear in the portlet depending on your permissions and the features that have been enabled in your NetSuite account include:

- **Publish Dashboard** — Opens the Publish Dashboard page, which lets you publish a dashboard for other users who log in to the same center you are currently in. For more information, see [Publishing Dashboards](#).
- **Set Up NetSuite for Outlook** — Opens the Set Up NetSuite for Outlook page, which lets you access the NetSuite for Outlook installer. After it is installed, NetSuite for Outlook enables you to synchronize your Microsoft Outlook™ email, events, contacts, and tasks with your NetSuite account. For more information, see the help topic [Outlook Integration](#).
- **Set Up SuiteAnalytics Connect** — Opens the SuiteAnalytics Connect Driver Download page, which lets you download a SuiteAnalytics Connect Driver. After it is downloaded and installed, the driver enables you to connect to the Connect Service which, in turn, lets you archive, analyze, and report on NetSuite data using third-party tools such as Microsoft™ Excel, BIRST and Adaptive. For more information, see the help topic [SuiteAnalytics Connect](#).

Note: If you don't see a link in the Settings portlet that you think you should, contact your system administrator.

Shortcuts Portlet

The Shortcuts portlet lets you quickly access your most-used records, transactions, lists, and reports.

These same links also appear as options on the shortcuts menu, the star icon , on the navigation menu.

You can add, remove, and reorder shortcuts in the portlet or menu, and you can set shortcuts to open in new windows. Any changes you make show up in both the Shortcuts portlet and menu.

For instructions on how to add the Shortcuts portlet to a page, see [Adding a Portlet to a Dashboard](#).

Important: If you have added the Shortcuts portlet to more than one page, the portlet always maintains the same links on every page. Any changes you make to the Shortcuts portlet displayed on one page are applied automatically to the Shortcuts portlet displayed on any other page and to the menu options listed on the shortcuts menu.

Adding Shortcut Links

You can add a link by going to the page you want to bookmark and selecting **Add to Shortcuts** from the **More** list. Or, go to the Shortcuts portlet and click **New Shortcut**.

To add a shortcut from the page where you want the shortcut to go:

1. Click the star icon  on the navigation menu and select **Add to Shortcuts**.

2. Edit the name for the shortcut link. By default it is the name of the page.
3. If you want the shortcut to open in a new window, check the **Open in New Window** box.
4. Click **Save**.

To add a shortcut from the Shortcuts portlet:

1. On the Shortcuts portlet, click **New Shortcut** on the portlet menu.
2. Enter a name for the shortcut link.
3. Enter the **URL** for the page. (If you don't know the page's URL, go to the page and use **Add to Shortcuts** instead.)
4. If you want the linked page to open in a new window, check the **Open in New Window** box.
5. Click **Save**.

Setting Up Shortcut Links

In the Set Up Shortcuts popup window, you can remove, reorder, rename shortcuts, and decide if they open in a new window.

 A screenshot of the 'Set Up Shortcuts' popup window. The window has a dark header with the title 'Set Up Shortcuts' and a close button (X). Below the header is a light-colored bar with 'Save' and 'Cancel' buttons. The main content area contains a table with columns: 'Enable', 'Label', 'External URL', and 'Open in New Window'. Above the table are two buttons: 'Move To Top' and 'Move To Bottom'. The table has five rows of shortcuts, each with a reorder handle (three horizontal lines) on the left. The 'Open in New Window' column has checkboxes. At the bottom of the window are 'Save' and 'Cancel' buttons.

	Enable	Label	External URL	Open in New Window
≡	☒	Tasks		☐
≡	☒	Calendar		☐
≡	☒	Create Invoices		☐
≡	☒	Accept Payments		☐
≡	☒	Write Checks		☐

To remove a shortcut:

1. Click **Set Up** in the Shortcuts portlet menu or the **Set Up Shortcuts** option on the shortcuts menu to open the Set Up Shortcuts popup window.
2. Clear the **Enable** box next to each shortcut that you want to remove.

Note: Shortcuts that were created when a dashboard was published for you appear with asterisks. The publisher may have restricted these shortcuts so that you cannot remove them.

3. Click **Save**.

To reorder shortcut links:

1. Click **Set Up** in the Shortcuts portlet menu or the **Set Up Shortcuts** option on the shortcuts menu to open the Set Up Shortcuts popup window.
2. Click the shortcut row to select it. The row will be highlighted and have a drag gripper.

	Enable	Label	External URL	Open in New Window
=	☒	Tasks		☐
	☒	Calendar		☒
=	☒	Create Invoices		☐
=	☒	Accept Payments		☐
=	☒	Write Checks		☐

3. Drag the shortcut row where you want it or use the **Move to Top** or **Move to Bottom** buttons.
4. Click **Save**.

To indicate that a shortcut's linked page should open in a new window:

1. Click **Set Up** in the Shortcuts portlet menu or the **Set Up Shortcuts** option on the shortcuts menu to open the Set Up Shortcuts popup window.
2. Check the **Open in New Window** box next to the shortcut name, and click **Save**.

To rename a shortcut link:

1. Click **Set Up** in the Shortcuts portlet menu or the **Set Up Shortcuts** option on the shortcuts menu to open the Set Up Shortcuts popup window.
2. Change the name in the **Label** field, and click **Save**.

Note: The Shortcuts portlet might show duplicate links if your administrator published a dashboard with links that match yours. To fix that, remove any custom links you've added.

SMT Links Portlet

The Site Management Tools Links portlet lets you see all your available websites and domains from your administrator account in NetSuite. When you pick a website from the dropdown, you'll see all available domains.

You have two options with each domain, **Preview**, denoted by the eye icon, or **Edit**, denoted by the edit icon.

When you click one of these icons, a new browser tab opens and you're automatically logged into Site Management Tools for that domain.

Note: The Site Management Tools feature must be enabled in your NetSuite account.

To add an SMT Links portlet to your dashboard:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **SMT Links** icon or drag it onto the dashboard.

SuiteApp Portlets

If you have a dashboard-compatible SuiteApp installed in your account, you can display this SuiteApp on your dashboard as a portlet.

To be available as a dashboard portlet, a SuiteApp must meet the following requirements:

- It must be installed in your account.
- It must include a dashboard component.

Note: You can't add SuiteApp portlets to custom dashboards.

To add a SuiteApp portlet:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **SuiteApps** tab of the **Personalize Dashboard** palette, click the SuiteApp you want to add or drag it onto the dashboard.

You can add up to six SuiteApp portlets to your dashboard.

Tasks Portlet

If you want to show a list of Tasks on your dashboard, you can add a Tasks portlet from the Personalize Dashboard palette.

Tasks

Total: 2View Task DashboardQuick SortDue Date

New	Edit View	Due Date	Task Title	Company	Priority	Status
	 	10/23/2024	Create an estimate for CTA		Medium	Not Started
	 	11/6/2024	Draft Product Expansion Needs		Medium	Not Started

You can view tasks using the Dashboard view or the Basic view. Basic view enables you to filter tasks by status and priority as well as view tasks assigned to other users by choosing the assignee from the Assigned To list.

You can also sort tasks by: In Order, Due Date, Recently Created, Recently Modified, or Recently Viewed.

You can expand the portlet to full-screen by clicking the double arrow icon . The full-screen view displays more columns and rows in the search results.

To add a Tasks portlet to your dashboard:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **Tasks** icon or drag it onto the dashboard.

Trend Graph Portlets

Trend graphs show the differences in Key Performance Indicators (KPIs) data over time. You can add up to five Trend Graph portlets to your dashboard.

To add a Trend Graph portlet to your dashboard:

1. Click **Personalize** in the upper right corner of your dashboard or use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **Trend Graph** icon or drag it onto the dashboard.

3. Click **Set Up** in the portlet or in the portlet menu and use the **KPI** list to select the KPI to be used for this trend graph. You can select up to three.

You can expand the portlet to full-screen view by clicking the double arrow icon .

To learn more about trend graphs and displaying them on your dashboard, see [Trend Graphs](#).

Printing and Exporting Dashboard Content

You can print or export content from some dashboard portlets. These options are usually in the same menu as the Set Up option in the portlets where they are available. The following table lists the portlets that support these options.

Portlet Type	Supported Print/Export Options	Notes
KPI Meter	- Print the chart - Download PNG image - Download JPG image - Download PDF document - Download SVG vector image	Available from portlet menu.
KPI Scorecard	Export (data to CSV file)	Available from portlet menu.
Report Snapshot	- Print the chart - Download PNG image - Download JPG image - Download PDF document - Download SVG vector image	Available from portlet menu.
Trend Graph Portlet	- Export (data to CSV file) - Print the chart - Download PNG image - Download JPG image - Download PDF document - Download SVG vector image	Available from portlet menu.
Trend Graph Pop-Up Window	- Export (data to CSV file) - Print the chart - Download PNG image - Download JPG image - Download PDF document - Download SVG vector image	- The Trend Graph pop-up window is available on some portlets, including KPI Scorecard and Key Performance Indicators portlets. - Export link is available from the Trend Graph window. - Print and download options are available from the Trend Graph window menu.

Customer Dashboards

NetSuite includes a specialized dashboard for every customer (including leads and prospects) in your system. The customer dashboard gives you quick access to their key data, so you don't have to search through multiple screens.

To open a dashboard for a customer, you can:

- Click the View Dashboard icon on a Customer record or on a row in a customer list:

- Enter **dash:customer_name** in the Global Search field at the top of the NetSuite page.

Setting the Customer Dashboard as Default View

If you prefer to look at all customer records using the dashboard view, you can set the preference to make this the default view whenever you open a customer record. To do this, go to Home > Set Preferences > Appearance > Set Customer Dashboard as Default View on Customer Record.

By default, a customer dashboard includes a KPI portlet with key summary data, a Dashboard Links portlet with customer reports, a list of customer transactions, and more. You can personalize content and setup of customer dashboard portlets.

- Choose Set Up from the portlet menu to modify the portlet's configuration. For more information, see [Setting Up Dashboard Portlet Content](#) and [Setting Up the Key Performance Indicators Portlet](#).
- To add portlets, see [Adding a Portlet to a Dashboard](#).

You can add a custom portlet that displays results from a SuiteScript, such as custom lists, data entry forms, or free-form HTML. To ensure that the custom portlet provides data for the selected customer, pass the customer's entity ID to the SuiteScript function. See the help topic [Creating and Deploying a Portlet Script](#).

A customer dashboard includes information about all transactions and activities for the customer's related projects and subcustomers. The customer dashboard's Transactions portlet data is consistent

with the customer record's Transactions subtab data, and the customer dashboard's Key Performance Indicators portlet data is consistent with the customer record's Financial subtab data. The Tasks portlet shows a list of CRM tasks related to the customer record. You can also use the Tasks portlet to create tasks for the customer. Tasks that are displayed here are only those that are created using the New Task menu of this portlet. You can find other tasks related to the customer record in the Activities portlet of the customer dashboard. For more information, see [Tasks Portlet](#).

Note that the setting for the Accept Payments Through Top-Level Customer preference affects the rollup of data for some customer dashboard KPIs, in the same manner that it affects the customer record's Financial tab data. For more information about this preference, see the help topic [Consolidated Payments](#).

Key Performance Indicators

Key Performance Indicators, or KPIs, synthesize your raw data into critical business metrics that you can see right on your dashboard in the formats you choose. KPIs let you spend more time learning from and acting on important data, and less time gathering it. NetSuite comes with over 75 built-in KPIs based on standard reports, like summaries of forecasts, pipelines, orders, cases, and financial data. You also can create custom KPIs, based on custom saved searches.

NetSuite provides the following types of dashboard portlets where you can display key performance indicators:

- **Key Performance Indicators portlet.** This portlet displays a summary line for each selected KPI, with clickable links that drill down into each KPI's underlying data source. The KPI portlet also enables you to see the KPIs you consider more relevant as headlines.
 - For information about adding a Key Performance Indicators portlet to a dashboard, and choosing KPIs and layout options for the portlet, see [Setting Up the Key Performance Indicators Portlet](#).
 - For a list of the standard KPIs available from NetSuite, see [Standard Key Performance Indicators Table](#).
 - For a summary of what you can see in the Key Performance Indicators portlet, see [Viewing Key Performance Indicator Data](#).
 - For tips on displaying your own KPIs, see [Custom KPIs](#).
- **KPI Meter portlet.** This portlet displays a visual representation of KPI data, a semi-circular meter providing comparison, date range, and threshold values at a glance. For more information, see [KPI Meters](#).
- **Trend Graph portlet.** This portlet displays the differences in data over selected time intervals for multiple KPIs in a single chart. You can display up to three KPIs in a chart. This chart type can be Area, Line, Bar, or Column. You can show comparisons either continuously or side by side. You can also get popup trend graphs from clickable icons in the Key Performance Indicators and KPI Scorecard portlets. For information, see [Trend Graphs](#).
- **KPI Scorecard portlet.** This portlet displays a performance scorecard that can include complex comparisons among multiple KPIs over multiple date ranges or accounting periods. Scorecards also can include Excel-like formulas with KPIs and functions in their expressions. For information, see [KPI Scorecards](#).

KPIs are role-based and feature-based, meaning the KPIs that you can choose to display depend upon the role you used to log in to NetSuite and the features that are enabled. For more information about roles in NetSuite, see the help topic [NetSuite Roles Overview](#).

Setting Up the Key Performance Indicators Portlet

If you want to display KPI data on a dashboard, the first step is to add the Key Performance Indicators portlet to the page if it is not already there.

When the Key Performance Indicators portlet appears on a page, you can click **Set Up** and define its content and layout in the Set Up Key Performance Indicators popup window. You can add up to eight KPIs as headlines.

The KPIs that are available to you in the Set Up Key Performance Indicators popup window depend upon the role you used to log in to NetSuite and the features that are enabled.

For more information, see the following:

- [Adding the Key Performance Indicators Portlet](#)
- [Making Changes to the Key Performance Indicators Portlet](#)
- [Choosing KPIs and Setting Layout Options](#)

Adding the Key Performance Indicators Portlet

To add the Key Performance Indicators portlet:

1. Click **Personalize Dashboard**.
2. Click or move the **Key Performance Indicators** item.

The portlet shows up on your page with default or previously selected KPI data.

Making Changes to the Key Performance Indicators Portlet

You can make the following changes to the Key Performance Indicators portlet:

- Select the standard and custom KPIs that appear in the portlet.
- Select the period of time for which you want KPI data to be synthesized.
- Choose to display comparisons of KPI data across different time periods, with percentage changes calculated automatically.
- Choose to highlight displayed KPI data that exceeds or falls short of a threshold that you define.
- Set some KPI data to appear in the portlet header.
- Determine the order in which KPIs appear in the portlet.
- For KPIs that provide time-based comparisons of data, define layout options for the popup trend graphs that are available from Trend Graph icons or by clicking the KPIs in the header.
- You may be able to choose whether to display data for all employees or employees in your team.

Choosing KPIs and Setting Layout Options

To define KPIs and layout options for the Key Performance Indicators portlet:

1. In the Key Performance Indicators portlet, click **Set Up** to open the Set Up Key Performance Indicators popup.
2. To select standard KPIs for display in the portlet, click **Add Standard KPIs** to open the Choose Standard Key Performance Indicators dialog.
 - Click a KPI in the left list to move it to the right list, which indicates that it should be displayed.
 - Click **Done** when you're finished picking KPIs to display.
 - Selected standard KPIs are listed with question mark icons. Click these icons for KPI descriptions. For a complete list of standard KPIs and their descriptions, see [Standard Key Performance Indicators Table](#).
3. To select saved searches to display as custom KPIs, click **Add Custom KPIs** to open the Choose Custom Key Performance Indicators dialog.
 - Click a saved search in the left list to move it to the right list, which indicates that it should be displayed as a custom KPI.
 - You can choose up to 10 custom KPIs.
 - Click **Done** when you're done picking KPIs to display.
 - Selected custom KPIs are listed with "c" icons. Click an icon for a brief general description of custom KPIs. For more details, see [Custom KPIs](#).
4. For each selected KPI, in the **Range** list, select the date or period range for which data should be included.
5. For each selected KPI, if an **Employees** list is available, select one of the following:
 - **All** – Includes KPI data for all employees in your organization.
 - **Only Mine** – Includes data only from employees in your group in a selected KPI.
 - **My Team's** – Includes only KPI data that is relevant to employees in your team.
6. For each selected KPI, in the **Highlight If** list, highlight displayed KPI data that exceeds or falls short of a defined threshold. If you do not want highlighting for this KPI, leave the list blank. For more details, see [Highlighting KPIs](#).
7. For each selected KPI, in the **Compare** column, check the box if you want to compare results from the time period defined in the **Range** list with results from another period defined in the **Compare Range** list. For more details, see [Setting Up KPI Comparisons](#).
8. For each selected KPI, in the **Compare Range** list, if you checked the **Compare** box, select the date or period range for which data should be compared with data from the first range. If you did not check the **Compare** box, you do not need to make a selection here.
9. You can remove a selected KPI from the Key Performance Indicators portlet by clicking its **x** button at far right. Click **Remove All** button to remove all selected KPIs.
10. You can change the order in which KPIs appear in the Key Performance Indicators portlet by using the **Move To Top** and **Move To Bottom** buttons or by dragging and dropping individual KPIs.
 - To move a KPI, click it and hold down the mouse button until you see the crossed arrows and the KPI is highlighted gray. Continue holding down the mouse button, moving the pointer to the location where you want the KPI to appear. Then release the mouse button.
 - To use one of the **Move** buttons, select a KPI by clicking on it and holding down the mouse button until you see the crossed arrows and the KPI is highlighted gray. Then click either of the **Move** buttons.
11. To change display options for KPIs' popup trend graphs, click the **Popup Trend Graphs** subtab. Check or clear the **Show Moving Average**, **Show Last Data Point on Pop-Up Trend Graphs**, or **Include Zero on Y-Axis** boxes. You can also set the chart theme and background for all popup trend graphs, plus the default chart type and time increment. For information about these options, see [Setting Up Popup Trend Graphs](#).

12. If you don't want the portlet to refresh automatically when you log in to NetSuite, select the **Cached Data** option.

This option also adds a time indicator that appears when you point to the portlet title, so you can see when the portlet was last updated.

13. Click **Save**.

You can now review the data displayed in the Key Performance Indicators portlet. To make further changes, click **Set Up** and redo the steps above as needed. For tips about what you can do in the portlet, see [Viewing Key Performance Indicator Data](#).

Viewing Key Performance Indicator Data

After you have added a Key Performance Indicators portlet to a dashboard and set up the KPIs on the Set Up Key Performance Indicators page, you can perform the following functions from within the portlet or on the dashboard.

View comparisons of data from different periods

If you have defined time ranges for comparisons in the Set Up Key Performance Indicators page, you can view percentage changes for KPIs. An arrow shows the direction of each change—green for positive, red for negative. For instructions for setting up comparisons, see [Setting Up KPI Comparisons](#).

View highlighted data

If you have defined goal amounts as thresholds for KPIs in the Set Up Key Performance Indicators page, you may notice that some KPIs appear in bold text with red flags because they have either exceeded or fallen short of goals. For more information, see [Highlighting KPIs](#).

Drill down to underlying data

Each standard KPI's data is based on a snapshot of a NetSuite report. Each custom KPI's data is based on a saved search. The Key Performance Indicators portlet provides multiple links for each KPI that you can click to open its underlying report or saved search. You can find one of these links by moving your cursor over a KPI and clicking when you see a pointing hand and underlined text.

Note: For KPIs based on financial and sales reports, totals are always rounded to the nearest whole number currency amount. You can drill down to the report to view the exact totals for that report.

View trend graphs

For any KPI with a time-based comparison, click its Trend Graph icon to open a popup trend graph. You can change the time period graphed by clicking options in the graph's popup window or change the graph's layout options in the Set Up Key Performance Indicators popup. For more information, see [Trend Graphs](#).

Key Performance Indicators	
INDICATOR	PERIOD
Employees	Today
 New Cases	 This Month
Open Cases	Today
Web Site Hits	This Fiscal Quarter vs. Last Fiscal Quarter

Move the Key Performance Indicators portlet

You can drag the Key Performance Indicators portlet to move it to a different place on the dashboard.

If you place the KPI portlet in a narrow column, the individual Refresh icons are not available due to the compact format of the narrow column. However, you can collapse and expand the list of KPIs as needed, and you can also see the KPIs displayed as headlines. Note that trend graphs are not displayed for KPI headlines. To view the popup trend graph, click the Trend Graph icon next to a KPI in the list of KPIs, if available. This option is enabled by default. For a fuller display with these options, move the portlet to the wide column.

Minimize the Key Performance Indicators portlet

You can minimize the Key Performance Indicators portlet so that its data is not loaded immediately when a page opens, avoiding a lot of waiting for slow-loading KPI data. To minimize the portlet, click its title bar. When the page is loaded, you can click the portlet's title bar again to display KPI data as needed.

