This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Employee Management

NetSuite provides you with the tools that you need to manage your employees. You can:

- Add employee records to NetSuite. For more information, see [Employee Information Management](#).
- Give employees access to NetSuite. For more information, see [Giving an Employee Access to NetSuite](#).
- Log employee expenses and purchase requests. For more information, see [Expense Reports and Purchase Requests](#).
- Track employees' time with the Time Tracking feature. For more information, see [Managing Time Tracking](#).

NetSuite also offers SuitePeople, a comprehensive and integrated Human Capital Management (HCM) solution. SuitePeople enables Human Resources professionals to manage employees within NetSuite, thus eliminating repetitive and manual processes with one source of where employee data is kept.

For more information, see [SuitePeople Overview](#). For more information about SuitePeople, contact your NetSuite account manager.

SuitePeople Overview

SuitePeople is a comprehensive and integrated Human Capital Management (HCM) solution. SuitePeople eliminates repetitive and manual processes by providing one source for employee data. This enables Human Resources (HR) and Payroll professionals to efficiently manage employees within NetSuite.

SuitePeople consists of three main modules:

- SuitePeople HR
- SuitePeople Workforce Management
- SuitePeople U.S. Payroll

For more information about SuitePeople HR, SuitePeople Workforce Management, or SuitePeople U.S. Payroll, contact your NetSuite account manager.

SuitePeople HR

SuitePeople HR empowers employees and managers with self-service functionality to complete most everyday tasks. SuitePeople HR leverages NetSuite to provide customizable workflows tailored for how you do business. This module includes:

- [Goal Management and Performance Reviews](#) – Manage goals and performance reviews with the Performance Management feature. Employees create and track their own goals, in collaboration with their managers. You can set up and launch performance reviews for individual employees or for groups of employees.

Note: The Performance Management feature requires SuitePeople HR but is not included in SuitePeople HR by default. To learn more, contact your NetSuite account manager.

- [Time-Off Management](#) – Create and manage time-off plans, and assign them to employees. Employees can request time off and view the status of their requests in the Employee Center. Managers can review and approve time-off requests either from an email message or from the Employee Center.
- [Effective Dating for Employee Information](#) – Edit the employee record as of a certain date, whether in the past, present, or future.
- [Employee Change Requests](#) - Manage change approvals for the employee record.
- [Job Management](#) – Track different job types within your organization.
- [Kudos](#) - Recognize the achievements of your coworkers.
- [Employee Directory and Org Browser](#) – Browse your organization's structure, and search for employees by using filters for location, department, and other parameters.
- [Employee Center Dashboard Publishing Feature](#) - Create a standard Employee Center dashboard for your organization. You can create/ a dashboard specifically designed for supervisors and managers.
- [Working With News Items](#)- Create and share company news with your employees. News items appear on the Company News portlet in the Employee Center.
- [Compensation Tracking](#)- Track base pay and bonus information on the employee record, and, if applicable, integrate compensation with SuitePeople U.S. Payroll.
- [Advanced Employee Permissions](#) - Use employee permissions for more control over which fields and sublists on the employee record are available to NetSuite roles.

- [Workforce Analytics](#) - Measure and analyze headcount and turnover trends in your company.
- [Employee Reports and Workbooks](#) - Use reports to keep you up to date with time-off balances, payroll, employee change history, and more.
- [Employee Onboarding and Offboarding Plans](#) - Manage the onboarding and offboarding process for various employees by using plans, templates, reminders, and email notifications.
- [Employee Offboarding](#) - Manage the offboarding of employees, including the creation of custom termination reasons.
- [Viewing an Employee's Timeline](#) - View an employee's key career milestones and career changes in chronological order.
- [Compliance](#) - Ensure that your organization is compliant with government and industry requirements.
- [SuitePeople U.K. Localization](#) - Helps HR professionals monitor information required by U.K. employee reporting regulations by using custom forms, fields, and saved searches.

SuitePeople Workforce Management

SuitePeople Workforce Management is a single solution to streamline shift scheduling, easily capture time and attendance across your workforce, and calculate wages. For more information, see [SuitePeople Workforce Management](#)

SuitePeople U.S. Payroll

SuitePeople U.S. Payroll is a full-service payroll solution that is fully integrated with SuitePeople HR and Accounting modules. For more information, see the help topic [Payroll](#).

SuitePeople Permission Requirements

Note: If you want more control over what employee information is accessible by different NetSuite users you can use the Advanced Employee Permissions feature. You can use the employee permissions that come with this feature to give you more control over what employee information certain roles can access. You can also customize employee permissions to include all or set of standard fields and sublists from the employee record. For more information, see [Advanced Employee Permissions](#).

The following section contains information about the permission requirements you need for various SuitePeople features.

NetSuite includes four different types of permissions. They are Lists, Reports, Setup, and Transactions. Generally, permissions have four possible access levels, which are View, Create, Edit, and Full.

You can control what a role can do based on the level of access you set for a permission. In general, each successive level (view, create, edit, full) of a permission provides increased usage of the related record type, task, or page. However, the usage of some permissions does not fit exactly into this model. Generally, any user with at least View access to a record type has the ability to print records of that type. For some permissions, not all access levels are supported. All SuitePeople features require some level of employee access to view employee information. For more information, see the help topic [Permissions Documentation](#).

- [Advanced and Basic Government-Issued ID Tracking Permission Requirements](#)
- [Compensation Tracking Permission Requirements](#)
- [Effective Dating Permission Requirements](#)
- [Employee Center Publishing Permission Requirements](#)
- [Employee Change Requests Permission Requirements](#)
- [Job Management and Job Requisitions Permission Requirements](#)
- [Kudos Permission Requirements](#)
- [News Items Permission Requirements](#)
- [Performance Management Permission Requirements](#)
- [Termination Reason Tracking Permission Requirements](#)
- [Time-Off Management Permission Requirements](#)
- [Workforce Analytics Permission Requirements](#)

Advanced and Basic Government-Issued ID Tracking Permission Requirements

You can enable the Basic Government-Issued ID Tracking feature to grant roles the Basic Government-Issued ID permission. Alternatively, you can enable the Advanced Government-Issued ID Tracking feature to grant roles the Advanced Government-Issued ID permission. These permissions are located on the Lists subtab of the Role page. For a list of the standard roles assigned to this permission, see the help topic [Standard Roles Permissions Table](#). You can create custom roles that include this permission. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

If you enable the Basic Government-Issued ID Tracking feature, note the following. You must assign the Basic Government-Issued ID Tracking permission at the Full access level to roles who track employees' passport numbers and driver's licenses. Passport numbers and driver's licenses are masked from roles that do not have the Basic Government-Issued ID Tracking permission at the Full access level.

If enable the Advanced Government-Issued ID feature, note the following. You must assign the Advanced Government-Issued ID permission to roles who track a variety of government-issued identifications for your employees. You can assign the Advanced Government-Issued ID permission at the View, Create, Edit, or Full access levels.

If users need to add or edit government-issued IDs on the employee record, assign the Government-Issued ID Types permission at access level Create or Edit.

The following table lists the permission level a user must have to perform certain tasks related to the Advanced Government-Issued ID Tracking features.

Permission	Subtab	Permission Access Level	Supported Functionality
Advanced Government-Issued IDs	Permissions > Lists	View	Allows users to view and search for employee government-issued ID information. Users cannot create, edit, or delete government-issued ID information.
		Create	Allows users to create driver's license, passport and other IDs through entry forms. Users cannot edit or delete government-issued IDs.

Permission	Subtab	Permission Access Level	Supported Functionality
Government-Issued ID Types  Note: IDs are always masked unless the Full access level is used.	Permissions > Lists	Edit	Allows users to create, view, and edit government-issued IDs. Users cannot delete government-issued IDs.
		Full	Allows users to create, view, edit, and delete government issued-IDs.
		View	Allows users to view and search for government-issued ID types. Users cannot create, edit, or delete government-issued ID types.
		Create	Allows users to create and view government-issued ID types for employees. Users cannot edit or delete government-issued ID types.
		Edit	Allows users to create, view, and edit government-issued ID types. Users cannot delete government-issued ID types.
		Full	Allows users to create, view, edit, and delete government-issued ID types.

For more information about these features, see [Government-Issued ID Tracking](#).

Compensation Tracking Permission Requirements

If you use the Compensation Tracking feature, any standard roles that have the Employees permission can access base pay and bonus target information. To access information on the bonus record, roles require the Bonus permission. To access bonus types, roles require the Bonus Type permission. These permissions are located on the Lists subtab of the Role page. For a list of the standard roles assigned to these permissions, see the help topic [Standard Roles Permissions Table](#). To create custom roles that include these permissions, see the help topic [Customizing or Creating NetSuite Roles](#).

For more information about the Compensation Tracking feature, see [Compensation Tracking](#).

The following table lists the permission level a user must have to perform certain tasks related to compensation tracking.

Permission	Subtab	Permission Access Level	Supported Functionality
Employees	Permissions > Lists	View	Allows users to view and search for base pay and bonus target information on the employee record.
		Create	Allows users to create and view base pay and bonus target information on the employee record.
		Edit	Allows users to create, view, and edit base pay and bonus target information on the employee record.
		Full	Allows users to create, view, and edit base pay and bonus target information on the employee record. Users can also delete the employee record.

Permission	Subtab	Permission Access Level	Supported Functionality
Bonus Type	Permissions > Lists	View	Allows users to view and search for bonus type records.
		Create	Allows user to view, search for, and create bonus type records.
		Edit	Allows users to view, search for, edit, and create bonus type records. Users can also inactivate bonus type records, if the records have not been assigned to a bonus.
		Full	Allows users to view, search for, edit, and create bonus type records. Users can also inactivate or delete bonus type records.
Bonus	Permissions > Lists	View	Allows users to view and search for a list of awarded bonuses on the employee record. Users can also see the Award Bonus button.
		Create	Allows users to view and search for a list of awarded bonuses on the employee record. Users can award bonuses using the Award Bonus form.
		Edit	Allows users to view and search for a list of awarded bonuses on the employee record. Users can award bonuses using the Award Bonus form, and, if bonuses are not paid using SuitePeople U.S. Payroll, users can edit bonuses.
		Full	Allows users to view and search for a list of awarded bonuses on the employee record. Users can award bonuses using the Award Bonus form. If bonuses are not paid using SuitePeople U.S. Payroll, users can edit bonuses. Users can also delete bonuses. If bonuses are paid using SuitePeople U.S. Payroll, users can delete only bonuses that are not included on a payroll batch.

Advanced Employee Permissions and Bonuses

With the Advanced Employee Permissions feature, you can apply additional restrictions to fields on the employee record. For more information, see [Advanced Employee Permissions](#). However, you cannot use the Advanced Employee Permissions feature to control access to fields on the bonus record. Access to bonus record fields is determined by your role, and specifically by the employee restrictions defined on a role. For more information about employee restrictions, see the help topics [Customizing or Creating NetSuite Roles](#) and [Setting Employee Restrictions](#).

The Advanced Employee Permissions feature includes a permission called Employee Compensation. This permission provides access to:

- Compensation fields on the employee record
- The Bonus sublist

The following image illustrates the fields that the Employee Compensation permission provides access to. It also shows the fields that the Advanced Employee Permissions feature can restrict.

Important: The ability to create or edit bonuses is restricted to roles that include the bonus permission. You might want managers to be able to create bonuses for their direct reports. However, if managers can create bonuses for their direct reports, then managers can also create bonuses for themselves.

Effective Dating Permission Requirements

If you use the Effective Dating feature, the Employee Effective Dating permission must be assigned to roles to use the feature. If users need to add or edit the change reasons record, the Employee Change Reason permission should be assigned at access level Create or Edit. The Employee Effective Dating permission also gives users access to the employee timeline. For more information, see [Viewing an Employee's Timeline](#). These permissions are located on the Lists subtab of the Role page.

For a list of the standard roles assigned to these permissions, see the help topic [Standard Roles Permissions Table](#). You can create custom roles that include this permission. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

The following table lists the permission level a user must have to perform certain tasks related to effective dating.

Permission	Subtab	Permission Access Level	Supported Functionality
Employee Effective Dating (Access levels Create and Full are not supported)	Permissions > Lists	View	Allows users to view and search for effective dated changes. Users cannot create, edit, or delete effective dated changes. Allows users to view the employee timeline from the employee record. For details, see Viewing an Employee's Timeline .
		Edit	Allows users to create, view, and edit effective dated changes. Users cannot create or delete effective dated changes.

Permission	Subtab	Permission Access Level	Supported Functionality
Employee Change Reason Permission	Permissions > Lists	View	Allows users to view and search change reasons records. Users cannot create, edit, or delete change reason records.
		Create	Allows users to create and view change reasons records. Users cannot edit or delete change reason records.
		Edit	Allows users to create, view, and edit change reasons records. Users cannot delete change reasons records.
		Full	Allows users to create, view, edit, and delete change reasons records.

For more information about this feature, see [Effective Dating for Employee Information](#).

Employee Center Publishing Permission Requirements

If you use the Employee Center Dashboard Publishing feature, note the following. You must assign the Employee Center Publishing global permission to any users who are responsible for publishing a standard Employee Center dashboard for your company. The permission is assigned to users on their employee record.

For more information about the Global Permissions feature, see the help topic [Using the Global Permissions Feature](#). For more information about the Employee Center Publishing feature, see [Employee Center Dashboard Publishing Feature](#).

Employee Change Requests Permission Requirements

Important: This topic describes a feature that is currently available only in some customer accounts. For information on the availability of this feature for your account, please contact your NetSuite account manager.

If you use the Employee Change Requests feature, note the following. You must assign Employee Change Requests permissions to any users who are responsible for managing Employee Change Requests for your company. The Administrator, HR Generalist, and Chief People Officer roles are automatically assigned Full permission for Employee Change Requests and Employee Change Request Types. For a list of the standard roles assigned to these permissions, see the help topic [Standard Roles Permissions Table](#). You can create custom roles that include this permission. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

Note: To create, view, approve, and decline Employee Change Requests in the Employee Center, note the following. You do not need to assign Employee Change Requests permissions to Employee Center roles. Instead, you must assign Advanced Employee Permissions to requesters and approvers in a custom Employee Center role. For more information, see [Advanced Employee Permissions for Employee Change Requests](#).

The following table lists the permission level a user must have to perform certain tasks related to Employee Change Requests.

Permission	Subtab	Permission Access Level	Supported Functionality
Employee Change Requests	Permission > Lists	View	Allows users to view employee change requests. Users cannot create, edit, or delete employee change requests.
		Create	Allows users to create and view employee change requests. Users cannot edit or delete employee change requests.
		Edit	Allows users to create, view, and edit employee change requests. Users cannot delete employee change requests.
		Full	Allows users to create, view, edit, and delete employee change requests.
Employee Change Request Types	Permission > Lists	View	Allows users to view employee change request types. Users cannot create, edit, or delete employee change request types.
		Create	Allows users to create and view employee change request types. Users cannot edit or delete employee change request types.
		Edit	Allows users to create, view, and edit employee change request types. Users cannot delete employee change request types.
		Full	Allows users to create, view, edit, and delete employee change request types.

For more information about this feature, see [Employee Change Requests](#).

Job Management and Job Requisitions Permission Requirements

If you use either the Job Management or the Job Requisitions feature, note the following. The Job Management and Job Requisitions permissions must be assigned to roles to use these features. Additionally, if users need to assign jobs, the Employees permission should be assigned at access level Edit.

These permissions are located on the Lists subtab of the Role page. For a list of the standard roles assigned to these permissions, see the help topic [Standard Roles Permissions Table](#).

The following table lists the permission levels that a user must have to perform certain tasks related to these features.

Permission	Subtab	Permission Access Level	Supported Functionality
Employees	Permissions > Lists	Edit	Allows users to assign jobs on the employee record.
Job Management (Access level View is not supported)	Permissions > Lists	Create	Allow users to create and view job records. Users cannot edit or delete job records.

Permission	Subtab	Permission Access Level	Supported Functionality
Job Requisitions (Access level View is not supported)	Permissions > Lists	Edit	Allows users to create, view, and edit job records. Users cannot delete job records.
		Full	Allows users to create, view, edit, and delete job records.
		Create	Allow users to create and view job requisition records. Users cannot edit or delete job requisition records.
		Edit	Allows users to create, view, and edit job requisition records. Users cannot delete job requisition records.
		Full	Allows users to create, view, edit, and delete job requisition records.

For more information about these features, see [Managing Jobs](#) and [Job Requisitions](#).

Kudos Permission Requirements

If you use the Kudos feature, the Kudos permission needs to be assigned to roles to use this feature. Additionally, if users need to create or edit organization values, the Organization Values permission should be assigned at access level Create or Edit.

The Kudos and Organization Values permissions are located on the Lists tab of the Role page. For a list of the standard roles assigned to this permission, see the help topic [Standard Roles Permissions Table](#).

The following table lists the permission level a user must have to perform certain tasks related to these features.

Permission	Subtab	Permission Access Level	Supported Functionality
Kudos	Permissions > Lists	View	Allows users to receive and view Kudos. Users cannot create new, edit, or delete Kudos.
		Create	Allows users to give Kudos. Users cannot edit or delete Kudos.
		Edit	Allows users to edit the Inactive field. Users cannot delete Kudos.
		Full	Allows users to edit the Inactive field and delete Kudos.
Organization Value	Permissions > Lists	View	Allows users to view company organizational values. Users cannot create, edit, or delete organizational values.
		Create	Allows users to create and view organizational values. Users cannot edit or delete organizational values.
		Edit	Allows users to create, view, and edit organizational values. Users cannot delete organizational values.

Permission	Subtab	Permission Access Level	Supported Functionality
		Full	Allows users to create, view, edit, and delete organizational values.

Kudos Permission Requirements

If you use the Kudos feature, the Kudos permission needs to be assigned to roles. Additionally, if users need to create or edit organization values, the Organization Values permission should be assigned at access level Create or Edit.

You can find the Kudos and Organization Values permissions on the Lists tab of the Role page. For a list of the standard roles assigned to this permission, see the help topic [Standard Roles Permissions Table](#).

The following table lists the permission level a user must have to perform certain tasks related to these features.

Permission	Subtab	Permission Access Level	Supported Functionality
Kudos	Permissions > Lists	View	Allows you to receive and view Kudos. You can't create new, edit, or delete Kudos.
		Create	Allows you to give Kudos. You can't edit or delete Kudos.
		Edit	Allows you to edit the Inactive field. You can't delete Kudos.
		Full	Allows you to edit the Inactive field and delete Kudos.
Organization Value	Permissions > Lists	View	Allows you to view company organizational values. You can't create, edit, or delete organizational values.
		Create	Allows you to create and view organizational values. You can't edit or delete organizational values.
		Edit	Allows you to create, view, and edit organizational values. You can't delete organizational values.
		Full	Allows you to create, view, edit, and delete organizational values.

News Items Permission Requirements

If you use the Employee Center Dashboard Publishing feature, note the following. The News Items permission lets you create news items that appear on the Company News portlet of the Employee Center.

This permission is located on the Lists tab of the Role page. For a list of the standard roles assigned this permission, see the help topic [Standard Roles Permissions Table](#).

The following table lists the permission access level a user must have to perform certain tasks related to this feature.

Permission	Subtab	Permission Access Level	Supported Functionality
News Items	Permissions > Lists	View	Allows users to view and search for news items. Users cannot create, edit, or delete news items.
		Create	Allows users to view and create news items. Users cannot edit or delete new items.
		Edit	Allows users to create, view, and edit news items. Users cannot delete news items.
		Full	Allows users to create, view, edit, and delete news items.

Performance Management Permission Requirements

If you use the Performance Management feature, any roles that have the Talent Administration permission can access goal and performance review information. With this permission you can:

- Create metrics for tracking employee performance
- View, inactivate, and delete employees' goals
- Create and manage performance review questions, rating scales, and templates
- Create, schedule, and approve performance reviews
- Edit, delete, and cancel performance reviews

The Talent Administration permission is located on the Lists subtab of the Role page. By default, the standard Human Resources Generalist, Administrator, and Chief People Officer (CPO) roles include the Talent Administration permission. For a list of standard roles and their permissions, see the help topic [Standard Roles Permissions Table](#). You can also create custom roles that include this permission. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

Permission	Permissions Subtab	Permission Access Level	Supported Functionality
Talent Administration	Lists	View	Allows you to view and search for goal and performance review information. You can view goals and performance reviews for employees. You can also view performance metrics, performance review questions, performance review rating scales, and performance review templates.
		Full	You can create and edit only your own goals. You can approve and delete goals. You can create, edit, or delete the following with some limitations: ■ performance metrics ■ performance review questions ■ performance review rating scales ■ performance review templates ■ performance reviews ■ performance review schedules You can approve and cancel performance reviews.

Termination Reason Tracking Permission Requirements

If you use the Termination Reason Tracking feature, the Termination Reasons permission must be assigned to roles to use this feature.

This permission is located on the Lists tab of the Role page. For a list of the standard roles assigned to this permission, see the help topic [Standard Roles Permissions Table](#).

The following table lists the permission access level a user must have to perform certain tasks related to this feature.

Permission	Subtab	Permission Access Level	Supported Functionality
Termination Reasons	Permissions > Lists	View	Allows users to view and search for termination reasons. Users cannot create, edit, or delete termination reasons.
		Create	Allows users to view and create termination reasons. Users cannot edit or delete termination reasons.
		Edit	Allows users to create, view, and edit termination reasons. Users cannot delete termination reasons.
		Full	Allows users to create, view, edit, and delete termination reasons.

For more information about this feature, see [Termination Reason Tracking](#).

Time-Off Management Permission Requirements

If you use the Time-Off Management feature, note the following. The Time-Off Administration permission and the Documents and Files permission must be assigned to roles to use this feature. These permissions are located on the Lists subtab of the Role page. For a list of the standard roles assigned to these permissions, see the help topic [Standard Roles Permissions Table](#).

You can also create custom roles that include these permissions. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

The following table lists the permission level a user must have to perform certain tasks related to this feature.

Note: The Time-Off Tracking SuiteApp must be installed when you are using the Time-Off Management feature. The Time-Off Tracking SuiteApp enables users to request or approve time-off from the Employee Center.

Permission	Subtab	Permission Access Level	Supported Functionality
Time-Off Administration	Permissions > Lists	View	Allows users to view and search for time-off plans, time-off types, and time-off rules. Users cannot create, edit, or delete time-off information.
		Create	Allows users to create time-off plans, time-off types, and time-off rules. Users cannot edit or delete time-off information.

Permission	Subtab	Permission Access Level	Supported Functionality
		Edit	Allows users to create, view, and edit time-off plans, time-off types, and time-off rules. Also, users can change the time-off plan assigned on the employee record. Users cannot delete time-off plans, time-off types, or time-off rules.
		Full	Allows users to create, view, edit, and delete time-off plans, time-off types, and time-off rules. Also, allows users to approve or reject time-off requests from all active and non-terminated employees.
Documents and Files	Permissions > Lists	View	Allows users to view and search for files in File Cabinet. The Time-Off Tracking SuiteApp requires access to files that are stored in File Cabinet.
		Create	Allows users to view and create files in File Cabinet. The Time-Off Tracking SuiteApp requires access to files that are stored in File Cabinet.
		Edit	Allows users to create, view, and edit files in File Cabinet. Users cannot delete files. The Time-Off Tracking SuiteApp requires access to files that are stored in File Cabinet.
		Full	Allows users to create, view, edit, and delete files in File Cabinet. The Time-Off Tracking SuiteApp requires access to files that are stored in File Cabinet.

For more information about this feature, see [Time-Off Management](#).

Workforce Analytics Permission Requirements

If you use the Workforce Analytics feature, any standard roles that have the Workforce Analytics permission can use this feature. This permission is located on the Reports tab of the Role page. For a list of the standard roles assigned to this permission, see the help topic [Standard Roles Permissions Table](#). You can create custom roles that include this permission. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

The following table lists the permission level a user must have to perform certain tasks related to this feature.

Permission	Subtab	Permission Access Levels	Supported Functionality
Workforce Analytics (Access levels Create, Edit, and Full are not supported)	Permissions > Reports	View	Allows users to access and view the headcount and turnover trends under Reports > Employees/HR.
Employees	Permissions > Lists	View	Allows users to view and search for headcount, hire, and turnover trends in your company. Users cannot create, edit or delete information.

Permission	Subtab	Permission Access Levels	Supported Functionality
		Create	Allows users to create hire and termination details on the employee record. Users cannot edit or delete hire or termination details on the employee record.
		Edit	Allows users to create, view, and edit hire and termination details on the employee record. Users cannot delete hire and termination details on the employee record.
		Full	Allows users to create, view, edit, and delete hire and termination details on the employee record.

For more information about this feature, see [Workforce Analytics](#).

Employee Information Management

- [Adding an Employee](#)

Adding an Employee

Employee records enable you to maintain information about your employees including contact details, payroll, human resources data, and access permissions.

You can also give an employee login access to your NetSuite account by entering an email address, password, and assigning a role.

For more information about adding an employee, see the following topics:

- [Entering Communication Information on the Employee Record](#)
- [Entering an Address for an Employee](#)
- [Entering Human Resources Information for an Employee](#)

To add an employee:

1. Go to Lists > Employees > Employees > New.
2. To use a custom form for the employee, select a form from the **Custom Form** list.
3. Enter the required information for the employee.

Tip: To understand more about the information that should go into each field, you can click the field label.

If you use NetSuite OneWorld, you must select a **Subsidiary** for the employee. The employee can access only information associated with this subsidiary. You can customize an employee's role to give the employee access to information outside of the subsidiary. For more information, see the help topic [Control Employee Access to Subsidiaries](#).

4. If necessary, enter information into the subtabs now or enter it later.

 **Note:** The subtabs you see depend on the enabled features and any customizations to the employee record in your account.

- **Communication** – Add files and user notes to the employee record. For more information, see [Entering Communication Information on the Employee Record](#).
- **Address** – Add the employee's addresses. For more information, see [Entering an Address for an Employee](#).
- **Human Resources** – Add information specific to human resources, such as the employee's hire date, social security number, and expense and purchase details. For more information, see [Entering Human Resources Information for an Employee](#).
- **Time-Off** – If you use the Time-Off Management feature, assign a time-off plan to the employee and view the employee's time-off balances. For more information, see [Assigning a Time-Off Plan to an Employee](#) and [Viewing an Employee's Time-Off Balance](#).
- **Government-Issued ID** – If you use the Government-Issued ID feature, track a variety of government-issued identification information about the employee. In this subtab, you can track accurate documentation for the employee's travel, driving qualifications, and tax compliance. For more information, see [Government-Issued ID Tracking](#).
- **Affordable Care Act** – If you use the ACA SuiteApp, you can assign an offer of coverage plan. Then, you can add any covered individuals who are included in the plan, and apply a safe harbor code for the employee. For more information, see [Updating Employee Records for ACA](#).
- **ACH/Direct Deposit** – If you use SuitePeople U.S. Payroll, set up direct deposit banking information for the employee. For more information, see the help topic [Setting up Direct Deposit for an Employee](#).
- **Time Tracking** – Set up a time approver for an employee. For more information, see [Managing Time Tracking](#).
- **Compensation Tracking** – Track the employee's base pay and bonuses. For more information, see [Compensation Tracking](#).
- **Payroll** – If you use SuitePeople U.S. Payroll to pay this employee, add the employee's payroll information. For more information, see the help topic [Payroll Setup for Employees](#).
- **Commission** – If you use the Commissions feature, indicate if the employee is eligible for commission and select the method of paying commission. For more information, see the help topic [Commission Preferences](#).
- **Access** – Grant the employee access to NetSuite. For more information, see [Giving an Employee Access to NetSuite](#).

5. Click **Save**.

 **Tip:** If you're adding multiple employees, it might help to create employee templates. For more information, see [Creating an Employee Template](#).

Entering Communication Information on the Employee Record

Communication information includes files and notes that you want to maintain for an employee.

To enter communication information on the employee record:

1. Go to Lists > Employees > Employees.

2. Beside an employee, click **Edit**.
3. Click the **Communication** subtab.
4. To attach a file to the employee record, click the **Files** subtab, and then do one of the following:
 - To attach a file from the File Cabinet, from the **Attach Existing Files** list, click **List**. Select a file to attach.
 - To attach a new file, click **New File**. For more information, see the help topic [Uploading Files to the File Cabinet](#).
5. To enter notes about the employee or about the record, click the **User Notes** subtab, and then click **New Note**.

Important: Because a contact record is created for each employee, these notes also appear on the corresponding contact record. You can prevent specific user roles from viewing notes on contact records that refer to the employee record. The role must have **Self Only** or **Self and Subordinates Only** selected in the **Employee Restrictions** field. Go to Setup > Users/Roles > Manage Roles to set this field.

6. When you're done, click **Save**.

Entering an Address for an Employee

On the **Address** subtab of the employee record, you can add multiple addresses for an employee. The address might be mandatory.

If you use SuitePeople U.S. Payroll, the home address you enter for an employee is used to calculate state and local taxes.

To enter an address for an employee:

1. Go to Lists > Employees > Employees.
2. Beside an employee name, click **Edit**.
3. On the employee record, click the **Address** subtab.
4. To indicate that this address is the default shipping address for the employee, check the **Default Shipping** box.
5. To indicate that this address is the employee's home address, check the **Home** box. If the employee has only one address, this box is checked by default. If you add other addresses for this employee, you can clear the Home box and check the box beside the home address.

Note: Make sure that the **Home** box is checked for one address. The address that is marked as the home address can be used in customized employee reports.

6. In the **Label** field, enter a descriptive title to appear for this address in lists.
For example, you could enter a label of **Home** or **Mailing Address**.
7. To add or edit values for other address fields, click the pencil icon in the **Edit** column.
An address popup displays address fields.

Note: The following steps list the address fields included in the default address form. The address form for each employee may vary according to the country where the employee is located. Variance also depends on the custom address forms defined in your account. For more information, see the help topic [Customizing Address Forms](#).

- a. Ensure the value for **Country** is correct.

 **Note:** If you use SuitePeople U.S. Payroll to pay your employees, you can pay only employees who reside in the United States.

- b. In the **Attention** field, enter the person at this address who should be notified of receipt of documents or goods.
The value you enter autofills on forms if this address is marked as default for **Shipping** or **Billing**.
- c. In the **Addressee** field, enter the company name that should show on the shipping label.
This name appears under the name entered in the **Attention** field.
- d. Enter a phone number for your employee.
This number appears on the Employee List report.
- e. Enter the employee's street address.
If you enter the zip code first, city and state is updated automatically.
- f. By default, the information entered for the employee's address appears in read-only format in the **Address** free-form text box. The information sources from the **Attention**, **Addressee**, **Address 1**, **Address 2**, **City**, **State**, **Zip**, and **Country** fields.

 **Note:** To edit the read-only text, check the **Override** box.

- g. Click **OK**.
- 8. To enter additional addresses, click **Add**.
- 9. Repeat steps 4-7 for each additional address.
- 10. Click **Save**.

Entering Human Resources Information for an Employee

On the Human Resources subtab of the employee record, you can enter an employee's social security number, supervisor, hire date, and other information.

To enter Human Resources information for an employee:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the employee's name.
3. Click the **Human Resources** subtab.
4. In the **Social Security** field, enter the employee's social security number. For information regarding social security number masking and encrypting, see [Working with Employee Social Security Numbers](#).
5. Enter this employee's birth date.

To enter job information for an employee:

1. From the **Type** list, select the type category that applies to this employee. For more information, see the help topic [Setting Up Employee Related Lists](#).
The type determines whether the employee data is included in employee-related key performance indicators.
To create new **Types**, go to Setup > Accounting > Employee Related Lists > New.

2. Select the status of this employee's employment with your company.

To create new selections for this field, go to Setup > Accounting > Employee Related Lists > New.
For more information, see the help topic [Setting Up Employee Related Lists](#).

3. Enter a job description for this employee.

Note: If you use the Effective Dating feature and are assigned to a role with the Employee Effective Dating permission, note the following. You can see historical changes to an employee's status and type on the employee timeline. For more information, see [Viewing an Employee's Timeline](#).

To enter job information for sales reps:

1. For sales reps, choose one of the following:

- If you don't use Team Selling, check the **Sales Rep** box to assign sales territories to the employee. You can also select them in the **Sales Rep** field on customer records and sales transactions.
- If you use Team Selling, and if the employee is a part of the sales team, select a field in **Sales Role**. For more information, see the help topic [Team Selling](#).

When the **Sales Rep** box is checked or a **Sales Role** is selected for an employee, NetSuite creates a customer record. The employee is selected as the default sales rep on the customer record.

2. To assign cases or territories to the employee, check the **Support Rep** box.
3. To assign the employee to work on projects and project tasks, check the **Project Resource** box.
If the employee is a project resource, check the **Project Manager** field to add them to the Project Manager selection on project records.
If the employee is a project resource, select a role in the **Default Projects Resource Role** field.
When the employee is assigned to a project, the selected role is automatically assigned.
When an employee is marked as a Project Resource, the **Target Utilization** field appears.
4. Select a work calendar for the employee.
5. In the **Labor Cost** field, enter the hourly overhead labor cost rate for this employee to calculate project costs and profitability.
6. In the **Hire Date** field, enter the date the employee was hired.
7. In the **Last Review Date** field, enter the date of the employee's last review.
8. In the **Next Review Date** field, enter the date of the employee's next review.
9. In the **Termination/Release Date** field, enter the person's last date of employment.

Supervisor Change Hist.

1. This subtab shows system notes about changes to the employee's supervisor. For more information, see [Assigning a Supervisor to an Employee](#).

Work Status

1. Select the Employee's resident status.
You can find this information in Section 1 of the employee's completed I-9 form.
To create new selections for this field, go to Setup > Accounting > Employee Related Lists > New.
2. Select the employee's **Visa Type**.

To create new selections for this field, go to Setup > Accounting > Employee Related Lists > New.

3. Enter the Visa's expiration date.

4. Enter the **Alien Number**.

You can find this information in Section 1 of the employee's completed I-9 form.

This step is required only if the employee's work status is **Alien authorized to work**.

5. Enter the date through which the employee is authorized to work.

You can find this information in Section 1 of the employee's completed I-9 form.

This step is required only if the employee's work status is **Alien authorized to work**.

6. On the **Work Status** subtab, check **I-9 Verified** if the employee has completed an I-9 form.

To enter expense and purchasing information:

1. In the **Expense Limit** field, enter the amount the employee can expense without approval.
This field defaults to \$0, which requires all expenses to be approved.
2. In the **Expense Approver** field, select the person that approves the employee's expense reports.
If no approver is selected, the supervisor approves expense reports. If a supervisor and an expense approver are selected, either can approve expense reports. For more information about approvers and approval limits, see the help topic [Approval Routing](#).
3. In the **Expense Approval Limit** field, enter the maximum amount an employee is allowed to approve on an expense report when specified as an approver.
4. In the **Purchase Limit** field, enter the amount the employee can purchase without approval.
This field defaults to \$0, which requires all purchases to be approved.
5. In the **Purchase Approver** field, select the person that approves the employee's purchase requests.
If no approver is selected, the supervisor approves purchase requests. If both a supervisor and a purchase approver are selected, either can approve the purchase request.
6. In the **Purchase Approval Limit** field, enter the maximum amount an employee can approve on a purchase request when specified as an approver.
7. In the **Account** field, enter this employee's account number if needed.

To enter personal information for an employee:

1. Select the employee's marital status.
To create new selections for this field, go to Setup > Accounting > Employee Related Lists > New.
2. Select the employee's ethnicity.
To create new selections for this field, go to Setup > Accounting > Employee Related Lists > New.
3. On the **Personal** subtab, select the employee's gender.
4. Use the following information to enter or verify information in the additional subtabs on the **Human Resources** subtab.
After you have entered all necessary information, click **Save**.

To enter medical insurance information (SuitePeople U.S. Payroll customers only)

1. On the Medical Insurance subtab, check one or more of the following boxes, as appropriate:

- **Medical Insurance Availability:** Check this box if medical insurance is available for this employee.
 - **Medical Insurance Enrolled:** Check this box if the employee is enrolled in medical insurance.
 - **Dependent Medical Insurance Availability:** Check this box if the employee has medical insurance available for any dependents.
 - **Dependent Medical Insurance Enrolled:** Check this box if the employee has any dependents enrolled in medical insurance coverage.
2. To select all of the boxes, check **Select All**.
 3. If you have checked any of the boxes, enter the date when the employee qualifies for medical insurance for themselves or dependents in the **Medical Insurance Eligibility Date** field.

For more information, see the help topic [Medical Insurance Information for New Hire Reporting](#).

To enter emergency contacts for an employee:

1. Enter the name of the employee's emergency contact.
2. Enter the relationship between the contact and employee.
3. Enter the address of the emergency contact.
4. Enter the phone number for the emergency contact.
5. Click **Add/Edit**.

To enter education information:

1. On the **Education** subtab, select the employee's level of education.
To create new selections for this field, go to Setup > Accounting > Employee Related Lists > New.
2. Enter the **Degree** received.
3. Enter the date the degree was conferred.
4. Click **Add/Edit**.

Adding Employees by Importing a CSV File

You can add multiple employee records at a time by uploading employee data in a CSV file. The CSV file must include the following information for each employee record:

- **Hire Date**
- **Work Calendar**
- **Employee ID**

 **Note:** You only need to provide the Employee ID if your organization has not checked the **Auto** box on the employee record entry form.

For One World Accounts, you must also include the following information for each employee record:

- **Subsidiary**
- **First Name**
- **Middle Name**
- **Last Name**

You can also include information for optional employee record fields in your CSV file.

You should organize employee information in your CSV file by using employee record field names as your CSV column headers.

	A	B	C	D	E	F	G	H	I	J	K	L
1	Hire Date	Work Calendar	Subsidiary	First Name	Last Name							
2	04/01/2019	US Work Calendar	Parent Company	Samantha	Smith							
3	04/01/2019	US Work Calendar	Parent Company	James	Brook							
4	04/01/2019	US Work Calendar	Parent Company	Mark	Black							
5	04/01/2019	US Work Calendar	Parent Company	Melissa	Roberts							
6	04/01/2019	US Work Calendar	Parent Company	Joyce	Rowling							
7												

To add employees by importing a CSV file:

1. Go to Setup > Import/Export > Import CSV Records.
2. In the **Import Type** list, select Employees.
3. In the **Record Type** list, select Employees.
4. In the CSV file(s), choose **One File to Upload**.
5. Click **Select...** and then select the file you want to upload.
6. Click **Next**.
7. In the **Data Handling** subtab, select **Add**.
8. Click **Next**.
9. Click the **Advanced Options** subtab and then check the **Run Server SuiteScript and Trigger Workflows** box.
10. Click **Next**.
11. On the Field Mapping page, verify that your CSV file's column headers have been matched to the correct employee record fields.
12. Click **Next**.
13. Enter a unique name for your CSV file's field mapping in the **Import Map Name** field.
14. Click **Save and Run**.

You can check the status of your CSV import from the Job Status page by clicking the **Import Job Status** link.

Editing Employee Records Using CSV Files

You can edit multiple existing employee records at one time by exporting employee records to a CSV file. Edit the CSV file and then import the CSV file. You can also include information for additional employee record fields in your CSV file.

You should organize employee information in your CSV file by using employee record field names as your CSV column headers.

To edit employee records using CSV files:

1. Go to Lists > Employees > Employees.
2. Click the CSV export icon.
3. Open the CSV file and edit the employee records you want to change. Then, save the file.
4. Go to Setup > Import/Export > Import CSV Records.
5. In the **Import Type** list, select Employees.
6. In the **Record Type** list, select Employees.
7. In the CSV file(s), choose **One File to Upload**.
8. Click **Select...** and then select the CSV file you edited.
9. Click **Next**.
10. In the **Data Handling** subtab, select **Add or Update**.
11. Click **Next**.
12. Click the **Advanced Options** subtab and then check the **Run Server SuiteScript and Trigger Workflows** box.
13. Click **Next**.
14. On the Field Mapping page, verify that your CSV file's column headers have been matched to the correct employee record fields.
15. Click **Next**.
16. Enter a unique name for your CSV file's field mapping in the **Import Map Name** field.
17. Click **Save and Run**.

Giving an Employee Access to NetSuite

Important: Don't give access to unknown email addresses, or unknown employees. It is also unsafe to use generic email addresses like test@test.com.

To give an employee access to your NetSuite account, you must ensure the employee record includes an email address. The email address serves as the user ID. Then, complete the necessary information on the Access subtab of the employee record. This setup includes the following:

- Enabling the Give Access option
- Assigning roles and/or permissions

Note: If you use the Effective Dating feature, the **Give Access** box and the **Email** address field on the employee record are not effective-dated. If you grant access to an employee or change the employee's email address, as part of an effective-dated change, those two changes are immediate.

Note: If you use the Advanced Employee Permissions feature, the Employee Access permission must be assigned to a role. This assignment lets the role give access and assign roles to employees. For more information, see [Employee Access Tab Permission Overview](#).

To secure the user login process:

- Two-factor authentication is the preferred alternative to restricting access by IP Address. For more information, see the help topic [Two-Factor Authentication \(2FA\)](#).
- If you use the IP Address Rules feature, you can set up IP address restrictions to limit where employees can log in to NetSuite. For information about setting IP address rules, see the help topic [Enabling and Creating IP Address Rules](#).

Note: Only active users with access count against the Full User Count purchased for your account. Inactive users that have access don't count. For information about making users inactive, see [Inactivating Employee Records](#).

Follow this procedure to let employees set up a NetSuite password themselves. If you prefer to assign passwords, see [Assign an Employee Password Manually](#).

To give an existing employee access to NetSuite:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the name of the employee for whom you want to set up access.
3. Under Email | Phone | Address, enter the employee's email address.
The email address is required for login.
4. Click the **Access** tab.
5. Check the **Give Access** box.
6. Check the **Send New Access Notification Email** box to inform the user how to access your NetSuite account. The standard user access notification includes the email address to use for logging in to NetSuite. It also contains a URL so that the user can set up a NetSuite password. The user must set up a NetSuite password within 24 hours or the URL will expire. If this occurs, edit the employee record, clear the **Give Access** box, click **Save**, and repeat steps 1–6.

Important: The email contains the URL only if the user doesn't have access to NetSuite. For example, it is a new user, or it is a user whose access was removed.

7. On the **Roles** subtab, assign one or more roles to this employee.
Each role includes a set of associated permissions that determine the data assigned users can see and the tasks they can perform. For more information, see [Assigning Roles to an Employee](#).
8. If you use the **Global Permissions** feature on the **Employees** subtab, note the following. A **Global Permissions** subtab is available on the employee record. Use this subtab to assign permissions. Go to Setup > Company > Enable Features to enable this feature.
These permissions apply for all of the employee's assigned roles. For more information, see the help topic [Using the Global Permissions Feature](#).
9. Click **Save**.

Assign an Employee Password Manually

Use the following procedure if you prefer to assign a user's password, rather than letting users assign their own password.

To give an employee access to NetSuite and assign a password:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the name of the employee for whom you want to set up access.
3. Under Email | Phone | Address, enter the employee's email address.
The email address is required for login.
4. Click the **Access** tab.
5. Check the **Give Access** box.
6. Do not check the **Send New Access Notification Email** box.

7. Check the **Manually Assign or Change Password** box.
8. Enter a password for the employee. As you type, the characters are validated against the password policy criteria, and the results displayed.

 **Note:** For employees who can view unencrypted credit card numbers, note the following. The password must be at least 12 characters or the minimum length required for your account, whichever is greater. This is required to comply with Payment Card Industry (PCI) Data Security Standard. For more information, see the help topic [NetSuite Password Requirements](#).

9. In the **Confirm Password** field, re-enter the password.
10. Check the **Require Password Change on Next Login** box to require this employee to change their password on their next login to NetSuite.

When the employee next logs in, the **Change Password** page appears. The user cannot access other NetSuite pages until a new password is created and saved.

Requiring this action protects your account from unauthorized access using generic passwords and prepares your account for an audit.

 **Important:** The **Require Password Change on Next Login** box never appears as checked. When you check this box and save the record, an internal flag is set. When the password change occurs, the flag is cleared. If you later check the box again and resave the record, the internal flag is reset to require another password change.

11. When you have finished entering information, click **Save**.
 12. Next, tell your user the appropriate login page to go to, the email address to use for login, and the password you assigned. For security reasons, don't send the password by email.
- For more information, see the help topic [Types of Login Pages for Your NetSuite Account](#).

Assigning Roles to an Employee

You must assign at least one role to each employee to whom you want to provide access to NetSuite. Each role is a set of associated permissions that determine the data assigned users can see and the tasks they can perform.

You assign roles to an employee on the Roles subtab of the Employee record's Access tab.

 **Note:** If you have the Effective Dating feature enabled, the Role field is not effective-dated. If you change an employee's role settings, as part of an effective-dated change, this change is immediate.

- For general information about roles and NetSuite access, see the help topic [NetSuite Access Overview](#).
- NetSuite provides many standard roles with predefined permissions. To view a list of the standard roles and permissions, see the help topic [Standard Roles Permissions Table](#).
- You can customize the standard roles to fit the unique needs of your business. For information about how to customize a role, see the help topic [Customizing or Creating NetSuite Roles](#).
- If you use the Global Permissions feature, in addition to assigning roles to employees, you can assign permissions directly on each employee record. Please note that usage of the Global Permissions feature isn't recommended. For more information, see the help topic [Using the Global Permissions Feature](#).
- You can restrict employee access to data by location. For information, see [Employee Locations](#).

- For information regarding employee roles and social security data, see [Working with Employee Social Security Numbers](#).

Employees can have multiple roles in your company.

To assign one or more roles to an employee:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the name of the employee you want to assign a role to.
3. Under **Email | Phone | Address**, enter an email address in the **Email** field if one has not been entered already.
4. Click the **Access** subtab.
5. Complete the necessary access-related fields, if you haven't already.
For more information, see [Giving an Employee Access to NetSuite](#).
6. In the **Role** field, select a role for this employee.
7. Click **Add**.
8. Repeat steps 6-7 for any other roles you want to assign to this employee.
9. Click **Save**.

Your employee now has a role and can access your NetSuite account. When the employee logs in, the employee sees only the links that the role gives permission to see.

If you need to remove a role for an employee, open the record, click the name of the role on the **Access** tab. Click **Remove**, and then click **Save**.

Note: To see a list of all the users assigned to a particular role, go to Setup > Users/Roles > Manage Users. Select the role from the Role list. You can also run an employee search to find out which roles have been assigned to employees. For more information, see the help topic [Simple and Advanced Searches](#).

Assigning a Supervisor to an Employee

In NetSuite, supervisors can approve the following for their supervised employees:

- Expense reports, if no expense approver is assigned
- Purchase orders, if no purchase approver is assigned
- Time-off requests, if the Time-Off Management feature is enabled

If you enable the Employee Change Requests feature, supervisors can create employee change requests for their supervised employees. For more information, see [Employee Change Requests](#).

For someone to be considered a supervisor in NetSuite, that person must be selected as the supervisor of another employee on that employee's record. The supervisor receives email when an employee enters a new time-off request, a new expense report, or a new purchase request that needs approval. For more information, see [Approving or Rejecting Time-Off Requests](#) and [Approval Routing](#).

Note: You can't make an employee's supervisor someone who is beneath that employee in the reporting hierarchy. In other words, you can't create a circular reporting structure.

To assign or change supervisors on employee records:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the name of the person whose supervisor you want to assign or change.
3. Under Primary Information, in the **Supervisor** dropdown, select the person who should be the supervisor of this employee. The employees who appear in this dropdown are the ones that you are permitted to assign as a supervisor to this employee. In other words, you can't assign someone below this employee in the reporting hierarchy.
4. When you have finished editing the employee's record, click **Save**.

Supervisor Changes and Commissions

Supervisor changes can affect commissions for the supervisor, depending on their commission schedule. For example, the effective date for a supervisor change isn't the same as the date when the employee is updated. Therefore, the supervisor could be credited with less or more commissions than they should be. To avoid this, change the effective date for a supervisor change to a date in the future or in the past.

Note: A change to a supervisor effective date doesn't cause a commission recalculation, which may be necessary to correct the commission amount.

To update a supervisor assignment:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the employee.
3. Under Primary Information, in the **Supervisor** field, select the supervisor's name.
4. Click **Save**.

To update the supervisor change history for an employee:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the employee.
3. Under Primary Information, in the **Supervisor** field, confirm that the employee has the correct supervisor.
4. Click the **Human Resources** tab.
5. Click the **Supervisor Change Hist.** subtab.
6. On the row with the relevant supervisor change, click **Edit**. Enter the correct date in the Effective Date field. Note that you can't enter effective dates of assignments that overlap. For example, an employee can't report to two supervisors at the same time. Click **Save**. Click **Close**.
7. To save the employee record, click **Save**.

Note: This manual change to the supervisor change history doesn't use the SuitePeople Effective Dating feature.

Viewing and Editing an Employee Record with Effective Dating

The Effective Dating feature enables you to make changes to the employee record that are back-dated or future-dated to a specific date. These changes represent when a particular piece of information became

effective or true, regardless of when you made the change. To use the Effective Dating feature, you must be logged into NetSuite using a role that has the Employee Effective Dating permission. By default, this permission is automatically assigned to the standard Administrator, Chief People Officer (CPO), and HR Generalist roles. This permission also gives you access to the employee timeline from the employee record. For more information, see [Viewing an Employee's Timeline](#).

Many fields on the employee record are supported by effective dating, but others are not. When you view an employee record, fields that are not supported are labeled Not Effective-Dated. For more information, see [Effective Dating for Employee Information](#).

 [Using Effective Dating with the Employee Record](#)

Viewing an Employee's Record as of a Date

If you are using the Effective Dating feature, you can view many of the fields on an employee's record as of a specified date.

To view an employee record as of a date:

1. Go to List > Employees > Employees.
2. Click **View** next to the name of the appropriate employee.
3. On the employee record page, from the **Actions** list, select **View As Of Date**.
4. In the Select Effective Date Information window, enter or select a date and click **OK**.

The employee record page is refreshed showing the Viewing As Of banner to indicate that you are viewing an effective-dated view of the employee record. Note that the fields that are not effective-dated are labeled.

 **Note:** You can also click the **Effective Date Log** subtab to view all effective-dated changes made to the employee's record. Use the **Field** and **Change Reason** filters to find specific changes.

 **Note:** If you use CSV import or the Mass Updates functionality to edit multiple employee records, note the following. The changes affect the current day version of the employee records. You can't use these features to make past-dated or future-dated changes to employee records. For more information, see the help topics [Employees Import Type](#) and [Mass Updates](#).

Editing an Employee's Record as of a Date

If you are using the Effective Dating feature, you can edit many of the fields on an employee's record as of a specified date. This allows you to back-date a change to employee information and specify when a particular piece of information was valid or true.

To edit an employee record as of a date:

1. Go to List > Employees > Employees.
2. Click **Edit** next to the name of the appropriate employee. You can also click **Edit** from a view of an employee record.
3. In the Select Effective Date Information window, enter or select the date as of which you would like to edit the employee record.

4. Select a change reason from the **Change Reason** list. Optionally, enter details of the change to further describe it. Click **OK**.

The employee record page appears showing the Editing As Of banner to indicate that you are editing an effective-dated view of the employee record. The fields that aren't effective-dated are labeled.

5. Make the required changes to the employee record.
6. Click **Save**. The changes you made will appear in the **Effective Date Log** subtab.

Rehiring a Terminated Employee

You can rehire employees that have been previously terminated. If you use the Effective Dating feature, you can select a date in the past or the future for this change to occur. For more information, see [Effective Dating for Employee Information](#).

 **Note:** You must be in the Administrator role to reactivate a terminated employee record.

To rehire a terminated employee:

1. Go to Lists > Employees > Employees (Administrator).
2. Click **Edit** next to the name of the terminated employee.
3. If you are using the Effective Dating feature, in the Select Effective Dating Information window:
 - a. In the **Date** field, select the employee's hire date.
 - b. In the Change Reason, select a change reason. For example, Rehire or Employee Status Change.
 - c. You can also enter Change Reason Details, if needed.
 - d. Click **OK**.
4. Click the **Human Resources** subtab.
5. In the **Hire Date** field, enter the new hire date.
6. Clear the **Termination/Release Date** field.
7. Update the rest of the necessary fields on the employee record such as the Position, Department, Supervisor, and so on.
8. Click the **System Information** subtab.
9. Clear the **Inactive** box.
10. Click **Save**.

Searching for Effective-Dated Changes to the Employee Record

 **Important:** This feature requires SuitePeople HR. For more information, see [SuitePeople Overview](#).

After you use the Effective Dating feature to make back- or future-dated changes to employee information, note the following. You can use the NetSuite search features to determine when particular

aspects of the employee record were true or valid. Use the Valid Date option on the Employee Change Search page to do this.

Using Effective Dating with the Employee Record

To search for effective-dated changes to the employee record:

1. Go to Reports > New Search.
2. Click **Employee Change**.
3. On the Employee Change Search page, under **Valid Date**, specify the date or date range that you want to search.
4. Specify any other search parameters you want to include. For example, you can look for employees who have effective-dated changes with a particular change reason. To do this, select one or more reason from the **Change Reason** list.
5. Click **Submit**.

The Employee Change Search: Results page shows the results of your search.

 **Note:** You can also search for effective-dated changes for a specific employee. Go to Lists > Employees > Employees, and then click **View** next to the name of the employee. Click the **Effective Date Log** subtab to view all effective-dated changes made to the employee's record. Use the **Field** and **Change Reason** filters to find specific changes.

Viewing an Employee's Timeline

The employee timeline displays an employee's key milestones and career changes in chronological order. Information displayed on the employee timeline includes the employee name, hire date, and the termination date. The employee timeline also displays most effective-dated changes made to the employee record.

You can view additional information on the employee timeline based on your role. If you're a manager, you can view effective-dated changes on the timelines of any employees in your reporting chain without the Effective Dating permission. If you're not a manager, you can view effective-dated changes on the employee timeline only if you have the Effective Dating permission. Similarly, you can view information about an employee's bonuses in the employee timeline if you have the Bonus permission.

The employee timeline displays:

- employee status changes
- employee type changes
- changes in job title
- changes in compensation (type, currency, and base wage)
- the name of the person who modified the information
- awarded bonuses

You can view an employee's timeline from the employee record.

Watch the following video for information on the employee timeline:

Introducing the Employee Timeline

To view an employee's timeline from the employee record:

1. Go to Lists > Employees > Employees.
2. Click **View** next to the employee name.
3. From the **Actions** list, select **View Timeline**.

Managers with Employee Center roles can also view their direct reports' employee timelines through the My Team portlet.

To view an employee's timeline from the My Team portlet:

1. On the **Manager** tab, go to the My Team portlet.
2. Select **View Timeline** from the **Actions** list next to the employee name.

Employee Locations

This section contains the following topics:

- [Associating an Employee with a Location](#)
- [Restricting Employee Access by Location](#)

Associating an Employee with a Location

You can associate employees with a specific location to ensure that employees have access to only the information associated with that location. For example, you can restrict access for warehouse personnel who handle item receipts or fulfillments at a single location. You can also refine employee reports and searches by location.

To associate an employee with a location:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the employee to whom you want to assign a location.
3. Under Classification in the **Location** field, select the location of this employee.
For more information, see the help topic [Creating Locations](#).
4. Click **Save**.

To search for employee records based on location, go to Lists > Employees > Employees > Search. In the **Location** field, choose the company location whose employee records you want to access, and click **Submit**. A list of employee records for that location appears.

Restricting Employee Access by Location

Use the following procedure to restrict employee access by location.

To restrict employee access by location:

1. Go to Setup > Users/Roles > User Management > Manage Roles.
2. Click **Customize** next to the role you would like to restrict.
3. Click the **Restrictions** subtab.

4. Click the blank line in the list and select **Location** from the **Segment** column.
 5. From the **Restrictions** column, choose a level of access for the location field on transactions and records.
 6. In the **Location Restrictions** field, choose a level of access for the location field on transactions and records.
 - **None - default to own** - There is no restriction on what can be selected. The default selection is the location set on the user's record.
All transactions and records are accessible.
 - **Own, subordinate, and unassigned** - Users are restricted to records with their own location, children records of their location, and records with unassigned location field.
 - **Own and subordinates only** - Users are restricted to records with their own location and children records of their location.
Users can access only those transactions and records with their location or sublocations selected in the **Location** field.
 7. Check the **Allow Viewing** box to allow users logged in with this role to see, but not edit, data. This applies to data for employees to which the role does not have access.
-  **Important:** This setting doesn't allow viewing of employee payroll or commissions data. Also, users can't view non-subordinate employee records other than their own record when the **Restrictions** column is set to **own and subordinates only**.
8. Check the **Apply to Items** box to apply the department restrictions defined here to item records, in addition to transaction, employee, or partner records.
 9. Click **Save**.

Creating an Employee Template

You can create a template for employee records to speed up adding employees to NetSuite.

On the template record, you can select default values for fields on the employee record. When you create an employee record, select your template and the default values will automatically be updated. For example, you can create a template for customer support reps that are paid hourly. On the template, you can select your support department, class, and location of this support team. You can also select payroll earnings, withholdings, and deductions, and then designate the employee as a support rep.

When you add a support rep employee, you can select your template to fill in all the appropriate information. Go to Lists > Employees > Employees > New. Enter the employee's name and contact information, and set up access to NetSuite, if necessary.

 **Note:** You must have the Advanced Employee Permissions feature enabled to view employee templates. For more information, see [Advanced Employee Permissions Overview](#).

To create an employee template:

1. Go to Lists > Employees > Employees.
2. In the Employees list, click **New Template**.
3. In the **Employee ID Template** field, enter a name for this template. You will select this name in the **Template** field when creating new employee records.
4. Under Classifications, you can:

- Select a default department, class, and location for employees. Click the plus sign next to any of these fields to create a new department, class, or location.
 - If you use NetSuite OneWorld, you can select a default subsidiary for employees.
 - If the **Project Management** feature has been enabled, you can select a default billing class for employees. An employee's billing class sets the rate billed for that employee's time.
5. On the **Human Resources** subtab, you can define defaults for the following:
 - **Type** - Select an employee type from those defined at Setup > Accounting > Employee Related Lists.
 - **Sales Role** - If this template is for sales reps, select a sales role. Sales roles are defined at Setup > Sales > CRM Lists. If you select from this field, sales territories can be assigned to employees whose records are entered with this template. These employees can be selected in the **Sales Rep** field on customer records.
 - **Support Rep** - If this template is for support reps, check this box. If you check this box, case territories can be assigned to employees whose records are entered with this template. These employees can be selected in the **Assigned To** field on case records.
 6. Click **Save** to make your template available on employee records.

Managing Subtabs on the Employee Template

The following subtabs that appear on the employee template depend on the enabled features in your account. For example, if you have SuitePeople U.S. Payroll enabled in your NetSuite account, the Payroll subtab will be available to you on the employee template.

The most common subtabs that will appear on the employee template include the following:

- Payroll subtab
- Project Management subtab
- Time-Off Management subtab

To define values on the Payroll subtab:

1. Check the **Include in Payroll** box to indicate if the employees created with this template are included in SuitePeople U.S. Payroll.
2. Check the **Compensation Type** box to indicate if the employees created with this template are paid on a wage basis or on a salary basis.
3. Check the **Pay Frequency** box to indicate how often employees created with this template are paid.
4. Check the **Workplace** box to select an existing workplace for the employees created with this template, or click the plus sign to create a new one.
5. You can define more Payroll items such as earnings, taxes, deductions, contributions, and accrued time for the employees created with this template.
 - For steps on setting up deductions, see the help topic [Setting up Deductions for an Employee](#).
 - For steps on setting up company contributions, see the help topic [Setting up Company Contributions for an Employee](#).
 - For steps on setting up accrued time such as vacation and sick time, see the help topic [Setting up Accrued Time for an Employee](#).
6. Click **Save** to make your template available on employee records.

To define values on the Project Management subtab:

1. If the **Project Management** feature has been enabled, you can check the **Project Resource** box to enable the employee to be added as a resource on projects and tasks.
 - If the Project Resource box is checked for this employee, the following fields are available for customization:
 - You can check the **Project Manager** box to mark the employee as a Project Manager.
 - In the **Default Project Resource Role** field, you can select which role the employee will be assigned when they are assigned to a project.
 - In the **Target Utilization** field, enter the percentage of time the employee has or will contribute to project work.
 - In the **Work Calendar** field, select the work calendar for this employee.
2. Click **Save** to make your template available on employee records.

To define values on the Time-Off Management subtab:

1. If the **Time-Off Management** feature has been enabled, you can check the **Time-Off Self Approver** to enable this employee to approve their own time-off requests.
2. Click **Save** to make your template available on employee records.

To define values on other subtabs:

1. If the **System Information** subtab is available to you, you can check the **Inactive** box to inactivate the employee record for this template.
2. If the SuiteCloud platform is available to you, a **Custom** subtab will appear on the employee template. You can add any custom fields you think would be relevant for the employee template. For more information about custom fields, see the help topic [Custom Fields](#).
3. The **Access** subtab will be available depending on any bundles you have installed in your account. For example, if you have the Expensify bundle installed, you can check the **Restrict Access to Expensify** box to restrict this employee from accessing Expensify. For more information about installing SuiteBundles, see the help topics [SuiteBundler Overview](#) and [SuiteApp Installation and Update](#).

Working with Employee Social Security Numbers

 **Warning:** In some cases, your scripts may expose social security numbers to any user with administrator access. To prevent unintended access to this information, ensure only authorized users have access to scripts that may expose this information.

Social security numbers are masked and encrypted by default when displayed on the screen or when records or transactions are printed. Only administrators or users with permission to access social security number data can view the numbers unmasked.

Users permission to access social security number data is based on the level of the Employee Social Security Numbers permission. This permission is associated with their assigned roles. This permission can be at one of the following two levels:

- **Masked** – Social security numbers appear in masked form such as (***** or *****). If 11 characters are displayed, it indicates that hyphens were used when the social security number was entered.

- **Full** – The complete social security numbers is displayed such as (123-11-1234).

Users assigned standard roles can access social security number data as follows:

Role	Permission Level
Administrator	Full
Employee Center	Masked
Payroll Manager	Full
Payroll Setup	Full
System Administrator	Full

Social security number data is masked or displayed based on role access level when a user does any of the following:

- Views the employee list
- Views or edits HTML or PDF formats of forms
- Views reports
- Customizes reports
- Saves or views saved reports

Social Security Numbers in Search

To ensure the security of your employees' social security numbers, NetSuite encrypts social security numbers. Because the numbers are encrypted, you cannot run a search that includes social security numbers in the results using the summary type Group.

Printing Mailing Labels for Employees

You can print mailing or shipping labels for employees without using mail merge or data export. For more information on printing mailing labels, see the help topic [Printing Mailing and Shipping Labels](#).

To print mailing or shipping labels, go to Transactions > Management > Print Checks and Forms. Click the Mailing Labels link.

Effective Dating for Employee Information

The Effective Dating feature lets you make changes to the employee record that are back-dated or future-dated to a specific date. These changes represent when a particular piece of information became effective or true, regardless of when you made the change. To use the effective dating feature, you must be logged into NetSuite as an Administrator, a Chief People Officer (CPO), or an HR Generalist.

When you make an effective-dated change, you specify a change reason to document why the change was made. This lets you track and distinguish changes by reason. When you enable the Effective Dating feature, several default change reasons become available, but you can create new ones that match your company's policies.

Watch the following help videos for information about using the Effective Dating feature:

-  [Using Effective Dating with the Employee Record](#)
-  [Managing Employee Change Reasons for Effective Dating](#)

For more information about this feature, see these topics:

- [Using Effective Dating With the Employee Record](#)
- [Managing Employee Change Reasons](#)
- [Searching for Effective-Dated Changes to the Employee Record](#)
- [Using Effective Dating with Other NetSuite Features](#)
- [Using Effective Dating with Employee Workflows and SuiteScripts](#)

Using Effective Dating With the Employee Record

The SuitePeople Effective Dating feature lets you make changes to the employee record that are effective as of a past, current, or future date. These changes represent when a particular piece of information became effective or true, regardless of when you made the change. To use the Effective Dating feature, you must be logged into NetSuite using a role that has the Employee Effective Dating permission. By default, this permission is automatically assigned to the standard Administrator, Chief People Officer (CPO), and HR Generalist roles. This permission also gives you access to the employee timeline from the employee record. For more information, see [Viewing an Employee's Timeline](#).

-  [Using Effective Dating with the Employee Record](#)

The Effective Dating feature lets you can view, edit, and search for effective-dated changes. For more information, see the following help topics:

- [Viewing an Employee's Record as of a Date](#)
- [Editing an Employee's Record as of a Date](#)
- [Searching for Effective-Dated Changes to the Employee Record](#)
- [Editing Employee Records Using CSV Import for Effective Dating](#)

Many fields on the employee record are supported by effective dating, but others aren't. When you view an employee record, fields that aren't supported are labeled Not Effective-Dated.

Important: If you disable this feature after using it, back-dated or future-dated changes you made are lost. Only the current state of the employee records is kept.

Note: Inline editing is disabled when the Effective Dating feature is enabled.

Roles and Permissions

For information about the permission requirements for effective dating, see the help topic [Effective Dating Permission Requirements](#).

Viewing an Employee's Record as of a Date

If you use the Effective Dating feature, you can view many of the fields on an employee's record as of a specified date.

To view an employee record as of a date:

1. Go to Lists > Employees > Employees.
2. Click **View** next to the name of the appropriate employee.
3. On the employee record page, under **Actions**, click **View As Of Date**.
4. In the Select Effective Date Information window, enter or select a date and then click **OK**.

The employee record page is refreshed showing the Viewing As Of banner to indicate that you're viewing an effective-dated view of the employee record. Note that the fields that are not effective-dated are labeled.

Note: You can also click the **Effective Date Log** subtab to view all effective-dated changes made to the employee's record. Use the **Field** and **Change Reason** filters to find specific changes.

Editing an Employee's Record as of a Date

If you're using the Effective Dating feature, you can edit many of the fields on an employee's record as of a specified date. This lets you back-date a change to employee information and specify when a particular piece of information was valid or true.

To edit an employee record as of a date:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the name of the appropriate employee. You can also click **Edit** from a view of an employee record.
3. In the Select Effective Date Information window, enter or select the date that you'd like to edit the employee record.
4. Select a change reason from the **Change Reason** dropdown list. Optionally, enter details of the change to further describe it. Click **OK**.

The employee record page appears showing the Editing As Of banner to indicate that you're editing an effective-dated view of the employee record. Note that the fields that aren't effective-dated are labeled.

5. Make the required changes to the employee record.
6. Click **Save**. The changes you made will appear in the **Effective Date Log** subtab.
7. If there are any conflicts between the changes you want to make and previously made effective-dated changes, they appear in the **Field Conflicts Found** window. To resolve the conflicts, do the following:
 1. To keep a previously created change, click **Keep** beside the change.
 2. To reject a previously created change, click **Override** beside the change.
 3. When you're finished resolving the conflicts, click **Confirm**.

Editing Employee Records Using CSV Import for Effective Dating

You can bulk edit employee records using the Effective Dating feature and CSV import. This lets you update employee records as of a past, current, or future date. Prepare your CSV file for import by sorting it from past to future-dated changes. You can include the column's Internal ID, Effective Date, Change Reason, and Change Reason Details.

To bulk edit employee records using CSV import:

1. Go to Setup > Import/Export > Import CSV Records.
2. Follow the steps on Importing CSV Files with the Import Assistant.
3. During the Field Mapping step, ensure the Effective Dated fields in NetSuite are mapped to the corresponding fields in the CSV. The Effective Dated fields are Effective Date, Change Reason, and Change Reason Details.
4. Confirm the CSV has the status Complete on the Job Status page after it has finished importing.

The Set By field in the Effective Dated Log will be set to the logged-in user that performed the import.

 **Note:** Use Multi-Threading is disabled when importing a CSV with Effective Dated fields.

 **Note:** When dealing with Effective-Dated conflicts, NetSuite applies future-dated changes as they come up. For example, there is a future-dated change for March 1, 2020 and an effective dated change is imported for February 1, 2020. The February 1 change will be applied until March 1, when that change becomes effective.

Managing Employee Change Reasons

If you have the Effective Dating feature enabled, you must specify an employee change reason when you make an effective-dated change to an employee record. Several default change reasons are provided when the feature is enabled. You can edit or delete these, and create your own.

Watch the following help video for information about how to create and search for Employee Change Reasons.