Change KPI data setup

You can click **Set Up** in the portlet menu at any time to open the Set Up Key Performance Indicators popup and change the contents and layout of the portlet.

Setting Up KPI Comparisons

A variety of date ranges are available for KPI comparisons, which allow you to compare results for two date ranges or periods.

Many additional date ranges and period ranges are available for comparisons in KPI scorecards. Each scorecard can include multiple lines of KPI data and comparisons for multiple data ranges or periods. If you want to display KPI results for more than two date ranges or periods, see [Creating a KPI Scorecard](#).

To set up KPI comparisons:

1. Click **Set Up** in your Key Performance Indicators portlet's menu.
2. In the Set Up Key Performance Indicators popup, if the KPI is not displayed, click **Add Standard KPIs** or **Add Custom KPIs**, select the KPI, and click **Done**.
3. In the **Range** column for the KPI, choose the first period of time for which data should be included in the KPI.
4. Check the box in the **Compare** column.
5. In the **Compare Range** column, choose the second time period for which data should be included in the KPI (and compared with the first period's data).
6. Repeat steps 2 through 5 for each indicator that you want to include a comparison.
7. Click **Save**.

After these setup steps, the KPI in your Key Performance Indicators Portlet now displays columns for the current period's metric, the previous period's metric, and the percentage change.

If you've set up a comparison for a custom KPI and the results aren't showing up right, the saved search it's based on might not meet the requirements. The saved search definition must:

- Not include any date fields defined as filters on the Criteria subtab
- Have only one field with a summary type (such as group, sum, or count) defined on the Results subtab.
- Have a date field defined as an available filter on the Available Filters subtab.

For more information, see [Custom KPIs](#).

Highlighting KPIs

You can call out specific KPIs when they're above or below your goals, so you can spot and handle business issues faster.

For example, Alexa Wolfe's goal this month is to have sales over \$40,000. If her company reaches this goal, she wants to reward her team with dinner. To see this information in her KPI portlet, Wolfe chooses to highlight her Sales indicator when it is over \$40,000.

To call out KPIs, you can define goal amounts as thresholds in the Set Up Key Performance Indicators popup. Then, if the KPI amount is greater than or less than the defined threshold amount, the KPI is highlighted in the Key Performance Indicators portlet, by appearing in bold text with a red flag. You also can indicate that a highlighted KPI can be displayed as a headline for the Key Performance Indicators portlet, meaning it is displayed at the top of the portlet in large, bold text.

To highlight KPIs:

1. Click **Set Up** in your Key Performance Indicators portlet.
2. In the Set Up Key Performance Indicators popup, if the KPI is not displayed, click **Add Standard KPIs** or **Add Custom KPIs**, select the KPI, and click **Done**.
3. In the **Range** column for the KPI, select the date or period range you want to report on for this metric.
4. In the **Highlight If** column, choose to call out this indicator if it is **greater than** or **less than** a threshold you set.
5. In the **Threshold** column, enter the threshold this indicator must exceed or fall below to be highlighted.
6. In the **Headline** column, check the box if you want this KPI to show up as a headline the top of the Key Performance Indicators portlet in large, bold text.
7. Repeat the preceding steps for each indicator you want to highlight.

8. Click **Save**.

Add Standard KPIs Add Custom KPIs Move To Top Move To Bottom Remove all

Key Performance Indicator	Range	Highlight If...	Threshold	Headline	Compare	Compare Range
Bank Balance	This Period				✓	Last Period
Cart Abandonment	this month				✓	last month
Authorized Commission	this month					
Open Opportunities	this month				✓	last month to date
Opportunities Won	this month				✓	same month last fiscal quarter to date
Income	This Period				✓	Last Period

After these setup steps, a KPI that either exceeds or falls short of its defined threshold value displays in bold text. If the Headline box is checked, the KPI is also displayed as a headline for the Key Performance Indicators portlet.

Note: You can display up to eight KPIs as headlines.

Standard Key Performance Indicators Table

Depending on your role and your account's enabled features, some or all of the following table's KPIs are available for display in the Key Performance Indicators portlet. If you see a KPI in the table that is not available to you in NetSuite and that you would like to display, check with your administrator to see if the related feature can be enabled, or if you can use another role to log in to NetSuite.

The table lists KPIs in alphabetical order.

KPI	Description
Authorized Commission	This indicator shows the total outstanding commission amount that has been authorized but not paid, as of the selected date range. Click this KPI's period or total to open the Authorized Commission Summary Report.
Authorized Partner Commission	This indicator shows the total outstanding commission amount that has been authorized but not paid to partners, as of the selected date range. Click this KPI's period or total to open the Authorized Partner Commission Summary Report.
Average Days to Pay	(Available on the Customer Dashboard only) This indicator shows the customer's average number of days between invoice date and the payment date for the selected period(s). Click this KPI's periods or totals to open the A/R Aging Detail Report.
Average Days Overdue	(Available on the Customer Dashboard only) This indicator shows the average number of days that the customer had an overdue balance for the selected period(s).

KPI	Description
	The formula for this KPI is the average number of days that invoices are overdue, weighted by the amount of the invoices. For example, if the time now is 3:00:10pm: an invoice for \$100 open for 5 days and a second invoice for \$200 open for 10 days, the KPI shows $((5+54010/86400)*100 + (10+54010/86400)*200)/300 = 8.9584490740740740740740740741$. The 54010 is the number of seconds since midnight of 3:00:10pm, and 86400 is the number of seconds in a day. So the invoice is not 5 days overdue, but is 5.6251157407407407407407407407 days overdue. The number in the dashboard changes every second. Click this KPI's periods or totals to open the A/R Aging Detail Report.
Balance	(Available on the Customer Dashboard only) This indicator shows the current dollar amount owed by the customer. Click this KPI's periods or totals to open the A/R Aging Detail Report.
Bank Balance (May display as Total Bank Balance)	This indicator shows the total impact on bank accounts, as of the selected period(s). Click this KPI's periods or totals to open either the Balance Sheet Report or the Bank Register Report. (Your account setup determines which report is the basis for this KPI. Click the Support by Phone button to understand your account settings.)
Cart Abandonment	This indicator shows the percentage difference between the number of Web store shopping carts filled and the number of orders placed during the selected date range. Click this KPI's periods or totals to open the Shopping Cart Abandonment Report.
Cases Closed	This indicator shows the number of cases closed during the selected date range(s). Click this KPI's periods or totals to open the Closed Cases Snapshot report.
Cases Escalated	This indicator shows the number of cases that have been escalated within the selected date range(s). Click this KPI's periods or totals to open the Open Case Escalation Summary Report report.
Checkout Abandonment	This indicator shows the percentage of web store checkouts that were started but not completed during the selected date range(s). This calculation divides the total number of times the checkout process was started by the number of successfully completed checkouts. Click this KPI's periods or percentage totals to open the Shopping Cart Abandonment Report.
Closed Issues	This indicator shows the number of issues that have been closed within the selected date range(s). Click this KPI's periods or totals to open the Closed Issues Summary Report report.
COGS	This indicator shows the dollar value of the cost of goods sold in transactions during the selected period(s). Click this KPI's periods or totals to open the Income Statement Report.
Consolidated Average Days Overdue	(Available on the Customer Dashboard only, when the Consolidated Payments feature is enabled.) This indicator shows the average number of days that the customer and its subcustomers had an overdue balance for the selected period(s). Click this KPI's periods or totals to open the A/R Aging Detail Report.
Consolidated Balance	(Available on the Customer Dashboard only, when the Consolidated Payments feature is enabled.) This indicator shows the current dollar amount owed by the customer and its subcustomers. Click this KPI's periods or totals to open the A/R Aging Detail Report.

KPI	Description
Consolidated Days Overdue	(Available on the Customer Dashboard only, when the Consolidated Payments feature is enabled.) This indicator shows the current number of days that the customer and its subcustomers have had an overdue balance. Click this KPI's period or total to open the A/R Aging Detail Report.
Consolidated Overdue Balance	(Available on the Customer Dashboard only, when the Consolidated Payments feature is enabled.) This indicator shows the amount of the current overdue balance for the customer and its subcustomers. Click Current or total to open the A/R Aging Detail Report.
Consolidated Unbilled Orders	(Available on the Customer Dashboard only, when the Consolidated Payments feature is enabled.) This indicator shows the total amount of orders for the customer and its subcustomers that have been placed but not billed for the selected period(s). Click this KPI's periods or totals to open the Open Sales Orders Report.
Credit Card Balance	This indicator shows the total impact on credit card accounts during the selected period(s). Click this KPI's periods or totals to open the Trial Balance Report.
Custom KPIs	Each of these indicators shows a total or count based on the results of a saved search. You add a custom KPI by selecting the saved search for which you want to display results. You can define up to 10 custom KPIs to display in the portlet. Click a custom KPI's periods or totals to open its underlying saved search results.
Days Overdue	(Available on the Customer Dashboard only) This indicator shows the current number of days that the customer has had an overdue balance. Click this KPI's period or total to open the A/R Aging Detail Report.
Deferred Revenue	This indicator shows the total credits and debits to deferred revenue accounts during the selected period. Click this KPI's periods or totals to open the Balance Sheet Report.
Employees	This indicator shows the number of active employees included in payroll with a hire date in the past and no release date, as of the selected date range(s). Click this KPI's periods or totals to open search results of employees that meet the above conditions.  Note: This KPI is intended to list employees from a payroll point of view, so its results may differ from the complete list of employees shown at Lists > Employees > Employees.
Equity	This indicator shows the dollar value of assets less liabilities for the selected period(s). Click this KPI's periods or totals to open the Balance Sheet Report.
Estimated Commission	This indicator shows the total value of estimated commissions for all transactions in the selected date range(s). Only commissions earned by you and your subordinates appear in this indicator. Click this KPI's periods or totals to view the Estimated Commission Summary Report. See also Commission Overview Report.
Estimated Partner Commission	This indicator shows the total estimated value of commissions earned by partners for transactions during the selected date range(s). Click this KPI's periods or totals to open the Estimated Partner Commission Summary Report.

KPI	Description
	See also Commission Overview Report .
Expenses	This indicator shows the total debits to income and expense accounts during the selected period(s). Click this KPI's periods or totals to open the Income Statement Report.
Fixed Assets	This indicator shows the total dollar value of fixed assets, meaning durable property or equipment that will not be used up or converted to cash within a year, for the selected period(s). Click this KPI's periods or totals to open the Trial Balance Report.
Forecast (This KPI is labeled Forecast (Billings) on the Customer Dashboard.)	This indicator shows total sales within the selected date range(s), including the following transactions: ■ Total income and reimbursed expenses from customers ■ Total value of open estimates that are set to be included in the forecast and are expected to close in the selected date range(s) ■ Total value of open opportunities that are expected to close in the selected date range(s) and do not include an estimate that is set to appear in the forecast  Note: The values of estimates and opportunities included in forecasts depend on the preferences defined at Setup > Sales > Preferences > Sales Preferences, Forecasts subtab. This KPI can display a comparison of two different date ranges if you have enabled the Historical Metrics feature. The box for this feature is available under Setup > Company > Setup Tasks > Enable Features, in the Sales section of the CRM subtab. Click this KPI's periods or totals to open the Billings Forecast vs. Quota Report.
Forecast (Alt. Sales)	This indicator shows the total sales forecast, based on alternate sales amounts (ASA), for the selected date range(s). This KPI can display a comparison of two different date ranges if you have enabled the Historical Metrics feature. The box for this feature is available under Setup > Company > Setup Tasks > Enable Features, in the Sales section of the CRM subtab. Click this KPI's periods or totals to open the Alt. Sales Forecast vs. Quota Report.  Note: When The ASA feature is enabled, sales reps can track two different forecasts, one based on billings, and one based on ASA.
Forecast Override	This indicator shows the total amount of sales your reps expect to bring in during the selected date range(s). The forecast amount shown is the sum of the forecast overrides for reps whose supervisors have not entered forecast overrides. Click this KPI's periods or totals to open the Billings Forecast vs. Quota Report.
Forecast Override (Alt. Sales)	This indicator shows the total sales forecast for the selected date range(s), based on the ASA override forecast amounts (ASA). The override forecast reflects the ASA amount that sales reps predict they will earn for the period. Sales managers can enter forecast override amounts to account for deals that have not yet been entered as transactions, adjusting the forecast amounts of sales reps based on reps' previous success at predicting their sales. Click this KPI's periods or totals to open the Alt. Sales Forecast vs. Quota Report.

KPI	Description
Gross New Leads	This indicator shows the total number of lead records created during the selected date range(s). Click this KPI's periods or totals to open the Gross Lead Source Analysis Detail Report. This report differs from the Lead Source Analysis Detail Report because it includes all leads, rather than those in a lead statuses marked to be included in lead reports within the date range of the report.
Hosted Page Hits	This indicator shows the number of pages your hosted website has displayed during the selected date range(s). Click this KPI's periods or totals to open the Hosted Page Hits Report.
Income	This indicator shows the total credits to income, other income, and expense accounts during the selected period(s). Click this KPI's periods or totals to open the Income Statement Report.
Inventory	This indicator shows the balance of the Inventory asset account and any Other Current Asset account for which you checked the Inventory box on the account record, for the selected date range(s).  Note: This KPI is intended to show the account balance, so its results may differ from the inventory valuation report that displays the value of each inventory item. Click this KPI's periods or totals to open the Inventory Valuation Report.
Long Term Liabilities	This indicator shows the total dollar value of long term liabilities, meaning debts payable over more than one year, for the selected period(s). Click this KPI's periods or totals to open the Trial Balance Report.
My Utilization	This indicator displays a user's utilization.
Net Cash Flow	This indicator shows the overall change in cash position during the selected period(s). Click this KPI's periods or totals to open the Cash Flow Statement Report.  Important: If your Cash Flow Statement has been customized, the KPI amount may differ from the amount shown on the report.
New Business	This indicator shows the total of all sales transactions during the selected period(s) for customers with first sales occurring in the period(s). For this period-based analysis, orders must be actual. Click this KPI's periods or totals to open the New Customer Sales Summary Report.
New Business (Orders Alt. Sales)	This indicator shows the dollar value of sales generated through sales orders by new customers, based on alternate sales amounts (ASA), during the selected period(s). Click this KPI's periods or totals to open the New Customer Sales Orders Summary Report.
New Business (Sales Orders)	This indicator shows the amount of sales generated through sales orders by new customers during the selected period(s). Click this KPI's periods or totals to open the New Customer Sales Orders Summary Report.
New Cases	This indicator shows the number of new cases created during the selected date range(s). Click this KPI's periods or totals to open the New Cases Snapshot report.
New Customers	This indicator shows the number of customers whose first sales transactions closed in the selected period(s). For this period-based analysis, transactions must be actual.

KPI	Description
	Click this KPI's periods or totals to open the New Customer Sales Summary Report .
New Customers (Sales Orders)	This indicator shows the number of sales orders generated by customers with first sales transactions closing in the selected period(s). Click this KPI's periods or totals to open the New Customer Sales Orders Summary Report.
New Issues	This indicator shows the total number of issues created within the selected date range(s). Click this KPI's periods or totals to open the New Issues Report.
New Leads	This indicator shows the total number of lead records created during the selected date range(s). Click this KPI's periods or totals to open the Lead Source Analysis Summary Report.
New Opportunities	This indicator shows the total number of new opportunities created during the selected date range(s). Click this KPI's periods or totals to open results of an opportunity search filtered for the selected date range.
New Visitors	This indicator shows the total number of first-time visitors your website has received during the selected date range(s). Click this KPI's periods or totals to open the New Visitor Report.
Open Cases	This indicator shows the number of open cases as of the selected date(s). Click this KPI's periods or totals to open the Open Cases Snapshot report.
Open Estimates	This indicator shows the number of estimates that were open during the selected date range(s). Open estimates have a probability between 0% and 100%, and have not expired, been voided or have not been closed by an order or actual. Click this KPI's periods or totals to open the Estimates to Close Report.
Open Issues	This indicator shows the number of issues with a base status other than Closed as of the selected date(s). Click this KPI's periods or totals to open the Open Issues Summary Report report.
Open Opportunities	This indicator shows the number of open opportunities expected to close within the selected date range(s). Open opportunities have probabilities between 0 and 100%, and have not been converted to sales. Click this KPI's periods or totals to open the Opportunities to Close Detail Report.
Open Projects	This indicator shows the current number of open projects. Click Current or total to open the Projects list filtered to show only open projects.
Open Prospects	This indicator shows the number of open prospects as of the selected date(s). Click this KPI's periods or totals to open the Open Prospects Snapshot report.
Open Quotes	This indicator shows the number of open quotes for the selected period. Click this KPI to see the Quotes to Close report. For more information about quotes, see the help topic Quotes for Commerce Websites.
Operating Cash Flow	This indicator shows the change in cash position, excluding financing and investment activities, during the selected period(s). Click this KPI's periods or totals to open the Cash Flow Statement Report.

KPI	Description
	 Important: If your Cash Flow Statement has been customized, the KPI amount may differ from the amount shown on the report.
Operating Expenses	This indicator shows the dollar value of operating expenses during the selected period(s). Click this KPI's periods or totals to open the Income Statement Report.
Opportunities Lost	This indicator shows the number of opportunities marked lost in the selected date range(s). Lost opportunities have probabilities of 0%. Click this KPI's periods or totals to open the Opportunities Lost Report.
Opportunities Won	This indicator shows the number of opportunities that were won in the selected date range(s). This number includes opportunities converted to sales transactions and those with probabilities set to 100%. Click this KPI's periods or totals to open the Opportunities Won Report.
Orders	This indicator shows the number of approved sales orders placed in the selected date range and approved return authorizations. Click this KPI's periods or totals to open the Sales Orders by Customer Summary Report.
Other Assets	This indicator shows the total dollar value of assets other than current assets and fixed assets, for the selected period(s). Click this KPI's periods or totals to open the Trial Balance Report.
Other Current Assets	This indicator shows the total dollar value of other current assets, meaning owned assets that are expected to be converted to cash within one year, for the selected period(s). Click this KPI's periods or totals to open the Trial Balance Report.
Other Current Liabilities	This indicator shows the total dollar value of other current liabilities, meaning debts payable within one year, for the selected period(s). Click this KPI's periods or totals to open the Trial Balance Report.
Overdue Balance	(Available on the Customer Dashboard only) This indicator shows the amount of the customer's current overdue balance. Click Current or total to open the A/R Aging Detail Report.
Paid Commission	This indicator shows the total amount of commissions paid to employees during the selected period(s). Click this KPI's periods or totals to open the Paid Employee Commission Summary Report.
Paid Partner Commission	This indicator shows the total amount of commissions paid to partners during the selected period(s). Click this KPI's periods or totals to open the Paid Partner Commission Summary Report.
Payables	This indicator shows the total impact on A/P accounts during the selected period(s). Click this KPI's periods or totals to open the A/P Aging Summary Report.  Note: This KPI assumes that vendor payments use the same class and department. If linked transactions use different classes and departments, the KPI may display incorrect balances.
Payroll	This indicator shows the total earnings amount from paychecks or year-to-date adjustments within the selected period(s).

KPI	Description
	Click this KPI's periods or totals to open the Payroll Summary Report .
Pipeline (Alt. Sales Projected)	This indicator shows the projected dollar value of open opportunities and open estimates, based on alternate sales amounts (ASA), expected to close within the selected date range(s). This summed value excludes the value of opportunities with estimates set to be included in the forecast. This KPI can display a comparison of two different date ranges if you have enabled the Historical Metrics feature. The box for this feature is available under Setup > Company > Setup Tasks > Enable Features, in the Sales section of the CRM subtab. Click this KPI's periods or totals to open the Alt. Sales Pipeline by Sales Rep Summary Report.
Pipeline (Alt. Sales Weighted)	This indicator shows the weighted dollar value of open opportunities and open estimates, based on alternate sales amounts (ASA), expected to close within the selected date range(s). The weighted value is calculated by multiplying probability by projected total. This value excludes the value of opportunities with estimates set to be included in the forecast. This KPI can display a comparison of two different date ranges if you have enabled the Historical Metrics feature. The box for this feature is available under Setup > Company > Setup Tasks > Enable Features, in the Sales section of the CRM subtab. Click this KPI's periods or totals to open the Alt. Sales Pipeline by Sales Rep Summary Report.
Pipeline (Projected)	This indicator shows the total value of open opportunities and open estimates expected to close within the selected date range(s). This value excludes the total of opportunities with estimates set to be included in the forecast. This KPI can display a comparison of two different date ranges if you have enabled the Historical Metrics feature. The box for this feature is available under Setup > Company > Setup Tasks > Enable Features, in the Sales section of the CRM subtab. Click this KPI's periods or totals to open the Pipeline by Sales Rep Summary Report.
Pipeline (Weighted)	This indicator shows the weighted value of open opportunities and open estimates expected to close within the selected date range(s). This value excludes the total of opportunities with estimates set to be included in the forecast. The weighted value is calculated by multiplying probability times projected total. This KPI can display a comparison of two different date ranges if you have enabled the Historical Metrics feature. The box for this feature is available under Setup > Company > Setup Tasks > Enable Features, in the Sales section of the CRM subtab. Click this KPI's periods or totals to open the Pipeline by Sales Rep Summary Report.
Pipeline Deals	This indicator shows the number of open opportunities and open estimates expected to close within the selected date range(s). This number excludes the number of opportunities with estimates set to be included in the forecast. This KPI can display a comparison of two different date ranges if you have enabled the Historical Metrics feature. The box for this feature is available under Setup > Company > Setup Tasks > Enable Features, in the Sales section of the CRM subtab. Click this KPI's periods or totals to open the Pipeline by Sales Rep Summary Report.
Profit	This indicator shows the difference between your income and expenses during the selected period(s). Click this KPI's periods or totals to open the Income Statement Report.
Quota	This indicator shows the sum of all top-level quotas to which you have access, for the selected date range(s). If an employee is assigned a personal quota and a team quota, only the team quota is included in the sum. Click this KPI's periods or totals to open the Billings Forecast vs. Quota Report.