Managing Employee Change Reasons for Effective Dating

Note: You can't delete an employee change reason that has been used to make an effective-dated change. If you no longer want to use a particular employee change reason, you can make it inactive. This causes it to not be available when an effective-dated change is made.

If you enable the Employee Change Requests feature, you can't delete an employee change reason that's linked to an employee change request type.

Creating Employee Change Reasons

Use the following procedure to create an employee change reason.

To create an employee change reason:

1. Go to Setup > HR Information System > Employee Change Reasons.
2. Click **New Employee Change Reason**.
3. On the Employee Change Reason page, enter a **Name** and **Description** for the reason.
4. Click **Save**.

Editing or Inactivating Employee Change Reasons

Use the following procedure to edit or inactivate an employee change reason.

To edit or inactivate an employee change reason:

1. Go to Setup > HR Information System > Employee Change Reasons.
2. Click **Edit** next to the change reason you want to edit.
3. On the Employee Change Reason page, enter a **Name** and **Description** for the reason.
4. To inactivate the change reason so that it's no longer available to select when editing an employee record, check the **Inactive** box.
5. Click **Save**.

Searching for Employee Change Reasons

Use the following procedure to search for employee change reasons.

To search for employee change reasons:

1. Go to Reports > New Search
2. Click **Employee Change Reason**.
3. Specify any search parameters you want to include.
4. Click **Submit**.

The Employee Change Reasons Search: Results page shows the results of your search.

Using Effective Dating with Other NetSuite Features

When the Effective Dating feature is enabled, there are NetSuite limitations with some functionality.

Overriding Future Changes

Any effective-dated change, whether past, present, or future, overrides any future-dated changes relative to the change being made.

Impact of Effective Dating on Employee Workflows and SuiteScripts

With the Effective Dating feature enabled:

- When you change the current version of an employee record, NetSuite executes all workflows and scripts that are triggered by employee record changes.
- When you make a past-dated change to an employee record, NetSuite doesn't run workflows and scripts that are normally triggered by employee record changes.
- When you make a future-dated change, the system doesn't immediately run workflows and scripts that are normally triggered by employee record changes. These workflows and scripts are run when the date specified in the future-dated change arrives.
- Any change that you make to the employee record will conflict with any future-dated changes that are dated after the change you're making now. If you make this change in the user interface, the system displays a window showing the conflicts and prompting you to confirm them. With workflows and scripts, the future-dated change is automatically overridden. For example, you change an employee's department from Sales to Marketing as of January 1, 2021. Then, you change that employee's department from Sales to HR as of today. The future-dated change from Sales to Marketing is overridden.
- Every effective-dated change needs a change reason. If a workflow or script doesn't provide a change reason, a default change reason is provided. This is to ensure that the workflow or script doesn't fail. For information about providing a change reason while scripting, see [Using Effective Dating with Employee Workflows and SuiteScripts](#). Here is a list of the default change reasons provided:
 - CSV Import Change - This employee's information has been changed using CSV import.
 - New Employee Record - This employee is new to the SuitePeople system.
 - Web Service Change - This employee's information has been changed using SOAP web services.
 - SuiteScript Change - This employee's information has been changed using SuiteScript.
 - Employee Self-Change - This employee's information has been changed by this employee.

Giving Employees Access and Assigning Roles

When you give an employee access to NetSuite, you check the Give Access box on the Access subtab of their employee record. Then, you assign a role to the employee, and make sure that the employee's email address is accurate so that NetSuite can contact them. These fields aren't effective-dated. If you change any of these settings, the change takes effect immediately, even if you do so as part of an effective-dated change. For more information, see [Giving an Employee Access to NetSuite](#) and [Assigning Roles to an Employee](#).

Updating an Employee's Supervisor

When you change an employee's supervisor on their employee record, you can then go to the Human Resources > Supervisor Change Hist. subtab and change the effective date for this change. This isn't governed by the Effective Dating feature.

Payroll Effective Dates

If you're using SuitePeople U.S. Payroll, note that the Payroll tab on the employee record has several fields that have an Effective Date and an Expiration Date. These values aren't governed by the SuitePeople Effective Dating feature. These fields include: Earnings, Deductions, Company Contributions, and Accrued Time.

Advanced Employee Permissions Feature

The following permission requirements are required when you use the Effective Dating feature with the Advanced Employee Permissions feature enabled.

- To view effective dating changes, a role must be assigned the Employee Effective Dating permission, and the Employees, Employee Confidential, or Employee Administration permission.
- By default, only the Employee Effective Dating permission gives access to the effective dating logs and the employee change search. However, you can customize any of the employee permissions to include effective dating logs. Note the following about users assigned to a role with a customized employee permission that includes effective dating logs. These users see only what they have access to see, based on the permissions assigned to the role. For example, a role with the Employee Confidential permission will see effective dating logs only for their direct reports and below.

For more information about the Advanced Employee Permissions feature, see [Advanced Employee Permissions Overview](#).

Employee Change Requests Feature

Before you enable the Employee Change Requests feature, you also need to enable the Effective Dating feature. The Effective Dating feature impacts employee change requests in the following ways:

- When you create an employee change request type, you must select an employee change reason. This is the employee change reason that will be used to make approved future-dated changes to an employee's record.
- When you create an employee change request, you must select a proposed future-date. This is the date the approved changes will be applied to an employee's record. Fields that are approved to change appear on the Effective Date Log subtab on the employee's record.

For more information about the Employee Change Requests feature, see [Employee Change Requests](#).

Using Effective Dating with Employee Workflows and SuiteScripts

You can make past, future, or current-day changes to the employee record using the user interface and using workflows and SuiteScripts. When you make an effective-dated change to the employee record,

you specify a change reason. When you make past or future effective-dated changes, you also specify the effective date for the change.

Current Day Changes

Here is a sample of how you make changes to today's version of the employee record:

```
1 require(['N/record'], function (record) {
2   var rec = record.load({type: 'employee', id: '659'});
3   rec.setValue({fieldId: 'initials', value: 'CC'});
4   rec.setValue({fieldId: 'employeechangereason', value: '4'});
5   rec.save({ignoreMandatoryFields: true});
6 });
```

Future or Past Effective-Dated Changes

Here is a sample of how you make changes to the employee record on a future or past date:

```
1 define(['N/record', 'N/format'], function(record, format) {
2   function onRequest(){
3     var loadDate = format.parse({value: "14/11/2021", type: format.Type.DATE});
4     var rec = record.load({type: "employee", id: '2730', defaultValues: {effectivedate: "14/11/2021"}}); // or customers date format in
      this case, mm/dd/yyyy
5     rec.setValue({fieldId: "title", value: "Manager"});
6     rec.setValue({fieldId: "effectivedate", value: loadDate});
7     rec.save({ignoreMandatoryFields: true});
8   };
9
10  return {
11    onRequest : onRequest
12  }
13 });
```

Note: The effectivedate field syntax must match the format you have chosen in your company settings. Go to Setup > Company > Preferences > General Preferences to configure your Date Format. Confirm that any SuiteScripts or workflows that reference the effectivedate field are using the same format.

Employee Change Requests

The Employee Change Requests feature enables managers to initiate requests for changes to their direct reports in NetSuite. Managers can initiate an employee change request for their subordinates in the Employee Center and have it go through an approval process. Approvers can approve or decline employee change requests, and approved requests are reflected in the employee's record on a proposed future date.

For more information about the Employee Change Requests feature, see the following topics:

- [Prerequisites for Employee Change Requests](#)
- [Employee Change Requests Management](#)
- [Employee Change Requests in the Employee Center](#)
- [Employee Change Request Statuses](#)

Prerequisites for Employee Change Requests

To use the Employee Change Requests feature, you must enable dependent features and set up employee change request types. Then, you must assign Advanced Employee Permissions to requesters and approvers. Finally, you must set up an approval workflow. For more information, see the following topics:

Watch the following help video for information about employee change requests:

 [Employee Change Requests Overview](#)

- [Enabling the Employee Change Requests Feature](#)
- [Setting Up Employee Change Request Types](#)
- [Advanced Employee Permissions for Employee Change Requests](#)
- [Approval Workflow for Employee Change Requests](#)

Enabling the Employee Change Requests Feature

The Employee Change Requests feature is dependent on Advanced Employee Permissions, Effective Dating, Compensation Tracking, and Job Management. These four features are automatically enabled when you enable the Employee Change Requests. To create an approval workflow for employee change requests, you must enable SuiteFlow. To allow managers to create employee change requests in the Employee Center, you must enable Employee Center Dashboard Publishing.

To enable the Employee Change Requests feature:

1. Go to Setup > Company > Enable Features.
2. On the **Employees** subtab, check the **Employee Change Requests** box.
3. If you want managers to create employee change requests in the Employee Center, on the **Employees** subtab, check the **Employee Center Dashboard Publishing** box.
4. On the **SuiteCloud** subtab, check the **SuiteFlow** box.
5. Click **Save**.

Setting Up Employee Change Request Types

Before managers can create employee change requests, an HR Administrator or other user with appropriate permission must set up employee change request types. Employee change request types provide managers with the types of changes they can initiate for their direct reports.

When creating an employee change request type:

1. First, choose the fields you want to appear on the employee change request.
2. Then, assign an employee change reason. The employee change reason you select for each employee change request type is used to make a future effective-dated change to employees' records. After an employee change request is approved by all approvers, the requested changes to fields on the employee's record are applied on a future date. The change appears in the Effective Date Log subtab on the employee's record as an effective-dated change.

Watch the following help video for information about setting up employee change request types.

 [Employee Change Request Types](#)

Default Employee Change Request Types

The Employee Change Requests feature includes three default employee change request types:

- [Base Pay Change Template Type](#)
- [Promotion Template Type](#)
- [Transfer Template Type](#)

You can edit, delete, or make copies of these types.

Base Pay Change Template Type

Base pay compensation includes an employee's regular salary or wage earnings.

You can view and edit an employee's base pay by clicking the Compensation subtab on the employee record. The employee's base pay information is recorded in the following fields:

- Compensation Currency
- Base Wage Type
- Base Wage

When the base pay change template type is set up, managers and HR administrators can change an employee's pay by completing an employee change request. For more information about setting up a base pay change template type, see [Creating New Employee Change Request Types](#).

For more information about completing a base pay change request type, see [Creating a Base Pay Change Request From the Employee Record](#).

Promotion Template Type

The promotion type permits managers and HR Administrators to promote an employee.

Information about the employee's promotion is recorded in the following fields on the employee record:

- Supervisor
- Job

- Compensation Currency
- Base Wage Type
- Base Wage

If administrators have set up the promotion template type, managers and HR administrators can promote an employee by completing an employee change request. For more information about setting up a promotion template type, see [Creating New Employee Change Request Types](#).

For more information about completing a promotion change request type, see [Creating a Promotion Change Request From the Employee Record](#).

Transfer Template Type

The transfer type permits managers and HR Administrators to transfer an employee to a different department, location, or supervisor.

Information about the employee's transfer is recorded in the following fields on the employee record:

- Supervisor
- Department
- Location

If administrators have set up the transfer template type, managers and HR administrators can transfer an employee by completing an employee change request. For more information about setting up a transfer template type, see [Creating New Employee Change Request Types](#).

For more information about completing a transfer change request type, see [Creating a Transfer Change Request From the Employee Record](#).

Creating New Employee Change Request Types

You can add a new employee change request type if you have the Employee Change Request Types permission at access level Create, Edit, or Full. For more information, see [Employee Change Requests Permission Requirements](#).

To create an employee change request type:

1. Go to Setup > HR Information System > Employee Change Request Types.
2. Click **New Employee Change Request Type**.
3. On the Employee Change Request Type page, enter a **Name** and **Description** for the employee change request type.
4. From the **Change Reason** list, select a change reason.
This is the change reason used to apply the requested changes on the employee's record after the employee change request is approved by all approvers. For more information about employee change reasons, see [Managing Employee Change Reasons](#).
5. In the **Guidelines for Request** field, enter any information that will assist employees when initiating this change request type. The guidelines that you enter here will be displayed to any employee who chooses to initiate a change request using this employee change request type.
6. In the **Related Fields** subtab, select the fields you want to include in the employee change request.
The fields you choose here appear on the employee change request when you select this employee change request type. After all the approvers approve the request, these fields on the employee's record are changed on the proposed future date.

- a. To add a field, select a field from the list, then click **Add**.

For example, if you're creating a transfer change request, you can select the following related fields:

- Location
- Department
- Supervisor
- Job

You can add related links next to each Related Field to give the manager creating the request useful information about each field.

7. Under the **Insights** tab, check the insights that you want to appear for managers and approvers.

The following insights are available:

- **Job Duration** — The range of time past employees have been in this employee's current role.
- **Salary Increase** — The range of salary increases for other employees within the organization in the same proposed position and location.

These insights are based on two years of organizational data.

8. Click **Save**.

Editing or Inactivating Employee Change Request Types

You can edit an employee change request type if you have the Employee Change Request Types permission access level at Edit, or Full. For more information, see [Employee Change Requests Permission Requirements](#).

To edit or inactivate an employee change request type:

1. Go to Setup > HR Information System > Employee Change Request Types.
2. Click **Edit** beside the employee change request type you want to edit.
3. In the **Related Fields** subtab, add, delete, or move fields that you want to appear on the employee change request form.
The fields you choose here are changed on the employee record after all the approvers approve the request.
4. From the **Change Reason** list, select a change reason.
This is the change reason that will apply to the requested changes as an effective-dated change on the employee's record. For more information about employee change reasons, see [Managing Employee Change Reasons](#).
5. To make it unavailable for selection when creating employee change requests, inactivate an employee change request type by checking the **Inactive** box.
6. When you're finished, click **Save**.

Deleting Employee Change Request Types

You can delete an employee change request type only if it's not in use. Additionally, you must have the Employee Change Request Types permission access level at Full. For more information, see [Employee Change Requests Permission Requirements](#).

If you no longer want to use an employee change request type, you can make it inactive. For more information, see [Editing or Inactivating Employee Change Request Types](#).

To delete an employee change request type:

1. Go to Setup > HR Information System > Employee Change Request Types.
2. Click **Edit** beside the employee change request type you want to delete.
3. Point to **Actions**, and click **Delete**.

Advanced Employee Permissions for Employee Change Requests

Before you use the Employee Change Requests feature, you must assign Advanced Employee Permissions to employees' roles. Requesters and approvers must have the correct Advanced Employee Permissions assigned to their role to successfully create, view, approve, and apply employee change requests. Human Resources Generalist, Chief People Office, and Administrator roles all have Employee Change Request permissions by default.

Important: Each requester and approver must have permission to view the fields in an employee change request. If you don't have permission to view a field, you can't view the employee change request. The final approver must have permission to edit the fields in an employee change request to apply the requested changes. For more information, see [Advanced Employee Permissions Overview](#).

For example, for a manager to create an employee change request to promote a direct report, their role must have permission to:

- View their subordinate's salary, which requires the Employee Compensation permission. For more information, see [Employee Compensation Permission Overview](#).
- View their direct report's job, which requires the Employee Confidential permission. For more information, see [Employee Confidential Permission Overview](#).

Note: If you want requesters to create employee change requests from the Employee Center, you must enable the Employee Dashboard Publishing feature. Alternatively, requesters can create employee change requests from employee records if their role has the Employee Record permission access level at View, Edit, or Full. Requesters must also have the Advanced Employee Permissions at some access level.

For more information about the Advanced Employee Permissions feature, see [Advanced Employee Permissions](#). For more information about how to set up specific employees using Advanced Employee Permissions, see [Advanced Employee Permissions Use Cases](#).

Approval Workflow for Employee Change Requests

You must set up an approval workflow before your company can begin creating employee change requests. This workflow defines and automates the approval process for changes to employees in your company.

Setting Up an Approval Workflow for Employee Change Requests

You can set up an approval workflow for your company's employee change requests by assigning approvers to a workflow template.

Watch the following help video for information about setting up an approval workflow for employee change requests:

 [Creating an Approval Workflow for Employee Change Requests](#)

To set up an approval workflow for employee change requests:

1. Go to Customization > Workflow > Workflows.
2. Click **New Workflow**.
3. Click **From Template**.
4. Go to the **Employee Change Request Approval** template and click **Select**.
5. If you want to have an intermediate approver, select the person you want to assign from the **Intermediate Approver** list.
6. Go to the **Final Approver** list and select the person you want to assign as final approver.
7. Click **Continue**.
8. Go to the **Workflow** subtab and click the edit icon.
9. Enter a unique name for the workflow in the **Name** field.
10. In the **Release Status** list, select **Released**.
11. Click **Save**.

Setting Up a Custom Approval Workflow for Employee Change Requests

You can set up a custom approval workflow for your company's employee change requests. You can customize your approval workflow by setting approvers according to your company's needs. For example, the next approver in your workflow could be set by the following:

- **Employee name** For example, if you want approvals to go through a set group of HR managers, you can set each approver as each HR manager.
- **Relationship to the employee.** For example, you can set the next approver to be the supervisor of the employee for whom you're creating the request.
- **Relationship to the requester.** For example, you can set the next approver to be the supervisor of the requester.
- **Relationship to the approver.** For example, you can set the next approver to be the supervisor of the current approver.

 **Note:** You should set the final approver in your workflow to be an HR personnel so they can check the employee change request for accuracy.

For information about creating a custom employee change request approval workflow, see [Sample Custom Employee Change Request Workflow](#). For more information, see the help topic [SuiteFlow \(Workflow\)](#).

Sample Custom Employee Change Request Workflow

This sample workflow demonstrates how to create a workflow for employee change requests that includes two approvers. A specific employee is set as each approver.

The following table describes the required states, actions, and transactions for this workflow.

State	Actions	Transitions
State 1: Entry	There are no actions for this state.	Transitions to State 2: Next Approver after an employee change request is created by a manager.
State 2: Next Approver	Set an employee to be the next approver.	Transitions to State 3: Final Approver after the employee set in State 2: Next Approver has approved the employee change request.
State 3: Final Approver	Set an employee to be the next approver and set this employee as the final approver.	Transitions to State 4: Complete after the final approver approves the employee change request.
State 4: Complete	Set the status of the employee change request to Complete and set the final approver to false.	There are no transitions for this state.

When you build your own employee change request workflow, you can include additional approver states between **State 2: Next Approver** and **State 3: Final Approver**. To do this, use the same action and transition that you use for **State 2: Next Approver** for the additional states.

You must use the actions for **State 3: Final Approver** for the final approver in your workflow. For example, you create a workflow with three approvers. Use the instructions for [Setting Up State 2: Next Approver](#) for your first and second approver states. Then, follow the instructions for [Setting Up State 3: Final Approver](#) for the third approver.

To begin building the Employee Change Request Workflow, go to [Building the Custom Employee Change Request Workflow](#).

Building the Custom Employee Change Request Workflow

Create the workflow definition and define the basic workflow properties and the workflow initiation properties. The workflow initiates after a manager creates an employee change request.

To create the workflow definition and define when the workflow initiates:

1. Go to Customization > Workflow > Workflows.
 2. Click **New Workflow**.
 3. Set the following in the **Basic Information** field group:
 - a. In the **Name** field, enter a name for your workflow, such as **Employee Change Request Workflow**.
 - b. In the **Record Type** list, select **Employee Change Request**.
 - c. In the **Release Status** list, select **Testing**.
-  **Note:** Set Release Status to **Testing** until it is ready for production. When your workflow is ready for production, you can set it to **Released**.
- d. In the **Keep Instance and History** list, select **Only When Testing**.
 - e. Check the **Enable Logging** box.
 4. In the **Initiation** field group, choose **Event Based**.
 5. In the **Event Definition** field group, check the **On Create** box.
 6. Click **Save**.
 7. To continue with the Employee Change Request workflow, go to [Creating States for the Employee Change Request Workflow](#).

Creating States for the Employee Change Request Workflow

After you create the workflow definition, create workflow states for each of the following events:

- Entry
- Next Approver
- Final Approver
- Completed

This procedure uses only two approvers, however, you can include additional approver states as needed.

Important: Each approver must have permission to view the fields in an employee change request. The final approver must have permission to edit the fields in an employee change request to apply the changes requested to the employee's record. For more information, see [Advanced Employee Permissions for Employee Change Requests](#).

To create states for each event:

1. If your Employee Change Request Workflow is not already built, go to [Building the Custom Employee Change Request Workflow](#).
2. In the workflow diagrammer, click **New State**.
A new state appears in the diagrammer.
3. Double-click the state you want to rename in the diagrammer.
Alternatively, you can do the following:
 - a. In the diagrammer, click the state you want to rename.
 - b. In the context panel in the **State** tab, click the **Edit** icon.
4. Repeat the above steps to create states for the following events in the workflow:
 - State 1: Entry

- State 2: Next Approver
- State 3: Final Approver
- State 4: Complete

 **Note:** If you want more than two approvers in your workflow, create additional states between **State 2: Next Approver** and **State 3: Final Approver** as needed.

5. To continue with the Employee Change Request Workflow, go to [Setting Up State 1: Entry](#).

Setting Up State 1: Entry

After you create the states, you can set up the transition from **State 1: Entry** to **State 2: Next Approver**. If a manager creates an employee change request, this transition triggers the next approver state.

To set up the transition to State 2: Next Approver:

1. If you haven't created states for your Employee Change Request Workflow, go to [Creating States for the Employee Change Request Workflow](#).
2. In the diagrammer, point to the bottom of **State 1: Entry**. The icon becomes a filled half-circle.
3. Drag the icon to **State 2: Next Approver**.
4. In the diagrammer, double-click the transition arrow from **State 1: Entry** to **State 2: Next Approver**.
5. In the **Workflow Transition** window, set the following:
 - a. In the **To** list, select **State 2: Next Approver**.
 - b. In the **Transition On** list, select **After Record Submit**.
6. Click **Save** to save your changes to the transition.
7. To continue with the Employee Change Request Workflow, go to [Setting Up State 2: Next Approver](#).

Setting Up State 2: Next Approver

After you set up **State 1: Entry**, you can set up **State 2: Next Approver**. If a manager creates an employee change request, this state sets a specified employee as the next approver.

 **Note:** If you want to include additional approvers in your own workflow, repeat these steps for each approver state that isn't the final approver.

State 2: Next Approver

To set up State 2: Next Approver:

1. If you haven't set up State 1, go to [Setting Up State 1: Entry](#).
2. In the diagrammer, click **State 2: Next Approver**.
3. In the context panel on the **State** subtab, click **New Action**.
4. In the **New Action** window, click **Set Field Value**.
5. In the **Parameters** field group, in **Field** list, select **Next Approver**.
6. In the **Value** field group, choose **Static Value**.

7. In the **Selection** list, select the name of the employee you want to be the next approver.
8. Click **Save**.

Transition to Step 3: Final Approver

To set up the transition to Step 3: Final Approver:

1. In the diagrammer, hover over the bottom of **State 2: Next Approver**. The icon becomes a filled half-circle.
2. Drag the icon to **State 3: Final Approver**.
3. In the workflow diagrammer, double-click the transition arrow from **State 2: Next Approver** to **State 3: Final Approver**.
4. In the **To** list, select **State 3: Final Approver**.
5. In the **Transition On** list, select **After Record Submit**.
6. In the **Event Types** list, click **Approve**.
7. In the **Condition** field group, select **Visual Builder**.
8. Next to the **Condition** field, click the **Open** icon to open the Condition Builder.
9. Enter the following:
 - a. In the **Field** list, select **Next Approver**.
 - b. In the **Compare Type** list, select **Any Of**.
 - c. In the **Selection** list, select **Current User**.
10. Click **Add** to add the condition, and then click **Save** to save the condition.
11. Click **Save** to save your changes to the transition.
12. To continue with the Employee Change Request Workflow, go to [Setting Up State 3: Final Approver](#).

Setting Up State 3: Final Approver

After you set up **State 2: Next Approver**, set up **State 3: Final Approver**. If the employee you assigned in State 2 approves the employee change request, the employee change request is sent to the final approver.

Important: The final approver must have permission to make changes to the employee's record for the fields specified in the employee change request. For more information, see [Advanced Employee Permissions for Employee Change Requests](#).

Note: You should set the final approver in your workflow to be an HR personnel so they can check the employee change request for accuracy.

State 3: Final Approver

To set up State 3: Final Approver:

1. If you haven't set up State 2, go to [Setting Up State 2: Next Approver](#).
2. In the diagrammer, click **State 3: Final Approver**.
3. To set the next approver:

- a. In the context panel on the **State** subtab, click **New Action**.
 - b. In the **New Action** window, click **Set Field Value**.
 - c. In the **Field** list, select **Next Approver**.
 - d. In the **Value** field group, choose **Static Value**.
 - e. In the **Selection** list, select the name of the employee you want to be the final approver.
4. To set the final approver to true:
 - a. In the context panel on the **State** tab, click **New Action**.
 - b. In the **New Action** window, click **Set Field Value**.
 - c. In the **Field** list, select **Final Approver**.
 - d. In the **Value** field group, choose **Static Value**.
 - e. Check the **Checked** box.
 - f. Click **Save** to save the action.

Transition to State 4: Complete

To set up the transition to State 4: Complete:

1. In the diagrammer, hover over the bottom of **State 3: Final Approver**. The icon becomes a filled half-circle.
2. Drag the icon to **State 4: Complete**.
3. In the workflow diagrammer, double-click the transition arrow from **State 3: Final Approver** to **State 4: Complete**.
4. In the **To** list, select **State 4: Complete**.
5. In the **Transition On** list, select **After Record Submit**.
6. In the **Event Types** list, click **Approve**.
7. In the **Condition** field group, select **Visual Builder**.
8. Next to the **Condition** field, click the **Open** icon to open the Condition Builder.
9. Enter the following:
 - a. In the **Field** list, select **Next Approver**.
 - b. In the **Compare Type** list, select **Any Of**.
 - c. In the **Selection** list, select **Current User**.
10. Click **Add** to add the condition, and then click **Save** to save the condition.
11. Click **Save** to save your changes to the transition.
12. To continue with the Employee Change Request Workflow, go to [Setting Up State 4: Complete](#).

Setting Up State 4: Complete

After you set up **State 3: Final Approver**, set up **State 4: Complete**. If the final approver you assigned in State 3 approves the employee change request, this state sets the status of the request to Complete.

To set up State 4: Complete:

1. If you haven't set up Step 3: Final Approver, go to [Setting Up State 3: Final Approver](#).
2. In the diagrammer, Select **State 4: Complete**.

3. To set the request status to complete:
 - a. In the context panel on the **State** subtab, click **New Action**.
 - b. In the **New Action** Window, click **Set Field Value**.
 - c. In the **Field** list, select **Request Status**.
 - d. In the **Value** field group, choose **Static Value**.
 - e. In the **Selection** list, select **Completed**.
 - f. Click **Save**.
4. To set the final approver to false:
 - a. In the context panel on the **State** tab, click **New Action**.
 - b. In the **New Action** window, click **Set Field Value**.
 - c. In the **Field** list, select **Final Approver**.
 - d. In the **Value** field group, choose **Static Value**.
 - e. Leave the **Checked** box unchecked.
 - f. Click **Save** to save the action.
5. Now that the workflow setup is complete, test and then release the workflow. To continue with the Employee Change Request Workflow, go to [Testing the Employee Change Request Workflow](#).

Testing the Employee Change Request Workflow

Before releasing your workflow, test it to make sure the workflow functions as designed.

After setting your workflow release status to **Testing**, test the following functionality:

- Test workflow initiation. Make sure the workflow initiates when an employee change request is created. To create an employee change request, see [Creating an Employee Change Request From the Employee Record](#) and [Creating an Employee Change Request from the Employee Center](#).
- Test conditions. Set up a testing scenario where you can verify that the conditions in each state can evaluate to both true and false. For more information, see the help topic [Testing Workflow Conditions](#).
- Test actions and transitions. Make sure that the actions and transitions in each step appear in the workflow execution log and complete successfully. For more information, see the help topic [Testing Actions and Transitions](#).

After you've tested the Employee Change Request Workflow, change the release status to **Released**. For more information, see the help topic [Release Status for Workflow Instances](#).

Employee Change Requests Management

HR Administrators or other users with appropriate permission can create new employee change requests from the employee record. They can also edit, delete, or inactivate existing employee change requests.

Before you create an employee change request, ensure you've completed [Prerequisites for Employee Change Requests](#).

For more information about managing employee change requests, see the following topics:

- [Creating an Employee Change Request From the Employee Record](#)
- [Creating a Base Pay Change Request From the Employee Record](#)
- [Creating a Promotion Change Request From the Employee Record](#)

- [Creating a Transfer Change Request From the Employee Record](#)
- [Editing or Inactivating an Employee Change Request](#)
- [Deleting an Employee Change Request](#)

Creating an Employee Change Request From the Employee Record

Requesters can create employee change requests from employee records if their role has the Employee Record permission access level at View, Edit or Full. For more information, see the help topics [Setting Permissions](#) and [Advanced Employee Permissions for Employee Change Requests](#).

Watch the following help video for information about creating an employee change request from the employee record:

 [Creating and Managing Employee Change Requests from Employee Records](#)

Managers can also create Employee Change Requests for their direct employees from the Employee Center. For more information, see [Creating an Employee Change Request from the Employee Center](#).

Creating a Base Pay Change Request From the Employee Record

You can create an employee change request for base pay compensation from the employee record.

To create an employee change request for base pay compensation:

1. Go to Lists > Employees > Employees.
2. Next to the employee you want to create a base pay change request for, click **View**.
3. From the **Actions** list, select **Create Employee Change Request**.
4. From the **Change Request Type** list, select a base pay change request type.
5. On the request form, complete the following fields:
 - From the **Compensation Currency** list, select the currency in which to compensate the employee.
 - From the **New Base Wage Type** list, select the type of compensation that the employee will receive.
 - If the employee doesn't already have a base wage, in the **New Base Wage** field, enter the amount.
 - If the employee has an existing base wage, you can do one of the following:
 - Enter a new value in the **New Base Wage** field.
 - Enter a percentage by which to change the amount in the **% Change** field.
 - In the **Proposed Date** field, enter or select a date in the future.
 - This date is used to apply the change as an effective-dated change. If your role has the permissions, you can edit this date up until the change status of Completed, Declined, or Expired.
 - In the **Justification** field, enter your reason for requesting this change.
6. Click **Submit**.

Creating a Promotion Change Request From the Employee Record

You can create an employee change request for promotions from the employee record.

To create an employee change request for promotions:

1. Go to Lists > Employees > Employees.
2. Next to the employee you want to create a promotion change request for, click **View**.
3. From the **Actions** list, select **Create Employee Change Request**.
4. From the **Change Request Type** list, select a promotion change request type.
5. On the request form, complete the following fields:
 - If the employee doesn't already have a base wage, in the **New Base Wage** field, enter the amount.
 - If the employee has an existing base wage, you can do one of the following:
 - Enter a new value in the **New Base Wage** field.
 - Enter a percentage by which to change the amount in the **% Change** field.
 - From the **New Base Wage Type** list, select the type of compensation that the employee will receive.
 - From the **Compensation Currency** list, select the currency in which to compensate the employee.
 - From the **New Job** list, select the employee's new job.
 - From the **New Supervisor** list, select the employee's new supervisor.
 - In the **Proposed Date** field, enter or select a date in the future.
 - This date is used to apply the change as an effective-dated change. If your role has the permissions, you can edit this date up until the change status of Completed, Declined, or Expired.
 - In the **Justification** field, enter your reason for requesting this change.
6. Click **Submit**.

Creating a Transfer Change Request From the Employee Record

You can create an employee change request for transfers from the employee record.

To create an employee change request for transfers:

1. Go to Lists > Employees > Employees.
2. Next to the employee you want to create a transfer change request for, click **View**.
3. From the **Actions** list, select **Create Employee Change Request**.
4. From the **Change Request Type** list, select a transfer change request type.
5. On the request form, complete the following fields:
 - From the **New Location** list, select the location of the employee's new job.

- From the **New Department** list, select the department of the employee's new job.
- From the **New Supervisor** list, select the employee's new supervisor.
- From the **New Job** list, select the employee's new job.
- In the **Proposed Date** field, enter or select a date in the future.
 - This date is used to apply the change as an effective-dated change. If your role has the permissions, you can edit this date up until the change status of Completed, Declined, or Expired.
- In the **Justification** field, enter your reason for requesting this change.

6. Click **Submit**.

Editing or Inactivating an Employee Change Request

After employee change requests are created, you can edit the request status, next approver, and justification. You can only edit an employee change request if you have the Employee Change Request permission access level at Edit, or Full. You can no longer edit the employee change request when it has the status Completed, Expired, or Declined. For more information, see [Employee Change Requests Permission Requirements](#).

To edit or inactivate an employee change request:

1. Go to Setup > HR Information System > Employee Change Requests.
2. Click **Edit** next to the employee change request you want to edit.
3. On the request form, you can modify Request Status, Next Approver, and Justification.

 **Note:** You must add an explanation in the **Reason** field if you set the Request Status to Declined.

4. To inactivate an employee change request, to make it unavailable, check the **Inactive** box.
5. When you're finished, click **Save**.

 **Note:** The Approvals subtab at the bottom of the employee change request shows who has already approved or declined the employee change request.

Deleting an Employee Change Request

You can delete existing employee change requests if you have the Employee Change Request permission access level at Full. For more information, see [Employee Change Requests Permission Requirements](#).

 **Note:** When you delete an employee record, employee change requests for that employee are also deleted. For more information, see [Deleting Employee Records](#).

If you want to make an employee change request unavailable, you can make it inactive. For more information, see [Editing or Inactivating an Employee Change Request](#)

To delete an employee change request:

1. Go to Setup > HR Information System > Employee Change Requests.

2. Click **Edit** next to the employee change request you want to delete.
3. On the request form, point to **Actions**, and click **Delete**.

Employee Change Requests in the Employee Center

The Employee Center is the primary workspace for processing approvals. You need a custom Employee Center role to access employee change requests in the Employee Center. An administrator can add a custom Employee Center role to your account. For more information, see [Adding an Employee](#).

To use employee change requests in the Employee Center, see the following topics:

- [Creating an Employee Change Request from the Employee Center](#)
- [Approving or Declining an Employee Change Request](#)
- [Viewing an Employee Change Request](#)

Creating an Employee Change Request from the Employee Center

Managers can create employee change requests from a custom Employee Center role. They can create employee change requests on the Manager tab in the My Team portlet. To create an employee change request in the Employee Center, you must enable the Employee Center Dashboard Publishing feature. For more information, see [Employee Center Dashboard Publishing Feature](#).

Watch the following help video for information about creating an employee change request from the employee center:

 [Employee Change Requests in the Employee Center](#)

To create an employee change request:

1. On the **Manager** tab, go to the My Team portlet.
2. Point to the **Actions** menu next to the employee for whom you want to request a change. Then, select the type of change you want to make.

 **Note:** If the type of employee change request you want to make isn't in the list, contact your HR Administrator.

3. On the request form, complete the following:
 - **Request Changes** - The employee's current information appears on the left. Select new values from the fields on the right.
 - **Proposed Date** - Enter a future date in the date panel. This date is used to apply the change as an effective-dated change.

 **Note:** The proposed date must be in the future. If this change is required now, contact your HR Administrator.

- **Justification** - Explain your reason for requesting this change.
4. Click **Submit**.

Approving or Declining an Employee Change Request

After an employee change request is created, each approver set by your company's defined workflow must approve the request. Approvers receive an email when it's their turn to approve or decline the request.

To approve or decline an employee change request:

1. On the **Employee** tab, go to the Home Links portlet.
2. Expand **Employee Change Requests** and click **Approve Pending Requests**.
3. Click **View** next to the request you want to approve.
4. Review the request, and then click **Approve** to approve the request, or click **Decline** to decline the request.
5. In the **Comments** field, enter an explanation for why you approved or declined the request. You must give a reason if you declined the request.

If you approve the request, one of the following occurs:

- If you're not the final approver, an email notification is sent to the next approver to approve or decline the request.
- If you're the final approver, the changes are applied to the employee's record on the proposed date.

If you decline the request, the next approvers can no longer approve the request. An email with your declining reason is sent to the manager who requested the employee change request.

An email is sent to the requester when an employee change request is completed successfully.

Viewing an Employee Change Request

You can view employee change requests that you've created and employee change requests that require your approval.

If you're an approver and your role includes the Employees permission, you can have different levels of access in the approval process:

- If you're the final approver, note the following. You can approve and apply employee change requests when the **Employees** permission access level is **Edit** or higher. You must also have **Effective Dating Edit** or higher.
- If you're not the final approver, you can approve employee change requests when the **Employees** permission access level is set to **View** or higher.

 **Note:** The Approvals subtab at the bottom of the employee change request shows who approved or declined the employee change request.

Viewing an Employee Change Request That You Created

After you create an employee change request, you can view the request to keep track of its status.

To view employee change requests that you created:

1. On the **Manager** tab, go to the Home Links portlet.

2. Expand **Employee Change Requests** and click **My Requests**.
3. Click **View** next to the request you want to view.

Viewing an Employee Change Request That Requires Your Approval

You can view an employee change request that requires your approval. You must be the next approver to view the request.

To view employee change requests that require your approval:

1. On the **Employee** tab, go to the Home Links portlet.
2. Expand **Employee Change Requests** and click **Approve Pending Requests**.
3. Click **View** next to the request you want to view.

Employee Change Request Statuses

The following table describes each possible status for an employee change request.

Status	Description
Pending Approval	The employee change request is in progress and requires attention from the next approver.
Completed	The employee change request has been approved by all approvers. NetSuite applies the requested changes to the employee's record on the proposed date.
Declined	The employee change request has been declined and can no longer be approved. No changes are made to the employee's record.  Note: If the request was declined because it requires a correction, create a new employee change request.
Expired	The employee change request has passed the proposed date and can no longer be approved. Create a new employee change request with a future proposed date. If a change is required now, contact HR.
Failed to Apply	The employee change request has been approved by all approvers but couldn't be applied to the employee's record. To have the changes applied, contact HR.

Employee Directory and Org Browser

The Employee Directory SuiteApp lets your employees to quickly and easily search for their colleagues by name, location, department, and job title. If you're using NetSuite OneWorld, employees can also search by subsidiary. This SuiteApp also includes an Org Browser. Employees can quickly browse your organizational chart and see supervisors and direct reports.

If you've set up SuitePeople HR and use the Kudos feature, employees can give Kudos to colleagues directly from the employee directory. For more information, see [Kudos](#).

For more information about this SuiteApp, see the following topics:

- [Set Up the Employee Directory SuiteApp](#)
- [Using the Employee Directory](#)
- [Using the Org Browser](#)

Set Up the Employee Directory SuiteApp

The table below shows the steps to set up the Employee Directory and Org Browser SuiteApp.

Step	Related Help Topic
1. Log in as a NetSuite Administrator.	Roles and Accounts
2. Make sure you've completed the prerequisites.	Prerequisites for the Employee Directory SuiteApp
3. Install the SuiteApp.	Installing the Employee Directory SuiteApp
4. Configure the SuiteApp.	Configuring the Employee Directory and Org Browser
5. Update the required scripts to work with custom roles.	Updating Required Scripts for the Employee Directory and Org Browser

 **Note:** Currently, the Employee Directory SuiteApp supports only US and UK English languages.

Prerequisites for the Employee Directory SuiteApp

To install the Employee Directory SuiteApp, make sure you've provisioned the Employee Center for your account. Make sure these features are enabled in your NetSuite account before you install (if you don't see them on the Enable Features page, contact your NetSuite account manager):

- Custom Records
- Server SuiteScript

If you want to give Kudos from the SuiteApp, you'll need to enable the Kudos feature in the Performance Management section of the Enable Features page.

Installing the Employee Directory SuiteApp

Bundle Name: **Employee Directory**

Bundle ID: 112469

This is a managed bundle and it's updated automatically. You'll get issue fixes and enhancements after the SuiteApp updates in your account.

For more information, see the help topic [Installing a Bundle](#).

Configuring the Employee Directory and Org Browser

After installing the Employee Directory SuiteApp, set up the Employee Directory and Org Browser:

- Decide if you want to use the Employee Directory, the Org Browser, or both.
- Pick four fields to show on the Employee Directory for all employees.
- Pick three fields to show on the Org Browser for all employees.
- Apply a filter to include or exclude employees based on a NetSuite saved search.
- Choose which employees you want at the top of the Org Browser - they'll appear at the top of the org chart.

The Employee Directory SuiteApp comes with a default saved search that filters out inactive and terminated users. If you want to filter employees differently, create a saved search and select it on the Employee Directory Configuration page.

The directory listing for an employee shows the following information:

- Employee Name
- Office Phone Number
- Mobile Phone Number
- Email Address
- Action Button

Four more fields show up in each employee's directory listing. **Configurable Field 1** comes right after the employee's name. As an administrator, you can choose which fields to show from the table below:

Configurable Fields	Standard Fields	Custom Field Types
Configurable Field 1	Job Title	Free-Form Text List/Record
Configurable Field 2	Subsidiary Location Department Sales Role Type	Free-Form Text List/Record
Configurable Fields 3 & 4	Department Location Fax Hire Date Home Phone Phone Sales Role	Free-Form Text List/Record Date Date/Time

Configurable Fields	Standard Fields	Custom Field Types
	Subsidiary	
	Supervisor	
	Type	

Important: The auto-suggest feature and filter panel on the Employee Directory SuiteApp use the configurable fields you pick. The SuiteApp suggests or filters employees based on four standard fields: **Job Title**, **Subsidiary**, **Location**, and **Department**. For example, if **Job Title** is one of your configurable fields, the SuiteApp will suggest and filter by job title. You can pick custom fields for the others.

Three more fields appear in the org browser listing. **Configurable Field 1** follows the employee name and has a larger font size than the other configurable fields. **Configurable Field 1** has its own line above **Configurable Field 2** and **Configurable Field 3**. The tables below show which fields you can pick:

Configurable Fields	Standard Fields	Custom Field Types
Configurable Field 1	Job Title	Free-Form Text List/Record
Configurable Fields 2 & 3	Subsidiary Location Department Sales Role Type	Free-Form Text List/Record

Note: For standard fields like Subsidiary and Sales Role to appear, make sure you've enabled the appropriate features.

To configure the employee directory and org chart:

- Go to Setup > Employee Directory/Org Browser > Preferences.
- To use the Employee Directory, check the **Enable Employee Directory** box.
 - The Directory Layout section shows visible fields in the Employee Directory. Pick the field you want to appear under the employee name and title from the **Configurable Field 1** and **Configurable Field 2** lists.
 - Pick the fields you want to show on the right side of the directory listing from the **Configurable Field 3** and **Configurable Field 4** lists.
- To use the Org Browser, check the **Enable Org Browser (Org Chart)** box.
 - The Org Browser Layout section shows visible fields in the Org Browser. Pick the three extra fields you want to display from the **Configurable Field 1**, **Configurable Field 2**, and **Configurable Field 3** lists.
 - Under Org Browser Top-Level Employees, click the arrow in the **Employee** field and pick the names of the employees you want to show at the top.
- Under Directory and Org Browser Filters, pick the saved search you want to use to filter employees out of the directory and org browser. To go back to the saved search that was included by default with the Employee Directory SuiteApp, select **Employee Directory (Default)** from the **Saved Search** list. For more information, see the help topic [Saved Searches](#).

Important: Make sure that the saved search doesn't filter standard criteria based on information listed on the user's record. Specifically, avoid filtering standard criteria such as **Class, Department, Location, Subsidiary**, and others and according to **- Mine -** or **- Mine and Descendants -**. These restrictions also apply to **User Field...** criteria that you can filter according to **Class, Department, Location, Subsidiary**, and more.

5. Click **Save**.

Updating Required Scripts for the Employee Directory and Org Browser

You'll need to update the Employee Directory and Org Browser scripts so they work with the custom roles using the SuiteApp.

Script ID	Script
customdeploy_ed_emp_dir_su	Employee Directory
customdeploy_ed_emp_dir_portlet	Employee Directory Portlet
customdeploy_ed_emp_search_backend_su	ED Employee Search Backend Su
customdeploy_ob_org_browser_su	Org Browser UI Su
customdeploy_ob_org_browser_backend_su	Org Browser Backend Su

To update the required scripts for the Employee Directory and Org Browser:

1. Go to Customization > Scripting > Script Deployments.
2. Locate a required script based on the table on this page and click **Edit**.
3. On the **Audience** subtab, go to the **Roles** field.
4. Pick the internal or external roles that will use the SuiteApp.
5. Click **Save**.
6. Repeat steps 2 to 5 for each script you need to update.

Using the Employee Directory

You use the employee directory to search for employees by name, location, department, job title, or (with NetSuite OneWorld accounts) subsidiaries. After you search, you can filter your results further by any of these categories.

Employee Directory

To use the employee directory:

1. From your Employee Center role, go to My Company > Employee Directory.
2. On the Employee Directory page, start typing what you want to search for. As you type, the search field shows employees who match your term in their name, location, department, job title, or (NetSuite OneWorld) subsidiary. The more you type, the narrower the search becomes.

3. To search for employees with your search term in their location, department, job title, or subsidiary, click the appropriate link in the search field.
4. If you see the person you're looking for in search field, click their name.
5. To perform a full search, press Enter or click **Search**.
6. The Employee Directory page lists all employees who match your search.
7. To see an employee in the org browser, click **View In Org Browser** on the right side of their entry.
For more information about the org browser, see [Using the Org Browser](#).

Filter Search Results

To filter your search results:

1. If your search returns a lot of results and you want to narrow them down, click **Filters** to open the filter pane.
2. To filter your results, check the box under **Locations**, **Departments**, **Job Titles**, or **Subsidiaries** for what you want to see.
3. By default, the filters pane shows up to five entries for each category, ranked by how many employees that match in each entry. To add another filter under a category, click **Add** and begin typing until you see the entry you want to use.
4. Below the filter area, you'll see the filters you've applied. To remove one, clear the box or click the close button.

Important: The Kudos feature needs SuitePeople HR, and an administrator has to enable it for your account. For more information, see [Kudos](#).

Give Kudos from the Employee Directory

To give Kudos from the employee directory:

1. On the Employee Directory page, search for the person you want to give Kudos to.
2. Click **Give Kudos** on the right side of the employee entry.
3. If you want to give Kudos to more than one coworker, start typing another name. As you type, you'll see suggested names - click one to add that person.
4. In the text field, type a description for the Kudos that explains why you want to recognize your coworker(s).
5. Under Supported Values, click one or more organizational values that this Kudos demonstrates. If you hover over a value icon, you'll see a description.
6. Click **Give Kudos**.

Using the Org Browser

The Org Browser provides an intuitive, interactive, and graphic method of viewing your organizational chart, and the supervisors and direct reports of fellow employees. You can also use the employee directory to locate employees. For more information, see [Using the Employee Directory](#).

To get started, from your Employee Center role, go to My Company and click Org Browser. The Org Browser page shows a tree structure graphic depicting your organization's hierarchy, centered on the person at the top of your organization, such as your president or chief executive officer. Each person's card shows their name, job title, and other information you've set up.

Here's how you can move around the org browser:

- To center the org browser on someone, click their card.
- Underneath that person's card, you see everyone who reports directly to them.
- You can also center on a person by typing their name in the search field.
- To zoom in or out, use your mouse's scroll button or click the zoom tool on the left.
- To move around, click and drag in any direction.
- If someone isn't centered in your view, a number below their card shows how many people report to them.
- If you're looking at someone lower in the hierarchy, their direct manager is replaced by a number. That number shows how many management levels are above them. When you hover over that number, the reporting relationship up to the top of your organization appears.
- To download a copy of your current view of the org browser, click **Download** beside the search field.
- To find a person by name, start typing their name in the **Find people by name** field.

Important: The Kudos feature needs SuitePeople HR, and an Administrator has to enable it for your account. For more information, see [Kudos](#).

To give Kudos from the Org Browser:

1. On the Org Browser page, find the person you want to give Kudos to and click their card to center them.

2. Click **Give Kudos** on their card.
3. Start typing a coworker's name. As you type, you'll see suggested names that match.
4. If you want to give Kudos to more than one coworker, keep adding names.
5. In the text field, type a description for the Kudos that explains why you want to recognize your coworker(s).
6. Under Supported Values, click one or more organizational values that this Kudos demonstrates. When you hover over a values icon, a description of that value appears.
7. Click **Give Kudos**.

Employee Center Management

The Employee Center is a role made for regular employees in your organization. In the Employee Center, your employees can see their own information. They can submit requests (such as time-off requests and purchase orders) for approval, submit timesheets, and so on. You can manage the Employee Center to make sure employees have the tools and information they need.

For information about managing the Employee Center, see the following topics:

- [About the Employee Center Role](#)
- [Employee Center Portlets](#)
- [Granting Access to the Employee Center](#)
- [Employee Center Dashboard Publishing Feature](#)
- [Working With News Items](#)
- [Download Form W-2 and Form W-2 C](#)

About the Employee Center Role

When you add the Employee Center role on an employee's record, you give them access to the Employee Center. From the Employee Center, employees can do the following:

- View their paycheck history, employee profile, and W-4
- Enter and view time entries. Supervisors can review and approve time entries for direct reports.
- Enter and view expense reports. Depending on how you set up approvals for expense reports, expense approvers (managers or supervisors) can review and approve expense reports.
- Enter and view purchase requests or requisitions. Depending on how you set up approvals for purchase requests or requisitions, purchase approvers (managers or supervisors) can review and approve purchase requests or requisitions.
- Enter and view activities such as tasks and phone calls
- Access their calendar
- Access documents and relationship records

With SuitePeople HR, your employees can complete additional tasks in the Employee Center:

- Request time off and view their time-off balances. Supervisors can view and approve time-off requests for their direct reports.
- Recognize the achievements of their peers with Kudos
- Browse the Org Chart and search the Employee Directory

For more information about SuitePeople, see [SuitePeople Overview](#).

Employees can customize the Employee Center dashboard to show the information they need most. Click **Personalize** in the upper right of the dashboard, or click **Personalize Dashboard** in the Settings portlet. For more information about personalizing your dashboard, see the help topic [Dashboard Personalization](#).

Note: You can't customize the dashboard if the lock icon (🔒) appears beside the **Home** on the left side of the home page.

The screenshot displays the Oracle NetSuite Employee Center Home page for user M Wolfe. The page is divided into several sections:

- Home:** Includes a 'Personalize' dropdown menu and a 'Layout' dropdown menu.
- Payroll:** Contains a 'Paycheck History' table with columns for DATE, AMOUNT, and PRINT. It also includes a 'Form W-4' link and a 'View All Paychecks' link.
- Purchases:** Contains a 'Purchase Orders/Requests' table with columns for REF #, SUBMITTED DATE, STATUS, and AMOUNT. It also includes an 'Enter Purchase Request' button and a 'View All Requests' link.
- Settings:** Contains a 'Personalize Dashboard' link (highlighted with a red box) and other settings like 'Set Preferences', 'Campaign Subscription Center', 'Change Email', 'Change Password', and 'Update Security Questions'.
- Home Links:** Contains a 'Find Link...' search bar and a list of links including 'My Information', 'Time Tracking', and 'Activities'.
- Tasks:** Contains a 'TOTAL: 1' summary and a table of tasks with columns for VIEW, DUE DATE, TASK TITLE, COMPANY, PRIORITY, and STATUS. A task is listed with a due date of 6/30/2017 and a title 'Set up call with prospective customer'.
- Kudos:** Contains a 'Give Kudos to...' search bar and a list of kudos given to the user, including one from M Wolfe.

Understanding Restrictions for Employee Center Data

The standard Employee Center role filters purchase orders, expense reports, and time reports employees with this role can view. Employees with this role can see their own purchase orders, expense reports, and time reports. If they're supervisors or approvers, they can also see purchase orders, expense reports, and time reports owned by their employees.

In OneWorld accounts, subsidiary restrictions don't filter time and expense report records for users with this role. Subsidiary restrictions do filter the records for this role, except for times reports, purchase orders, and expense reports. The system checks subsidiary restrictions for the role first, then for individual users.

Customized Employee Center roles based on the standard role filter records the same way by default.

Purchase Approvals and Currencies

If you use the Multiple Currencies feature, how currency fields show up on purchase requests and orders that need approval depends on whether you customize the view.

Non-customized View

- **Amount** – shows amount in base currency
- **Base Currency** – shows currency in base amount

Customized View

- **Amount (Foreign Currency)** – shows amount in foreign currency
- **Currency** – shows foreign currency

Employee Center Portlets

NetSuite offers portlets that employees can add to their Employee Center dashboards. Some portlets are always available, while others depend on which features your NetSuite account has enabled.

Standard Portlets

The following standard portlets are always included in the Employee Center, no matter which features are enabled in your account. Some of these portlets appear the first time you log in to the Employee Center. You can access others from the Personalize Dashboard palette.

Portlet	Description
Calendar	Lists activities for a selected period ordered by date and time, with links to view each activity record. In the portlet, you can pick a daily, weekly, monthly, or agenda view. You can show your own calendar or a public calendar for another team or department Click the Set Up menu option to open a popup where you choose which activities to show in the calendar.
Custom Search	You can show up to six on the Home page, and up to two on the Manager tab if you have access. Shows results from a saved search. In the portlet, click Set Up to pick the saved search and set a custom title. You can choose how many results to show and whether to view details in the portlet or on a new page. If you use Inline Editing, you can turn it on for search results. Note: If you put a custom search portlet in the right or left dashboard columns, it shows only the first four columns of results. In the center column, it shows the first nine. Custom search portlets also have New, Edit, and View links for each record.
Employee Center — Home Links	Provides links to different records within your Employee Center, such as documents, contacts, and timesheets.
List	Shows a list of records of a selected type, with links to view or edit them if you have permission. In the center column, it shows nine columns; in the right or left column, it shows four. In the portlet, click Set Up to pick the record type and how many records to show. Note: On some tabs, Lists portlets are set up to show certain types of records. For example, the Activities page has Tasks and Phone Calls list portlets.
Quick Search	Lets you quickly search for records of a selected type, using one filter and keywords. Click Set Up to pick the record type to search. Then, enter keywords in the portlet's text box and pick a field name from the Search For list.
RSS/Atom Feed	You can show up to two. Shows RSS or Atom feed URL content from an external website or HTML document. In the portlet, click Set Up to pick display options and a URL. NetSuite offers some standard RSS feed URLs, or you can enter your own.
Recent Records	Shows a list of records you've recently created, changed, or viewed. In the portlet, click the record to view it. If you have permission, you'll also see an Edit link to open it in edit mode.

Portlet	Description
Recent Reports	(Available on the Reports tabbed page.) Shows a list of reports that you've recently created, changed, or viewed. In the portlet, click the report name to view it.
Reminders	Shows important tasks of selected types, usually ones that are past due or coming up soon. In the portlet, click Set Up to pick reminder types and set how many days in advance to show them. Click a reminder to go to the page where you need to take action.
Report Snapshots	(Can display up to 10.) Each portlet gives you a chart or list summary of a selected standard or custom report, with a link to the full report. In the portlet, you can pick a date range and click thumbnails to choose chart types. Click Set Up to pick the display type and layout options, including chart themes. Use the menu to print the chart, download it as a PNG, JPG, PDF, or SVG, or view the full report results. When the report snapshot portlet is in the left or right dashboard column, the list text truncates at 25 characters. To avoid this, place the portlet in the middle column. Report snapshot list amounts round to the nearest whole number and don't show decimals.
Search Form	Lets you search for records of a selected type. Filter fields use system defaults or your preferred custom search form. In the portlet, click Set Up to pick the search form. Click Full Search to go to the default search page for the selected record type. Click Edit to open the search form's settings and make changes.
Settings	Shows links to user setup tasks.  Important: The contents of this portlet are set by the system. You can't remove or change it.
Shortcuts	Shows links to selected pages, so you can get to frequently used pages faster. Click Set Up to reorder your shortcut links. Click New Shortcut to add a shortcut if you know the URL of the page. If you don't know the URL, go to that page and click More > Add to Shortcuts in the upper right corner of that page.
Tasks	Shows a list of upcoming CRM tasks assigned to you, with links to view or edit them if you have permission. In the portlet, pick a view and a sorting method, then click Set Up to choose how many tasks to show.
Trend Graphs	(Can display up to five.) Shows a chart of key performance indicator (KPI) data with a time-based X axis. In the portlet, click thumbnails to pick different chart types. You also can change the graph's X axis scale by picking different time intervals. Click Set Up to select a KPI to be graphed and layout options, including chart themes. You also can click menu options to print the trend graph chart or download it as a PNG, JPG, PDF, or SVG file.

Feature-Dependent Portlets

The following portlets are available for the Employee Center dashboard only if certain features are enabled in your account.

Portlet	Description	Required Feature
Expense Reports	Shows you the status of up to five of your latest submitted expense reports. You can also click the Enter Expense Report button to add a new one. You won't find links to your expense reports in the Home Links portlet.	Expense Reports
Goals	Shows actions you can take on goals and an overview of goals in progress. On the Employee dashboard, the portlet shows your goals that are starting soon, due soon, and overdue. You can also see progress and time elapsed for their top three goals in progress. On the Manager dashboard, the portlet shows your direct reports' goals that require approval or reflection, and overdue goals. Managers can also see progress and time elapsed for their direct reports' goals in progress. For more information, see Viewing Goals in the Goals Portlet .	Performance Management
Kudos	Lets you to give Kudos to your coworkers to recognize a job well done. You can also see other Kudos given in your company.	Kudos
My Team	Shows a list of your direct reports if you're a manager. This portlet appears on the Manager view of your Employee Center dashboard. If you've enabled Employee Change Requests, managers can create change requests for their direct reports right from the My Team portlet. For more information, see Employee Change Requests in the Employee Center .	Employee Center Dashboard Publishing
News Items	Lets you to share company news with your employees.	Employee Center Dashboard Publishing
Payroll	Shows the status of your last five paychecks, view and download Form W-2, and allows you to view your Form W-4 information. Paycheck amounts are hidden by default, but you can view them by clicking the eye icon. You can't access your paycheck history, Form W-2, or Form W-4 from the Home Links portlet.	Payroll
Purchases	Shows the status of up to five of your latest submitted purchase requests or requisitions. You can click the Enter Purchase Request button or the Enter Requisition button to add new ones. Links to your purchase requests or requisitions aren't available from the Home Links portlet.	Purchases or Requisitions
Time-Off	Provides a quick view of your time off for the rest of the year, plus the time off you've taken and booked. You can also click Book Time-Off to schedule more time off.	Time-Off Management

Granting Access to the Employee Center

Use the following procedure to assign the Employee Center role to an employee.

To assign the Employee Center role to an employee:

1. Go to Lists > Employees > Employees.
2. Next to the employee's name, click **Edit**.
3. Under Email | Phone | Address, enter the applicable information if it hasn't already been entered.
4. Click the **Access** subtab.
5. Fill out all access-related fields. For more information, see [Giving an Employee Access to NetSuite](#).
6. In the **Role** field, select **Employee Center**.
7. Click **Add**.

8. Click **Save**.

 **Note:** Employees with both Administrator and Employee Center access don't count against your Employee Center licenses. If you remove an employee's Administrator role, they'll count against your Employee Center licenses. If you need more licenses, contact your account representative.

Employee Center Dashboard Publishing Feature

The Employee Center Dashboard Publishing feature includes:

- **Employee Center Publishing global permission** – If you have this permission, you can publish a standard Employee Center dashboard for everyone. All Employee Center users see the same layout and portlets when they log in with their Employee Center role.
- **News Item record and permission** – If your role has this permission, you can create News Item records. News items show up in the Company News portlet on the Employee Center dashboard. For more information, see [Working With News Items](#).
- **Manager dashboards in the Employee Center** – If you're a supervisor or manager, you'll have two dashboards in the Employee Center.
 - An Employee dashboard, where they can book time off, enter their own expense reports, keep track of contacts, and more.
 - A Manager dashboard, where you can see information about and approve requests from your direct reports.

More information about the Manager dashboard is available in the Employee Center help.

For information on enabling features, see the help topic [Enabling Features](#).

 **Note:** The Employee Center Dashboard Publishing feature is only available if your account has SuitePeople HR. For more information, see [SuitePeople Overview](#).

 **Important:** After you enable the Employee Center Dashboard Publishing feature, any Employee Center dashboards employees customized before are replaced with a default dashboard. Only users with the Employee Center Publishing global permission can edit this dashboard. If you turn off the feature, previous versions of the dashboard are restored.

The Employee Center Publishing Permission

When you enable the Employee Center Dashboard Publishing feature, the Global Permissions feature is also enabled (unless it already is). For more information, see the help topic [Using the Global Permissions Feature](#). To use the publishing tool, you'll need to assign the Employee Center Publishing global permission to a user. This user can then publish the Employee Center dashboard from the Employee Center role. Other users can't customize their own dashboards, and a lock icon (🔒) appears on the dashboard. For more information about publishing the Employee Center dashboard, in the Employee Center help, see the section "Customizing the Employee Center for Your Organization".

To assign the Employee Center Publishing permission to a user:

1. Go to Lists > Employees > Employees.
2. Next to the employee responsible for publishing the Employee Center dashboard, click **Edit**.

3. Click the **Access** subtab.
4. On the **Roles** subtab, make sure the employee is assigned the Employee Center role.

5. On the **Global Permissions** subtab, pick **Employee Center Publishing** from the **Permission** list, then click **Add**.

6. Click **Save**.
When this employee uses the Employee Center role, they'll see the Edit Dashboard button on the Employee Center home page.

 **Warning:** Only use the Global Permissions feature to assign permissions to employees.

Working With News Items

To share company news with your employees, you can create news items that appear on the Company News portlet in the Employee Center. If your company has multiple locations, you can create news items that show up just for employees in certain locations. You can also create news items that only managers see. Managers can find these on the Manager dashboard in the Employee Center.

Prerequisites

To create news items, you'll need to have the Employee Center Dashboard Publishing feature enabled in your NetSuite account. For more information about the Employee Center Publishing feature, see [Employee Center Dashboard Publishing Feature](#).

You'll also need a role that includes the News Item permission. By default, the News Item permission comes with these NetSuite roles, with full access (view, create, edit, and delete):

- Chief People Officer (CPO)
- Human Resources Generalist

For more information about permissions, see the help topic [NetSuite Permissions Overview](#).

Adding News Items to the Company News Portlet

The five most recent news items appear on the Company News portlet in the Employee Center. Older news don't appear.

The following image shows what a news item looks like in the Company News portlet:

1	The headline of the news item.
2	The body of the news item. You can format this text with different fonts, colors, and basic formatting (bold, italics, underline, numbered and ordered lists).
3	The Call to Action button. You can set the button text and link. For example, you might want to link to a page on your company's intranet site.
4	Users can see headlines for other news items and click them to read other news.

To add news items to the Company News portlet:

1. Go to Lists > News Items > New > New.
2. In the **Headline** field, enter a headline for the news item.
3. In the **Body** field, enter the text for the news item.
4. You can also set the following:
 - You can add a button users can click to learn more or take certain action. In the **Call to Action** field, enter the button text. In the **Call to Action Link** field, enter the link that opens when the user clicks the button.
 - To show this news item to only employees in a specific location, first clear the **Available in All Locations** box. Then, pick one or more locations from the list.

Important: Employees who aren't linked with a location can see news items for any location.

- To show this news item only to managers, check the **Managers Only** box.
5. Click **Save**.

To edit news items:

1. Go to Lists > Web Site > News Items.
2. Beside the news item that you want to edit, click **Edit**.
3. Make your changes.
4. Click **Save**.

To delete news items:

1. Go to Lists > Web Site > News Items.
2. Beside the news item that you want to delete, click **Edit**.
3. In the **Actions** menu, click **Delete**.

Download Form W-2 and Form W-2 C

About Form W-2 and Form W-2 C

At the end of each financial year, every employer submits Form W-2 for all paid employees (current and terminated) during the calendar year. The Form W-2 is submitted to the Social Security Agency (SSA). This needs to be done for each employee who is paid a salary, wage, or other compensation as part of the employment relationship. The form shows a breakdown of an employee's gross taxable annual wages paid and withholding information. The withholding information includes any amount withheld toward:

- Federal, Social Security, Medicare, State and other taxes (as applicable)
- Medical insurance provided by the employer for the employee and their dependents
- 401k, Roth 401k, and Individual Retirement Account (IRA) contributions by an employee, including any matching 401k contribution by the employer
- Bankruptcy claims (if any)
- Child Support, Alimony, Federal and State tax levies, unpaid taxes or incorrect tax amount filed with IRS, bankruptcy, student loans, and other court-ordered garnishments

There can only be a single Form W-2 generated for each employee in a financial year. However, there can be multiple amendments made to it. Each time an amendment is made to Form W-2, a Form W-2 C will be generated. For example, correcting details like address, name, or Social Security Number (SSN) for an employee.

There can be more than one Form W-2 C issued for an employee in a financial year. If there are multiple amendments to Form W-2, only the latest amendment will be displayed.

If you notice any inaccuracy in your W-2, you need to inform your payroll team. In such cases, the necessary corrections will be made and a Form W-2 C will be issued. The C added to a W-2 means it's an amendment to the original W-2 issued by the IRS.

For more information about Form W-2 and the fields in the form, see [About Form W-2, Wage and Tax Statement](#). For more information about Form W-2 C and the fields in the form, see [About Form W-2 C, Corrected Wage and Tax Statements](#).

View your Form W-2 and Form W-2 C

Important: If you don't see the Payroll portlet, you can't view Form W-2 and Form W-2 C in NetSuite.

You can view your Form W-2 and Form W-2 C only when you choose Employee Center from the list of assigned roles. To know more about how to switch the roles, see the help topic [Roles and Accounts](#). The latest five records for Form W-2 and Form W-2 C can be viewed under the **Form W-2** subtab of the **Payroll** portlet. Click **View All** in the **Form W-2** subtab to view all the forms that have been uploaded to NetSuite for your organization.

Note: The Form W-2 and Form W-2 C will be available for download effective from the financial year of 2024 onward. The forms for 2024 will be available for download from the Employee Center at a later date. If you want to download the forms for 2024 before that date, contact your payroll team.

In NetSuite, Form W-2 will be shown in the YYYY format and Form W-2 C will be shown in the YYYY-corrected format. For example, Form W-2 and Form W-2 C for the year 2024 will be shown as 2024 and 2024-corrected.

Download Your Form W-2 and Form W-2 C as a PDF Document

Important: If you don't see the Payroll portlet, you can't view Form W-2 and Form W-2 C in NetSuite.

To download your Form W-2 and Form W-2 C for a financial year,

1. Log in to NetSuite using your credentials.
2. Change your role to **Employee Center** if you are logged in to a different role. To know more about how to switch the roles, see the help topic [Roles and Accounts](#).
3. In the **Payroll** portlet, go to the **Form W-2** subtab.

Note: The latest five forms will be displayed in the portlet. To view W-2 and W-2 C forms for all the years, click **View All**.

4. Click the **Download** link next to the year for which you want to download the W-2 form. For example, if you want to download the W-2 form for 2024, click the **Download** link next to it.

1. A pop-up appears asking you to create a password for the downloaded PDF.

Note: The pop-up will appear every time you try to download the form from NetSuite.

2. Enter a password that meets all the validation criteria mentioned in the pop-up in the **Password** field. As you type, the characters are validated against password policy criteria and the results are displayed.
3. Re-enter the same password in the **Confirm Password** field.
5. Click **OK** to save the form as a PDF document to the default downloads folder on your device. You can only save the form if you meet the password policy criteria mentioned in the pop-up.

The dialog box is titled "Create a password" and "Create a password for the downloaded W2 PDF". It contains two input fields: "PASSWORD" and "CONFIRM PASSWORD", both filled with asterisks. To the right, under "Password must:", there are four criteria, each with a green checkmark: "Be between 10 to 64 characters", "Be a combination of alphanumeric and special characters" (with sub-points: "Contain at least one uppercase letter", "Contain at least one lowercase letter", "Contain at least one number", "Contain at least one special character (!@#\$%^&*~.-'"/+?_<>)" and "Not contain invalid characters (such as ç é û à ç)"), and "New passwords match". At the bottom left, there is an unchecked checkbox labeled "CHECK THE BOX IF YOU DO NOT WANT TO CREATE A PASSWORD.". At the bottom right are "OK" and "Cancel" buttons.

Note: The password you created needs to be entered every time you try to access the PDF from your device.

6. If you don't want to create a password, check the box as shown and click **OK** to save the form as a PDF document.

This dialog box is identical to the one above, but the "PASSWORD" and "CONFIRM PASSWORD" fields are empty. The "CHECK THE BOX IF YOU DO NOT WANT TO CREATE A PASSWORD." checkbox is now checked. The password criteria on the right now have red 'X' marks instead of green checkmarks, indicating they are not being enforced. The "OK" and "Cancel" buttons remain at the bottom right.

Employee Rehire

There may be certain scenarios when an employee quits an organization and rejoins after a certain time. If the NetSuite Administrator updates the employee's details in the same Employee record when they rejoin, they can view all the historical W-2s. If the NetSuite Administrator creates a new Employee record

when the employee rejoins the company, they can't view historical W-2s. However, the employee will be able to view the W-2s from the financial year of the year they rejoin the organization. If the employee needs to view historical W-2s, they need to raise a request with the payroll team. In such cases, the payroll team will download the W-2s and share it with them.

Form W-2 FAQs

Where can I view my Form W-2 and Form W-2 C?

You can view your Form W-2 and Form W-2 C only when you choose Employee Center from the list of assigned roles. To know more about how to switch the roles, see the help topic [Roles and Accounts](#). The latest five records for Form W-2 and Form W-2 C can be viewed under the **Form W-2** subtab of the **Payroll** portlet. Click **View All** in the **Form W-2** subtab to view all the forms that have been uploaded to NetSuite for your organization. See [View your Form W-2 and Form W-2 C](#) for more information.

Note: The Form W-2 and Form W-2 C will be available for download effective from the financial year of 2024 onward. The forms for 2024 will be available for download from the Employee Center at a later date. If you want to download the forms for 2024 before that date, contact your payroll team.

What should I do if there is a mistake on my Form W-2? What is Form W-2 C?

If you notice any inaccuracy in your W-2, you need to inform your payroll team. In such cases, the necessary corrections will be made and a Form W-2 C will be issued. The appended C to a W-2 denotes it is an amendment to the original W-2 issued by the IRS. See [Download Form W-2 and Form W-2 C](#) for more information.

Note: The Form W-2 and Form W-2 C will be available for download effective from the financial year of 2024 onward. The forms for 2024 will be available for download from the Employee Center at a later date. If you want to download the forms for 2024 before that date, contact your payroll team.

Who can download and view my Form W-2?

As an employee, only you can download and view your Form W-2. Your Payroll Administrator can also download and view it. However, neither you nor your Administrator can modify any details in the form. Any modifications or rectifications need to be processed through a support ticket and a Form W-2 C will be issued with the amended information.

What should I do if I forgot the password I set for my downloaded Form W-2?

If you forget the password you set for your Form W-2, you'll need to download it again. See [Download Your Form W-2 and Form W-2 C as a PDF Document](#) for more information.

Where can I view my downloaded Form W-2?

You should be able to view the downloaded PDF file in the default location where all your downloads are saved on the device.

How do I print my Form W-2?

Download the form as a PDF file following the steps in [Download Your Form W-2 and Form W-2 C as a PDF Document](#). After downloading the form, you can print the form following the instructions in the PDF viewer you are using.

What if I lose my access to NetSuite? Can I still get my Form W-2 and Form W-2 C?

There are two scenarios where you may lose access to NetSuite.

- The first scenario is when you are no longer working the organization and your access to NetSuite has been revoked.
- The second scenario is you have left and rejoined the organization. However, your details have been updated in a new Employee record. Thereby, you will not be able to access the old Employee record.

In both the scenarios, you need to contact your Payroll Administrator who can download the required forms and share it with you.

Employee Onboarding and Offboarding Plans

Planning employee onboarding and offboarding tasks is common when you manage human resources. With the Onboarding/Offboarding Plans SuiteApp, you can facilitate smooth career movements for employees in your organization. The SuiteApp gives you customizable plans and templates that you can tailor to your business needs.

For more information, see:

- [Onboarding and Offboarding Plans Overview](#)
- [Setting Up Onboarding and Offboarding Plans](#)
- [Getting Started With Onboarding and Offboarding Plans](#)
- [Working With Onboarding and Offboarding Plans](#)

Onboarding and Offboarding Plans Overview

The Onboarding/Offboarding Plans SuiteApp is a comprehensive tool for managing employee career movements in your organization. HR professionals can use it to create employee plans, use premade plan templates, or make their own. They can also use it to receive notifications related to an employee onboarding or offboarding.

Features and Benefits

With Onboarding/Offboarding Plans, you can:

- Save time by creating employee plan templates that you can reuse for different scenarios.
- Help new hires have a great first day by linking tasks to their points of contact.
- Make sure exiting employees have a smooth transition by linking tasks to their points of contact.
- Provide a checklist for employees who are in the process of entering or exiting the organization.
- Keep track of tasks you need to complete to meet legal requirements, such as completing government forms.
- Identify common roadblocks when completing tasks to help refine future employee career changes.

Plan Types and Templates

Onboarding/Offboarding Plans lets you create plans for any employee career move. You can select from different plan types based on what you need. Each plan type comes with a premade template that populates with tasks suitable for the change.

The following table shows the available plan types and the purpose and template assigned to each.

Plan Type	Purpose	Template
Onboarding	Use this to organize tasks for new hires and transfers, and help them get started in their new roles.	Onboarding Plan Template

Plan Type	Purpose	Template
Offboarding	Use this to organize tasks for employees who are leaving and make sure everything gets handed over.	Offboarding Plan Template

Roles

As an HR professional, you can use the following standard roles to view, create, and edit employee plans:

- Administrator
- Chief People Officer
- Human Resources Generalist

If you want a custom role to use Onboarding/Offboarding Plans, see [Granting Onboarding/Offboarding Permissions for Custom Roles](#).

When you create a plan for an employee, you can assign a Coordinator to manage it and Assignees to perform the tasks.

SuiteApp Role	NetSuite Role Requirement	Definition
Coordinator	Chief People Officer Human Resource Generalist Custom roles with permissions	This role lets you view, edit, track, or delete another employee's plan.
Assignee	Any NetSuite role	This role lets you view and update the status of your assigned tasks.

If you use a standard role and open a plan made for you, you automatically become an Assignee. You can only view, update, and add notes to your own tasks. You can only see the full list of tasks in other employees' plans.

For more information about the SuiteApp, see the following:

- [Limitations and Best Practices](#)
- [Frequently Asked Questions: Onboarding/Offboarding Plans](#)

To install and set up the SuiteApp as an Administrator, see [Setting Up Onboarding and Offboarding Plans](#).

To learn how to use the SuiteApp for your specific business need, see [Getting Started With Onboarding and Offboarding Plans](#).

For more details about what you can do with the SuiteApp, see [Working With Onboarding and Offboarding Plans](#).

Limitations and Best Practices

Read this section for best practices and things to watch out for when you use Onboarding/Offboarding Plans.

Limitations

- Currently, the Onboarding/Offboarding Plans SuiteApp supports only US and UK English.

- You can't import CSV files into Onboarding/Offboarding Plans. If you try to import lists from the SuiteApp, you may run into formatting issues.

Best Practices

Follow these guidelines to maximize your use of the SuiteApp:

- Set your preferred form when you set up the SuiteApp to make sure plans and templates work. For more information, see [Setting Form Preferences](#).
- Create an employee record before you create a plan. Some features need an employee record to work. For example, receiving email notifications, and automatically including employees and supervisors as assignees. For more information, see [Adding an Employee](#).
- If you created the employee's plan before their employee record, see [Guidelines for Associating Plans With Employee Records](#).
- Enter a termination date on the employee record before you create an offboarding plan.

 **Note:** If you use Effective Dating, you must set the employee record's effective date to the current date or a past date. If you set it to a future date, the SuiteApp can't source the termination date from the record.

- When you create plans, make sure you select the right plan type before editing any fields. If you change the plan type later, you'll lose any data you've entered.
- When creating a plan, remember that the template field can't be changed after you click **Save**. Ensure that you select the correct template before saving.
- If you need to work on existing templates, see [Guidelines for Managing Templates](#).
- For tips on getting email notifications, see [Receiving Email Notifications](#).

Frequently Asked Questions: Onboarding/Offboarding Plans

Read the answers to the following questions for more information about the SuiteApp.

How many plans and templates can I create using the SuiteApp?

You can create as many plans and templates as you want.

Can I assign a task to multiple assignees?

Yes, you can assign a task to more than one person, and there is no limit on the number of assignees.

Why can't I see the count changing on the Reminders or Onboarding portlet even after I completed a task?

Click the Refresh icon on the Reminders or Onboarding portlet to see the most recent task counts.

Does the SuiteApp account for business days and holidays when computing due dates?

This feature isn't available.

What is the time zone used in the SuiteApp?

The SuiteApp uses the time zone set in your company preferences.

Setting Up Onboarding and Offboarding Plans

To set up Onboarding/Offboarding Plans, follow these steps.

To set up Onboarding and Offboarding Plans:

1. Log in as a NetSuite administrator. For more information, see the help topic [Roles and Accounts](#).
2. Complete the prerequisites. For more information, see [Prerequisites](#).
3. Install Onboarding/Offboarding Plans. For more information, see [Installing the SuiteApp](#).
4. Give custom role permission to use Onboarding/Offboarding Plans. For more information, see [Granting Onboarding/Offboarding Permissions for Custom Roles](#).
5. Set the preferred form for custom roles. For more information, see [Setting Form Preferences](#).
6. Set up the Onboarding portlet. For more information, see [Setting Up the Onboarding Portlet](#).

Prerequisites

To use Onboarding/Offboarding Plans, enable the features in the following table.

Subtab	Feature	Description
SuiteCloud	Custom Records	Lets you access custom records provided by the SuiteApp.
	Client SuiteScript	Lets you use custom functions provided by the SuiteApp.
	Server SuiteScript	Lets you run scripts provided by the SuiteApp.

For more information, see the help topic [Enabling Features](#).

To continue setting up the SuiteApp, see [Installing the SuiteApp](#).

Installing the SuiteApp

As an Administrator, install the Onboarding/Offboarding Plans using the following details:

- Bundle Name: Onboarding/Offboarding Plans
- Bundle ID: 244690

For more information about how to install a SuiteApp, see the help topic [Installing a Bundle](#).

To continue setting up the SuiteApp, see [Granting Onboarding/Offboarding Permissions for Custom Roles](#).

Granting Onboarding/Offboarding Permissions for Custom Roles

Standard Chief People Officer (CPO) and HR Generalist (HRG) roles get all permissions by default. You can then create custom versions of these roles and assign them to employees for SuiteApp access.

Onboarding/Offboarding Plans Permissions

To give access to custom roles that aren't created based on standard CPO or HRG roles, add these permissions manually:

Custom Record	Level	Restrict
Onboarding/Offboarding Plan	Full	–
Onboarding/Offboarding Plan Task	Full	–
Onboarding/Offboarding Template	Full	–
Onboarding/Offboarding Template Task	Full	–
Onboarding/Offboarding Task	Edit	Viewing and Editing

To give a role permissions:

1. Log in as an Administrator.
2. Go to Setup > Users/Roles > User Management > Manage Roles.
3. On the Manage Roles page, select a role.
 - Click **Edit** to add permissions to a custom role.
 - Click **Customize** to create a custom role from a standard role.
4. On the Role page, look for the **Permissions** subtab, then click the **Custom Record** subtab.
5. Select a permission from the list.
6. Select the level of access and restrictions for the permission.
7. Click **Add**
8. Repeat steps 5 to 7 for each permission you want to add.
9. Click **Save**.

Guidelines for Granting Permissions for Custom Roles

- When the SuiteApp is upgraded or fixed, only standard roles get the updates. You'll need to manually push updates to custom roles.
- If you made custom CPO and HRG roles before you installed the SuiteApp, you must manually add permissions to these custom roles.

For more information about setting permissions for a role, see the help topic [Setting Permissions](#).

Change in Custom Scripts Using the Full Access Role

 **Note:** The Full Access role has been deprecated. For more information, see the help topic [Full Access Role \(Deprecated\)](#).

Starting with Onboarding/Offboarding Plans version 1.02.1, custom scripts included in the SuiteApp run using the Administrator role. If you're upgrading to this version, update your script deployments to run as Administrator.

To update your script deployments:

1. Go to Customization > Scripting > Script Deployments.
2. Find the following OOP scripts and click **Edit**.
 - OC Assignee Task UE
 - OC Employee UE
 - OC Checklist Access Su
 - OC Checklist Su
 - OC Onboarding Checklist UE
 - OC Onboarding Template Checklist UE
3. On the **Execute as Role** list, select **Administrator**.
4. Click **Save**.

To continue setting up the SuiteApp, see [Setting Form Preferences](#).

Setting Form Preferences

Set the preferred form for each custom role you assign to users.

To set form preferences:

1. Go to Setup > Users/Roles > Manage Roles.
2. Find the custom role on the list and click **Edit**.
3. On the Role page, click the **Forms** subtab.
4. Click the **Custom Record** subtab.
5. In the **Preferred** column, check the box for **Custom Onboarding Task Form**.
6. In the **Restricted** column, check the box for **Custom Onboarding Task Form**.
7. Click **Save**.

Updates Preferences

Roles that use the SuiteApp can receive updates about their plans through the Onboarding portlet, Reminders portlet, or email notifications.

To set up the Onboarding portlet, see [Setting Up the Onboarding Portlet](#).

To set up reminders, see the help topic [Setting Up Reminders](#).

Click or drag to add the following reminders on your dashboard:

- Onboarding Tasks
- Offboarding Tasks

For email notifications to work, refer to the following:

- Verify that any Coordinator you assign to a plan has an email address on their employee record. The SuiteApp uses this address to send notifications to employees.
- If you want an employee to get notifications, they must have an existing employee record. Otherwise, they can't receive updates about their assigned tasks or plans. If you create a plan before their record, update the plan to link it after the record has been created.

Email Summary

The SuiteApp has a script that sends an email summary of current tasks, assignees and coordinators. You can change the script's schedule to fit your company's email policies.

To change the email summary script:

1. Go to Customization > Scripting > Script Deployments.
2. Under the Script column, find OC Send Daily Summary SS and click **Edit**.
3. In the **Status** field, select **Scheduled**.
4. Make the appropriate changes under the **Schedule** subtab. For more information, see the help topic [Scheduled Script Deployment Record](#).
5. Click **Save**.

To learn how to use the SuiteApp for your business, see [Getting Started With Onboarding and Offboarding Plans](#).

Setting Up the Onboarding Portlet

You can customize your dashboard to include an Onboarding portlet. The Onboarding portlet can show up to three tabs:

- Your onboarding plan
- Your assigned tasks
- New hires in your organization

Here's what you can do with the Onboarding portlet:

- Track progress and due dates for your onboarding activities
- Mark onboarding activities as complete
- See how many assigned tasks you still have pending
- Monitor tasks with upcoming due dates
- Open a task link to update its status
- View your company's recent hires
- Open a link to view a new hire's employee record or send them a welcome email

To set up your Onboarding portlet:

1. Click **Personalize** in the upper-right corner of your dashboard or use the **Personalize Dashboard** link in the **Settings** portlet.
2. On the **SuiteApps** tab, click the **Onboarding** icon or drag it onto the dashboard.

Tip: You should use the portlet in the wide or narrow areas of the one- or two-column dashboard layouts. Try not to use it in the narrow areas of a three-column layout.

To give everyone with the Employee Center role the same onboarding experience, turn on the Employee Center Dashboard Publishing feature. This feature lets you publish a standard Employee Center dashboard for everyone in your organization with that role. All Employee Center users see the same dashboard and portlets when they log in to NetSuite with that role. For more information, see [Employee Center Dashboard Publishing Feature](#).

To perform activities on the Onboarding portlet, see [Using the Onboarding Portlet](#).

Getting Started With Onboarding and Offboarding Plans

Onboarding/Offboarding Plans lets you manage employee career changes in your organization.

To get started with the SuiteApp, see the following:

- [Accessing the SuiteApp](#)
- [Using the SuiteApp for Employee Onboarding](#)
- [Using the SuiteApp for Employee Offboarding](#)

For more details on what you can do with the SuiteApp, see [Working With Onboarding and Offboarding Plans](#).

Accessing the SuiteApp

Refer to the following navigation table to access Onboarding/Offboarding Plans.

Task	Page Name	Accounting Center (CPO and HRG)	Classic Center (Administrators)
Create a new plan	Onboarding/Offboarding Plan	Payroll and HR > Lists > Onboarding/Offboarding Plan > New	Lists > Employees > Onboarding/Offboarding Plan > New
View the list of plans	Onboarding/Offboarding Plan List	Payroll and HR > Lists > Onboarding/Offboarding Plan	Lists > Employees > Onboarding/Offboarding Plan
Create a new template	Onboarding/Offboarding Template	Setup > Onboarding/Offboarding > Template > New	Setup > Onboarding/Offboarding > Template > New
View the list of templates	Onboarding/Offboarding Template List	Setup > Onboarding/Offboarding > Template	Setup > Onboarding/Offboarding > Template

For more information about using plans and templates, see [Working With Onboarding and Offboarding Plans](#).

Using the SuiteApp for Employee Onboarding

Onboarding/Offboarding Plans helps you give new employees a smooth transition. You can run onboarding activities with custom plans and templates you can reuse.

To get started with employee onboarding, refer to the following table for a list of common tasks.

Task	Related Help Topic	Notes
1. Create an onboarding template or make a copy of the premade template.	Working With Templates	Template: Onboarding Plan Template
2. Create an onboarding plan.	Creating Plans	Plan Type: Onboarding
3. Manage the onboarding plan.	Managing Plans	-
4. Track updates.	Updates Preferences Working With Updates	Reminders portlet: Onboarding Tasks

Using the SuiteApp for Employee Offboarding

Onboarding/Offboarding Plans helps you make offboarding smooth for employees who are leaving. You can handle offboarding with custom plans and templates you can reuse.

Guidelines for Using the SuiteApp for Employee Offboarding

- Before you create an offboarding plan, make sure the employee has a record. You can't create an offboarding plan without one.
- After you create an offboarding plan, don't clear the **Termination/Release Date** field on the employee record. The SuiteApp uses this date to set task due dates. If you delete it, you won't be able to change due dates and will have to delete the plan.
- If you use Effective Dating, make sure the effective date on the employee record is the current date or a date in the past. If you set it to a future date, the SuiteApp can't source the termination date from the record

To get started with employee offboarding, refer to the following table for a list of common tasks.

Task	Related Help Topic	Notes
1. Create an offboarding template or make a copy of the premade template.	Working With Templates	Template: Offboarding Plan Template
2. Enter a termination date on the employee record.	Employee Termination	-
3. Create an offboarding plan.	Creating Plans	Plan Type: Offboarding
4. Manage the offboarding plan.	Managing Plans	-
5. Track updates.	Updates Preferences Working With Updates	Reminders portlet: Offboarding Tasks

Working With Onboarding and Offboarding Plans

Onboarding/Offboarding Plans helps you manage templates, plans, and updates for smooth employee career movements.

For more information about working with Onboarding/Offboarding Plans, see the following:

- [Working With Templates](#)
- [Working With Plans](#)
- [Using the Onboarding Portlet](#)
- [Working With Updates](#)

Working With Templates

With Onboarding/Offboarding Plans you can make your own templates or use premade patterns when creating plans. Templates are used when creating plans.

To start, see:

- [Working With Premade Templates](#)
- [Creating Templates](#)

■ Managing Templates

Working With Premade Templates

You can use a premade template as a pattern for templates that you want to create. Each template has a task that fit the plan type.

Note: Only make copies of premade templates when making your own template. Don't edit premade templates. If you do, SuiteApp upgrades may overwrite your changes.

The SuiteApp includes the following templates:

- Onboarding Plan Template
- Offboarding Plan Template

To create a template from a premade template:

1. Go to the Onboarding/Offboarding Template List page. For instructions, see [Accessing the SuiteApp](#).
2. On the page, choose a premade template. Click **View**.

Note: Don't click **Edit**. If you do, SuiteApp upgrades may overwrite your changes.

3. On the template page, point to the **Actions** list. Click **Make Copy**.
4. On the Onboarding/Offboarding Template page, click the **Template Name** field. A list of tasks will appear under the **Tasks** subtab. The **Plan Type** and **Due Date Basis** fields are already populated with the appropriate entries.

Note: The **Due Date Basis** field is populated according to plan type. For onboarding plans, it displays **Hire Date**. For offboarding plans, it displays **Termination Date**.

5. In the **Template Name** field, enter a new name with a maximum of 300 characters.
6. In the **Custom Welcome Message and Email Content** text box, retain or edit the message. The text shows in the Onboarding portlet, welcome page of the Onboarding plan, and is sent as an email notification to the employee.

Tip: The [firstname] placeholder fills in the employee's first name sourced from the employee record.

7. On the **Tasks** subtab, you can keep or update the existing values for each task.

Column	Notes
Task Name	Keep the task name or enter a new name with a maximum of 300 characters.
Task Description	Keep the task description or enter a new one with a maximum of 100 characters.
Required	Check the box if the assignees must finish the task.
Days from Due Date Basis	This column works with the Due Date Basis field on the header section. Enter the date when the task should be finished. ■ Before the due date basis – Enter a minus sign (-) and the number of days. ■ On the same day as due date basis – Enter zero (0). ■ After the due date basis – Enter the number of days.

Column	Notes
	- No defined due date – Leave blank. The following lists some examples of tasks and the appropriate entries: - Order a computer 14 days before the hire date – Enter -14. - Introduce the new hire on their hire date – Enter 0. - Complete profile five days after the hire date – Enter 5. - Submit an optional document – Leave blank.
Assigned To	To assign a task to a specific employee for all plans created using this template, select the employee. Otherwise, leave it blank. You can fill out the column later when you create a plan for an employee. To select assignees, click the double arrows. On the popup window, select assignees from employee lists or search for their names.
Include Supervisor as Assignee?	Check the box to include the supervisor as an assignee. When you use the template to create an employee's plan, the Assigned To column will automatically include their supervisor.
Include Employee as Assignee?	Check the box to include the employee as an assignee. When you use the template to create an employee's plan, the Assigned To column will automatically include their name.
Task URL	If a task requires the employee to access a website, add the URL. You can add a maximum of 999 characters on this field. The task name will show as a link in the assignee's plan. This is especially helpful if the task involves other pages in NetSuite.

- To add tasks, go to the bottom of the task list. Enter the task details and click **Add**.
- Click **Save**.

After you save the template, you'll find it in the list of all templates. For more information, see [Accessing the SuiteApp](#).

To make a plan from the template you created, see [Creating Plans](#).

Creating Templates

Onboarding/Offboarding Plans helps you make templates that fit your business needs.

To create a template:

- Go to the Onboarding/Offboarding Template page. For instructions, see [Accessing the SuiteApp](#).
- Enter a name in the required **Template Name** field. Use clear keywords. You can enter up to 300 characters.
- In the **Plan Type** field, select the appropriate type. This field is set to **Onboarding** by default.
- The **Due Date Basis** field populates with the date that matches the plan type. For onboarding, it displays **Hire Date**. For offboarding, it displays **Termination Date**. This field works in conjunction with the **Days from Due Date Basis** column to determine the due date of each task.
- In the **Custom Welcome Message and Email Content** text box, keep or edit the message. The text you enter appears in the Onboarding portlet, welcome page of the Onboarding plan, and is sent as an email notification to the employee.

Tip: The [firstname] placeholder fills in the employee's first name sourced from the employee record.

- On the **Tasks** subtab, enter the details of your task.

Column	Notes
Task Name	Enter a task name with a maximum of 300 characters.
Task Description	Enter a task description with a maximum of 100 characters.
Required	Check the box if assignees must finish the task.
Days from Due Date Basis	This column works with the Due Date Basis field on the header section. Enter the date when the task should be finished. ■ Before the due date basis – Enter a minus sign (-) and the number of days. ■ On the same day as due date basis – Enter zero (0). ■ After the due date basis – Enter the number of days. ■ No defined due date – Leave blank. The following lists some examples of tasks and the appropriate entries: ■ Order a computer 14 days before the hire date – Enter -14. ■ Introduce the new hire on their hire date – Enter 0. ■ Complete profile five days after the hire date – Enter 5. ■ Submit an optional document – Leave blank.
Assigned To	To assign a task to a specific employee for all plans created using this template, select the employee. Otherwise, leave it blank. You can fill out the column later when you create a plan for an employee. To select assignees, click the double arrows. On the popup window, select assignees from employee lists or search for their names.
Include Supervisor as Assignee?	Check the box to include the supervisor as an assignee. When you use the template to create an employee's plan, the Assigned To column will automatically include their supervisor.
Include Employee as Assignee?	Check the box to include the employee as an assignee. When you use the template to create an employee's plan, the Assigned To column will automatically include their name.
Task URL	If a task requires the employee to access a website, add the URL. You can add a maximum of 999 characters on this field. The task name will show as a link in the assignee's plan. This is especially helpful if the task involves other pages in NetSuite.

7. After you complete the task details, click **Add**.
8. Repeat step 6 for each task you need to add.
9. Click **Save**.

After you save the template, you'll find it in the list of all templates. For more information, see [Accessing the SuiteApp](#).

To make a plan from the template you created, see [Creating Plans](#).

Managing Templates

Onboarding/Offboarding Plans lets you edit, inactivate, or delete an existing template.

Guidelines for Managing Templates

- If you change a template after it was associated with a plan, your changes apply only to future plans that are created with that template.

- You can't delete a template if a plan uses it. Delete the plan first, then delete the template.
- If you don't want to use a template, but can't delete all plans associated with it, you can mark it as inactive. Inactive templates can't be used for new plans.

To manage a template:

1. Go to the Onboarding/Offboarding Template List page. For instructions, see [Accessing the SuiteApp](#).
2. Locate the template name. Click **Edit**.
3. Choose the task you want from the following table.

Task	Instructions
Edit the template	Edit the fields and columns.
Inactivate the template	Check the Inactive box.
Delete the template	Point to the Actions list. Click Delete .

4. Click **Save**.

Working With Plans

After you install Onboarding/Offboarding Plans, you can already create a plan by using a premade template. You can also create your own template that you can use to create plans.

To start, see:

- [Creating Plans](#)
- [Managing Plans](#)

Creating Plans

Onboarding/Offboarding Plans helps you make a plan for an employee's career move. When you make a plan, you can use an existing template to populate tasks or create a new list of tasks.

Important: Make sure the employee has an employee record before you create their offboarding plan. You can't make one without it.

To create a plan:

1. Go to the Onboarding/Offboarding Plan page. For instructions, see [Accessing the SuiteApp](#).
2. In the **Plan Type** field, select the appropriate type.

This field is set to **Onboarding** by default.

The plan type determines which templates you can select in the Template field. For more information, see [Plan Types and Templates](#).

Note: Ensure that you select the correct plan type before you continue. If you change it later, you'll lose any data you entered in the other fields.

3. Complete the values for the fields in the table.
 - For onboarding plans, enter values based on whether there's an employee record or not.

- The welcome message and email from an onboarding plan template will only work with employees that have existing employee records. The employee record must have a name and email address.
- For offboarding plans, follow the steps in the Employee record is available column.

Field	Employee record is available	Employee record is not available
Employee Name	No action needed. The value is sourced from the employee record. If the record's deleted, this field is set to blank.	Enter the employee's name.
Employee Record	Enter a name or click the double down arrows to select the employee.	Leave the field blank.
Hire Date	No action needed. The value is sourced from the employee record. If the record is deleted, this field is set to blank. The employee record must contain a hire date before you can select a template from the Template field.	Enter the date when the employee starts to work in the organization. If want to use an onboarding template from the Template field, ensure this field isn't blank.
Termination Date (for offboarding plans)	No action needed. Value is sourced from the employee record.  Note: If you use Effective Dating, you must set the employee record's effective date to the current date or a past date. If you set it to a future date, the SuiteApp can't source the termination date from the record.	For offboarding plans, you can't enter anything in this field.
Supervisor	No action needed. The value is sourced from the employee record. If the record is deleted, this field is set to blank.	Enter a name or click the double down arrows to select the supervisor.
Location	No action needed. The value is sourced from the employee record. If the record is deleted, this field is set to blank.	Select the location where the employee works.

 **Note:** When the employee record becomes available, the coordinator can link it to the plan. Before you do, see [Guidelines for Associating Plans With Employee Records](#).

4. From the **Plan Status** list, select the status of the plan.

Plan Status	Description	Notes
Not Started	This status is for plans where all tasks are set to Not Started . New plans have this status by default.	The plan goes back to Not Started if one or more task statuses is set to blank, then Not Started .
In Progress	This means at least one task is In Progress or Completed , but not all are done.	The plan goes back to In Progress if any task is set to Not Started or In Progress .
Completed	This means all tasks are completed. The coordinator can also set the plan to Completed even if some tasks aren't marked complete.	The plan is set to Completed if all tasks are marked completed, or any Not Started or In Progress tasks are deleted.

5. From the **Coordinator** list, select the name of the employee who will manage the plan. The Coordinator can view, edit, and create tasks on the plan. For more information, see [Managing Plans as a Coordinator](#).

6. If you want to use a template from the **Template** list, you need to check the following:
- When you create onboarding plans, ensure that the **Hire Date** field isn't blank.
 - For onboarding plans, employee records must have a name and an email address so that the welcome message and email are displayed and sent correctly.
 - When you create offboarding plans, ensure that the **Termination Date** field isn't blank.

The tasks in the template will appear on the **Tasks** subtab

7. Complete the task details:
- If you used a template and want to change the task details, use the table as a guide.
 - If you didn't use a template and need to add new tasks, enter the values based on the table. Click **Add**.

Column	Guideline
Task Name	Enter a maximum of 300 characters for the name of your task.
Task Description	Enter a maximum of 100 characters for the description of the task.
Required	Check the box if assignees must finish the task.
Due Date	If you used a template, the populated tasks will already have due dates. For new tasks, enter or select the date.  Note: If you link an employee record with an existing plan, the hire date and due dates of all tasks may change. The dates set may adjust to accommodate the difference between the two hire dates.
Assigned To	Click the double arrows. On the popup window, select assignees from employee lists or search for their names.
Task Status	Select the status of the plan. This field is set to Not Started by default.
Marked Complete By	Leave this field blank. It's automatically populated with the name of the employee who marks the task as Completed
Notes	Enter a maximum of 300 characters for information that are relevant to the task.
Task URL	If a task requires the employee to access a site, append a URL with a maximum of 999 characters on this field. The task name will appear as a link in the assignee's plan. This is especially helpful if the task involves other pages in NetSuite.

8. Click **Save**.

Guidelines for Associating Plans With Employee Records

If you must associate an employee record to an existing plan for an employee, remember the following:

- Ensure the record has a name, an email address, and a hire date.
- If the hire date in the record and plan are different, the due dates for all tasks adjusts to accommodate the difference in the dates. See the following table for a sample calculation for due dates if hire dates are changed manually, or are associated with an employee record.

	Before Associating with Record	After Associating with Record
Hire Date	October 1, 2019	October 6, 2019
Task Due Before the Hire Date	September 17, 2019	September 22, 2019

	Before Associating with Record	After Associating with Record
Task Due After the Hire Date	October 6, 2019	October 11, 2019

- If you change the hire date of employees on their record, the plan's hire date and due dates may also change.
- If you delete an employee record linked to a plan, the following sourced values are removed from the plan:
 - Employee Name
 - Hire Date
 - Supervisor
 - Location
- When due dates change, the SuiteApp sends an email to the employees and assignees about the update.

Managing Plans

The actions you can perform on a plan depends on whether you have a Coordinator or Assignee role.

If you use any of the standard roles and access a plan created for you, you're automatically set as an Assignee. You can only view, update, and add notes to tasks assigned to you. You can only view the complete list of tasks of other employee plans.

To start, see:

- [Managing Plans as a Coordinator](#)
- [Managing Plans as an Assignee](#)

Managing Plans as a Coordinator

As the Coordinator of a plan, you can do the following:

- [Viewing or Editing Plans](#)
- [Tracking the Status of Plans](#)
- [Deleting Plans](#)

If you use any standard role with complete permissions to access a plan that is created for you, you're automatically set as an Assignee. This also applies to custom roles. You can only view the complete list of tasks of other employee plans. For more information, see [Managing Plans as an Assignee](#).

Viewing or Editing Plans

Use the following procedure to view or edit plans.

To view or edit a plan:

1. Go to the Onboarding/Offboarding Plan List page. For instructions, see [Accessing the SuiteApp](#).
2. On the page, locate the employee's name, then click **View** or **Edit**.
3. After you click **Edit**, you can make changes to the plan.

 **Note:** If the plan is already associated with a template, you can't change it anymore. You can only select a template when you first create the plan.

4. Click **Save**.

Tracking the Status of Plans

As a Coordinator, use the **Plan Status** field to view and edit the status of the plan.

Plan Status	Description	Notes
Not Started	This status is for plans where all tasks are set to Not Started . New plans have this status by default.	—
In Progress	This means at least one task is In Progress or Completed , but not all are done.	The plan goes back to In Progress if any task is set to Not Started or In Progress .
Completed	This means all tasks are completed. The coordinator can also set the plan to Completed even if some tasks aren't marked complete.	The plan is set to Completed if all tasks are marked completed, or any Not Started or In Progress tasks are deleted.

Deleting Plans

To delete a plan:

1. Go to the Onboarding/Offboarding Plan List page. For instructions, see [Accessing the SuiteApp](#).
2. On the page, locate the employee's name and click **Edit**.
3. From the **Actions** list, click **Delete**.

Managing Plans as an Assignee

As an Assignee to a task, you can do the following:

- [Viewing Assigned Tasks](#)
- [Updating the Status of Tasks](#)
- [Adding Notes on Assigned Tasks](#)

If you use any standard role, and access a plan that is created for you, you're automatically set as an Assignee. You can only view, update, or add notes to tasks that are assigned to you. You can only view the complete list of tasks of other employee plans.

Viewing Assigned Tasks

As an Assignee, you can view tasks through the Onboarding portlet, the Reminders portlet or email notifications.

To view tasks using the Onboarding portlet, see [Using the Onboarding Portlet](#).

The Reminders portlet shows notifications and how many tasks you have that are **Not Started** or **In Progress**.

To view assigned tasks on the Reminders portlet:

1. Go to Home.

2. On the Reminders portlet, click one of the following:
 - Onboarding Tasks
 - Offboarding Tasks

Note: You'll need to add both reminders on the portlet to receive notifications. For more information, see [Updates Preferences](#).

3. On the results page, find your task and click **Edit** or **View** to open it.

Employees and assignees get email notifications with links to plans. To better understand the notifications, see [Receiving Email Notifications](#).

Updating the Status of Tasks

You can update your task status in the Onboarding portlet, the plan page, or the Reminders portlet results page.

To update tasks using the Onboarding portlet, see [Using the Onboarding Portlet](#).

Note: All tasks, including required and optional tasks, must be marked complete for the plan status to automatically set itself as **Completed**. Otherwise, the Coordinator has to update it manually. For more information, see [Managing Plans as a Coordinator](#).

To update the task status on the plan page:

1. On the Onboarding/Offboarding Plan page, locate the task.
2. In the **Task Status** column, select a status from the list.

Task Status	Description	Notes
Not Started	All tasks start with this status by default.	—
In Progress	Select this status for tasks you've started to work on.	The assignee status changes from Not Started to In Progress if one or more task statuses are set to In Progress or Completed .
Completed	Select this status for tasks you've finished.	The assignee status changes to Completed when all your tasks are set to Completed .

3. Click **Save**.

To update the task status from the Reminders portlet:

1. On the Reminders portlet, click one of the following:
 - Onboarding Tasks
 - Offboarding Tasks
2. To use inline editing, turn on the **Edit** switch.
3. Locate the task on the list and click the status of the task to select a new status.

Adding Notes on Assigned Tasks

As an assignee, you can add comments or notes to each task. Other assignees assigned to these tasks can view and edit them too.

if the plan is for you, you can see notes added by assignees.

To add notes on assigned tasks:

1. On the Onboarding/Offboarding Plan page, locate the task.
2. In the **Notes** column, enter your comments about the task. You can enter a maximum of 300 characters in this field.
3. Click **OK**.
4. Repeat Steps 2 to 3 to add notes to other tasks on the plan.
5. Click **Save**.

Using the Onboarding Portlet

The Onboarding portlet is available to all roles, including the Employee Center role. If you don't see the portlet on your dashboard, see [Setting Up the Onboarding Portlet](#).

 **Note:** In the Employee Center, if you see a lock icon next to **Home** on the dashboard and the portlet is missing, contact your administrator.

With the Onboarding portlet, you can perform activities on the following tabs:

- [My Plan](#)
- [My Tasks](#)
- [New Hires](#)

My Plan

The My Plan tab becomes available when you get assigned your first onboarding plan. What you see changes as you make progress.

The My Plan tab is only available when the employee is first assigned an onboarding plan. The contents of the tab dynamically changes depending on the employee's progress.

Colored badges appear in the top left corner when a plan activity is due today, due tomorrow or overdue.

To complete your onboarding plan:

1. On the Onboarding portlet, select the **My Plan** tab.
2. Depending on your progress, click **Start Onboarding** or **Continue Onboarding** to open the Onboarding Plan page.
3. Check the box next to the task name of every task you complete.
4. Click **Save**. The green progress bar extends to the right to show your progress.
5. To return to the home dashboard, click **Back**.
6. Repeat steps 1 to 3 until all activities are marked complete.
After you complete all the activities, the Onboarding Plan page closes and takes you back to the Onboarding portlet.
7. Click **Dismiss Plan** to hide the **My Plan** tab.

My Tasks

The My Tasks tab is always available and shows tasks assigned to you as part of another employee's onboarding plan. Colored badges appear under the Due Date column for tasks that are due today, due tomorrow or overdue.

To update the status of your tasks:

1. On the Onboarding portlet, select the **My Tasks** tab.
2. To open the Onboarding/Offboarding Plan page, click on a task name.
3. In the **Task Status** column, select a status from the list.

Task Status	Description	Notes
Not Started	All tasks start with this status by default.	—
In Progress	Select this status for tasks you've started.	The assignee status changes from Not Started to In Progress if one or more task statuses are set to In Progress or Completed .
Completed	Select this status for tasks that you have accomplished.	The assignee status changes to Completed when all your tasks are set to Completed .

4. Click **Save**.
5. (Optional) To view a list of all your tasks, click **View All Tasks**.
6. (Optional) To view a list of all completed tasks, click **View Completed**.

New Hires

The New Hires tab always shows up to five new employees from the last 90 days. To view the new employee's profile, click their name. To send a welcome email, click the envelope icon beside the **Say Hi!** greeting on the right column. If they don't have an email in their employee record, you won't see the icon, so you can't send them an email.

Guidelines for the Onboarding Portlet

Read these guidelines to maximize your use of the portlet:

- The portlet only supports one onboarding plan. After you complete and dismiss it, the My Plan tab is permanently hidden. If you are given a new onboarding plan, the activities on that plan will appear in the My Tasks tab.
- After you dismiss a plan, you can still view it using your Employee Center – Home Links. You can also view it if you click **View Completed** in the My Tasks tab.
- All onboarding plan tasks, including required and optional activities, must be marked complete for the plan to set itself as complete.
- The My Tasks tab shows up to five tasks, but you'll see the total number of assigned tasks next to the My Tasks label.
- After you click a new employee's name, the information you see depends on your role's permissions.
- To send a welcome email from the New Hires tab, ensure that you have a valid email application installed in your device. Your operating system must also recognize this application as your device's default email client.

Working With Updates

HR professionals or employees with access to the SuiteApp can receive notifications about the progress of an employee in the following ways:

- [Tracking Dashboard Reminders](#)
- [Receiving Email Notifications](#)

Tracking Dashboard Reminders

You can set up reminders for incoming onboarding tasks in the reminders portlet. For the reminders to appear on the portlet, you need to be assigned to a task.

To set up reminders, see [Updates Preferences](#). You can track the following reminders from the dashboard:

- Onboarding Tasks
- Offboarding Tasks

To update task statuses, see [Updating the Status of Tasks](#).

Receiving Email Notifications

The SuiteApp sends email notifications to the following users defined on the plan:

- Employee
- Coordinator
- Assignee

Important: Email notifications sent to employees and assignees are sent by using the coordinator's email address. Coordinators should make sure their record has an email address so that the SuiteApp can use it to send email notifications.

The SuiteApp sends an email after an employee updates and saves a plan.

The following table shows the events that trigger email notifications for each type of user.

Email Notification Trigger	Employee on the Plan	Assignee	Coordinator
New tasks were assigned to you	X	X	–
Tasks are no longer assigned to you because of any of the following: ■ You were removed as an assignee ■ Tasks were deleted ■ Plan was deleted	X	X	-
Due dates for your tasks were changed	X	X	-
Daily update of your tasks	X	X	-
Daily update of all tasks related to an employee change	–	-	X

Employee Offboarding

When an employee leaves your company, you should update the employee's information in NetSuite. NetSuite provides tools to terminate employees, track termination reasons, and inactivate or remove employee records.

For more information, see the following help topics:

- [Employee Termination](#)
- [Termination Reason Tracking](#)
- [Deleting Employee Records](#)
- [Inactivating Employee Records](#)

Employee Termination

When an employee leaves your company, you should modify the person's record to show the termination date. You should also remove any granted user roles and access permissions. You can inactivate the employee record to prevent it from showing in lists or as choices anywhere in your account. For more information, see [Inactivating Employee Records](#).

You must also specify a termination date. If you use the Termination Reason Tracking feature, you must specify a termination category, termination reason, termination details, and if the termination is regretted. For more information, see the help topic [Termination Reason Tracking](#).

If you use SuitePeople U.S. Payroll to pay this employee, you can create an individual paycheck to complete any financial obligation you have to them. For more information, see the help topics [Viewing Individual Paychecks](#) and [Creating an Off-Cycle Payroll Batch](#).

Modifying a Terminated Employee's Record

Use the following procedure to modify a terminated employee's record.

To modify a terminated employee's record:

1. Go to Lists > Employees > Employees.
2. On the Employees list, click **Edit** next to the terminated employee's name.
3. Click the **Human Resources** subtab.
4. In the **Termination/Release Date** field, enter the last working day for the employee. Choose this day based on one of these possibilities:
 - To terminate the employee as of today or a past date, enter the appropriate date. If you terminate an employee on today's date, the termination will take effect immediately and the employee will lose access to NetSuite. If you want the employee to still access NetSuite on their last day of employment, you can terminate their employment at the end of the workday.
 - If you're using the Effective Dating feature and you want to terminate the employee on a future date, enter that future date.

 **Note:** Future-dated changes are made shortly after 12:00:01 am Pacific Time on the specified date.

If you're using Termination Reason Tracking, you must enter the following:

- a. **Termination Category** - Select whether the termination is voluntary or involuntary. Voluntary means the employee ended their employment and involuntary means the company ended the employment.
 - b. **Termination Reason** - Select the reason for the termination. For more information, see the help topic [Managing Termination Reasons](#).
 - c. **Termination Regretted** - Select if the termination is regretted. A regretted termination means that the company regards the termination as a loss. A non-regretted termination means that the company doesn't see the termination as a loss. Select **Unspecified** from the list to untrack this information.
 - d. **Termination Details** - Enter details of the termination.
5. Modify any other fields as required. For more information, see [Entering Human Resources Information for an Employee](#).
 6. Click the **Access** subtab.
 7. Remove all access permissions and assigned user roles.
 8. Click the **System Information** subtab.
 9. Check the **Inactive** box if you don't want this employee's record to appear in lists or as choices anywhere in your account.
- To view inactivated employee records or reactivate them, go to Lists > Employees > Employees, and check the **Show Inactives** box.

 **Important:** You should also clear the **Give Access** box to revoke access for the employee. If you want to inactivate all roles of the employee, and the employee is also a partner, customer, or vendor, you must revoke access and inactivate those records, too.

10. Click **Save**.

 **Note:** You can't delete an employee record that has any associated transactions.

Completing Financial Obligations to a Former Employee

You must follow the laws set by your jurisdiction to complete financial obligations to a terminated employee. Depending on the jurisdiction an employee works in, you might need to pay them on the same day that employment is terminated. Otherwise, you can process the employee's final paycheck in your regular payroll batch.

If you use SuitePeople U.S. Payroll to pay your employees, follow this procedure for compensating a terminated employee.

To complete financial obligations to a former employee:

1. Update payroll information. This ensures the employee's new status is updated with the payroll tax engine. For more information, [Updating Payroll Information](#)
2. If you need to process payroll on the same day that employment is terminated, create a one time payroll that includes only the terminated employee. For more information, [Creating an Off-Cycle Payroll Batch](#).

Important: For same-day payroll batches, a fee applies. Direct deposits take at least two business days to process. To pay the employee with a check, check the **No Direct Deposits** box on the Payroll Batch page.

The terminated employee is paid during the first regular payroll cycle that includes the termination date. You can also pay them from a one-time payroll batch.

Mass Deleting an Employee's Events

When an employee leaves your company, an administrator can delete the events they've scheduled. This is the only way to delete another employee's events that are marked Private or Show as Busy.

Roles other than administrator can't delete events that do not belong to them. During the mass update, administrators may see public events they can't delete.

To perform the delete events mass update:

1. Go to Lists > Mass Update > Mass Updates.
2. Click **Activities**, and then click **Delete Events**.
3. On the **Criteria** subtab in the **Filter** column, select **Calendar**.
4. In the window that appears, select the employee whose calendar you want to delete.
5. Click **Set**.
6. Click **Preview**.
7. On the Mass Update Preview Results page, click **Perform Update**.

Termination Reason Tracking

When you terminate an employee, you must specify a termination or release date. If you use the Termination Reason Tracking feature, you must select a termination category and a termination reason from a list of options. You must also specify termination details, and whether the termination is regretted. For more information, see [Managing Termination Reasons](#).

If you view the employee record of an employee who was terminated before this feature was enabled, these fields are populated by the string "Unspecified".

NetSuite has several default termination reasons, but you can change them or create your own. For more information, see [Default Termination Reasons](#).

The Termination Reasons page shows all of the termination reasons in your account. If you don't want to use a reason, but it has been used in the past, you can make it inactive. To view inactivated termination reasons, select the **Show Inactives** box.

If you use the Workforce Analytics feature, you can view a high-level snapshot and synopsis of the employees who are leaving your company. You can view the reasons why employees are leaving on the Turnover Analysis page. Go to Reports > Employees/HR > Turnover Analysis. For more information, see [Workforce Analytics](#).

Note: When this feature is enabled, mass update isn't available. Instead use the NetSuite Import Assistant to update data through import of a CSV file. For information, see the help topic [Importing CSV Files with the Import Assistant](#). Also, when this feature is enabled inline editing is disabled.

Watch the following help video for information about using the Termination Tracking feature:

Using the Termination Reason Tracking Feature

Termination Reason Tracking Roles and Permissions Requirements

For information about the permission requirements for termination reason tracking, see the help topic [Termination Reason Tracking Permission Requirements](#).

Note: If you want more control over what employee information is accessible by different NetSuite users, you can use the Advanced Employee Permissions feature. When this feature is enabled, you can use its employee permissions. This gives you more control over what employee information certain roles can access. You can also customize employee permission that include all or set of standard fields and sublists from the employee record. For more information, see [Advanced Employee Permissions](#).

Managing Termination Reasons

When you enable the Termination Reason Tracking feature, NetSuite provides several default termination reasons, but you can change them or create your own. For more information, see [Default Termination Reasons](#).

The Termination Reasons page shows all of the termination reasons in your account. If you don't want to use a reason, but it has been used in the past, then you can make it inactive. Select the **Show Inactives** box to show all reasons.

Adding Termination Reasons

Use the following procedure to add a termination reason.

To add a termination reason:

1. Go to Setup > HR Information System > Termination Reasons > New, or click **New Termination Reason** on the Termination Reasons page.
2. Enter a **Name** for the reason. Select a **Termination Reason Category** (Voluntary, Involuntary) from the list.
3. To make the reason inactive, check the **Termination Reason is Inactive** box.
4. To save and return to the Termination Reasons page, click **Save**. To save and create another new termination reason, click the down arrow, and click **Save & New**.

Editing Termination Reasons

Use the following procedure to edit a termination reason.

To edit a termination reason:

1. Go to Setup > HR Information System > Termination Reasons.
2. Click **Edit** beside the termination reason you want to edit.
3. Enter a **Name** for the reason. Select a **Termination Reason Category** (Voluntary, Involuntary) from the list.

4. To make the reason inactive, check the **Termination Reason is Inactive** box.
5. Click **Save**.

Default Termination Reasons

If you're using the Termination Reason Tracking feature, you must specify a termination reason when you terminate an employee. NetSuite has a set of default termination reasons. You can change these or create your own. For more information, see [Managing Termination Reasons](#). For each termination reason, you also specify a termination category: Voluntary or Involuntary.

This is the list of default termination reasons that are available when you start using this feature.

Termination Reason Name	Termination Category
Attendance	Involuntary
Another Job	Voluntary
Disability	Involuntary
Dissatisfaction with Compensation	Voluntary
Dissatisfaction with Co-Worker	Voluntary
Dissatisfaction with Supervisor	Voluntary
Enlisted in Armed Forces	Voluntary
Family Reasons	Voluntary
Health Reasons	Voluntary
Insubordination	Involuntary
Involuntary Other	Involuntary
Involuntary Retirement	Involuntary
Job Abandonment	Voluntary
Job Position Eliminated or Changed	Involuntary
Leave of Absence and Did Not Return to Work	Voluntary
Marriage	Voluntary
Personal Reasons	Voluntary
Refusal to Follow Instruction	Involuntary
Refused Suitable Work	Voluntary
Relocation	Voluntary
Return to School	Voluntary
Unsatisfactory Performance	Involuntary
Violation of Rules	Involuntary
Voluntary Other	Voluntary

Voluntary Retirement	Voluntary
Without Notice or Reason	Voluntary
Working Conditions	Voluntary
Work Schedule	Voluntary

Deleting Employee Records

You can delete an employee record, but normally only in an unusual situation, such as creating the employee record in error. If an employee record has any transactions associated with it, it can't be deleted.

If you have the Compliance 360 SuiteApp installed, you can't delete employee records that are associated with access logs.

If an employee is no longer actively working for your company, you should inactivate the employee record instead. For more information, see [Inactivating Employee Records](#) and [Employee Termination](#).

To delete an employee record:

1. Go to Lists > Employees > Employees.
2. On the Employees list, click **Edit** next to the name of the employee record you want to delete.
3. On the **Actions** menu, click **Delete**.
4. When prompted to confirm, click **OK**.
5. If the employee record has dependent records, the employee record can't be deleted and a NetSuite notice page will appear. Here, you can either click **Go Back** or click the hyperlink to view the dependent records. To delete the employee record, each dependent record must be deleted first.

Inactivating Employee Records

You can inactivate employee records for employees who no longer actively work for your company. This lets you remove their access to NetSuite, while retaining the history of their employment with your company.

When you inactivate an employee record, you can't select it in employee fields anymore.

You can also delete an employee record. You'd only do that if the record was created in error, or if you had another reason to recreate the employee record. For more information, see [Deleting Employee Records](#).

The following are some cases in which you'd want to inactivate an employee record:

- You're terminating the employee. In this case, you don't want to delete the employee record. It has information that you might need in the future for record-keeping or auditing purposes. Also, you might rehire the employee and make their record active again. For more information, see [Employee Termination](#).
- The employee is taking a leave of absence, so you want to temporarily remove their access to NetSuite and restore it later.

When you inactivate an employee record:

- The employee's login credentials and role assignments remain intact. If they return to your company and you make their record active again, they can access NetSuite like they did before being inactivated.
- If the employee has scheduled reports, then the report schedules are automatically deleted.
- If the employee is the owner of calendar events, those events remain in the calendar.
- If the employee is the owner of saved searches, they remain in the list of saved searches.

To inactivate an employee record:

1. Go to Lists > Employees > Employees.
2. Check the **Show Inactives** box at the top of the list.
3. In the **Inactive** column, check the box next to the employee you want to inactivate.
4. Click **Submit**.

Important: You should also clear the **Give Access** box to revoke access for the employee. If you want to inactivate all roles of the employee, and the employee is also a partner, customer, or vendor, you must revoke access and inactivate those records, too.

Time-Off Management

The NetSuite Time-Off Management feature lets Human Resources define and manage time-off plans based on your company's policies. You can then assign these plans to employees based on location, department, class, or with NetSuite OneWorld subsidiary. For more information, see the following topics:

- [Time-Off Management Overview](#)
- [Prerequisites for Using Time-Off Management](#)
- [Time-Off Management Setup](#)
- [Time-Off Management Integration With SuitePeople U.S. Payroll](#)
- [Viewing an Employee's Time-Off Balance](#)
- [Time-Off Changes](#)
- [Submitting Time-Off Requests on Behalf of Employees as an Administrator](#)
- [Approving or Rejecting a Time-Off Request as an Administrator](#)
- [Time-Off Management for Employees or Managers](#)
- [Time-Off Reports](#)

Time-Off Management Overview

The NetSuite Time-Off Management feature enables Human Resources to define and manage time-off plans according to company policies. Then, assign them to employees based on location, department, class, or with NetSuite OneWorld subsidiary.

This includes the ability to:

- Create time-off types for the different categories of leave your employees can take.
- Set up time-off rules to match your company's policies.
- Configure how NetSuite handles rule changes at specific employee milestones.
- Set up who's eligible and what they're entitled to.
- Set up accruals based on a fixed amount per period or hours worked.
- Set up balance and carryover limits.
- Review and adjust employees' time-off balances.

Employees on a time-off plan need access to the Employee Center so they can submit time-off requests. Managers can review and approve time-off requests from an email or from the Employee Center. For more information, see [Time-Off Management for Employees or Managers](#).

The Time-Off Management feature can be integrated with other features in NetSuite, including Time Tracking, SuitePeople U.S. Payroll, Projects, and Resource Allocations:

- [Time Tracking and Time-Off Management](#)
- [Payroll and Time-Off Management](#)
- [Projects and Time-Off Management](#)
- [Project Management, Resource Allocations, and Time-Off Management](#)

Time Tracking and Time-Off Management

You need to enable Time Tracking to use Time-Off Management. If you track employee time and bill it to projects, NetSuite creates time entry records when a time-off request is approved. If you use SuitePeople U.S. Payroll, time off appears in Payroll. You can see these time entry records under the Time Tracking subtab on the employee record. For more information, see the help topic [Time Tracking](#).

Note: If you check the **Require Approvals** box on **Time Records**, you can't edit time-off entries from approved requests. You'll find this preference on the Time & Expenses subtab. To let employees make updates, clear the box.

Payroll and Time-Off Management

Time-Off Management and SuitePeople U.S. Payroll work together to make sure employees get the time off they're entitled to and get paid correctly. For more information about how to set up Payroll and Time-Off Management to work together, see [Time-Off Management Integration With SuitePeople U.S. Payroll](#).

Projects and Time-Off Management

You can associate different types of time off to projects and tasks. When a request for project-related time off is approved, the project information appears on the **Time Details** subtab on the time tracking record.

Project Management, Resource Allocations, and Time-Off Management

When you enable Project Management and Resource Allocations features, they work with Time-Off Management in the following ways:

- If a project manager assigns someone to a project and they have approved time off that conflicts, NetSuite shows a warning on the allocation record and on the Time-Off Conflicts subtab.
- If someone already assigned to a project requests time off that conflicts and it's approved, the project manager gets an email with the conflict details.

For more information, see the help topic [Resource Allocations and Time-Off Management](#).

Prerequisites for Using Time-Off Management

This section outlines the prerequisites for using the Time-Off Management feature:

- [Install the Time-Off Tracking SuiteApp](#)
- [Assign Work Calendars to Employees](#)
- [Time-Off Management Roles and Permissions Requirements](#)

Note: Currently, the Time-Off Tracking SuiteApp supports only US and UK English languages.

Install the Time-Off Tracking SuiteApp

Important: To install the Time-Off Tracking SuiteApp, you need to have Time-Off Management enabled. Go to Setup > Company > Enable Features. On the Employees subtab, under HR Information System, check the Time-Off Management box. If you don't see this feature on the Enable Features page, you need SuitePeople HR on your account. For more information, see [SuitePeople Overview](#).

With the Time-Off Tracking SuiteApp, employees can request time off using their Employee Center role. Requests go to their supervisor for approval, and the SuiteApp includes saved searches you can use as reports. For more information, see the help topic [Time-Off Tracking Reports](#).

For more information about installing SuiteApps, see the help topic [Installing a Bundle](#). You can search for the Time-Off Tracking Suite App using the following information:

- Bundle Name: **Time-Off Tracking**
- Bundle ID: 112449

The Time-Off Tracking SuiteApp is a managed bundle that updates automatically whenever fixes and enhancements are available.

 **Note:** The Time-Off Tracking SuiteApp uses the time-off request record. Custom fields on the time-off request record don't appear when employees create time-off requests. If you add custom fields to the time-off request record, make sure they aren't required, or set default values if they are.

Assign Work Calendars to Employees

When you use the Time-Off Management feature, you'll need to assign a work calendar to each employee. This way, NetSuite knows which days are working days and can calculate how many hours to deduct for each time-off request. For more information, see the help topics [Setting Up a Work Calendar](#) and [Assigning a Time-Off Plan to an Employee](#).

Time-Off Management Roles and Permissions Requirements

You'll need the Time-Off Administration permission to set up Time-Off Management. Standard roles with this permission are HR Generalist, Administrator, and Chief People Officer (CPO). For details, see the help topic [Time-Off Management Permission Requirements](#).

You can also create custom roles with this permission. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

If your role has the right permission, you can review, approve, or reject time-off requests before employees take time off.

Employees assigned a time-off plan need access to the Employee Center role so they can submit time-off requests and view their time-off balances.

Managers can review requests from an email or from the Employee Center.

Time-Off Management Setup

 **Important:** If you are using SuitePeople U.S. Payroll, see [Time-Off Management Integration With SuitePeople U.S. Payroll](#).

Before you set up Time-Off Management, think about how your company's time-off policies apply to different employees. For example, consider how much time off they get, how unused time off is handled at year-end, and how time off is accrued. You can create multiple plans to fit these differences.

Time-off plans include the types and rules that match your company's policies. Set up time-off types to match your leave categories, like vacation or sick leave. The rules cover eligibility, entitlements, accruals, and carryover during an employee's time at your company.

Complete the following steps to set up the Time-Off Management feature:

- [Creating a Time-Off Type](#)
- [Creating a Time-Off Plan](#)
- [Creating a Time-Off Rule](#)
- [Assigning a Time-Off Plan to an Employee](#)

The process for setting up Time-Off Management is as follows:

Time-Off Types

Time-off types let you define the different categories of leave your employees can take.

For example, you can create a time-off type for vacation and another time-off type for sick leave. These time-off types should be consistent with your company's policies.

You can create as many time-off types as you need to match your company's policies. You can also add multiple rules to each type for different stages of an employee's tenure. For more information, see [Time-Off Rules](#).

Watch the following help video for information about creating a time-off type:

 [Time-Off Management Overview & Creating Time-Off Types — Video 1 of 4](#)

Creating a Time-Off Type

Use the following procedure to create a time-off type.

To create a time-off type:

1. Go to Setup > HR Information System > Time-Off Type > New.
2. In the **Name** field, enter a unique name for the type. This name appears in time-off lists for requests, plans, and changes.
3. In the **Display Name** field, enter how you want the name to appear to employees. For example, you might have different types for different subsidiaries, departments, or locations, but you want them to look the same to everyone.
4. To track only the usage of this time-off type (with no entitlement or balance), check the **Track Only** box. For example, you can use this if your company offers unlimited sick days.
If you change a time-off type to track only, NetSuite stops calculating future accruals. All previous balance entries stay saved and appear in the time-off changes record. For more information, see [Viewing an Employee's Time-Off Balance](#).
5. If you are using SuitePeople U.S. Payroll, select a **Payroll Item**. For more information, see [Time-Off Management Integration With SuitePeople U.S. Payroll](#).

Important: Each time-off type can be associated to only one payroll item, and it must be an Earning type. For more information, [Setting up Payroll Items to Work With Time-Off Management](#).

6. In the **Minimum Increment** and **Increment Unit** fields, set the smallest amount of time off allowed for this type. Requests must be at least this amount and in multiples of it. Leave it at zero or blank to let employees enter any value.
For example, employees must take time off in half-day increments. Set the **Minimum Increment** field to 0.5, and then, from the **Increment Unit** list, select **Days**.
7. To associate this time-off type with a specific project, select the project from the **Project** list.
When you create a project to associate with a time-off type, consider the following:
 - If you select **Limit Time** and **Expenses to Resources**, employees must have **Project Resource** checked on their record to track time.
 - If you select **Allow Time Entry** and **Classify Time as Exempt** on the Preferences subtab, employees can track time against a project even if **Project Resource** isn't checked.
8. To associate this time-off type with a specific task on the project, select it from the **Project Task** list. When you create a project task to associate with a time-off type, enter a value in the **Estimated Work** field on the Project Task/Milestone page. If you don't enter anything in this field the project task is saved as a milestone. It doesn't appear in the **Project Task** list on the time-off type record. For more information, see the help topic [Project Tasks](#).
If you associate a time-off type to a project and task, reports for tracked time will include time-off entries.
9. Use the color selector to choose a color for this time-off type.
10. Click **Save**.

Next, create the time-off plan and add the new types to it. For more information, see the help topic [Creating a Time-Off Plan](#).

Editing a Time-Off Type

You can edit a time-off type at any time. If you're making changes that affect accruals for many employees, do it at the end of the business day so NetSuite has time to process them. Try not to make changes that affect accruals on the same accrual day.

To edit a time-off type:

1. Go to Setup > HR Information System > Time-Off Type.
2. Click **Edit** next to the time-off type you want to change.
3. When you're done editing, click **Save**.

Inactivating or Deleting a Time-Off Type

When you inactivate a time-off type, it won't appear in lists anymore.

You can't delete a time-off type if it's assigned to a time-off plan or if anyone has used it for a balance change or request. Before deleting, remove it from the plan and delete all related changes and requests.

To inactivate a time-off type:

1. Go to Setup > HR Information System > Time-Off Type.
2. Click **Edit** next to the time-off type you want to inactivate.
3. Check the **Inactive** box.
4. Click **Save**.

If the type-off type is assigned to a time-off plan, you'll need to remove it from the plan before you inactivate it. To see inactive types, go to the list page and check the **Show Inactives** box.

Note: When you inactivate a time-off type, its rules are hidden. All future accruals are deleted, and unused time off expires at year-end with no carryover. If needed, manually remove any changes or approved requests for future dates.

To delete a time-off type:

1. Go to Setup > HR Information System > Time-Off Type.
2. Click **Edit** next to the time-off type you want to delete.
3. Select **Delete** from the **Actions** menu.
4. When you're asked to confirm, click **OK**.

Setting Up Time-Off Type Auto-Approval and Time-Off Self-Approver

You can set a time-off type to be automatically approved when requested, with to an approval threshold.

You can make certain employees self-approvers so their time-off requests are automatically approved. This is helpful for executives, like the Chief Product Officer, whose time off you still want to track.

To set up a time-off type for auto-approval with threshold:

1. Go to Setup > HR Information System > Time-Off Type.
2. Click **Edit** next to the time-off type you want to change.
3. Check the **Auto-Approve with Threshold** box.

4. In the **Auto-Approval Threshold** field, enter the maximum period of time that can be automatically approved. Requests over this limit will require supervisor approval. The value uses the unit from the **Increment Unit** field. The minimum value is **1**, and there is no maximum. You can enter a value such as 200 to allow for almost unlimited time-off auto-approvals.

For example, if you set the threshold to 5 days, requests of up to 5 consecutive days will be automatically approved. Requests over 5 days will require supervisor approval. For more information, see [Guidelines for Time-Off Auto-Approvals](#).

5. Click **Save**.

The following guidelines describe how time-off type auto-approvals work with other time-off types in the same request:

- If a request includes both auto-approved and non-auto-approved types, it needs supervisor approval.
- If a request has multiple auto-approved types, it might still need supervisor approval depending on each threshold. The total time is checked against the highest threshold in the request.

The following table summarizes different scenarios when submitting multiple auto-approved time-off types in the same request.

Time-Off Type Submitted		Total Duration of Time-Off Request	Requires Supervisor Approval?
A	B		
Within threshold	Within threshold	Within highest threshold value	No
Within threshold	Within threshold	Exceeds highest threshold value	Yes
Within threshold	Exceeds threshold	Within highest threshold value	Yes
Within threshold	Exceeds threshold	Exceeds highest threshold value	Yes
Exceeds threshold	Exceeds threshold	Exceeds highest threshold value	Yes

- To avoid issues, let users know they should submit auto-approved time-off requests separately from others.

To assign an employee as a time-off self-approver:

1. Go to List > Employees > Employees.
2. On the Employees list, click **Edit** next to the employee you want to set up as a time-off self-approver.
3. Click the **Time-Off** subtab.
4. Check the **Time-Off Self-Approver** box.
5. Click **Save**.

If your account has Advanced Employee Permissions enabled, make sure you add **Time-Off Self Approver** as a custom field in your custom employee permissions. For more information, see [Adding Custom Fields to Advanced Employee Permission](#).

Setting Up Time-Off Calendar Event Creation

You can set time-off types to automatically create an event in the NetSuite calendar. The time-off requester and their supervisor see the approved time-off requests in their Calendar portlet. When the

time-off request is cancelled or rejected, the calendar event is deleted from the calendar. For more information about the Calendar and events, see the help topics [Calendar Portlets](#) and [Working with Events](#).

A calendar event is created for each day in the approved time-off request. By default, all time-off calendar events are set as an All Day event and follows the timezone preferences of the time-off requester. The employee and their assigned supervisor are set as event attendees and must have Active employee records.

To set up automatic time-off calendar event creation:

1. Go to Setup > HR Information System > Time-Off Type.
2. Click **Edit** next to the time-off type you want to change.
3. Check the **Create Calendar Event** box.
4. Click **Save**.

Time-Off Plans

A time-off plan includes the types and rules that dictate how each time-off type is applied. The rules set how eligibility, accruals, entitlements, and carryover work for employees, and how these change over time.

Before you create a time-off plan, make sure you've set up and defined time-off types. For more information, see [Creating a Time-Off Type](#).

Watch the following help video for information about creating a time-off plan:

[Creating Time-Off Plans Using the Time-Off Management Feature — Video 2 of 4](#)

Creating a Time-Off Plan

Use the following procedure to create a time-off plan.

To create a time-off plan:

1. Go to Setup > HR Information System > Time-Off Plan > New.
2. In the **Name** field, enter a name for the time-off plan. This name appears whenever you need to select a time-off plan, such as the employee record. Name the plan so that you or someone else in HR can easily select the right plan to assign to each employee.
3. To show forecasted accruals for the year in days available to an employee, check the **Days Available Includes Future Accruals for the Year** box. To show only time off that employees have accrued so far, leave it unchecked.
4. In the **Start of Entitlement Period** list, select when the entitlement period starts. For example, if employees are entitled to 15 days, and if April is selected, the entitlement period starts April 1st.
5. If necessary, select a **Subsidiary, Class, Department, or Location**. You can assign this plan only to employees who are associated with the department, class, location, and subsidiary you set here. If you don't set any of these, this plan can be assigned to anyone.
6. Click **Save**.

After you save the plan, you can create time-off rules. For more information, see the help topic [Creating a Time-Off Rule](#).

Editing a Time-Off Plan

You can update a time-off plan at any time. After you save it, the system updates any future changes to match the new settings.

To edit a time-off plan:

1. Go to Setup > HR Information System > Time-Off Plan.
2. Click **Edit** next to the time-off plan you want to change.
3. When you're finished editing, click **Save**.

Note: If you're removing rules from a plan, you can't delete the last rule if the time-off plan is assigned to employees. You need to either add another rule or unassign the plan from all employees before you can delete it.

Inactivating or Deleting a Time-Off Plan

When you inactivate a time-off plan, it won't appear in lists anymore. If a plan is already assigned to an employee, remove it from their record before inactivating it. To see inactive plans, go to the list page and check the **Show Inactives** box.

To inactivate a time-off plan:

1. Go to Setup > HR Information System > Time-Off Plan.
2. Click **Edit** next to the time-off plan that you want to inactivate.
3. Check the **Inactive** box.
4. Click **Save**.

To delete a time-off plan:

1. Go to Setup > HR Information System > Time-Off Plan.
2. Click **Edit** next to the time-off plan that you want to delete.
3. From the **Actions** menu, select **Delete**.
4. When you're asked to confirm, click **OK**.

If you try to delete a time-off plan that has employees assigned to it, a popup window appears. Click the associate in the window to view to see who is assigned to the plan. Before you can delete the time-off plan, you need to remove it from each employee record.

Time-Off Rules

After you create a time-off plan, you'll need to set up and apply rules to it. Time-off rules let you decide how time off accrues for each type, and how to manage balances and carryover limits.