KPI	Description
Quota (Alt. Sales)	This indicator shows the sum of all top-level quotas to which you have access, based on alternate sales amounts (ASA), for the selected date range(s). If an employee is assigned both a personal quota and a team quota, only the team quota is included in the sum. Click this KPI's periods or totals to open the Alt. Sales Forecast vs. Quota Report.
Quota Reps	This indicator shows the number of sales reps that have been assigned quotas as of the selected date(s). Click this KPI's periods or totals to open the Quota Reps report.
Receivables	This indicator shows the total impact on A/R accounts during the selected period(s). Click this KPI's periods or totals to open the A/R Aging Summary Report.
Revenue	This indicator shows the total credits to income and expense accounts during the selected period(s). Click this KPI's periods or totals to open the Income Statement Report.
Sales (This KPI is labeled Sales (Billings) on the Customer Dashboard.)	This indicator shows total paid or billed income and reimbursed expenses for customers during the selected period(s). It excludes the following transaction types: Journal, Deposit, Credit Card, Credit Card Refund, and Check. Click this KPI's periods or totals to open the Sales by Customer Summary Report.
Sales (Cash Basis)	This indicator shows total paid income and reimbursed expenses for customers during the selected period(s). It excludes the following transaction types: Journal, Deposit, Credit Card, Credit Card Refund, and Check. Income is only counted in this KPI if it has been paid. Sales are included based on the date of the payment. Click this KPI's periods or totals to open the Sales by Customer Summary – Cash Basis report. See also Setting Up Cash Basis Reporting.
Sales (Orders)	This indicator shows the dollar value of sales generated through approved sales orders during the selected date range(s). Click this KPI's periods or totals to open the Sales Orders by Customer Summary Report.
Sales (Orders Alt. Sales)	This indicator shows the dollar value of sales generated through approved sales orders, based on alternate sales amounts (ASA), during the selected date range(s). Click this KPI's periods or totals to open the Sales Orders by Customer Summary Report.
Total Backlog (Projects)	This indicator shows the total number of budgeted hours left to complete all open projects. Click Current or total to open the Current Backlog By Resource Report report.
Total Open Estimates	This indicator shows the number of estimates that were open as of the selected date(s). Open estimates have a probability between 0% and 100%, and have not been closed by an order or actual. Click this KPI's periods or totals to open the Total Open Estimates Report.
Total Open Opportunities	This indicator shows the number of opportunities that were open as of the selected date(s). Open opportunities have a probability between 0% and 100%, and have not been closed by an order or actual. Click this KPI's periods or totals to open the Total Open Opportunities Detail Report.
Total Open Quotes	This indicator shows the total number of open quotes for the selected period. Click this KPI to see the Total Quotes report. For more information about quotes, see the help topic Quotes for Commerce Websites.

KPI	Description
Total Orders (Count)	This indicator shows the number of sales orders placed during the selected date range(s). Click this KPI's periods or totals to open the Sales Order Register Report.
Total Pipeline (Alt. Sales Projected)	This indicator shows the total projected dollar value of open opportunities and open estimates based on alternate sales amounts (ASA), that are open as of today, or as of the other dates selected. This KPI can display a comparison for two different dates if you have enabled the Historical Metrics feature. The box for this feature is available under Setup > Company > Setup Tasks > Enable Features, in the Sales section of the CRM subtab. Click this KPI's periods or totals to open the Alt. Sales Total Pipeline by Sales Rep Summary Report.
Total Pipeline (Alt. Sales Weighted)	This indicator shows the total weighted dollar value of open opportunities and open estimates, based on alternate sales amounts (ASA), that are open as of today, or as of the other dates selected. The weighted value is calculated by multiplying probability by projected total. This KPI can display a comparison for two different dates if you have enabled the Historical Metrics feature. The box for this feature is available under Setup > Company > Setup Tasks > Enable Features, in the Sales section of the CRM subtab. Click this KPI's periods or totals to open the Alt. Sales Total Pipeline by Sales Rep Summary Report.
Total Pipeline (Projected)	This indicator shows the projected value of open opportunities and estimates, as of today, or as of the other dates selected. This value excludes the total of opportunities with estimates set to be included in the forecast. This KPI can display a comparison for two different dates if you have enabled the Historical Metrics feature. The box for this feature is available under Setup > Company > Setup Tasks > Enable Features, in the Sales section of the CRM subtab. Click this KPI's periods or totals to open the Total Pipeline by Sales Rep Summary Report.
Total Pipeline (Weighted)	This indicator shows the weighted value of open opportunities and estimates, as of today, or as of the other dates selected. This value excludes the total of opportunities with estimates set to be included in the forecast. The weighted value is calculated by multiplying probability times projected total. This KPI can display a comparison for two different dates if you have enabled the Historical Metrics feature. The check for this feature is available under Setup > Company > Setup Tasks > Enable Features, in the Sales section of the CRM subtab. Click this KPI's periods or totals to open the Total Pipeline by Sales Rep Summary Report.
Total Pipeline Deals	This indicator shows the total number of opportunities and estimates that are presently open, as of today, or as of the other dates selected. This KPI can display a comparison for two different dates if you have enabled the Historical Metrics feature. The box for this feature is available under Setup > Company > Setup Tasks > Enable Features, in the Sales section of the CRM subtab. Click this KPI's periods or totals to open the Total Pipeline by Sales Rep Summary Report.
Total Sales (Orders)	This indicator shows the total dollar value of sales, through both approved and unapproved sales orders, during the selected date range(s). Click this KPI's periods or totals to open the Sales Order Register Report.
Unbilled Orders	(Available on the Customer Dashboard only) This indicator shows the total amount of the customer's orders that have been placed but not billed for the selected period(s).

KPI	Description
	Click this KPI's periods or totals to open the Open Sales Orders Report .
Unique Visitors	This indicator shows the number of visitors your website has received during the selected date range(s). Click this KPI's periods or totals to open the Visitor Activity Summary Report .
Web Orders	This indicator shows a count of web orders placed during the selected date range(s). Click this KPI's periods or totals to open the Item Orders Report .
Web Revenue	This indicator shows the total credits to income and expense accounts from Web orders during the selected date range(s).
Web Site Hits	This indicator shows the number of pages your website has displayed during the selected date range(s). Click this KPI's periods or totals to open the Page Hits Report .

Resolving Errors

If you log into NetSuite and see an unexpected error in your Key Performance Indicators portlet, it might be related to custom KPIs you've set up. Usually, the error message tells you which KPI is causing the problem. To fix the error, remove the custom KPI from the portlet and check the saved search.

To remove the unexpected error:

1. Click **Set Up** in the Key Performance Indicators portlet. If there is no Set Up link, copy and paste the following URL into a new tab or window:
`https://system.netsuite.com/app/center/setup/snapshots.nl?kpigrp=KPI§ionid=-29&qelem=servercontentneg62`
2. Click the **x** button next to the problematic KPI, and click **Save**.
3. You should now be able to see your KPIs in the Key Performance Indicators portlet on your Home dashboard.

Note: If you continue to get unexpected errors even after logging out of NetSuite, clearing your cache, and logging back in, then please contact NetSuite Customer Support for further investigation.

To review the saved search on which the custom KPI is based:

1. Go to Cases > Other > Saved Searches.
2. If the error reproduces, try to rebuild the saved search and see if the problem persists.

For more information, see the following topics:

- [Custom KPIs](#)
- [Accessing a Saved Search](#)
- [Dashboard Personalization](#)

KPI Meters

You can add up to three KPI Meter portlets to a dashboard. Each meter visually represents data for one KPI that is displayed in the dashboard's Key Performance Indicators portlet. You can also see the currency symbol of the data for values represented by currencies.

Choices of KPIs for a meter are limited to the KPIs displayed in the dashboard's Key Performance Indicators portlet, plus the following: Actual vs. Forecast, Actual vs. Quota, Forecast vs. Quota, and Forecast vs. Quota (Alt. Sales).

Each KPI meter can show KPI data for one date range, a comparison of KPI data for two different date ranges, or a flagged threshold value. By default, the meter shows comparisons or thresholds if they're set up for the KPI in the Key Performance Indicators portlet. Whenever you change these options in either the KPI meter or the Key Performance Indicators portlet, they are also changed in the other portlet so that the two portlets remain in sync. You can, however, set up different options for the KPI meter, for instance not showing a comparison in the KPI meter portlet but showing one in the Key Performance Indicators portlet.

To set up a KPI Meter portlet:

- 1. Make sure the KPI you want to show in the KPI meter is listed in the Key Performance Indicators portlet. If it is not listed, click **Set Up** in the portlet menu. In the Set Up Key Performance Indicators popup, click **Add Standard KPIs** or **Add Custom KPIs** , select the KPI, and click **Done**. Click **Save** to add the selected KPI to the portlet.
- 2. To add a KPI Meter portlet to a page, click **Personalize Dashboard**. In the Add Content Panel, click the KPI Meter icon or drag it onto the dashboard.
- 3. By default, the KPI Meter portlet displays a graph for the KPI that is listed first in the Key Performance Indicators portlet. To change the KPI that the meter represents, select another KPI from the portlet's dropdown list.

If you select **Actual vs. Forecast**, **Actual vs. Quota**, **Forecast vs. Quota**, or **Forecast vs. Quota (Alt. Sales)**, the following message may appear: "No data available for this portlet."

This message means you need to add one or both of the underlying KPIs to the Key Performance Indicators portlet to see the KPI meter.

To display this meter...	Add these KPIs to Key Performance Indicators Portlet:
Actual vs. Forecast	Sales, Forecast (Alt. Sales)
Actual vs. Quota	Sales, Quota
Forecast vs. Quota	Forecast (Alt. Sales), Quota
Forecast vs. Quota (Alt. Sales)	Forecast (Alt. Sales), Quota (Alt. Sales)

To add these KPIs to the Key Performance Indicators portlet, click **Set Up** in the portlet menu, click the **Add Standard KPIs** button, select each KPI from the box, click **Done**, and click **Save**. For more information, see [Setting Up the Key Performance Indicators Portlet](#).

4. To change the meter's settings for showing comparison or threshold highlighting, click **Set Up** in the portlet menu, make changes in the Set Up KPI Meter popup, and click **Save**.

The 'Set Up KPI Meter' dialog box is shown. It has a title bar with a close button. Below the title bar are 'Save' and 'Cancel' buttons. The main area contains a 'Move To Bottom' button and a table of settings. The table has columns: Snapshot, Range, Highlight if..., Threshold, Compare, and Compare Range. The 'Snapshot' column shows a question mark icon and 'Bank Balance'. The 'Range' column shows 'This Period'. The 'Highlight if...' column has a dropdown menu. The 'Threshold' column has an input field. The 'Compare' column has a checked checkbox. The 'Compare Range' column shows 'Last Period'. At the bottom are 'Save' and 'Cancel' buttons.

Note: For visual purposes only, the KPI Meter displays a different number than the threshold. For positive numbers, the maximum number displayed is higher than the threshold. For negative numbers, the maximum number displayed is lower than the threshold.

You can also print the KPI Meter or download it as a file using the portlet menu options.

You can change the position of the KPI Meter portlet on your dashboard by dragging it to a different location. For more information, see [Arranging Dashboard Portlets](#).

Important: If you have selected a custom KPI to display in a KPI meter and its results do not look correct, the saved search on which the custom KPI is based may not satisfy related requirements. The saved search definition must:

- Not include any date fields defined as filters on the Criteria subtab.
- Have only one field with a summary type (such as group, sum, or count) defined on the Results subtab.
- Have a date field defined as an available filter on the Available Filters subtab.

For more information, see [Custom KPIs](#).

Trend Graphs

The dashboard trend graphs can be used to illustrate the differences in data over time for up to three KPIs.

Trend graphs offer choices to display data in Area, Line, Bar, or Column charts, and to use continuous or side-by-side comparisons. You can click thumbnails to shift among these choices.

You can also use the dropdown list to set the time period for trend graph data.

When you roll over a point in a trend graph, its value displays:

Trend graphs are available in two display modes: popup trend graphs and trend graph portlets. You can set layout options for both types of trend graphs. Both also offer options to print charts, to download charts to PNG, JPG, PDF, and SVG files, and to export chart data to CSV files.

For more information, see the following topics:

- [Displaying Popup Trend Graphs](#)
- [Displaying Trend Graph Portlets](#)
- [Displaying Custom KPI Results in Trend Graphs](#)

Displaying Popup Trend Graphs

Popup trend graphs are available from clickable Trend Graph icons in the Key Performance Indicators portlet and the KPI Scorecard portlet.

Financial Ratios			
INDICATOR	THIS PERIOD	LAST PERIOD	CHANGE
Current Ratio	 21.1	21.1	↑ +0.02%
Receivables Turnover	-0.7	-1.72	↓ -59.31%
Days Sales Outstanding	-44.4	-18.07	↑ +145.76%
Inventory Turnover	-0.01	-0.01	↓ -15.32%
Days Inventory On Hand	-4,317.6	-3,656.02	↑ +18.10%

- To enable this icon for a KPI in the Key Performance Indicators portlet, you need to set up a time-based comparison for it in the Set Up Key Performance Indicators popup. For information, see [Setting Up KPI Comparisons](#).
- In KPI Scorecard portlets, trend graph icons are usually enabled when the portlet is set to display KPIs on the left. However, when the portlet is set to display date ranges on the left, you may need to click Set Up in the KPI Scorecard portlet to open the KPI Scorecard Setup popup and check the Show Trend Graph Icon box. For information, see [Adding a KPI Scorecard Portlet to a Dashboard](#).

When you click a Trend Graph icon, a popup shows the trend graph data.

- You can set display options for all popup trend graphs in the Popup Trend Graphs subtab of the Set Up window of the Key Performance Indicators portlet. For more information, see [Setting Up Popup Trend Graphs](#).
- Each popup trend graph includes buttons you can click to print the trend graph chart, or to download it to a PNG, JPG, PDF, or SVG file, and Export you can click to export chart data to a CSV file.

Displaying Trend Graph Portlets

You can add up to five trend graph portlets to any standard or custom dashboard, by clicking Trend Graphs icons in the Personalize Dashboard panel or dragging them onto the dashboard. Each trend graph portlet includes a Set Up link that you can click to set display options for that trend graph only. For more information, see [Setting Up Trend Graph Portlets](#). Additional menu options enable you to print the trend graph chart, to download it to a PNG, JPG, PDF, or SVG file, and to export chart data to a CSV file.

Displaying Custom KPI Results in Trend Graphs

- A custom KPI can be displayed in a trend graph portlet if the saved search on which this custom KPI is based:
 - Doesn't include any date fields as filters on the Criteria subtab.
 - Has exactly one field with a summary type (such as group, sum, or count) defined on the Results subtab. The rest of the fields on the Results subtab should not use any summary types.
 - Has a date field defined as an available filter on the Available Filters subtab.
- Custom KPIs can only be displayed in trend graph portlets on pages that include a Key Performance Indicators portlet.
- When a KPI is set to Custom KPI #1-#10, the Default Trend Type dropdown shows saved searches that meet the trend graph criteria.

For more information, see [Custom KPIs](#).

Setting Up Popup Trend Graphs

You set display options for popup trend graphs on the Popup Trend Graphs subtab of the Set Up Key Performance Indicators popup. These options apply to all popup trend graphs for both the Key Performance Indicators portlet and the KPI Scorecard portlet.

You can also reset the time interval for each graph's x-axis right in the trend graph popup.

For more information, see the following topics:

- [Making Popup Trend Graphs Available](#)
- [Setting Up Popup Trend Graph Display Options](#)

Making Popup Trend Graphs Available

- To make popup trend graphs available from the Key Performance Indicators portlet, ensure that the portlet displays the KPI for which you want to view a popup trend graph, and that you have set up a date range comparison for the KPI. For information, see [Setting Up the Key Performance Indicators Portlet](#).
- Popup trend graphs are available for KPIs in a KPI Scorecard portlet that is set to display KPIs on the left. If your KPI Scorecard portlet is set to display date ranges on the left, you need to click **Set Up**

in the portlet's menu and select the Show Trend Graph Icon box. For information, see [Adding a KPI Scorecard Portlet to a Dashboard](#).

Setting Up Popup Trend Graph Display Options

You can define display options for popup trend graphs on the Popup Trend Graphs tab of the Set Up Key Performance Indicators window that is displayed when you click **Set Up** in the Key Performance Indicators portlet.

Note that the options you set here apply to ALL popup trend graphs available from both the Key Performance Indicators portlet and the KPI Scorecard portlet.

To set up a popup trend graph:

1. Click **Set Up** in the Key Performance Indicators portlet to open the Set Up Key Performance Indicators popup.
2. Click the **Popup Trend Graphs** subtab to set these options.
 1. Select from the **Default Chart Type** list to set the default chart used for all popup trend graphs.
 - Chart type options are **Area**, **Line**, **Bar**, and **Column**.
 - You can click thumbnails in an individual trend graph to change its chart type from the default set here.

In addition to the set of four chart type thumbnails on the left, each popup trend graph includes two thumbnails that you can click to choose either a continuous or side-by-side comparison of data in the trend graph.

2. Select from the **Default Time Increment** list to set the default time interval used for all popup trend graph comparisons.
 - Choices usually include **Daily**, **Weekly**, **Monthly**, **Quarterly**, and **Yearly**.
 - You can change this default in an individual trend graph by selecting from its time interval dropdown list.
3. Review the following options, and check or clear boxes as needed.
 - If the **Show Moving Average** option is enabled, all popup trend graphs display a dotted line representing the rolling average of KPI data values. This option is enabled by default.
Trend graphs work with simple moving average (SMA). You can find more information about how SMA is calculated in the [following link](#).
 - If the **Show Last Data Point on Pop-Up Trend Graphs** option is enabled, all popup trend graphs display the most recent KPI data point. Because the last point may not provide complete data, you may want to exclude this point from the graph to avoid a misleading display. This option is enabled by default.
 - If the **Include Zero on Y-Axis** option is enabled, the first y-axis value for all popup trend graphs is set to zero, rather than to the initial KPI data point. This option is disabled by default, to avoid showing misleadingly dramatic increases in initial trend graph data.
4. Enter a number in the **Period to Calculate Moving Average** field.
 - This number indicates the number of data points to use in calculating the slope of the moving average line in popup trend graphs.
 - Note that the lower the number here, the greater the slope of the line.
 - You can enter the number that represents the window of data you want to average based on the time increment selected. For example, if you select Monthly and enter 3 as your window, each data point on your Y-axis represents a 3 month average.
5. Select from the **Chart Themes** list to set a look and feel for popup trend graph data:
 - **Global Theme** – uses the chart theme selected at Home > Set Preferences.
 - **Basic** – provides limited color contrast.
 - **Colorful** – provides more color contrast.
 - **Match Color Theme - Bold** – harmonizes with your choices in the Colors section of the Set Preferences page using bolder shades.
 - **Match Color Theme - Light** – harmonizes with your choices in the Colors section of the Set Preferences page using lighter shades.
6. Select from the **Chart Background** list to set the display behind popup trend graph data:
 - **Global Background** – uses the chart background set at Home > Set Preferences.
 - **Lines** – provides lines that demarcate different levels along the Y-axis.
 - **Bands** – provides bands that demarcate different levels along the Y-axis.
 - **Grid** – provides a grid all throughout the Y-axis.
7. You can also specify a custom color for the trend graph line by typing its hexadecimal code in the **Custom Series Color** field or by clicking the palette button that appears when you hover over this field.

3. Click **Save**.

Note: A custom KPI will not display properly in a popup trend graph if the saved search on which it is based does not meet related requirements. For information, see [Displaying Custom KPI Results in Trend Graphs](#).

Setting Up Trend Graph Portlets

You can add up to five trend graph portlets to any standard or custom page. Each trend graph portlet includes a Set Up link that you can click to set display options for up to three KPIs.

To set up a trend graph portlet:

1. Click **Personalize** in the upper right corner of a page or in the Settings portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click a Trend Graph icon or drag it onto the dashboard. You can see the number of available trend graph portlets by hovering over the icon.
3. Click **Set Up** in the trend graph portlet's menu.
4. Select standard or custom KPIs from the **KPI** dropdown list. You can select a maximum of three KPIs.

Important: Custom KPIs are only available in trend graph portlets on pages that include a Key Performance Indicators portlet.

5. You can also edit the following settings:

1. In the **Custom Portlet Title** field, enter a title for the portlet.
2. Select from the **Default Chart Type** list to set the default chart type displayed in this portlet.
 - Chart type options are **Area**, **Line**, **Bar**, and **Column**.
 - You can click thumbnails in the portlet itself to dynamically change its chart type from the default set here.

In addition to the set of four chart type thumbnails on the left, each trend graph portlet includes two thumbnails that you can click to choose either a continuous or side-by-side comparison of data in the trend graph.

3. If you selected a custom KPI, select a saved search from the **Default Trend Type** dropdown list. If a saved search isn't available or gives you an error, its setup might not meet the requirements for trend graph display. For information, see [Displaying Custom KPI Results in Trend Graphs](#)
4. Select from the **Trend Type** list to indicate whether the graph's x-axis time scale should be **daily**, **weekly**, **monthly**, **quarterly**, or **yearly**. You also can set this option by selecting from a dropdown list in the portlet.
5. Check the **Show Moving Average** box to display a dotted line in the trend graph, representing the rolling average of KPI data values. This option is enabled by default.
Trend graphs work with simple moving average (SMA). You can find more information about how SMA is calculated in the [following link](#).
6. In the **Period to calculate moving average** field, enter the number that represents the window of data you want to average based on the date range selected in the **Trend Type**

field. For example, if you select monthly and enter 3 as your window, each data point on your y-axis will represent a 3 month average.

7. Check the **Show Last Data Point** box to display the most recent KPI data point in the trend graph. Because the last point may not provide complete data, you may want to exclude this point from the graph to avoid a misleading display. This option is enabled by default.
 8. Check the **Include Zero on Y-Axis** box to set the first y-axis value for the trend graph to zero, rather than to the initial KPI data point. This option is disabled by default, to avoid showing misleadingly dramatic increases in initial trend graph data.
 9. Select from the **Chart Theme** dropdown list to set a look and feel for chart data:
 - **Global Theme** – uses the chart theme set at Home > Set Preferences (the default). See the help topic [Personal Preferences for Appearance](#).
 - **Basic** – provides limited color contrast.
 - **Colorful** – provides more color contrast.
 - **Match Color Theme - Bold** – harmonizes with your choices in the Colors section of the Set Preferences page using bolder shades.
 - **Match Color Theme - Light** – harmonizes with your choices in the Colors section of the Set Preferences page using lighter shades.
 10. In the **Custom Series Color** field, enter a hexadecimal value for a custom color you want to use for the chart. (Note that this option is provided for backward compatibility with custom chart colors defined prior to the introduction of chart themes in Version 2012 Release 2.)
 11. Select from the **Background Type** dropdown list to set the display behind chart data:
 - **Global Background** – uses the background type set at Home > Set Preferences (the default).
 - **Lines** – provides lines that demarcate different levels along the Y-axis.
 - **Bands** – provides bands that demarcate different levels along the Y-axis.
 - **Grid** – provides a grid all throughout the Y-axis.
6. When you're done, click **Save**. The portlet will refresh automatically.

Note that each trend graph portlet includes menu options to print the chart, to download it to a PNG, JPG, PDF, or SVG file, and to export its data to a CSV file.

To expand the portlet to full-screen view, click the double arrow icon .

Custom KPIs

NetSuite provides over 75 standard KPIs that you can display in a dashboard's Key Performance Indicators portlet, or use for calculations in a KPI scorecard. These standard KPIs provide quick summaries of standard NetSuite report data and enable you to drill down into the full reports for more detail.

You may have other important data that you would like to display as a KPI on your dashboard, that is not available from standard reports. In this case, you can find a preexisting saved search that compiles this data or create a new saved search for this purpose.

For information, see:

- [Selecting an Existing Search to be a Custom KPI](#)
- [Creating a New Search to be a Custom KPI](#)

After you have identified an appropriate saved search, you can define it as a data source for a custom KPI.

- You can display up to ten custom KPIs in each Key Performance Indicators portlet. When a custom KPI is displayed in the portlet, you can click it to drill down to detailed results from its saved search, and click a Trend Graph icon to display its data in a popup trend graph. For information, see [Adding a Custom KPI to the Key Performance Indicators Portlet](#).
- You can define up to ten custom KPIs to be used in each KPI scorecard portlet's calculations. For information, see [Using a Custom KPI in a KPI Scorecard](#).
- Custom KPIs displayed in the Key Performance Indicators portlet are also available for display in KPI Meter portlets. You can display up to three KPI meters on a dashboard. For information, see [KPI Meters](#).
- Custom KPI data can also be displayed in Trend Graph portlets. You can add up to five Trend Graph portlets. For information, see [Setting Up Trend Graph Portlets](#).
- Custom KPI definitions for individual KPI scorecards, the Key Performance Indicators portlet, and Trend Graph portlets are all independent of each other.

For a saved search to be used as a custom KPI that displays results for multiple date ranges in the Key Performance Indicators portlet, a KPI scorecard, a trend graph, or a KPI meter, the search definition must meet the following requirements:

- Not include any date fields defined as filters on the Criteria subtab. See the help topic [Defining Standard Search Filters](#).
- Have exactly one field with a summary type (such as count, group, or sum) defined on the Results subtab. The rest of the fields on the Results subtab should not use any summary types. See the help topic [Defining Summary Types to Roll Up Search Results](#).
- Have a date field defined as an available filter on the Available Filters subtab. See the help topic [Selecting Available Filters for Saved Searches](#).

Selecting an Existing Search to be a Custom KPI

To better understand the requirements that your saved search must meet to be used as a custom KPI, see [Custom KPIs](#).

You can edit an existing saved search to be used as a custom KPI by completing the following steps:

To select an existing saved search to be used as a custom KPI:

1. Choose Reports > Saved Searches > All Saved Searches.
2. In the Saved Searches list, click **Edit** next to the search you want to use as a custom KPI. Make sure the search is set up to show KPI data the way you want.
3. On the **Criteria** subtab, make sure you're not using any date filters as search criteria.

 **Note:** KPIs can't enforce summary criteria filters because KPI calculations don't include groupings. If a saved search used as a custom KPI has any summary criteria filters, the KPI result might be different from the saved search results.

4. On the **Results** subtab, make sure you have exactly one field that uses a summary type.
 - If you want to display a count of the number of search results for a KPI, select a number or ID field (such as **Number**) and set a **Count** summary type for this field.
 - If you want to display summary data such as sum (total), average, minimum, or maximum, select a field and set the appropriate summary type for it.

5. On the **Available Filters** subtab, add a date field to be able to compare saved search results over different date ranges in a Key Performance Indicators portlet, a trend graph, a KPI meter, or a KPI scorecard.
 - If the type of search you have selected does not offer a date column as a filter, you may be able to use a different type of search, for example, a transaction search.
 - If you want to use a saved search as a custom KPI in a scorecard and you have enabled the **Use Periods** option for a scorecard, only saved searches with a **Period** filter defined as an **Available Filter** can be defined as custom KPIs for the scorecard.
6. Edit the search to meet your requirements and resave it.
 - If you do not have the ability to edit and resave this search, you can ask the owner to edit it, or you can create another, similar search yourself.
 - Choose **Save & Run** to verify the search results are what you expect.
7. Note the title of the search. It will appear in the custom KPI lists in the Set Up Key Performance Indicators popup and the KPI scorecard.
8. Now you can use the search as a custom KPI and add it to the Key Performance Indicators portlet, add it to a KPI scorecard, or display it in a trend graph portlet. See [Adding a Custom KPI to the Key Performance Indicators Portlet](#), or [Using a Custom KPI in a KPI Scorecard](#).

For more information about editing saved searches, see the help topic [Saved Searches](#).

Creating a New Search to be a Custom KPI

To better understand the requirements that your saved search must meet to be used as a custom KPI, see [Custom KPIs](#).

You can create an existing saved search to be used as a custom KPI by completing the following steps:

To create a new saved search to be used as a custom KPI:

1. Choose Reports > Saved Searches > All Saved Searches > New.
2. In the New Saved Search list, click a search type.
3. On the Saved Search form, enter a title for the search. (This title will appear in the custom KPI dropdown lists in the Set Up Key Performance Indicators popup and the KPI scorecard.)
4. On the **Criteria** subtab, set up filters to narrow down your search data, but don't include date filters as criteria.

Note: KPIs can't enforce summary criteria filters because KPI calculations don't include groupings. If a saved search used as a custom KPI has any summary criteria filters, the KPI result might be different from the saved search results.

5. On the **Results** subtab, define which fields you want to be returned in the saved search results. Make sure you have exactly one field that uses a summary type.
 - If you want to display a count of the number of search results for a KPI, select a number or ID field (such as **Number**) and set a **Count** summary type for this field.
 - If you want to show summary data like sum, average, minimum, or maximum, pick a field and set the right summary type.
6. On the **Available Filters** subtab, add a date field to be able to compare saved search results over different date ranges in a Key Performance Indicators portlet, a trend graph, a KPI meter, or a KPI scorecard.

- If your search type doesn't have a date column as a filter, try using a different search type, like a transaction search.
 - If you want to use a saved search as a custom KPI in a scorecard and you have enabled the **Use Periods** option for a scorecard, only saved searches with a **Period** filter defined as an **Available Filter** can be defined as custom KPIs for the scorecard.
7. When you're done setting up the search, click **Save**. (You can also click **Save & Run** to make sure the results look right.)

Now you can use the search as a custom KPI and add it to the Key Performance Indicators portlet, add it to a KPI scorecard, or display it in a trend graph portlet. See [Adding a Custom KPI to the Key Performance Indicators Portlet](#), or [Using a Custom KPI in a KPI Scorecard](#).

For more information about creating saved searches, see the help topic [Saved Searches](#).

Adding a Custom KPI to the Key Performance Indicators Portlet

Custom KPIs are based on saved searches, so you need to create or select an appropriate search before you add a custom KPI to the portlet. For information, see [Creating a New Search to be a Custom KPI](#) or [Selecting an Existing Search to be a Custom KPI](#).

To add a custom KPI to the Key Performance Indicators Portlet:

1. Click **Set Up** in your Key Performance Indicators portlet.
2. In the Set Up Key Performance Indicators popup, click **Add Custom KPIs** to open the Choose Custom Key Performance Indicators popup window.
 - Click a saved search in the right list to move it to the left list, which indicates that it should be displayed as a custom KPI.
 - Click **Done** when you're finished picking KPIs to display.
 - You can choose up to 10 custom KPIs.
 - Custom KPIs show up with "c" icons—click one for a quick description.
3. For each selected KPI, in the **Range** list, select the date or period range for which data should be included.
4. For each selected KPI, in the **Compare** column, check the box if you want to compare results from the time period defined in the **Range** list with results from another period defined in the **Compare Range** list.
5. For each selected KPI, in the **Compare Range** list, if you checked the **Compare** box, select the date or period range for which data should be compared with data from the first range. If you did not check the **Compare** box, you do not need to make a selection here.
6. For each selected KPI, in the **Highlight If** list, select **greater than** or **less than** if you want to highlight data that exceeds or falls short of a defined threshold. If you do not want highlighting for this KPI, leave this column blank.
7. If you selected an option in the **Highlight If** column, enter the threshold value in the **Threshold** column.

If you want the change to be highlighted in the portlet's headline when the specified threshold value is reached, check the box in the **Headline** column.

8. Click **Save**.

Using a Custom KPI in a KPI Scorecard

You can use custom KPIs for comparisons in KPI scorecards as well as include them in KPI scorecard formulas.

To learn how to create and configure KPI scorecards, see [KPI Scorecards](#).

To learn more about Custom KPIs, see [Custom KPIs](#).

 **Note:** Custom KPIs are based on saved searches, so you need to create or select an appropriate search before you add a custom KPI to a scorecard. For information, see [Creating a New Search to be a Custom KPI](#) or [Selecting an Existing Search to be a Custom KPI](#).

To add a custom KPI to a KPI scorecard:

1. Open the KPI scorecard where you want to add a custom KPI.
 - To edit an existing KPI scorecard, go to Customization > Centers and Tabs > KPI Scorecards and click Edit next to the KPI scorecard you want to edit.
 - To create a new KPI scorecard, go to Customization > Centers and Tabs > KPI Scorecards > New. For more information, see [Creating a KPI Scorecard](#), and [Entering Basic Scorecard Information](#).
2. On the **Content** tab, select one of the custom KPIs (**Custom KPI #1–Custom KPI #10**) from the **KPIs** list.
3. On the **Custom** subtab, find the custom KPI number you added to the **KPIs** list (**Custom KPI #1** through **Custom KPI #10**) and specify the saved search to be used as this custom KPI.
4. If you want to add a custom KPI ID to a formula expression, select a formula from the **KPIs** list, click the **Set Formula** icon in the **Formula** column, and select one of the custom KPIs you defined on the **Custom** subtab.

To learn how to define other formula settings, see [Defining KPI Scorecard Formulas](#).

5. Define other settings for the KPI comparison. For information, see [Defining KPI Scorecard Comparisons](#).

Customer 360

Customer 360 offers a complete, 360-degree view of the customer, including their financial information, transaction history, and other related data.

The Customer 360 page collects customer information from different areas of NetSuite and includes actionable insights. You can use the metrics presented on this page to easily track interactions made with the customer, their financial position and profitability to your business, their purchasing trends, and more.

 **Note:** Customer 360 is available on all accounts and you don't need to enable it.

There are three ways to access Customer 360 from NetSuite:

- By clicking View Customer 360 on the customer record:

- By clicking Switch to Customer 360 View on the customer dashboard:

- By clicking the icon located next to the customer record on the left:

The Customer 360 View

Customer 360 displays the following transaction types based on the user's permissions. The transaction types include: Invoice, Sales Order, Cash Sale, Return Authorization, Credit Memo, Opportunities, Estimates, Customer Payments, and so on. All transaction types are included in the displayed metrics.

The customer 360 page includes several tabs, such as **Overview**, **Opportunities and Estimates**, **Orders and Returns** and **Receivables** tabs.

The **Overview** page displays the following metrics:

Note: These metrics are based off only those transactions that the logged-in user has access to.

- Recent Activities:** A list of all transactions with the customer, most recent at the top. This list includes Customer Deposit, Customer Refund, Statement Charge, Purchase Order, Work Order, Cash Refund, Check, Credit Card Refund, Bills, Bill Payment, Bill Credit, Vendor Return Authorization, Item Fulfillment, and Fulfillment Request.

There are other activities such as: Activities, Cases, Emails and Notes.

The "See Customer History" link takes you to a detailed view of the customer's transactions, notes, and activities, including phone calls, tasks, events, and emails.

- Product Recommendations:** An AI-generated list of recommended products is displayed, highlighting frequently purchased items and including pricing details. These features are designed

to offer actionable insights and optimize your workflow. For additional details, see the help topic [Intelligent Recommendations](#).

Next to the product list, a checkbox lets you select items. After selecting, use the Action button to choose from the following options: Add to New Sales Order, Add to New Opportunities, or Add to New Estimates. Each option directs you to the corresponding record for further processing.

- The **Sales Performance** section is divided into two subtabs: **Sales This Year** and **Customer Lifetime Value**.
 - **Sales This Year:** This section offers a comprehensive view of your sales performance since the beginning of the current year, displayed in the currency set by the user. It includes sales from invoiced transactions such as invoices and cash sales. For invoices, only transactions with "open" or "paid in full" statuses are considered, while for cash sales, all statuses except "deposit" and "deposited" are included. Refunds are excluded from all metrics, charts, and headlines.

The metrics card displays the total sales made to customers from January 1st of the current year to today. It automatically calculates the percentage change in sales compared to the same period last year. If sales have increased, the headline will read "Sales are up." If sales have decreased, it will show "Sales are down." If there's no change compared to the previous year, the message will state "Sales are the same."

The chart visualizes sales performance for both the current year (from January 1st to today) and the previous year (January to December). When you hover over any data point on the chart, a tooltip will show additional details. This section displays key metrics for the transactions that have been invoiced, and you can further explore detailed customer data by clicking the **View Report** link to access the Analytics section, where you can filter and analyze the data.
 - **Customer Lifetime Value:** The total amount of sales made to the customer since the first transaction, in the currency set by the user.
- **Top Selling Items:** A list of items purchased the most by the customer since the first transaction and sorted by the revenue they generate for your business, highest on top. There's a **View Report** link which directs you to a detailed report.

The Customer 360 page also lets the user create contacts, opportunities, estimates, invoices, and sales orders, depending on whether the feature has been enabled for the NetSuite account and if the user has the permissions to create them.

The **Opportunities and Estimates** tab

Track opportunities and estimates in this tab. If Opportunities and Estimates are disabled, the Opportunities and Estimates tab won't be visible. However, if you enable them, the tab will appear. Metrics will only be displayed for the features that are enabled. You'll see the following metrics:

- The **Projected Total** shows the sum of all opportunities and estimates combined.
- The **Weighted Total** reflects the sum of probable opportunities and estimates.
- The **Opportunities Won** metric card highlights the opportunities that have been successfully closed.
- The **Estimates Converted** metric card displays the percentage of estimates that have been successfully converted into closed deals.

The listed metrics include direct links to workbooks, providing you a more in-depth view of the data.

The **Orders and Returns** tab

In the Orders and Returns tab, you monitor the status of your orders at various stages. The following metrics are available:

- The **Orders** metric card shows the total number of orders placed.
- The **Returns** metric card tracks the number of returns authorized.

- The **In Progress Orders** metric card highlights orders that are in progress.
- The **Average Order Value** metric card displays the average value of all completed orders.

The listed metrics include direct links to workbooks, providing you a more in-depth view of the data.

A search field is available to filter orders by type and status. Each order is assigned a unique ID, and clicking on an order's ID will display detailed status information.

The **Receivables** tab

On the Receivable tab, you can view various invoice statuses, including open and overdue invoices. This section also displays available credit memos, which are the sum of credit limits and balances from the customer record. The Financial Details section pulls data directly from the customer record. When the Multi-book Accounting feature is enabled, only the primary book information will be visible in the result table. The following metrics are available:

- **Open Invoices:** Invoices that are still unpaid and have an Open status.
- **Overdue Invoices:** Invoices that have passed their due date and have not been paid.
- **Available Credit Memos:** Unused credit balances that can be applied to future invoices.
- **Credit Remaining:** The customer's available credit limit after deducting the amount already used.

The listed metrics include direct links to workbooks, providing you a more in-depth view of the data.

The **Activity** tab

On the Activity tab, you can view a full list of customer transactions and interactions, expanding the view of items shown on the Overview page. This tab provides a list of all customer activities and transactions such as Sales Order invoices, Credit Memo, and Return Authorization.

Customer 360 Compatibility and Cross- Subsidiary Record Viewing

When the “Allow Cross- Subsidiary Record Viewing” feature, located in the Role's Subsidiary Restrictions, is enabled, certain scenarios can cause compatibility issues with the Customer 360 functionality. These scenarios relate to the subsidiary assignments of the customer and the role of the logged-in user.

Unsupported Scenarios:

- **Multiple Subsidiary Assignment:** If a customer is associated with multiple subsidiaries and a user with the Cross- Subsidiary Viewing permission attempts to access their Customer 360 profile, it can potentially trigger compatibility issues.
- **Mismatch in Subsidiary Assignment:** Compatibility problems can occur when a customer is assigned to one subsidiary, but the logged-in user is assigned to a different subsidiary.

Disabling Cross- Subsidiary Record Viewing:

If this feature isn't essential to your daily operations, disabling or temporarily disabling the “Allow Cross-Subsidiary Record Viewing” option can ensure a smooth user experience and prevent potential conflicts. Here's how to disable the feature:

1. Go to **Setup**.
2. Select **Manage Roles**.
3. Identify and choose the specific role assigned to the user.

4. In the Subsidiary Restriction section, clear the box for "Allow Cross- Subsidiary Viewing".

Follow these steps to manage access permissions and ensure a smooth Customer 360 experience.

Customer 360 Permissions

The Customer 360 application can't be customized directly. However, users can customize the roles associated with it. The data and features available in Customer 360 depend on the permissions assigned to each role. For example, if the "Sales Order" permission is removed from a role, users with that role won't see Sales Orders in the "Recent Transactions" section or the "Orders and Returns" tab. This change will also impact Sales Orders metrics. The customer can only view records they have permission to access. If they don't have access to the Returns section, they'll only see other available records. The system automatically calculates and displays only the records the customer is authorized to view.