Important: If you use SuitePeople U.S. Payroll in your NetSuite account, follow the setup instructions in [Time-Off Management Integration With SuitePeople U.S. Payroll](#).

Watch the following help video for information about creating a time-off rule:

[Creating Time-Off Rules Using the Time-Off Management Feature — Video 3 of 4](#)

Creating a Time-Off Rule

Important: If you use SuitePeople U.S. Payroll in your NetSuite account, follow the setup instructions in [Time-Off Management Integration With SuitePeople U.S. Payroll](#).

To create a time-off rule:

1. Go to Setup > HR Information System > Time-Off Plan.
2. Click **Edit** beside the plan that you want to define rules for.
3. Click **New Time-Off Rule**.
4. In the **Time-Off Type** field, select a time-off type to apply to the plan.

Tip: Click **New** in the Time-Off type field to create a new time-off type for this plan.

5. Enter the minimum tenure for this time-off type, and choose months or years. Usually, minimum tenure increases how much time off employees get over time, but you can also use it to adjust accrual or carryover rules at milestones.

For example, you might want employees to start with 10 vacation days, then bump it up to 15 days after five years. To do this, add two rules for the same time-off type: one with a minimum tenure of zero and 10 days, and another with five years and 15 days.

6. Set up time-off accruals. For more information, see [Time-Off Accruals](#).
7. Set up balance and carryover limits. For more information, see [Setting up Balance and Carryover Limits in a Time-off Rule](#).
8. Click **Save**.

Repeat these steps for each rule you want to add. You can create multiple rules for one time-off type in a plan, but it has to accrue the same way — either by a fixed amount or by hours worked — in every rule.

Time-Off Accruals

Important: If you use SuitePeople U.S. Payroll in your NetSuite account, follow the setup instructions in [Time-Off Management Integration With SuitePeople U.S. Payroll](#).

Time-off types can automatically accrue in a plan either by a fixed amount per period or by hours worked. See [Setting up an Accrual Based on a Fixed Amount per Period](#) and [Setting up an Accrual Based on Hours Worked](#).

Note: If you select a track-only time-off type in the time-off rule, you won't see accrual options.

The following diagram illustrates the process for setting up time-off accruals in a time-off rule:

Important: In a time-off plan, if two or more rules use the same time-off type, they all have to accrue the same way — either by a fixed amount or by hours worked.

Setting up an Accrual Based on a Fixed Amount per Period

Accruals based on a fixed amount are always set up in time-off rules.

When time-off types accrue by a fixed amount per period:

- Time off accrues after a fixed amount of time: weekly, biweekly, semi-monthly, monthly, or annually.
- You set an annual entitlement for the time-off type. For example, employees might be entitled to two personal days in a year.
- Accruals are calculated based on the annual entitlement divided by the number of accrual periods in a year.

For example, time off accrues semi-monthly (or 24 times a year). The annual entitlement is 15 days. Therefore, the accrual amount per period = $15 \div 24$.

For more information about how accruals are calculated, see [Understanding How Accruals are Generated when Multiple Time Rules are in One Time-Off Plan](#)

- Time off can accrue proactively (for the period employees are about to work) or retroactively (for the period they've already worked).

To set up an accrual based on a fixed amount:

1. In the time-off rule, under **Accrual Method**, check the **Automatically Accrue** box.
2. From the **Accrues Based On** list, select **Fixed Amount Per Period**.
3. From the **Accrual Type** list, select whether time off accrues proactively or retroactively:
 - If employees accrue time off for the period they're about to work, select **Proactive**. Then set the Minimum Tenure. If it's zero, in the **Opening Balance for New Employees** field, choose one of the following:
 - **Full Amount for Accrual Period** - Employees get the full accrual amount on their start date or the first day they're eligible, based on the plan rules.
 - **Prorated Amount for Accrual Period** - Employees get a prorated amount based on working days left in the period, applied on their start date or the first day they're eligible, based on the plan rules.
 - **Zero** - Employees' first accrual happens on the next regularly scheduled accrual date.
 - If employees accrue time off for the period they've already worked, select **Retroactive**.
4. In the **Accrual Frequency** field, choose when time off accrues.

If you select **Biweekly** or **Weekly** as the accrual frequency, set the day for the next accrual. This sets the calendar day when the accrual is applied.

Note: Annual and monthly accruals happen on the first day of the year or month for proactive, and the last day for retroactive. Semi-monthly accruals are on the 1st and 15th for proactive, and the 15th and last day for retroactive.

5. In the **Entitlement** field, enter the number of days or hours that employees earn each year.
6. In the **Entitlement Unit** field, choose whether the entitlement is in days or hours.

The **Accrual Amount** and **Accrual Amount Unit** fields show the accrual rate based on your selections.

7. To enable an accrual limit, check the **Set Accrual Limit** box, and do the following:
 - In the **Accrual Limit** field, enter the maximum number of days that employees can accrue. For example, if you enter 15 days, your employees stop accruing time when they reach this limit. Employees start accruing time again when they use some of their accrued time.

The **Accrual Limit Unit** field displays the accrual limit rate based on your selections.
8. Click **Save**.

Continue to [Setting up Balance and Carryover Limits in a Time-off Rule](#).

Understanding How Accruals are Generated when Multiple Time Rules are in One Time-Off Plan

Sometimes more than one time-off rule apply to an employee within the same accrual period. If both rules accrue proactively, and have different tenures, accruals are generated only when employees are eligible. This means employees can see their entitlement in the Employee Center only when they've reached the tenure period.

Note: Remember that tenure is based on the Start Date for Time-Off Calculations on the employee record.

If you want employees to see their future entitlements, check the **Days Available Includes Future Accruals** for the Year box on the time-off plan.

For more details on how and when accruals are generated, see [Employee has Partial Time-Off Accrual at the Start of the Accrual Period](#)

Setting up an Accrual Based on Hours Worked

Accruals based on hours worked can be set up in one of two ways, depending on whether you use SuitePeople U.S. Payroll in your account:

- If you use the Payroll feature, you set up accruals on the Payroll > Accrued Time subtab of the employee record. For more information, see [Time-Off Management Integration With SuitePeople U.S. Payroll](#).

Note: If you're setting up Time-Off Management for a subsidiary that doesn't use Payroll, accruals based on hours worked are **not** available.

- If the Payroll feature isn't enabled in your account, you set up accruals in time-off rules. The rest of this topic describes this method.

When time-off types accrue by hours worked:

- The Time Tracking feature must be enabled.
- Accruals are calculated based on the hours that an employee works on approved time entries, multiplied by an accrual rate.

For example, the accrual rate is 0.04. The approved time entry shows 20 hours worked. The accrual amount for the time entry = 20 x 0.04.

The following diagram shows how the Time Tracking feature and the Time-Off Management feature work together to calculate hourly accruals for an employee:

To set up an accrual based on hours worked:

1. In the time-off rule, under **Accrual Method**, check the **Automatically Accrue** box.
2. From the **Accrues Based On** list, select **Hours Worked**.
3. In the **Hourly Accrual Rate** field, enter the accrual rate.
4. To enable an accrual limit, check the **Set Accrual Limit** box and do the following:
 - In the **Maximum Accrual Limit** field, enter the maximum number of hours that employees can accrue. For example, if you enter 80 hours, employees stop accruing time when they reach this limit. Employees start accruing time again when they use some of their accrued time.

The **Maximum Accrual Unit** field displays the accrual limit rate based on your selections.
5. Click **Save**.

Continue to [Setting up Balance and Carryover Limits in a Time-off Rule](#).

Setting up Balance and Carryover Limits in a Time-off Rule

The following diagram illustrates the process for setting up balance and carryover limits:

To set up balance and carryover limits:

1. In the time-off rule, set up how you want to manage carryover balances:
 - To deduct unused time off from an employee's balance, under **Balance and Carryover Limits**, clear the **Allow Employees to Carry Over Unused Time-Off** box.
 - To allow carryover, check the **Allow Employees to Carry Over Unused Time-Off** box. This is the default setting. Then do the following:
 - To restrict how much unused time off can be added to next year's balance, check the **Limit the Amount of Time-Off Employees Carry Over** box. Then, do the following:
 1. In the **Maximum Carryover** field, enter the maximum amount of time each employee is entitled to carry over.
 2. In the **Maximum Carryover Unit** field, select the unit of time for the maximum carryover field.

For example, employees are entitled to carry over 5 days. Enter 5 in the **Maximum Carryover** field, and then select **Days** in the **Maximum Carryover Unit** field.

- To expire carried over time off after a specific period of time, check the **Expire Unused Carryover** box. Then, select which month the carried over time off should expire.

For example, if you select March, employees have until the end of March to take this type of time off. If they do not book the time off before it expires, it's removed from their accrual and they can no longer use it.

Note: If you select a date in the past, the expiry doesn't occur until the following year. If you change a carryover expiry month from a future date to a past date, the change doesn't occur until the following year. This is also true if you change a carryover expiry from a past date to a future date. The change takes effect in the current calendar year only if the expiry month is in the future.

- To prevent employees from carrying over negative balances at the end of the year, check the **Reset Negative Balances to Zero at Year End** box.
- To display expiry notification messages to employees in the Employee Center, check the **Show Balance Expiry** box. Notifications appear in the Employee Center when employees have time off that expires within the current or the next calendar month.

2. Click **Save**.

Deleting a Time-Off Rule

Use the following procedure to delete a time-off rule.

To delete a time-off rule:

1. Go to Setup > HR Information System > Time-Off Plan.
2. Click **Edit** beside the plan that contains the rule you want to delete.
3. From the **Time-Off Rule** subtab, select **Edit** beside the time-off type from the rule you want to delete.
4. From the **Actions** menu, select **Delete**.
5. When you're asked to confirm, click **OK**.

Note: You can't delete the last rule in a time-off plan when the plan is assigned to employees. Unassign the plan from all employees before you delete all of the rules in it.

Assigning a Time-Off Plan to an Employee

When you turn on the Time-Off Management feature, a **Time-Off** subtab is added to your employee records. From here you can assign a time-off plan to your employees and check their current time-off balances. Employees assigned to a time-off plan can submit time-off requests and check their balances in the Employee Center. They can request the types of time off they're eligible for, based on their plan's rules.

Before assigning a time-off plan to an employee:

- If you haven't already, create an employee record for employees you want to give access to time-off management. For more information about creating employee records, see [Adding an Employee](#).
- Make sure employees can access to time-off management from the Employee Center. For more information, see [About the Employee Center Role](#).

Important: If you use SuitePeople U.S. Payroll in your NetSuite account, see [Updating the Employee Record for Time-Off Management and Payroll](#).

Watch the following help video for information about assigning a time-off plan:

[Assigning a Time-Off Plan Using the Time-Off Management Feature — Video 4 of 4](#)

To assign a time-off plan to an employee:

1. Go to List > Employees > Employees.
2. On the Employees list, click **Edit** next to the employee you want to set up for time-off management.
3. In the **Supervisor** field, select the employee's supervisor. The supervisor receives any time-off requests that the employee submits.
4. Click the **Time-Off** subtab.
5. In the **Time-Off Plan** field, select the plan to assign to the employee. If the time-off plan doesn't appear, check that rules are assigned to the plan. For more information, see [Time-Off Rules](#).
6. In the **Start Date for Time-Off Calculations** field, enter the date you want to start tracking time off for this employee. This date helps decide which time-off rule applies, based on how long they've been with the company. It's different from the hire date and lets HR manage when each employee reaches time-off milestones.

For example, if your company acquires another company, you might want to use the date those employees started working, not the acquisition date.

Note: If you change an employee's start date after assigning them to a time-off plan, all future accruals, carry over, and expiry are updated based on the new date.

7. Click the **Human Resources** subtab.
8. In the **Work Calendar** field, select a work calendar for the employee.

When a work calendar is selected for time-off management, it:

- tells the system which days are working days for the employee
- blocks out the days that aren't considered working days when an employee fills out a time-off request
- calculates the number of hours to deduct from the employee's balance when a day is taken off

If you don't select a work calendar, the system assumes that the employee works eight hours a day, Monday to Friday, with no holidays. For more information, see the help topic [Setting Up a Work Calendar](#).

9. Click **Save**.

Time-Off Management Integration With SuitePeople U.S. Payroll

Important: This topic applies to you if you have SuitePeople U.S. Payroll in your account. If you are **not** using Payroll, follow the steps in [Time-Off Management Setup](#) to set up the Time-Off Management feature.

If SuitePeople U.S. Payroll is set up in your account, follow the steps in this section to set up the Time-Off Management feature. Time-Off Management and Payroll work together to track time-off accruals and

balances. When accruals and balances are correct, your employees are paid correctly and they receive the time off that they are entitled to.

To make sure that accruals and balances are correct, you'll need to turn on the Time Tracking feature. The diagram below illustrates how the Payroll, Time-Off Management, and Time Tracking features interact:

When an employee books time off, approved time off appears on their timesheet and enters Payroll. Time-off types are associated with payroll items, which are shared with the Time-Off Management system. The employee's accruals are calculated in one of two ways:

- If time off accrues by a fixed amount in a period of time, the time-off system calculates accruals. The Time-Off Management system shares accruals with the payroll system so that proper amounts appear on employees' pay statements.
- If time off accrues on an hourly basis, Payroll calculates accruals. Payroll shares accruals with the Time-Off Management system so that time-off balances are accurate.

Process for Setting up Time-Off Management With Payroll

The following diagram illustrates the process for setting up Time-Off Management with Payroll.

The following topics detail each step in the diagram:

1. [Setting up Payroll Items to Work With Time-Off Management](#)
2. [Associating a Time-Off Type With a Payroll Item](#)
3. [Creating a Time-Off Plan With Payroll](#)
4. [Setting up a Time-Off Rule With Payroll](#)
5. [Updating the Employee Record for Time-Off Management and Payroll](#)

When to Set Up Time-Off Management With Payroll

The changes that you make to time-off information have an impact on payroll information. To avoid errors in payroll calculation, set up the Time-Off Management feature only when you're not creating or committing payroll batches. If the Time-Off Management feature is already integrated with SuitePeople U.S. Payroll, make sure you only change time-off information when you're not creating or committing payroll batches. This includes adding new employees to a time-off plan.

View the following videos to see an example of how to set up Time-Off Management with Payroll:

-  [Integrating NetSuite Payroll & Time-Off Management Overview — Video 1 of 4](#)
-  [Integrating NetSuite Payroll with Time-Off Management: Setting Up Payroll Items and Time-Off Types — Video 2 of 4](#)
-  [Integrating NetSuite Payroll & Time-Off Management: Creating Time-Off Plans and Time-Off Rules — Video 3 of 4](#)
-  [Integrating NetSuite Payroll & Time-Off Management: Updating the Employee Record — Video 4 of 4](#)

Prerequisites for Integrating Time-Off Management With Payroll

Before you can set up the Time-Off Management feature with SuitePeople U.S. Payroll, the following must be completed:

- SuitePeople U.S. Payroll needs to be set up in your NetSuite account. If it isn't contact NetSuite Customer Support. For more information, see the help topic [Payroll Setup](#).
- You need to turn on the Time Tracking feature in your account. For more information, see the help topic [Managing Time Tracking](#).
- You need to turn on the Time-Off Management feature.

Important: Be prepared to set up the Time-Off Management feature as soon as you enable it so that accruals in Payroll can be calculated correctly.

- Work calendars need to be assigned to your employees. For more information see [Assign Work Calendars to Employees](#).

Setting up Payroll Items to Work With Time-Off Management

Important: This topic applies to you if you use SuitePeople U.S. Payroll in your NetSuite account.

If you use SuitePeople U.S. Payroll, you already have payroll items set up in your NetSuite account. If you have payroll items set up for time off, make sure the Item Type is set to Earning:Sick or Earning:Vacation.

If you don't have payroll items set up for time off, use the following steps:

To create a payroll item for time off:

1. Go to Lists > Employees > Payroll Items > New.
2. If you use NetSuite OneWorld, select a subsidiary.
3. From the **Item Type** list, select **Earning:Sick** or **Earning:Vacation**.
4. In the **Item Name** field, enter a name for the payroll item. For example, "Personal Days" or "Vacation Time".
5. If necessary, select a **Pay Code**.
6. Click **Save**.

This payroll item will be associated with a time-off type in the step [Associating a Time-Off Type With a Payroll Item](#).

Associating a Time-Off Type With a Payroll Item

Important: This topic applies to you if you use SuitePeople U.S. Payroll in your NetSuite account.

You need to associate time-off types with the payroll items that you created or updated. For more information, see [Setting up Payroll Items to Work With Time-Off Management](#). Associating time-off types with payroll items ensures that:

- NetSuite associates time entries with the correct payroll item. Time entries track time-off usage against each payroll item. Employees who track time can see their booked time off on their timesheet.
- Accruals can be calculated based on hours worked. For more information about calculating accruals on an hourly basis, see [Accruals Based on Fixed Amounts and Accruals Based on Hours Worked](#).

If you use Payroll for multiple subsidiaries in your NetSuite account, you need to create separate time-off types for each subsidiary. You can't use the same time-off type with multiple subsidiaries. You also need to associate time-off types with payroll items that are associated with the same subsidiary.

For example, the subsidiaries Acme X and Acme Y both use Payroll. You set up a type called Vacation X for Acme X, and a type called Vacation Y for Acme Y. You also have a payroll item for Acme X called Vacation Pay X. You have another payroll item for Acme Y called Vacation Pay Y. To ensure that your time-off types work with payroll, you should associate the time-off type Vacation X with the payroll item Vacation Pay X. The time-off type Vacation Y should be associated with the payroll item Vacation Pay Y.

To create a time-off type that is associated with a payroll item:

1. Go to Setup > HR Information System > Time-Off Type > New.
2. In the **Name** field, enter a unique name for the type. The name specified here appears in time-off lists for time-off requests, time-off plans, and time-off changes.
As a best practice, if you use Payroll for multiple subsidiaries, you should include the subsidiary name in the time-off type name. For example, for a subsidiary called Acme X, you might want to name the time-off type **Vacation X**.
3. In the **Display Name** field, enter how you want the time-off type name to appear to employees. For example, you have different time-off types for different subsidiaries, departments, or locations. However, you want the type to appear the same to all employees.
4. To record usage without having an entitlement and accruing a positive balance, check the **Track Only** box.

 **Note:** When you change an existing time-off type to track-only, future accruals are not calculated. All balance entries prior to the change are saved and displayed in the time-off changes record. For more information, see [Viewing an Employee's Time-Off Balance](#).

5. Select a **Payroll Item**. This payroll item should be one that you created or updated in the step [Setting up Payroll Items to Work With Time-Off Management](#).
If you use Payroll for multiple subsidiaries, make sure that you select a payroll item that applies to the subsidiary for this time-off type.

 **Important:** A time-off type can be associated with only one payroll item.

6. In the **Minimum Increment** and **Increment Unit** fields, specify the minimum increment of time-off required for this type. Time-off requests can't be for less than this amount and must be multiples of this amount. You can leave the field value at zero or blank to allow employees to enter any value.
7. From the color selector, select the color that you want to use with this time-off type.
8. Click **Save**.

Creating a Time-Off Plan With Payroll

 **Important:** This topic applies to you if you use SuitePeople U.S. Payroll in your NetSuite account.

After you create time-off types and associate them with payroll items, you can create time-off plans. A time-off plan contains different time-off types and rules that you can assign to an employee. For example,

a time-off plan could include vacation time, personal time, sick days, and bereavement days. The plan would have rules that specify how these types of time off accrue. You might have different plans for part-time employees than for full-time employees. You might have different plans for employees who are paid hourly and employees who are paid a salary. You can create as many plans as you need to fulfill the time-off policies of your organization. Each time-off plan also contains time-off rules. These rules define entitlement for a time-off type and how that time-off type accrues within the plan. It's important to understand the difference between accruals based on fixed amounts and accruals based on hours worked.

Accruals Based on Fixed Amounts and Accruals Based on Hours Worked

When Time-Off Management and Payroll are integrated, time-off accruals can be automatically calculated in one of two ways:

Fixed Amount Per Period	Hours Worked (NetSuite U.S. Payroll)
The system calculates accruals based on a fixed amount (weekly, bi-weekly, monthly, semi-monthly, or annually).	The system calculates accruals based on the hours an employee works. This type of accrual might be appropriate for users who are paid hourly.
Time-Off Management calculates the accruals. You add the payroll items associated with each time-off type to the employee record in the Payroll > Accrued Time subtab.	Payroll calculates the accruals.
When you run payroll, accrual amounts and balances from Time-Off Management are included on employees' pay statements for the period ending date. Time-off balances also appear accurately in the Time-Off portlet in the Employee Center.	When you run payroll, accrual amounts and balances from Payroll are included on employees' pay statements for the period ending date. Time-off balances also appear accurately in the Time-Off portlet in the Employee Center.
You'll need to add payroll items for these accruals to the employee's record in the Payroll > Accrued Time subtab. This way, the payroll items show up on employees' pay statements.	Set up payroll items for these accruals on the employee's record in the Payroll > Accrued Time subtab. For more information, see Setting up Accruals Based on Hours Worked On the Employee Record for Payroll .
Annual entitlement can reset at the start of any month.	Annual entitlement must reset at the start of January.
Employees can carry over unused time off, and you can set carryover expiry limits.	You can use the Accrued Time subtab on the employee record to specify whether employees can carry over unused time off, but you can't set carryover expiry limits.

For each time-off type that you plan to use, decide which type of accrual works best with your time-off policies.

To create a time-off plan with payroll:

1. Go to Setup > HR Information System > Time-Off Plan > New.
2. In the **Name** field, enter a name for the time-off plan. This name appears wherever you need to select a time-off plan, such as the employee record. Name the plan so that you or someone else in HR can easily choose the right one for each employee.
3. Check the **Days Available Includes Future Accruals for the Year** box to include forecasted accruals through the end of the year. If you only want to include time off employees have accrued, leave the box unchecked.

4. From the **Reset Annual Entitlement At the Start Of** list, select the month when the entitlement period starts. The default setting is January.

Important: For a time-off rule that includes a time-off type that accrues based on hours worked, set **Reset Annual Entitlement At the Start Of** to **January**.

5. If necessary, select a **Subsidiary**, **Class**, **Department**, or **Location**. You can assign this plan only to employees who are associated with the department, class, location, and subsidiary you set here. If you don't set a these fields, you can assign this plan to anyone.
6. Click **Save**.

Setting up a Time-Off Rule With Payroll

Important: This topic applies to you if you use SuitePeople U.S. Payroll in your NetSuite account.

After you create a time-off plan, you'll need to define and apply rules to the time-off plan. Time-off rules let you decide how employees accumulate time off over time. The image below depicts the process for setting up accruals in a time-off rule:

To set up a time-off rule with payroll:

1. Go to Setup > HR Information System > Time-Off Plan.
2. Next to the plan you want to define rules for, click **Edit**.
3. Click **New Time-Off Rule**.
4. In the **Time-Off Type** field, select the type of time off to apply to the plan. To integrate with Payroll, choose a time-off type that you created in [Associating a Time-Off Type With a Payroll Item](#).
5. Specify the minimum tenure for this time-off type and whether it's in months or years. Typically, minimum tenure is used to increase the amount of time off employees are entitled to over a specific period of time. It can also be used to adjust an accrual or carryover rule at an employment milestone.

For example, you might want employees to start with 10 vacation days, then set an increase after five years of employment to 15 vacation days. To do this, you would add two time-off rules to the plan using the same time-off type. One rule would have a minimum tenure of zero with an entitlement of 10 vacation days. The second rule would have a minimum tenure of five years with an entitlement of 15 vacation days.

Note: If you set a minimum tenure on a time-off rule, keep in mind that the associated payroll item appears on employee pay statements only after an employee has met the minimum tenure.

Next, set up accruals for the time-off rule. Consider if you want time-off types to accrue by a fixed amount or by hours worked:

- [Setting up an Accrual Based on a Fixed Amount With Payroll](#)
- [Setting up an Accrual Based on Hours Worked With Payroll](#)

For more information, see [Accruals Based on Fixed Amounts and Accruals Based on Hours Worked](#).

Setting up an Accrual Based on a Fixed Amount With Payroll

Use the following procedure to set up an accrual based on a fixed amount.

To set up an accrual based on a fixed amount:

1. In the time-off rule, under **Accrual Method**, check the **Automatically Accrue** box.
2. From the **Accrues Based On** list, select **Fixed Amount Per Period**.
3. From the **Accrual Type** list, select whether you want to accrue time proactively or retroactively:
 - If employees accrue time off for the period they're about to work, select **Proactive**. Next, set the **Minimum Tenure**. If minimum tenure is set to zero, in the **Opening Balance for New Employees** field, choose one of the following:
 - **Full Amount for Accrual Period** - Employees' first accrual is the full amount for the accrual period. It's applied either on their start date, or the first day they are eligible to accrue based on the rules defined in their plan.
 - **Prorated Amount for Accrual Period** - Employees' first accrual is a prorated amount based on the number of working days remaining in the accrual period. It's applied either on their start date, or the first day they are eligible to accrue based on the rules defined in their plan.
 - **Zero** - Employees' first accrual takes place on the next regularly scheduled accrual date.

- If employees accrue time off for the period they've already worked, select **Retroactive**.

4. In the **Accrual Frequency** field, choose when time off accrues.

If you select **Biweekly** or **Weekly** as the accrual frequency, set the day of the next accrual. This determines the calendar day on which the accrual is applied.

Note: Annual and monthly accruals happen on the first day of the year or month for proactive accruals, and on the last day for retroactive ones. Semi-monthly accruals happen on the 1st and 15th for proactive, and on the 15th and last day for retroactive.

5. In the **Entitlement** field, enter how many days or hours employees earn each year.

6. In the **Entitlement Unit** list, select whether the entitlement is in days or hours.

The **Accrual Amount** and **Accrual Amount Unit** fields display the accrual rate based on your selections.

7. To enable an accrual limit, check the **Set Accrual Limit** box, then do the following:

In the **Accrual Limit** field, enter the maximum number of days that employees can accrue. For example, if you enter 15 days, your employees stop accruing time when they reach this limit. Employees start accruing time again when they use some of their accrued time.

The **Accrual Limit Unit** field displays the accrual limit rate based on your selections.

8. Set up how you want to manage carryover balances:

- To deduct unused time off from an employee's balance, clear the **Allow Employees to Carry Over Unused Time-Off** box.

- To allow carryover, check the **Allow Employees to Carry Over Unused Time-Off** box. Then do the following:

- To limit how much unused time off gets added to the next year's balance, check the **Limit the Amount of Time-Off Employees Carry Over** box. Then do the following:

1. In the **Maximum Carryover** field, enter the maximum amount of time off that each employee can carry over.
2. In the **Maximum Carryover Unit** field, select the unit of time for the maximum carryover field.

For example, employees are entitled to carry over 5 days. Enter 5 in the **Maximum Carryover** field, and then select **Days** in the **Maximum Carryover Unit** field.

- To expire carried over time off after a specific period of time, check the **Expire Unused Carryover** box. Then select which month the carried over time off should expire.

For example, if you select March, employees have up until the end of March to take this type of time off. If they do not book the time before it expires, it is removed from their plan and they can't use it anymore.

Note: If you select a month in the past, the expiry won't happen until next year. If you change the expiry month from a future to a past date (or vice versa), the change won't take effect until the following year—unless the current expiry month is in the future and you change it to another future date, in which case it can take effect this year.

- Check the **Reset Negative Balances to Zero at Year End** box to prevent employees from carrying over negative balances at the end of the year for this time-off type.
- To display expiry notification messages to employees in the Employee Center, check the **Show Balance Expiry** box. Notifications appear in the Employee Center when employees have time off that expires in the current month or next calendar month.

9. Click **Save**.

Continue to [Updating the Employee Record for Time-Off Management and Payroll](#).

Setting up an Accrual Based on Hours Worked With Payroll

Use the following procedure to set up an accrual based on hours worked.

To set up an accrual based on hours worked:

1. In the time-off rule, under **Accrual Method**, check the **Automatically Accrue** box.
2. From the **Accrues Based On** list, select **Hours Worked (NetSuite U.S. Payroll)**.
3. Click **Save**.

Continue to [Updating the Employee Record for Time-Off Management and Payroll](#).

Updating the Employee Record for Time-Off Management and Payroll

Important: This topic applies to you if you use SuitePeople U.S. Payroll in your NetSuite account.

After you create time-off rules in your time-off plans, you need to assign a time-off plan to each of your employees. If some of your time-off plans include accruals based on hours worked, you need to set up those accruals on the employee record.

Assigning a Time-Off Plan to an Employee

Use the following procedure to assign a time-off plan to an employee.

To assign a time-off plan to an employee:

1. Go to Lists > Employees > Employees.
2. Beside an employee, click **Edit**.
3. In the **Time-Off** subtab, select a plan from the **Time-Off Plan** list.
4. In the **Start Date for Time-Off Calculations** field, enter the date for time-off calculations. The date calculates the number of days that the employee is entitled to time off. It's based on the minimum and maximum tenures set in the time-off plan. If there's no value specified in this field, this employee can't be assigned to a time-off plan.
5. Click **Save**.

Adding Payroll Items to the Employee Record

To make sure payroll items associated to a time-off type show up on employees' pay statements, you'll need to add those items to each employee's record.

Important: Payroll items that accrue based on hours worked need additional setup. For more information, see [Setting up Accruals Based on Hours Worked On the Employee Record for Payroll](#).

To add payroll items to the employee record:

1. Go to Lists > Employees > Employees.
2. Beside an employee, click **Edit**.
3. Click the **Payroll** subtab, and then click the **Accrued Time** subtab.
4. In the **Sick/Vacation Time** list, select a payroll item.
5. Click **Save**.

When a payroll item is associated with a time-off type that accrues based on a fixed amount, the accrual appears on the employee's pay statement. It doesn't appear in the Accrued Hours field on the Accrued Time subtab.

Setting up Accruals Based on Hours Worked On the Employee Record for Payroll

You need to set up accrual rates for payroll items that accrue based on hours worked on each employee's record.

To set up accruals based on hours worked for an employee:

1. Go to Lists > Employees > Employees.
2. Beside an employee, click **Edit**.
3. Click the **Payroll** subtab, and then click the **Accrued Time** subtab.
4. In the **Sick/Vacation Time** list, select a payroll item that accrues by hours worked. The **Accrues Based On** field is set to **Hours Worked (NetSuite U.S. Payroll)**.
For example, you might have associated a time-off type with a payroll item called **PTO - Vacation**.
5. In the **Accrued Hours** field, enter a beginning balance if the employee has accrued time that's not in the system.
After the beginning balance is set, the system keeps track of this total.
6. In the **Accrue As** list, select **Per Hour Worked**.

Warning: If you select an option other than Per Hour Worked in the Accrue As list, it could result in inaccurate accrual balances on the employee's pay statement.

7. In the **Accrual Rate** field, enter the number of hours this employee accrues for each hour worked (for example, 0.04).
8. In the **Monetary Rate** field, enter the cost per hour of the accrued time.
9. Depending on whether your time-off policy allows carryover, you can do one of the following:
 - If you **do not** allow employees to carry over unused time off, check the **Reset at Year End** box. At the end of each calendar year, NetSuite sets the total accruals to zero and starts calculations again.
 - If you allow employees to carry over unused time off, **do not** check the **Reset at Year End** box.

10. If your company sets a limit for accrued time, enter the maximum number of hours that can be accrued in the **Maximum Hours** field.
11. Click **Save**.

When a payroll item is associated with a time-off type that accrues based on hours worked, the employee's accrual appears in the Accrued Hours field and on the pay statement.

Viewing an Employee's Time-Off Balance

To view an employee's time-off balance, go to Lists > Employees > Employees. On the Employees list, click **View** next to the employee you want to check, then click the **Time-Off** subtab to see a summary of their time-off balance for the entire year.

The **Available Now** subtab displays how much time off an employee has left, and how much they've used and scheduled for the current year. This subtab includes:

- **Available This Year** - If the **Days Available Includes Future Accruals** box on the Time-Off Plan page is checked, the time-off plan includes all future accruals and manual increases and decreases for the current year. For more information, see [Time-Off Plans](#).
- **Used This Year** - The amount of time off that's been used as of the current date.
- **Scheduled This Year** - The amount of time off that's been requested and approved, but not yet taken.
- **Available Now** - The total remaining time off for the current year.

The **Balances** subtab displays an employee's available balance as of the current date, based on the accruals and carry over rules defined in the time-off plan. This subtab includes:

- **Carried Over** - The amount of time off that's carried over as of the current date.
- **Accrued** - The amount of time off that's accrued as of the current date.
- **Used** - The amount of used time off.
- **Expired Carryover** - The amount of time off that's expired as of the current date.
- **Balance** - Displays the balance as of the current date based on the amount of time carried over, accrued, used, and any expired carry over.

Time-Off Changes

When an employee accrues or uses time off, or when time off expires or gets carried over, NetSuite creates a time-off change record. If you need to update an employee's time-off balance, you can create or adjust a time-off change record.

For more information, see:

- [Viewing Time-Off Changes](#)
- [Creating a Time-Off Change](#)

Viewing Time-Off Changes

The Time-Off Changes page displays a list view of all the time-off change records for the employees at your company. Time-off change records are created when time-off requests are approved, when

you make manual adjustments, when carryover is applied, when time off expires, and when automatic accruals are calculated. Each change is recorded separately so you can tell them apart.

To view time-off changes:

1. Go to Setup > HR Information System > Time-Off Change.
The Time-Off Change page displays a list of all time-off changes, sorted by most recent changes.
2. To filter the list of time-off changes, expand the **Filters** section and try these options:
 - To find time-off changes for a specific employee, select the employee from the **Employee** list.
 - To view time-off changes by time-off types, select a time-off type in the **Time-Off Type** list. To make multiple selections, hold down the Ctrl key.
 - To view time-off changes by time-off change type, select a time-off change type from the **Time-Off Change Type** list.

Note: When a time-off request for a future date that was previously approved is rejected, the associated time-off change record is deleted.

Creating a Time-Off Change

You can manually adjust an employee's time-off balance for any of the time-off types that are part of the employee's plan. If needed, you can correct mistakes to time-off balances by deleting the existing time-off change and submitting a new one. You can also submit a new time-off change with the required adjustment. You often need to create or edit a time-off change if an approved time entry is edited.

You can't create a time-off change for yourself or makes adjustments to your own time-off balance.

Note: To preserve employee data for auditing purposes, you can't delete employee records for employees who have modified time-off balances. Instead, you should inactivate these employee records.

To adjust an employee's time-off balance:

1. Go to Setup > HR Information System > Time-Off Change > New.
2. Select the employee and the time-off type that you want to make the adjustments to.
3. In the **Amount** field, enter a negative or positive value.
4. In the **Amount Specified In** field, specify if this amount is in hours or days.

Note: When days is selected, the amount saves and displays in hours on the time-off change record. For example, you enter two days. It appears as 16 hours on the record when the employee's work calendar is set to an eight-hour work day. For more information, see the help topic [Setting Up a Work Calendar](#).

5. Enter the date when you want to apply this change.
6. If required, enter a description.
7. Click **Save**.

To delete a time-off change record, go to Setup > HR Information System > Time-Off Change. From the list page of all the time-off change records, click **Edit** next to the time-off change record you want to delete. From the **Actions** menu, select **Delete**. At the prompt, click **OK** to confirm.

Submitting Time-Off Requests on Behalf of Employees as an Administrator

You can submit a time-off request on behalf of employees. The employee must be active and have available time-off entitlements.

Common scenarios where this feature is useful include:

- Submitting requests for employees who are sick or have emergencies.
- Consolidating time-off balances for employees who may have missed submitting time-offs.

To submit a time-off request on behalf of an employee:

1. Go to Setup > HR Information System > Time-Off Request.
2. Click **New Time-Off Request**.
3. On the Request Time-Off page, check that **Submit On Behalf Of** is switched on.

4. In the **Employee** field, type the employee's name. As you type, suggested names appear that match what you've typed.
5. Click a name or press Enter to select the first employee on the list.
6. Note that the **Auto-Approve** box is checked by default so the request is automatically approved upon submission.

(Optional) If you want the employee's supervisor to review the request, clear this box.

Note: This box is checked and unavailable when:

- The employee selected is set up as a time-off self-approver.
- The time-off type you select is set up for auto-approval and the request duration is within the auto-approval threshold.

7. Specify the start and end dates of your request.
After you specify the date range using the calendar, each day appears in chronological order.

Request Time-Off

Employee *

Jonathan Larson ☒ Auto-Approve

Dates *

April 6, 2021
 to
 April 8, 2021

TUE	APRIL 06	SICK	All day	Edit	No coworkers away
WED	APRIL 07	SICK	All day	Edit	No coworkers away
THU	APRIL 08	SICK	All day	Edit	No coworkers away

Message to Approver

 **Summary**

You are requesting **3 Sick days** from **April 6th** to **April 8th 2021**.

8. For each date in your request, select the type of time-off you are requesting. If the time-off type you select has multiple days available, the dates will fill in automatically.
You can also use a combination of time-off types for a time-off request.
9. To change a time-off type or adjust the duration, click the **Edit** icon beside the entry you want to change.
10. Make any required changes in the popup window that appears, and click **Done**.
11. Review the summary box for a breakdown of your request, and then click **Submit**.

An email is sent to the employee's supervisor informing them of the request.

Approving or Rejecting a Time-Off Request as an Administrator

 **Note:** You cannot approve or reject your own time-off request.

To approve or reject a time-off request:

1. Go to Setup > HR Information System > Time-Off Request.
2. Select **View** beside the time-off request that you want to approve or reject.
3. To approve the request, click **Approve**.
4. To reject the request, click **Reject**. Optionally, enter a reason for the rejection, and then click **OK**.

Rejecting an Approved Time-Off Request

Sometimes, employees submit a time-off request that gets approved, but then decide to during all or part of that time. In many cases, you can reject the time-off request to update their available balance.

Time-Off Requests That Appear on a Calculated Payroll Batch

To reject an approved time-off request that appears on a calculated payroll batch:

1. Remove the employee's paycheck from the payroll batch. See the help topic [Removing Paychecks from a Batch](#).
2. Reject the time-off request. See [Approving or Rejecting a Time-Off Request as an Administrator](#).
3. Add the employee back to the payroll batch. See the help topic [Adding Employees to a Payroll Batch](#).
4. Calculate the payroll batch again. See the help topic [Calculating a Payroll Batch](#).

Time-Off Management for Employees or Managers

With NetSuite Time-Off Management, you can get your time off approved before you take it. You can create and submit time-off requests using the Book Time Off button in the Time-Off portlet on your Employee Center home page. The types of time off and the rules for your plan are based on your company's policies and are set up by your HR Administrator. After you submit a time-off request, the approver gets an email notification.

 **Note:** To use time-off management as an employee or manager, you need to use your Employee Center role.

Submitting Time-Off Requests

[Requesting Time Off from NetSuite's Employee Center](#)

Use the following procedure to submit a time-off request.

 **Important:** If the Time-Off portlet doesn't appear on the home page of your Employee Center, then the Time-Off Management feature hasn't been enabled for your account. To add the Time-Off portlet to your Employee Center, contact your NetSuite Administrator or HR Generalist.

To submit a time-off request:

1. From the home page of your Employee Center, in the **Time-Off** portlet, click **Home**.
2. Click **Request Time-Off**.

3. On the Request Time-Off page, specify the start and end dates for your time-off request.

You can't enter time off for days that aren't part of your work week. Non-working days and pending or approved whole day requests are grayed out and can't be selected.

Note: To request only one day off, click the day you want off in the calendar twice. The Dates field will automatically populate with the specified date.

After you specify the date range using the calendar, each day is displayed in chronological order.

Request Time-Off

Submit **Cancel**

Dates ^{*}

February 06, 2017 to February 13, 2017

MON	FEBRUARY 06	
TUE	FEBRUARY 07	
WED	FEBRUARY 08	VACATION 3.5 days available
THU	FEBRUARY 09	SICK DAY 3 days available
FRI	FEBRUARY 10	
MON	FEBRUARY 13	FLEX 2 days available

Include a message to help make your case

Requesting 6 days of vacation.

Submit **Cancel**

4. For each date in your request, select the type of time off you're requesting. If the time-off type you select has multiple days available, the corresponding date entries in the list are automatically filled for you.

For example, if you select **Vacation** with three days available, the first three days in the list are tagged as vacation days.

You can also use a combination of time-off types for a time-off request. For example, you can specify that you want to use a combination of vacation days and floating holidays.

The displayed days available takes into account time off that has already been approved for the year, but that you haven't taken.

If the time-off type is tagged as track only, no time off is accumulated, and only your usage is tracked. For example, you have no limit to the number of sick days that you can take. The sick day time-off type is tagged as track only.

Note: If your company lets you carry over unused time, and you're booking time off for next year, note the following. You don't see your carryover balance in the forecasted balance. Your carryover days are calculated at the end of the year to ensure you don't overbook your time off for next year.

- To change a time-off type, or adjust the duration of the time off, click the **Edit** icon beside the entry that you want to change. Make any required changes in the popup window that appears, and click **Done**.

Jonathan Larson
 From February 6 to February 13, 2017

Wait!

You are requesting **4 Vacation days** which is more than the **3.5 days** available. **You might want to change the requested days.** If you're sure, click **Submit**

6. Optionally, you can include a message to your approver.
7. Review the summary box for a breakdown of your request, and then click **Submit**.

A request is sent by email to your approver. For time-off types set with automatic calendar event creation, calendar events will be created after the request is approved. You can view the event in your Calendar portlet, and it includes your assigned supervisor as an attendee. To view the status of your time-off request, in the **Time-Off** portlet, click **Requests**. For more information, see [Viewing Time-Off Requests](#).

Submitting Time-Off Requests on Behalf of Employees as a Manager

Managers can only submit requests on behalf of employees who are direct reports. The employee must be active and have available time-off entitlements.

Scenarios where this feature is useful include:

- Submitting requests for employees who are sick or have emergencies.
- Consolidating time-off balances for employees who may have missed submitting time-offs.

To submit a time-off request on behalf of an employee:

1. From the home page of your Employee Center, in the **Time-Off** portlet, click **Home**.
2. Click **Request Time-Off**.
3. On the Request Time-Off page, click **Submit On Behalf Of**.

Message to Approver

 **Summary**

You are requesting **3 Sick days** from **April 6th** to **April 8th 2021**.

8. For each date in your request, select the type of time off you're requesting. If the time-off type you select has multiple days available, the corresponding date entries in the list are automatically filled. You can also use a combination of time-off types for a time-off request.
9. To change a time-off type or adjust the duration of the time off, click the **Edit** icon beside the entry that you want to change.
10. Make any required changes in the popup window that appears, and click **Done**.
11. Review the summary box for a breakdown of your request, and then click **Submit**.

For time-off types set with automatic calendar event creation, calendar events will also be created. The event can be viewed in your Calendar portlet and includes the employee as an attendee.

Viewing Time-Off Requests

Use the following procedure to view time-off requests.

To view time-off requests:

1. From the home page of your Employee Center, in the **Time-Off** portlet, click **Requests**.

2. To see more time-off requests, in the portlet, click **View All Requests**.
3. On the Time-Off Request page, you can:
 - See the current status of the request, who submitted it, the date range, and the time-off types used for the request.
 - Use the **Filters** section to find a specific time-off request, or view a history of requests for a specific employee, or a specific status. To make multiple selections, hold down the Ctrl key.
 - Click **View** beside a time-off request to see the original request.
4. To export the information, in the header row above the list, click one of the following icons:
 - the CSV Export icon
 - the Excel icon
 - the PDF icon
5. To print the list of time-off requests, click the Printer icon.

Viewing Time-Off Balances

From the Time-Off portlet in the Employee Center, you can see a summary of time-off balances, pending requests, and any upcoming booked time-off for yourself. If your role has the appropriate permission, you can also view time-off information for your subordinates.

Note: Your time-off balances are view only and can't be edited. If you see something that is incorrect, contact your HR administrator.

To view time-off balances:

1. From the home page of your Employee Center, in the **Time-Off** portlet, click **Balances**. By default, your balance is displayed in days.

Tip: To view time-off balances in hours instead of days, click the **More** icon, and then select **Switch to Hours**.

2. To see a list of pending requests, upcoming time-off, and past time-off, or to view your balance in hours, click **View Balance Details**.

Approving or Rejecting Time-Off Requests

If your role has the right permissions, you'll receive email notifications when you have time-off requests to approve. You can use the links in the email to quickly approve or reject the request. For time-off types set with automatic calendar event creation, calendar events are created as soon as you approve the request. You can view the event in your Calendar portlet, and it includes the employee as an attendee.

Watch the following help video for information about approving or rejecting time-off requests:

Quickly Approving or Rejecting Time-Off Requests

Use the following procedure to approve or reject time-off requests.

To quickly approve or reject a time-off request:

1. Do one of the following:
 - From the home page of your Employee Center, in the **Home Links** portlet, under **Time-Off**, click **Approve Time-Off Requests**.
 - From the email notification, use the links to take action on the request:
 - To approve the request, click **Approve**.
 - To reject the request, click **Reject**. Optionally, enter a reason for the rejection, and then click **OK**.

You can't reject only a specific day in a multiple day time-off request. You'll need to reject the whole request.

Rejected time-off requests can't be resubmitted.

Reviewing Details of a Specific Request

You can view more details of a specific request. For example, you can check whether the employee has enough time-off balance for the request.

To review details of a specific request before you approve it:

1. From the email notification, click **View Record**.
2. On the Request Time-Off page, review the request details.

Request Time-Off

Approve **Reject** **Cancel**

Emma Swan

VOLUNTEER TIME REQUEST • Pending Approval

FRI **DECEMBER 30** **VOLUNTEER TIME** **All day**

Approve **Reject** **Cancel**

✓ **Tip:** If the request exceeds the employee's available days or conflicts with a holiday, a warning icon (⚠) appears beside the request. If the request overlaps with another employee's time-off request, a notification icon appears beside the request. For more information, hover over the icon.

3. Click **Approve**, **Reject**, or **Cancel**.

If you click Reject, you'll be asked to enter a comment, which is sent to the employee.

Note: A rejected request can't be resubmitted or canceled.

Viewing all Time-Off Requests Waiting for Approval

To view all time-off requests waiting for approval:

1. From the home page of your Employee Center, in the **Home Links** portlet, under **Time-Off**, click **Approve Time-Off Requests**.

✓ **Tip:** If the request exceeds the employee's available days or conflicts with a holiday, a warning icon (⚠) appears beside the request. If the request overlaps with another employee's time-off request, a notification icon appears beside the request. For more information, hover over the icon.

Review Time-Off Requests 5

 Sandra Meyer VACATION REQUEST	OCTOBER 19 WED to OCTOBER 20 THU 2 days (16 hours)	Approve View Request ✓ Available hours/days ✓ No schedule conflicts
 Jeffrey Matthews Requesting 9 days of vacation. VACATION REQUEST	NOVEMBER 8 TUE to NOVEMBER 18 FRI 9 days (72 hours)	Approve View Request ⚠ Insufficient hours/days ⚠ Possible schedule conflicts
 Sandra Meyer Requesting 8.5 days of vacation VACATION REQUEST	NOVEMBER 8 TUE to NOVEMBER 18 FRI 8.5 days (68 hours)	Approve View Request ✓ Available hours/days ⚠ Possible schedule conflicts
 Jonathan Larson Requesting 2 flex days. FLEX REQUEST	DECEMBER 24 TUE to DECEMBER 25 WED 2 days (16 hours)	Approve View Request ✓ Available hours/days ✓ No schedule conflicts ⚠ Conflicts with holidays
 Rose Jordan Logging two sick days. SICK DAY REQUEST	OCTOBER 10 MON to OCTOBER 11 TUE 2 days (16 hours)	Approve View Request ✓ Available hours/days ✓ No schedule conflicts

2. Do one of the following:
 - To approve a request, click **Approve**.
 - To reject a request, click **View Request**, and then click **Reject**. You are prompted to enter a comment, which is sent to the employee.

 **Note:** A rejected request cannot be resubmitted.

Canceling Time-Off Requests

After you submit a time-off request, you can cancel pending and approved time-off requests for a future date. Time-off calendar events will be deleted when you cancel an approved time-off request.

 **Note:** Approved time-off requests that are associated with a locked timesheet can't be canceled. If your time-off balances need to be corrected because you didn't take scheduled time off, contact your administrator.

To cancel a time-off request:

1. From the home page of your Employee Center, in the **Time-Off** portlet, click **Requests**.
2. Select the time-off request that you want to cancel.
3. Click **Cancel Request**.

Time-Off Reports

The Time-Off Management feature comes with a variety of reporting tools and saved searches you can use to pull, view, and analyze your time-off data:

- [Available Time-Off Report](#)
- [Time-Off Balance Summary Report](#)
- [Time-Off Balance Details Report](#)
- [Time-Off Tracking Reports](#)
- [Time-Off Management Ad Hoc Reports](#)

For more information, see the help topic [Reporting Overview](#).

Time-Off Management Ad Hoc Reports

You can create ad hoc reports to fit your company's specific needs. For an ad hoc report, select the type of data you want to report on and the report format. Then, decide how you want to subtotal and group the information.

To create a report, go to Reports > New Report. Then, choose the data metric to include in your report. For Time-Off Management, you can choose from Time-Off and Time-Off Balance Adjustments.

For more information, see the help topics [Ad Hoc Reports](#) and [Choices for Ad Hoc Reports](#).

SuitePeople Workforce Management

SuitePeople Workforce Management (WFM) gives you one solution to streamline shift scheduling, track time and attendance for your team, and calculate wages.

The visual scheduling tool lets managers see exactly where they need to add or adjust shifts.

Employees can clock in and out on a computer or mobile device with digital time tracking.

The mobile app makes it convenient for managers and employees to view schedules, manage shift swaps, and more.

The built-in wage rules automatically calculates wages and works seamlessly with SuitePeople U.S. Payroll.

For more information about WFM, see the following topics:

Workforce Management Terminology

The following table defines usage of terms in Workforce Management.

Term	Definition	Related Terms
Access Group	A permission structure in WFM that assigns users to specific roles or access levels, determining their capabilities within the WFM platform.	
Activation Code	A one-time code used in WFM for employee or device registration and activation of mobile or time clock applications.	
Allowance	A set additional amount awarded to employees via WFM when certain shift conditions are met. You can establish rules, such as for the first shift of a given day, and associate allowances to them, such as for uniform or laundry.	
API Keys	Unique identifiers provided to customers for securely accessing WFM APIs, granting integration capabilities with external systems or custom applications. These are requested from the NetSuite Support team.	

Term	Definition	Related Terms
Attestation	A WFM feature that allows employees to accept or dispute their approved hours with their manager.	
Audit Logs	System-generated records in WFM that capture user activities, configuration changes, and key events for compliance and troubleshooting.	
Automatch	A WFM approval feature that automatically approves punches falling within defined tolerance limits of a scheduled shift.	Rounding
Availability	An employee request or specification of their preferred or available times for scheduling. Managers can approve, deny, or change employee availability. In a wage agreement, it's a setting used to assign the region where the agreement applies.	
Biometric or Fingerprint Functionality	An optional feature in WFM, available for Windows, that enables employee identification and time capture using fingerprint data, subject to legal compliance responsibilities for biometric data collection.	
Brand	A top-level grouping that can be set up for organizations to segregate across their different product or service offerings. Every location has to be associated to a brand and will inherit its settings.	
Classification	A component of a wage agreement, which is used to assign employees specific pay rates and conditions based on factors like level, employment status, location, or job.	
Condition	A component of a wage agreement, which specifies when particular pay rates, penalties, or allowances apply to employee shifts. The four types of WFM conditions are: Regular Rate, Penalty Rate, Overtime Rate, and Allowance or Penalty.	Rule
Contract Hours	A feature available for customers in Australia, which allows organizations to define, track, and enforce employee contractual working hours within shift scheduling and payroll calculations.	
Cross-Agreement Linking	A feature allowing the connection of multiple wage or employment agreements for an employee. Linking allows employees to be paid against separate wage agreements at different WFM locations. This feature supports complex scheduling and payroll scenarios involving more than one agreement.	
Daily Shifts	A WFM scheduling view for one location and one day used to create and edit shifts, set breaks, and manage daily staffing against KPIs and forecasts.	Weekly Shifts, Multi-Location Shifts, Employee Scheduling
Day Parts	Defined segments of the day, such as morning or evening, used for more granular labor forecasting, staffing, or wage application.	
Drop Pre-Approval	A feature that requires a manager to authorize an employee's request to release a scheduled shift before it is offered to others.	

Term	Definition	Related Terms
Employed User or Active WFM Employee	A user whose WFM employment status is not Terminated.	
Employee PIN Code	A unique numeric code assigned to employees for secure login or time capture on WFM time clocks or portals.	
Employee Scheduling	A core functionality in WFM used to plan, assign, and manage employee shifts, enabling efficient and compliant workforce deployment.	Shifts: Daily, Weekly, Multi-Location
Enhanced Timesheets Using WFM Wage Rules	A WFM feature that enables employees to enter time in weekly timesheets, automatically calculate regular and overtime hours based on configured wage agreements and rules, and integrate approved time entries with SuitePeople U.S. Payroll for accurate, automated payroll processing.	
Extra Hours	Additional scheduled staff coverage beyond labor model forecasts, either fixed or dynamic, to support operational needs such as preparation or closing tasks.	
Financial Configuration	Settings available for customers in Australia, which are used for managing wage-related financial data. Settings include bank details, superannuation funds, tax file details, visa details, and term breaks.	
Forecasting or Sales Forecasting	A WFM planning feature that imports or references POS sales or unit data to generate forecasts that drive labor deployment and scheduling targets. WFM customers must configure and manage data to build forecasts.	
Job	A predefined field assigned to shifts to indicate the work an employee performs and to control shift eligibility. Employers can map the job field to NetSuite records on the employee record for time allocation.	
Junior Validation Rules	Validation rules designed to assist with compliance to specific state regulations that apply to employees classed as juniors by age.	
KPI (Key Performance Indicators)	A metric displayed in dashboards and reports to help management evaluate performance. These include total hours, wage cost and sales, labor percent, productivity, and labor efficiency.	
Labor Analytics Dashboard	A visual display of various real-time insights into labor metrics or KPIs (key performance indicators), which you can configure for single or multiple locations to manage multi-level operations. Labor metrics include hours worked, wage costs, labor cost percentage, and others.	
Labor Deployment Model	A configuration that translates forecast metrics, such as sales and units, into shift suggestions for each time interval for different stores. Models can be assigned to locations.	Forecasting
Leave or Time-Off Type	A WFM record that categorizes employee time off and defines settings such as default hours per day, multiplier or loading, weekend costing, and payroll or integration mappings to NetSuite Time-Off types.	

Term	Definition	Related Terms
	The three default leave types are: Annual Leave, Sick Leave, and Unpaid Leave. You can configure other leave types, including Time in Lieu (TIL) or Flexitime.	
Location	A predefined field typically representing a physical work site whose schedules, employees, and sales data are managed in WFM. Employers can map the location field to NetSuite records on the employee record for time allocation.	Primary Location
Maximum Hours	A scheduling constraint in SuitePeople WFM that sets the upper limit of hours an employee can be scheduled or can work within a defined period.	Minimum Hours
Minimum Hours	A scheduling constraint in SuitePeople WFM that sets the lowest number of hours an employee can be scheduled or can work within a defined period.	Maximum Hours
Mobile Applications	Native apps for WFM, including NetSuite Workforce Management and NetSuite Time Clock, that support employee and manager self-service, shift management, and time capture on iOS and Android devices.	
Multiplier	A percentage applied to base pay rates, used for overtime, penalty, or allowance calculations.	
Multi-Location Shifts	A WFM scheduling view that consolidates shifts across multiple locations to enable cross-site planning and management from a single screen.	Daily Shifts, Weekly Shifts, Employee Scheduling
Opening Hours	The business or departmental operating hours used to guide labor deployment and scheduling.	
Open Shift	An unscheduled or unassigned shift in WFM that needs to be filled, allowing managers or eligible employees to select and assign themselves as needed.	
Over-Unders	Metrics in WFM scheduling that highlight the variance between forecasted labor requirements and scheduled hours, helping to optimize staffing.	
Paid Rest Break	A short, scheduled interval during a work shift in WFM, which you can configure as hours worked. These breaks can help organizations support compliance and employee wellness.	
Payroll Integration	The process of mapping and exporting approved WFM shift and wage data into NetSuite Payroll or external payroll systems, enabling streamlined payroll processing.	
Penalty	A fixed or percentage-based increase to employee pay rates applied for shifts meeting specific nonstandard conditions, such as late hours or weekend work.	
Pre-configured Wage Agreement	Convenience-based wage rule sets within WFM that customers can use as templates for compliance with specific labor awards, subject to customer verification for legal accuracy.	Region-Based Wages
Primary Location	The main workplace assigned to an employee that is used for scheduling and reporting. The primary location also determines the managers who can approve employee availability and leave requests.	

Term	Definition	Related Terms
Region-Based Wages	A set of convenience conditions built into WFM that are loaded by default into customer's accounts within the United States. These conditions do not guarantee compliance with laws and regulations. You must validate that these rules meet your needs and own the process of configuring additional rules you need based on your local labor laws.	Pre-configured Wage Agreement
Revision	A version of a region-based wage rule or wage agreement that you can use to track changes to conditions and rules. Revisions allow historical rates, conditions, and rules to be retained for wage calculations and reporting.	
Rounding	A time-and-attendance setting that adjusts approved punches to scheduled start or finish times based on set intervals or multiples.	Automatch
Rule	A specific parameter or threshold within a condition in WFM that defines the precise criteria for when the condition is triggered.	Condition
Salary Splits	A configuration enabling the allocation of a salaried employee's pay across multiple locations or departments worked during a pay period.	
Schedule Validation	A WFM feature that checks schedules against configured rules, such as required employee counts, qualifications, or compliance thresholds. This feature helps prevent publishing or printing schedules with errors or violations.	
Shift Template	A preset configuration of shift times and roles, used to streamline scheduling by quickly assigning common shift patterns.	
Short Breaks	A feature that prevents employees from punching back in during a break before the meet minimum required break time.	
Suggested Shifts	System-generated recommendations indicating optimal staffing times or shift allocations based on sales, labor models, and scheduling rules.	
SuitePeople Time Clock	Cloud-based time and attendance app, previously referred to as AdiClock, used to capture employee punches by using a mobile (Android or iOS) or a Windows device.	
SuitePeople WFM Integration Role	A predefined NetSuite role granting permissions required to configure and run the WFM integration.	
SuitePeople Workforce Management SMS	A messaging feature that enables sending SMS notifications (subject to usage caps) from WFM to employee mobile phones, supporting shift and time management communications.	
Target Hours	The scheduled number of working hours assigned to an employee for a given scheduling period. Hours are used for shift validation and reporting.	
Teams	Groupings used to organize employees by function, location, or department for scheduling and reporting purposes.	
Timesheet Uploader	A tool that imports timesheet data from a CSV file into WFM, with header mapping and error validation.	

Term	Definition	Related Terms
Unpaid Meal Break	A designated and unpaid break period during a work shift that is excluded from total hours worked. These breaks assist organizations with meeting labor compliance requirements.	
Wage Agreement	A set of rules or conditions available to customers in Australia and New Zealand, which define employee pay rates, overtime, and penalties. Wage agreements can be configured in WFM for accurate payroll processing.	Region-Based Wages
Wage Rule Engine	A calculation engine in WFM that applies customer-configured or pre-configured rules to determine wages, overtime, penalties, and allowances based on conditions, schedules, and regional requirements. The engine is provided as a convenience tool and does not guarantee legal compliance. Customers are responsible for validating wage rules against applicable labor laws and business needs.	
Wages	Pay amounts calculated and managed within WFM, determined by configured wage rules, wage agreements, and mapped NetSuite payroll items.	
Weekly Shifts	A WFM scheduling and approval view for a location across a week that displays scheduled shifts, timesheets, and approved shifts for payroll processing.	Daily Shifts, Multi-Location Shifts, Employee Scheduling
Workforce Management Portlet	A dashboard panel with configuration options, which gives users access to WFM features in NetSuite.	

Workforce Management Setup Guide

Follow this setup guide to learn about the basics of installing and getting started with SuitePeople Workforce Management (WFM).

- [Installing Workforce Management](#)
- [Getting Started with Workforce Management](#)
- [Integrating Workforce Management with NetSuite](#)

After you have installed and set up WFM, you can review these training topics, which include some useful videos:

- [Training #1: Scheduling](#)
- [Training #2: Five-Step Scheduling with Copy and Paste](#)
- [Training #3: Approving Time](#)
- [Training #4: Find Last-Minute Fill-ins, Drop or Swap Shifts](#)

Installing Workforce Management

To install Workforce Management, follow the steps in the table.

Step	Related Help Topic
1. Log in as a NetSuite administrator.	Roles and Accounts

Step	Related Help Topic
2. Complete the prerequisites.	Prerequisites
3. Install the Workforce Management SuiteApp.	Installing the SuitePeople Workforce Management SuiteApp
4. Assign the SuitePeople WFM Integration role.	Assigning the SuitePeople WFM Integration Role
5. Deploy User Event Scripts in NetSuite.	Deploying User Event Scripts in NetSuite
6. Configure additional permissions in NetSuite.	Configuring Additional Permissions in NetSuite
7. Integrate WFM with NetSuite	Integrating Workforce Management with NetSuite

Prerequisites

To use Workforce Management, you'll need to:

- Provide your account ID to your NetSuite representative.
- Enable the Token-Based Authentication feature.

Account ID

Give your NetSuite Account ID to your NetSuite rep, and the NetSuite team will make the Workforce Management (WFM) SuiteApp available in your account.

For more information, see the help topic [Finding Your NetSuite Account ID](#).

Enable Token-Based Authentication (TBA)

TBA lets WFM use a token to access NetSuite through APIs.

For more information, see the help topic [Enable the Token-based Authentication Feature](#).

To continue setting up WFM, see [Installing the SuitePeople Workforce Management SuiteApp](#).

Installing the SuitePeople Workforce Management SuiteApp

Important: SuitePeople Workforce Management (WFM) is now available to install from the SuiteApp Marketplace.

Users of the following Adi Insights SuiteApps should install SuitePeople WFM from the Marketplace to continue using WFM features embedded in NetSuite:

- Adi Insights (Bundle ID: 317115)
- Adi Insights – Embedded (Bundle ID: 401708)

As of 2025.1, updated releases are only be available with the SuitePeople WFM SuiteApp from the Marketplace.

For more information, see [Switching to SuitePeople WFM from the Marketplace](#).

You should install the latest WFM version available on the SuiteApp Marketplace.

After you've installed WFM from the Marketplace, set up your WFM portlet to work with the new SuiteApp version.

Switching to SuitePeople WFM from the Marketplace

Users of the Adi Insights SuiteApps, **Adi Insights** (Bundle ID: 317115) and **Adi Insights – Embedded** (Bundle ID: 401708), should complete the procedure to switch to WFM from the Marketplace.

To switch to SuitePeople WFM from the Marketplace:

1. Log in to the Administrator role.
2. Enable the following features. For more information, see the help topic [Enabling Features](#).
 - SuiteTalk (Web Services): **REST (Web Services)**
 - Manage Authentication: **OAuth 2.0** and **NetSuite as OIDC Provider**
3. Install **SuitePeople Workforce Management** from the SuiteApp Marketplace. See the help topic [Installing from the SuiteApp Marketplace](#).
4. Grant access to the **SuitePeople WFM Integration** role to your account and to other employees who oversee authentication. Add this role even if the employees are already assigned the SuitePeople WFM role. See [Assigning Roles to an Employee](#).
5. Configure NetSuite as OIDC Provider. See the help topic [Configure NetSuite as OIDC Provider](#).
 - Integration name: **SuitePeople Workforce Management**
 - Entities to enable: Click **Employees**. Check the **Select All** box.
 - Roles to enable: Check the **Select All** box.
6. Edit the SuitePeople Workforce Management integration.
 - a. Go to Setup > Integration > Integration Management > Manage Integrations.
 - b. Click **SuitePeople Workforce Management**. Click **Edit**.
 - c. On the **Authentication** subtab, go to the **OAuth 2.0** section.
 - d. From the **OAuth 2.0 Consent Policy** list, select **Never Ask**. Click **Save**.
7. Uninstall the Adi Insights SuiteApps, **Adi Insights** (Bundle ID: 317115) and **Adi Insights – Embedded** (Bundle ID: 401708), from your account. See the help topic [Uninstalling a Bundle](#).

After you've finished these steps, set up the WFM portlet to work with the new SuiteApp version. See [Setting Up the Workforce Management Portlet](#).

Installing SuitePeople Workforce Management from the SuiteApp Marketplace

Using the Administrator role, follow the procedure to install SuitePeople WFM from the SuiteApp Marketplace.

To install WFM from the Marketplace

1. Go to SuiteApps.
2. In the **Search** field, enter **SuitePeople Workforce Management**.
3. Click the **SuitePeople Workforce Management** tile.
4. On the SuiteApp details page, click **Install**. Click **OK**.

The installation process begins.

For more information about installing SuiteApps from the Marketplace, see the help topic [Installing from the SuiteApp Marketplace](#).

After you've installed WFM, finish the rest of the steps in the [Switching to SuitePeople WFM from the Marketplace](#) section.

Setting Up the Workforce Management Portlet

Employees with the **WFM Integration** and **Payroll Administrator** roles can set up the WFM portlet.

To set up the Workforce Management portlet:

1. Log in to the appropriate role.
 - For customers using Infinet Cloud Payroll in Australia or Canada, log in to the **Payroll Administrator (Unlocked)** role.
 - For all other customers, log in to the **Payroll Administrator** role.
2. Go to Workforce Management.
If the tab is not available, see [Troubleshooting Missing WFM Tabs](#).
3. On the upper right corner of the page, click **Layout**.
4. (Optional) Select the **one-column** layout.
5. On the Custom Content portlet, point to the upper right corner.
6. Click the More icon. Click **Set up**.
7. From the **Source** field, select **SuitePeople Workforce Management**.
The SuitePeople Workforce Management page appears.
8. Go to Dashboard > Setup > NetSuite Integration > Settings.
A notification that a new SuiteApp has been installed in your account appears.
9. Enter your NetSuite email address and password. Click **Submit**.
Your previous data links and settings carry over to your account.

Assigning the SuitePeople WFM Integration Role

After you've installed the SuiteApp, ensure that the **SuitePeople WFM Integration** role is available to the user setting up the integration.

To assign the SuitePeople WFM Integration role:

1. As an Administrator, go to List > Employees > Employees.
2. Click **Edit** next to the name of the employee for whom you want to set up access.
3. Click the **Access** tab.
4. On the **Roles** subtab, assign the **SuitePeople WFM Integration** role.

Note: If you're using Infinet Cloud Payroll, add the **Payroll Administrator-Unlocked** role for ICS. Ensure all subsidiaries are selected.

5. Click **Add**. Click **Save**.

Assigning WFM Permissions to Roles

If you need to give WFM SuiteApp access to existing roles, add the required permissions to any roles that aren't the Employee Center Role.

If needed, assign WFM permissions to the following roles:

- HR - HR Manager
- PRL - Payroll Manager

To assign WFM permissions to roles:

1. Go to Setup > Users/Roles > Manage Roles.
2. Next to the role that needs permissions, click **Edit**.
3. On the **Permissions** subtab, click the **Setup** subtab.
4. From the Permissions list, add the following permissions with their corresponding levels.

Permission	Level
REST Web Services	Full
Log in using OAuth 2.0 Access Tokens	Full

5. Click **Save**.

To continue setting up WFM, see [Deploying User Event Scripts in NetSuite](#).

Deploying User Event Scripts in NetSuite

Deploy user event scripts from the installed WFM SuiteApp to your account.

To deploy WFM user event scripts:

1. As an Administrator, go to Customization > Scripting > Scripts.
2. Expand the filter options. From the **Type** list, select **User Event**.
3. Click **View** beside **SuitePeople WFM Webhook**.
4. Click the **Deployments** subtab.
5. Under the **Applies To** column, click on the **Employee** record.
6. Click **Edit**.
7. Check the **Deployed** box.
8. Click **Save**.
9. For the **Location** record, repeat steps 5 to 8.

Configuring Additional Permissions in NetSuite

After you've installed the SuiteApps, you might need to give the WFM role access to more record types in NetSuite.

To configure additional permissions in NetSuite:

1. As an Administrator, go to Setup > Users/Roles > Manage Roles.
2. Next to the **SuitePeople WFM Integration** role, click **Edit**.
3. If needed, add any extra permissions by clicking the **Permissions** subtab, then the **Lists** subtab.
For example, you can add permissions for the following:
 - Workplaces
 - Time-Off Administration
4. Click **OK**. Click **Save**.