Not all permissions listed in the table are strictly required for Customer 360 to function. However, the permissions marked as "general" are essential—if these aren't included in the role, Customer 360 won't operate correctly. Customer 360 can still function if certain permissions, such as "Journal Entries" or "Statement Charges," are missing. However, the absence of specific permissions will impact what users see in the interface. For example, if a user lacks permissions for "Orders and Return Authorizations," the "Orders and Returns" tab will be empty. Similarly, the "Opportunities and Estimates" tabs will be blank if the role doesn't include permissions for "Opportunities and Estimates."

Customer 360 Datasets

Opportunities and Estimates Dataset

This dataset displays Opportunities and Estimates records combined in a single view. From here, you can track the status of both elements and their relationship. This data also lets you extract projected totals, estimate conversion percentages, and more.

Orders and Returns Dataset

This dataset displays Orders and Returns records combined in a single view. This helps you monitor sales status alongside any related returns, making it easier to track transaction progress and assess overall sales performance.

Receivables Dataset

This dataset displays information about all records impacting Accounts Receivable, such as Invoices, Statement Charges, Credit Memos, Payments, and so on. This data offers financial insights, including overdue invoices, available credit memos, and more.

Sales Overview Dataset

This dataset displays Invoiced sales, including Invoices, Cash Sales, Credit Memos, Journal Entries, and so on. This data offers valuable insights into sales activity, letting you track total sales over a specific period and identify sales trends.

Top Selling Items Dataset

This dataset displays the top-selling products along with all related lines in the report, such as line items, credit memos, statement charges, and so on. This information helps you understand customer purchasing trends and supports forecasting future sales.

Root Record Type	Joined Record Type(s)	Custom Formula Field(s)	Data Grid	Criteria Filters

Customer 360 Workbooks

These workbooks are based on the Overview datasets and display all transactions you've created.

Top Selling Items Workbook

This workbook displays the top-selling products along with all related lines in the report, such as line items, credit memos, statement charges, and so on. This information helps you understand customer purchasing trends and supports forecasting future sales. This workbook uses the Top Selling Items dataset.

From within the Top Selling Items workbook, you can view the Table View: Top Selling Items.

Sales Overview Workbook

This workbook displays Invoiced sales, including Invoices, Cash Sales, Credit Memos, Journal Entries, and so on. This data offers valuable insights into sales activity, letting you track total sales over a specific period and identify sales trends. All the visualization uses the Sales Overview dataset.

The Sales Overview workbook includes the Table View: Sales Overview, as well as pivot tables for Sales by Item and Sales by Customer. Also, it contains charts for Sales by Sales Rep and Sales Over Time.

Opportunities and Estimates Workbook

This workbook displays Opportunities and Estimates records combined in a single view. From here, you can track the status of both elements and their relationship. This data also lets you extract projected totals, estimate conversion percentages, and so on. This workbook uses the Opportunities and Estimates dataset.

In the Opportunities and Estimates workbook, you can view the Table View: Opportunities and Estimates.

Orders and Returns Workbook

This workbook displays Orders and Returns records combined in a single view. This helps you monitor sales status alongside any related returns, making it easier to track transaction progress and assess overall sales performance. This workbook uses the Orders and Returns dataset.

The Orders and Returns workbook includes the Table View: Orders and Returns.

Receivables Workbook

This workbook displays information about all records impacting Accounts Receivable, such as Invoices, Statement Charges, Credit Memos, Payments, and so on. This data offers financial insights, including overdue invoices, available credit memos, and more. This workbook uses the Receivables dataset.

The Receivables workbook contains the Table View: Receivables.

Customer 360 Analytical Record Types

Here's a list of analytical record types:

KPI Scorecards

The KPI Scorecard portlet displays your choice of a performance scorecard. KPI scorecards can include complex comparisons among multiple KPIs over multiple date ranges or accounting periods. Scorecards also can include Excel-like formulas with KPIs and functions in their expressions. Scorecards offer many choices for calculation and display of KPI data. KPIs are role-based and feature-based, meaning the KPIs that you can choose to display depend upon the role you used to log in to NetSuite and the features that are enabled. For more information about roles in NetSuite, see the help topic [NetSuite Roles Overview](#).

To get an understanding of what you can do with KPI scorecards, see the following:

- [Scorecard Data Calculation and Comparison Options](#)
- [Scorecard Data Display Options](#)

To get started using KPI scorecards, see the following:

- [Enabling the KPI Scorecards Feature](#)
- [Adding a KPI Scorecard Portlet to a Dashboard](#)
- [Creating a KPI Scorecard](#)

Scorecard Data Calculation and Comparison Options

- Comparison of KPI results for a greater variety of date range types
- Comparison of KPI results for a progression of date ranges
- Comparison of multiple KPIs' results
- Different types of comparative calculations including:
 - **Sums** – $A+B$
 - **Variances in absolute or percent terms** – $A-B$ or $100(B-A)/A$
 - **Ratios in absolute or percentage terms** – (B/A) or $100*B/A$
- Inversion of date ranges in comparisons
- Excel-like formulas with the following features:
 - Formula results that can be expressed as:
 - Dollar amounts
 - Percentages
 - Numeric amounts
 - Formula expressions that can include:
 - Multiple KPIs
 - Common functions
 - Ability to define hidden formulas with results to be used by other formulas

Scorecard Data Display Options

- Ability to orient KPIs horizontally or vertically
- Ability to define custom labels in place of KPI names
- Optional popup trend graphs

- Ability to limit displayed data to your own or your team's results.

Note: NetSuite includes a prebuilt Financial Ratios scorecard that is available to users with permission to see the Trial Balance report. For information about this scorecard, see [Financial Ratios Scorecard](#).

Enabling the KPI Scorecards Feature

The KPI Scorecards feature must be enabled before you can create a KPI scorecard or add a KPI Scorecard portlet to a dashboard.

To enable the KPI Scorecards feature:

1. Go to Setup > Company > Enable Features.
2. On the **Analytics** subtab, check the **KPI Scorecards** box, and click **Save**.

Note: If you don't see **Enable Features** on your **Setup** tab, you don't have this permission. You need to ask a user with the Administrator role or the Enable Features permission to enable the KPI Scorecards feature.

When the KPI Scorecards feature is enabled, you can:

- Create your own KPI scorecard (if you have the KPI Scorecards permission). See [Creating a KPI Scorecard](#).
- Add a KPI scorecard portlet to display an existing KPI scorecard. See [Adding a KPI Scorecard Portlet to a Dashboard](#).

Adding a KPI Scorecard Portlet to a Dashboard

You can add a KPI Scorecard portlet to a dashboard in the same manner that you add other portlets, but this portlet is not available unless the KPI Scorecards feature has been enabled.

After you've added a KPI Scorecard portlet, you can click Set Up in the portlet, then select a KPI scorecard and define display options.

To add a KPI Scorecard portlet to a dashboard:

1. Click **Personalize** in the upper right corner of your dashboard. You can also use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **KPI Scorecard** item or drag it onto the dashboard.

If the list doesn't include KPI Scorecard, the KPI Scorecards feature has not been enabled. See [Enabling the KPI Scorecards Feature](#).

3. In the KPI Scorecard portlet, click **Set Up** to open a KPI Scorecard Setup popup.
 1. In the **KPI Scorecard** list, select the scorecard that you want to display.
If you don't see a suitable scorecard, you may need to create a new KPI scorecard. See [Creating a KPI Scorecard](#).
 2. By default, the **Restrict To** list is set to **All** to indicate that scorecard results aren't filtered. If you want to filter results, select **My Team** or **Only Mine**.
 3. By default, the **Orientation** list is set to **KPIs on Left**, meaning that the scorecard lists KPI labels on the left and date ranges across the top. To change this layout, select **Date Ranges on Left**.

4. Check or clear the **Show Trend Graph Icon** box to indicate whether you want the KPI Scorecard portlet to include icons that can be clicked to open popup trend graphs of KPI data. For more information, see [Setting Up Popup Trend Graphs](#).
 5. Check or clear the **Show Date Row** box to indicate whether to include explicit date ranges as the first row (or first column if you selected **Date Ranges on Left** for **Orientation**). This data is useful to display if the scorecard uses relative date ranges, such as 1 year ago.
 6. Click **Save**.
4. Review the portlet's contents and links. The portlet title matches the name of the selected KPI scorecard.
 1. Click **Refresh** to refresh portlet data.
 2. Click **Set Up** to change portlet settings.
 3. Click **Edit** or **Customize** to open the KPI scorecard and make changes to its definitions. For information, see [Editing a KPI Scorecard](#).
 4. Click **Export** to save scorecard results in an external CSV file.

Creating a KPI Scorecard

NetSuite enables you to create custom scorecards that can be displayed in the KPI Scorecard dashboard portlet.

To create a new KPI scorecard:

1. Go to Customization > Centers and Tabs > KPI Scorecards > New.
If this menu option is not available, the KPI Scorecards feature may not be enabled. See [Enabling the KPI Scorecards Feature](#). Or you may not have permission to create scorecards. Check with your account administrator to ensure you have the KPI Scorecards permission.
2. At the top of the page, you can enter basic scorecard information. See [Entering Basic Scorecard Information](#).
3. On the **KPIs** subtab of the **Content** subtab, you can add KPIs and define their comparisons, and add formulas and define formula expressions.

- Scorecards can intermingle KPIs and formulas and compare them to each other, so you define KPIs and formulas in the same place using some slightly different fields on the subtab.
 - For KPI steps, see [Defining KPI Scorecard Comparisons](#).
 - For formula steps, see [Defining KPI Scorecard Formulas](#).
- If you define custom KPIs to be used in scorecards, you need to define their underlying saved searches on the **Custom** subtab of the **Content** subtab.

Only saved searches with a date field defined under **Available Filters** are available for use as custom KPIs in scorecards. The exception is if you enable the **Use Periods** option for a scorecard. Then only saved searches with a **Period** filter defined under **Available Filters** are available.
- After you've entered KPIs and formulas, you can reorder them by dragging and dropping or using the **Move** buttons.
- 4. On the **Date Ranges** (or **Periods**) subtab of the **Content** subtab, you can define multiple date ranges (or periods). These date ranges apply to all scorecard data. See [Defining KPI Scorecard Date Ranges or Periods](#).

After you've entered date ranges, you can reorder them by dragging and dropping or using the **Move** buttons.
- 5. On the **Highlighting** subtab of the content subtab, you can set highlighting options to make results more visible in KPI Scorecard portlets. See [Highlighting KPI Scorecard Results](#).
- 6. On the **Audience** subtab, you can define who has access to your scorecard, meaning who can place it in their KPI Scorecard portlet. You can base this definition on roles, departments, subsidiaries, groups, employees, or partners. See [Sharing a Custom KPI Scorecard](#).
- 7. When you've completed all steps to define the scorecard, click **Save**.

You can use SuiteCloud Development Framework (SDF) to manage KPI scorecards as part of file-based customization projects. For information about SDF, see . You can use the Copy to Account feature to copy an individual KPI scorecard to another of your accounts. Each KPI Scorecard page has a clickable Copy to Account option in the upper right corner. For information about Copy to Account, see the help topic [Copy to Account](#).

Entering Basic Scorecard Information

To create a new KPI scorecard, go to Customization > Centers and Tabs > KPI Scorecards > New. For more information, see [Creating a KPI Scorecard](#). Then you can enter basic scorecard information at the top of the page.

To enter basic KPI scorecard information:

1. Enter a **Name** for the KPI scorecard. This name will appear as the title of portlets displaying this scorecard.

By default, your name appears in the **Owner** dropdown list. If you are an administrator, you can define a different owner by selecting a different name.
2. If you want the KPI data to be calculated according to accounting periods rather than date ranges, check the **Use Periods** box.

When **Use Periods** is selected:

- The name of the **Date Ranges** subtab changes to **Periods**.

- Only saved searches with a **Period** filter defined under **Available Filters** are available for use as custom KPIs in this scorecard.
 - You may encounter issues with KPI scorecard data if you haven't set up accounting periods, or if you haven't set the **Report by Period** preference to **All Reports** on the **Analytics** subtab of the Set Preferences page.
3. (Optional) Enter a **Description** for the scorecard.

Defining KPI Scorecard Comparisons

You can define KPI scorecard comparisons when you're creating a new scorecard or editing an existing scorecard.

- To create a new KPI scorecard, go to Customization > Centers and Tabs > KPI Scorecards > New. For more information, see [Creating a KPI Scorecard](#), and [Entering Basic Scorecard Information](#).
- To edit an existing KPI scorecard, go to Customization > Centers and Tabs > KPI Scorecards and click Edit next to the KPI scorecard you want to edit.

To define KPI scorecard comparisons:

1. Click **Customize** from the KPI scorecard portlet dropdown list.
2. On the **KPIs** subtab of the **Content** subtab, select a KPI from the **KPI** list.
3. In the **Compare Value to** list, select a KPI to compare to the first KPI you selected.
4. If you selected a custom KPI from either dropdown list, go to the **Custom** subtab, and in the corresponding custom KPI list there, select the saved search to be used as the basis for the custom KPI.

Only saved searches with a date field defined under **Available Filters** are available for use as custom KPIs in scorecards. The exception is if you enable the **Use Periods** option for a scorecard. Then only saved searches with a **Period** filter defined under **Available Filters** are available.

Note that KPI scorecard custom KPI definitions are different from Key Performance Indicators portlet custom KPI definitions. For more information, see [Custom KPIs](#).

5. Check **Compare with Previous** if you want to compare the results of this comparison to the comparison defined in the row above this one on the **KPIs** subtab.
6. Select one of the following comparison types:
 - **Variance (Percent)** : $100 \times (B - A) / A$
 - **Variance (Absolute)** : $B - A$
 - **Ratio (Percent)** : $100 \times B / A$
 - **Ratio (Absolute)** : B / A
 - **Sum** : $A + B$
7. Check **Invert Comparison** if you want to invert the operation used to calculate the comparison type.
8. Enter a **Label** for the KPI if you want something other than the KPI name to display as a row or column header in the portlet.
9. Click **Add**, if you're adding a new KPI to the scorecard, or **OK**, if you're editing an existing KPI entry).

 **Warning:** KPI scorecards don't support results that are unions of two comparisons. If you enter a KPI comparison as a row on the **KPIs** subtab and also enter a date range comparison on the **Date Ranges** subtab, that KPI comparison displays a result of N/A in the KPI Scorecard portlet. To work around this limitation, try defining the comparison as a formula instead. For example, instead of entering **Quota** for **KPI**, **Sales** for **Compare Value To**, and **Variance (Percent)** for **Comparison Type**, enter **Formula (Percent)** for **KPI** and **{SALES}/{QUOTA}** for **Formula**. See [Defining KPI Scorecard Formulas](#).

Defining KPI Scorecard Formulas

You can define formulas to calculate KPI comparisons when you're creating a new scorecard or editing an existing scorecard. These formulas are similar to those used in Excel, and can include functions and KPI IDs. A Formula popup page, available from the KPI scorecard record, offers dropdown menus that you can use to build formula expressions.

- To create a new KPI scorecard, go to Customization > Centers and Tabs > KPI Scorecards > New. For more information, see [Creating a KPI Scorecard](#), and [Entering Basic Scorecard Information](#).
- To edit an existing KPI scorecard, go to Customization > Centers and Tabs > KPI Scorecards and click Edit next to the KPI scorecard you want to edit.

 **Warning:** KPI scorecards don't support results that are unions of two comparisons. If you enter a KPI comparison as a row on the **KPIs** subtab and also enter a date range comparison on the **Date Ranges** subtab, that KPI comparison displays a result of N/A in the KPI Scorecard portlet. To work around this limitation, try defining the comparison as a formula instead. For example, instead of entering **Quota** for **KPI**, **Sales** for **Compare Value To**, and **Variance (Percent)** for **Comparison Type**, enter **Formula (Percent)** for **KPI** and **{SALES}/{QUOTA}** for **Formula**. See [Defining KPI Scorecard Comparisons](#).

To define KPI scorecard formulas:

1. Click **Customize** from the KPI scorecard portlet dropdown list.
2. On the **KPIs** subtab of the **Content** subtab, select a formula from the **KPI** list. The following choices are available:
 - **Formula (Currency)**
 - **Formula (Numeric)**
 - **Formula (Percent)**
3. Enter the formula's expression in the **Formula** column. Click the **Set Formula** icon to open the Formula popup. In this popup, you can:
 - Select from the **Function** list to add functions to the formula.
 - Select from the **KPIs** dropdown list to add KPI IDs to the formula. For a list of IDs and their corresponding KPI names, see [KPI IDs Available for Scorecard Formulas](#).
 - Edit the formula directly in the **Formula** field.

When you've finished entering the expression, click **Set**.

4. If you included a custom KPI in a formula, go to the **Custom** subtab, and in the corresponding custom KPI list, select the saved search to be used as the basis for the custom KPI.

Only saved searches with a date field defined under **Available Filters** are available for use as custom KPIs in scorecards. The exception is if you enable the **Use Periods** option for a scorecard. Then only saved searches with a **Period** filter defined under **Available Filters** are available.

KPI scorecard custom KPI definitions are independent of the custom KPIs selected for display in the Key Performance Indicators portlet. For more information, see [Custom KPIs](#).

5. If lower values are preferable for this formula's results, check the box in the **Less is More** column. When this option is enabled, downward arrows are green and upward arrows are red in the KPI scorecard portlet. (The default is the reverse.)
6. If you don't want this formula's results to display in the scorecard, check the **Hidden** box. This option is available so you can use a formula as the basis for another displayed comparison.
7. Enter a **Label** for the formula. This label appears as a row or column header in the portlet.
8. Click **Add**, if you're adding a new KPI to the scorecard, or **OK**, if you're editing an existing KPI entry).

KPI IDs Available for Scorecard Formulas

The following table lists the KPI IDs that are available for use in KPI scorecard formulas. For a description of each KPI, see [Standard Key Performance Indicators Table](#).

KPI Name	KPI ID
Authorized Commission	COMMISSIONS
Authorized Partner Commission	COMMISSIONSPARTNER
Bank Balance	BANKBAL
Cart Abandonment	CARTABANDON

You can enter KPI IDs in a scorecard formula by selecting a KPI name from the KPI dropdown list in the scorecard's Formula popup window. Open this popup by clicking on the Set Formula icon that is available when you add a formula to the scorecard's KPIs subtab. For more information, see [Defining KPI Scorecard Formulas](#).

If you include a custom KPI's ID in a scorecard's formula, you need to go to the scorecard's Custom subtab, and select a saved search in the corresponding custom KPI dropdown list there.

For an example of how to use formulas in KPI scorecards, check out NetSuite's prebuilt Financial Ratios scorecard that is available to users with permission to see the Trial Balance report. You can review the formulas in this scorecard as examples. See [Financial Ratios Scorecard Formulas](#).

Defining KPI Scorecard Date Ranges or Periods

You can define the date ranges to use in KPI data calculations when you're creating a new scorecard or editing an existing scorecard.

- To create a new KPI scorecard, go to Customization > Centers and Tabs > KPI Scorecards > New. For more information, see [Creating a KPI Scorecard](#), and [Entering Basic Scorecard Information](#).
- To edit an existing KPI scorecard, go to Customization > Centers and Tabs > KPI Scorecards and click Edit next to the KPI scorecard you want to edit.

Note: If you've checked the **Use Periods** box on a KPI scorecard, you need to define periods rather than date ranges, and the name of the **Date Ranges** subtab is changed to **Periods**. Please note that you can't clear the **Use Periods** box after the KPI scorecard has been saved.

To define date ranges for a KPI scorecard:

1. On the **Date Ranges** subtab of the **Content** subtab, in the **Range** column, specify date ranges to be applied to all KPI scorecard data.
2. In the **Compare Value to** field, select a date range to compare to the first range you selected.
3. Check **Compare with Previous** if you want to compare the results for this comparison to the date ranges listed above this one.
4. Select one of the following comparison types:
 - **Variance (Percent)** : $100 \times (B-A)/A$
 - **Variance (Absolute)** : $B-A$
 - **Ratio (Percent)** : $100 \times B/A$
 - **Ratio (Absolute)** : B/A
 - **Sum** : $A + B$

5. Check the box in the **Invert Comparison** column if you want to invert the operation used to calculate the comparison type.
6. Enter a **Label** for this date range. This label appears as a column or row header in the portlet.
7. Click **Add**, if you're adding a new KPI to the scorecard, or **OK**, if you're editing an existing KPI entry).

If you select multiple relative date ranges, such as 2 months ago, you can display the explicit dates in the KPI Scorecard portlet, by checking the Show Date Row box in the KPI Scorecard Setup dialog. See [Adding a KPI Scorecard Portlet to a Dashboard](#).

 **Warning:** KPI scorecards don't support results that are unions of two comparisons. If you enter a KPI comparison as a row on the **KPIs** subtab and also enter a date range comparison on the **Date Ranges** subtab, that KPI comparison displays a result of N/A in the KPI Scorecard portlet. To work around this limitation, try defining the comparison as a formula instead. For example, instead of entering **Quota** for **KPI**, **Sales** for **Compare Value To**, and **Variance (Percent)** for **Comparison Type**, enter **Formula (Percent)** for **KPI** and **{SALES}/{QUOTA}** for **Formula**. See [Defining KPI Scorecard Formulas](#).

Highlighting KPI Scorecard Results

You can set up highlighting of KPI scorecard results when you're creating a new scorecard or editing an existing scorecard. Highlighting makes results more visible in the KPI Scorecard portlet.

Custom Financial Ratios			
INDICATOR	THIS PERIOD	LAST PERIOD	CHANGE
Current Ratio	21.1	21.1	↑ +0.02%
Receivables Turnover	-0.7	-1.72	↓ -59.31%
Days Sales Outstanding	-44.4	-18.07	↑ +145.76%
Inventory Turnover	-0.01	-0.01	↓ -15.32%
Days Inventory On Hand	-4,317.6	-3,656.02	↑ +18.10%

- To create a new KPI scorecard, go to Customization > Centers and Tabs > KPI Scorecards > New. For more information, see [Creating a KPI Scorecard](#), and [Entering Basic Scorecard Information](#).
- To edit an existing KPI scorecard, go to Customization > Centers and Tabs > KPI Scorecards and click Edit next to the KPI scorecard you want to edit.

To set highlighting options for a result in a KPI scorecard:

1. Select a **KPI** from the dropdown list.
2. Select an option in the **Highlight If...** column, to indicate how the result should be compared to the **Threshold** value. The following options are available:
 - Always
 - Less Than
 - Greater Than
 - Magnitude Greater Than
 - Magnitude Less Than
3. Enter a **Threshold** value.
4. Select the **Date Range** or **Period** to determine whether highlighting should be applied when the comparison with the threshold is performed. The available options include All and the date ranges or periods set on the **Date Ranges** or **Periods** subtab.

5. You can use any of the following options to specify the highlighting to be applied to the results that exceed or fall short of the specified **Threshold** value.
 - Use the **Image** column to select an image to be displayed with the highlighted result in the KPI scorecard portlet.
 - Use the **Text Color** column to select a text color other than the default for the highlighted result.
 - Use the **Background Color** column to select a background color other than the default for the highlighted result.
 - Check the box in the **Bold** column to display the highlighted result in bold text.
 - Check the box in the **Headline** column to display the highlighted result as a headline, in large bold text at the top of the KPI Scorecard portlet.

Note: Up to four scorecard results can be displayed as headlines.

You can see the results in your KPI Scorecard portlet:

Custom Financial Ratios				
BANK BALANCE		INCOME		
(60,306,865) \$ USD		17 \$ USD		
INDICATOR	ACCOUNTING BOOK	LAST PERIOD	PERIOD BEFORE LAST	
Bank Balance	Primary Accounting Book	(60,306,865) \$ USD ▼	(60,306,865) \$ USD	
Income	Primary Accounting Book	17 \$ USD ✕	0 \$ USD	

Sharing a Custom KPI Scorecard

You can define an audience for your KPI scorecard when you're creating a new scorecard or editing an existing scorecard. Members of that audience can display your custom scorecard in their KPI Scorecard portlets. You can base the audience definition on roles, departments, subsidiaries, groups, employees, or partners.

- To create a new KPI scorecard, go to Customization > Centers and Tabs > KPI Scorecards > New. For more information, see [Creating a KPI Scorecard](#), and [Entering Basic Scorecard Information](#).
- To edit an existing KPI scorecard, go to Customization > Centers and Tabs > KPI Scorecards and click Edit next to the KPI scorecard you want to edit.

To define an audience for a KPI scorecard:

1. On the KPI Scorecard record, click the **Audience** subtab.

2. You can select internal and external roles as follows:
 - **Internal Roles** - In the Internal Roles field, do one of the following:
 - Check the **Select All** box next to Internal Roles to make the KPI scorecard available to all internal roles.
 - Clear the **Select All** box and then select from the desired internal roles from the list.
 - **External Roles** - To make the KPI scorecard available to specific external roles, select them from the list.
3. Click **Save**.

Editing a KPI Scorecard

If you own a KPI scorecard, you can make changes to it. To open a custom KPI scorecard, you can:

- In the KPI Scorecard portlet, click **Edit**.
- Go to Customization > Centers and Tabs > KPI Scorecards and click **Edit** next to the scorecard.

If you want to customize a prebuilt KPI scorecard, you can open it and make changes, then save it with a different name. To open a prebuilt KPI scorecard, you can:

- In the KPI Scorecard portlet, click **Customize**.
- Go to Customization > Centers and Tabs > KPI Scorecards and click **Customize** next to the scorecard.

You can perform the following tasks:

- [Entering Basic Scorecard Information](#)
- [Defining KPI Scorecard Comparisons](#)
- [Defining KPI Scorecard Formulas](#)
- [Defining KPI Scorecard Date Ranges or Periods](#)
- [Highlighting KPI Scorecard Results](#)
- [Sharing a Custom KPI Scorecard](#)

Financial Ratios Scorecard

NetSuite offers a prebuilt Financial Ratios scorecard to help you analyze your business's financial position and operating efficiency. This scorecard includes metrics built with embedded formulas that incorporate standard NetSuite key performance indicators (KPIs).

The scorecard displays metrics for the current accounting period and the previous accounting period, and shows the percentage change between periods for each metric. Metrics include:

- Current Ratio
- Receivables Turnover
- Days Sale Outstanding
- Inventory Turnover
- Days Inventory on Hand
- Asset Turnover
- Profit Margin on Sales

- Return on Assets
- Return on Equity
- Debt to Total Assets
- Debt to Equity

To view the formulas used to calculate these metrics, see [Financial Ratios Scorecard Formulas](#).

The Financial Ratios scorecard's data is based on a set of NetSuite standard reports, and you can click on the scorecard's metrics to drill down into each of the detailed reports. By default, the scorecard is available to you only if you have permission to view the Trial Balance report. If you have this permission, you can display this scorecard in your KPI Scorecard portlet.

Administrators can review this scorecard's definitions and modify them to create a custom Financial Ratios scorecard, including giving permission to additional users to display the scorecard on their dashboard by changing the audience for the scorecard. For information, see [Editing a KPI Scorecard](#).

Note: You may encounter issues viewing Financial Ratios scorecard data if you haven't set up accounting periods or if you haven't set the **Report by Period** preference to **All Reports** at Home > Set Preferences, the **Analytics** subtab.

To display the Financial Ratios scorecard on your dashboard:

1. Add a KPI Scorecard portlet to your dashboard.
 1. On the page where you want to see the scorecard, click **Personalize**.
 2. In the Personalize Dashboard panel, click the **KPI Scorecard** icon or drag it onto the dashboard.
2. In the KPI Scorecard portlet's menu, click **Set Up**.
3. Select **Financial Ratios** from the **KPI Scorecard** list, and click **Save**.

To review the Financial Ratios scorecard formulas:

1. Go to Customization > Centers and Tabs > KPI Scorecards.
2. In the KPI Scorecards list, click **Financial Ratios**.

To customize the Financial Ratios scorecard:

1. In the Financial Ratios KPI Scorecard portlet, click **Customize** in the portlet's menu, or go to Customization > Centers and Tabs > KPI Scorecards, and click **Customize** next to **Financial Ratios**.
2. Notice that the name of the scorecard is changed automatically. You can make additional changes and click **Save**. For information, see [Editing a KPI Scorecard](#).

Financial Ratios Scorecard Formulas

The following table lists the formulas used to calculate data for the prebuilt Financial Ratios scorecard. This scorecard is available if you have permission to see the Trial Balance report. Formula components are standard NetSuite KPI IDs.

Scorecard Ratio	Formula
Current Ratio	$\frac{({BANKBAL})+({RECEIVABLES})+({OTHERCURRENTASSET})}{({PAYABLES})+({CREDITCARDBAL})+({OTHERCURRENTLIAB})}$

Scorecard Ratio	Formula
Receivables	$\{SALES\}/\{RECEIVABLES\}$
Days Sales Outstanding	$\{DAYS\}/(\{SALES\}/\{RECEIVABLES\})$
Inventory Turnover	$\{COGS\}/\{INVENTORY\}$
Days Inventory On Hand	$\{DAYS\}/(\{COGS\}/\{INVENTORY\})$
Asset Turnover	$\{SALES\}/(\{BANKBAL\}+\{RECEIVABLES\}+\{OTHERCURRENTASSET\}+\{FIXEDASSET\}+\{OTHERASSET\})$
Profit Margin on Sales	$\{PROFIT\}/\{INCOME\}$
Return on Assets	$\{PROFIT\}/(\{BANKBAL\}+\{RECEIVABLES\}+\{OTHERCURRENTASSET\}+\{FIXEDASSET\}+\{OTHERASSET\})$
Return on Equity	$\{PROFIT\}/\{EQUITY\}$
Debt to Total Assets	$(\{PAYABLES\}+\{CREDITCARDBAL\}+\{OTHERCURRENTLIAB\}+\{LONGTERMLIAB\})/(\{BANKBAL\}+\{RECEIVABLES\}+\{OTHERCURRENTASSET\}+\{FIXEDASSET\}+\{OTHERASSET\})$
Debt to Equity	$(\{PAYABLES\}+\{CREDITCARDBAL\}+\{OTHERCURRENTLIAB\}+\{LONGTERMLIAB\})/\{EQUITY\}$

- For more information about this scorecard, see [Financial Ratios Scorecard](#).
- For information about the underlying report, see the help topic [Trial Balance Report](#).
- For a list of standard KPI IDs, see [KPI IDs Available for Scorecard Formulas](#).
- For a list of standard KPIs and descriptions, see [Standard Key Performance Indicators Table](#).
- For information about adding formulas to KPI scorecards, see [Defining KPI Scorecard Formulas](#).

Report Snapshots

NetSuite includes a large number of standard reports that you can run to obtain detailed information about your business. For immediate access to reports' summary data, NetSuite enables you to add Report Snapshot portlets to your dashboard. Report Snapshot portlets offer quick looks at important business results every time you view your dashboard.

Each Report Snapshot portlet displays a high-level summary of a report's results for a selected date or time period. You can configure the number and order of results, and choose the format that is most useful for you, including four different chart types, or a list. You can define the look and feel of each chart by setting its theme and background. Also, you can expand the portlet to full-screen view by clicking the double arrow icon ↗. Each portlet also includes menu options to print content, to download content to a PNG, JPG, PDF, or SVG file, and to view the underlying report's detailed data.

When you roll over a data point in a report snapshot chart, its value displays.

Adding Report Snapshots

For instructions for adding Report Snapshot portlets to your dashboard, see [Adding a Report Snapshot Portlet](#). The available snapshots vary according to enabled features, and each user's roles and permissions. For more information about roles in NetSuite, see the help topic [NetSuite Roles Overview](#). Available snapshots may include the following:

- **Standard Report Snapshots** - You can select from a list of predefined report snapshots. See [Standard Report Snapshots Table](#).
- **Custom Report Snapshots** - You can create a custom report snapshot from a customized report. See [Creating Custom Report Snapshots](#).
- **Sales Management Report Snapshots** - You can choose to view sales management report summaries rolled up to different levels of management hierarchy. See [Sales Management Snapshots](#).

Using Report Snapshots

After you've added a report snapshot to your dashboard, you can configure the data that is displayed.

- Click thumbnails in the portlet to try different chart types.

- Select the time period for which report snapshot data is displayed.

- Date Selector for Comparative Report Snapshots:

two fiscal quarters ago ▼

- Date Selector for Other Report Snapshots:

As of
two fiscal quarters ago ▼

- For more configuration options, click **Set Up**.

For more information, see [Setting Up a Report Snapshot Portlet](#).

Adding a Report Snapshot Portlet

You can add Report Snapshot portlets to some dashboard pages. The report snapshots that are available for display in a dashboard portlet depend on your role and the features you've enabled. A report snapshot is available to you if you have permission to view the underlying report's data.

To add a Report Snapshot portlet to a page:

1. Click **Personalize** in the upper right corner of the dashboard. You can also use the **Personalize Dashboard** link in the **Settings** portlet.
2. On the **Report Snapshots** tab of the **Personalize Dashboard** palette, click the **Report Snapshots** icon or drag it onto the dashboard.
If the **Report Snapshots** tab doesn't display in the Personalize Dashboard panel, it means you can't add Report Snapshot portlets to this page.
3. Click **Set Up** in the portlet's menu to select the report snapshot you want to be displayed in the portlet.

The snapshots you've added appear in portlets on the page. When you log in, the information in each portlet refreshes.

- You can manually refresh report snapshot data at any time by clicking the portlet's Refresh icon.
- You can click a thumbnail in the portlet to change the type of chart used to display data. For most snapshots, choices are line, bar, column, or pie charts.
- You can change the dates for displayed report snapshot data using the dropdown list in the portlet.
- You can expand the portlet to full-screen view by clicking the double arrow icon ↗.
- You can select a menu option to print the portlet content, to download content to a PNG, JPG, PDF, or SVG file, or to view the underlying report.
- You may be able to change layout options for report snapshot data by clicking **Set Up**, if it is available. Layout options include whether to display report results in a list or a graph, the default chart type for the graph, the theme and background for the chart, how many results to display, and the order in which to display results. For more information, see [Setting Up a Report Snapshot Portlet](#).

Notes:

- Comparative sales report snapshots have different setup options than other types of report snapshots. For details, see [Setup Options for Comparative Sales Report Snapshots](#).

- Report snapshot list text truncates at 25 characters when the report snapshot portlet is in the left or right dashboard column. To avoid this truncation, place the portlet in the middle column. Also, report snapshot list amounts are rounded to the nearest whole number and don't display decimal places.

Standard Report Snapshots Table

The following table lists NetSuite standard report snapshots, in alphabetical order. You can see the snapshots available by clicking **Set Up** in the Report Snapshot portlet's menu and checking the Snapshot list. You may see a subset of snapshots listed in the following table, depending on your role and the features you've enabled.

Note: A report snapshot is only available to you if you have permission to view the underlying report's data.

Report Snapshot	Description
Campaigns By Activity	This snapshot shows the top campaigns by percent of campaign messages viewed during the date range you choose. This snapshot is based on the Campaign Response Summary Report.
Campaigns By Profitability	This snapshot shows the top campaigns by profitability during the date range you choose. This snapshot is based on the Campaign ROI Analysis Summary Report.
Comparative Sales	This line graph compares the total income and reimbursed expenses for customers in the periods you choose. It excludes the following transaction types—Journal, Deposit, Credit Card, Credit Card Refund and Check. This snapshot is based on the Comparative Sales report. This snapshot offers different setup options from other standard snapshots. For information, see Setup Options for Comparative Sales Report Snapshots.
Comparative Sales (Orders)	This line graph compares the total income for sales orders in the periods you choose. It excludes the following transaction types—Journal, Deposit, Credit Card, Credit Card Refund and Check. This snapshot is based on the Comparative Sales (Orders) report. This snapshot offers different setup options from other standard snapshots. For information, see Setup Options for Comparative Sales Report Snapshots.
Comparative Sales (Orders Alt. Sales)	This snapshot shows a comparison of the total dollar values of sales orders, based on alternate sales amounts (ASA) in the two date ranges you select. These values exclude the following transaction types: journal, deposit, credit card, credit card refund, and check. This snapshot is based on the Comparative Sales (Alt. Sales) report. This snapshot offers different setup options from other standard snapshots. For information, see Setup Options for Comparative Sales Report Snapshots.
Customers By Balance	This snapshot shows the customers with the largest account balances due for the date range you select. This snapshot is based on the A/R Aging Summary Report.
Customers By Forecast	This snapshot shows the top customers by forecast during the time period you select. The forecast includes: - total income and reimbursed expenses - total value of open estimates that are set to be included in the forecast and are expected to close in the period you've selected

Report Snapshot	Description
	total value of open opportunities that are expected to close in the period you've selected and do not include an estimate that is set to appear in the forecast Note: The values of the estimates and opportunities that are included in the forecast depend on the preferences you've set at Setup > Sales > Preferences > Sales Preferences on the Forecasts subtab. This snapshot is based on the Forecast by Customer Summary Report.
Customers By Forecast Outstanding	This snapshot shows the top customers by outstanding forecast during the time period you select. This snapshot includes: - total value of open estimates that are set to be included in the forecast and are expected to close in the period you've selected - total value of open opportunities that are expected to close in the period you've selected and do not include an estimate that is set to appear in the forecast Note: The values of the estimates and opportunities that are included in the forecast depend on the preferences you've set at Setup > Sales > Preferences > Sales Preferences on the Forecasts subtab. This snapshot is based on the Forecast (Outstanding) by Customer Summary Report.
Customers By Hosted Page Hits	This snapshot shows the top customers by hosted page hits in your website during the date range you choose. This snapshot is based on the Hosted Page Hits by Customer Report.
Customers By Page Hits	This snapshot shows the top customers by page hits in your website during the date range you choose. This snapshot is based on the Page Hits by Customer Report.
Customers By Pipeline	This snapshot shows the top customers by pipeline. The pipeline includes the projected amount of open opportunities and open estimates expected to close in the date range you choose. This excludes the total of opportunities with estimates set to be included in the forecast. This snapshot is based on the Pipeline by Customer Summary Report.
Customers By Profitability	This snapshot shows the most profitable customers for the date range you select. Profit is calculated by subtracting cost from revenue. This snapshot is based on the Customer Profitability Summary Report.
Customers By Sales	This snapshot shows the top customers by sales during the time period you select. This snapshot is based on the Sales by Customer Summary Report.
Customers By Sales Orders	This snapshot shows the total of the approved sales orders for each customer during the date range you select. This snapshot is based on the Sales Orders by Customer Summary Report.
Customers By Total Pipeline	This snapshot shows the top customers by total pipeline. The total pipeline includes the projected amount of all opportunities and estimates that are open as of the date you choose. This excludes the total of opportunities with estimates set to be included in the forecast. This snapshot is based on the Total Pipeline by Customer Summary Report.
Earned Value	This snapshot shows the top projects by earned value as of the date you choose. This data illustrates the effectiveness of project resources. This snapshot is based on the Earned Value by Project Report, which includes data on the difference between projects' earned value and planned value, and the difference between projects' earned value and actual cost.

Report Snapshot	Description
Forecast By Status	This snapshot shows your forecast divided by customer statuses. This enables you to understand where sales are in the sales cycle. This snapshot is based on the Forecast by Status Summary Report.
Hosted Page Hits	This snapshot shows you the number of hits to Web pages hosted in your NetSuite File Cabinet during the date range you choose. This snapshot is based on the Hosted Page Hits Report.
Hosted Page Hits By Unique Visitor	This snapshot shows the top hosted pages by unique-visitor hits in your website during the date range you choose. This snapshot is based on the Hosted Page Hits Report.
Internal Search Hits	This snapshot shows the keywords that website visitors are using to search within your site and the search results being returned. This snapshot is based on the Internal Search Summary Report.
Inventory Sales	This snapshot shows the top selling items by amount of revenue generated. This snapshot is based on the Inventory Revenue Report.
Invoices	This snapshot shows the top open invoices by customer during the date range you choose. This snapshot is based on the Open Invoices Report.
Items By Qty Sold	This snapshot shows the top selling items by quantity sold. This snapshot is based on the Sales by Item Summary Report.
Items By Sales	This snapshot shows the top items by sales during the date range you choose. This snapshot is based on the Sales by Item Summary Report.
Items By Sales Orders	This snapshot shows the top items by sales order income during the date range you choose. This snapshot is based on the Sales Orders by Item Summary Report.
Keywords By Revenue	This snapshot shows the top keywords website customers enter in search engines by the revenue generated from customers who used those keywords during the date range you choose. This snapshot is based on the Search Engine Keywords Summary Report.
Keywords By Visitors	This snapshot shows the top keywords website customers enter in search engines and follow results to your site during the date range you choose. This snapshot is based on the Search Engine Keywords Summary Report.
Lead Sources By Activity	This snapshot shows the top lead sources by the quantity of lead records entered in NetSuite during the date range you choose. This snapshot is based on the Lead Source Analysis Summary Report.
Open Escalations	This snapshot shows the number of escalated cases during the range you choose grouped by employee. This snapshot is based on the Open Escalations report.
Open Estimates	This snapshot shows the estimates with the highest projected amounts expected to close during the date range you select. Open estimates have a probability between 0% and 100% and have not been closed by an order or actual.