For more information about setting permissions for a role, see the help topic [Setting Permissions](#).

Getting Started with Workforce Management

The WFM basic setup includes creating a brand, locations, jobs, employees, and wages. These are all found in the **Setup** subtab.

Step	Related Help Topic
1. Create a Brand.	Creating a Brand
2. Create a Location	Creating a Location
3. Set Up Jobs.	Setting Up Jobs
4. Set Up Wages.	Setting Up Wages
5. Add Employees.	Adding Employees

After you've finished the basic setup, WFM's ready to use.

If you've got finance or HR tasks, see [Finance or HR Manager Onboarding](#).

If you're a people manager, see [People Manager Onboarding](#).

Creating a Brand

A brand allows you to change settings for multiple locations in one place.

Any locations you create belong to a brand and inherit its settings. If you change brand settings, they'll affect your location, unless you've overridden location configurations. Most of the time, you'll only have one brand.

To create a Brand, go to Setup > Brands then follow the prompts.

For more information about creating a brand, see [Creating a New Brand](#).

To learn more about Brands, see [Configuring Brands](#).

Creating a Location

A location is a single place where employees get assigned shifts.

A venue or site where employees are scheduled is typically one location, although there may be cases where multiple locations belong to a venue or site.

For example, a store might have multiple departments which might require multiple schedule locations as each department is scheduled separately. Another example is a restaurant that might group employees into two schedules such as front of house and back of house.

Employees can work at more than one location.

To create a location, go to Setup > Location, then follow the prompts.

For more information, see the following topics:

- [Adding a New Location in WFM](#)
- [Locations](#)

Setting Up Jobs

Jobs define what roles employees do during their shifts, and you can run reports based on different jobs.

When you create a schedule or shift, you can assign a specific job to it. Only employees who can do that job will show up for that shift. For example, if there's a job called Management, only management staff will appear.

You'll assign jobs to each employee and location you create. As you add jobs, ensure they're linked to the right locations. To do this, go Workforce Management > Setup > Jobs. Then select the locations where each job is available.

Assign accurate jobs to each location. For example, if you have two locations and only one offers deliveries, you only need to assign the delivery job where it makes sense.

To learn more, see [Jobs](#).

Setting Up Wages

There are three different kinds of wages you can set up in WFM. A combination of all three can be set up, depending on what is best for you. Wage Agreements can be set up right away, however, setting up Hourly & Salary employees and assigning wage agreements can not be set up until employees are added.

You can set up three types of wages in WFM, and you can use any mix that works for you.

You can set up Wage Agreements right away. When setting up Hourly or Salary wage types, you must add employees first.

- **Hourly** – This wage type the basic level in WFM. Each employee gets their own hourly rate, which calculates for every hour they work.

 **Note:** Hourly wages don't calculate overtime or penalty rates. To calculate these, set up Wage Agreements.

- **Salary** – Employees on salary have their wage spread evenly over the hours they work each week. Their pay stays the same every week.
- **Wage Agreements** – Compared to the hourly wage type, wage agreements offer more flexible and added benefits. You can use it to:
 - Bulk update wages when changes occur
 - Set custom overtime and penalty conditions
 - Apply different rates for different jobs worked
 - Calculate hourly or weekly shift allowances

To manage wage types:

- For hourly and salary employees, go to their profiles. For more information, see [Managing Wages for WFM Employees](#).
- For wage agreements, in Workforce Management, go to Setup > Wage > Agreements.

After you've set up Wage Agreements, you can add them to employees in the same area. For the calculation type, select **Classification**. Then, select the employee's classification level.

Adding Employees

Now you can add employees and start entering their schedules.

To add an employee, go to Setup > Employees > List. For more information, see [Adding New WFM Employees](#).

To learn about schedules, see [Scheduling in Workforce Management](#).

Here are a few other things you might want to do to help with scheduling:

- Get employees to log in and set their availability
- Set managers up with the right access so they can approve availability

For more information, see [WFM Employee Availability](#).

Finance or HR Manager Onboarding

If you're responsible for HR or finance tasks, here are a few steps and best practices to help you set up employees and ensure they get paid properly.

These are:

- [Creating Employee Records in WFM](#)
- [Assigning Employees to Locations](#)
- [Setting Correct Wages](#)
- [Setting Job Roles](#)
- [Setting Availability](#)
- [Setting Access Group](#)

Creating Employee Records in WFM

You can create new employee records in WFM under Setup > Employees > List > New.

When setting up an employee, the required fields are:

- First name
- Last name
- Primary Location

You'll also want to add an email address so they can get their login details and published shifts.

For more information, see [Adding New WFM Employees](#)

Assigning Employees to Locations

To assign a location to an employee, go to Setup > Employees > List. Click the ID next to the employee you want to assign a location to. On the employee profile, click the **Locations** tab.

Ensure the **Primary Location** is correct. Then, check the **Can work at** field if the employee can work at more than one location.

For more information, see [Employment](#).

Setting Correct Wages

To assign a wage to an employee, go to Setup > Employees > List. Click the ID next to the employee you want to set a wage. On the employee profile, click the **Wages** tab.

You'll see one line of wage history showing a \$0 hourly rate. This is the default wage set for all employees and needs to be updated.

You can edit this wage to set their correct salary, hourly rate, or wage agreement in WFM.

For more information, see [Managing Wages for WFM Employees](#).

Setting Job Roles

On the employee profile page, click the **Jobs** tab. Click **New job** and select any jobs the employee is eligible. For example, you may have a "Training" job that all new hires are required to be assigned to. Click **Save**.

For more information, see [Jobs](#).

Setting Availability

Employees can log in and set their availability.

Or, you can set their availability so they show up as available in the schedules they can work.

For more information, see [WFM Employee Availability](#).

Setting Access Group

You can set the access group during the new employee setup. If it wasn't set, or if the employee was imported or promoted, you can change the access group later.

For more information, see [Employee Access in WFM](#).

To learn more about other important things you need to do for payroll, read [Steps for Payroll Day](#).

People Manager Onboarding

As a people manager, you can use Workforce Management (WFM) to manage staff schedules, keep labor on target, and handle staff communications.

When you first log in, you'll see a list of employees.

To help you create and manage employee schedules, see the following topics:

- [Reviewing Employee Jobs and Availability](#)

- [Managing Shifts](#)
- [Creating, Managing, and Publishing Schedules](#)
- [Duplicating and Optimizing Schedules](#)
- [Reviewing Time and Attendance and Approving Exceptions](#)
- [Short Videos: Phone App, Fill-ins, Swapping, Dropping and Approving Shifts](#)

Reviewing Employee Jobs and Availability

The employee list shows everyone available to work at your locations.

Click an employee to see their profile.

In the employee profile, check out the **Jobs** and **Availability** tabs.

- **Jobs**– See which jobs the employee can work. If there aren't any listed, you can add a new job. When you create shifts, you might want to add certain roles, like a Supervisor shift. Any jobs available at the employee's locations will show up here.

For more information, see [Jobs](#)

- **Availability** – When you make new schedules, employees will show up as available or not. To learn more, see [WFM Employee Availability](#).

If you let employees log in, they can set their availability and you'll get notified about any requests. To receive availability requests or to make changes to employee availability, read [Approvals](#).

If you're missing employees from the list, you can add them. For more information, see [Adding New WFM Employees](#).

Managing Shifts

In WFM, go to the **Shifts** menu to manage shifts.

See the following options:

- **Daily** – Lets you schedule and publish shifts. For more information, see [Scheduling in Workforce Management - Daily](#).
- **Weekly** – Lets you review and approve shifts, including exceptions. For more information, see [Weekly](#).
- **Multi-Location** – Like the weekly options but lets you view shifts across all the locations you manage. For more information, see [Multi-location](#).
- **Forecasting** – Lets you add and adjust sales projections to help plan future schedules. For more information, see [Forecasting](#).

Creating, Managing, and Publishing Schedules

Here is a short video that shows how to start scheduling:

[Scheduling from the daily view - quick start tips](#)

For more information, read the following help topics

- Creating a sales forecast - [Forecasting](#).
- Creating shifts - [Shift Creation - Daily](#).
- Extending start and end times on a location - [Location Options in WFM](#).
- Publishing a schedule - [Publishing schedules](#).

- Printing a schedule - [Printing Schedules](#).

Duplicating and Optimizing Schedules

You can duplicate schedules daily or weekly. Usually, you'll copy a previous schedule forward and tweak the shifts based on your sales forecast.

For more information, see [Copy and paste shifts](#).

Here is a video showing how you might optimize your schedules:

[Optimize your schedule using your sales forecast with labor deployment model](#)

For more information, see [Managing Workforce Management Shifts](#).

Reviewing Time and Attendance and Approving Exceptions

Every day, you'll want to check Shifts > Weekly to review the day's shifts.

If you've set up time and attendance, times will show up under each employee's scheduled shifts. If not, you can still approve and make changes to shifts.

You can add extra shifts or approve time and attendance with notes.

For more information, see [Weekly, Updating hours worked](#) and [Approving Shifts with Automatch](#).

Here is video showing how to approve time:

[Approval of hours worked](#)

Short Videos: Phone App, Fill-ins, Swapping, Dropping and Approving Shifts

The following videos demonstrate some other tasks you can do in Workforce Management.

Phone App Navigation

Get to know the WFM Phone App, where you can view your shifts, trades, and notifications.

For more information, see [SuitePeople Workforce Management Phone App](#).

Swapping Shifts

Employees can swap shifts if the manager approves.

If enabled in your account, learn how employees can swap shifts with one another. See the workflow from employee to manager, ending in the manager reviewing the potential cost differences and approving the swap.

[Swap Shift](#)

A manager can deny the swap request. The employee gets notified and can try to pick up a different shift, which sends a new approval request to the manager.

[Deny Swap](#)

Fill Shift

If an employee can't make their shift or doesn't show up, use WFM or the Phone App to quickly find a fill-in. The manager can start a fill shift and consider cost differences to make the best decision.

[Find a shift Fill-in](#)

For more information, see [Filling Shifts](#).

Drop Shift

An employee can start a drop request, and another employee can pick up the shift if the manager approves.

If it's enabled, employees can start a drop request from the Phone App if they can't make their shift.

 **Note:** This video shows Drop Pre-Approval turned on. If you turn it off, employees can drop shifts without manager approval, and the request goes to all available employees. When someone offers to pick up the shift, the manager gets notified to approve or deny. You can change this in Setup > WFM Phone App.

[Drop Shift Approved](#)

The manager can also deny the request.

[Deny Drop](#)

Approved Shifts

If it's enabled, employees can see their approved shifts in the Phone App.

[Approved Shift](#)

You can also let employees confirm or dispute their time. To learn more, read [Attestation](#).

Training #1: Scheduling

Now that you've got your WFM account set up and ready to go, create your first schedule.

Watch the video, or follow the steps below.

[Scheduling from the daily view - quick start tips](#)

To start adding shifts:

1. Go to Shifts > Daily.
2. Pick a day first using the calendar picker. Start with next week's schedule.
3. Now you're looking at the first day of next week's schedule. First, you'll want to check that your forecast is correct. For more information, see [Forecasting](#).
4. To see if the data is generating automatically, check the Sales and Units rows at the bottom of the Daily screen.
5. If the numbers look off or there's no data, click **Create Forecast** or **Edit Forecast** on the menu bar to the right of the date picker.
6. From here, you can manually generate your forecast based on a certain week and add a rolling average or index. Or, enter your forecast using your own projections.
7. When your forecast looks right, click **Create Schedule** at the top to go back to the Daily view.
8. Drag a shift out in the gray bar at the bottom, from the start time to the finish time.
9. Choose the job you want to schedule, then pick the staff member from the list on the right. People are sorted by suitability.

FAQs

- **Why do employees appear in yellow?** You haven't set up availability for employees yet. Go to **Setup > Employees > List** and click **Edit / Approve Availability**. Start from next week, and click **Always available** to make someone available 24/7). For more information, see [WFM Employee Availability](#).
- **Why do employees appear in red?** They are already scheduled on at that time.
- **Why do employees not have a cost?** You haven't set up wages for that employee yet. Go to an employee profile, then click **Wages**. For more information, see [Managing Wages for WFM Employees](#).
- **Why don't I see a staff member I'm looking for under a certain job?** You haven't set up the Jobs section of the employee profile. For more information, see [Jobs](#). To add extra jobs to your account, go to **Setup > Jobs**.
- **How do I color-code the shifts?** Click the **Options** button at the top then toggle the "Color by" option to color by job or availability.

Tips

- If you're happy with the day's schedule, you can copy shifts from one day to future days, or copy a whole week to another week. Hover over **Copy**. For more information, see [Copy and paste shifts](#).
- When you've finished the week's schedule and you're happy with it, send it to the employee. Go to **Actions > Publish Schedules**.
- Try printing out the schedule. Click **Print**.

Training #2: Five-Step Scheduling with Copy and Paste

Now that you've got your first week's schedule set in WFM, here are five steps to build your schedule each week.

Step 1: Copy and paste last week's schedule

1. Go to **Shifts > Daily**.
2. While you're looking at the current week in the daily schedule view, hover over **Copy**. Select **Copy to next week**.
3. After you make your selection, you'll be taken to the next week where all shifts and staff are pasted.

Step 2: Check sales forecast

1. If you've got historical sales data for your default date range, ensure it looks right. Start by checking the weekly sales total. You will see this in the KPI panel on the right of the daily page.
2. Check the sales forecast for each day. To do this, press Tab through the days on the daily view. The arrow in the bottom right will move you ahead one day at a time.
3. If you need to adjust the sales forecast or if no forecast appears, select **Edit forecast** or **Create forecast**.
4. To generate your sales forecast, use one of the following options (see screenshot above):
 - **Option 1 — POS defaults:** Uses past imported POS data to automatically build your forecast.
 - **Option 2 — Custom POS settings:** Pick the date you'd like your sales forecast to be based on. Dates in red mean missing sales data, so choose a week with all black dates.

- **Option 3 — Enter a manual projection:** Enter the sales or units you expect to sell each day for the week you're scheduling.

Step 3: Reassign staff to shifts they can work

1. Go to the Options button and change the "Color by" to "Availability". This will color all of the shifts in the scheduling view to Green/ Red/ Yellow/ Blue depending on Availability. [See this user manual page on Shifts Colors] to understand what all the colors mean.
2. The fastest way to reassign employees is to start on the first day and look for any red shifts. Click the red shift, then click the blue reassign arrow. An employee selection dialog displays the list of available employees.
3. Keep reassigning those red shifts to available staff until all the shifts are green.

Note: You need to add a job to each shift. Before you can assign an employee to a shift, select the job to see the list of employees who can do it.

Step 4: Optimize your schedule

1. The best way to optimize your schedule depends on whether you've set up a labor deployment model in WFM. If you have, follow Option 2.
2. **Option 1. Optimize your schedule using your sales forecast (no labor deployment model)**
 - Start by checking your labor KPIs for next week. Check if they are on target. If not, look at the busy and slow times using the sales row to spot them.
 - By checking the hourly KPIs on the daily page, you can spot areas to optimize. If your labor cost percentage target is 19 to 21%, you'll see any times outside that range marked in red. In the example below, labor percent is highest from 7 to 10 AM.

As a manager, you'd expect this if I've got a few people doing prep or opening. The first times to focus on are peak hours when sales are highest: 12 PM to 2 PM and 4 PM to 8 PM. In this example, labor percent is below target during those times.

As a manager, you might want to add a few more employees or extend existing shifts to cover those times and hit your labor cost target. As you add or adjust shifts, the metrics update in real time. When the numbers turn black, you're within your target for that hour. Follow this process daily, keeping an eye on your weekly labor cost percent target. This is the big number at the top right.
 - There are lots of ways to tweak your schedule to improve labor metrics and customer service time. You can also set targets for productivity and labor efficiency, and follow the same process to keep your metrics balanced.
3. **Option 2. Optimize your schedule using your sales forecast WITH labor deployment model**
 - The fastest way to build and optimize your schedule each week is to follow these steps. After you've finished step 3, turn on your labor deployment model. Select **Options**. On the Shift display options, switch **Labor deployment** on.
 - To optimize your schedule with the model, follow the steps in the video:
[Optimize your schedule using your sales forecast WITH labor deployment model](#)

Step 5: Communicate shifts to staff and print reports

1. To let your staff know about their shifts, select **Actions**, then click **Publish Schedules**.
2. Employees can receive their schedules through:

- SMS
- Email
- Push notifications to the phone app

If you'd like to send the schedule by SMS or email, tick those boxes in the Publish Schedules window. You can also add a message for an employee if you want to share something with their schedules, such as "Staff meeting Wednesday 10AM."

3. After you've picked how you want to notify staff and added any messages, scroll down and click **Choose all** under the Staff box to move everyone over. Only employees with shifts scheduled for that week will get notifications.

4. Click **Publish and Send**. You can find more info about publishing shifts here.

5. This emails texts the Schedule to Staff for the week at the Location you're looking at. They'll also get a notification on their smartphone if WFM phone app is installed. Staff may also log in to the browser and see published Schedules. To print, select 'Print' and choose report type:

This emails and texts the schedule to staff for the week at the location you're viewing. They'll also get a notification on their phone if the WFM app is installed. Staff can also log in on the browser to see published schedules.

To print, click **Print**, then select any of the following reports:

- Staff report shows a table view of the full week's schedule without wages.
- Daily report gives you a bar graph view without wages.
- Reports with " " in the name contain wage costs.

Training #3: Approving Time

Now you've got your first schedule, update it to follow the actual shifts.

After you've got some scheduled shifts in WFM, employees will come in and work those shifts. You can track their time with SuitePeople Time Clock, but you'll want to see these punch events next to the schedule.

Go to Shifts > Weekly. Days of the week are the columns, the rows are the person's information.

- **Scheduled Shifts** – Shows what was supposed to happen.
- **Timesheets** – Shows staff punch events from SuitePeople Time Clock.
- **Shifts** — Shows what occurred. These data are created when you approve, deny, or edit scheduled shifts or timesheets. Actual shifts are sent to payroll.

When approving a shift, note the following:

- Use the thumbs up to approve a shift as shown. This creates a shift using the start, finish, and break info.
- Use the thumbs down to deny a scheduled shift. This says that this shift wasn't worked. You can assign the shift to someone else who filled in or create leave for the employee who didn't work.
- Use the pencil icon to edit a shift. You can change the start or finish time, break, or job.

If an employee wasn't scheduled and didn't punch in, they'd have no timesheet entry. You can hover over the row for that employee to manually create a shift.

Check the % in the top right. It shows how many shifts have been processed. At the end of the week, it'll be 100% if you've processed all visible shifts.

[Approval of hours worked](#)

Training #4: Find Last-Minute Fill-ins, Drop or Swap Shifts

Phone App Navigation

- Get to know the phone app. Learn how to view your shifts, trades, and notifications.

[Phone app navigation](#)

Swap Shift: Staff agree on a Swap with Manager Approval

- If enabled in your account, learn how Staff can Swap Shifts with one another. See the workflow from Staff to Manager, ending in the Manager reviewing the potential cost differences and approving the Swap.

If it's enabled in your account, see how employees can swap shifts with each other. The workflow goes from employee to manager, with the manager reviewing any cost differences and approving the swap.

- [In this video](#), see how the Manager can deny a swap request.

The employee gets notified and can pick up a different shift instead, which sends a new swap request to the manager to approve or deny.

[Swap Shift](#)

Fill Shift

- If an employee can't make their shift or doesn't show up, use WFM or the phone app to quickly find a fill-in. See how the manager can start a fill shift and consider cost differences to make the best decision.

[Find a shift Fill-in](#)

Drop Shift: Staff initiates a Drop and Staff picks it up with Manager approval

- If it's enabled in your account, see employees can start a drop request from the phone app if they can't make their shift. The workflow goes from the employee starting the drop request to the manager reviewing it and finding a fill-in.
- [In this video](#), see how a manager can deny a drop request.

 **Note:** This video shows Drop Pre-approval turned on. If you turn it off, the initial manager approval is skipped. When a staff member drops their shift, it automatically sends a request to all available employees. If someone offers to pick it up, the manager gets notified to approve or deny. You can change this setting in Setup > WFM Phone App.

[Drop Shift Approved](#)

Approved Shifts

- If the feature is enabled in your account, employees can see their approved shifts in the phone app.
- You can also let staff confirm or dispute their time with attestation. To learn more, see [Attestation](#).

[Approved Shift](#)

Integrating Workforce Management with NetSuite

To integrate Workforce Management (WFM) with NetSuite, you'll need the General Manager access group in WFM.

See the following help topics:

- [Integrating Payroll with WFM](#)
- [Mapping a WFM User to Enable SuiteSignOn](#)
- [Adding the WFM Portlet in NetSuite](#)
- [Troubleshooting Missing WFM Tabs](#)
- [Linking Workforce Management Fields with NetSuite](#)
- [Linking Workforce Management Records with NetSuite](#)
- [Exporting Shifts for Payroll](#)
- [Setting Up POS Imports](#)
- [Connecting Saved Searches to WFM Sales and Units Data](#)
- [Steps for Payroll Day](#)
- [NetSuite and WFM Integration FAQ](#)

Integrating Payroll with WFM

Link WFM with NetSuite so they communicate and sync with one another.

To integrate payroll with WFM:

1. Go to the stand-alone WFM website at see.adiinsights.com.
2. Go to Setup > Integrations.
3. If you are using Infinet Cloud Payroll, select **SuitePeople** or **InfinetCloud Payroll**.
4. Enter your NetSuite credentials used to access NetSuite when installing the WFM SuiteApp.
 - a. Enter your NetSuite username and password.
 - b. From the list, select **Production**.

A list of NetSuite accounts the user has access to appears.
5. Select the account that you used to install the WFM SuiteApp.

Note: This list only shows accounts with the right roles assigned.

You've now successfully linked NetSuite and WFM.

Next, you'll see how to map your WFM user to your NetSuite user.

Mapping a WFM User to Enable SuiteSignOn

After you've linked WFM and NetSuite, map your own user credentials.

To map WFM users:

1. From the last step, go to the **Staff** tab on the left side of the screen.

2. Find your WFM user. Click the search field next to the user and type the name of the NetSuite user that you set up.
3. Select your name from the list.
4. Click **Link**.

You've now mapped your WFM user to your NetSuite employee record for SuiteSignOn.

If you're using the HR or Payroll Manager NetSuite role and got an authorization error when you go to the **Process Time** subtab, log in with your NetSuite credentials.

After you map your NetSuite employee record with your WFM user credentials, you can go back to NetSuite and configure the account.

Adding the WFM Portlet in NetSuite

After you've mapped your WFM user credentials to your NetSuite employee record and returned to NetSuite, finish the setup.

To complete the setup, add the WFM portlet. The portlet lets you access and manage WFM without leaving NetSuite.

You can only add the portlet if the **Workforce Management** tab is available for your center and role. This tab is available for NetSuite roles using the Accounting or Employee Center. If you don't see the tab, see [Troubleshooting Missing WFM Tabs](#).

To continue adding the portlet, see the help topics:

- [Setting Up the Workforce Management Portlet](#)
- [Dashboard Portlets](#)
- [SuiteApp Portlets](#)

After the portlet is configured you will see the following subtabs:

- Dashboard
- Availability
- Shifts
- Reports
- Process Time
- Setup

Troubleshooting Missing WFM Tabs

If your role uses the Accounting or Employee Center, the **Workforce Management** tab should show up by default.

If the tab is not available, perform the following actions:

- If you have lots of tabs, check the right-hand extension menu.
- Ensure that the SuitePeople Workforce Management SuiteApp is installed. For more information, see [Installing the SuitePeople Workforce Management SuiteApp](#).
- If you've already installed the SuiteApp and the tab still doesn't show up, check if it appears in the Center Tabs list for role's Center Type.

To check the Center Tabs list:

1. Go to Customization > Centers and Tabs > Center Tabs.
Workforce Management should show up in the list.
2. If your role doesn't use the Accounting or Employee Center type, add a new center tab.

To create a new center tab, see the help topic [Creating Center Tabs](#).

To fill in the New Center Tab page, refer to the following information:

- **Label** – Enter **Workforce Management**.
- **ID** – Use the format custcentertab_wfm_center. For example, custcentertab_wfm_customer.
- **Center** – Select the center for which you want to add the tab.
- **Content subtab** – On the **Portlets** subtab, complete the following columns:
 - **Type** – Select **Custom Portlet**.
 - **Portlet** – Select **Center**.
 - **Show** – Select **Yes**.

After you save the new tab page, the Workforce Management tab should be visible. If you've got a lot of center tabs, you might see it in the dropdown at the right of the menu.

Linking Workforce Management Fields with NetSuite

Learn more about linking WFM fields for timebills with NetSuite.

- [Guidelines for Linking WFM Fields](#)
- [Configuring WFM Fields to Link with NetSuite](#)
- [Settings for Linking WFM Fields](#)
- [Configuring WFM Time Fields for NetSuite](#)
- [Linking Workforce Management Records with NetSuite](#)

Timebill field linking options from WFM to NetSuite include but aren't limited to:

- WFM location to a NetSuite location
- WFM location to a NetSuite project
- WFM location to a NetSuite department
- WFM job to a NetSuite department
- WFM job to a NetSuite project task or service item

Guidelines for Linking WFM Fields

Keep these guidelines in mind.

- The default setup is different from what's described below, so make sure your settings match exactly.
- If you use Infinet Cloud Payroll, the payroll subsidiary and timebill wage options aren't available.
- When mapping WFM locations and jobs, ensure that employees get the right wage rate for the locations they work at and the jobs they do.
- Record and report time against projects, tasks, or other NetSuite fields.

- Adapt time-based billing.

Configuring WFM Fields to Link with NetSuite

Follow the procedure to configure WFM fields.

To configure WFM fields to link with NetSuite:

1. Go to Workforce Management.
2. Go to Setup > NetSuite Integration > Settings.
3. Click the **Configuration** subtab.
4. Refer to the actions in the **Settings for Linking WFM and NetSuite Fields** table.
5. After setting configurations, click **Save**.

Settings for Linking WFM Fields

Refer to the actions on the table to link WFM fields with NetSuite.

Section	Field	Action
Staff	Push staff member changes to NetSuite	Clear the box.
Staff	Single Subsidiary	Choose from the payroll subsidiary options. ■ Check the Single Subsidiary box – If your mapped employees will be paid from one subsidiary, check the box. If you check this box, all exported staff will be linked with the selected subsidiary. ■ Clear the Single Subsidiary box – You will need to select a subsidiary when exporting staff.
Staff	Pay from subsidiary	If you checked the Single Subsidiary box, select the subsidiary name that will be used for exporting staff.
Timebill Wage	Send rate	Check the box. If unchecked, no rate data will be sent to NetSuite with the timesheet information.
Timebill Wage	Send blended overtime	Check the box. This setting calculates blended overtime for each eligible employee across the export period.
Timebill Wage	Send combined penalties	Check the box. This setting combines penalties and segments to get an effective rate for each segment.
Timebill Wage	Payroll Item Record	Select an option.
Timebill Wage	Timebill Record	Select an option.
Timebill Wage	Allowance Record	Select an option.
Timebill Wage	Penalty Record	Select an option.
Leave/Time-Off	Handling	Select the leave or time-off method.

Section	Field	Action
		■ No action – If you use Infinet Cloud Payroll, select this option and reach out to your NetSuite account manager, if needed. ■ Pull approved Leave/Time-Off from Time Management (Adi Insights) – Select this option if leave is requested and approved in NetSuite. ■ Push approved Time-Off to Time Management (Adi Insights) – Select this option if your leave is requested and approved from within Time Management. Changing the Leave/Time-Off handling method might mean you need to adjust how Leave/Time-Off objects are linked. The relationships between linked objects depends on the data flow direction. For example, you can't import multiple Leave/Time-Off balances into a single Leave/Time-Off type.
Leave/Time-Off	Leave/Time-off Type Record	Select an option.
Leave/Time-Off	Leave/Time-off Request Record	Select an option.
Hourly-paid employees	Hourly time	Leave blank.
Salaried employees	Send salary hours	Clear the box. If checked, salary hours are sent to NetSuite. If you send salary hours, you need to ensure that employees are set up to be on a salary. Overtime hours are excluded.
Salaried employees	Normal time	Leave blank. This field lets you select the payroll item for normal salary hours.
Salaried employees	Salary overtime	Leave blank. This field lets you select the payroll item for salary overtime hours.
Salaried employees	Public holiday time	Leave blank. This field lets you select the payroll item for salary public holiday hours.
Revisions	Auto link new revisions	Check the box. With this setting, you can automatically relink allowances, penalties, rates, and multipliers from new revisions. WFM notifies you when a new revision is created for any linked agreements, regions, or location overrides.

Configuring WFM Time Fields for NetSuite

In WFM, you can set up added time fields to track more time segments in timebill records.

You can set up the:

- Fields to be used to send additional data to NetSuite
- Additional fields that employees will see when they punch in

- The order that WFM shows the fields

Managers can select the right values during approval. Any later record types that reference a previous one will have their available list filtered based on the earlier selection.

Important: Shifts with additional fields can't be approved using the automatch feature. If your shifts have added time fields, you must manually approve them. For more information, see [Automatch and Rounding Settings in WFM](#).

To configure WFM fields to link with NetSuite:

1. Go to Workforce Management
2. Go to Setup > NetSuite Integration > Settings.
3. Click the **Time Fields** subtab.
4. Click **Configure fields...**
5. On the Fields for Timebill window, complete the required details for each field.
 - **Field label** – Enter the field's label. If you leave it blank, it'll default to the record name, purpose, or field name.
 - **Record type** – Enter the record name linked to the field label in NetSuite without any spaces.
 - **Field name** – Enter the field name from the timebill.
 - **Value** – Enter **True** or **False**.
 - **Purpose** – Select why you're using this field.
 - **Required for export** – If there are added custom fields that the employee or manager needs to complete when approving time, check this box.
For the record to export, the custom field must contain data. For example, if an employee fills out extra time fields, project, project task, or service task, they also need to complete the custom field so the data can be exported.
6. (Optional) If you want to add a field, click **Create new field**.
7. Click **Submit**.
8. From the **Available** panel, drag the fields that you want to show into the **Time Field Order** panel.

Important: Fields linked to the record type are automatically selected and placed in the Available panel.

Fields that aren't mirrored can't be selected and won't show up on the panel.

9. (Optional) Reorder the fields that you moved to the **Time Field Order** panel.
10. Set the visibility for the added fields.
 - a. Click the pencil icon next to the field name.
A window appears.
 - b. Choose how you want the field to show up for customers.
 - **Do not show in Time & Attendance**– If you want to hide the field, choose this button.
 - **Show in Time & Attendance**– If you want to show the field and make it optional, choose this button. Managers can also select the added time data field before submitting time to NetSuite.
 - **Require selection in Time & Attendance**– If you want to show this field as required, choose this button.

Setting up Employees for WFM

After you've finished your NetSuite setup, set up the following employee configuration:

- Set additional locations, other than their Primary Location, where they can work.
- Set up the WFM jobs that they can do.
- Assign the right access levels.
- Send a welcome message to employees.

Can Work at Locations

Assign added locations where employees can work.

For more information, see [Employment](#).

Jobs

Assign any added jobs that employees can work.

For more information, see [Jobs](#).

WFM Access Levels

Assign employees to WFM access groups or levels. All employees start at the lowest level, **Staff**.

For more information, see [Employee Access in WFM](#).

Send Welcome email

After you've set up your employees and they're ready to start using the platform, send a welcome email so they can create their usernames and passwords.

For more information, see [Templates](#).

Linking Workforce Management Records with NetSuite

Record linking lets different records in NetSuite be mirrored in Workforce Management (WFM). It ensures that any new or updated NetSuite record is automatically created or updated in WFM.

For example, linking NetSuite employee records means certain groups of employees, based on primary location mapping, are automatically created in WFM. Any shared fields, like name, email, or base wage rate, are updated in real time.

Linking WFM Location Fields to NetSuite Records

Link NetSuite locations to Workforce Management (WFM). You can either manually or automatically create a location in WFM from NetSuite data.

To manually create a WFM location, see [Adding a New Location in WFM](#)

The following procedure lets you link a new location to NetSuite or automatically create and link WFM locations.

To link WFM locations to NetSuite locations:

1. From the Workforce Management tab, go to Setup > NetSuite Integration > Settings > Records.
2. Under Standard Records, click the **+Location** button to create the linked record for a location.
3. Under the Link Type dropdown, select **Location**.
4. (Optional) Check the **Automatically create and update data in linked objects from NetSuite records** box if you want to automatically create WFM locations. Proceed to steps 6-7.

Important: This action creates WFM jobs for all active NetSuite locations.

You can add an optional custom field on the NetSuite Location record to show if that location can auto-sync.

If you manually created a WFM location, go to steps 6 to 9.

5. Click **Save**.
6. On the location row, click the **refetch** button as shown below. If you chose to automatically create WFM locations, the procedure ends here.
7. For manually created locations, go to Setup > NetSuite Integrations > Locations.
8. In the search field next to the location, type the name of the NetSuite location you want to link. To link, click the location name in the list.

Tip: If you don't see the name of the NetSuite location, click **Refresh Locations from NetSuite** and try again.

Linking WFM Job Fields to NetSuite Department Records

Link jobs to WFM using NetSuite departments. You can either manually or automatically create a WFM job.

To manually create a WFM job, see [Create a Job](#).

The following procedure then allows you to link the new job to NetSuite or automatically create and link WFM jobs.

To create and link jobs from department data:

1. From the Workforce Management tab, go to Setup > NetSuite Integration > Settings > Records.
2. Under Standard Records, click the **+Department** button to create the linked record for a location.
3. Under the Link Type dropdown, select **Job**.
4. Check the **Automatically create and update data in linked objects from NetSuite records** box if you want to automatically create WFM jobs. Go to steps 5 to 6.

Important: This action creates WFM jobs for all active NetSuite locations.

You can create an optional custom field on the NetSuite Location record to indicate if that location can auto-sync.

If you manually created a WFM location, proceed to steps 5-8.

5. Click **Save**.
6. On the Department row, click the **refetch** button.
7. For manually created jobs, go to Setup > NetSuite Integrations > Departments.

8. In the search field next to the WFM job, type the name of the NetSuite department you want to link. To link, click the department name in the list.

Tip: If you don't see the NetSuite department name, click **Refresh Departments from NetSuite** and try again.

Creating the Workplace Linked Record

After you've linked WFM locations and jobs, create your first linked record, called Workplace.

To create the Workplace linked record:

1. From the Workforce Management tab, go to Setup > NetSuite Integration > Settings > Records.
2. Click the **+Mirror new record type** button.
3. Fill out the fields for the new record type.
 - Display name
 - Display name plural
 - Link type
 - Icon (not required)
 - Name field
 - Include sublists
 - Grouping field
 - Display fields
4. Click **Save**.

Linking the WFM Workplace Record

After you create the Workplace record, you'll need to link it to NetSuite.

To link the Workplace record:

1. Click on the Setup tab, then select the NetSuite Integrations, then select Workplace.
2. Click in the search field, then enter the name you want to map to.
3. Click the right NetSuite name and they'll link automatically.

Employee Sync Settings

Sync employee settings between NetSuite and WFM.

To sync employee settings:

1. From the Workforce Management tab, go to Setup > NetSuite Integration > Settings > Records.
2. Click **Edit** in the employee row.
3. In the Editing record data for Employee window, check the boxes as follows:
 - **Create staff** – Check the box.
 - **Update staff** – Check the box.

- **Update wage data** – Check the box.
 - **Update employment periods** – Check the box.
 - **Primary location field** – Select a field. If this record type isn't already mirrored, it will automatically be created for mirroring.
 - **Wage type** – Select an option.
 - **Salary default hours** – Enter the default number of hours.
 - **Leave balance fields** – Configure fields.
4. Click **Save**.

Creating Time-Off Linked Records

If you're using SuitePeople HR, you'll need to add two linked records.

This lets approved time-off in SuitePeople flow into WFM automatically. That way, managers won't schedule employees on days they've got approved time off.

To create Time-Off linked records:

1. From the Workforce Management tab, go to Setup > NetSuite Integration > Settings > Records.
2. Click the **+Mirror new record type** button.
3. Fill out the fields in the Editing record data for Time-Off Request window.
 - **Display name** – Enter **Time-Off Request**.
 - **Display name plural** – Enter **Time-Off Requests**.
 - **Link type** – Select **Leave/Time-off Request/Approval**.
 - **Icon** – Select an icon for time off, such as the airplane icon.
 - **Name field** – Enter **name**.
 - **Include sublists** – Check the box.
4. Click **Save**.
5. Fill out the fields in the Time-Off Type record.
 - **Display name** – Enter **Time-Off Type**.
 - **Display name plural** – Enter **Time-Off Types**.
 - **Link type** – Select **Leave/Time-off Type**.
 - **Icon** – Select an icon for time off type, such as the briefcase icon.
 - **Name field** – Enter **name**.
 - **Include sublists** – Check the box.
6. Click **Save**.

Mapping Wage Conditions

To ensure that hours and rates are sent to the right place, you'll need to map wage conditions to the correct pay items.

To map wage conditions:

1. From the Workforce Management tab, go to Setup > NetSuite Integration > Region Based Wages.

On the window that opens, link the applicable wage condition to the matching pay items in NetSuite.

2. If you're using subsidiaries, select which wage condition matches the right pay item for each one.

Note: Things to keep in mind:

- SuitePeople needs payroll items to have employees assigned to receive and a rate set. As an Administrator, go to Lists > Employees > Payroll Items. Select each payroll item you'll use for exporting.
To add an effective and expiration date automatically, check the **Apply** box for each employee individually rather than use the Mark All option. Enter the rate for each employee.
- WFM Regular Hours are usually linked to the **XX-Hourly NetSuite Payroll** item. WFM Overtime is linked to an **XX-Overtime NetSuite Payroll** item.

Linking WFM Leave/Time off Types to NetSuite

If you choose to create Leave/Time Off requests in NetSuite from WFM, you'll need to link the two types.

To link WFM leave/time-off types:

1. From the Workforce Management tab, go to Setup > NetSuite Integration > Leave/Time-Off.
2. In the search field next to the WFM Leave/Time-Off, type the name of the NetSuite Time-Off you want to link. Click the Time-Off name when it pops up in the dropdown to link them.

Note: Some things to keep in mind:

- Depending on whether you import or export leave with NetSuite, you'll see different linking options. If you chose to import leave from NetSuite, you'll get a list of Time-Off Types from NetSuite to match to leave types in WFM.
- After a Time-Off type is linked to a WFM Leave type, WFM can create leave based on approved time off in NetSuite.
- When you're exporting to NetSuite, the leave is sent as soon as it's approved in WFM and not during payroll processing.
- If you're using Infinet Cloud, when you create a part-day leave in WFM, the leave hours are sent. When you create a full or multi-day leaves in NetSuite, only the dates are sent and not the required hours.

Leave Balance Imports

With NetSuite, Leave/Time-Off can pull data from NetSuite or use WFM as the source and push data to NetSuite. If you're using WFM as the source, it's important to see how much leave an employee has accrued when approving requests.

WFM can get an employee's current leave balance from NetSuite through the following:

- Using a sublist (default: availablenow) with all leave balances
- Using a custom field on the employee record for each leave/time-off type

Leave balances are imported whenever a change is detected and after data is fetched from NetSuite for an employee. Deploy the User Event Script for the employee record to process more efficiently.

NetSuite Time-Off Type/Custom Record Employee Sublist

When using NetSuite standard Time-Off Types or a custom record in a sublist, give WFM the sublist record is so it can fetch the list of choices for linking.

If this record type isn't set up for mirroring, you'll need to create it with these settings:

- **Record type** – Enter **timeofftype**.
- **Display name** – Enter **Time-Off Type**.
- **Display name plural** – Enter **Time-Off Types**.
- **Link type** – Select **Leave/Time-off Type**.
- **Name field** – Enter **name**.
- **Include sublists** – Check the box.

For more information, see [Creating Time-Off Linked Records](#).

Setting up the record type for mirroring will turn on the Leave linking page.

When Leave types are linked to NetSuite records, leave balances for that leave type will be imported.

When Leave types are linked to NetSuite records, leave balances for that type will be imported.

NetSuite Employee Custom Field

Some NetSuite setups use a different custom field on the employee record for each Leave/Time-Off Type. This value gets updated in NetSuite whenever the leave balance changes.

You can set this up in WFM by configuring the Employee Mirrored Record on the Editing record data for Employee page. Add the values for the leave types you must import.

Only leave types that you enter a field for will be imported.

Exporting Shifts for Payroll

Follow the procedure.

To export shifts for payroll:

1. Go to Workforce Management.
2. Go to Process Time.
3. On the **From** field, select the start date for the export.
4. On the **to** field, select the end date for the export.
5. Filter your locations.
 - a. In the **Locations** field, click the filter icon.
The Filter Locations window opens.

- b. From the list on the left, select a location group.
The Available Choices and Chosen Items panels for groups and locations appear.
 - c. From the Available Choices panel at the top, select the group of locations with shifts that you must export.
If you want to select all states, click **Choose All**.
To move your selections to the Chosen Items panel on the right, click the blue right arrow in the middle. All locations in those groups will show up in the Available Choices panel at the bottom.
If you want to clear your selections, click **Clear All**.
 - d. From the Available Choices panel at the bottom, select the specific locations with shifts you want to export.
 - e. Click **Done**.
6. From the **Employees** list, filter the group of employees with shifts for export.
Choose from the following options:
- All
 - with shifts to push
 - with shifts
 - with failed pushes

Setting Up POS Imports

WFM can import point of sale (POS) data from NetSuite for scheduling.

Before you set up POS imports, complete the following requirements.

- Set up and configure your WFM and NetSuite integration.
- Upgrade to the latest version of the WFM SuiteApp. See [Installing SuitePeople Workforce Management from the SuiteApp Marketplace](#).
- If you are use InfinetCloud, add these view permissions to the **Payroll Administrator - Unlocked** role from InfinetCloud:
 - Items
 - Cash Sale
 - Cash Sale Refund
 - Invoice
 - Sales Order

If you're not using InfinetCloud, these permissions are already included in the role from the WFM SuiteApp.

To set up POS imports:

1. Set up a saved search for WFM to pull transactions from NetSuite.
Make a copy of this saved search before making changes, so updates to the SuiteApp don't override your changes.
 - a. Open the list of all saved searches. For instructions, see the help topic [Accessing a Saved Search](#).
 - b. Find the **customsearch_Adi_transactions** saved search.

- c. Edit and save a copy of the saved search. For more information, see the help topic [Editing or Deleting a Saved Search](#).
 - d. Configure the search to get the results you want. For more information, see the help topic [Defining a Saved Search](#).
For example, you can include or exclude items like gift cards from the search.
 - e. Keep the search tab open and note the ID.
2. Add a new custom record in the WFM website.
 - a. Open the WFM website at see.adiinsights.com.
 - b. Go to Setup > NetSuite Integration > Configuration > Records.
 - c. Click **create new custom record**
 - d. Set the link type to **Transaction**.
 - e. In the **Record Type** field, enter the search ID noted from NetSuite earlier. You may opt to add extra filters and columns to fetch from NetSuite here.
 - f. Set the display name and display name plural to be **Transactions** or something similar.
 - g. In the **name** field, enter the name. Click **Create**.
 3. Map the fields from NetSuite to the right items in WFM.
 - a. After you create the custom record, click **Fields** for the record type you made.
 - b. Identify the fields you need to pull from NetSuite. For more information about the available fields, see [NetSuite Records Browser for Transactions](#)
 - c. For each field, specify a purpose and a field name.
 - d. Map the fields.
 - **Stats location** – This field in NetSuite maps to the WFM location where you import the data..
 - **Date** – If your sales are reported to NetSuite in real time, use the **datecreated** field. This field gives you the date and time of the sale, allowing for a 15-minute resolution.
If your sales are added in bulk at the end of the day or tracked on a different day, use either **trandate** or **saleseffectivedate**. These fields only track at a daily resolution.
You can set up the field for sale date or time as either **Date and time of the sale** or **Date** depending on if WFM will get the time from NetSuite.
 - e. **Stats types** – For sales, you should map these to amounts. Either map to **quantity** to get the number of items sold, or map to **internalid** to get a count the transactions during the period.
 - f. **Additional filters** – Use these to exclude individual items for a sale or to exclude tax lines. You may set up a test to add these.
 4. Click the **Linking** tab.
 5. From the list, select **Transaction** from the import only group. Click **Save**.
A new menu item for import sales will show up. This lets you import any missing data or fetch data again if it's wrong or you've updated the search or mapping. WFM updates sales for today and yesterday throughout the day.

Connecting Saved Searches to WFM Sales and Units Data

You can create a saved search with sales, units, and other custom info in NetSuite. Use the search to forecast shift hours and view them in WFM. Setting up forecasting in WFM helps ensure that your hours worked meet your goals.

To connect a saved search to WFM sales and units data:

1. With an Administrator role, create a saved search with the sales and units data that you want to show in WFM. For more information, see the help topic [Defining a Saved Search](#).

For example, your saved search may include, but is not limited to, the following:

- Internal ID
- Date Created
- Date
- Sales Effective Date
- Location
- Amount
- Quantity

2. Note the search ID of the custom search you created.
3. In WFM, set up the saved search record to pull data.
 - a. Go to Workforce Management.
 - b. Go to Setup > NetSuite Integration > Settings.
 - c. On the Configure NetSuite page, click **Records**.
 - d. Click **+ Mirror new record type....**
 - e. On the Editing record data for new record type window, complete the required fields.
 - **Record type** – Enter the saved search ID.
 - **Display name** – Enter a name for the record, such as **Sales Search**.
 - **Link type** – Select **Transaction**.
 - **Icon** – (Optional) Select an icon for the record.
 - **Name field** – You may leave this as default.
 - **Ordering field** – You may leave this as default.
 - **Include sublists** – Verify that the box is checked.
 - **Inactive field type** – Enter **isinactive**.
 - **Mirror this record type** – Clear the box.
 - **Fetch entire record** – Verify that the box is checked.
 - f. Click **Save**.
4. Add key fields to the saved search record.
 - a. On the **Records** tab in WFM, click **fields** beside the record type you edited.
 - b. On the Fields window for the record, click **+ Create new field**.
 - c. Create the four key fields. Refer to the following table for the fields and related configurations.

Field	Field label	Record type	Field name	Purpose
Location	Location	location	location	Stats location
Sales	—	—	amount	Sales
Units	—	—	quantity	Units
Date and time of sale	—	—	datecreated	Date and time of sale

For more information, see [Guidelines for Creating Fields Linked to Saved Searches](#).

- d. On the saved search results page in NetSuite, confirm that the correct fields are mapped to date and time of sale. For more information, see the help topic [Accessing a Saved Search](#).
- e. If the **Date** and **Sales Effective Date** columns do not coincide, adjust the field name and purpose for the **Date and time of sale field** in WFM.
 - **Field name** – Change from **datecreated** to **trandate**.
 - **Purpose** – Change from **Date and time of sale** to **Date and time of sale (aggregated to daily total)**.

Note: When you create the **Date and time of sale** field in WFM for sales with times, set the **Purpose** field to **Date and time of sale (aggregated to daily total)**. The field will aggregate all data at a daily level.

5. To ensure that sales and units are created in the right locations, map the WFM locations to the fields.
 - a. Go to Workforce Management.
 - b. Go to Setup > NetSuite Integration > Locations.
The Link Location page appears with a list of locations in WFM.
 - c. Beside the location you need to link, click to search the corresponding location name in NetSuite.
 - d. For each location, click **Link**.

6. To view the connected sales and units in WFM, go to Shifts > Weekly.

The table displays the number of sales and units as well as other KPIs. When WFM starts to consistently gather data, you can use the actual sales or units for forecasting and labor deployment.

Guidelines for Creating Fields Linked to Saved Searches

When you create fields, keep these guidelines in mind:

- **Location** – Since you can pick the field and record type, you can use a subsidiary, department, or another custom category.
- **Sales** – If you use **amount** as the field name, the numbers in the **Amount** column of the saved search are added to get to the daily sales figure.
- **Units** – The field name is **quantity**, and this field sums up the number of units sold. To monitor the number of transactions done in a day, use the **internalid** as the field name.
- **Date and time of sale** – When this field is set, you can see the date and time of the sale, like when the sale record was created in NetSuite. Use this to group data into 15-minute periods.

Steps for Payroll Day

Follow these steps in this topic before running payroll in SuitePeople or Infinet Cloud to make things smoother and cut down on after-payroll adjustments.

The Percent Approved Report

- Run the WFM Percent approved report Go to Reports > Shifts > Percent Approved.

- This report identifies the % of processed or approved shifts for each location.

Note: It's best to have managers approve time daily. The schedule should be 100% processed or approved before you process payroll.

Locking Periods

After all shifts are approved, lock the scheduled weeks. This action stops any previous time approvals from being changed after processing.

If approved hours need to change, managers will need to talk to someone with Finance Coordinator access or higher in WFM to unlock it. WFM keeps a record of who locked and unlocked the time period for auditing.

To lock a time period:

1. Go to Workforce Management.
2. Click the **Shifts** tab.
3. Select **Lock Periods**.
4. Click **+New locked period**.
5. Fill in the **Start** and **Finish** dates for the period you must lock in.
6. In the Locations section, from the Available Choices panel, select the locations you need to lock. If you want to select all states, click **Choose All**.

To move your selections to the Chosen Items panel on the right, click the blue right arrow symbol in the middle of the panels.

If you want to clear your selected items, click **Clear All**.

Payroll Preview

After you've done all that, you're ready to start processing payroll.

- Go to Workforce Management. Click the **Process Time with NetSuite** subtab.
- When the window opens, set up the info you'll use for processing.
- Select the date range.
- Processing will default to 'All active locations'. If different locations are on different payroll schedules, the Locations can be filtered out by clicking on the filter icon to the right.
- Click **Fetch staff with shifts**. You can filter the list according to duration, locations, and employees.
- An export summary will show the number of exportable shifts and the total hours being processed or pushed into SuitePeople.
- Below the summary, you'll see a preview of all staff being processed or pushed, along with their hours.
- To see more details about an employee's hours, click their name. The window will expand to show dates, hours worked, locations, payroll items, workplace, rate, and total cost for the shift.

In the following example, there are 6 hours of normal time at a rate of \$18/hr for 6 hours along with an overtime rate of \$27/hr for 1.21 hours.

Date	Departments	Locations	Payrol Item	Workplace	Hours	Rate	Total
Wednesday, June 30, 2021	—	AK Coffee	Normal Time	AK Coffee	6.0000	18.0000	108.0000
Wednesday, June 30, 2021	—	AK Coffee	OT 1.5	AK Coffee	1.2167	27.0000	32.8500

If the Payroll Item isn't showing here, you can set it up. For more information, see [NetSuite Payroll Item \(SuitePeople/Premier Payroll\) not appearing in the export preview](#)

- Below the details, you'll see a summary of the approved shift, any notes, and who in WFM approved it. The summary includes:
 - Location
 - Start
 - Finish
 - Length
 - Job
 - Notes
 - Approver
- When you're ready to push your hours for pay, scroll up to the Export Summary window and click **Push**.
- WFM will begin the push process and you will see a progress menu appear. When it's done, WFM will show you a summary of the shifts that were pushed to SuitePeople.
- Click **Acknowledge**. Your payroll processing is done.

Reviewing Exported Data in NetSuite

After the data is pushed into NetSuite, review it. You should set up a saved search for a quick overview.

For tips on setting up a saved search, see [Setting Up a Saved Search to Review Time Exported to NetSuite](#)

Deep Analysis and Validation - Approved Hours Report

If you need extra analysis or want to check things like automated overtime in WFM, or if you need to manually enter hours for a pay item that's not linked, run the Hours report for the pay period.

Go to Reports > Shifts > Hours. When the window opens, select the pay run date range and the right locations.

- In the **Shift type** field, select **Actual shifts**.
- In the **Employment status** section, move the statuses you want to filter from the Available Choices panel to the Chosen Items panel.

After you've picked your filter options, click **Preview** at the bottom. The columns will show any overtime or other conditions triggered during the selected date range. This report can also list the employee name, job worked, location, and total hours.

NetSuite and WFM Integration FAQ

Click any of the following links to see more information:

- [NetSuite Payroll Item \(SuitePeople/Premier Payroll\) not appearing in the export preview](#)
- [Setting Up a Saved Search to Review Time Exported to NetSuite](#)

NetSuite Payroll Item (SuitePeople/Premier Payroll) not appearing in the export preview

If the Payroll Item column isn't showing in the preview, you can display it with a quick configuration.

Date	Departments	Locations	Payrol Item	Workplace	Hours	Rate	Total
Thursday, March 24, 2022	Security	USVI Security	Normal Time	USVI Hotel	8.0000	10.50000	84.0000
Thursday, March 24, 2022	Security	USVI Security	OT 1.5	USVI Hotel	0.1667	15.75000	2.6250
Friday, March 25, 2022	Security	USVI Security	Normal Time	USVI Hotel	8.0000	10.50000	84.0000
Friday, March 25, 2022	Security	USVI Security	OT 1.5	USVI Hotel	0.11667	15.75000	1.8375
Saturday, March 26, 2022	Security	USVI Security	Normal Time	USVI Hotel	7.9167	10.50000	83.1250
Saturday, March 26, 2022	Security	USVI Security	Normal Time	USVI Hotel	7.9000	10.50000	82.9500

To show the payroll item in the preview, go to WFM > Setup > NetSuite Integration > Settings > Records. Do the following:

- Show the payroll item in the column.
 - Click Edit Fields next to the timebill record, then click the button at the bottom labeled Create New Custom Field. This adds a new set of fields to the table—enter payrollitem as the record type and field name, then click Submit to save.
 - If you want WFM to block exports to NetSuite when there's no mapped payroll item, check the box for Required For Export before submitting.
- Give WFM the info to show in the preview. At the bottom of the records list, click Create New Custom Record. Fill in the details as follows:
 - Record Type = payrollitem
 - Display Name = Payroll Item
 - Display Name Plural = Payroll Items
 - Name Field = name
 - Grouping Field = itemtypenohierarchy
 - Columns = subsidiary

Click **Submit**.

The next time you load an export preview, the payroll item will show up.

Setting Up a Saved Search to Review Time Exported to NetSuite

To review time exported from WFM to NetSuite, you should set up a saved search with formatting to highlight any issues before you run payroll.

To set up a saved search, go to Reports > Saved Searches > All Saved Searches > New. On the next screen, pick the type of search. Select **Time** from the list.

Enter a name, like **Workforce Management Time Export**. Then, choose to make it public, available as a list, and available in sublist view.

Under **Criteria** set up a filter. Choose the option for **Created by SuitePeople WFM (Custom Column)** and set it to **True**.

Click the **Results** subtab and set the info to display. Customize as needed. From the following items, ensure you add the ones set in bold:

- **Date**
- **Employee**
- **Payroll Item**
- Blended Overtime (Custom Column)
- Payroll Rate (Custom Column)
- **Duration**
- Time-Off Type
- Payroll Workplace
- Location
- Department
- Customer:Project
- Case/Task/Event
- Item

Choose a sort order. You may opt to sort by employee, then by date.

It's helpful to highlight anything of concern, like overtime rows, with a red background. To set this up, go to the **Highlighting** subtab. Add a condition. In Payroll Item, choose any of your overtime payroll items. Select a background color.

To make the report easier to use, set up some quick filter options in the **Available Filters** subtab. Select filters to help you query the data. The most common are Employee, Location, and Date. This action lets you filter by date range, staff member, or location.

Click on **Save**. You can now run this report by typing the report name in the search box. If you have selected the list and sublist view options, use this report to filter and display the data under the **Time Tracking** subtab when viewing an employee.

Configuring Workforce Management

Configure Workforce Management (WFM) according to your needs.

Refer to the table for available configuration options and references.

Configuration	Description	Related Help Topic
Account Settings	Choose the amount and length of breaks employees can record.	Account Settings
Availability	Choose employee options for changing their availability.	Availability
Configuring Brands	Create brands and apply default settings units under the brand.	Configuring Brands
Locations	Add locations and configure schedules, locations, and other settings.	Locations
Jobs	Create jobs and configure related locations, jobs, and other advanced settings.	Jobs

Configuration	Description	Related Help Topic
Leave/Time Off	Set leave types, time in lieu, applications, approvals, holidays, overtimes, costings, and other related details.	Leave/Time Off
Validation Rules	Establish rules and criteria around the number and ages of employees working at a certain time.	Validation Rules
Shift Metrics	Set up items to track on individual shifts to be used for allowances, payroll, and reporting.	Shift Metrics
Financial Configuration	Set up details about employee superannuation funds.	Financial Configuration
Wage Setup	Create wage agreements and configure allowance, rate, penalty, and overtime rate conditions.	Wage Setup
Notifications	Set up reminders for important events, such as birthdays, document expiration, and others.	Notifications
Shift Reports	Create reports to track important weekly and daily statistics.	Shift Reports
Categories	Create location categories and groups for use in exporting shift reports.	Categories
Audit logs	View user actions related to publishing schedules, approving leaves, adding shifts, and others.	Audit Logs
Greyscale mode	Change UI colors to high-contrast black, gray, and white for ease of viewing.	Greyscale Mode
Security Settings	Set up two-factor authentication (2FA) to secure your account.	Security Settings in WFM
Dashboard	Configure the widgets, KPIs, and groups that appear on your WFM dashboard.	Dashboard

Account Settings

Time & Attendance

This page allows you to enable or disable the option to use Rest Breaks (Paid) and prevent shifts from containing more than one break. These settings will flow through to your time and attendance devices.

To prevent creating shifts with more than one unpaid break, click the **Single break** box.

To allow creating shifts with paid or rest breaks, click the **Rest breaks** box.

When you've set time and attendance break options, click **Save**.

Single Break

The **Single break** option ensures both timesheet shifts and shifts can only contain a single break. If you are using a payroll system that only supports single breaks, enabling this option will satisfy this requirement of the payroll system.

Enabling this option will add the option for paid rest breaks to be used when employees clock out for a break, or when managers edit and approve shifts. If you disable this option, only unpaid rest breaks will be used.

By default, the **Rest breaks** option is disabled.

Paid Rest Breaks and the Weekly Scheduling View

You can manually edit timesheets and shifts after completed timesheet shifts in the Weekly Scheduling View. This includes Jobs, start and finish times of events, and comments.

In the Weekly Scheduling view, the **+Add** button will add a new event row to the bottom of the list of punches. The **Remove** button will remove the bottom row event.

It's important to note that a paid rest break is counted as hours worked, and as such is included in all KPI calculations as if it were time worked. If wage-escalation is being used, the pay rate for a Rest Break (Paid) is decided by whatever the pay rate was before starting the Rest Break (Paid).

Short Break Prevention

Short Break Prevention is available on Time Clock for Windows as well as on iPad and Android mobile devices.

Short Break Prevention prevents the employee from returning from their break before the minimum length has passed.

If an employee comes back before meeting the minimum break requirements, they will see a message on Time Clock. The message advises employees of the time when their break finishes and when they will be allowed to punch back in.

To enable Short Break Prevention, see [Preventing Short Breaks](#).

Availability

The availability configuration page allows managers to set a limit on how much forward notice an employee must give when changing their availability. Employees will be unable to change their availability during these periods.

This is useful for small businesses as last-minute changes are a more frequent occurrence which can hinder a store's efficiency.

In the Availability configuration, you can set up the **Availability cutoff** field. Select the number of days in advance that staff members are prohibited from requesting availability changes.

You block availability requests for weeks with a schedule that has already been published in advance. For example, if a schedule has been published 1 month in advance, this will block any employee from requesting an availability change for this week.

If you want to prevent employees from requesting availability changes on a published roster period, click the **Publish blocks availability** box.

When you're done configuring availability settings, click **Save**.

Configuring Brands

The use of brands within WFM helps simplify the need to segregate different sections of a company. Creating different locations within brands stops any accidental employee crossover and confusion. You can create and apply default settings under a brand. When you create a location belonging to this brand,

the default brand settings are applied to that location. You can then directly override the settings for each location. This means less time spent setting up new locations.

An example of multiple brands would be through a food company, which may own a type of chocolate bar, a soft drink, and a type of gum. Creating a different brand for each of these products will give better direction for employees and managers within the company.

Head to the following links for more information

- [Creating a New Brand](#)
- [Editing a Brand](#)
- [Deactivating and Restoring a Brand](#)

Creating a New Brand

Adding a New Brand

On the Workforce Management tab, go to Setup > Brands. To create brand, click **New Brand**.

The Create new brand page appears.

Details

On the Details tab, complete the fields.

- **Name** – Enter a name for your brand
- **Logo** – If you want to include a logo for the brand, click Browse and locate a graphic file. The file must be SVG, PNG, or JPEG format and no larger than 600x600 pixels resolution.

When you're done setting the details, click **Save** and continue.

Defaults

On the Defaults tab, complete the following fields:

- **Schedule start day:** Select which day you would like your week to start. Enter times for when you want each workday to start, shifts to start, and shifts to finish
- **Shift interval:** Shift Interval helps you when creating a shift by snapping to the set times, whether it be to the nearest 15 minute, 30 minute, or 1 hour block. Set the shift interval to 15 minutes as it will allow you greater control when optimizing your schedule.
- **Break length:** The length of the breaks that are automatically placed after a set amount of hours.
- **Break required after:** Simplifies the need to place a break by automatically doing so after a set amount of hours. The Auto add Breaks option allows you to choose whether you want WFM to automatically add a break, or if you would like to do it manually.

After you have filled in all of the areas, click **Save**.

Default Stats

Setting up default stats will allow you to easily forecast your future sales. This uses sales and units values imported from your POS system to estimate how much you will sell. If you believe that you will sell more or less, you can apply a percentage index on top of the forecasted sales.

The Default to stats from sets the amount of weeks you want to use for a forecast prior to the desired week.

The Rolling average is a more involved way to calculate a forecast by using the average for multiple weeks data to give a better estimate on the predicted profits.

By applying an index to the forecast you can change the result by whether you believe you will make profit or not.

After you have filled in all of the areas, click **Save**.

Day Parts

Day Parts is a simple way to assess a broken-down chart from a day during a weekly forecast to show when the stores sales peaked.

1. Select **Add New**.
2. Name the first day part, and then select the period that you would like it to cover (Reminder: Day Parts cannot overlap)
3. After you have created as many Day Parts as you need, click **Submit**. The bar at the bottom of the screen shows how much of the day has been covered by Day Parts.

Templates

Templates is a simple way to inform employees that they are missing essential information from their profile, and to give them a nice welcome message to inform them to update their WFM profile. This can be done over SMS or Email.

Note: Note: Templates is an advance option.

Welcome Email

The welcome email is a way to direct a new employee through the step by step process of setting up their profile with WFM.

From the Templates tab, select **Welcome email** and edit the subject and content of the template. When you select this option, the available tags you can use are shown on the page.

From here you can customize what the welcome email will say. It can be useful to use important tags when informing an employee on what steps need to be completed.

Missing Details Email

An email can be sent out at any time to an employee to inform them on the fact that they have important information missing from their profile. Missing information may have an impact on their payroll.

From the Templates tab, select **Missing details email** and edit the subject and content of the template. When you select this option, the available tags you can use are shown on the page.

To customize the email you can use useful tags such as the ones shown on the Templates tab when you edit the template.

Missing Details SMS

If you want to be sure that your employee receives the notification as soon as possible, you can send them a customized SMS.

 **Note:** Text messages are billed in increments of 160 characters, work your message around this to reduce costs.

From the Templates tab, in the SMS section, select **Missing details**. You can edit the subject and content of the template.

After you have written out the structure for the SMS you can use the helpful tags shown.

Locations

In the Locations subtab, you can see all of the Roster Units that are incorporated with this brand.

Editing a Brand

After you have created a brand there is always the option to go over what you have created and make any changes to your brand.

First of all you will need to go to Setup > Brands and select the brand you want to edit.

From here it will take you to the same page as New Brand.

Editing

Now you are dealing with all of the details that you originally had set for the brand. You can select which section you would like to edit by selecting the relevant tab name.

For more information, see [Creating a New Brand](#).

Deactivating and Restoring a Brand

To deactivate a brand:

1. Go to your brand in Setup > Brands and then select the brand you want to deactivate.
2. On the right side of the page, click **Deactivate**.
A warning appears.
3. Click **Deactivate (Brand Name)**.

You can restore a brand after it has been deactivated.

To restore a brand:

1. Go to Setup > Brands.
2. Click **Restore Brands**.
3. A list of all of the deactivated brands will show up with an option to restore them.
4. Click **Restore**.

You will be prompted with a warning message explaining that any roster units that were deactivated with the brand will be restored.

5. Click **Restore (Brand name)**.

Labor Deployment

What is labor deployment?

This interface allows you to setup your ideal employee to customer or employee to sales ratio. WFM will then predict the correct number of employees required based on the 'sales' and 'unit' forecasted in WFM. As your projected sales changes week in-week out, so does the labor deployment suggestions, ensuring your managers always have an ideal employee to customer or employee to sales ratio and are on track with their labor targets.

On the **Daily** shifts screen, WFM will calculate how many scheduled hours are required per **location load** per hour. A **scheduled hour** is effectively one employee working for 1 hour.

 **Note:** Location Load is determined by the customer and is either "units" per hour or "sales" per hour

Customers enter how they want their employee levels to be adjusted as location load varies. These levels are entered at an hourly resolution. The platform may have forecast sales data down to 15-minute resolution (there are two other intervals, 30 minute and 1 hour) in which case the platform will divide as appropriate.

Terms to understand

- **Brand:** A Brand is a way of streamlining the handling of locations. Locations may belong to a Brand, and the Brand settings will be applied to the Location. You can override Brand settings for specific locations by changing the setting directly.

Newly created Locations associated with a Brand will get all of the Brand defaults.

The Day Parts, Teams and Labor Deployment Model are set up at the Brand level and then Locations are associated with them.

Brands work at a franchise or brand level as the franchisor (will own the brand) can make changes to labor deployment and push deployment out to new franchise locations.

- **Day Parts:** You may divide a work day up into any number of non-overlapping parts. This feature is used for creating different employee targets across different parts of the day: enabling you to require a different combination of employees working a given role at different times.

Your day parts may not overlap, but you may leave gaps between them if you want. Times without an associated day part will not be available for selection when using features that rely on a day part.

 **Note:** This is more of an advanced feature - a brand knows their base labor deployment model you can then start adjusting the model for different day parts.

- **Teams:** Teams can be used to group and order jobs; shifts can be grouped according to their team in the scheduling view. Shifts are also utilized in the Labor Deployment Model where several jobs from a team can sufficiently meet the staffing needs for a shift.

For example: a customer service specialist, customer service representative or a customer service lead could cover a shift needed in the Customer Service team. You might have 10 different back-of-house jobs, but they all use the same deployment model, so you may set up one team to cover BOH. You may not care which job role works when.

- **Opening Hours:** Under Setup > Brands > Hours, you can configure opening hours to be shared to all locations. Under Setup > Locations > Scheduling > Opening hours, you can override the shared opening hours from the brand.

Opening hours are currently only used in deployment for:

- Extra hours
- Sales based deployment will be restricted to opening hours

Opening hours may not overlap from one day to the next: the opening time on a given day must be after the closing time from the previous day.

Opening hours may not be longer than 24 hours on a given day.

- **Labor model:** The labor deployment model ensures various teams have sufficient employees to meet specified criteria. You can create multiple deployment models to satisfy ideal staffing levels for different stores. For example, stores with drive-thru will have a model explicitly for the drive thru. There may even be different models depending on the resources available at different stores (eg number of fryers or counters available) as well as store volume or location (shopping mall vs standalone)
- **Extra hours:** Extra hours will be applied on top of the suggestions from the model. This is not for ensuring minimum coverage but is to be used when you require additional employees to cover duties that are not related to sales, for example assigning 3 hours of management time for office administrator work on a Monday morning or having an extra 2 employees on for an hour to receive a load of goods that need to be unpacked and stored.

Fixed hours can only be added at a location level.

- **Over-unders:** Over-unders shown in red will show you how many employee hours you need to add or remove within a 15-minute period. This will compare the sales forecast to the already scheduled shifts to allow you to see where you need to make optimizations to meet the model.

Each of the red + numbers represent the number of additional employee hours required in a 15-min period.

Note: It is also possible to have negative numbers. If there are no red numbers for given periods, it means the labor model is met for that period.