Report Snapshot	Description
	This snapshot is based on the Estimates to Close Report .
Open Opportunities	This snapshot shows the opportunities with the highest projected amounts expected to close during the date range you select. Open opportunities have a probability between 0% and 100% and have not been closed by an order or actual. This snapshot is based on the Opportunities to Close Detail Report.
Open Sales Orders	This snapshot shows the top open sales orders by customer during the date range you choose. This snapshot is based on the Open Sales Orders Report.
Page Hits	This snapshot shows the top pages by hits in your website during the date range you choose. This snapshot is based on the Page Hits Report.
Page Hits By Unique Visitors	This snapshot shows the top pages by unique-visitor hits in your website during the date range you choose. This snapshot is based on the Page Hits Report.
Partners By Activity	This snapshot shows the top partners by the quantity of activities they have entered in NetSuite during the date range you choose. This snapshot is based on the Partner Activity Summary Report.
Partners By Customer Acquisition	This snapshot shows the top partners by the quantity of customers they acquired in the date range you choose. This snapshot is based on the Customers by Partner Summary Report.
Partners By Sales	This snapshot shows the top partners by sales during the period you choose. This snapshot is based on the Sales by Partner Summary Report.
Partners By Sales Orders	This snapshot shows the top partners by sales order totals during the date range you choose. This snapshot is based on the Sales Orders by Partner Summary Report.
Pipeline By Status	This snapshot shows the total of the open estimates and opportunities expected to close in the date range you choose grouped by status. This snapshot is based on the Pipeline by Status Summary Report.
Promotion By Sales Orders	This snapshot shows sales order income by promotion during the date range you choose. This snapshot is based on the Sales Orders by Promotion Code Summary Report.
Prospects	This snapshot shows the top prospects by projected value of estimates expected to closed during the date range you choose. This snapshot is based on the Prospect Analysis Summary Report.
Referrer By Revenue	This snapshot shows the top referring websites by the revenue they deliver during the date range you choose. This snapshot is based on the Referrer Summary Report.
Referrer By Visitors	This snapshot shows the top referring websites by the quantity of shoppers they deliver during the date range you choose. This snapshot is based on the Referrer Summary Report.

Report Snapshot	Description
Sales Reps By Activity	This snapshot shows the top sales reps by the number of sales activities they have initiated during the time period you select. Activities include events, tasks, notes, messages, and campaigns. This snapshot is based on the Sales Activity by Sales Rep Summary Report.
Sales Reps By Forecast	This snapshot shows the top sales reps by forecast for the date range you select. The forecast includes: ■ total income and reimbursed expenses from customers ■ total value of open estimates that are set to be included in the forecast and are expected to close in the period you've selected ■ total value of open opportunities that are expected to close in the period you've selected and do not include an estimate that is set to appear in the forecast Note: The values of the estimates and opportunities that are included in the forecast depend on the preferences you've set at Setup > Sales > Preferences > Sales Preferences on the Forecasts subtab. This snapshot is based on the Alt. Sales and Billings Forecast vs. Quota Report.
Sales Reps By Pipeline	This snapshot shows the top sales reps by pipeline. This snapshot includes open estimates and opportunities expected to close in the date range you select. This snapshot is based on the Pipeline by Sales Rep Summary Report.
Sales Reps By Sales	This snapshot shows the top-selling sales reps for the date range you select. This snapshot is based on the Sales by Sales Rep Summary Report.
Sales Reps By Sales Orders	This snapshot shows the top-selling sales reps by sales orders for the date range you select. This snapshot is based on the Sales Orders by Sales Rep Summary Report.
Sales Reps By Sales Orders Alt. Sales	This snapshot shows the sales reps with the greatest dollar amounts of sales orders, based on alternate sales amounts (ASA), for the date range you select. This snapshot is based on the Sales Orders by Sales Rep Summary Report.
Sales Reps By Total Pipeline	This snapshot shows the top sales reps by total pipeline. This snapshot includes all estimates and opportunities that are open as of the date you select on the snapshot. This snapshot is based on the Total Pipeline by Sales Rep Summary Report.
Support Reps By Closed Cases	This snapshot shows the top support reps by the quantity of closed cases during the date range you choose. This snapshot is based on the Closed Case Analysis Summary Report.
Support Reps By Open Cases	This snapshot shows the top support reps by the quantity of open cases during the date range you choose. This snapshot is based on the Open Case Analysis Summary Report.
Time by Employee	This snapshot shows the employees who have the most time recorded during the date range you choose. This snapshot is based on the Time by Employee Summary Report.
Time by Item	This snapshot shows the service items with the most time recorded against them during the date range you choose. This snapshot is based on the Time by Item Summary Report.

Report Snapshot	Description
Time by Project	This snapshot shows the projects with the most time recorded against them during the date range you choose. This snapshot is based on the Time by Customer Summary Report.
Total Open Estimates	This snapshot shows the estimates with the highest projected amounts that were open as of the date you select. Open estimates have a probability between 0% and 100% and have not been closed by an order or actual. This snapshot is based on the Total Open Estimates Report.
Total Open Opportunities	This snapshot shows the opportunities with the highest projected amounts that were open as of the date you select. Open opportunities have a probability between 0% and 100% and have not been closed by an order or actual. This snapshot is based on the Total Open Opportunities Detail Report.
Total Pipeline By Statuses	This snapshot shows the projected and weighted total of all the open estimates and opportunities for each customer status. Only estimates that are marked to be included in forecasts are included in this report. Only opportunities that have not been converted to estimates or other transactions are included. This snapshot is based on the Total Pipeline by Statuses Summary Report.
Utilization	This snapshot shows the employees with the highest productivity during the date range you choose. This snapshot is based on the Utilization by Employee report.
Web Items Ordered	This snapshot shows you the quantity of website orders by item during the period you choose. This snapshot is based on the Item Orders Report.
Web Items Ordered By Unique Visitors	This snapshot shows the top items by quantity that were ordered from unique visitors in your website during the period you choose. This snapshot is based on the Item Orders Report.

Setup Options for Comparative Sales Report Snapshots

Most report snapshots let you compare at most two date ranges. For Comparative Sales Report Snapshots, including Comparative Sales, Comparative Sales (Orders), and Comparative Sales (Orders Alt. Sales), you can choose whether to compare two or three date ranges in a snapshot line graph. For both two and three data point comparisons, several standard date range sets are provided. Also, you can define custom date ranges for either sort of comparison, of the type you choose: daily, weekly, monthly, quarterly, or yearly.

Report setup options are different for comparative sales report snapshots than for other report snapshots. Click **Set Up** in this type of portlet to open a popup where you can:

- Define the number of data points to be graphed in the snapshot (2 or 3).
- Select a set of standard date ranges, or select Custom to create your own set of date ranges, for comparison.

If you select Custom, you need to:

- Select a time interval for date ranges in the Date Range Type dropdown list: daily, weekly, monthly, quarterly, or yearly. The following topics for lists of date range comparisons that are available:

- [Standard Two-Point Date Range Comparisons](#)
 - [Standard Three-Point Date Range Comparisons](#)
- Select specific date ranges in the grid below. (The grid's date range fields become dropdown list selectors after Custom is selected for Date Range.)
- Select a default chart type for the portlet data. Note that comparative sales report snapshots support a different set of chart types than other report snapshots: Area, Line, Column, and Bar.
- Select a chart theme to define the look and feel of chart data.
- Select a chart background to define the display behind chart data.
- Select the color for each date range. (If you don't make selections here, defaults for the selected chart theme are used.)

You also can select or change a standard date range comparison from a dropdown list in the portlet, and click portlet thumbnails to change the type of chart displayed.

Standard Two-Point Date Range Comparisons

The following standard date range sets are available for two data point comparisons:

- Today vs Yesterday
- This Week vs Last Week
- This Month vs Last Month
- This Month vs Same Last Year
- This Month vs Same Last Qtr
- This Qtr vs Last Qtr
- This Qtr vs Same Last Year
- This Year vs Last Year
- Last Month vs Month Before Last
- Last Month vs Same Last Qtr
- Last Month vs Same Last Year
- Last Qtr vs Qtr Before Last
- Last Qtr vs Same Last Year
- Last Year vs. Year Before Last

For more information, see [Setting Up KPI Comparisons](#).

Standard Three-Point Date Range Comparisons

The following standard date range sets are available for three data point comparisons:

- Today vs. Yesterday vs. 2 Days Ago
- This Week vs. Last Week vs. Week Before Last
- This Month vs. Last Month vs. Month Before Last
- This Month vs. Last Month vs. Same Last Year
- This Month vs. Same Last year vs. Same Year Before Last
- This Month vs. Same Last Qtr vs. Same Qtr Before Last
- This Month vs. Same Last Qtr vs. Same Last Year
- This Qtr vs. Last Qtr vs. Qtr Before Last
- This Qtr vs. Last Qtr vs. Same Last Year

- This Qtr vs. Same Last Year vs. Same Year Before Last
- This Year vs. Last Year vs. Year Before Last
- Last Three Months
- Last Month vs. Same Last Qtr vs. Same Qtr Before Last
- Last Month vs. Same Last Year vs. Same Year Before Last
- Last Three Qtrs
- Last Qtr vs. Same Last Year vs. Year Before
- Last Three Years

For more information, see [Setting Up KPI Comparisons](#).

Creating Custom Report Snapshots

If standard report snapshots aren't providing the information that you need, you can create custom report snapshots to be displayed in dashboard portlets. To create a custom snapshot, customize a standard report that currently generates snapshots, and create a snapshot of the customized report when you run the report.

You can create custom report snapshots only from reports that currently are used to generate standard report snapshots. For a list of these reports, see [Reports Available for Custom Report Snapshots](#).

To create a custom report snapshot:

1. Open the report you want to customize.

For a list of reports you can use, see [Reports Available for Custom Report Snapshots](#).

- Go to Reports > Reports Overview, find the report to customize, point to it and click **Customize** next to its name.
- If the report is displayed in a report snapshot portlet, click **View Report** in the portlet's menu, and then click **Customize** in the report's footer area.

2. Use the Report Builder to customize the report.

For information about how to customize a report, see the help topic [Report Customization](#).

Important: By default, when users click a custom report snapshot link to view detailed data, drilldown goes to the standard detail report, not to a customized detail report.

3. Click **Save** or **Run Report**.
4. On the report results page, click the **Create Snapshot** icon .

Note: The **Create Snapshot** icon is always visible, but is only enabled for custom reports that display results data.

5. On the Customize Report Snapshot page, define layout options for portlets displaying this custom report snapshot.
 1. Enter a **Portlet Title** that will be displayed in the header bar of this snapshot's portlet. The title must be unique.
 2. On the **List** subtab, select at least two columns you want to display for each version of the portlet, narrow and wide, by checking the box next to each label name. The narrow version of the portlet can display only two columns. The wide version shows only when the portlet is positioned in the center column of the dashboard. For more information about dashboard columns, see [Dashboard Layouts](#).

3. On the **Graph** subtab, select the columns of data to show in the graph's X and Y axes.
6. Click **Save**.

This snapshot is now available for you to add to a dashboard portlet. For more information about adding and setting up the portlet, see the following topics:

- [Adding a Report Snapshot Portlet](#)
- [Setting Up a Report Snapshot Portlet](#)

When a custom snapshot is displayed in a portlet, you can click **Edit** to make changes.

Note: If you receive the error message “This record already exists” when you click **Save**, it means there's a previously created custom snapshot that has the same name. You can change your report snapshot title or delete the previously created snapshot. See [Deleting a Custom Report Snapshot from a Report Snapshot Portlet](#).

Deleting a Custom Report Snapshot from a Report Snapshot Portlet

You can delete a custom report snapshot when it is displayed in a report snapshot portlet.

To delete a custom report snapshot:

1. Find the custom report snapshot on your dashboard.
2. Click the report snapshot dropdown list and select **Edit**.
3. From the **Actions** menu, select **Delete**.

Reports Available for Custom Report Snapshots

The only reports that you can customize to create custom report snapshots are reports that are used to generate standard report snapshots.

Note: The reports available to you in NetSuite depend upon your role and the features you've enabled.

The following reports can be customized to create custom report snapshots.

- Alt.Sales and Billings Forecast vs. Quota
- Campaign ROI Analysis Summary
- Campaign Response Summary
- Closed Case Analysis Summary
- Customers by Partner Summary
- Customer Profitability Summary
- Earned Value by Project
- Forecast (Outstanding) by Customer Summary
- Forecast by Item Summary
- Forecast by Sales Rep Summary
- Forecast by Status Summary
- Forecast by Customer Summary

- Hosted Page Hits Detail
- Hours & Earnings
- Internal Search Summary
- Inventory Revenue Summary
- Item Orders Summary
- Lead Source Analysis Summary
- Open Case Analysis Summary
- Open Invoices
- Open Sales Orders
- Page Hits Detail
- Page Hits Summary
- Partner Activity Summary
- Payroll Liabilities
- Pipeline by Sales Rep Summary
- Pipeline by Status Summary
- Pipeline by Customer Summary
- Prospect Analysis Summary
- Referrer Summary
- Sales Activity by Sales Rep Summary
- Sales by Customer Summary
- Sales by Item Summary
- Sales by Partner Summary
- Sales by Sales Rep Summary
- Sales Orders by Customer Summary
- Sales Orders by Item Summary
- Sales Orders by Partner Summary
- Sales Orders by Promotion Code Summary
- Sales Orders by Sales Rep Summary
- (Search Engine) Keywords Summary
- Time by Customer Summary
- Time by Employee Summary
- Time by Item Summary
- Total Open Estimates
- Total Open Opportunities Detail
- Total Pipeline by Customer Summary
- Total Pipeline by Sales Rep Summary
- Total Pipeline by Statuses Summary
- Utilization by Employee (deprecated)

Sales Management Snapshots

If you are a sales manager, administrator, or executive with access to sales reports, you can display sales management report snapshots in dashboard portlets. NetSuite offers the following sales management report snapshots:

- **Sales Managers by Sales Orders.** This snapshot shows the approved sales order totals for each manager and rep in a selected date range, and is based on the Sales Orders by Sales Rep Summary report.
- **Sales Managers by Forecast.** This snapshot shows the quota, actual sales, calculated forecast, and override forecast, for each manager and rep in a selected date range, and is based on the Alt. Sales and Billings Forecast vs. Quota report.
- **Sales Managers by Sales.** This snapshot shows the sales revenue by each sales manager in the selected period range, and is based on the Sales by Sales Rep report.

Sales management reports roll up and display data according to the sales management hierarchy. This hierarchy is based on the supervisors defined on employee records.

After you've added a sales management snapshot portlet, you can click **Set Up** to select the hierarchical level of data to display.

- For example, you may have four levels of hierarchy: the CEO, the sales VP, sales managers, and sales reps. If you select the 2nd level of hierarchy for a snapshot, you'll see information for the CEO and the sales VP only. However, the totals include the corresponding subordinate's totals.
- In the Report Snapshot portlet, you can click a + or - sign next to a sales manager to display more or less data.

To display a sales management snapshot:

1. Click **Personalize** in the upper right corner of the dashboard. You can also use the **Personalize Dashboard** link in the **Settings** portlet.
2. On the **Report Snapshots** tab of the **Personalize Dashboard** palette, click the **Report Snapshots** icon or drag it onto the dashboard.
If you don't see the **Report Snapshots** tab, you can't add portlets to this page.
3. Click **Set Up** in the portlet's menu.
4. In the **Snapshot** dropdown list, select either of the following sales management snapshots:
 - Sales Managers by Forecast
 - Sales Managers by Sales
 - Sales Managers by Sales Orders
5. In the **Hierarchy Level** list, select the level of management data to display.
6. Click **Save**.

The snapshot portlet refreshes to display the selected level of hierarchy. From the portlet, you also can do the following:

- Change the date or period range to display results for a different time period.
- Click a + or - next to a manager's name to expand or collapse displayed data.
- Click **Refresh** to reload and update the portlet's data.
- Choose **Print**, **Download**, or **View Report** menu options.

Setting Up a Report Snapshot Portlet

When you've added a Report Snapshot portlet to your dashboard, you can configure the portlet to display data in the most useful manner.

To learn how to add a Report Snapshot portlet, see [Adding a Report Snapshot Portlet](#).

To set up a Report Snapshot portlet:

1. In the report snapshot portlet, click  and select **Set Up** from the menu.

2. The portlet setup window appears.

The screenshot shows the "Report Options" dialog box. It contains the following settings:

- Save** (button), **Cancel** (button), **Reset** (button)
- SNAPSHOT**: Invoices (dropdown)
- DEFAULT CHART TYPE**: Column (dropdown)
- AS OF**: today (dropdown)
- DISPLAY TYPE**: ☐ LIST, ☒ GRAPH
- DISPLAY ORDER**: ☒ TOP, ☐ BOTTOM
- HOW MANY**: Top 5 (dropdown)
- CHART THEME**: Global Theme (dropdown)
- CUSTOM SERIES COLOR**: (color picker)
- BACKGROUND TYPE**: Global Background (dropdown)

3. In the portlet setup window, you can:
 - Use the **Snapshot** menu to select the report snapshot to display.
 - For custom report snapshots, change the portlet title, or the name of the snapshot.
 - Use the **As of** or **Date Range** dropdown menu to change the time period for which data is displayed.
 - Choose a **Display Type** to indicate whether data should be displayed as a list or a graph.

Note the following about report snapshots that display lists:

- Report snapshot list text truncates at 25 characters when the report snapshot portlet is in the left or right dashboard column. To avoid this truncation, place the portlet in the middle column.
- Report snapshot list amounts are rounded to the nearest whole number and don't display decimal places.
- Graph-specific settings, including **Default Chart Type**, **Chart Theme**, **Custom Series Color**, and **Background Type**, are not available for lists.
- Choose a **Display Order**.
 - If you select **Top**, your data will be shown in order starting with the greatest value.
 - If you select **Bottom**, your data will show in order starting with the lowest value.
- From the **How Many** list, select the number of results to display. Choices include:
 - **Top 5**
 - **Top 10**
 - **Top 15**
 - **Top 25**
 - **Top 50**

For custom report snapshots, set a number 1 – 300.

- For graphs, use the **Default Chart Type** dropdown menu to set the default chart used for snapshot data. You can later change the chart type by clicking a thumbnail in the portlet itself.
 - For comparative sales report snapshots, chart type options are **Area**, **Line**, **Bar**, and **Column**.
 - For other report snapshots, chart type options are **Line**, **Bar**, **Column**, and **Pie**.
- For graphs, use the **Chart Theme** dropdown menu to set a look and feel for chart data:
 - **Global Theme** – uses the chart theme set in the Chart Themes section on the Home > Set Preferences page (the default). See the help topic [Personal Preferences for Appearance](#).
 - **Basic** – offers limited color contrast.
 - **Colorful** – offers more color contrast.
 - **Match Color Theme - Bold** – harmonizes with your choices in the Colors section on the Home > Set Preferences page, using bolder shades. See the help topic [Personal Preferences for Appearance](#).
 - **Match Color Theme - Light** – harmonizes with your choices in the Colors section on the Home > Set Preferences page, using lighter shades. See the help topic [Personal Preferences for Appearance](#).
- For graphs, use the **Custom Series Color** field to enter a hexadecimal value for the color you want to use for the graph. This option is meant for backward compatibility with custom chart colors defined prior to the introduction of chart themes in Version 2012 Release 2.
- For graphs, use the **Background Type** dropdown menu to set the background display behind chart data:
 - **Global Background** – uses the background type set on the Set Preferences page (the default)
 - **Lines**
 - **Bands**
 - **Grid**

4. When you've finished configuring the portlet, click **Save** to save your configuration.

Note: Some report snapshot portlets don't include a Set Up link because these snapshots don't offer choices for data display. For custom snapshots, you may see an Edit link that includes some of the same settings available from the Set Up link.

Workbooks

The Analytics portlet lets you view your workbook charts, pivot tables, and table views on your dashboard. You can add up to 10 Analytics portlets, with each one displaying a single visualization. You can pick any visualization from your account, including any workbooks you've saved or that have been shared with you.

You can set layout options for each portlet. For charts, set the portlet size and chart type. For pivot tables and table views, set the height by choosing how many rows you want visible. These settings only apply to that portlet.

Note: In pivot tables, the rows displayed include both header and result rows. In table views, only result rows count toward the displayed number. For more information, see [Setting Up the Analytics Portlet](#).

You can also open workbooks through the portlet. If you don't own a workbook but have the Analytics Administrator permission, you can view, edit, and delete workbooks created by other users in your account. For more information about the Analytics Administrator, see the help topic [The Analytics Administrator Permission](#).

Note: To set up the Analytics Portlet on your dashboard, the SuiteAnalytics Workbook feature must be enabled. The feature is enabled by default. For more information see the help topic [Enabling SuiteAnalytics Workbook in Your NetSuite Account](#).

You can also apply filters to your Analytics portlet. For more information about data visualization in your portlet, see [Viewing Workbook Data in the Analytics Portlet](#).

For more information about Analytics portlets, see the following topics:

- [Adding an Analytics Portlet](#)
- [Setting Up the Analytics Portlet](#)
- [Adding Translatable Analytics Portlet Names](#)
- [Viewing Workbook Data in the Analytics Portlet](#)
- [Opening Workbooks from the Analytics Portlet](#)

Adding an Analytics Portlet

You can add an Analytics portlet to your dashboard in the same way you add other portlets.

To add an Analytics portlet to a dashboard:

1. Click **Personalize** in the upper right corner your dashboard. You can also use **Personalize Dashboard** in the **Settings** portlet.
2. On the **Standard Content** tab of the **Personalize Dashboard** palette, click the **Analytics** icon or drag it onto the dashboard.

If you don't see the Analytics portlet in the **Personalize Dashboard** palette, the Analytics Workbook feature isn't enabled. See the help topic [Enabling SuiteAnalytics Workbook in Your NetSuite Account](#).

After you add an Analytics portlet, click **Set Up** in the portlet to choose a workbook visualization and set the layout options. For more information, see [Setting Up the Analytics Portlet](#).

Setting Up the Analytics Portlet

After you add an Analytics portlet to your dashboard, click the **Set Up** option in the upper right to pick the visualization you want to see. You can select a different chart, pivot table, or table view per portlet.

To set up the Analytics Portlet:

1. Click **Set Up** in your Analytics Portlet.
2. In the **Analytics** popup, pick the visualization you want by clicking an option from the list on the left panel. Charts are represented by the **Chart** icon , pivot tables are represented by the **Pivot Table** icon , and table views are represented by the **Table View** icon . Optionally, you can use one of the following options to identify the chart or pivot table:
 - From the **Portlet type** drop-down list, filter by charts, pivot tables, or table views by selecting one of the portlet types.
 - In the **Search** field, enter part of the name of the workbook visualization that you want to view.

Note: You'll see your workbook visualizations and any that have been shared with you.

3. After you pick a workbook visualization, the **Settings** options are displayed on the right.
4. In the **Settings** panel, you can do the following:
 - For charts, pivot tables, and table views, enter a title for the portlet in the **Custom name** field. If you leave it empty, the portlet shows the workbook and visualization name.

Note: If your workbook visualization has a name in the translatable **Default Portlet Title** field, don't enter a name in the **Custom name** field. The **Custom name** field replaces the translatable field name and translations won't be available. For more information, see [Adding Translatable Analytics Portlet Names](#).

- For charts, select the size of the portlet. Available sizes are **Short**, **Medium**, and **Tall**.
- For pivot tables, enter how many rows you want visible in the portlet. The portlet height will automatically adjust to fit that number.

Note: The number of rows shown includes both header and result rows. For example, if your pivot table has two header rows and you want five result rows, enter **7** in the **Number of visible rows** field. By default, the portlet displays 10 rows.

- For table views, enter how many rows you want visible in the portlet. The height automatically adjusts to fit that number.

Note: The number of rows is only result rows. For example, if you enter **5** for **Number of visible rows**, your table view displays the header, five result rows, and the footer row. By default, the portlet displays 10 result rows.

5. Click **Save**.

The workbook visualization appears in the portlet.

Adding Translatable Analytics Portlet Names

You can add a translatable name to your Analytics portlet. Translation strings and collections are automatically created when you enter the portlet name in the **Default Portlet Title** field of your workbook visualizations.

To add translatable Analytics portlet names:

1. On your workbook visualization, click the information icon next to the workbook name.
If you want to open the workbook from your Analytics portlet, see [Opening Workbooks from the Analytics Portlet](#).
2. On the popup window, click **Workbook Script IDs**.
3. On the Workbook Script IDs window, identify the **Default Portlet Title** column.
4. Click the edit icon to add a translatable name for the workbook visualization that you want. Then, click **Apply**.
5. Click **Save**.

Note: If you enter a name in the translatable **Default Portlet Title** field, don't add one in the **Custom name** field of the Analytics portlet settings. The **Custom name** field replaces the translatable field name and translations won't be available.

For more information about workbook visualizations, see the help topics [Workbook Charts](#), [Workbook Pivot Tables](#), and [Workbook Table Views](#).

For information about how to use translation collections, see the help topic [Working with Translation Collection Strings](#).

Viewing Workbook Data in the Analytics Portlet

For charts, pivot tables and table views, you can do the following:

- Access all data and capabilities of the portlet by clicking the double arrow icon  to expand the view to full-screen.
- Update the data displayed on your portlet by clicking the refresh icon  if you can't see the latest data.

For charts, you can change the chart type by clicking the drop-down arrow in the upper-left corner of the portlet, and then click the thumbnail. These are the available chart types:

- Basic – Column Chart, Bar Chart, Area Chart, and Line Chart.
- Stacked – Column Chart, Bar Chart, Area Chart, and Line Chart.

For more information about the different chart types, see the help topic [Chart Types](#).

Filters applied to the underlying workbook are available from the portlet. You can modify these filters or add new filters in the same way that you do from the Workbook UI.

These changes apply only to the portlet. Also note that if you refresh the portlet with the refresh icon  or by logging in and out of NetSuite, it clears any filters applied to the portlet. For more information about workbook filters, see the help topic [Workbook Visualization Filters](#).

Opening Workbooks from the Analytics Portlet

After you pick a workbook visualization for the Analytics portlet, you can access and edit the associated workbook right through the portlet.

Note: To edit workbooks you don't own, you need the Analytics Administrator permission. For information about the Analytics Administrator permission, see the help topic [The Analytics Administrator Permission](#).

To open a workbook from the Analytics portlet:

1. Click the menu icon in the upper-right corner of the portlet.
2. Select **Open in Workbook** from the dropdown menu.

The workbook opens in a new browser tab.

For more information about workbook visualizations, see the help topics [Workbook Charts](#), [Workbook Pivot Tables](#), and [Workbook Table Views](#).

Publishing Dashboards

The NetSuite user interface is role-based, so that your role determines the set of tabbed pages, or **center**, that displays when you log in. Centers are tied to functional areas, such as Accounting, Marketing, Sales, and Support. NetSuite offers a default visual workspace, or **dashboard**, for each tabbed page, and lets you personalize your dashboards to fit your business. Administrators can share, or **publish**, their personalized dashboards to users logging in to the same center. A published dashboard can include one tabbed page, or multiple pages.

Published dashboards offer a consistent interface to users with related roles. This uniformity in dashboards' appearance can help users work together, because they have ready access to the same data. Publishing dashboards also can save time, by allowing an administrator to set up dashboards for an entire team of users.

Permissions and Roles

To get started publishing dashboards, you need to understand the following:

- To publish dashboards, you must have the Publish Dashboards permission. A few administrative roles have this permission assigned by default, but most users don't. For more information, see [Publish Dashboards Permission](#).
- When you have the Publish Dashboards permission, you can publish dashboards to other users, designated by role. You can only publish a dashboard to roles that tie to the same center in which you've personalized the dashboard. For example, if your role is set to Account Administrator when you personalize a dashboard, you can publish it only to roles tied to the Classic center. If your role is set to Sales Administrator, you can publish a personalized dashboard only to roles tied to the Sales center. For more information, see [Publish Dashboards Permission](#).
- If you want to publish dashboards to users of multiple centers, you need to log in with a role that uses each center to create the dashboard to be published to each center's users.

Publishing a Dashboard

To publish a dashboard, you need to complete the following two steps:

1. **Personalize the dashboard you want to publish** – After you've verified that you have the Publish Dashboards permission, and logged in with the appropriate role, the next step to publishing a dashboard is to personalize one or more of your own tabbed pages to fit the team's business needs. Personalization can involve changes you make to the standard NetSuite tabs or the creation of custom tabs of your own. See [Dashboard Personalization](#) and [Creating Center Tabs](#).

2. **Publish the dashboard** – When you've finished personalizing your own tabbed pages, you can publish one or more of them to appear on other users' tabs. See [Publishing a Dashboard](#).

When you publish a dashboard, you make the following choices. Note that some choices can be changed after you've published the dashboard, and others cannot.

- The roles to which the dashboard should be published. (Can be changed later.)
- Whether the dashboard should be published to new users only or to both existing and new users, replacing existing users' dashboards. (Can be changed later.)
- The tabbed pages to include in the dashboard. (**Cannot be changed later.**)
- The restriction levels for users' dashboard personalizations. (**Cannot be changed later.**)

After you've published a dashboard, you can make further changes to it and copy your published dashboard to any of your accounts. See the following topics:

- To make further changes to a published dashboard and apply these changes to users' dashboards, see [Applying Changes to Published Dashboards](#).
- To copy a published dashboard to another of your accounts, see [Copying a Published Dashboard to Another Account](#).

Publish Dashboards Permission

To publish dashboards, you must have the Publish Dashboards permission. A few administrative roles have this permission assigned by default, but most users don't. When you use the Publish Dashboard button, the dashboard will appear in the state of the dashboard for you and your corresponding role that is currently logged into NetSuite. If you make a change to a published dashboard, the dashboard will publish with those edits included. It's not possible to revert back to dashboard settings that were previously published.

If you have the Publish Dashboards permission, a Publish Dashboard link displays in the Settings portlet on your home page. If this link isn't available, you don't have the permission.

For information, see the following topics:

- [Roles with Publish Dashboards Permission](#)
- [Adding the Publish Dashboards Permission](#)
- [Can Publish to Own Center Only](#)

Roles with Publish Dashboards Permission

By default, the Publish Dashboards permission is available to users assigned the following roles:

- **Administrator** – can publish dashboards to users assigned roles in the Classic Center.
- **Intranet Manager** – can publish dashboards to users assigned roles in the Ecommerce Management Center.
- **Issue Administrator** – can publish dashboards to users assigned roles in the Engineering Center
- **Marketing Administrator** – can publish dashboards to users assigned roles in the Marketing Center.
- **Product Manager** – can publish dashboards to users assigned roles in the Support Center.
- **QA Manager** – can publish dashboards to users assigned to roles in the Engineering Center.
- **Sales Administrator** – can publish dashboards to users assigned roles in the Sales Center.
- **Support Administrator** – can publish dashboards to users assigned roles in the Support Center.
- **System Administrator** – can publish dashboards to users assigned roles in the System Administrator Center.

Adding the Publish Dashboards Permission

If additional users require the Publish Dashboards permission, for example, in cases where centers don't have any existing roles with this permission, the account administrator can customize the users' roles to add the permission, or create a custom role with the permission.

For example, to allow the publishing of a dashboard to roles that use the Advanced Partner Center role, the account administrator can create a customized Advanced Partner Center role, add the Publish Dashboards permission to it, and assign the role to the user who needs to publish the dashboard.

The Publish Dashboards permission is listed on the Setup subtab of each Role record's Permissions subtab. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

Note: If the Global Permissions feature is enabled, the account administrator can add the Publish Dashboards permission directly to employee records' Global Permissions subtab, to be applicable to all of the employees' assigned roles.

Can Publish to Own Center Only

Be aware that even with the Publish Dashboards permission, you can publish dashboards only to other users with roles tied to the same center where you've personalized your dashboard, because only roles tied to the same center share the same set of tabbed pages. For example, if you're logged in as a sales administrator when you personalize a dashboard, only sales roles are available when you attempt to publish that dashboard.

The account administrator generally uses the Classic Center, which may not be shared with many other users. For this user to publish dashboards to users with roles in other centers, the user must be assigned an additional role for each center where a published dashboard is needed. If any of these roles don't have the Publish Dashboards permission, it needs to be added. Then, this user can log in with each role to personalize and publish a dashboard to roles for the related center.

In other cases, it may make more sense for different users to publish dashboards to different centers. In all cases, you should be aware of the center for your role, know which other roles share your center, and ensure that you have the Publish Dashboards permission, BEFORE you personalize a dashboard that you want to publish.

Note: Dashboards published to the Advanced Partner Center are published to partner contacts as well as partners. If a partner or a partner contact modifies the dashboard content by, for example, adding a portlet, this change will appear on the dashboards of the partner and all partner contacts logged in using the same role.

Publishing a Dashboard

You can share your personalized dashboard with other users in your center by publishing it. A published dashboard can consist of one tabbed page or of multiple pages. When you publish a dashboard, you define the roles for users who will see the published dashboard, and what changes users will be able to make to the published dashboard.

Note: The minimum required screen width size when using a three column layout is 1400 pixels.

Before you attempt to publish a dashboard:

- Verify that you have the Publish Dashboards permission by checking for the Publish Dashboard link in your home page Settings portlet.
- Verify that the role you're currently using shares the same center as the roles to which you want to publish the dashboard. Do not begin personalizing a dashboard until you are sure that your role can publish to the users you want!

For more information, see [Publish Dashboards Permission](#).

- Personalize the home page by adding portlets that you want to be part of the published home page dashboard. For more information, see [Setting Up Dashboard Portlet Content](#).

Note: Please note that if your dashboard contains a calendar portlet that displays My Calendar, the published dashboard users will see their personal calendar, not the publisher's one.

- Personalize one or more of your own tabbed pages to be part of the published dashboard. You can personalize a page by making changes to a standard NetSuite tabbed page, as described in [Dashboard Personalization](#). Or, you can create your own custom tabbed page, as described in [Creating Center Tabs](#).

When you create a custom tab, you select the centers where it will display. For example, for a tab used by sales reps, you would select the Sales Center, and for a tab used by accounting clerks, you would select the Accounting Center. You also have the option of making a tab display in all centers. However, be aware that tabs applied to all centers aren't available in published dashboards.

To publish a dashboard:

1. Go to your home page, and in the **Settings** portlet, click **Publish Dashboard**.
2. On the Publish Dashboard page, enter a name for the dashboard in the **Name** field, and, if desired, descriptive text in the **Notes** field. These fields are for your reference only and aren't exposed to other users.
3. If you want to prevent users from removing Shortcuts portlet links on the published dashboard's pages, check the **Lock Shortcuts** box.
 - When you enable this option, users still can add and reorder links in their Shortcuts portlets.
 - For information about the Shortcuts portlet, see [Shortcuts Portlet](#).
4. To prevent users from removing Create New menu links on the published dashboard's page, check the **Lock New Bar** box.
 - When you enable this option, users still can add and reorder links in their Create New menu.
 - For information about the Create New menu, see the help topic [Create New Menu](#).
5. On the **Apply To Roles** subtab, select the roles to which you want to publish this dashboard and indicate whether to publish the dashboard to new users only or to both new and existing users.
 1. Select a role from the **Role** list.
Only roles tied to the center that your current role uses are listed here, because you can only publish a dashboard to roles that share your center. If a role isn't listed here, you can't publish the dashboard to it when you're logged in with your current role. You may be able to log in with a different role, personalize a dashboard, and publish it to additional roles. For more information, see [Publish Dashboards Permission](#).
Roles that are inactive aren't included in the list.
 2. By default, for a dashboard being published for the first time **Override existing user's settings** is set to **Yes**, indicating that this dashboard should be published to existing users with the selected role, replacing their current dashboards. Clear this box if you want to publish the dashboard only to new users assigned the selected role.
 3. Click **Add**.
 4. Repeat the preceding steps for additional roles to which you want to publish the dashboard.

Only a part of the published dashboard content may be available to some users. Users can view only the dashboard content that their assigned roles give them permission to see.
6. On the **Apply To Tabs** subtab, select the tabbed pages that you've customized to be part of the published dashboard, and choose how you want to restrict users' changes to the published dashboard's pages.

1. Check the box in the **Apply** column next to each tabbed page you want to include in this dashboard.
2. In the **Mode** column, choose the level of restriction for users' changes to the selected page:
 - **Unlocked** – lets users make all changes to the selected page.
 - **Locked** – restricts users from making any changes to the selected page.
 - **Add/Move Content** – enables users to add and rearrange portlets on the selected page, and at the same time prevents them from removing portlets.

 **Note:** The **Add/Move Content** option prevents users from removing not only portlets that were added as part of the published dashboard but also the portlets they added themselves.

For more information, see [Restricting Users' Dashboard Personalizations](#).

7. Click **Save**.

The published dashboard is applied to users assigned the selected roles. They may need to log out and log back in to the system for changes to be visible. They also may need to clear their browser cache.

Assigning Published Dashboards to Users

You define the users for a published dashboard by selecting one or more roles when you first publish it. After the dashboard has been published, you can add or remove roles to change the users.

All of a published dashboard's information may not be available to all of its users. Users can view only the dashboard content that their assigned roles give them permission to see.

To assign saved dashboards to users:

1. Go to your home page, and in the Settings portlet, click **List** next to **Publish Dashboard**.
A list of your dashboards appears.
2. Click **Edit** next to the name of the dashboard for which you want to change assigned users.
3. On the **Apply To Roles** subtab of the Published Dashboard page, you can:
 1. Add a role to which the dashboard should be published by placing the cursor in a blank line, selecting a role from the **Role** list, and clicking **Add**.
By default, for a previously published dashboard **Override existing user's settings** is set to **No**, indicating that the dashboard will be published only to new users assigned the selected role. Check this box to change it to **Yes** if you want to publish the dashboard to existing users with the selected role, replacing their current dashboards.
 2. Remove a previously selected role from the published dashboard's list by selecting the role and clicking the **Remove** button.
4. Click **Save**.

The published dashboard is applied to users with the selected roles. They may need to log out and log back in to the system for changes to be visible.

Restricting Users' Dashboard Personalizations

When you first publish a dashboard, you can set a restriction level that indicates the types of changes users can make to each tabbed page of the published dashboard.

You set this restriction level by selecting from the following three modes on the Publish Dashboard page's Apply To Tabs subtab:

- **Unlocked** – lets users make all changes to the selected page.
- **Locked** – restricts users from making any changes to the selected page.
- **Add/Move Content** – enables users to add and rearrange portlets on the selected page, and at the same time prevents them from removing portlets.

 **Note:** The **Add/Move Content** option prevents users from removing not only portlets that were added as part of the published dashboard but also the portlets they added themselves.

When selecting a mode for each tabbed page, or tab, included in the published dashboard, you can specify different modes for each tab.

After you've saved a published dashboard, you can't modify these modes, so make your selections carefully!

 **Note:** Each Publish Dashboard page has options for locking the Shortcuts portlet and the New Bar so that users can't remove links. These options can be changed after a dashboard has been published.

Applying Changes to Published Dashboards

When you make changes to a personalized dashboard that you've published, you can apply these changes to the dashboards of all or some of the users for the published dashboard, based on users' assigned roles.

To change a published dashboard:

1. Log in with the role you were using when you published the dashboard.
2. Make changes to one or more of your dashboards that you previously published to other roles.
3. Go to your home page, and in the **Settings** portlet, click **List** next to **Publish Dashboard**.
4. Click **Edit** next to the dashboard you want to reapply to other roles.
5. On the **Apply To Roles** subtab of the Publish Dashboard page, you can apply your changed dashboard to users' dashboards based on their roles.

For each role to which you want to apply the changed dashboard, check the box in the **Override existing user's settings** column.

If you checked this box for a role when you initially published the dashboard, this box isn't checked now. If you want to apply these changes to that role, you must check this box again.

6. Click the **Save and Update Content** button.

 **Note:** If you click the Save button, the dashboard definition is saved, but the changes aren't applied to users' dashboards.

A pop-up message will appear. You can either publish the dashboard with the originally selected tabs and restrictions by clicking **OK** or you can click **Cancel** and change the tabs and the restrictions.

Your changes to this published dashboard are applied to users assigned the selected roles. They may need to log out and log back in to the system for changes to be visible. Depending on your browser's

caching settings, users may need to manually refresh the page for each dashboard that has been updated.

Applying Updates for Bundled Published Dashboards

Changes to a dashboard installed by a bundle may be applied automatically, as part of bundle updates, to the dashboards of users with roles to whom the dashboard was previously published.

Whether these automatic updates to users' dashboards occur depends upon the setting for a related bundle preference. The user who updates the bundle in your account can indicate whether bundled dashboard updates should be applied only to the dashboard definition, or to both the definition and to the dashboards of all users with roles to which the dashboard was previously published.

If the updates are applied only to the dashboard definition, you can follow steps 2-6 above to apply updates to users' dashboards as desired. For information about the bundle update process, see the help topics [Installed Bundle Updates](#), [Reviewing the Preview Bundle Update Page](#), and [Set Bundle Update Preferences](#).

Copying a Published Dashboard to Another Account

After you've published a dashboard, you can copy it to another of your accounts.

You can use SuiteCloud Development Framework (SDF) to manage published dashboards as part of file-based customization projects. For information about SDF, see .

You can use the Copy to Account feature to copy an individual published dashboard to another of your accounts. Each published dashboard page has a clickable Copy to Account option in the upper right corner.

 **Note:** Only supported portlets in a dashboard are copied. See the help topic [Customizations Supported by SuiteCloud Development Framework](#).

Before you copy a dashboard to another account, you must complete the following two steps:

1. Check that the NetSuite accounts you want to copy to and from meet specific requirements. See the help topic [Copy to Account](#).
2. Enable the Copy to Account feature. See the help topic [Setting Up Copy to Account](#).

To copy a published dashboard to another account

1. Go to your home page, and in the Settings portlet, click **List** next to **Publish Dashboard**.
A list of your dashboards appears.
2. Click **Edit** next to the name of the dashboard that you want to copy.
3. To start the Copy to Account process, click the **Copy to Account** option in the upper right corner and follow the steps described in [Using Copy to Account](#).