- **Suggested Shifts:** The suggested shifts shown are based on the over-unders. If more than two thirds of the minimum shift length requires additional employees, WFM will suggest a shift. Suggested shifts are in the screen-shot above, denoted with no employee name as well as a dotted outline.
- **KPIs:** When the deployment mode is enabled, an extra line is shown in the KPI panel and is called Deployment. This shows the number of hours the labor model is suggesting based on the forecast. This also shows at an hour-by-hour interval under the shifts.

- KPI panel
- Hour by hour

Create your first labor model

- Reach out to your account manager to enable labor deployment on your account
- Head to Setup > Brands and select your Brand
- Create some Teams

To create a model, you must first create teams. You must do this as the employee levels are adjusted on a team-by-team basis.

Expand on the above and explain some examples EG FOH BOH Administrator Management teams.

A “team” is either one job or several jobs. This means that a certain number of “team” members are required for a certain number of units (or sales, depending on customer choice). Any employee who can do any job in a “team” can be used to fill shifts.

A labor deployment plan can be set by deciding on the staffing levels of a group of jobs (team). This would mean that any employee that could do any of the jobs in the team could be scheduled. It also means that there is no ordering on the jobs in the team or a requirement on what jobs are filled.

- **Creating and Managing Teams in WFM:** The Teams Tab allows you to create and manage your teams. When creating your team you can name the team and assign jobs that belong to this team.

When the team is created, you may drag teams by their handle to reorder them, and you may drag jobs between the various teams within a brand. The order of jobs within a team is always alphabetical.

When you are done, head to the **Deployment** tab.

Creating and Managing Deployments

The Deployment tab allows you to create and manage your deployment models.

To create a deployment model:

1. Go to Setup > Brands. Select a brand and click the Deployment tab.
2. Provide a name.
3. Set:
 - **Minimum Shift Length**
Allow the customer to specify the shortest length of time (in hours) that an employee can be scheduled. The default will be 3 hours.
4. **Maximum Shift Length**
Allow the customer to specify the longest length of time (in hours) that an employee can be scheduled. The default will be 8 hours.

Deployment Settings and Locations

1. Managers can view the deployment settings assigned to a location by going to Setup > Locations and selecting their location.
2. Select the Deployment tab to display the current settings. To view the metrics assigned against each team, click on the team name to expand out and view the number of employees assigned against the metrics range
3. For the selected location, managers are able to assign extra hours against teams using the Create option under Extra Hours.
4. Should a location have higher or lower performing employees than most of the locations that are using this model, the location can have the model copied/cloned and adjusted for that location.
5. This can be done at the location under the Deployment tab. Head to Tools and select "Clone and Edit this Model".

Note: a Deployment has been cloned, the model is no longer attached to the Brand Model. Any changes to this detached copy will only be used for this location. Changes you make to this clone will have no effect on other locations and any changes made to the Model at the Brand level will no longer affect this location.

When the above are set, you will be able to select teams for deployment and assign the metrics type to be used for the team.

For the selected team, the model can then be built. This can be done by assigning the number of employees (Staff Count) that should be scheduled to meet the metric range selected (Base).

the model has been built, you can assign the model to locations by selecting the Locations button.

For the selected team, the model can then be built. This can be done by assigning the number of employees (Staff Count) that should be scheduled to meet the metric range selected (Base).

Enter the number of employees required for an hour with the corresponding value you are basing this off (either sales or units). WFM will automatically work out how many employees you need in each 15 minute period based on the hourly value provided.

If some of your day parts require a higher level of staffing than the rest of your day you can also build a different set of requirements for the other day parts.

When the model has been built, you can assign the model to locations by selecting the Locations button.

Daily Shifts View and using Labor Deployment

To use and view your model, head to the Daily View. Under Options you can enable Labor Deployment by enabling the Shift Display Option 'Labor Deployment'.

This enables the suggested shifts view and over/under ations.

Extra Hours

Every Extra Hours object will have a name and will apply to a specific Team. Extra hours are extra hours you'd like to calculate on top of the existing deployment. A simple example of this is "I would like to add 2 employees to open and close the store each day irrespective of sales".

There are two period types:

- Fixed period
- Relative period

There are three methods of determining the number of hours:

- Fixed employee count
- Fixed hours
- Dynamic hours

You can combine the period types and the hours types together as necessary.

Fixed Period

Fixed period hours refer to a static period on the day: for instance "between 9am and 11am"

Relative Period

You may also select a Day Part, (or the period Open to Close), and then apply optional offsets to the start and finish of this period to dynamically calculate the period. This can differ when a Location has different opening hours, for instance.

You can use this to generate periods like:

- Between 1 hour before Open to Open
- Between 30 minutes before Close to 1 hour after Close
- Between 1 hour after Open until 1 hour before Close

If a Day Part is used instead of the full open period, this will be truncated as necessary to the open period.

If a Relative period evaluates to an empty period (ie, is for a Breakfast day part on a Location that does not open until Lunch), then this extra hours object will be ignored for this Location

Fixed Staff Count

This rule type is automatically included in the per-shift interval demand levels.

Fixed staff count must be an integer, as it refers to the number of extra employees required for the given period.

Fixed Hours

A Fixed Hours rule indicates that there is a set number of hours that should be allocated to employees across the designated period. These hours may overlap with one another (ie, a 2 hour rule could be met by two employees working for 1 hour each at the same or different times, or 4 employees working 30 minutes each, or 1 employee working for 2 hours).

Unallocated fixed extra hours are shown slightly differently on the scheduling view: because they could apply anywhere within the period, the total number of unallocated hours is shown with the period where they can apply.

When generating suggested shifts, the rule process will attempt to create shifts according to the preference specified (start, middle or end of the period), but this may not always work with the other shifts and demand

Demand-based hours

Similar to how the regular team rules work, it is also possible to create a table of values that indicate how many hours should be applied as “extra” hours. This takes the total figure for the period from the selected stats type (which could be a subcategory, see above), and then uses the lookup table to determine how many extra hours are required.

It then applies them using the same rules as for Fixed hours, including where it will prefer to create suggested shifts, and the mechanism for displaying unallocated hours

Display of extra hours in the scheduling view

As mentioned above, extra hours that are not “Fixed employee count” hours will be “consumed” by any shifts that are in excess of the team rule demand. Unallocated extra hours objects, because they refer to a range, will show up as the total number of unallocated extra hours, stretched over the period to which they may apply.

The graphic below shows the sales demand for the BOH team across a day, but additionally shows that there is a 2½ hour unallocated extra hours in the morning, and 7 hours extra throughout the day. These hours could be allocated to any parts of shifts within the relevant periods that are beyond the demand from the team rule.

Team rule demand will always be applied to a shift before any extra hours are considered.

Deployment level extra hours

It is possible to configure extra hours at the deployment level. These will apply to any Locations that are using that deployment model.

You may still override the extra hours at a given location: this includes not using a specific extra hours rule, or adding additional ones.

Demand based hours are calculated based on the stats and allocated the same way fixed hours are allocated

Sales Subcategories

Currently, sales subcategories are only imported from Redcat.

Within a brand, select **Stats Types**.

Here you can add subcategories to an existing stats type (Sales/Units), and these can be different between sales or units.

To add a new one click **Add new**.

To change the name, click it and type in what you want.

To deactivate click **Deactivate**.

If you've got deactivated ones, you can reactivate them.

You can set these up to drill down to whatever level of detail you need.

Deployment by Sales Subcategories

Here are the actions for deployment by sales subcategories.

- Click a button to create a new team rule.
- Choose the team and the subcategory, knowing that Sales or Units is also classed as a subcategory.
- If you select a subcategory with children, deployment adds up that subcategory and all its children.

If you create more than one model for a team, each is calculated separately and then added together for staffing needs.

For example: In a restaurant you may build a model for the FOH team based on dine-in units and a second model based on takeaway units.

When you need an employee in either model, they'll be added to the team's staffing needs.

Deployment Report

In Setup > Locations, select a location and then go to Scheduling > Deployment you will see an option within the 'tools' menu to generate a report.

This report shows deployment for either the forecast or sales. If you're changing the model and want to know how many hours it generates or how your changes look, this report will help you understand that.

This doesn't take into account any shifts during the period. It only shows the required hours after Team Rule and Extra Hours are applied to sales for that day.

Opening & Prep Hours

Dynamic Extra Hours

You can set up dynamic extra hours at a brand level and change them for a specific location if needed.

Name the extra hours, assign them to a team, and pick which days they apply to.

You can apply the extra hours to a fixed or relative period.

If there's a day part set up at the brand level, select it. Otherwise, you can only select **Full day**.

The next two options let you set how many extra hours you want to add, based on the selected period:

Underneath the **relative to** list, there are two rows with three options:

- How many hours (time wise)
- Select either "at", "before", or "after"
- "Start of period" or "Finish of period"

This field lets you pick how many extra hours you need before or after the start or end of the period.

For example, if I need employees to open the store each day, I can set the options like this:

- **Relative to** – Full day period (open -> close)
- **Between** – 2 hours before the start of the full day period (open time)
- And at 0 hours at the start of full day period (open time)

So this means it'll suggest two extra hours before my open time, right up until opening..

Employee count

This setting applies X number of employees for the whole period.

It'll be added to the +1/-1 15-minute data.

Fixed hours

Fixed hours add X hours to the period you set earlier.

Prefer hours means suggested shifts will use these hours first.

For example, if you need 3 hours of setup in the two hours before open, you can set the times as above. Then, enter **3** as fixed hours and set prefer hours to finish the period.

Demand-based hours

Demand-based hours are calculated from stats and assigned like fixed hours.

In the daily view, the first line shows sales-driven deployment with employee count.

The second line shows dynamic extra hours. You can use 2.5 hours before open, 7 hours during open hours, and 2 hours after close.

It's up to the scheduler how to use the extra hours. They must stay within the period.

Opening hours

Under Setup > Brands, select a brand. Click **Details**.

To set opening hours for all locations, select **Hours**.

To override the shared opening hours from the brand, go to Setup > Locations. Select a location and click Scheduling > Opening hours.

Opening hours are only used for deployment in these cases:

- Extra hours
- Sales based deployment will be restricted to opening hours

Locations

A location is used for single stores where a manager can control their employees. Locations have lots of options to help with opening and closing, shifts, sales forecasts, and other day-to-day improvements.

See the following topics:

- [Location Options in WFM](#)
- [Adding a New Location in WFM](#)
- [Bulk Uploading Locations in WFM](#)
- [Deactivating a Location in WFM](#)
- [Shift Templates in WFM](#)
- [Managing Public Holidays in WFM](#)
- [Automatch and Rounding Settings in WFM](#)

Location Options in WFM

There are lots of options to look at when editing a location, and each plays an important part in weekly shifts.

To edit a location, go to Setup > Locations and select the one you want to edit.

When you've selected a location to edit, you'll see the following options:

- [Details](#)
- [Scheduling](#)
- [KPI Targets](#)
- [Modifiers](#)
- [Approvals](#)
- [Jobs](#)

Details

When you edit a Roster Unit, the first tab is for editing the basic details.

The Details tab has a few basic info pages for the Roster Unit.

There are seven tabs on this screen.

Name

Change the Roster Unit name.

Custom ID is a custom identifier for the Roster Unit.

- Some csv reports can display the custom ID to help when importing to a spreadsheet
- If using our Generic Email importer, we can match location names to the Custom ID

Address

Enter the location name or address.

Ensure the timezone and state are correct. Timesheets and public holidays will be calculated based on these details.

Important: To comply with the Biometric Information Privacy Act (BIPA), devices in Illinois locations may not be used to capture biometric data through fingerprint scanning.

When you change a location previously set outside of Illinois to within it, an error message may appear with a list of devices that use biometric data to authenticate.

To continue changing the device location, click each of the device links and go through the device wizard. On the Authenticate by field, select PIN only as the authentication method.

Contact details

Phone will fill by default when publishing by SMS.

Contacts

These include any outside contacts who might need to be called, such as maintenance workers, delivery services, or customers.

Groups

This option only appears in specific setups.

Scheduling

Schedule days and times

Choose which day your schedule starts, like **Wednesday** if your week is Wednesday to Tuesday.

Shift interval – This interval is how often your shifts are scheduled, usually every 30 minutes. If you schedule shifts 15 minutes before or after the hour, select **15 minutes**.

Shift interval

Daily start and finish time – These times are the earliest and latest someone can be scheduled.

Show shift finish times – If you check this, shift end times will show on printed schedules.

Clear this if you only want employees to see they're needed until required.

You can have breaks auto-applied if shifts are long enough. Set this to match your award conditions, along with break length. You can still edit this while making a shift.

Display breaks on printed reports – If employees take breaks when it's not busy and don't have preset breaks, clear this option. The break will still count even if it doesn't show.

Default stats

If you have a POS integration for importing sales data, you can set the default schedule to fetch the data so you don't have to change it every week. You can also apply an index.

KPI Targets

Setting key performance indicators (KPIs) for a roster unit helps management keep a record of important information. The two main types of KPI are:

- Sales Related Targets
- Absolute Targets (Per-Week)

Sales related targets

Labour Percentage is a helpful sales-related KPI. It lets you set a daily or weekly goal for how much you spend on wages compared to profits.

Set the productivity goal KPI to see how many units get sold per hour. For example, in an electronics store, the goal might be 3 units per hour per employee. With ten employees, selling within 10% of 30 units means you met the goal.

Absolute targets

Absolute targets are limitation goals for a week's shifts.

Costs lets you set a goal for how much gets spent on wages..

Hours for the total hours worked by all employees.

You hit these targets if the result is less than or equal to the goal.

Modifiers

You can add things like superannuation and salary on-costs.

Multiplier

You can add any required costs as a percentage multiplier for the weekly schedule. You can set an effective from date and apply it to an employment status.

An example of a multiplier is superannuation.

Fixed Costs

You can add any required fixed costs to the weekly schedule. You can set an effective from date and apply it to an employment status.

An example of a fixed cost is the work cover.

Approvals

Availability

You can select which managers can be approvers for availability requests at each location. The manager will receive availability requests from employees that have that location as their primary location.

Leave

You can select which person/s can be approvers for leave requests at each location. They will receive leave requests from employees that have that location as their primary location.

IMPORTANT NOTE: This setting does not prevent the manager from adding an approved leave event for employees that they 'manage' this is defined by any roster unit/location that the manager is available to be rostered at.

Actual

If you set this, you'll get a warning if you try to approve a shift longer than what you've set.

Approvals_Actual

Automatch

For more information about these settings, see [Automatch and Rounding Settings in WFM](#).

Jobs

Note: Before you can assign jobs to a Roster Unit, you must set them up. To do this, go to Workforce Management. Go to Setup > Jobs.

Select which jobs can be worked at this location. Move them over using the arrow. If all jobs apply click **Choose All**, then hit **Save**.

Adding a New Location in WFM

Follow the steps to add a new location roster in WFM to manage a separate set of employees.

Step 1: Add a new Location

1. Go to **Setup > Location**.
2. Select **Add New**.
3. Follow the prompts to add a new location.

Step 2: Configure additional Location settings

1. If there are any unique schedule settings for this unit, set up approvers and multipliers. Verify everything before you add employees.

Step 3: Set up Time Clock

1. [Setup SuitePeople Time Clock for Windows] within Location settings.
2. [Setup NetSuite Time Clock for Android & IOS] under the Time Clock Config option.

Step 4: Add employees which are available to be scheduled at this Location

1. When creating a location, you can add employees who already work in WFM or at another roster unit. This is useful if you share employees across sites or are combining locations.

2. You can create new employees as usual and assign them to the new location. You can also add the new location to existing staff in WFM.

Step 5: Start Scheduling!

1. After you complete the previous steps, you can start setting schedules and tracking employee times.
2. Some integrations might need extra setup. If you need help with the setup, contact NetSuite Customer Support.

Bulk Uploading Locations in WFM

In Workforce Management (WFM), you can upload locations in bulk using a CSV file.

To upload locations in bulk in WFM:

1. Go to Setup > Locations.
2. On the top right section, click **Bulk Actions**. Click **Uploader**.
3. On the Location uploader page, click the brand associated with the locations.
4. To download a template of the CSV file, click **Template**.
5. Format your locations according to the downloaded template.
6. Drag and drop the formatted CSV file in the upload space at the bottom of the page.
The page updates with the mapping and preview of the bulk upload.
7. On the Header Mappings section, check that the items in the **File Header** column match those in the **WFM header** column as you intended.
8. On the **Mapping Preview** section, review that the data fall under the correct headers.
9. On the **Upload options** section, check the boxes that apply to your upload. Click Upload.
A confirmation page appears.
10. Understand and check all the boxes and click **Upload**.
A summary window appears showing the counts for the successfully or failed data changes.
If there are errors in the upload, click **Errors**. A window appears to help you troubleshoot failed updates.

Important: To comply with the Biometric Information Privacy Act (BIPA), devices in Illinois locations may not be used to capture biometric data through fingerprint scanning. All devices in the Illinois locations must be set to use only pin codes to authorize, otherwise, the location will not be updated.

To view device settings, log in to Workforce Management. Go to Setup > Time Clock. From the **Activated Devices** subtab, click the device name associated with the location. On the Options page of the wizard, from the **Authenticate by** field, select **PIN only** as the authentication method.

11. Click **Done**.

Deactivating a Location in WFM

To deactivate a location, go to Setup > Locations. Select the location you want to deactivate.

On the Location screen, click **Deactivate**. Confirm the deactivation on the warning that appears.

Reactivating a Location

After deactivating a location, you can restore it any time you need.

Go to Setup > Locations.

To see a list of deactivated locations with restore options, check the **Include deactivated units** box. Select **Inactive**.

A warning message appears. Click the **Restore (Location name)**.

Shift Templates in WFM

If shift templates are enabled, you will need to be utilizing jobs within WFM.

For help setting up jobs and assigning them to employees, see [Jobs](#).

Only Managers and higher can access shift templates. Users can only see templates for locations they can view.

This guide is split into two sections:

- Creating shift templates
- Using shift templates

Creating Shift Templates

Shift templates let you set up permanent, recurring shifts without employees attached.

You will be able to set:

- Location of shifts
- Starts time of shifts
- Finish time of shifts
- Number of employees to fill each shift
- The job which is worked that shift

If you want to copy a permanent employee schedule week to week, use the copy and paste function in Workforce Management.

1. To create the initial template, go to Shift Template setup, available by **Setup > Locations** and selecting a location. When selected, click on **Scheduling** and **Template shifts**.
2. Click on a day to expand and view all template shifts on that particular day. If there are no template shifts, you will see a button 'add new shift set'
3. The list of headers that appear are:

- **Start** – start time of template shift
- **Break start** – start time of the break of the template shift (Only used with the Shift Template Model option)
- **Break finish** — end time of the break of the template shift (Only used with the Shift Template Model option)
- **Finish** — finish time of template shift
- **Job** — the job assigned to this template shift
- **Count** — number of shifts with this day (explained below)

The following are sample settings for a template shift:

- start time of **7:00am**
- finish time of **4:00pm**
- Break start time of **12:30pm**
- Break end time of **01:00pm**
- Job of **Manager**
- Count of 2 employees working this shift

The **count** of 2 above means two template shifts will appear, both starting at **7am** and finished at **1:30pm** of the job **Manager**

After your shift sets are created, you can go back here to edit them.

You can adjust template shifts when creating a schedule below.

A completed shift set may look like below:

▼ Wednesday							
⌚ 08:30 AM	⌚ 12:00 PM	⌚ 12:30 PM	⌚ 04:30 PM	Barrista	↕	2	Delete
⌚ 04:30 PM	⌚ 07:00 PM	⌚ 07:30 PM	⌚ 10:00 PM	Barrista	↕	2	Delete
⌚ 08:00 AM	⌚ 11:00 AM	⌚ 11:30 AM	⌚ 03:00 PM	Restaurant Manager	↕	1	Delete
⌚ 03:00 PM	⌚ 07:00 PM	⌚ 07:30 PM	⌚ 11:00 PM	Restaurant Manager	↕	1	Delete
⌚ 08:30 AM	⌚ --:-- --	⌚ --:-- --	⌚ 12:30 PM	Host	↕	1	Delete
⌚ 12:30 PM	⌚ --:-- --	⌚ --:-- --	⌚ 06:30 PM	Host	↕	1	Delete
⌚ 06:30 PM	⌚ --:-- --	⌚ --:-- --	⌚ 10:30 PM	Host	↕	1	Delete
+ Add new shift set							

Shift Templates in Action

Shift templates are available on the **Daily** view and the **Multi-unit** view. There are also two different layout types: Legacy and Model.

This section describes the legacy static shift templates type. This is the default shift template type.

We will start with the **Daily** view.

Click **Options** at the top of a new, blank week.

The view options pane will appear from the side. Click the **Shift Templates** option to view shift templates you previously created. You can turn these on or off at any time.

Select the **Shift templates** type to assigned to create a static template to work from.

Switch **Shift labels** to **on**, to view the details on each template.

The shifts created earlier show up below. Note the differences from normal scheduled shifts:

- No names attached to the left of shifts
- Dotted shift outline
- No cost associated to shifts
- No wages or scheduled hours added to KPI's

To assign someone to a shift template, click the shift you want to assign.

The shift shows up at the bottom with the job and available employees. Unpaid break rules still apply.

To change shift length and break times, drag the template shift at the bottom bar before assigning employees.

Selected, the new added shift will be displayed with the template.

If you delete a templated shift, it will reappear as a blank unassigned shift.

Note: You can adjust the shift length after it's assigned to an employee. If you edit template shifts, the changes will not apply if an employee has already been assigned one of these shifts.

Creating Shift Templates using Hours Met Shift Template Types

The purpose of shift templates is set up a permanent, recurring set of shifts with no employees attached.

The Hours Met shift template allows you to work dynamically on templated shifts.

You will be able to set:

- Locations of shifts
- Start time of shifts
- Finish time of shifts
- Number of employees to fill each shift
- The job which is worked that shift

Shift templates are available on the **Daily** view and the **Multi-unit** view. There are also two different layout types: Legacy and Model.

This section describes the dynamic model shift templates type.

We will start with the **Daily** view.

Click **Options** at the top of a new, blank week.

The view options pane will appear from the side. Click the **Shift Templates** option to view shift templates you previously created. You can turn these on or off at any time.

Select the **Shift templates** type to **Hours met** to create a dynamic template to work from.

Switch **Shift labels** to **on**, to view the details on each template.

To create the initial template, go to Shift template setup, available by **Setup > Locations** and selecting a location. When selected, click on **Scheduling** and **Template shifts**.

The Dynamic Model view will treat shifts with breaks as two separate shifts. Creating the template without breaks may be a layout consideration.

A completed shift set may look like below:

▼ Thursday							
⌚ 08:30 AM	⌚ --:-- --	⌚ --:-- --	⌚ 04:30 PM	Barrista	↕	2	🗑 Delete
⌚ 04:30 AM	⌚ --:-- --	⌚ --:-- --	⌚ 10:00 PM	Barrista	↕	2	🗑 Delete
⌚ 08:00 AM	⌚ --:-- --	⌚ --:-- --	⌚ 03:00 PM	Restaurant Manager	↕	1	🗑 Delete
⌚ 03:00 PM	⌚ --:-- --	⌚ --:-- --	⌚ 11:00 PM	Restaurant Manager	↕	1	🗑 Delete
⌚ 08:30 AM	⌚ --:-- --	⌚ --:-- --	⌚ 12:30 PM	Host	↕	1	🗑 Delete
⌚ 12:30 PM	⌚ --:-- --	⌚ --:-- --	⌚ 06:30 PM	Host	↕	1	🗑 Delete
⌚ 06:30 PM	⌚ --:-- --	⌚ --:-- --	⌚ 10:30 PM	Host	↕	1	🗑 Delete
+ Add new shift set							

When creating the template, a **count** of 2 above means two template shifts will appear, both starting at **8:30am** and finish at **4:30pm** of the job **Manager**.

The shifts created earlier show up below. Note the following differences from normal scheduled shifts:

- No names attached to the left of shifts
- Dotted shift outline
- No cost associated to shifts
- No wages or scheduled hours added to KPI's

To assign an employee to a shift template, click on the shift you would like to assign an employee to.

The shift appears at the bottom with the right job and available employees.

To change shift and break times, drag the template shift at the bottom before assigning employees.

The Model Shift template is dynamic. It suggests what coverage is still needed after you start filling shifts.

If you assign part of a template, it will show what still needs to be filled.

If you delete a templated shift, it will reappear as a blank unassigned shift.

Note: You can adjust a shift's length after assigning it to an employee. Edits to templates won't apply if an employee is already assigned.

Adding Employees to a Regular Template Shift

When you're setting up or editing shift templates, you can add notes to each shift or select specific employees to show up as available choices.

- **Comments column** – Adds a comment to the corresponding template shift
- **Staff column** – Shows a selection box of available employees. You can select certain employees to appear for selection for that shift.

Shift Notes

Shift notes will show up each week when you add an employee from the template. You can change this each week if needed.

Employee Selection

Situations you may want to do this are if you have certain employees, such as full-time employees, which usually work certain shifts however any of them could work these certain shifts, these shifts are set however the employee can change each week and you must schedule a full-time employee on this shift.

You might have an employee with a regular shift every week. You can assign only that person to the shift, so they're the only one who shows up for it.

To select them, click **All employees** on the template shift.

After you've selected your employees, close out. The setup page shows how many employees are available per template shift.

Copy Templates Between Locations

If you've made a template at one location, you can copy it to other locations in the company.

You can copy all template shifts for the week, or certain days.

This is accessed on the shift template setup page underneath the template setup.

	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday	Total
1 Copy from: Blacktown (current location)	3	1	1	1	1	1	1	9
	3 ↓	↓	↓	↓	↓	↓	↓	
2 Copy to: Bondi	0	0	0	0	0	0	0	0
Combined templates	3	1	1	1	1	1	1	9
Template sets in red will be deleted								
								5 Copy

1. Select a location to copy templates from # number of template shifts on each day are listed to the right
2. Select a location to copy templates to # number of template shifts which are currently at that location are listed to the right
3. Clicking this option will gray out the icon so that day's template shifts won't get copied. This setting is useful when you only want to copy certain days.
4. Total number of template shifts which will be copied across to the selected location
5. Button to finalise the copy

Note: Copying is non-reversible

Copying template shifts between locations on certain days

You may want to copy template shifts only from certain days # for example extended hours at multiple locations on Fridays - you can make changes to Friday's template shifts at 1 location; and if they are the same at another location you can copy them over.

The below scenario we have made changes to our Monday - Friday template shifts, however do not want to copy over our Saturday + Sunday template shifts as we want them to stay the same at the location we are copying to (please note copying overrides shifts at the location you are copying to).

Click the arrow on days you don't want to copy. Those days will gray out and not get copied.

This way, Saturday and Sunday won't get copied, and the bottom number in bold will show 0 shifts for those days.

	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday	Total
Copy from: Blacktown (current location)	3	1	1	1	1	1	1	9
	↓	↓	↓	↓	↓	-	-	
Copy to: Bondi	0	0	0	0	0	0	0	0
Combined templates	3	1	1	1	1	0	0	7
Template sets in red will be deleted								
								Copy

Managing Public Holidays in WFM

You can edit public holidays by Location. To do so, go to Setup > Locations, select a location, and then click Public Holidays.

Some Enterprise Agreements, Awards or Regions may view different public holidays than the Federal or State dates (eg. regional show days).

Public holidays can be included or excluded at the WFM Location level.

For a full list of holidays for the U.S., go to <https://see.adiinsights.com/holidays/US/2023/>.

Within this menu, you will see a list of public holidays which are assigned to your Location.

Adding a Public Holiday

Holidays will generally only need to be added if you need to replace a holiday or your local area observes holidays other than state or national holidays. Note: if you add a holiday, it only applies to this location. To add a holiday, click **Add local public holiday**. Enter a name and a date for the holiday. Optionally, enter a start time and a finish time. Click **Create**. The holiday appears in the list for that location.

Excluding a public holiday

Clicking on the “Exclude” button will prompt you to confirm you’d like to exclude this particular holiday from this Location.

After excluding a public holiday a new list of holidays excluded from this Location will appear underneath the list of current holidays:

You can click “Restore” on a public holiday if you have made a mistake or need to add that holiday back to those included/observed at this Location.

Automatch and Rounding Settings in WFM

 **Note:** This setting is available if it is enabled on your account and you use the SuitePeople Time Clock (previously AdiClock) app on an Android device or iPad. To know more, contact your NetSuite account manager.

With automatch, you can minimize time spent on shift approvals by setting conditions for automatic timesheet approvals.

Guidelines When Using Automatch

Note the following guidelines:

- Automatch cannot be used with timesheet shifts that have additional time fields. When you run automatch, these shifts appear as exceptions. You must manually review and approve them. For more information, see [Configuring WFM Time Fields for NetSuite](#).
- When configuring automatch settings, avoid testing on real data. If you are using real data, ensure any users with approval rights at that location are aware so that employees do not have shifts approved incorrectly.

- When configuring automatch settings, ensure that you check the boxes for your desired settings. If the box for the setting is cleared, WFM will not check for it even if the field contains values.

To update your automatch settings, see [Updating WFM Automatch Settings](#)

For more information about using automatch when managing shifts, see [Approving Shifts with Automatch](#).

To know more about the available settings, refer to the following sections:

- [General Automatch and Rounding Settings](#)
- [Shift Settings](#)
- [Unpaid Meal Break Settings](#)
- [Paid Rest Break Settings](#)
- [Punch Events Settings](#)

General Automatch and Rounding Settings

Review the table for the related settings.

Setting	Description	Example
Default Grace Period X minutes	Enter the number of minutes before or after a scheduled shift that WFM should consider when approving timesheets. WFM automatically matches the times that fall within the grace period. If you require more detailed shift settings, define those preferences in the Shift Settings section of this page.	If you enter 15 minutes as the default grace period, WFM will automatically approve employee times within 15 minutes of the shift start and end times.
round actual shifts to a multiple of X minutes	If you want to round actual shifts to a multiple of time, check this box and enter the base number of minutes. WFM rounds off employee times to the closest multiple of the base number. Specifies the rounding to a multiple of minutes. Times will round to the closest multiple. If you don't want to round shift times, clear this box.	If you enter 15 minutes, WFM rounds off the approved start time to times within multiples of 15. These times include 9 am, 9:15 am, 9:30 am, and so on. If the employee start time is 9 am, expect the following scenarios: ■ The employee punches in at 9:07 am, and the closest 15-minute multiple of time is 9 am. That time becomes the approved shift start time. ■ The employee punches in at 9:08 am, then the approved shift start time rounds off to 9:15 am.

Shift Settings

Review the table for the related settings.

Setting	Description	Example
length is within X minutes of scheduled	Check to define the maximum number of minutes that a shift can vary from the scheduled shift length so that WFM will still approve it.	If you enter 30 minutes, WFM will approve shifts that lasts for as short as 7.5 hours to as long as 8.5 hours.

Setting	Description	Example
start is less or equal X minutes before scheduled	- Check to define the maximum number of minutes before the scheduled start time the actual shift should start so that WFM will still approve it. - You may also round the time to the scheduled start time.	If you enter 15 minutes before the scheduled start time, which is 9 am, WFM will approve shifts punched in from 8:45 am to 9 am. A shift punched in at 8:44 am must be manually approved. If rounding is checked, approved punches will round to 9 am.
start is less or equal X minutes after scheduled	- Check to define the maximum number of minutes after the scheduled start time the actual shift should start. - You may also round the time to the scheduled start time.	If you enter 15 minutes after the scheduled start time, which is 9 am, WFM will approve shifts punched in from 9:01 am to 9:15 am. A shift punched in at 9:16 am must be manually approved. If rounding is checked, approved punches will round to 9 am.
finish is less or equal X minutes before scheduled	- Check to define the maximum number of minutes before the scheduled end time the actual shift should end. - You may also round the time to the scheduled finished time.	If you enter 15 minutes before the scheduled end time, which is 6 pm, WFM will approve shifts punched out from 5:45 pm to 6 pm. A shift punched out at 5:44 pm must be manually approved. If rounding is checked, approved punches will round to 6 pm.
finish is less or equal X minutes after scheduled	- Check to define the maximum number of minutes after the scheduled end time the actual shift should end. - You may also round the time to the scheduled finished time.	If you enter 15 minutes after the scheduled end time, which is 6 pm, WFM will approve shifts punched out from 6:01 pm to 6:15 pm. A shift punched out at 6:16 pm must be manually approved. If rounding is checked, approved punches will round to 6 pm.

Unpaid Meal Break Settings

Review the table for the related settings.

Setting	Description	Example
start is within X minutes of scheduled	Check to define the maximum number of minutes after a scheduled break start time the actual break should start so that WFM will still approve the shift.	If you enter 5 minutes and the scheduled break starts at noon, WFM will approve shifts with breaks starting from noon to 12:05 pm. A shift with a break starting at 12:07 pm must be manually approved.
length is within X minutes of scheduled	Check to define the maximum number of minutes after a scheduled break end time the actual break should end.	If you enter 5 minutes and the scheduled break ends at 12:30 pm , WFM will approve

Setting	Description	Example
		shifts with breaks ending from 12:30 pm to 12:35 pm. A shift with a break ending at 12:37 pm must be manually approved.
length is at least the same as scheduled	Check to only approve shifts if the actual break length is equal to or longer than the scheduled break.	If you check this box, and the scheduled break is from noon to 12:30 pm, WFM approves shifts with breaks that ran for 30 minutes or longer. A shift with a break from noon to 12:25 pm needs to be manually approved because it ran for less than 30 minutes.

Paid Rest Break Settings

Review the table for the related settings.

 **Important:** The Paid Rest Break section appears on the settings page only if **the Rest Breaks (Paid)** feature is enabled in your account. To know more, contact your NetSuite account manager.

Setting	Description	Example
treat paid rest breaks as time worked	- Check to automatically approve timesheets with paid rest breaks that meet all other automatch criteria. - If the round actual shifts to a multiple of X minutes box is checked, WFM will apply rounding only to the worked segments and not to the paid breaks. - If rounding causes the break to extend beyond the rounded shift end time, the shift must be manually approved.	WFM will automatically approve a shift that: - has one or more paid rest breaks - meets all other automatch conditions In the following example, rounding is checked, causing the break times to extend and the shift to require manual approval: - actual shift end time is 5:51 pm - paid rest break was taken late in the shift, from 5:33 pm to 5:48 pm - with 15-minute rounding, the recorded shift end is 5:45 pm - the rounded shift end (5:45 pm) is earlier than the break end time (5:48 pm), so WFM skips approval.

Punch Events Settings

Review the table for the related settings.

Setting	Description	Example
only punches with confirmed visual verification	 Note: The Visual Verification package must be available on your account. To know more, contact your NetSuite account manager. Check to approve shifts only if they've been visually verified.	—

Setting	Description	Example
only punches with no notes	Check to approve shifts only if they do not have notes added.	—

Updating WFM Automatch Settings

You can update your automatch settings for single or multiple locations.

To update automatch settings:

1. Go to Setup > Locations.
2. On the Locations page, choose between the following:
 - Set options for a single location
 - Set options for multiple or bulk locations
3. For a single location, follow the steps.
 - a. Select a location.
 - b. From the **Approvals** tab, click the **Automatch** subtab.
4. For multiple locations, follow the steps.
 - a. Click **Bulk Actions**.
 - b. Click **Automatch**.
5. If you are updating for multiple locations, configure location settings.
 - a. Set the filters.
 - b. From the **Available Choices** panel on the left, select the locations where you want the automatch settings to apply.
If you want to select all locations, click **Choose All**.
 - c. To move the chosen locations to the **Chosen Items** panel on the right, click the blue right arrow symbol at the middle of the panels.
If you want to clear your chosen items, click **Clear All**.
6. Set the automatch and rounding settings that you want to apply to all of the selected locations. For descriptions and examples of each setting, see [Automatch and Rounding Settings in WFM](#).
7. Click **Save**.

After each setting change, you can test them without needing to refresh the page. To test, run automatch from the weekly view on your desired shifts.

Jobs

Jobs may be used to define what jobs a person will perform during their shifts. They may be applied to Scheduled and shifts, and only a person who is eligible to perform a job will be able to be assigned to a shift with that job.

Create a Job

First step that you will need to take is to go on to the job screen, which can be accessed through Setup > Jobs. you are on this screen you will need to click on "New Job" to begin.

Next you will have to enter in a name, code and color for the job. The code can be anything you prefer such as SC for sous-chef. The color will allow you to easily identify the job on the schedule view.

A description of the job is optional, but is highly when being used across numerous locations. you are happy with the job information hit "Save" to finish.

Restore a Job

Restoring an inactive job is a simple process, the first step is to go to Setup > Jobs and select "Restore Jobs".

A list of all of the inactive jobs will show up, all you have to do is select the job you want to restore.

You will be given a warning before being able to restore your job. Click the "Restore (Job name)" button to complete the process.

Edit a Job

To edit a job you will need to go to Setup > Jobs and then select the job you want to change.

You have chosen the job you want to edit, you will be directed toward the basic details of the job.

These details are:

- Name
- Code
- Color
- Description

The next section you can edit is the **Advanced** section, which gives you the option to include any hours cost with this job into the KPIs.

An example of this is if you have a job for **Offsite Training** and do not want the hours included in KPIs as they are not relevant to the productivity of the employees store, but you do want the cost included in the labor cost percentage because you still need to pay them.

The final section of a job you can edit is which locations you would have this job included with.

If you want to do a couple of stores hold down the CTRL button (Windows) or the COMMAND button (MAC), and then hit the small blue arrow.

When you are happy with how the job has turned out you can then hit "save" to finish.

Delete a Job

Deleting a job can be done in only a few steps, firstly you will have to go to Setup > Jobs, and then select the job that you would like to delete. you have opened up the job information, there will be a **Deactivate** button in the top right corner of the screen.

You will be prompted with a warning before you are able to remove the job. Accept the warning then click **Deactivate (Job name)**.

How Can I Find Out Which Shifts Don't Have Jobs

The easiest way you can tell which scheduled shifts don't have a Job is by:

- Heading to the printable PDF reports page (Reports > Shifts > Print Ready)
- Generate the "Multi-Unit Staff Report" for all Locations.
- Wait for the report to generate & then download it.
- Open the report and look for any shifts with no color. These will not have a Job assigned to them unless shift has a Job name.
- You can speak with your managers and direct them to add Jobs onto shifts moving forward by editing those shifts and adding a Job

Leave/Time Off

WFM comes with 3 leave types built in by default. These are Annual Leave, Sick Leave and Unpaid Leave. The names of these are not editable.

If you need to add in more leave types you can, simply head to Setup > Leave/Time Off at the top to and there will be a button for a new leave type.

When editing a leave type you can change:

- The name of the leave type
- The default number of hours per day for the leave type
- The multiplier or loading for the leave type
- If leave is costed on weekends

If you are using a supported payroll system, you will also be able to link a payroll ID for the leave type as well.

Adding leave when scheduling or doing the actuals

When you are deleting or denying a shift you have the option of creating leave. This will create a part day object with the amount of hours as shown in the dialog.

Costing of leave on the Schedule

Leave is costed on the schedule by taking the employee's base hourly rate, and multiplying it by the number of hours and the multiplier

If the employee has taken 20 hours of leave over 5 days it will be costed at 4 hours per day, unless one of the days is a weekend and the leave is set to not include weekends, it will do 5 hours for the 4 week days and 0 hours for the weekend day.

Does leave appear in my hours, wage and KPI totals?

Leave costs are included in wage totals for each day & week. The cost will affect your labor cost percentage, as leave costs still need to be paid out.

The hours totals will only include productive hours. This means leave hours are not included in the daily and weekly hour totals, as they are not productive (as the employee is not working). This means your other KPI's (like productivity and sales per labor hour) will also calculate correctly (based on the hours employees are working)

Time in Lieu/Flexitime

There is no function to natively handle Time In Lieu (TIL) within WFM.

If you want to use WFM to handle TIL, you are able to set up leave types to handle this and include as part of your process.

First you will need to set up leave types to account for TIL, setup is complete we will run through best practice workflows for managing this at a regular basis.

Setup

1. First, head to Setup > Leave/Time Off where you will see a list of current leave within WFM.
2. Create two new leave types. Name them Time In Lieu Accrued and Time In Lieu Taken.
3. Set the penalty loading of each new leave type to how you pay
4. For example, if you don't cost leave accruals, but you do cost the leave taken set the penalty loading for accruals to 0, and leave the penalty loading for leave taken to 1. See example below:

Name TIL Accrued Default hours 7.50000 Penalty loading 0.00000 Include weekends ☒ Include weekends in hours calculations ✓ Save	Name TIL Taken Default hours 7.50000 Penalty loading 1.00000 Include weekends ☒ Include weekends in hours calculations ✓ Save
--	--

Accruals: Best Practice

1. The leave types created above now appear for use within the system. In the example below, this employee was scheduled to finish at 9:15pm but instead finished at 10:15pm.

6:30pm-9:15pm 2.75hrs

Line Counter \$35.16

6:33pm-10:15pm 3.69hrs

2. If this employee is eligible for and accruing time in lieu for this extra 1 hour worked, first approve the scheduled shift, or the shift for the hours that are not eligible for time in lieu.

Our example below shows the scheduled shift as approved, so these hours will be paid to the employee.

	6:30pm-9:15pm 2.75hrs
	Line Counter \$35.16
	6:33pm-10:15pm 3.69hrs
	6:30pm-9:15pm 2.75hrs
	Line Counter \$35.16
	

- Next step is to head to the employee profile, and to their leave tab.
- Select TIL Accured as the 'leave type', correct cost unit, and part-day leave. In the below screenshot we have selected the time of 9:15pm to 10:15pm - as we have approved the employee's scheduled shift until 9:15pm, but worked until 10:15pm so is eligible for 1 hour of accruals.
- Head back to the Weekly screen and you will see an extra row above the scheduled shift we approved earlier - this is the leave row showing the TIL accrual which was entered on that particular day

TIL Taken: Best Practice

- There are two ways to add TIL Taken. If the employee has enough TIL accruals to take TIL on a whole shift, you can 'deny' the shift in the Weekly screen on the day, or in the past.
- Click the 'thumbs down' on the desired shift, select 'create leave' and select TIL Taken
- If you are trying to add TIL Taken in advance, such as when publishing schedules, or if an employee is only taking a small amount of TIL, such as leaving 1 hour earlier than scheduled, this will need to be added within the employee leave page.

New approved leave instance

Leave type

TIL Taken

Default hours is 7.5 per day.
Does not include hours on weekends.

Cost unit

Blacktown

☒ Full or multiple day
 ☐ Part day

Start

25/04/2018

Finish (inclusive)

25/04/2018

1 day

Hours

7.5

 automatically updated

4. For employees taking TIL as part of the shift, be sure to select 'part day' and select the times TIL is being taken
5. As TIL is a leave type, this can be set up to export to payroll. Please contact your payroll champion for help or questions about setup.

Quickly Create Part-Day Approved leave

You can quickly add a leave accrual or part-day leave by clicking on the 'thumbs down' to deny a scheduled shift and adding the leave type taken. The example below shows TIL Accruals.

9:30am-4pm 6.5hrs \$137.55
Line Counter

Deny scheduled shift

☐ Move shift to...

☒ Create leave for Santos Jaskolski

Leave type TIL Accrued

Leave hours 6.50

✕ Cancel Remove

What you then see is a grayed out scheduled shift as well as leave for the hours you entered earlier.

You will notice an icon in the middle of the grayed out shift. Click this to restore the shift. This will place the shift back, but it will not remove the TIL accrual you created.

You can then approve the shift for the desired time.

This comes in handy when the whole shift accrues TIL, for example on public holidays, or even if an employee goes home sick part-way through a shift (thus requiring sick leave taken).

Application and Approval of Leave

There are two ways leave can be entered into WFM, through an application and approval process, or by the manager when they are working on the schedule or approving hours.

Lets look at the approvals process first

Employee

When an employee logs into WFM they can head to the leave tab on the left to request time off. They will see a list of their pending and approved leaves.

Under New Leave Request, employees can fill in the details of the request and click save, sending a request to their "Leave Approvers" to approve the request.

The only other thing an employee needs to do in WFM in regards to the leave request is log back in and check the status of this request.

Manager

After an employee has applied for leave the manager who is the "Leave Approver" will get a notification in WFM. Click on the 'View' button to be taken to the request to approve or deny.

They then head to the employee's leave page, click on the Approve/deny button. From here you will have the option of editing, approving or denying the leave.

Automatic Union Holiday Leave

Step 1: Set up Leave Type Under the Leave Settings

1. Head to Setup > Leave/Time Off and create your new Leave Type
2. After Saving, head to the "Automatic leave" tab and click the button for "Use for automatic leave."

Step 2: Amend Wage Setup to include Holiday Conditions

1. Head to Setup > Wage > Region-based wages setup to view the existing default Region-based wage setup as well as any wage overrides you currently have setup. Click on your custom Wage Override you have setup. In this example below, the Wage Setup titled 'Region' is our custom Wage Setup.
 - The default Region-based wages are viewable but not editable. If you have not yet set up a custom Region-Based Wage Override, click the "+New region-based wages override" button at the bottom and follow the prompts.
2. Next, click on Conditions to view and edit your existing Wage Conditions.
3. Click Edit to update your existing Holiday Condition (or click + Create new Condition if you do not yet have a Holiday Condition setup.)

Note: Automatic Leave for Union Members before July 1, 2017 is currently defaulted to apply 8 hours of Automatic Leave so long as the employees works their Previous and Subsequent Shifts. This means you only need to setup the Override for employees that are enrolled after July 1, 2017.

After you click Edit, you will then be able to view and edit the rules for this Condition. In this example, we have named the Holiday condition "Holiday Loading" and set it as a Penalty Rate.

We have ticked the box "Only applies on public holidays" to ensure this rule only triggers on the public holidays listed on the Account.

4. You can create several different Rules to capture the different Conditions of your Holiday pay. With the new Automatic Leave functionality, comes the ability to add rules surrounding Union enrollment dates as well as if the employee worked their previous Shift before the Holiday and subsequent Shift after the Holiday. These rules are found at the bottom of the Rules Edit box.
5. Next, head to the Multipliers tab to set up the Multiplier for this Penalty Rate Condition you've created. In this instance, we have set the above Condition to trigger a multiplier of 150%. This means, if the employee works the Holiday and meets the Conditions. They will be paid at a rate of 1.5x their Regular Rate.

Step 3: Ensure employees are setup with their Union Membership dates

1. In the Employee's profile under their Employment tab, there is a box for Union Membership. Enter the employee's Union Membership date and Save.

Step 4: Viewing Automatic Leave in the Weekly View

1. See below for the example of what it will look like in the Weekly View for three different scenarios where the employees are working on a Holiday:
 - A Non-Union employee that does not trigger Automatic leave
 - An employee that was enrolled in the union **after** July 1, 2017 that is triggering the Override of 1.5X their base rate
 - An employee that was enrolled in the Union **before** July 1, 2017 that has the 8 hours of Automatic Leave in addition to their Scheduled hours
2. See below for the example of what it will look like in the Weekly View for three different scenarios where the employees are not working on the Holiday:
 - A Non-Union employee is not scheduled and does not trigger Automatic leave
 - An employee that was enrolled in the union **after** July 1, 2017 that is triggering the 8 hours of Automatic Leave
 - An employee that was enrolled in the union **before** July 1, 2017 that is triggering the 8 hours of Automatic Leave

 **Note:** The Automatic Leave and 1.5X rule will only apply if there is no action or an Approval on both the previous and subsequent Shift. This means, if the Shift before After the Holiday is denied (thumbs down), the Union Leave Conditions will be removed. If an employee enrolled in the Union after July 1, 2017 is not Schedule but ends up working the Holiday, the 8 hours of Automatic Leave will be removed and the 1.5X trigger will apply to the Approved time.

Step 5: Viewing Automatic Leave within the Employee's Profile

1. Using the example above of the 4th of July, you will now be able to see the Automatic Leave in the employee's profile under their Leave tab
2. If you hover over the Notes, it will read "Automatically generated leave due to public holiday."

Step 6: Viewing Automatic Leave in the Shift Hours Report

1. You will now be able to see the Automatic Leave hours + cost, plus the Union Member dates within the Shift Hours report

Overtime Calculation in Leave and Time-Off

When configuring leave and time-off types in Workforce Management (WFM), you can set the **Accrues Overtime** preference to enable overtime calculations. This preference lets the leave and time-off events of the selected type's hours to be eligible for overtime.

By default, the **Accrues Overtime** preference is switched off for all leave or time-off types. When checked, all leave and time-off events of the selected type are considered for overtime eligibility. This setting applies for all employees who have a calculation type that includes overtime.

For further information about assigning employees wages and calculation types, see [Managing Wages for WFM Employees](#).

Guidelines for Overtime Calculations in Leave and Time-Off

Overtime and penalties are not stored on the actual leave or time-off event. Overtime and penalties are only applied to time worked or shift segments.

If overtime applies during a leave or time-off event, it will be applied to the previous worked time or shifts.

Example 1

Example Rule: Overtime applies when, during the week, time worked exceeds 38 hours.

Scenario: The employee was on Annual Leave for 8 hours a day for the first two days of their working week. Then, they worked 8-hour shifts over the next 3 days.

Expectations: You can expect the following:

- If the **Accrues overtime** box is unchecked, they do not have any overtime hours, because only the 24 hours they worked are counted.
- If the **Accrues overtime** box is checked, then the 16 hours of leave count toward their hours worked. As such, the 40 hours are counted. Based on the example rule, the last 2 hours of their final shift include overtime.

Example 2

Example Rule: Overtime applies when, during the week, time worked exceeds 38 hours.

Scenario: For this example, overtime only applies to time worked or to a shift segment. If overtime applies during a leave or time-off event, it will be applied to the previous worked time or shift.

The employee was on **Annual Leave** for 8 hours a day for the first day of their working week. Then, they worked 8-hour shifts over the next 2 days. Then, they went on **another leave or time-off event** for 8 hours a day.

Expectations: You can expect the following:

- If the **Accrues overtime** box is unchecked, they do not have overtime, as only the 24 hours they worked are counted.
- If the **Accrues overtime** box is checked, then the 16 hours of leave count toward their hours worked. Their 40 hours of work are counted.
- Based on the example rule, the last 2 hours of the leave or time-off event at the end of the workweek are counted as overtime.
- Leave and time-off events, however, can't be assigned with overtime in WFM. The last 2 hours of overtime that count as leave or time-off are then applied to the previous shift.

Workforce Management Accrues Overtime FAQ

Does the Accrues Overtime preference apply to salaried employees?

Yes. If salaried employees are configured to apply overtime on their employee profile wage object and the leave type has the **Accrues Overtime** preference switched on, then those hours will be counted toward overtime. You can set salaried employees to overtime by setting an overtime rate on the wage object.

If I switch on Accrues Overtime for a leave type, will it apply to all instances of this type, including historical leave?

Yes. Switching on the **Accrues Overtime** preference will apply to all historical, current, and future instances of the leave type. You can also create a new leave type if you prefer.

Validation Rules

Schedule Validation Rules

To create a new validation rule go to "Config" > "Validation" and then click on "New Period Rule".

Schedule Validation rules centre around how many of a particular employee you must require to be working at a certain time. You can set rules that will prevent printing, SMS, emailing or publishing a schedule if they are not met.

Rules are a set of criteria which must all be met before being able to publish a schedule.

To be able to set rules, please contact your store manager. You will be able to create any number of specific 'rules' for your company which help safeguard errors such as putting less than minimum employees on, or having proficient enough employees working during a specific time.

Rule Name

Rule name is fairly straightforward. Enter the name of the validation rule.

Rule Details

Rule details focuses on how many employees are needed working, and whether the employees that fall under this rule have to be scheduled on between your set period of time, or the whole working day. You can choose to have more than, or less than an amount of employees working for this rule. Here you can also choose the maximum and minimum skill level of the employees for this rule. If you don't know what to choose then select "between Level 1 and" "level 10"

Next you will need to choose what Jobs fall under this Rule, the example below shows that the rule requires a "Bar" employee to be working, this may be due to the store selling products from a bar until close. To select a job click on the choice that you want (For multiple jobs hold down "ctrl" for Windows or "command" for Mac), or you can select the "Choose all" button.

You will need to then select the proficiency of the employees, this means that employees that work too efficiently (may mean that they are too expensive) or employees that aren't skilled enough are excluded from this rule if they are outside of the proficiency boundaries.

Things to know:

- Rules can be set for a single or multiple locations
- You can have multiple rules in place at

- You are able to create as many rules as you need
- You can set a minimum, maximum, or choose exactly (x) number of employees that need to be scheduled on at any given time, or at specific times and dates.

For example, you can set a rule which will enforce that at least 5 people are scheduled on during a Friday night, while having another rule alongside it needing 2 employees to be schedule on at all times.

You are able to add extra criteria to this, for example, if you would like at least two bartenders on at any time, along with one chef between 11-4 every Friday and Saturday, you would create one rule for the bartenders being schedule on at any time, and another rule for a chef needing to be on every Friday and Saturday between 11-4.

You are also able to go a step further and make sure employees above a certain level of proficiency or level of management are on during set times.

While rules are not necessary, they are as they will help safeguard against any errors or mistakes while writing up a schedule.

Junior Validation Rules

When you publish or print a schedule, WFM can validate that they comply with state regulations that apply to junior or school-aged employees.

If a schedule has a potential regulatory breach, WFM displays an error on the left side of the page. The error states the specific laws that may be breached.

To understand how WFM handles regulations for junior employees, see:

- [State and Territory Restrictions](#)
- [Excluding Employees from Junior Validation Rules](#)
- [Creating Term Break Periods for School Holidays and Pupil-Free Days](#)

State and Territory Restrictions

Junior employee restrictions differ and across different states and territories in Australia. WFM checks for employee ages, hours, and other restrictions to ensure that your published schedules are compliant.

For all of the states and territories, the following regulations apply:

- A school week starts on Sunday.
- Public holidays count as weekend days.

The following table shows the rules for different Australian states and territories that WFM validates.

State or Territory	Age	Maximum Hours	Shifts	Breaks	Prohibited Hours
Australian Capital Territory	Under 15	On a school week: ■ 6 hours daily ■ 10 hours weekly	Maximum of one shift daily	At least 12 hours between shifts	■ Between 10 p.m. and 6 a.m. the next day ■ Between midnight and sunrise
New South Wales	Under 16	On a school week, 4 hours on a weekday	■ Maximum of one shift daily	■ At least 12 hours between shifts	—

State or Territory	Age	Maximum Hours	Shifts	Breaks	Prohibited Hours
			Maximum of 5 consecutive days	At least 60 minutes after working for 4 hours	
Northern Territory	Under 15	—	—	—	Between 10 p.m. and 6 a.m. the next day
Queensland	Under 16	On a school week: 4 hours on a weekday 8 hours on a weekend 12 hours weekly On a term break week: 8 hours on a weekday 8 hours on a weekend 38 hours weekly	Maximum of one shift daily	- At least 12 hours between shifts - At least 60 minutes after working for 4 hours	Between 10 p.m. and 6 a.m. the next day
South Australia	Under 17	—	—	—	—
Tasmania	Under 18	—	—	—	—
Victoria	Under 15	On a school week: 3 hours daily 12 hours weekly On a term break week: 5.5 hours daily 30 hours weekly	—	- At least 12 hours between shifts - At least 30 minutes after working for 3 hours	Between 9 p.m. and 6 a.m. the next day
Western Australia	Under 15	—	—	—	Between 10 p.m. and 6 a.m. the next day

Important: WFM does not handle all state and territory regulations. When scheduling junior employees, manually check your schedules to ensure they do not breach the regulations that WFM excludes.

The following table shows regulations for different Australian states and territories that WFM excludes from validation.

State or Territory	Regulations Excluded in WFM
Australian Capital Territory	Junior employees are prohibited to work during school hours.

State or Territory	Regulations Excluded in WFM
	Work must not adversely affect a young person's ability to benefit from education.
New South Wales	Junior employees are prohibited to: - work during school hours - work any hours that make the combination of school and work hours in a 7-day period exceed 50 hours - work after 9 p.m. on a day where the next day is a school day
Northern Territory	Junior employees are prohibited to work during school hours.
Queensland	- Junior employees are prohibited to work during school hours. - Children between 11 and 13 years are prohibited from delivery work between 6 p.m. and 6 a.m.
South Australia	Junior employees are prohibited to: - work during school hours - work late at night or early in the morning that is likely to render them unfit to attend school or obtain the proper benefit from such attendance
Tasmania	Junior employees are prohibited to work during school hours.
Victoria	Junior employees are prohibited to: - work during school hours - perform street trading between 6 p.m. or sunset, whichever is earlier, and 6 a.m. or sunrise, whichever is later
Western Australia	- Junior employees are prohibited to work during school hours. - Children aged 10, 11, or 12 are prohibited from delivery work between 7 p.m. and 6 a.m.

Excluding Employees from Junior Validation Rules

If you have junior employees who are exempt from these rules, exclude them from the WFM junior validation rules.

To exclude employees from junior validation rules:

1. Log in with a Payroll Manager or Administrator role.
2. From Workforce Management, go to Setup > Employees > List.
3. From the employee list, locate the employee you need to exclude. Click the corresponding row.
4. On the employee page, click **Wages**.
5. Click **Edit wage**.
6. On the Edit wage page, check the **Exclude from junior restrictions** box.
7. Click **Save**.

Creating Term Break Periods for School Holidays and Pupil-Free Days

Different restrictions apply during school holidays and pupil-free days.

WFM lets you create term breaks to account for junior employee restrictions around school holidays and pupil-free days.

Employees can request term breaks for approval.

Important: State and territory restrictions may still apply to junior employees who are on a term break. Refer to the earlier table for these restrictions.

Options for creating term breaks:

- Employees with access to payroll functions create term break periods for multiple employees
- Employees submit term break requests for approval

To bulk create term breaks for employees, head to **Setup > Employees > Process Term Break Request**.

Click on the **approved** tab and select **Add Term Break**. Here you can set the period which the break covers, and select the applicable employees. The list of employees you are shown will only include employees who are considered a junior based on the locations they can be scheduled at.

Creating Term Break Periods for Multiple Employees

Follow the procedure.

To create term break periods for multiple employees:

1. Log in with a role with payroll functions.
2. Go to Setup > Employees > Process Term Break Requests.
3. Click **Approved**. Click **Add Term Break**.
4. Set the period that the term break covers.
5. From the employee list, select the employees for whom the term break applies.

Creating Term Break Requests

With ESS Extended, employees and managers can follow the procedure to create term break requests.

To create term break requests:

1. Log in to Workforce Management.
 - If you are an employee, log in to Workforce Management.
 - If you are a manager, log in with a Payroll Manager or Administrator role.
2. Open the employee profile.
 - If you are an employee, click your user icon and select **Your Details**.
 - If you are a manager, go to Setup > Employees > List.
From the employee list, click the employee name.
3. On the employee page, click **Term breaks**.
4. Click **New Request**.
The Update term break change request page opens.
5. On the **Periods** field, pick the start and end dates for the term break.
6. On the **Proof of enrolment** field, drag the appropriate file.
7. On the **Proof of holidays** field, drag the appropriate file.

8. Click **Update this request**.

After the request has been made, it is ready to be processed by any user with **Finance Co-ordinator** or **General Manager** access.

Processing Term Break Requests as an Approver

Follow the procedure.

To process term break requests as an approver:

1. Log in with a role with payroll functions.
2. Go to Setup > Employees > Process Term Break Requests.
3. In the **Tools** column, choose how you want to process requests.
 - If you want to allow the employee to take the term break, click **Approve**.
 - If the request is invalid, click **Deny**. From the list, select a reason for denial.

After a term break has been approved for an employee, any maximum hours rules applied to that employee will be ignored for the approved period.

Shift Metrics

Setting up Shift Metrics may help you track additional shift data relating to an employee. This data may be used for allowances, payroll, or reporting purposes.

Metrics are added by managers during the shift approval stage, and are allocated to each employee's shifts. This allows you to record and keep track of this information to the individual shift level.

Some examples of Metrics you can setup are:

- Deliveries
- Distance travelled
- Clients seen
- Cars

To set up a Metric, select + New Metric.

We have created a metric to track distance which an employee has traveled during a shift. It is useful to calculate reimbursement when it comes to payroll time.

The only required field for setup is "Name". "Internal name" can be a short name for the Metric. This will appear when approving shifts, if set.

You can require a metric, meaning a shift can't be approved without a value for this metric.

When approving shifts, you will see the metric field you created. You can go ahead and add the data you need to.

Note: At the moment when adding a metric, you will need to enter a comment.

The metric will appear on each approved shift that you have added it to.

Generate the Shift Hours report - it is available in the menu under Reports > Shifts.

New columns will appear to the right of the report. There will be a column for each Metric which you set up, and will view the same grouping options you select. If you summarize hours for the whole period, the sum of metrics will appear for the same period.

Financial Configuration

Here you are able to set up a **default superannuation fund** for employees. This default superannuation fund will appear within each employee's **Financial** section as a button which says **Default fund**.

When this button is hovered over, the default fund you have set up will appear for them.

Clicking this button pre-fills the details, and employees only need to fill in their superannuation account number.

Setup

Back to the **Setup > Financial** menu option, you'll see the **Superannuation defaults** fields.

Fill in the Fund name, and USI (or legacy SPIN if required) and save. This will then appear for the employee.

Note: This is set up at a company level, appearing for all employees within your WFM company.

Wage Setup

Wage Agreements for Australia and New Zealand

Wage agreements allow you to define rules that are used to calculate wage costs according to a range of calculation methods.

Wage agreements allow you to define when wage costs, such as regular rate, penalty rates, overtime, and public holidays are applied to scheduled and worked hours.

The Wage Agreement page is used to build wage conditions and rules for awards, enterprise agreements, or both.

You can also configure wage agreements for specific states or territories in the country where the agreement is available.

To understand what makes up wage agreements in Australia and New Zealand, see [Structure of a Wage Agreement](#).

Preconfigured wage agreements are also available for specific industry awards that cover employee work in Australia. For more information, see the help topics:

- [Pre-configured Wage Agreements](#)
- [Awards with Pre-configured Wage Agreements](#)

Accessing Wage Agreements

Follow the procedure.

To access wage agreements:

1. Go to Workforce Management.
2. Go to Setup > Wage.
A list of the available wage agreements appears.
3. Click the agreement you want to view.

Setting up a Wage Agreement

Follow the procedures on the table for guidance on setting up a wage agreement.

Step	Related Topic
1. Create a wage agreement.	Creating a Wage Agreement
2. Create new or update existing conditions.	Managing Conditions and Rules
3. Set up fixed rates.	Setting up an Allowance Setting up a Penalty
4. Create classifications.	Creating a Classification
5. Set up minimum hours.	Setting up Minimum Hours
6. Create a new revision.	Creating a Revision
7. (Optional) Link work agreements.	Cross-Agreement Linking

For more information about wage agreements that cover specifications and coverage of industry awards in Australia, see [Pre-configured Wage Agreements](#).

Pre-configured Wage Agreements

With WFM, you can assign preconfigured wage agreements to employees according to the industry or occupation awards that cover their work in Australia.

In preconfigured wage agreements, the following components are set up to apply the specifications and coverage of the each award to employee pay:

- Conditions and rules designed to calculate pay rates and entitlements
- Employee classifications with assigned pay rates
- Allowances and penalties for entitled employees

To see the industry awards covered in WFM as well as their default settings, see [Awards with Pre-configured Wage Agreements](#).

You must activate each preconfigured agreement so you can assign them to employees. For more information, see [Using Pre-configured Wage Agreements](#).

In preconfigured agreements, you can associate jobs with classifications, allowances, and penalties and view all information. You cannot make any changes to conditions, rules, or rates. For more information, see [Assigning Jobs for Pre-Configured Wage Agreements](#).

If you want to ensure that linked payroll items for allowances, penalties, and multipliers are carried over with each new revision, see [Linking New Revisions to Pre-Configured Wage Agreements](#).

Fast Food Industry Award [MA000003]

After you activate and review the configurations of the Fast Food Industry Award [MA000003] preconfigured agreement, it is available to be assigned to employee wages.

The agreement covers employees in the fast food industry and those who fit within the classifications of the award.

For more information about the full coverage and classification descriptions of the Fast Food Industry Award, go to the Fair Work Ombudsman website.

Fast Food Industry Award Classifications

Refer to the following table for the default classification settings of the preconfigured agreement.

Classification	Level	Employment Status
Level 1	Level 1	Full-time and Part-time

Classification	Level	Employment Status
Level 1 Casual	Level 1	Casual
Level 2	Level 2	Full-time and Part-time
Level 2 Casual	Level 2	Casual
Level 3a	Level 3	Full-time and Part-time
Level 3a Casual	Level 3	Casual
Level 3b	Level 4	Full-time and Part-time
Level 3b Casual	Level 4	Casual

Fast Food Industry Award Conditions

Refer to the following table for the default conditions of the preconfigured agreement.

Condition	Rules	Employment Status
Regular Hours (Regular Rate)	Every day	Casual, Part-time, and Full-time
After 10pm (Penalty Rate)	Every day between 10 p.m. and midnight	Casual, Part-time, and Full-time
After Midnight (Penalty Rate)	Every day between midnight and 6 a.m.	Casual, Part-time, and Full-time
Saturday (Penalty Rate)	Every Saturday	Casual, Part-time, and Full-time
Sunday (Penalty Rate)	Every Sunday	Casual, Part-time, and Full-time
Public Holiday (Penalty Rate)	Every day that is a public holiday	Casual, Part-time, and Full-time
Standard Overtime (Overtime Rate)	- Every day when during the day time worked exceeds 11 hours - Every day when during the week time worked exceeds 38 hours - Every day when more than 5 days are worked this week - Every day when more than 4 days are worked this week and more than 5 days were worked last week	Part-time and Full-time
Overtime more than 2 hours (Overtime Rate)	- Every day when during the day time matching Standard Overtime worked exceeds 2 hours - Every day when during the week time worked exceeds 40 hours - Every Sunday when during the day time worked exceeds 11 hours - Every Sunday when during the week time worked exceeds 38 hours	Part-time and Full-time
FT/PT Sunday Overtime (Overtime Rate)	Every Sunday when during the day time worked exceeds 11 hours	Part-time and Full-time

Condition	Rules	Employment Status
	- Every Sunday when during the week time worked exceeds 38 hours - Every Sunday when more than 5 days are worked this week - Every Sunday when more than 4 days are worked this week and more than 5 days were worked last week	
Public Holiday Overtime (Overtime Rate)	- Every day that is a public holiday when during the day time worked exceeds 11 hours - Every day that is a public holiday when during the week time worked exceeds 38 hours - Every day that is a public holiday when more than 5 days are worked this week - Every day that is a public holiday when more than 4 days are worked this week and more than 5 days were worked last week	Part-time and Full-time
Casual Standard Overtime (Overtime Rate)	- Every day when during the day time worked exceeds 11 hours - Every day when during the week time worked exceeds 38 hours	Casual
Overtime more than 2 hours (Overtime Rate)	- Every day when during the day time matching Casual Standard Overtime worked exceeds 2 hours - Every day when during the week time worked exceeds 40 hours - Every Sunday when during the day time worked exceeds 11 hours - Every Sunday when during the week time worked exceeds 38 hours	Casual
Public Holiday Overtime (Overtime Rate)	- Every day that is a public holiday when during the day time worked exceeds 11 hours - Every day that is a public holiday when during the week time worked exceeds 38 hours - Every day that is a public holiday when more than 4 days are worked this week and more than 5 days were worked last week - Every day that is a public holiday when more than 5 days are worked this week	Casual

Fast Food Industry Award Allowances

Refer to the following table for the default allowances of the agreement.

Allowance	Rule
Uniform (daily)	For the first shift of a given day
Uniform (weekly)	For the first shift of a given week

General Retail Industry Award [MA000004]

After you activate and review the configurations of the General Retail Industry Award [MA000004] preconfigured wage agreements, they are available to be assigned to employee wages.

The following are the two agreements that cover typically used variations of the General Retail Award:

- **[MA000004] General Retail Industry** – Use this agreement to manage employee wages that have the typical span of hours as defined in the Award.
- **[MA000004] General Retail Industry Award - Late Trading (After 9pm)** – Use this agreement when the employees you manage have late trading hours that extend beyond:
 - 9 p.m. from Monday to Friday
 - 6 p.m. on a Saturday or Sunday

Workforce Management (WFM) does not provide agreements covering the following sectors:

- Early trading
- Shift workers
- Early trading news agency
- Late trading video shop
- Apprenticeships

For more information about the full coverage and classification descriptions of the General Retail Industry Award, go to the Fair Work Ombudsman website.

[MA000004] General Retail Industry Agreement

Refer to the tables in this section for the specifications of this agreement.

WFM does not automate General Retail Industry Award allowances.

Classifications

Refer to the following table for the default classifications of the agreement.

Classification	Level	Employment Status
Retail employee level 1	Level 1	Full-time
Retail employee level 1	Level 1	Part-time
Retail employee level 1	Level 1	Casual
Retail employee level 2	Level 2	Full-time
Retail employee level 2	Level 2	Part-time
Retail employee level 2	Level 2	Casual
Retail employee level 3	Level 3	Full-time
Retail employee level 3	Level 3	Part-time
Retail employee level 3	Level 3	Casual
Retail employee level 4	Level 4	Full-time
Retail employee level 4	Level 4	Part-time
Retail employee level 4	Level 4	Casual
Retail employee level 5	Level 5	Full-time

Classification	Level	Employment Status
Retail employee level 5	Level 5	Part-time
Retail employee level 5	Level 5	Casual
Retail employee level 6	Level 6	Full-time
Retail employee level 6	Level 6	Part-time
Retail employee level 6	Level 6	Casual
Retail employee level 7	Level 7	Full-time
Retail employee level 7	Level 7	Part-time
Retail employee level 7	Level 7	Casual
Retail employee level 8	Level 8	Full-time
Retail employee level 8	Level 8	Part-time
Retail employee level 8	Level 8	Casual

Conditions

Refer to the following table for the default conditions of the agreement.

Condition	Rules	Employment Status
Regular Hours	Every day	Casual, Part-time, and Full-time
Mon - Fri 6 p.m. - 9 p.m.	Every weekday between 6 p.m. and 9 p.m.	Casual, Part-time, and Full-time
Saturday	Every Saturday	Casual, Part-time, and Full-time
Sunday	Every Sunday	Casual, Part-time, and Full-time
Public Holiday	Every public holiday	Casual, Part-time, and Full-time
OT Mon - Sat First 3 hours	- Every day from Monday to Saturday when, during the day, time worked exceeds 9 hours - Every day Monday to Saturday when, during the week, time exceeds 38 hours - Every weekday between 9 p.m. and midnight - Every Saturday between 6 p.m. and midnight - Every day from Monday to Saturday between midnight and 7 a.m.	Casual, Part-time, and Full-time
OT Mon - Sat More than 3 Hours	Every day from Monday to Saturday when, during the day, time of type overtime rate worked exceeds 3 hours	Casual, Part-time, and Full-time
OT Sunday	- Every Sunday between midnight and 9 a.m. - Every Sunday between 6 p.m. and midnight - Every Sunday when, during the shift, time worked exceeds 9 hours	Casual, Part-time, and Full-time

Condition	Rules	Employment Status
	Every Sunday when, during the week, time exceeds 38 hours	
Time Between Shifts	Every day where there has not been a clear break of 12 hours since the previous day	Casual, Part-time, and Full-time
OT Public Holiday	- Every day that is a public holiday when, during the day, time worked exceeds 9 hours - Every day that is a public holiday when, during the week, time exceeds 38 hours	Casual, Part-time, and Full-time

[MA000004] General Retail Industry Award - Late Trading (After 9pm)

Refer to the tables in this section for the specifications of this agreement.

WFM does not automate General Retail Industry Award allowances.

Classifications

The default classifications of the late trading agreement is the same as those for typical hours. See [Classifications](#).

Conditions

Refer to the following table for the default conditions of the agreement.

Condition	Rules	Employment Status
Regular Hours	Every day	Casual, Part-time, and Full-time
Mon - Fri 6 p.m. - 11 p.m.	Every weekday between 6 p.m. and 11 p.m.	Casual, Part-time, and Full-time
Saturday	Every Saturday	Casual, Part-time, and Full-time
Sunday	Every Sunday	Casual, Part-time, and Full-time
Public Holiday	Every public holiday	Casual, Part-time, and Full-time
OT Mon - Sat First 3 hours	- Every day from Monday to Saturday when, during the day, time worked exceeds 9 hours - Every day from Monday to Saturday when, during the week, time exceeds 38 hours - Every day from Monday to Saturday between 11 p.m. and midnight - Every day from Monday to Saturday between midnight and 7 a.m.	Casual, Part-time, and Full-time
OT Mon - Sat More than 3 Hours	Every day from Monday to Saturday when, during the day, time of type overtime rate worked exceeds 3 hours	Casual, Part-time, and Full-time
OT Sunday	Every Sunday between midnight and 9 a.m.	Casual, Part-time, and Full-time

Condition	Rules	Employment Status
	- Every Sunday between 11 p.m. and midnight - Every Sunday when, during the shift, time worked exceeds 9 hours - Every Sunday when, during the week, time exceeds 38 hours	
Time Between Shifts	Every day where there has not been a clear break of 12 hours since the previous day	Casual, Part-time, and Full-time
OT Public Holiday	- Every day that is a public holiday when, during the day, time worked exceeds 9 hours - Every day that is a public holiday when, during the week, time exceeds 38 hours	Casual, Part-time, and Full-time

Hospitality Industry (General) Award [MA000009]

After you activate and review the configurations of the Hospitality Industry (General) Award [MA000009] preconfigured agreement, it is available to be assigned to employee wages.

The agreement covers employees in the hospitality industry and those who fit within the classifications of the award.

For more information about the full coverage and classification descriptions of the Hospitality Industry Award, go to the Fair Work Ombudsman website.

Hospitality Industry (General) Award Classifications

Refer to the following table for the default classification settings of the preconfigured agreement.

Classification	Level	Employment Status
Introductory	Level 0	Casual
Introductory	Level 0	Full-time and Part-time
Introductory PT	Level 0	Part-time
Level 1	Level 1	Full-time and Part-time
Level 1	Level 1	Casual
Level 1 PT	Level 1	Part-time
Level 2	Level 2	Casual
Level 2	Level 2	Full-time and Part-time
Level 2 PT	Level 2	Part-time
Level 3	Level 3	Casual
Level 3	Level 3	Full-time and Part-time
Level 3 PT	Level 3	Part-time
Level 4	Level 4	Full-time and Part-time
Level 4	Level 4	Casual
Level 4 PT	Level 4	Part-time

Hospitality Industry (General) Award Conditions

Refer to the following table for the default conditions of the preconfigured agreement.

Condition	Rules	Employment Status
Regular Hours (Regular Rate)	Every day	Casual, Part-time, and Full-time
Evening (Per-hour Penalty Rate)	Every shift if the shift is on a weekday if any part of the shift is between 7 p.m. and midnight	Casual, Part-time, and Full-time
Night work (Per-hour Penalty Rate)	Every shift if the shift is on a weekday if any part of the shift is between midnight and 7 a.m.	Casual, Part-time, and Full-time
Saturday (Penalty Rate)	Every Saturday	Casual, Part-time, and Full-time
Sunday (Penalty Rate)	Every Sunday	Casual, Part-time, and Full-time
Public Holiday (Penalty Rate)	Every day that is a public holiday	Casual, Part-time, and Full-time
Delayed meal break (Overtime Rate)	Every day when during the time worked since last break time worked exceeds 6 hours	Casual, Part-time, and Full-time
Full Time Overtime (Overtime Rate)	- Every day when during the day time worked exceeds 11.5 hours - Every day when during the week time worked exceeds 38 hours - Every day where there has not been a clear break of 10 hours since the previous day - Every day when the spread of time worked on a single day exceeds 12 hours	Full-time
M-F Overtime after 2 hours (Overtime Rate)	- Every weekend when during the day time of type overtime rate worked exceeds 2 hours - Every weekday when during the week time worked exceeds 40 hours	Full-time
Weekend (Overtime Rate)	- Every weekend when during the day any time matching Full Time Overtime is worked - Every weekend when during the week time worked exceeds 38 hours	Full-time
Part Time Overtime (Overtime Rate)	- Every day when during the day time worked exceeds 11.5 hours - Every day when during the week time worked exceeds 38 hours - Every day for the part of the shift that is longer than the scheduled hours - Every day when the spread of time worked on a single day exceeds 12 hours - Every day where there has not been a clear break of 10 hours since the previous day - Every day when more than 5 days are worked this week	Part-time

Condition	Rules	Employment Status
M-F Overtime after 2 hours (Overtime Rate)	- Every weekend when during the day time of type overtime rate worked exceeds 2 hours - Every weekday when during the week time worked exceeds 40 hours	Part-time
Weekend (Overtime Rate)	- Every weekend when during the day any time matching Part Time Overtime is worked - Every weekend when during the week time worked exceeds 38 hours	Part-time
Casual Standard Overtime (Overtime Rate)	- Every day when during the day time worked exceeds 12 hours - Every day when during the week time worked exceeds 38 hours	Casual
M-F Overtime after 2 hours (Overtime Rate)	- Every weekend when during the day time of type overtime rate worked exceeds 2 hours - Every weekday when during the week time worked exceeds 40 hours	Casual
Weekend (Overtime Rate)	- Every weekend when during the day any time matching Casual Overtime is worked - Every weekend when during the week time worked exceeds 38 hours	Casual

Hospitality Industry (General) Award Allowances

Refer to the following table for the default allowances of the agreement.

Allowance	Rule
Broken Shift Allowance 2-3 hours	Every shift where the break during or before the shift is in the range 2.0 hour(s) - 3 hours
Broken Shift Allowance Over 3 hours	Every shift where the break during or before the shift is in the range 3.01 hour(s) - 6 hours

Restaurant Industry Award [MA000119]

After you activate and review the configurations of the Restaurant Industry Award [MA000119] preconfigured agreement, it is available to be assigned to employee wages.

The agreement covers employees in the restaurant industry and those who fit within the classifications of the award.

For more information about the full coverage and classification descriptions of the Restaurant Industry Award, go to the Fair Work Ombudsman website.

Restaurant Industry Award Classifications

Refer to the following table for the default classification settings of the preconfigured agreement.

Classification	Level	Employment Status
Introductory	Level 0	Full-time and Part-time

Classification	Level	Employment Status
Introductory	Level 0	Casual
Level 1	Level 1	Casual
Level 1	Level 1	Full-time and Part-time
Level 2	Level 2	Casual
Level 2	Level 2	Full-time and Part-time
Level 3	Level 3	Casual
Level 3	Level 3	Full-time and Part-time
Level 4	Level 4	Full-time and Part-time
Level 4	Level 4	Casual
Level 5	Level 5	Full-time and Part-time
Level 5	Level 5	Casual
Level 6	Level 6	Casual
Level 6	Level 6	Full-time and Part-time

Restaurant Industry Award Conditions

Refer to the following table for the default conditions of the preconfigured agreement.

Condition	Rules	Employment Status
Regular Hours (Regular Rate)	Every day	Casual, Part-time, and Full-time
10 p.m. – Midnight (Penalty Rate)	Every weekday between 10 p.m. and midnight	Casual, Part-time, and Full-time
Midnight – 6 a.m. (Penalty Rate)	Every weekday between midnight and 6 a.m.	Casual, Part-time, and Full-time
Saturday (Penalty Rate)	Every Saturday	Casual, Part-time, and Full-time
Sunday (Penalty Rate)	Every Sunday	Casual, Part-time, and Full-time
Public Holiday (Penalty Rate)	Every day that is a public holiday	Casual, Part-time, and Full-time
Standard Overtime (Overtime Rate)	- Every day when during the day time worked exceeds 11.5 hours - Every day when during the week time worked exceeds 38 hours	Casual, Part-time, and Full-time
Spread of Hours (Overtime Rate)	Every day when the spread of time worked on a single days exceeds 12 hours	Casual, Part-time, and Full-time
Overtime - Sat (Overtime Rate)	Every Saturday when during the day time worked exceeds 11.5 hours	Casual, Part-time, and Full-time

Condition	Rules	Employment Status
	Every Saturday when during the week time worked exceeds 38 hours	
Delayed meal break (Overtime Rate)	Every day when during the time worked since last break time worked exceeds 6 hours	Casual, Part-time, and Full-time
Break since Overtime (Overtime Rate)	Every day when the last shift worked any time matching one of Standard Overtime, Time between shifts, Spread of Hours, Overtime - Sat, Delayed meal break is worked where there has not been a clear break of 8 hours since the previous day	Casual, Part-time, and Full-time
Extended Overtime (Overtime Rate)	- Every day when during the shift time matching one of Standard Overtime, Time between shifts, Spread of Hours, Overtime - Sat, Delayed meal break, Break since Overtime worked exceeds 2 hours - Every day when during the day time worked exceeds 13.5 hours - Every day when during the week time worked exceeds 40 hours - Every Sunday when during the day time worked exceeds 11.5 hours - Every Sunday when during the week time worked exceeds 38 hours	Casual, Part-time, and Full-time
Break since Extended Overtime (Overtime Rate)	Every day when during the last shift worked any time matching the condition "Extended Overtime" is worked where there has not been a clear break of 8 hours since the previous day	Casual, Part-time, and Full-time
Time between shifts (Overtime Rate)	Every day where there has not been a clear break of 10 hours since the previous day	Part-time and Full-time

Using Pre-configured Wage Agreements

To opt in to using preconfigured wage agreements, follow the procedure.

To use pre-configured wage agreements:

- Go to Workforce Management.
- Activate the preconfigured agreements.
 - Go to Setup > Wage.
 - On the upper right corner, check the **Include inactive agreements** box.
Inactive agreements appear on the list of available agreements.

Important: If preconfigured wage agreements do not appear after you click the box, please contact NetSuite Customer Support.

- Locate the agreements that correspond to your employee needs.
 - For each agreement, click + Use this agreement.
- Click and review the configurations of each agreement.
 - For each pre-configured agreement, link payroll items to WFM.
 - Go to Setup > NetSuite Integration > Agreements.
 - On the Link objects to Payrollitems page, on the Conditions subtab, locate the agreement and conditions with items you need to link to WFM.

- c. For each condition, select the payroll item you want to link. Click **Link**.
- d. For each subtab, repeat steps 4b and 4c.

Important: For classifications, you generally need to select the latest revision date. Link all applicable payroll items to conditions in different age ranges and levels.

5. Assign the agreements to employees.
 - a. Go to Setup > Employees > List.
 - b. Click the employee who must be assigned to a pre-configured agreement.
 - c. Click the name of the employee.
 - d. On the employee profile, on the left-hand panel, click **Wages**.
 - e. On the Wages page, click **Edit wage**.
The Edit wage window for the employee opens.
 - f. On the Cost calculations/rates section, from the Calculation type list, select **Agreement**.
 - g. From the Classification list, locate the pre-configured agreement.
 - h. Click the classification that applies to the employee.
 - i. Click **Save**.

When a pre-configured agreement is revised, its conditions are updated and applied to the exported data. You will, however, need to link allowances, penalties, and multipliers to payroll items again.

If you want to automatically link these payroll items to new agreement revisions, switch this WFM setting on. See [Linking New Revisions to Pre-Configured Wage Agreements](#).

Linking New Revisions to Pre-Configured Wage Agreements

When a preconfigured agreement is revised, its conditions are updated and applied to the exported data. You will, however, need to link allowances, penalties, and multipliers to payroll items again.

If you want to automatically link these payroll items to new agreement revisions, switch this WFM setting on.

To link new revisions to pre-configured wage agreements:

1. Go to Setup > NetSuite Integration > Settings.
2. Click the **Configurations** subtab.
3. Check the **Auto link new revisions** box.
4. Click **Save**.

Assigning Jobs for Pre-Configured Wage Agreements

In the preconfigured agreement classifications, you can assign jobs that will trigger the rules and rates of that classification to apply. Employees who punch in with this job can be assigned a higher level of classification, or higher duties, and paid the corresponding rates.

Employees will never be moved down to a lower level classification, so only employees who have a base classification of level 1 or below will trigger this change.

To assign jobs for pre-configured wage agreements:

1. Go to Workforce Management.
2. Go to Setup > Wage.
3. On the upper right corner, check the **Include inactive agreements** box.
4. Click the agreement. Click the **Classifications** subtab.
5. Click the **Classifications** subtab.
6. On the classifications list, select a classification.
7. Click **Availability**.
8. From the Available Choices panel on the left, select the job that will trigger the classification.
 If you want to select all jobs, click **Choose All**. To move your selections to the Chosen Items panel on the right, click the blue right arrow symbol in the middle of the panels.
 If you want to clear your selected items, click **Clear All**.
9. Click **Save**.

Structure of a Wage Agreement

Wage agreements let you define when wage costs, such as regular rate, penalty rates, overtime, and public holidays are applied to scheduled and worked hours.

The Wage Agreement page is used to build wage conditions and rules for awards, enterprise agreements, or both.

Availability

You can restrict a wage agreement to regions. For example, if your agreement applies to Australia, you can set the agreement to apply only in the states of Queensland and New South Wales (NSW).

Revisions

Revisions pertain to the various versions of the agreement that are active on different durations. Revisions help determine which rules and rates will be used for calculating costs on a specified duration. Only one revision of an agreement is active on any given date.

When applying changes to your wage agreement, you should create new revisions instead of directly changing the rates on the agreement. This way, you can track and report changes you made across different revisions.

When creating a revision, note that each one must have a start date. All previous revisions must include an end date, while the current revision does not. Revisions must not overlap. No gaps should also exist between revisions.

For more information, see [Creating a Revision](#).

Conditions and Rules

A condition is a component consisting of one or more rules, which define when wage costs are applied. Conditions are used when creating rates for classifications, allowances, and penalties.

A condition will apply when at least one rule matches the shift. You can set the order of the conditions to allow WFM to check for conditions dependent on previous conditions before applying payment rates.

Conditions can be shared across different classifications within the same wage agreement

You can create and update conditions and rules according to your needs.

For more information, see [Managing Conditions and Rules](#).

Classifications

Classifications contain the levels and pay rates in a wage agreement.

You assign conditions to each classification to establish when a different rate will apply. Each classification is assigned a level.

Classifications may be limited to locations, jobs, employment statuses, or their combinations.

For example, you may choose to create classifications according to different age ranges. You must provide the conditions that apply to each age range classified. For each condition, you would need to provide the applicable rates.

Following is an example of an hourly rates table for a classification named **Level 1**, which follows the six default conditions.

Age Range	Regular Rate	Public Holiday	Saturday	Sunday	Standard Overtime	Extended Overtime
20 years and older	\$25	\$37.5	\$31.25	\$37.5	\$37.5	\$50
19 and under 20	\$22.5	\$33.75	\$28.125	\$33.75	\$33.75	\$45
18 years old	\$20	\$20	\$30	\$25	\$30	\$40
17 years old	\$17.5	\$26.25	\$21.875	\$26.25	\$26.25	\$35
16 years old	\$15	\$22.5	\$18.75	\$22.5	\$22.5	\$30
Under 16	\$12.5	\$18.75	\$15.625	\$18.75	\$18.75	\$25

You can update the rates of classifications by creating a new revision of the agreement. For instance, if you need to increase the base rate of a specific classification at the end of a financial year, you can create a new revision of the agreement and provide the percentage increase for that classification.

For more information, see [Creating a Classification](#).

Allowances

Allowances are fixed amounts that are applied to a shift that meets a specified condition. When creating an allowance, you must define the **condition** where it will apply, the **amount** to be awarded, and the eligible **employment statuses**.

You may also specify the **jobs** of employees who are awarded the allowance. When jobs are linked to an allowance, only the shifts with one of the jobs will be eligible to receive the payment. If you provide an allowance for all employees or shifts, such as a uniform or laundry allowance, you do not need to specify the jobs.

For example, you can create a condition that triggers when an employee's work hours exceed 0, which covers employees who worked their shift. When setting up your allowance, you can select that condition then set the laundry allowance amount to fixed rate per shift, day or week.

For more information, see [Setting up an Allowance](#).

Penalties

Penalties are fixed amounts that increase the rates applied to the parts of a shift that meet the penalty conditions. For example, a penalty rate that increases rates to \$1.22 per hour for all hours after 6 pm results in an employee's rate increasing by that amount for the part of her shift that went after 6 pm.

For more information, see [Setting up a Penalty](#).

Minimum Hours

Minimum hours establish the required minimum number of hours that an employee should be assigned during their shift. You can set up different minimum hours for different types of employment statuses.

When an employee is assigned a shift that is shorter than the configured minimum hours, WFM will top up or add the missing hours to their shift payment.

For more information, see [Setting up Minimum Hours](#).

Creating a Wage Agreement

To track employee costs for public holiday, overtime, penalty rates, and other conditions in WFM, you must set up a wage agreement.

Guidelines for Creating a Wage Agreement

Before you create a wage agreement, note the following guidelines.

- If you are looking to update the rates and conditions for an existing agreement, for situations such as rate updates at the end of financial year, you should create a new revision rather than a new agreement. For more information, see [Creating a Revision](#).
- In Australia, the start date of the current revision of the wage agreement is typically the first day of the first full pay run in that period. Only enter a finish date if this agreement ends on a specific date and will not be renewed.
- You can still add, delete, or update conditions after you create an agreement.

To create a wage agreement:

1. Go to Workforce Management.
2. Go to Setup > Wage.
A list of the available wage agreements appears.
3. At the bottom of the page, click **+ New Wage Agreement**.
The Wage Agreement wizard opens.

Important: To ensure your wage agreement selections are saved, complete all the sections before you go out of the wizard.

4. On the Agreement Name section, complete the fields, then click **Next**.
 - **Name** – Enter the name of the agreement. For example, Sample Company Subsidiary.
 - **Country** – Select the country where the agreement applies, For example, Australia.
5. (Optional) On the Availability section, from the Available Choices panel on the left, select the locations where the shifts of the agreements are based.

For example, if your employees cross state lines and get paid under a different award or agreement, you can customize the locations where this agreement applies.

- If you want to select all states, click **Choose All**. To move your selections to the Chosen Items panel on the right, click the blue right arrow symbol in the middle of the panels.
 - If you want to clear your selected items, click **Clear All**.
6. When you're done or if you do not need to limit the agreement to specific locations, click **Next**.
 7. On the Starting Date section, complete the fields, then click **Next**.
 - **Start Date** – Select the date when the agreement will start to apply.
 - **Finish Date** – Select the date when the agreement will end. If the agreement has no known end date, leave blank.
 8. On the Conditions section, complete the actions, then click **Next**.
 9. From the list of default conditions, select those that apply to the agreement.
Selected conditions are highlighted in green. If you want to exclude a selected condition, clear the box.
 10. On the Confirmation section, review your previous selections.
 11. If you need to update a selection, click **Change** beside the section name.
 12. Click **Create**.

After creating your agreement, you can continue setting up your wage agreement. See [Setting up a Wage Agreement](#).

Managing Conditions and Rules

In WFM, rules provide granular options for you to define when and how conditions should apply to a wage agreement.

To know more about conditions and rules, see the help topics:

- [Default Conditions and Rules](#)
- [Types of Conditions](#)
- [Creating a Condition](#)
- [Creating or Editing a Rule](#)
- [Managing Conditions in Existing Classifications](#)

Default Conditions and Rules

By default, WFM provides the following set of conditions and rules in this order. These conditions contain the most common rules found in most classifications and awards in Australia.

Condition	Rules	Description
Regular Hours	Every day	Rates apply when no conditions apply
Public Holiday	Every day that is a public holiday	Rates apply when the rules apply
Saturday	Every Saturday	Rates apply when the rules apply
Sunday	Every Sunday	Rates apply when the rules apply
Standard Overtime	■ Every day when during the day time worked exceeds 8 hours	Rates apply when the rules apply

Condition	Rules	Description
	Every day when during week time worked exceeds 38 hours	
Extended Overtime	- Every day when during the day time worked exceeds 11 hours - Every day when during the week time worked exceeds 41 hours - Every day when during the day time worked exceeds 8 hours - Every day when during the week time worked exceeds 38 hours	Rates apply when the rules apply

Types of Conditions

When you create a wage agreement, WFM provides default conditions and rules that you can use. After creating the agreement, you can also create new conditions and rules.

For more information, see [Creating a Condition](#).

The four types of conditions in WFM are:

- **Regular Rate** – These conditions are used as base hours.
- **Penalty Rate** – These conditions are used to give a different rate to regular hours, rather than a wage increase when particular days or hours are worked. For example, hours worked between 7 pm and 10 pm on a Sunday receive a different rate, rather than an increase per hour worked.
- **Overtime Rate** – These conditions are used to give a different rate to regular hours, rather than a wage increase after a certain number of hours have already been worked. For example, every day where hours worked during the week exceed 38 hours receives a different rate.
- **Allowance or Penalty** – These conditions are used to give a wage increase rather than a different rate. For example, hours worked between 7 pm and 10 pm receive an extra \$1 per hour, rather than a different rate altogether.

Creating a Condition

After you create a new agreement, you can manage the conditions on the Conditions subtab of the wage agreement. You can also create new conditions that match your business needs.

To create a condition:

1. Open the wage agreement. See [Accessing Wage Agreements](#).
2. Click the **Conditions** subtab.
3. Click **+ Create new Condition....**
The New Condition form appears.
4. In the **Name** field, enter the name of the condition.
5. From the **Type** list, select the type of condition or rate. For more information, see [Types of Conditions](#).
6. In the **Default loading** field, enter the percentage of the rate that will be added to employee pay when the condition runs. This percentage can be used when assigning pay rates to classifications.
7. On the appropriate rule tab, complete the required information for the rule parameters you need. For more information, see [Rule Parameters in WFM](#).

8. If you need to create more rules, click **+New rule...**, then complete the required parameters.
9. After you're done adding rules, click **Save**.

Creating or Editing a Rule

When you create conditions, you must set up one or more rules when the conditions apply. The condition will apply if any of the rules apply.

Rule Parameters in WFM

Rules in WFM consist of parameters that you can manage when you add or edit a condition. Refer to the table for the available rule parameters.

Rule Parameter	Action Needed
Apply only for the dates (start date) # (end date)	If applicable, select a start date, end date, or both to indicate if the new rule is only valid during the given dates. In most cases, these values can be left blank.
Apply only for the days (type of day)	If applicable, configure the days when the condition applies. You can select or clear individual days on the first column or select Any day, Weekends, or Weekdays on the second column. If the condition applies exclusively on public holidays, check the appropriate box.
For the period between (start time) and (end time)	If the condition should only apply between hours of the day, set the start and end time.
When during the (selection) time worked of type (condition type) condition (condition name) time worked exceeds (number of hours)	If applicable, select whether the condition applies on hours worked during the shift, day, week, fortnight, four-weekly period, or time worked since last break. If applicable, select the types of condition the condition should run, either allowance or penalty, regular rate, penalty rate, overtime rate, or a combination of these types. If applicable, select a specific condition name that is required for the condition to apply. Based on the condition name, enter the number of work hours after which the condition will apply.
When the shift starts before (time) (and) the shift starts after (time) (and) the shift finishes before (time) the shift finishes after (time)	If applicable, set the condition to apply based on the time a shift starts or finishes.
For worked hours that are (selection)	If applicable, select when outside of scheduled hours the condition applies. Select only one from outside scheduled hours, before scheduled start, after scheduled finish, or longer than scheduled. This rule will check all locations and jobs that a person works for overlapping shifts.
Break length between (number of hours) and (number of hours)	If applicable, establish the lengths of breaks for split shifts. This rule applies to all parts of all shifts that occur after a break on a day that is within the designated length. A break longer than the maximum value will cause subsequent parts of shifts to no longer match this rule. A break in this rule refers to any break between shifts on the same day, or unpaid breaks within a shift.

Rule Parameter	Action Needed
	A shift that has a break within it, or immediately prior to it that has a length within the range will cause an allowance using this rule to be applied.
Previous shift less than (number of hours) ago on more than (number of days) this week	If applicable, set the condition to apply when the employee works the minimum number of hours for a maximum number of days on the same week.
Days worked this week exceeds (number of days) Days worked last week exceeds (number of days)	If applicable, set the condition to apply when the employee works the maximum number of days during the current week. You can also set it to apply when the employee works the maximum number of days during the previous week.
Days worked exceeds (number of days) over the previous (number of days)	If applicable, you can set the number of days worked over a period to apply.
Consecutive days worked exceeds (number of days) Spread of time on day exceeds (number of hours)	If applicable, set the condition to apply based on how many consecutive days an employee has worked in the current week, or based on the spread of hours worked in a day. For example, the condition applies if the spread of hours worked in a day exceeds 4 hours.
Worked previous shift	If you want the condition to apply if the employee works their previously scheduled shift, check the box.
Worked subsequent shift	If you want the condition to apply if the employee works their subsequently scheduled shift, check the box.

To create or edit a rule:

1. Open the wage agreement. See [Accessing Wage Agreements](#).
2. Click the **Conditions** subtab.
A list of available conditions appears.
3. Choose how you want to access the condition.
 - If you want to edit the rules of an existing condition, click **Edit** beside the condition. Click the subtab for the rule that you need to update.
 - If you want to create a new condition with a new rule, click **+ Create new Condition....**
The New Condition form appears.
4. If you created a new condition, complete all fields for the new condition. See [Creating a Condition](#).
5. On the appropriate rule tab, complete the required information for the rule parameters you need. For more information, see [Rule Parameters in WFM](#).
6. If you need to create more rules, click **+New rule...**, then complete the required parameters.
7. After you're done adding rules, click **Save**.

Managing Conditions in Existing Classifications

Follow the procedure to add conditions to previously created classifications.

To manage conditions in existing classifications:

1. Open the wage agreement. See [Accessing Wage Agreements](#).
2. Click the **Classifications** subtab.

A list of the classifications appears.

3. Click the classification where you need to add conditions.

The rates table for the classification appears.

4. Beside a condition heading, click the information icon.

A window opens showing a summary of the rules in that condition as well as actions you can perform for the classification.

5. To remove a condition, select **Remove condition....**

Removing a condition removes its related rates in classification, effective on the start date of the current version.

6. To replace the condition with another one, select **Select condition....**

Replacing a condition assigns its related rates in the classification with the new condition's rates, effective on the start date of the current version.

7. From the Condition field, select the new condition. Click **Change**.

The updated rates table with the new condition appears.

8. To add a new condition, select **Add condition....**

9. From the **Condition** field, select the new condition.

10. For each age range, enter the hourly rates. Click **Save**.

The updated rates table with the new condition appears.

Setting up an Allowance

After setting up your wage agreement, classifications, and conditions, you can assign allowances to a shift or period of shifts.

To set up an allowance:

1. Open the wage agreement. See [Accessing Wage Agreements](#).
2. Click the **Allowances** subtab.
3. Click **+ New allowance....**
4. On the Create new Allowance window, complete the fields.
 - **Condition** – Select the condition that applies to the allowance.
 - **Amount** – Enter the amount to give to employees when the allowance is applied.
 - **Employment status** – Check the boxes for all statuses that can receive the allowance.
 - **Jobs** – From the Available Choices panel, select the jobs that can receive this allowance.
5. Click **Save**.

Setting up a Penalty

After setting up your wage agreement, classifications, and conditions, you can assign penalties or fixed increases to a shift or period of shifts. You can set up different penalty rates for different employee levels.

To set up a penalty:

1. Open the wage agreement. See [Accessing Wage Agreements](#).

2. Click the **Penalties** subtab.
3. Click **+ New penalty...**
4. On the Create new Penalty window, complete the fields.
 - **Condition** – Select the condition that applies to the penalty.
 - **Increase** – Enter the amount to give to employees when the penalty is applied.
 - **Levels** – Choose an option.
 - **Any** – The penalty applies to any level.
 - **Between level 0 and level 0 (inclusive)** – Enter the range of levels that can receive the penalty. For example, if the penalty is for Level 1 and lower, enter **Level 0 and Level 1**. If it's for Level 2 and above enter **Level 2 and Level 0**.
 - **Jobs** – From the Available Choices panel, select the jobs that can receive this penalty. If the penalty applies to all employees or shifts, do not select jobs. When you assign a job to a penalty, only the shifts with one of those jobs will be eligible for the penalty.
5. Click **Save**.

Creating a Classification

After creating a wage agreement, you must create classifications, so WFM can assign the correct rates to the specified sets of employees.

Guidelines for Assigning Jobs in a Classification

- A job escalation is configured when a job is assigned to a classification level.
- If the employee is assigned a higher classification level on their employee profile, the employee will continue to be paid at the higher classification level.
- Job overrides only apply when an employee requires a higher rate. That is, the employee will always receive the classification of the higher level. When setting up job escalations, a job should only be assigned to one classification level for the applicable employment status.
- For example, if you associate the Supervisor job to the classification for full-time employees and chose Level 3 in the previous section, a Level 1 full-time employee who acts as a supervisor for a hectic shift will be assigned this classification and will receive the higher payment rate at level 3 for that shift.

To create a classification:

1. Open the wage agreement. See [Accessing Wage Agreements](#).
2. Click the **Classifications** subtab.
3. Click **+ Create new Classification**.
The New Classification wizard opens.
4. On the Classification Name section, enter a name for the classification. For example, **Senior Kitchen Staff**.
5. On the Level section, select the numerical level of the classification, starting from **1**.
6. On the Availability section, complete the requirements, then click **Next**.
 - **Employment status** – Check the boxes for all statuses that are included in the classification.
 - **(Optional) Jobs that should trigger this classification** – Assign a job only if you have employees receiving a higher rate when working a specific job. See Guidelines for Assigning Jobs in a Classification. To configure the job escalation, from the Available Choices panel, select

the jobs that match this classification. If you do not need to associate this classification to a job, skip this field.

7. On the Conditions section, complete the actions, then click **Next**.
 - Select which conditions will apply to this classification, based on the conditions that currently belong to the agreement.
 - From the list of default conditions, select those that apply to the agreement. Selected conditions are highlighted in green. To exclude a selected condition, clear the box.
 - In this section, you can provide a Penalty Loading for each condition, such as 100% for Regular Hours or 200% for Public Holiday.
 - In the Penalty rate fields assign the percentage of the pay that should apply to the employee's hourly pay for each condition. The percentages can be relative to the regular rate. The percentages you provide will later be used to calculate the hourly rate for each age range and condition.
 - (Optional) Click and drag each condition to reorder how they appear on the rates table.
8. If applicable, on the Age Ranges section, complete the requirements, then click **Next**.
 - Enter the age ranges included in the classification in whole values (20 years). By default, WFM uses ages for Under 18 Years to 20 Years and older.
 - To remove ages, click the **stop sign** icon.
 - To add ages, click the **+** icon.
 - To set the loading of each age, enter the rate in the **Percentage of adult rate**.

The Rates section appears with a table containing blank fields for the rates of each age range and condition.
9. In the **Regular Hours** column, enter the hourly rate for the first age range. For example, you may enter **\$33** as the hourly rate for the regular hours of employees who are 20 years and older.
10. To automatically calculate the rates for the rest of the conditions and ranges, click the Expand icon next to the cell.

WFM completes the rest of the table using the Penalty rates and Percentages of adult rates you entered in the earlier sections.
11. Confirm all automatically calculated rates to correct any rounding errors or adjust according to your needs. Click **Next**.
12. On the Confirmation section, review your previous selections.
13. If you need to update a selection, click **Change** beside the section name.
14. Click **Create**.

To continue setting up your work agreement, see [Setting up a Wage Agreement](#).

If you need to update or add more conditions, see [Managing Conditions in Existing Classifications](#).

Setting up Minimum Hours

After setting up your wage agreement, classifications, and conditions, you can configure the minimum hours that employees need to work based on their employment status and type of day worked.

To set up minimum hours:

1. Open the wage agreement. See [Accessing Wage Agreements](#).
2. Click the **Minimum Hours** subtab.

3. Click **+ Add Minimum Hours**.
4. On the Create new Minimum Hours Name window, complete the fields.
 - **Employment status** – Select the status that requires minimum hours set up.
 - **On days that are** – Select the type of day that the minimum hours apply, either regular or public holiday.
 - **Minimum shift length** – Enter the number of hours.
 - **Effective from** – Select the start date when the minimum hours apply.
5. Click **Save**.

Creating a Revision

When an update to wages or conditions needs to occur, you can create a new revision to apply these updated rates.

Employees who are on a classification which you add a new revision for will follow the updated rate as of the specified date. Historical data will still appear with the correct wage rate.

Some situations when you need to create a revision include:

- An increase to the minimum wage which supersedes old rates
- An update to penalty calculations as of a particular date
- An update to wage rates as of a particular date
- Any other change to wages which applies from a certain date, which supersedes rates already set up in the system

For example, in the US if there is an update to the minimum wage in a particular state, and new wage rates will apply to employees currently set up in the system, you can set these up as new revisions.

In Australia, when increases to the minimum wage are announced before the new financial year, you can add a new revision of wages which are affected to take effect as of the correct date.

Follow the procedure to effectively create a new version of the wage agreement with updated rates.

To create a revision:

1. Open the wage agreement. See [Accessing Wage Agreements](#).
2. Click the **Revisions** subtab.
3. Click **+ Create new revision....**
The New Revision wizard opens.
4. On the Valid period section, complete the fields, then click **Next**.
 - **Start Date** – Select the date when the revision will start to apply. If the previous revision has no finish date, WFM will update it to use the start date of the new revision as the previous revision's finish date.
 - **Finish Date** – Select the date when the revision will end. If the revision has no known end date, leave blank.
5. On the Allowances section, update the allowances, then click **Next**.
6. On the Penalties section, update the penalties, then click **Next**.
7. On the Classifications section, complete the actions, then click **Next**.
 - Check the classifications that you want to apply to the new revision.

- Clear the classifications that you want to remove from the revision. For example, you can do this when you are retiring a pay grade, however, ensure any employees currently on these classifications have a new wage added to their profile.
 - (Optional) For each classification and level, enter the percentage of increase for this revision. This will apply an increase to every rate in the classification. If individual conditions change, such as when the weekend penalty increases or decreases at a different percentage, update that on the next section. If a particular classification will still exist, but the rate doesn't change, leave the percentage box blank.
8. On the Rates section, confirm each classification rate's changes based on the percentage you entered in the previous section. If you did not enter a percentage in the previous section, update the relevant rates manually. If the rounded rate is different to what is displayed or if the base increase is not in line with the pay conditions, edit the rates here.
 9. In the Confirmation section, review your previous selections.
 10. If you need to update a selection, click **Change** beside the section name.
 11. Click **Create**.
- At the top of the Wage Agreement page, the note is updated to add information about the revision that you are viewing.

Guidelines for Creating Revisions in Wage Agreements

Refer to the following guidelines.

- If you are viewing the current revision of the agreement and the new revision you created has not started yet, the note indicates that there is a revision that starts later. To access this revision, click **View next revision**.
- If you are viewing a revision that has not started, the note on top of the page will indicate that this is not the current revision of the agreement.
- When setting employee wages, WFM shows the active agreements and revisions, as of the wage start date you selected.
- Current employees with classifications you have migrated do not need to have wages updated in their profile. The revision will supersede their wages. You will need to change their rate if their classification was not migrated.
- If your payroll integration requires classification linking, you will need to link your classifications. For more information, see [Workforce Management Integrations](#).

Cross-Agreement Linking

Important: Linking work agreements is an add-on feature to Workforce Management (WFM). If you want to implement the feature in your setup, contact NetSuite Customer Support.

Cross-agreement linking allows employees to be paid against separate wage agreements at different WFM locations.

Refer to the following example:

- **Location 1** – All employees are paid under the Retail Industry Award for all hours worked.
- **Location 2** – Some employees are paid under the Warehouse Award for all hours worked.

Cross-agreement linking allows you to set up the Warehouse Award to be paid for the hours worked of selected employees at Location 2.

Before you can link work agreements across different locations for each employee, you should first finish setting up the wage agreements and creating groups.

For more information, see [Creating a Wage Agreement](#).

To link work agreements:

1. Open the wage agreement. See [Accessing Wage Agreements](#).
2. Click the **Locations** subtab.
A list of locations that use the wage agreement to calculate shifts appears.
3. Click **+ Add locations...**
4. On the Add locations window, complete the required information.
 - **Groups** – If you have set up category groups, from the Available Choices panel, select the groups that should use the agreement to calculate wages.
 - **Locations** – From the Available Choices panel, select the groups that should use the agreement to calculate wages.
5. Click **+ Add locations**.

Assigning Employee Classification for Cross-Agreement Linking

After linking work agreements, you can assign employees to the relevant level they will be paid at locations set for cross-agreement linking.

To assign employee classification for cross-agreement linking:

1. Go to Workforce Management.
2. Go to Setup > Employees > List.
3. Click the name of the employee.
4. On the employee profile, on the left-hand panel, click **Wages**.
5. On the Wages page, click **Edit wage**.
6. On the Edit wage window, expand the Advanced section.
If you do not complete the fields in this section, the employee will be paid their default cost calculation type.
7. Select any wage agreements and classifications that apply to the employee when they work on a location with cross-agreement linking.
8. Click **Save**.

Region-Based Wages for North America

Region-based wages are a set of convenience conditions built into WFM that are loaded by default into customer's accounts within the United States.

Important: These conditions do **not** guarantee your compliance with laws and regulations. You must validate that these rules meet your needs and own the process of configuring additional rules you need based on your local labor laws.

If you have any locations in a supported US state, you will see the rules from the Wage Rule Process appear.

If the rules do not meet your business needs or if you require additional rules, you can assign your own region-based overrides.

For more information about the available preconfigured overrides for North America, see [Definitions for Region-Based Overrides](#).

Structure of Region-Based Wages

Region-based wages are convenience based preconfigured wage rules to assist with region wage rules.

Region-based wages consist of the following components:

- Revisions
- Conditions
- Multipliers
- Penalties
- Allowances
- Locations

For more information about typical wage components, see [Structure of a Wage Agreement](#).

Accessing Region-Based Wages or Overrides

To view your region-based wages or overrides follow the procedure.

To access region-based wages or overrides:

1. Go to Workforce Management.
2. Go to Setup > Wage.
A list of the available wages or overrides appears. Wage names that start with United States of America are the default region-based overrides that are preloaded with WFM.
If you created your own set of rules, your override appears on top of the preconfigured overrides.
3. Click the wage or override you want to view. You cannot edit a preconfigured override.

You can see any updates and overtime rules that apply to your employees.

After you have set the wage on an employee profile, WFM calculates overtimes based on the percentages that are set in the **Multipliers** subtab.

Setting up Region-Based Overrides

Follow the procedures on the table to set up overrides.

Step	Related Topic
1. Create categories for region-based overrides.	Creating Categories for Region-Based Overrides
2. Create region-based overrides.	Creating a Region-Based Override
3. Assign locations for region-based overrides.	Assigning Locations to Region-Based Overrides

Step	Related Topic
4. Create new or update existing conditions.	Managing Conditions for Region-Based Overrides
5. Create multipliers.	Managing Multipliers
6. Create penalties.	Setting up a Penalty
7. Create allowances.	Setting up an Allowance
9. Create a new revision.	Creating a Revision

Creating Categories for Region-Based Overrides

To apply a region-based override, you will need to create a category group with locations to apply to your region-based override.

With categories, you can create groups of locations that you can use for management oversight, reporting, and accurate location-based wage costing.

You can also use category groups to assign locations to region-based overrides.

To create categories for region-based overrides:

1. Go to Workforce Management.
2. Go to Setup > Categories.
3. Create and prepare a category. For the related procedures, see [Categories](#).
 - a. Create a category.
 - b. Create one or more groups then assign them to the category.
 - c. Assign WFM locations to the groups you created.
4. For each category you created, click **+Use for Region-based wage overrides**.

After you prepared the category group requirements for region-based overrides, you can associate the groups with the correct overrides.

Creating a Region-Based Override

After you prepared the category group requirements for region-based overrides, you can create a custom region-based override. Follow the instructions.

To create a region-based override:

1. Go to Workforce Management.
2. Go to Setup > Wage.
3. On the Region-based wages setup page, scroll to the bottom.
4. Click **+ New region-based wages override**.
5. In the **Name** field, enter a name for the override. Click **Create**.
6. Enter the start and finish dates for the wage override. Click **Next**.
7. Confirm the settings. Click **Create**.

After you create the override, you can create conditions, multipliers, penalties, allowances, groups, locations, and notes.

Definitions for Region-Based Overrides

Region-based wages are a set of convenience conditions built into WFM that are loaded by default into customer's accounts within the United States.

Important: These conditions do **not** guarantee your compliance with laws and regulations. You must validate that these rules meet your needs and own the process of configuring additional rules you need based on your local labor laws.

The following table shows the available preconfigured overrides for North America, including the options available for each one.

Override	Condition	Rule	Multiplier	Allowances
United States of America	OT1.5 over 40 hours week	Every day when during the week time of type regular rate worked exceeds 40 hours	150%	—
United States of America # California	OT1.5 day over 8 hrs	Every day when during the day time worked exceeds 8 hours	150%	—
United States of America # California	OT2.0 day over 12 hrs	Every day when during the day time worked exceeds 12 hours	200%	—
United States of America # California	OT1.5 over 6 consecutive days	Every day when more than 6 days in a row have been worked	150%	—
United States of America # California	OT2.0 consecutive days +6/+8hrs	Every day when during the day time worked exceeds 8 hours when more than 6 days in a row have been worked	200%	—

Assigning Locations to Region-Based Overrides

After you create region-based overrides, you should assign locations associated with category groups. If you need to create categories for the overrides, see [Creating Categories for Region-Based Overrides](#).

To assign locations to region-based overrides:

1. Open the region-based override. See [Accessing Region-Based Wages or Overrides](#)
2. On the override page, click the **Groups** subtab.
3. Click **+Add group**.
4. From the list of category groups you created, select the group or groups containing the locations you need to assign.
All locations in the group you select are added to the Locations subtab of the region-based override.

After you create region-based overrides and assign locations, ensure that you test new rules with your account. You should create scheduled shifts that aim to trigger the rules as well as other scenarios or business workflows.

Managing Conditions for Region-Based Overrides

After assigning locations to region-based overrides, you can start to create conditions for your override.

To create a condition for region-based overrides:

1. Open the region-based override. See [Accessing Region-Based Wages or Overrides](#)
2. On the Region-based override page, click the **Conditions** subtab.
The New Condition form appears.
3. Click **+ Create new Condition....**
4. In the **Name** field, enter the name of the condition.
5. From the **Type** list, select the type of condition or rate. For more information, see [Types of Conditions](#).
6. On the appropriate rule tab, complete the required information for the rule parameters you need. For more information, see [Rule Parameters in WFM](#).
7. If you need to create more rules, click **+New rule....**, then complete the required parameters.
8. After you're done adding rules, click **Save**.

To create specific conditions, see the following help topics:

- [Setting up a Spread of Hours Condition for Region-Based Overrides](#)
- [Setting up Break Conditions for Region-Based Overrides](#)

Setting up a Spread of Hours Condition for Region-Based Overrides

Follow the procedure to create a spread of hours rule and condition.

To set up a spread of hours condition:

1. Open the region-based override. See [Accessing Region-Based Wages or Overrides](#)
2. Create the Spread of Hours condition.
 - a. On the Region-based override page, click the **Conditions** subtab.
 - b. Click **+ Create new Condition....**
The New Condition form appears.
 - c. In the **Name** field, enter **Spread of Hours**.
 - d. From the **Type** list, select Allowance or Penalty.
 - e. In the **Spread of time on day exceeds** field, enter the number of excess hours that require an allowance to be added. For example, you may enter **10 hours**.
3. Create the Spread of Hours multiplier.
 - a. Click the **Multipliers** subtab.
 - b. Click **+ New multiplier....**
 - c. From the **Conditions** list, select **Spread of Hours [allowance]**.
 - d. On the employment status section, check all the statuses where this multiplier applies.
 - e. In the **Rate** field, enter the multiplier rate (%). This multiplier will be applied to the shift base rate.

Setting up Break Conditions for Region-Based Overrides

After you have set up your region-based override, you can start configuring options to manage premium pay for meal or rest breaks. These breaks may include missed, untimely, shortened, or interrupted breaks.

Guidelines for Handling Noncompliant Break Periods

Before configuring options to handle noncompliant break periods, note the following guidelines:

- WFM applies an hour of pay at the employee's base hourly rate and does not consider premium pay or other types of compensations, such as commissions and nondiscretionary bonuses. You must manage and incorporate other types of compensation in your payroll solution, if applicable.
- When applicable, the employee's base hourly rate of pay is added per workday for each unpaid meal break.
- Waiving meal breaks by mutual consent of both the employer and the employee is not covered in WFM and must be managed manually outside the system.

To configure options for noncompliant breaks:

1. Open the region-based override. See [Accessing Region-Based Wages or Overrides](#)
2. Create the condition.
 - a. On the region-based override page, click the **Conditions** subtab.
 - b. Click **+ Create new Condition....**

The New Condition form appears.

- c. In the **Name** field, enter the name of the missed break condition.
 - d. From the **Type** list, select **Allowance or Penalty**.
 - e. In the **Total daily time worked** field, enter the range of work hours that apply for this condition.
3. Set the break requirements.
 - a. Go to the **Break requirements** fields.
 - b. Select the break type, either **paid** or **unpaid**.
 - c. Enter the number of minutes representing the length of the prescribed break.
 - d. Enter the number of hours that employees will work before taking prescribed breaks.
 - e. Based on the hours you entered, select the fraction and timing when the break will be required.
4. (Optional) If you need to create separate rules for various types of noncompliant breaks, create separate conditions for different break types.
5. Complete any other fields relevant to your needs. Click **Save**.
6. Create the allowance.
 - a. Click the **Allowances** subtab.
 - b. Click **+ New allowance....**
 - c. On the Create new allowance window, from the **Condition** field, select **Missed Meal Break (allowance)**.
 - d. Choose the basis for the payment.
 - In the **Amount** field, enter the amount to be paid.
 - In the **at current base rate** field, enter the number of hours that will be multiplied to the employee's base rate.
 - e. In the Employment status section, check the statuses of employees who can receive missed break payments.
 - f. Click **Create**.

Managing Multipliers

Multipliers are penalty rates that are multiplied with the employee rate to adjust their shift payment based on specified conditions.

For example, conditions for holidays can be set up with a multiplier of 150% so employees are paid 1.5 times their base hourly rate for holiday work.

For a condition to apply to time worked, a multiplier for the corresponding condition must be created.

To set up a multiplier:

1. Open the region-based override. See [Accessing Region-Based Wages or Overrides](#).
2. Click the **Multipliers** subtab.
3. Click **+ New multiplier....**
4. On the Create new Multiplier window, complete the fields.
 - **Condition** – Select the condition that applies to the multiplier.

- **Employment status** – Check the boxes for all statuses that can receive the multiplier.
- **Rate** – Enter the rate that will be multiplied to employee rates when the associated condition is applied.

5. Click **Create**.

Notifications

WFM can send you notifications when things happen, to access the notification setup section go to **Setup > Notifications**.

To view your notifications, click on the envelope at the top right corner of your screen.

There are configurable notifications for:

- Birthday Reminders
- Expiring Documents
- New Staff
- Personal Details
- Financial Details

Birthday Reminders

WFM can send you notifications to remind you of an employee's birthday. This is useful as when an employee gets older they may be entitled to a pay increase.

It also helps with employee morale.

To view your notifications, click on the envelope at the top right corner of your screen.

Setting Up Birthday Notifications

To set up an automatic notification system for employee birthdays, go to **Setup > Notifications**. Click **Birthday reminder**.

From here you have a range of settings to adjust. The first option is whether you would like WFM to send you an automatic reminder, choose this option if you want a reminder for any upcoming birthdays (**it is still important to complete the rest of the setup page as this information may still be applicable to managers**)

You will then be given the option to choose how many days before the employee's birthday you will receive a notification, as well as an option to send a reminder on the day. The last section focuses on which managers will be informed of the birthday; you firstly have the option to make it so that only the managers that have primary control over the employee will receive a notification. If you want for other employees to know about employees' birthdays, then you can also include them.

Click **Save** continue.

Expiring Visas

Set up reminders for employees whose visas are expiring.

To set up notifications for expiring visas:

1. Go to Workforce Management.
2. Go to Setup > Notifications.
3. On the Notification Config page, click **Expiring Visa**.
4. Configure notification settings.

Field	Action
Send reminder for upcoming expiring visas that have not been superseded	If you want to receive reminders, check the box.
Send it X days before expiration	Enter the number of days before the expiration date that you want to receive the reminder.
Send on date Send reminder on expiration date (in addition to above)	If you want to receive a reminder on the day the visa expires, check the box.
Notify managers Send reminder to primary location managers	If you want primary location managers to receive visa expiration notifications, check the box.
Also send notifications to	If there are any other users with manager or higher access who you would like to receive notifications, select them here. If nobody is selected, only primary location managers will receive these notifications for their employees. To select employees: 1. On the Available Choices panel, select the names of the employees who you want to receive visa expiration notifications. If you want all employees to receive the notifications, click Choose all. 2. To move your selections to the Chosen Items panel, click the blue right arrow in the middle of the panels. If you want to clear your selections, click Clear All.

5. Click **Save**.

Expiring Documents

WFM has a notification system that is able to inform you when an employee has expiring documents.

A notification will appear on the top right corner of your screen, click the icon to view it.

Setting Up Expiring Documents Notifications

To set up an automatic notification system for an employee's expiring documents you need to go to **Setup > Notifications**. From here, you can go to the "Expiring Document" tab.

From here you have a range of optional settings to set. The first option is whether you would like WFM to send you an automatic reminder, choose this option if you want a reminder for an employee's expiring document (**it is still important to complete the rest of the setup page as this information may still be applicable to managers**).

You will then be given the option to choose how many days before the employee's documents expire to receive a notification, as well as an option to send a reminder on the day.

The last section focuses on which managers will be informed of the expiring documents; you firstly have the option to make it so that only the managers that have primary control over the employee will receive a notification. If you want other employees to know about this, then you can also include them.

Click **Save** to continue.

Uploading Driver's License to an Employee

Follow the procedure.

To upload a driver's license for an employee:

1. Go to Workforce Management > Setup > Employees > List.
2. Click an employee's ID.
3. Under Employment documents, click **Add new**.
4. Fill in the required information.
 - a. In the **Label** field, enter **Driver's license**.
 - b. From the **Type** field, select **Personal Details**.
 - c. Upload the file from your device.
 - d. Set the expiry date of the driver's license.
 - e. Click **Upload**.

The uploaded document will be saved and appear in the list of Employment documents.

5. Make sure document expiry notifications are set up correctly.
 - a. In Workforce Management, go to Setup > Notifications.
 - b. Go to **Expiring Document**.
 - c. Check the reminder boxes and set the notification period that suits you.

6. Make sure document expiry notifications are set up correctly.

You will receive a notification when there is an expiring driver's license. This notification appears in your notification page.

New Employees

WFM can send you notifications when new employees are added to the system.

To view your notifications, click on the envelope at the top right corner of your screen.

Setting Up a New Staff Notification

Setting up a notification system to remind you, or any other managers about a new employee is a simple process. Go to **Setup > Notifications**, and then click **New employees created**.

The first step that you need to do is choose whether you would like to receive a notification when a new employee is created, you can ignore this section if you have no involvement with employee handling.

You will then need to choose which managers will be informed about a new employee.

Click **Save** to continue.

Personal Details

WFM can send you notifications when an employee's details are changed.

To view your notifications click on the envelope at the top right corner of your screen.

Setting Up Personal Details Notifications

Setting up a notification system to remind you, or any other managers about any change to an employee's details is a simple process. You will need to go to **Setup > Notifications**, and then click **Personal details**.

The first step is to choose from the notification options.

You can then choose which managers will be informed about a change to an employee's details.

Hit "save" to continue.

Financial Details

WFM can send you notifications when an employee's details are changed.

To view your notifications click on the envelope at the top right corner of your screen.

Setting Up Financial Details Notifications

Setting up a notification system to remind you, or any other managers about any change made to an employee's financial details is a simple process. Go to **Setup > Notifications**, and then click **Financial details**.

You can choose which managers will be informed about a change of an employee's financial details.

Click **Save** to continue.

Shift Reports

Shift reports within WFM enable you to inform employees and management about important aspects of a week. Different reports are customized for different purposes, such as the "Report" which is a weekly roster including wages and KPI information. This report can be used by management to keep track of important statistics.

It's super simple to create your own custom reports, or edit an existing report!

Ensure you are logged in as a General Manager or Franchisee.

It's important to remember that there is a big difference between weekly reports and daily reports.

The Different Types of Reports

- [Standard Week Reports](#)

- [Standard Day Reports](#)
- [Editing Day Reports](#)
- [Editing Week Reports](#)
- [Restoring or Deactivating Custom Reports](#)

Several of the Reports cannot be changed, but you are able to create copies that you are then able to edit in a way that simplifies management over the employees.

To access the shift reports go to **Setup > Shift Reports**. The different types of reports are listed on the left, click on the one you want to view.

Standard Week Reports

Standard week reports in multiple different ways to suit the needs of different employees and management. There are five types of reports that are pre-made for use; these reports are:

An report is a statement of a previous week outlining the shifts of all working employees, costs, sales, and other juicy information for management.

Printing off an report can help management compare statistics from numerous weeks, it also helps when preparing for future weeks, as you can adjust or change workers shifts according to productivity and sales.

Staff Report

The staff report is the typical schedule employees would see. This is something which can be printed out and hung up at work.

It contains shifts, any job roles, and total hours.

On the last page of this, any shift notes will be printed.

Multi-Unit Staff Report

The Multi-Unit Staff report creates a weekly shift report of two or more locations. This report is useful for any management employees overlooking multiple locations.

This type of report is also useful for employees who work at multiple locations.

Report

like the employees report, but for management only.

The Report contains wage and KPI information of previous weeks.

Standard Day Reports

The standard day reports are a useful way to dissect a specific day's schedule, this could be throughout the use of a daily schedule for employees, or more important information that could be useful for management.

All day reports are spread over multiple pages, this is so that information isn't crammed, and it is to analysis specific parts of the reports.

These reports include:

Daily by Day

The daily by day report is an employee schedule report that gives a more in-depth look into the length of an employee's shift, this is useful as it reduces room for error when employees receive their schedule.

Daily

The daily is useful for management as it shows them an accurate analysis of the predicted costs and profits. This report can be compared next to an report to show the difference between the expected sales, and the sales.

Daily

Similar to a daily by day report, the daily report shows the employees schedule; this is a more efficient way to analysis the weekly schedule as it removes as much empty space by putting each day directly next to each other.

Editing Day Reports

Report Options

Each customize report will need to be assigned a name. This new named report will be available under your existing Shift Reports.

Next, you will can choose the required features for the report, such as the inclusion of the date. To change the selection simply click on the "off" slider to turn it on, and inversely.

The last option is the choice to create a new page for each day of the week, which will reduce the chances of misreading the timetable.

Timeline Labels

Day Reports have a useful timeline feature that appears at the top of a report, when editing a report you can change features on how the time is displayed.

An example is whether it will be in 12 or 24 hour format.

Roster Day Label

This section is mostly around the aesthetics of the report, focusing on whether you would like the day to be abbreviated or not; and the heading date format. Staff Labels

The next section is about how you require your employees details to be displayed. You firstly have to choose the order of the employees' names, this can be a mix of first name, last name, preferred name.

The next two options let you choose the day and date formats. The options are either a shortened one with their name with initials or one with their WFM ID showing.

Grouping

Grouping helps segregate different employees into sections, you can choose what time or grouping you want from the selection tab. And again you are able to choose whether this is in ascending or descending order.

Shift Display

Shift display is the most important section as you will be able to select which key information is displayed on the report. (If a large amount of information is chosen to be displayed, privacy considerations may be applicable.)

The majority of the choices are self explanatory such as the first four options; these options focus on aesthetic features.

"Unspecified Breaks" will reduce the information given for breaks, this is helpful when employees are given breaks at a range of different times.

The next two options give you the option to include information about the employees job, and whether the color of the job shows up on the report.

The next few options focus on some key information that revolve around management. The "Show Hours" option is fairly straight forward; and the "Show Costs" option will add a new column on each day, this column will contain the daily costs for each employee.

The final two choices give you the option to show the salaried costs of the employees on their shift and the units sold by the employees.

Report KPI's

Having Key Performance Indicators on a report helps management evaluate key information; this section should only be used when creating reports for management.

Every option will create another row below the shifts, this is so that it can clearly show any information for a specific day; at the end of each row there is a weekly total or average, depending on which option it is.

The first option is to choose whether you would like there to be units on any of the options below.

Total hours will create a row stating how many hours are being worked in a day from all of the employees for the location(s).

Wage Cost and Sales will state the cost of the employees scheduled on for a day, and the amount of sales predicted/made for the day.

Labor percent is an option that will compare the wages of the employees to the sales.

Productivity shows how efficient the scheduled employees can be. If you have employees scheduled on that aren't as productive as you require, you will be able to look at this report and change the schedule accordingly.

The next option is quite straight-forward, where it creates a wage average for all of the shifts on a particular day.

Labour Efficiency is a row that shows the difference from your set labor percent goal, such as if you set the goal to \$15,000, the Wage cost is \$14,600, and the Labour efficiency is \$400.

Footer

Footer gives the option to have small aesthetic features implemented on to the bottom of the page.

The first option will let you choose to see any cost modifiers that a location has implemented.

Report Permissions

Report Permissions will show a list of all of the groups that have access to the report.

The Shift Jobs Key is an option that gives a small list of each of the jobs and the colors that are affiliated with them.

Editing Week Reports

Week reports are used on a regular basis to notify employees and management on important information about a coming week, it is essential that you customize your reports to your liking.

Report Options

Each customized report will need to be assigned a name. This new named report will be available under your existing Shift Reports.

Next, you will need be able to select the required features for the report, such as the inclusion of the date. To change the selection simply click on the "off" slider to turn it on, and inversely.

There are two types of shifts to choose from, the "Scheduled Shifts" will create a report based on predicted stats, whereas the "Shifts" option will create a report from the data collected from a previous week.

Selecting "Shifts" will give an extra option, this option gives you the choice to segregate exported and un-exported shifts.

The "Multi-location report" option gives you the option to include multiple locations in the report.

Staff Labels

The next section is about how you want for your employees details to be displayed. You firstly have to choose the order of the employees name, this can be a mix of first name, last name, preferred name.

The next few options are self-explanatory, where you can choose to shorten their name with initials, to have their WFM ID showing, and whether you would like to have their mobile numbers showing.

The last option is the order of the names, whether it be in ascending order, or descending.

Column Headings

This section is mostly around the aesthetics of the report, focusing on whether you would like the day to be abbreviated or not; and the heading date format.

Another option is to choose whether you would like to include the total hours for each employee.

Grouping

Grouping helps segregate different employees into sections, you can choose what time or grouping you want from the selection tab.

Again, you are also able to choose whether this is in ascending or descending order.

Shift Display

Shift display is the most important section as you will be able to select which key information is displayed on the report. (If a large amount of information is chosen to be displayed, privacy considerations may be applicable.)

The majority of the choices are self-explanatory, such as the first four options; these options focus on aesthetic features.

"Unspecified Breaks" will reduce the information given for breaks, this is helpful when employees are given breaks at a range of different times.

The next two options give you the option to include information about the employees job, and whether the color of the job shows up on the report.

The next few options focus on some key information that revolve around management. The "Show Hours" option is fairly straight forward; and the "Show Costs" option will add a new column on each day, this column will contain the daily costs for each employee.

If you have chosen to show the costs, another option "Show Salaried Costs" will appear.

The last two options are aesthetic features which make the report easier to understand. One of the two options is "Show Icon on Shift with Notes"; when a shift is changed and a note is added, a small icon will appear on that shift.

If the report is an "Report", a final option will appear, this option is "Show icon on shifts exported to payroll". This option applies an icon to any applicable shift.

Report KPIs

Having Key Performance Indicators on a report helps management evaluate key information; this section should only be used when creating reports for management. Every option will create another row below the shifts, this is so that it can clearly show any information for a specific day; at the end of each row there is a weekly total or average, depending on which option it is.

Total hours will create a row stating how many hours are being worked in a day from all of the employees for the location

Wage Cost and Sales will state the cost of the employees scheduled on for a day, and the amount of sales predicted/made for the day.

Labor percent is an option that will compare the wages of the employees to the sales.

Productivity shows how efficient the scheduled employees can be. If you have a small amount of low productivity employees on, you will be able to look at this report and change the schedule accordingly.

The next option is quite straight-forward, where it creates a wage average for all of the shifts on a particular day.

Labor Efficiency is a row that shows the difference from your set labor percent goal. for example If you set the goal to be \$15000, and the wages cost \$14600, the Labor efficiency would be \$400.

KPI Options

KPI Options has one aesthetic choice that allows you to choose whether you would like the units for all of the options from "Report KPI" to show.

Footer

Footer gives the option to have small aesthetic features implemented onto the bottom of the page.

The first option will show what type of icons are being used in the report, and what they are.

The next option will let you choose to see any cost modifiers that a location has implemented.

The Shift Jobs Key is an option that gives a small list of each of the jobs and the colours that are affiliated with them.

Page numbers is self-explanatory.

Appendices

The appendices tab allows you to create a section dedicated to extra information.

The first option will create an extra table which shows all of the shift notes for employees. (Notes such as "Clean the windows")

The next choice can add a list of all of the employees that don't currently have a shift.

The last three options are all of the same options from the "Footer" tab.

Report Permissions

Report Permissions will show a list of all of the groups that have access to the report.

Restoring or Deactivating Custom Reports

It's always important to be able to remove anything you deem unnecessary, and to be able to restore anything that has only recently become useful again. With WFM's deactivation and restoration system within "Shift Reports" it is a simple process to follow.

Deactivating a Custom Report

If a custom report has been created that you decide isn't a necessary requirement, you are able to go deactivate it. Simply select the report that you want to deactivate, and then hit the "Deactivate" button on the top right corner.

You will then be prompted with a warning to confirm that you want to deactivate the custom report. Select the "Deactivate (report name)" button.

Restoring a Custom Report

Restoring a deactivated report is a simple process, all you have to do is select the "Restore Reports" button on the bottom left of the screen. Then you will have to select the "Restore" button for the report you want to reactivate.

After this you will then be given a warning indicating that you want to restore the report.

Categories

You may use the Categories feature to group locations in multiple ways. Examples of this can include grouping into:

- Regions
- Area/Regional Managers
- Store type
- Anything!

A Category has a name, and may contain any number of Groups within. These may be organised into a hierarchy, or be a simple flat list. Each Group may only have one manager at a given time - a manager being a management user who is in charge of locations within that group (and any sub-groups).

Assigning a new manager for a new period will trim or remove the previous manager's management period.

On any given date, a manager may view all locations associated with the groups managed, if their association period contains that date. If there is a hierarchy of groups, then she will also be able to view locations that are currently associated with groups within that hierarchy.

Creating a new category

- Click on +New Category
- Add a name
- Add a description (optional)
- Click create

The created category can have groups added to it. To do this:

- Select a category
- Click on +New Group
- Add a name
- Click 'ok'

An example of a category you could create could be a state, and within each category. The groups could each be regions/group of locations.

Sub grouping

You can create a sub-group within a group.

- Click on +New group
- Name this group
- Select the parent group which this sub-group will belong to from the dropdown

This will nest the group you created within the 'parent' group you selected:

Assign locations

To assign a location to a group you've created:

- Select the group from the drop down (above)
- Select **+Assign locations**

Select a start date & locations you would like to be apart of this group.

A start date is required but a finish date is not.

selected and saved you will see what locations belong to a group on the group page (screenshot above).

Assigning Manager

Only one person can be the manager of a single group at any given point.

The manager of a group will be able to see locations which belong to this group - including any sub-groups.

Above: Clicking the icon in the top-left shows a list of groups & sub groups to select from.

To assign a manager to a group you've created:

Select a group/sub-group to assign a manager to (above)

Click on +New Manager

Select a manager to assign to this group

Select a start-date (start date is required but finish date is not)

A manager is now assigned to this group

You can see a history of managers on each group page:

This will list any previous and future managers for this group. If a manager does not have an end date set this is fine, however if a new manager is taking over you may see an information message letting you

know there may be an overlap. If there is no overlap, the screen indicates that there are no overlapping manager associations.

A common example of this is a manager going on leave for a few weeks and they won't be able to log in, in which case there are two options.

Set a finish date for the manager

Select a new manager to take over for those few weeks.

If you set a finish date for the manager, the manager of the parent group will now become the manager of these locations.

Please note: The assigned manager will be able to see the locations on the daily and weekly screen as well as change their settings, however they will not be able to see the employees profiles unless they have those locations explicitly assigned on their profiles.

Where do these appear?

If you try and generate any shift reports where reporting by location is an option, you'll see these groups that you have created.

These groups will filter the list of available locations to choose from.

On the Can be rostered at page for each employee, you can select a particular group. Employees with an associated group will be available to be scheduled at all locations belonging to this group.

Audit Logs

You can generate audit log reports to track user actions in Workforce Management (WFM).

To access Audit Logs, go to Workforce Management > Reports. Click **Audit Logs**.

You can use audit logs to meet the following goals:

- View who published a schedule and the date and time it was published
- View who unpublished a schedule and when, such as when amendments are made to shifts
- Check whether any changes were made to shifts, including reassigning employees and changing times
- Check payroll to see if shifts were added after a shift export was run
- View who approved a leave or availability and when it was approved
- Pinpoint if someone made changes to external integration configurations, such as unlinked Xero or MYOB locations or employees
- View changes to employee personal details

You can filter audit logs according to the following:

- **Action** – Filters logs based on specific actions.
- **Date** – Filters logs based on on a specific date or period..
- **Anyone** – Filters logs based on the user.
- **Type** – Filters logs according to the Table column, which specifies the generic data type the user changed, such as Agreement, Brand, or Condition.

The Audit Logs page lists user actions starting with the most recent.

The following table shows the data available in audit logs.

Data	Description	Content
Action	Shows the type of action performed.	Actions may include: ■ Create ■ Update ■ Delete
Timestamp	Shows the date and time the action was performed based on your current timezone. If you download the CSV log, however, the timestamp shows time in GMT.	N/A
User	Shows the user who performed the action.	N/A
IP address	Shows the network IP address of the user who made the action.	The red numbers or letters after the IP address is a unique session or instance ID. This ID is used to identify actions that were made in the same logged in session. For example, if a user logs in, makes a change, logs out, and then logs in again, the instance ID of the actions in the first session will be different from that of the actions in the second session.
Instance	Shows the specific field that was changed in relation to the Table column.	Some examples that may appear in this row include: ■ For a published schedule, the location name and week number ■ For an update on personal details, the employee name with their shift times and location worked
Table	Shows the general type of data field that the user changed, which was specified in the Instance column.	Some examples are: ■ Company mobile settings ■ Brand ■ Timesheet shift
Changes	Shows the change made as a comparison between the original value and the updated value. If there was no data there originally then it will show a blank value.	N/A

Sample Audit Log

To better understand how to interpret audit logs, refer to the following table.

Action	Timestamp	User	IP Address	Instance	Table	Changes
Insert	May 21, 2019, 10:57 a.m. 2 days ago	Jasmine Connor	61.68.198.142 qd7dl8...	Blacktown [week 21 2019]	Released Roster	week: no value => 21

Action	Timestamp	User	IP Address	Instance	Table	Changes
						releaser: no value => Jasmine Connor 236752 location: no value => Blacktown 11695 id: no value => 742180 year: no value => 2019
Update	May 21, 2019, 10:55 a.m. 2 days ago	Jasmine Connor	61.68.198.142 qd7dl8...	[26991351] Matthew Townsend @ Blacktown 2019-05-30 9:30 am to 2:30 pm	Rostered Shift	person: Casey Gleeson 236259 => Matthew Townsend
Update	May 21, 2019, 10:54 a.m. 2 days ago	Jasmine Connor	61.68.198.102 3m1j2n...	Vanessa Piong	Person	email: vpiong@example.com => Vanessa.Piong@example.com

The first instance is for a location with week number attached. It is on the **Released Roster** table, meaning a roster or schedule has been released or sent out. The schedule is for Blacktown on week 21 in 2019.

The second instance is for an employee name at a location with a shift on May 30, 2019. Based on the **Table** column, this instance is for a scheduled shift. A user reassigned this shift that was previously for Casey.

The third instance is for an employees name based on the **Personal** table. The personal details field was changed. Based on the **Changes** column, the email address was updated.

Security Settings in WFM

You can enable two-factor authentication (2FA) in Workforce Management (WFM) to add a layer of security to your account.

Before you enable the setting, do the following:

- Set up your mobile number in your profile. You must have a valid mobile number to enable recovery of your account if you lose your token generator and your backup codes.
- Understand the use of token-based authenticator apps and download one on your mobile device. With 2FA turned on, an authenticator app will generate the verification code required for you to sign in to your account.

To enable two-factor authentication:

1. Go to the configuration page.
 - If you are working on the standalone WFM site, from the upper right corner of the screen, click the user icon. Click **Configure 2-factor**.
 - If you are working on WFM in NetSuite, go to Workforce Management. Go to Setup > Security Settings.
2. On the Enable Two-Factor Authentication page, scan the bar code which is generated on-screen.
3. Enter the code that appears on the authenticator app. Click **Next**.
4. On the **Expire verification after** field, enter the maximum number of minutes that you will be allowed to enter the code from the authenticator in future verification sessions. Click **Save**.

Changes to this field will only affect new verification events. Existing verified sessions will expire according to the settings that were in place when the verification occurred.

5. (Optional) Generate backup codes and store these somewhere secure, as these can be used to validate your login if you do not have access to the authenticator.

If you don't have backup codes set up, you can request a code to be sent via SMS to remove your 2FA setting.

After you configure your 2FA settings, you will be required to validate your login when you:

- Access employee financial details
- Access Payroll integrations
- Change your password
- Change 2FA settings

When asked to validate your login, provide the code from your authenticator app. This code changes every 30 seconds.

You can continue accessing these pages until the validation has expired or until you log out.

User Details

You can view your account details in Workforce Management (WFM) to configure various settings.

To open the configuration page, refer to the following:

- If you are working on the standalone WFM site, from the upper right corner of the screen, click the user icon. Click **Your Details**.
- If you are working on WFM in NetSuite, go to Workforce Management. From the upper right corner of the screen, click the user icon. Click **Your Details**.

The Your Details page contains the following settings:

- **Personal** – Lets you update personal information, such as name and date of birth.
- **Employment** – Shows the status of employment, locations, and notes.
- **Access** – Shows the username for WFM as well as the Time Clock pin code.
- **Wages** – Shows the wage setup that currently applies to you, including the calculation type and rent.
- **Jobs** – Shows your job name, effective date, proficiency, and tools.
- **Availability** – Shows your schedule availability for work.

Grayscale Mode

To facilitate ease of viewing, you can switch the Grayscale Mode on in Workforce Management (WFM). This setting changes the display to use high-contrast colors of black, gray, and white.

To switch Grayscale Mode on or off:

1. Go to Workforce Management.
2. From the upper right corner of the page, click the user icon.

3. From the panel, click the **Grayscale Mode** switch to turn it on or off.

Login History

You can view a report containing a history of login sessions in Workforce Management (WFM) across various sources.

To access the page, go to Workforce Management. From the upper right corner of the screen, click the user icon. Click **Login history**.

The page displays the most recent sessions first.

The page contains the following information:

- Source
- Logged in at
- Logged out at
- IP address
- Session status

Dashboard

Watch the following videos for brief demonstrations of the WFM Dashboard.

Intro to your dashboard & using the default widgets.

[Dashboard Introduction and Default Widget Groups](#)

Adding extra KPIs to your widget groups.

[Adding Extra KPI Widget to Your Widget Group](#)

What are my numbers telling me?

[What are My Numbers Telling Me?](#)

If you remove all widgets from your dashboard you'll see two options.

Click Add Historical Graph to add a graph of a particular KPI for a day in the past

Click Add Live Graph - this will show you a graph of particular KPI you select for the current day

Select your Restaurant and the metric you want to graph.

this has been added you will see that graph as a rectangular widget on screen. You can then add additional tiles by clicking the + in the bottom right

Options to add a historical or live graph then appear. You can then continue adding the graphs you want.

Live graph will ask you for a location, KPI to view, as well as the time period you'd like to appear.

You can hit the + magnifying glass to expand a graph you want to view at a larger resolution.

The following fields are adjustable to your preferences:

- Date
- Resolution

The important one to be able to play with is the date field on the historic graph, so you can have access to any day.

Managing Workforce Management Employees

You can use the Employee list to configure and manage your employees.

For information about managing employees, see the help topics:

- [Employee List](#)
- [Viewing and Editing Employee Details](#)
- [Adding New WFM Employees](#)
- [WFM Employee Availability](#)
- [Importing Employees to WFM](#)

Employee List

From the Workforce Management page, click Setup, and then click Employees > List. You can sort the list by clicking on the table heading. Click it again to reverse the order. This list will sort based on:

- WFM ID
- First name
- Last name
- Preferred
- Email
- Mobile
- Primary Location
- Calculation type
- Employment status
- State
- Country
- Employed?
- Payroll ID
- Timesheet PIN
- Group

To search for an employee, type their name in the search field.

By default, only current employees appear in this list. To filter the employee list by other parameters, select one from the dropdown list:

- Only employed staff
- All staff
- Only terminated staff

To open the employee profile, click the employee's name. For more information, see [Viewing and Editing Employee Details](#).

Viewing WFM Employee Headcount

To keep track of the current number of WFM employees and count it against the provisioned number of employees, go to the Billing Information page.

Go to Setup > Company > View Billing Information.

On the **Billable Components** subtab, find **Workforce Management Employee**. You can compare the corresponding figures under the **Current Provisioned Qty** and **Current Used Qty** columns.

Viewing and Editing Employee Details

When you select an employee to view, their personal details page appears.

On an employee's personal page, you'll be able to update their personal details.

To update their details, click **Edit**.

To save the changes after you've edited them, click **Save** or **Save & Close**.

If you make a mistake you can click on Cancel to avoid saving.

Personal Details

Personal details are a necessary step when setting up employees in WFM. When employees are imported from NetSuite, this information is included by default.

The Personal details page include:

- Name
- Preferred name
- Gender
- Date of birth
- Email address
- Mobile
- Phone
- Address

Emergency Contacts

In case of an emergency, it's always important to have the information of a relative or associate of the employee involved.

You'll need basic contact details, such as their name, mobile number, relationship to the employee, and their address.

Profile Photo

Including a photo of the employee can be a useful feature to help distinguish the visual difference between employees. This is particularly important if you're using the Visual Verification functionality, since it lets you compare the employee's punch photo with their profile photo. The employee's photo is shared between the Workforce Management browser and the Phone App. An employee can update their profile picture in either the browser or the phone app, and that picture is automatically synced to the other application.

Managers can also upload a photo for the employee. Click **Browse**, select an image, and click **Save**.

The employee profile photo will appear on:

- the Daily/ Weekly/ Multi-Location Schedule views
- Employee selection list on shift creation, reassign and fill shift
- Employee list
- Phone App
- Employee profile

Employee Self-Service (ESS) Extended for Australia

Important: The Employee Self-Service (ESS) Extended feature for Australia is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

Employee Self-Service (ESS) Extended lets employees sign in to their WFM profiles and fill in their own financial information, eliminating the need for paper forms.

With ESS Extended, employees will have access to:

- New tabs on their profile
 - **Financial** – Employees can update and view their bank details, tax file number declaration, and superannuation fund details. This information will also carry over to payroll systems integrated with WFM.
 Only Finance/payroll and franchisee users will be able to see this tab on staff members profiles.
 Bank details and superannuation details will be filled in by employees upon onboarding, replacing current paper methods. This reduces paperwork and manual data entry. This data sync is ongoing.
 To know more about financial information available with ESS Extended, read [Financial Details for ESS Extended](#).
 - **Visa details** – You can add visa details for selected employees. You'll get reminders when a visa is close to expiring.
 - **Term breaks** – Employees on a Student Visa might be able to work extra hours over holiday periods, if they can show the correct required information. Managers can view & approve these Term break requests, so these employees can be scheduled on for extra hours over this period automatically. Please visit this page for more information regarding Term Breaks.
- Updates to existing tabs

- **Personal** – Fields are added.
 - **Education/Qualifications** – Employees, payroll employees, and managers can add this information. Any courses completed by employees, which you want to track, can be uploaded here.
 - **Emergency Contacts** – Employees can enter emergency contacts upon employment. This provides quick access for managers to view this information if they need to during a shift.
- **Employment** – Employees can store employment documents like contracts, tax forms, visas, and job descriptions. Employees can remove and override or update documents with revised versions. An expiry date can be set to notify users when a document is about to expire.

Financial Details for ESS Extended

Important: The Financial Details feature is part of the Employee Self-Service (ESS) feature for Australia available only where it's already provisioned. It's not included with the current SuitePeople WFM solution.

With this feature, your employees can update their financial details. Updates can sync automatically with the payroll system integrated with Workforce Management (WFM).

Employees can view and update the following sections:

- Bank details
- Tax file number declaration
- Superannuation fund details

Editing Financial Details for ESS Extended

Follow the procedure.

To edit financial details:

1. Log in to Workforce Management.
2. To open the right-hand panel, click your user icon.
3. Click **Your Details**.
Your employee profile will appear.
4. Click **Financial**.
5. From the upper right corner, click **Edit**.
6. Edit your details on the page.
7. When you're done, click **Save and Close**.

Bank Details

The Bank Details section shows:

- Account name
- Bank State Branch (BSB)
- Account number

Tax File Number Declaration

The Tax File Number (TFN) declaration can only be completed by staff. This is a requirement from the Australian Taxation Office (ATO) to treat this as a signed copy of the form.

When it's completed, you can view a read-only copy of the form.

The Tax file number declaration form includes:

- Tax file number
- Name
- Previous surname
- Date of birth
- Address
- Employment basis
- Residency status
- Tax free threshold claimed
- Senior or pensioner tax offset claimed
- Special tax offset claimed
- Higher Education Contribution Scheme – Higher Education Loan Program (HECS-HELP) and Student Financial Supplement Scheme (SFSS) debt

Note: If your linked payroll package can't lodge the TFN declaration form electronically, you'll need to continue using paper forms. For more information about which payroll packages can lodge forms, check page 9 of this document. Otherwise, a paper form is still required.

Editing the TFN Form

Follow the procedure to edit the TFN.

Tax File Numbers are distributed based on an algorithm. WFM uses this same algorithm (provided by the ATO) to identify if a staff member has entered a valid TFN.

All other options on the WFM form mirror the paper TFN declaration form exactly.

Editing the TFN form in WFM:

1. To go to the page, see [Editing Financial Details for ESS Extended](#).
2. Answer the questions.
 - **What is your tax file number (TFN)?** – Enter your TFN or choose from the following:
 - I have made a separate application for a new/existing TFN.
 - I am claiming an exemption because I am under 18 and do not earn enough to pay tax.
 - I am claiming an exemption because I am in receipt of a pension, benefit, or allowance.
 - I choose not to provide my TFN. I am aware I will be taxed at a higher rate.
 - **What is your name?** – Choose from the following titles. Then, enter your first, last, and other names in the corresponding boxes.
 - Mr.
 - Mrs.
 - Miss

- ☐ Ms.
 - ☒ **If you have changed your name since you last dealt with the Australian Taxation Office, show your previous family name** – If this question applies to you, enter the name before the change.
 - ☒ **What is your date of birth?** – Pick your birth date.
 - ☒ **What is your home address in Australia?** – Enter your home address in the corresponding boxes.
 - ☒ **On what basis are you employed?** – Choose your employment status.
 - ☐ Full-time employment
 - ☐ Part-time employment
 - ☐ Labour hire
 - ☐ Superannuation/annuity income stream
 - ☐ Casual employment
 - ☒ **Are you an Australian resident for tax purposes?** – Choose your tax residency. To confirm, visit the ATO website.
 - ☐ Australian resident for tax purposes
 - ☐ Foreign resident for tax purposes
 - ☐ Working holiday maker for tax purposes
 - ☒ **Do you wish to claim the tax-free threshold from this payer?** – Choose Yes or No. Only claim the tax-free threshold from one payer at a time, unless your total income from all sources from the financial year will be less than the tax-free threshold.
 - ☒ **Do you want to claim the seniors and pensioners tax offset by reducing the amount withheld from payments made to you?** – Choose Yes or No.
 - ☒ **Do you want to claim a zone, overseas fores, dependent spouse or dependent (invalid and carer) tax offset by reducing the amount withheld from payments made to you?** – Choose Yes or No.
 - ☒ **Do you have an accumulated Higher Education Loan Program (HELP) debt, or an accumulated Financial Supplement debt?**
 - ☐ **Do you have an accumulated Higher Education Loan Program debt?** – Choose Yes or No. Your payer will withhold additional amounts to cover any compulsory repayments that may be raised on your notice of assessment.
 - ☐ **Do you have an accumulated Financial Supplement debt?** – Choose Yes or No.
3. On the **Confirmation** section, enter your username and password.
 4. Click **Save changes**.

Saving your TFN form acts as a digital signature.

Superannuation Fund Details

If a staff member is linked with a compatible payroll system, they'll see a list of super funds to select from. These will be the funds that exist in the payroll system. They will be able to select other to enter in the details of their fund.

These details include:

- ☒ Fund name
- ☒ Super Product Identifier Number (SPIN)

- Unique Superannuation Identifier (USI)
- Account number

Visa Details

Users with Finance Co-ordinator access and above can add Visa details to employees on Visa restrictions.

Entitlements, expiry date, and proof of visa documents can be added. The expiry date will notify selected users within WFM before the visa details expire.

The visa details page includes:

- Expiry date
- Passport number
- Country of issue
- Nationality
- Visa class
- Work entitlement
- Notes
- Associated documents

Term Breaks in Visa Details

Term breaks appear only for employees who have a visa set up in WFM.

For more information about term breaks and how they're used in WFM, see [Term Breaks in WFM for ESS Extended](#).

Term Breaks in WFM for ESS Extended

Important: The Term Break feature is available to customers who currently have the Employee Self-Service (ESS) Extended feature set up.

ESS Extended feature is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

The purpose of this package is to allow employees on a visa to enter proof of course breaks.

Term Break Permitted Hours

An employee on a student visa, for example, might only be able to work 20 hours per week while their course is in session.

In the employee's WFM wage profile, their maximum hours may be set to 20 per week (meaning they can't be scheduled greater than 20 hours per week, otherwise this breaches the conditions of their visa).

When the employee has course holidays, they may be permitted to work a greater amount of hours than this. Term break automatically over-ride the 'maximum hours' field set in WFM for that employee, for that period of time.

The employee can add in their periods of holidays they are applying for, including their proof of enrollment & proof of holidays (like a course or university timetable). The request notifies payroll users within WFM. And after they review the proof given, can apply the Term break.

Over these holiday periods, the employee won't be restricted to the maximum hours set in their profile.

Term break overrides let an employee temporarily adjust their hourly work targets. This can be used so that overseas students who are legally prevented from exceeding a certain number of hours during term, can increase their holiday hourly target, after submitting the relevant documentation.

Term Break Weekly Schedule

Term Break requests need to be for a full schedule week.

For example, if your schedule is Monday to Sunday, the request needs to apply starting on a Monday and ending on a Sunday.

Accessing Term Breaks

You can access the visa for your employee by selecting their profile from your Employee List and going to Visa Details. Term breaks only appear for employees with a valid visa set up in WFM.

Only the highest levels of access can approve term break requests. Check with (Enter point of contact) if you're unsure of this level of access.

You're able to set managers and primary location managers to receive notifications of requests. These users will receive requests through notifications in WFM, but they can't approve these requests.

Requesting Term Breaks

To know more about how to create and process term break requests, see [Creating Term Break Periods for School Holidays and Pupil-Free Days](#).

Employment

On the employment page, you can terminate and re-hire employees, reassign their primary location, and add and remove locations they can work at.

Primary Location

The employee's primary location is sometimes referenced as their "home location." This location is automatically imported from the mapped field on their employee record in NetSuite. When employees request availability changes or submit leave requests (if using Leave in WFM), those requests go to the manager(s) of their primary location.

Can work at

This is a list of locations the employee can punch in or be scheduled to work.

To add or remove locations the employee can work at, click **Edit**.

When editing, the box on the right will list locations they can work at. The box on the left shows locations you can view and add to the employees. You'll only see locations you have access to. If you're trying to add a location you can't see here, you'll need to ask someone with higher access to add this to your account or add this to the employees on behalf of you.

Multi-add locations or groups

If you can see categories or groups, you're able to allocate all locations in these groups to an employee.

When editing the can work at, there's an option underneath the location boxes:

The table(s) below shows a summary of which **Locations** from a **Category** or **Group** Abdullah Alswayan can work at, while also providing short cuts to quickly add and remove **Locations**.

[-] State	4/709	+ Add all	x Remove all
[-] NSW	0/185	+ Add all	x Remove all
[-] QLD	0/193	+ Add all	x Remove all
[-] VIC	4/331	+ Add all	x Remove all
VIC - North & CBD	4/79	+ Add all	x Remove all
VIC - South & South East	0/128	+ Add all	x Remove all
VIC - West & Regional	0/101	+ Add all	x Remove all

This lists the categories and groups you have access to view. In the screenshot, we have a group for each state. You can "Add all" locations from a group to an employee. This is useful if employees can work at any location in that group.

You can continue expanding the hierarchy to add all locations from a specific group:

Beside each group, the number of locations in the group appears, along with how many of those are allocated to the employees.

To add the locations to the selection boxes above, click "add all". You can fine-tune this selection and remove any if required before saving.

Terminating a WFM employee

You terminate employees from the Employees page. From the Workforce Management tab, go to Setup > Employees > List.

Note: Employee terminations and rehires will sync automatically from the NetSuite employee record. If you believe you need the ability to add or terminate employees within WFM, please contact your Account Manager.

To terminate an employee:

1. From the Workforce Management tab, go to Setup > Employees > List.
2. Click the ID number of the employee you want to terminate.
3. Click **Terminate employment**.
4. When prompted, enter a **Termination date** and a **Reason for termination**. Click **Terminate employment**.

Warning: Ensure that the termination date is correct, as this can't be changed.

After the person is terminated, they'll appear in WFM until that date is reached.

You can also re-employ an employee if they leave and come back. Examples include seasonal employees or students.

Re-employing a Terminated Employee

Note: Employee terminations and rehires will sync automatically from the NetSuite employee record. If you believe you need the ability to add or terminate employees within WFM, please contact your Account Manager.

To re-employ a terminated employee from the Workforce Management tab, go to Setup > Employees > List.

Select **Only terminated staff** from the dropdown list. Click on the person's name to open their details.

Click on the **Employment** tab.

On this page, you'll be able to re-employ the employee.

Note: Employee terminations and rehires will sync automatically from the NetSuite employee record. If you believe you need the ability to add or terminate employees within WFM, please contact your Account Manager.

Updating an employee's primary location

An employee's primary location is the roster unit where they were employed, will receive the most shifts, and where their manager is possibly located.

To change or add a primary location:

1. On the employee's page, click **Locations**.
2. Beside Primary Location, click **Edit**.
3. In the Location dropdown list, select a location.
4. Select a date from the **Effective from** calendar.
5. To delete a location, click the **Delete** button beside it.
6. To add a location, click the **Add new** button.
7. To save these settings and continue working, click **Save**. To save the settings and close these settings, click **Save & Close**.

Employee Access in WFM

As part of configuring employee management for Workforce Management, you can use the employee details page to control an employee's access, change their username, and set what group they're in.

From the Workforce Management tab, go to Setup > Employees > List. Click the ID number of the employee you want to configure. Click the **Details** tab. Click **Edit** to change these settings.

To confirm any changes, click **Save** or **Save and Close**.

You can also update the SuitePeople Time Clock PIN on this page. To have WFM set a new available PIN for the employee, click **Edit**. Click **Generate PIN**, and then click **Save PIN**.

Sending Employee Login Details

To send employees an email with their username and a link to reset their password, click the email icon in the blue bar. WFM will send an email to the address associated with this employee.

WFM Access Groups

WFM access groups are independent from NetSuite roles.

The available access groups depend on the date when your WFM account was provisioned. Accounts provisioned after November 17, 2023, have access to renamed and additional access groups that allow for flexibility when assigned to employees.

Note: If your usage requires the use of a specific access group currently not available in your account, contact NetSuite customer support.

To use the permissions and reports provided to an access group, an employee should access WFM by using the NetSuite Employee Center then going to the **Workforce Management** tab.

The following tables identify the access groups available to employees based on when their accounts were provisioned.

Administrator and Similar Roles

Refer to the following table.

Before November 17, 2023	After November 17, 2023	Permissions	Reports
General Manager	Administrator	■ Can Manage Wage Agreements ■ Can Create and Configure Time Clock Devices ■ Can Process Payroll ■ Can lock Periods for Payroll ■ Can schedule and approve shifts ■ Can publish schedules ■ Can view Employee's details for ALL WFM locations ■ Can add Employee's availability ■ Can create Employee's leave ■ Can view and Edit Employee's wages ■ Can be set as a Leave and Availability approver for Assistant Managers and Employees ■ Can view Contract Hours (AU) ■ Can add leave types ■ Can create customized quick shift reports ■ Can Create and Manage Categories	Shift Reports Reports > Shifts ■ Print Ready ■ Hours ■ Hours And Times ■ Approved Hours, Times and Stats ■ Open Shifts ■ Variance (Tardy+) ■ Timesheet ■ Overtime Checks ■ Percent Approved ■ Weekday Split ■ Allowances ■ Employee Payroll Query ■ Day Worked Frequency ■ Zero Hours ■ DST Ambiguous Shifts ■ Punch Breaks Employee Reports Reports > Employee ■ All ■ Terminated ■ Wage Changes ■ Birthdays ■ Missing Details ■ Average Ages ■ Monthly Turnover ■ Leave/Time-Off Location Reports Reports > Location ■ Variance ■ Forecasting Analysis ■ Percent Hours Per Location Audit Logs

			Reports>Audit Logs
Finance co-ordinator	Payroll HR	- Can Manage Wage Agreements - Can Create and Configure Time Clock Devices - Can Process Payroll - Can lock Periods for Payroll - Can schedule and approve shifts - Can publish schedules - Can view Employee's details for ALL WFM locations - Can add Employee's availability - Can create Employee's leave - Can view and Edit Employee's wages - Can be set as a Leave and Availability approver for Assistant Managers and Employees - Can view Contract Hours (AU) - Can add leave types	Shift Reports Reports > Shifts - Print Ready - Hours - Hours And Times - Approved Hours, Times and Stats - Open Shifts - Variance (Tardy+) - Timesheet - Overtime Checks - Percent Approved - Weekday Split - Allowances - Employee Payroll Query - Day Worked Frequency - Zero Hours - DST Ambiguous Shifts - Punch Breaks Employee Reports Reports > Employee - All - Terminated - Wage Changes - Birthdays - Missing Details - Average Ages - Monthly Turnover - Leave/Time-Off Location Reports Reports > Location - Variance - Forecasting Analysis - Percent Hours Per Location

Manager and Similar Roles

Refer to the following table.

Before November 17, 2023	After November 17, 2023	Permissions	Reports
Manager (SMS)	Manager	Can schedule and approve shifts	Shift Reports Reports > Shifts

		- Can publish schedules - Can view Employee's details assigned to their 'Can work locations' - Can add Employee's availability - Can create Employee's leave - Can view Employee's wages - Can be set as a Leave and Availability approver for Assistant Managers and Employees	- Print Ready - Hours - Hours And Times - Variance (Tardy+) - Timesheet - Percent Approved - Allowances - DST Ambiguous Shifts - Punch Breaks Location Reports Reports > Location - Variance - Forecasting Analysis
—	Manager (Cannot Publish)	- Can schedule and approve shifts - Can view Employee's details assigned to their 'Can work locations' - Can add Employee availability - Can create Employee's leave - Can view Employee's wages	Same as the Manager (SMS, Before November 17, 2023) or Manager (After November 17, 2023) role
Area Manager (SMS)	Area Manager (All Locations)	- Can schedule and approve shifts - Can publish schedules - Can view Employee's details for ALL WFM locations - Can add Employee's availability - Can create Employee's leave - Can view and Edit Employee's wages - Can be set as a Leave and Availability approver for Assistant Managers and Employees - Can view Contract Hours (AU)	Same as the Manager (SMS, Before November 17, 2023) or Manager (After November 17, 2023) role
—	Area Manager (Assigned Locations)	- Can schedule and approve shifts - Can publish schedules - Can view Employee's details assigned to their 'Can work locations' - Can add Employee's availability - Can create Employee's leave - Can view and Edit Employee's wages	Same as the Manager (SMS, Before November 17, 2023) or Manager (After November 17, 2023) role

		- Can be set as a Leave and Availability approver for Assistant Managers and Employees - Can view Contract Hours (AU)	
—	Area Manager (Assigned Locations Cannot Edit Wages)	- Can schedule and approve shifts - Can publish schedules - Can view Employee's details assigned to their 'Can work locations' - Can View but can't edit wages - Can add Employee's availability - Can create Employee's leave - Can view Employee's wages - Can be set as a Leave and Availability approver for Assistant Managers and Employees - Can view Contract Hours (AU)	Same as the Manager (SMS, Before November 17, 2023) or Manager (After November 17, 2023) role

Before November 17, 2023	After November 17, 2023	Permissions	Reports
Staff	Employee	Can view Schedule, can request availability changes and leave requests	—

Managing Wages for WFM Employees

Setting and editing the wages for employees is a crucial part of workforce management. You set an employee's wages from their employee details page. Note that an employee can only have one active wage.

First, select an employee for whom you want to create or edit a wage. Go to Setup > Employees > List and click the employee. On the employee profile, click **Wages**.

The Wages tab should display at least one wage based on the employee's base rate set in their employee record in NetSuite.

An employee's base rate will sync automatically from the employee record in NetSuite. Editing or adding wages directly into WFM is typically only used if you have employees that are paid different rates dependent on the Location and/or Job that they are working.

Employment Details

Select an employment status from the dropdown list: **Full-time**, **Part-time**, **Casual**, and **Contract**. If **Casual** is selected, the next option will be automatically filled in with "Wages".

In the Wage type list, select **Salary** or **Wages**. The choice that you make here will affect how the employee's shift details will appear.

Cost Calculations/Rate

The cost calculation/rate section is the most important part of setting a wage as this setting controls how much an employee earns in an hour, week, and year.

First, you'll need to select the calculation type. There are six options:

- Agreement
- Salary
- Fixed hourly rate
- Base rate with conditions applied
- Base rate with location overrides
- Base rate with only job overrides

Agreements

Agreements are used if you have Wage Agreements set up within Workforce Management. Select Agreement then select the Classification from the drop-down list. This feature is currently only available through the help of support.

Fixed hourly rate

If you select **Hourly**, select the hourly rate of the employee.

Salary

If an employee has an annual salary, fill in the **Annual salary** field. The **Monthly salary** and **Weekly salary** fields are updated automatically.

Next, enter how many **Hours per week** they work. The **Salary hourly rate** is updated automatically.

Salary overtime/public holiday

If you pay your salaried employees overtime or higher public holiday rates, enter the rates here.

If employees are paid the same rate regardless of how many hours they work, then choosing a fixed hourly rate means that overtime and any other wage conditions won't apply to the employee.

Base rate with conditions applied

This selection will pay employees their base rate and apply any wage conditions that have been configured in your account. These conditions might include overtime, shift differentials, worked holiday premiums, and so on.

Base rate with location

Use this selection if an employee is paid different rates when working at different locations. Select the Location, the Job and enter the rate.

Click **Create New** to add another row.

Base rate with only job

This selection is to be used if employees are paid different rates for working different jobs, but the rate does **not** vary from location to location.

Click **Create New** to add another row and select the job and associated rate.

If an employee works a job that doesn't have a designated job rate, it will default to their Hourly Rate.

Classification

Classification is a feature that is currently only available through the help of support.

When you select **Classification**, you can select the award or enterprise agreement classification.

Hours of Work

Hours of work is how employee hours-per-week validation is managed and maintained.

All of these values are based on one schedule week.

Here are the hours of work settings:

- **Target hours** - By default, this is set to 38. These are the target number of hours this employee would usually work each week. Employees being scheduled at or exceeding target hours will notify the user scheduling when employees have reached their target hours. However, it still allows the scheduling of additional hours. This validation occurs within schedule mode.
- **Minimum hours** - By default, this is set to 0. If an employee has minimum hours set, the schedule won't be published until the minimum hours are reached for the employee. This validation will occur when trying to Publish or Print the week's schedule.
- **Maximum hours** - By default, this is set to 168 (since this is how many hours there are in a week). You can't schedule an employee on for more than the maximum hours. This validation will occur when trying to Publish or print the week's schedule.
- **Salary splits** - By default, this is checked. This only appears for employees on a salary. If the employee works across multiple locations, WFM will automatically assign the employee wages across all locations worked that week, evenly distributed. If this box is cleared, you can send percentages of the salary to different locations this employee is available to work at. You can also assign 100 percent of the salary to one location, no matter how many hours are worked at other locations.

Understanding WFM Salary Calculations

Workforce Management makes employee salary calculations to reflect the actual cost of a salary worker day-to-day. While salary costs are the same week to week, the value of their work can change depending on how much or little they work on each day and during the week. If salary costs are equal on each day, the value of work done on days where they work longer is less.

For example, if an employee works 12 hours on 3 days of a week and then 7 hours on the last 2 scheduled days of the week, then the value of their work on the 12-hour days is effectively less on the 7-hour days.

WFM calculates salaries by dividing the weekly salary into an hourly rate based on the number of hours scheduled or worked that week.

Here are some examples:

- An employee is paid \$1,000 per week and they work 45 hours in a week. Let's use the example that the salary is fixed each day ($\$1,000/5 \text{ days} = \$200/\text{day}$) so if they worked 12 hours on day 1, the hourly rate for that day is \$16.6667 ($\$200/12 \text{ hours}$.) If they then work 7 hours the next day, their hourly rate is \$28.57 ($\$200/7 \text{ hours}$.) This means that on one day their work is paid at \$16.67 per hour and the next day they're at \$28.
- Let's use the same example of an employee who is paid \$1,000 per week and works 45 hours in a week. The system calculates the weekly average hourly rate for the salary employee to \$22 per hour for the week ($\$1,000/45 \text{ hours}$.) So, when the employee is scheduled on for the 12-hour day, the system calculates the shift to be \$264 for that day ($\$22 \times 12 \text{ hours}$.) The next day is a 7-hour shift and this is calculated to be \$154 for the day ($\$22 \times 7 \text{ hours}$.) In this instance, the employee's hourly value is consistent during each shift while showing at a higher level the weight of the hours they work monetized to give a more accurate wage figure which is consistent with hours worked.

Overtime for Salaried Employees

Salaried employees with an overtime rate set will have any hours worked after their hours per week value calculated at overtime.

For example, an employee is paid \$1,000 per week and is paid overtime when they work more than 38 hours at a rate of \$39.47. If they work 40 hours, WFM will set their weekly cost as \$1,078.94 ($\$1,000 + 2(\$39.47)$).

Higher Rates on a Public Holiday

If you pay your salaried employees a higher rate of pay on a public holiday and have set up a public holiday rate on their wage details, WFM will add the cost of the public holiday to their weekly wage.

For example, Aaron is rostered to work 9 a.m. to 5 p.m. on Monday to Friday with a 30-minute break on each day. Aaron's weekly Salary is \$1,000 and he is paid \$39.47 when he works on a public holiday. If a holiday is set at 7.5 hours, then the shift is costed at 7.5 hours multiplied by \$39.47, giving a total cost of \$296.02.

JobKeeper

Important: The JobKeeper feature is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

Under the Australian JobKeeper Payment Scheme, businesses significantly impacted by the COVID-19 pandemic can access a subsidy from the Government to continue paying their staff.

This assistance will help businesses to keep people in their jobs and re-start when the crisis is over. If you need more information, you can review the following government resource: <https://www.ato.gov.au/general/JobKeeper-Payment/>

To help manage this, we've added the JobKeeper section to employee profiles.

Users with access to payroll functions can view and change this information.

To set employees for JobKeeper payment:

1. Go to Workforce Management.
2. (Add navigation path in WFM)
3. On the JobKeeper Payment for employers and employees page, check the **Claiming JobKeeper payment** box.
4. Click **Save**.

To view a report of employees who are set to claim JobKeeper:

1. Go to Workforce Management.
2. Go to Reports > Employee > All.
3. Click the **Show JobKeeper** box.
4. Click **Preview** or **Download**.

WFM generates a list of employees. The rightmost side of the report includes a job_keeper column. If the employee receives JobKeeper, the column indicates **True**. Otherwise, it shows **False**.

Jobs

On the jobs page, you can set the jobs that employees can perform. These may be skill-based or role-based.

The effective from date lets you forward-date a job that is if that person is undergoing training in a month's time, you can set the job to start in a month. The proficiency tells managers how proficient the employee is at that job. Examples of jobs include:

- Barista
- First Aid
- Duty Manager
- Retail Assistant
- Packaging
- Shipping

Jobs could also be the equivalent of projects if you're projects-based, or task-related if you want more granular time recording.

Adding a Job to an Employee

To add one or multiple jobs to an employee, go to the Jobs tab of the employee profile and click **New job**.

Select the jobs which will apply to this employee.

You can also select when this change will become effective, allowing you to be proactive by adding jobs that will take effect in the future.

When you're finished adding jobs, click **Save**.

Removing a Job from an Employee

To remove a job from an employee, go to the Jobs tab of the employee's profile and click **Edit**.

Click **Remove job**. When prompted, click **Confirm removal**.

Confirm the removal.

Adding New WFM Employees

Note: It's best practice to pull employees in from NetSuite and as such, the ability to add employees directly to WFM is disabled by default. If you believe you have a need to enter employees directly into Workforce Management, reach out to your Account Manager.

You add a new employee from the employee list page. From the Workforce Management tab, click Setup > Employees > List. Click **New**.

The first section asks for the personal details of the new employee. This includes the employee's first and last names, their preferred name (if there are more than one employee of the same name or they go by a name different to their legal name), their date of birth, and their gender.

All of the fields with the asterisk next to them must be filled in for this section.

The next section asks for basic contact details. Although this section can be skipped, it's highly recommended that all fields are filled in. After the contact details, it is essential that you fill in the country that the new employee lives in.

Now you'll need to choose how much access to Workforce Management you want to give to the new employee by choosing their group. You can choose to let the employee have login details by checking **Can login** box. If the new employee gave you an email for their contact details, you have the choice to let that be their login details, as well as a password of your choice.

If you give an employee access to WFM, you must give them a username and a group.

The final section requires you to fill in their employment status. Make sure you correctly state the starting date of when they were employed. After that, you'll need to select the primary location of the new employee, and any other secondary locations that they can work at.

Click **Save** to continue.

WFM Employee Availability

Availability is an essential communication piece in Workforce Management. When you add scheduled shifts, you may notice some employees appearing yellow red due to being unavailable.

How do we set up availability?

There are four different availability workflows:

- Employees **requesting** an availability change
- Manager **approving** an availability request
- Manager **denying** an availability request
- Manager **changing** employee availability

Concepts to understand

A **primary location availability approver** needs to be set up. This is individually set for each location. After you've set this up for your locations, you can view employee availability. To set the availability approver, go to Setup > Locations. Select the location. Click Approvals. On the Availability tab, move the approver to the chosen items column and click **Save**.

Employees can request a change to their regular availability (either change it ongoing or for a set number of weeks). Any change request made needs a 'reason' provided. That employee's primary location availability approver will then get a notification within WFM.

 **Note:** Please note: If there is more than one availability approver per location, when availability is approved by one approver, it removes the notification from any other approver's notifications.

The person approving availability can view these notifications, and then approve/deny each of the availability requests.

Manager changing availability

After you've set up yourself or the required managers as availability approvers, you can now add and change employee availability.

You can change this on employee profiles. Go to **Setup > Employees > List** and click **Edit / Approve Availability**.

You can choose to view only employees at the primary location you oversee, or all employees that work at that Location. You can then choose to group by **Day** to view coverage, or by **Person** to see employees alphabetically.

Availability is created by moving to a desired day in a future week and dragging out the green bars across the day for the times when the employee is available for work, or by clicking **Always Available** to set an employee with open availability.

When these settings are saved, schedules are updated.

 **Note:** As an availability approver, you don't need to enter in a reason for changing the availability. This is only required for employees.

Employee availability

This is what employees see when they're logged in to WFM and open their availability page:

Viewing availability for Harley Streten

Show week containing  30/05/2018  **1**

What do the symbols mean? **2**

-  Approved availability
-  ... repeats for 3 weeks
-  ... repeats indefinitely
-  Approved Leave period
-  Pending availability
-  ... repeats every two weeks, for 7 repeats (14 weeks)
-  Non-editable day (schedule published, or past cutoff date)

Day	Date	Availability	Notes
Monday	May 28, 2018	09:45 - 24:00	3 Always Available
Tuesday	May 29, 2018	10:30 - 23:45	cutoff date passed
Wednesday	May 30, 2018	02:15 - 24:00	5 cutoff date passed
Thursday	May 31, 2018		cutoff date passed
Friday	June 1, 2018	10:00 - 22:15	cutoff date passed
Saturday	June 2, 2018	07:00 - 24:00	6 Clear
Sunday	June 3, 2018	07:00 - 24:00	Clear

- Date-picker lets employees move forward. Availability can be future-dated.
- Legend shows what different colors and icons appear for **Always available**, so that employees can quickly make themselves always available.
- If a schedule is published or the cutoff date has passed, a message will appear next to those days since they can't edit their availability.
- Purple bars mean the availability can't be changed due to above reasons.
- Currently set availability. Times appear within the green bars. The green bars mean the employee is available at those times, on those days/dates.

Employees can make changes to their availability, and must enter a reason to submit a change request.

 **Note:** Any pending employee availability won't appear on schedules until approved.

Managers can deny availability from the notification that appears. Select **View** and click the Deny button that appears next to the employee availability.

Importing Employees to WFM

Employees should be imported from NetSuite. There may be a requirement to import employees that aren't available in NetSuite, such as contractors. You can conduct a bulk import of your employees into WFM using the Employee Importer. You can create or update multiple employees at a time.

This feature is available for Finance and General Manager user groups.

To import employees, go to Setup > Employees > List and then click **Import**.

Before importing, prepare a CSV file with the list of employees. Drag that file into the box or click the box and select the file.

Note: WFM will automatically detect if there are headings in the file and check the **First row is headers** box for you.

Here is an example file that you can set up columns for:

first_name	last_name	email	mobile	date of birth	state	country	list of locations	start date	classification name	wage type	employment status	list of jobs
Test	Staff	test@gmail.com	0455522312	04/04/2000	QLD	AU	location name	2021-01-01	Level 2	Wages	FT	FOH

Note: Mobile and date of birth fields are optional. If you're adding employee addresses, ensure that the country code and state are included as separate columns.

The sample image above is a common example of data you can import when setting up employees for the first time. Please make sure that the locations, classifications, and jobs match exactly as they are set up in WFM. This includes capitalizations and making sure there are no extra spaces.

If you want to import employee wages, you'll need to make sure you have wages set up in your WFM account first.

After you've uploaded your CSV file, review the field mapping to WFM fields.

WFM matches fields based on your column headers. However, some might not be automatically selected. If this is the case, **Do not use** appears in the dropdown. Click that and then select the correct WFM field.

If a field isn't available, it's already selected for another column. Please ensure that you've selected the correct fields.

Underneath the header mapping, the first few rows are displayed as an example. Below that, a bigger example of one employee appears with a summary so that you can ensure that the mapping is correct.

Note: Ensure that "Date format for CSV" matches the date format in your CSV, otherwise dates of birth and start dates will import incorrectly.

After you've confirmed that the import mapping is correct, click **Begin** and your employees' details will either update automatically or be entered into WFM.

Other notes

Round decimal places is a helpful checkbox if you're importing/updating leave balances. This means we'll round any extra trailing decimals.

Managing Workforce Management Shifts

Scheduling in Workforce Management

Workforce Management has three different views for building employee schedules. The scheduling views can be found under the **Shifts** tab.

Daily

The Daily view lets you schedule for one location, for one day at a time. By seeing your sales fluctuations throughout the day, you can efficiently build and optimize schedules that meet demand.

As shifts are created, they're displayed on the page along with important KPI information. With several viewing options, the Daily view lets you create a schedule that shows and helps you understand crucial information for management.

The Daily view can be taken a step further with the addition of labor deployment. If you have a labor model in the system, Workforce Management shows your managers exactly where they need to add or adjust shifts throughout the day to meet your targets.

Weekly

The Weekly view lets you view and build your schedule for one location in a weekly format.

You can use the Weekly view to alter shifts from a previous week to account for any last minute changes that weren't recorded.

On the weekly view you're required to confirm or deny any shifts; if you have SuitePeople Time Clock incorporated with your company, you're able to receive precise information about the staffs clock in/out times.

Scheduling in Workforce Management - Daily

You can go to this page by clicking **Shifts > Daily**.

Getting around the page

At the top of the page, you can see a drop-down box labeled "schedule day". This is your typical schedule day, starting and finishing at your open times.

There are more viewing options when you click this box. These are:

- Schedule day
- Day
- Schedule week
- Week
- Custom

You can go throughout the days by using the date picker at the top of the page or the arrows at the bottom left and right-hand side

You can move between schedules by selecting the location name from the next drop-down box.

Stats panel on the right - your projections and targets will appear here, along with your staff wages, and your relevant KPIs.

Statistics/KPI's - Projected Sales Data - Daily

You can enter in custom forecasted sales data to schedule shifts or if you have a POS integrations setup, you can use historical sales and units information to automatically generate an accurate forecast.

To view or adjust your forecast for the week, click **Edit Forecast** from the top menu bar.

From here, you have three options for generating a forecast:

- Use POS defaults

If you have a POS integration setup, these will be the default settings that are applied to the stats. Update your default settings by going to Setup > Locations > select location > Scheduling > Default stats

- Use custom POS settings

If you have a POS integration setup, you can use the date selector to choose which week of data you want to use to build your forecast. You can also choose to apply a rolling average and/or an index.

- Use an entered projection

If you don't have a POS integration setup, you can manually enter the forecasted sales and units by day or by the week. If you enter a weekly total, you can then use percentages to distribute the sales and units appropriately throughout the week.

When you've chosen your forecast method, click **Generate forecast for week**.

When it generates, you'll see the forecasted sales and/or units for the future week you've selected. You can drill into the individual days and fine tune the forecast by clicking the gray edit pencil next to the day you want to adjust.

If you want to adjust a certain time of the day, you can click **expand** to expand out the day and fine tune it further.

When you're happy with your forecast, scroll back to the top and click **Create schedule** to be taken back to the daily view for this location to build your schedule.

On the right-hand side of the screen, you'll see a statistics panel. The top of this panel displays your total projected labor cost percentage for the week. The next set of data contains your wage data. You'll have the total costs for the day and the week. If any on-costs are set up, you'll see them underneath the base wage cost.

WEEK 18 LABOUR PERCENT 0.58%			
pm			
Wages (\$)			
	Mon	Week	
Base	93.47	172.07	
On Costs	10.28	18.93	
Laundry	1.25	2.50	
Total	105.00	193.50	
Labour percent (%) Sales (\$)			
Target	20.00	Week	33474.89
Week	0.58	Mon	4041.38
Mon	2.60		
Labour efficiency (\$/hr) Hours rostered (hrs)			
		Target	300.00
Week	1716.66	Week	19.50
Mon	621.75	Mon	6.50
Productivity Units sold			
Target	11.00	Week	4513.00
Week	231.44	Mon	566.00
Mon	87.08		
Required sales (\$) Average hourly cost (\$/hr)			
Week	967.49	Week	9.92
Mon	525.01	Mon	16.15

The statistics in the KPI panel represent:

- **Wages:** The total cost of wages. Base shows the raw cost of wages, while any modifiers set up for your location will be individually listed and included in the total wage figure.
- **Sales:** Forecasted sales based on actual sales figures.
- **Units:** Forecasted units based on actual units figures. Units can represent different figures depending on your POS, but often represent the number of transactions or individual items sold.
- **Hours Schedule:** The total number of hours scheduled.
- **Labor percent:** The percentage of how much of your projected sales are going toward the projected wages, ie: labor as a percent of sales.
- **Labor efficiency:** The sales per labor hour.
- **Productivity:** The units per labor hour.
- **Required sales:** How much you'll need to make in sales to meet your labor percent target, based on your wage cost.
- **Average hourly cost:** The total wages divided by the number of hours.

Shift Creation - Daily

Creating shifts is done by using the gray bar at the bottom of the page.

This bar is the perfect size for your thumb; you can schedule on touchscreen devices. It also indicates the current day which you're creating shifts for.

Rather than manually entering start and finish times, you click and draw out the times from this timeline.

1. Hover your mouse over a shift start time and click down.
2. Draw your mouse to the right side of the screen. A green bar will appear, starting from the time you selected.
3. Drag your mouse to a shift finishing time and let it go.

4. The green selection will be a shift period.
5. If you have breaks configured on the location settings, a gray area will appear in the middle of the shift where the scheduled break has been auto generated. You can click and drag this break during shift creation to stagger break times.

Employee Selection

After you've created the length of a shift, a list of all the employees who can work at that location will appear to the right.

At the top of this list will be a tab which has all the jobs associated with the location.

To narrow down the range of employees, simply select the job that you require for the shift. Employees will be sorted in order of cost effectiveness, with the most cost effective employees at the top.

Any employees unable to work at that time due to availability will be colored yellow at the bottom. Employees who can't work due to being scheduled on at that time, either at this location or another, will be in red at the bottom. This will prevent issues with double scheduling.

Shift Editing

You can change the start and finish times by hovering over one side of the shift period - your cursor will turn into a double-sided arrow and allow you to drag the time. If you need to edit a break time or the job, you can click on the scheduled shift and then click the edit pencil.

If you need to reassign a shift to a different employee, click on the scheduled shift and then click on the blue arrow icon. From here, you'll see the other employees who are able to work that job at that location. Select the employee and click **Save** to reassign the shift.

If you need to remove a scheduled shift from the schedule, click on the shift and click the red circle icon. From here, you can choose to move the shift to someone else or create an open shift. Click **Remove** if you'd like to proceed with simply removing the shift altogether.

Past Schedules

Schedules from the past cannot be edited.

If you try to edit or create a shift in a past schedule, your mouse will show a cancel sign on the shift creation bar, which means that you won't be able to do anything.

When you go to change a past shift through the shift details bubble that pops open after selecting a shift, there will be no possible way to edit any of the details shown.

Daily Schedule Options

Schedule options is a side tab that opens after you select the **Options** button. From there you have a variety of useful tools to aid you with viewing the daily schedule.

You can configure the following options:

- Statistics Options
 - Statistics visible
- Shift Display Options
 - Shift labels
 - Shift order
 - Shift groups
 - Shift color
- Name Display Options
 - Name
 - Name format

Statistic Options

This section gives you a drop-down list of all of the information that you may want to view.

Click on the individual statistics to toggle them on or off.

Shift Display

Shift Labels is an on/off button which toggles whether any information is displayed on the shifts.

Next you can choose how the employees are listed on the schedule; whether it be by time (for example, 7am-7pm), or the alphabetical order of their first or last name.

You can then select how the employees are grouped. The options given are by "Job", "Wage", "Category" or "Group".

The final shift option is shift color. You can color by availability to see if any employees are no longer available to work their assigned shifts. Using this information, you can then adjust the schedule to make sure that everyone is available by reassigning shifts.

The second option is to show the color of the jobs, this is useful for seeing if somewhere in the schedule there's too many staff members with the same job scheduled on.

Name Display

These two options focus on how the names of the employees are displayed. The first option is to show the employee's first name, or preferred name. You should use preferred name to reduce confusion in companies with a large number of staff, or if your employees use a different name to their legal name.

The second option focuses on the ordering of the employees name, whether it be "First name (Preferred), Last name" or "Last name, First name (Preferred)".

Printing the weekly schedule

Workforce Management has a wide variety of different printable shift reports. The different types of reports that can be printed include:

- Daily by day
- Daily
- Daily Master
- Staff Report
- Master Report
- Multi Unit Staff Report

You can print with the shifts grouped by job, wage, category or even WFM access group.

It's also possible to remove and include extra KPIs on an hour-by-hour basis.

You can click on the options button to make the changes.

To obtain a report for printing, go to the **Print** button next to the options.

Custom Reports

A custom report will be available to print after it has been created from **Setup > Shift Reports**. Custom Reports are a way to customize schedule reports. This could include wages or KPI information depending on who it's available for.

Staff Report

The staff report is the typical schedule that employees see. This is something that can be printed out and hung up at work.

It contains shifts, any job roles, and total hours worked.

On the last page of this, any shift notes will be printed.

Master Report

The Master Report is like the staff report, but for management only.

It contains wage and KPI information of previous weeks.

Daily Report

The Daily Report lets you view the week's schedule. It creates a singular report that shows the shifts for one location in a day-by-day format.

This report is useful for managers because of its simple layout.

Daily Master Report

The Daily Master report gives an hour by hour, day by day analysis of the weekly master report.

This report is useful as it gives more in-depth information about important features such as the employee wages and KPI information.

Daily By Day Report

A Daily By Day report is very similar to a daily report, the main difference between the two is that the Daily By Day report print a day per page. This is useful to managers as it leaves extra room for them to add small notes after it has been printed out.

Multi-Unit Staff Report

The Multi Unit Staff report creates a weekly shift report of two or more locations. This report is useful for any management staff overlooking multiple locations.

This type of report is also useful for employees who work at multiple locations.

What do shift colors mean?

If you're viewing shifts based on availability (Options > Shift color > Availability) you'll see 4 different kinds of shift colors on screen (if your schedules are entered).

Click on any shift with a color other than green, and a message with the reason will appear.

The colors are

- Green
- Red
- Orange
- Blue

Green

Employee is available to work the whole shift. Conditions of this:

- Availability is set to 'available' and available for the duration of the shift

Red

Employee may not be able to work part-of or all-of the shift. Possibilities for shifts to appear red are:

- Unavailable for any part of the shift
- On leave at that time
- Already working at that time at that location
- Already working at that time at another location

Orange

There may be a shift conflict for you to confirm:

- Already working on that day, shift doesn't overlap - at that location
- Already working on that day, shift doesn't overlap - at another location

Blue

Target hours for the week have been reached.

Weekly

Updating hours worked

Both the Weekly view and Multi-Location view serve two purposes. The first is for scheduling and the second is for approving time. To get to the Weekly view, go to **Shifts > Weekly**.

The Weekly view shows the schedule week for one Location.

In the navigation bar at the top, you'll see:

- Current Week - Date picker.
- Current location
- Schedule actions - Copy (hover for additional options).
- View options
- Print reports - Create / Edit Forecast.
- Schedule to Approval mode toggle
- Percentage of actioned shifts for the current week

ZUUS Config Staff Shifts Reports Payroll ZuusOrg 06-Mar-2018 at Somerton Park Actions Copy Options Print Create forecast Switch 25% % of shifts actioned

									7.58 hrs \$166.83

Statistics

The KPI panel in the Weekly view is formatted in columns at the top of the Weekly view. You can adjust the KPIs you're viewing by clicking on the **Options** button.

You'll see actual (actioned shifts) data such as hours worked per day, wages, as well as your actual sales & transaction data (if you have your Point of Sale integrated) from that day. If not, you can manually add your sales data for each day.

Updating shifts worked

You can open this page at any time to update shifts in the past. Best practice is to approve time daily.

The days of the week are across the top with the employees on the left and their shifts in the middle.

Each employee will have three rows next to them. Starting from the top, you'll see:

- Scheduled shifts
- Timesheet data
- Actual (approved or actioned shifts)

Actioning shifts worked

If you want to pay exactly to the clock on & off times, approve the timesheet times with the green thumbs up icon. If you need to make an edit, you can edit the timesheet and amend start & finish times or the job using the pencil icon.

If you want to see timesheets in more detail, all you need to do is click on the timesheet box. This will expand and provide more information about the timesheet.

Shift flags

An orange warning triangle will appear on timesheet shifts that:

- Needs visual verification reviewed or has notes.

A red clock icon will appear on scheduled or approved shifts that:

- Have overtime calculated on the shift

Note: If you click on the timesheet it'll pop up to provide further info about the timesheet and the symbol that appears. For example, the overtime condition which is calculating will appear letting you know what OT condition is being triggered, while clicking on a timesheet with notes will show you what the note is.

Creating an actual shift

If an employee who wasn't scheduled on a particular day ends up working, you'll need to create an actual shift for them.

1. Head to the Weekly View and find the employees name on the left-hand side.
2. Select the day on which the employee worked and move your mouse over the "actual" row. By clicking in this area, you'll be able to create an actual shift.
3. Clicking on this will pop up a shift creation dialogue box.
4. When this is filled out and saved, you'll see the actual shift appear in place.

Weekly view options

When you select the **Options** button from the top of the page, you'll be provided with a side menu that will slide out from the right side of the screen. This side menu will include several choices that will allow you to customize the weekly view to your preference.

Forecast Stats - Choose between always seeing forecasted stats (alongside your actual stats) or when viewing the schedule.

Statistics Visible - Select which statistics and KPI data you'd like to view on-screen (to minimize clutter). For example, you might only want to see your sales data, hours, and labor %.

Table options

- **Show all staff** - Choose whether all employees are displayed on-screen rather than only those with shifts
- **Show exceptions** - Gray out any shifts that have already been actioned
- **List order** - Order employees by First Name or Last Name
- **Shift groups** - Group shifts by: (eg waiter, cook, etc)
 - Wage calculation type (salaried, hourly, or classification staff)
 - Employment status (FT, PT, or Casual)
 - Category (see staff levels)
 - Group (managers, employees, area managers, etc)
 - Name (first or preferred name)
 - Name format (how names will be displayed on this page)

Name options

- **Name** - Display first or preferred names for employees
- **Format** - Display employee names as First Last or Last, First

Shift options

- **Color** - Switch between coloring shifts by job color or availability (only available in schedule mode)
- **Style** - Choose to show colors on shifts with Strips or colored background
- **Icons** - Show extra shift icons such as Geolocation Confirmation and Tips

To help with viewing important shift information like the start and finish of a shift, the default job color has been moved to the left as a stripe. This enables a greater contrast between the shift information and the background, making it easier to view in a wider number of settings.

You can still set the background of the shift to be the job color (with Shift Options as above), however, it'll be toned down - this is to increase the amount of contrast between the shift information and the background, making the important information like shift start and finish times easier to read.

Change jobs on an actual shift

1. If you already have an approved shift you'd like to change the job, find the shift and then select the blue pencil icon.
2. A message will appear. There will be a drop-down box next to **Job**
3. Within this drop-down box you'll see a list of jobs which this employee is eligible to work, and which are available at the location this shift is scheduled at.

 **Note:** If you make a change to the job you might be required to add an approval note.

 **Note:** If no jobs appear, or the correct jobs don't appear, either the employee isn't eligible to work that job, or the job isn't available at that location.

Add sick leave to an unworked shift (if using Leave in WFM)

If enabled on your account and an employee calls in sick for a shift, or leaves sick part way through a shift, you can record this within Workforce Management.

1. On the Weekly screen, find the employees shift which you'd like to replace with sick leave.
2. Click the red **thumbs down** icon.
3. Check the **Create leave for x employee** box.
4. Select the 'Sick Leave' or other leave you'd like to replace the shift.

This leave will appear as a new line above the scheduled shift. The scheduled shift will gray out indicating it has been actioned.

If you need to remove the leave you created, you can do this under their profile.

If you need to re-instate the shift, click the icon on the grayed-out shift.

Options button

Within the Weekly Scheduling view there are several options that can be set to change the way you view the schedule.

To access the scheduling view options, click on the Options button located in the top toolbar.

After you've clicked Options, the schedule screen will shift to the left and a menu bar will appear on the right hand side.

Options

When the Options menu has appeared, you'll have a variety of ways to see and sort your data as it pertains to the weekly schedule. Below is a list of the menu items and what they do. It's also important to note that when the options are set, they'll stay in place for that user until changed, so there is no need to remember and reconfigure after you logout of the system.

Statistics Options

- **Forecast Stats:** This can be toggled between 'Schedule' and 'Always'. Schedule will only show you the actual statistics for the day's that appear in your weekly schedule. Always will show you the forecasted stats along with the actuals stats for each day within the week.
- **Statistics Visible:** This option lets you toggle various statistic on and off within your weekly view. As some statistics may be monitored more closely than others, this is a great way to un-clutter your view.

Table Options

- **Show All Staff:** This option lets you view all employees for the location or only those employees that have been scheduled. Show all staff set to **No** will only show those employees that have been scheduled. Show all staff set to **Yes** will show employees that are scheduled and aren't scheduled.
- **Show Exceptions:** This option will gray out any actioned shifts so your attention is drawn to those needing actioning. You can also click the percentage wheel at the top right of the weekly view to toggle between viewing exceptions.
- **Shift Groups:** This is a drop down list that will group employees in the schedule view based on the commonality of the option selected.
- **List Order:** This option lets you sort the employees within the schedule by first or last name.

Name Options

- **Name:** This option lets you view employees by their first name or preferred name within the schedule view.
- **Format:** This option lets you view employees in the schedule view by either First, Last name or by Last, First name.

Shift Options

- **Color:** When viewing the weekly schedule view, this option lets you view employees by the color assigned to a job or the employees availability for shifts.
To see the availability colors, you'll need to change the schedule to schedule view by clicking on the Switch button in the upper toolbar so that it appears like pictured below.
- **Style:** This option will toggle how the colors are displayed on shifts, either by a color stripe along the left hand side of the scheduled shift, or will fill in the entire shift to the applicable color.
- **Icons:** This option will either hide or show time punch notifications from the employees recorded time punches. ie; how the staff member punched in (SuitePeople Time Clock and/or by the phone app) or any forced punch notifications.

Visual verification

Your company will need to have the "Enable Visual Verification" package added to their Account.

In the Weekly View, you can access Visual Verification by clicking on the Actions button and going to the bottom of the list.

In the Multi-Location View, you can access Visual Verification by clicking the Verification button on the top bar.

When you click the Visual Verification button, a dialogue box will appear. By default, you'll see the list of all of the people with unverified punch photos. Visual Verification shows a photo per punch event and all must be verified.

When completing Visual Verification, you're looking for the exceptions (ie: the people that don't match their photo or have a bad uniform.)

On each photo, there are three action icons:

1. **Smiley Face:** confirm the employee's name punching in matches the photo. You'll then be able to approve or edit/approve the timesheet as usual.

 **Note:** You don't have to click this for each photo. See below for how to bulk verify those that match their photos.

2. **Not Them:** click this if the employee's name punching in doesn't match the photo. This won't let you approve the timesheet, so you don't pay an employee for work they didn't do.
3. **Bad Uniform:** the employee's name matches the punch, however, they have a bad uniform/ don't meet uniform requirements. This will add a note to the timesheet and let you approve or edit/approve the timesheet.

When you've gone through and clicked the corresponding buttons on the exceptions (those that don't match their photo or have a bad uniform), you can then click the green Verify Visible button at the bottom of the box. Any photos with no actions on them will be marked with the Smiley Face and verified.

When the verification is complete, you can change the filtering in the dialogue box from "Unverified" to "All" to review the photos that have been verified. If you need to make a change, you can do it from this view. In this filtering, you can select "In Progress" to only view those employees that have Shifts that are still in progress.

To ensure the accuracy of punches and to get the most out of insights in Workforce Management, you can complete the Visual Verification and approvals daily.

Tips and tricks

- If Visual Verification is enabled, you won't see the "thumbs up" on the Timesheet to approve until Visual Verification is complete. If you try and click the pencil icon to edit and approve, you'll receive a message that there are unchecked punch photos, and you won't be able to approve.
- To open the Visual Verification dialogue box to a specific employee, you can click on that employee's Timesheet and under the Visual Verification section, click **Edit**.
- If an employee has more than four unverified photos, you'll see a Next icon at the bottom of that employee's photos to tab to the next page of their punch photos.
- You can search for a specific employee's punch photos in the search box at the top of the dialogue box.
- If an employee doesn't have a profile picture set in Workforce Management, you can click on one of their Punch Photos in the Visual Verification dialogue box and set that as their profile picture. This will let you see their photo in the Verification view for easier identification and comparison. You'll then see their photo in the Employee List and the scheduling views.

Using AutoMatch + Visual Verification

If Visual Verification is enabled on your account, you'll need to ensure that:

You enable the “only punches with verified visual verification” option in location settings. Otherwise, if this isn't done, automatch will still work regardless of if visual verification has been completed or not.

When this setting is enabled on the location configuration, all verification will need to be complete prior to clicking Automatch. If you click Automatch and Verification isn't complete, the Visual Verification will pop up, prompting you to finish Verification. When you complete the Visual Verification steps (Mark any exceptions then Verify Visible) you'll then be able to click the Automatch button to move forward with approvals.

Approving Shifts with Automatch

With automatch, Workforce Management (WFM) can automatically approve times when they meet a set of criteria.

For assistance on configuring automatch settings, see the following help topics:

- [Automatch and Rounding Settings in WFM](#)
- [Updating WFM Automatch Settings](#)

To approve shifts with automatch:

1. Go to Workforce Management.
2. Open the Shifts page.
 - Go to Shifts > Weekly.
 - Go to Shifts > Multi-Location.
3. Click **Actions**. Click **Automatch**.

WFM automatically approves shifts that match the automatch and rounding settings, then grays them out. You can continue to approve the shifts that require manual approval.

Multi-location

The Multi-location view is a variation of the Weekly view that can be used to approve and manage shifts for multiple locations a time.

This screen is a great tool for anyone managing the approval of shifts across more than one site.

Selecting locations

When you first visit this page, you'll be prompted to select which locations and week you want to look at. Move any locations you'd like to view over to the **Chosen Items** column on the right-hand side and select which week you'd like to view using the calendar selector.

View staff hours across multiple locations

In some situations, you may need to view total hours worked throughout a week, including hours across multiple locations.

For example, scheduling employees and making sure they're working less than X hours per week, even across different locations.

You can view those shifts on the **Multi Location** screen.

1. When you've selected a particular week & location to view, click on **Options**.
2. In the Options dialog select **All shifts for staff** and make sure it says **Yes**

If there is a manager that can only view one location, but has an employee that works across multiple, any extra hours or shifts which an employee works will appear here.

Below screenshot of an employee when this is turned off (default):

	Monday, May 14th	Tuesday, May 15th	Wednesday, May 16th	Thursday, May 17th	Friday, May 18th	Saturday, May 19th	Sunday, May 20th	
Abbie Gibson			Stockroom 12pm-4pm FOH 4hrs \$167.79	Stockroom 10am-2pm FOH 4hrs \$167.79	Stockroom 6pm-9pm FOH 3hrs \$121.16	Stockroom 12pm-4pm FOH 4hrs \$167.79	Stockroom 12:30pm-4pm FOH 3.5hrs \$112.16	18.50 hrs \$440.28

Below screenshot of an employee when this is turned on:

	Monday, May 14th	Tuesday, May 15th	Wednesday, May 16th	Thursday, May 17th	Friday, May 18th	Saturday, May 19th	Sunday, May 20th	
Abbie Gibson	Control Shift 9am-5pm 8hrs \$167.79		Stockroom 12pm-4pm FOH 4hrs \$167.79	Stockroom 10am-2pm FOH 4hrs \$167.79	Stockroom 6pm-9pm FOH 3hrs \$121.16	Stockroom 12pm-4pm FOH 4hrs \$167.79	Stockroom 12:30pm-4pm FOH 3.5hrs \$112.16	26.50 hrs \$608.07

View overtime

Any shifts which incur overtime will appear with a red clock symbol next to their job (or wage cost). Total overtime for the week will also appear under their total number of hours for the week in the right column:

9am-5am Manager 19.5hrs \$-	10am-5pm Manager 7hrs \$-	9am-6pm Manager 8hrs \$-	10am-5pm Manager 7hrs \$-	10am-5pm Manager 7hrs \$-	10am-5pm Manager 7hrs \$-	10am-5pm Manager 7hrs \$-	56.50 hrs OT: 12.50 hrs
--------------------------------------	------------------------------------	-----------------------------------	------------------------------------	------------------------------------	------------------------------------	------------------------------------	----------------------------

This icon appears when overtime has been applied to some part of those shifts. Clicking on the shift will show a breakdown of hours triggered so you can identify which overtime is being triggered.

The overtime icon is triggered by any salary overtime, if setup, or any wage conditions set to "overtime".

A summary of hours worked appears when a shift is clicked on - click on any part of a shift box to appear (note: will not appear if you click on the shift icons).

Shift segments

Shift segments occur when employees 'change job' on iPad & Android SuitePeople Time Clock. These let you track employee time worked on different jobs as they happen - without needing to make changes after the fact. When an employee is clocked in and then enter in their pin code, they have the option to change jobs.

When a staff member is clocked in and then enter in their pin code, they have the option to change jobs. They can click **Change Job**.

Each time an employee changes job (or clocks out for a break) the time which they clocked out or changed job appears within their timesheet during approvals.

If you're viewing shifts 'colored by job' you may see multiple different colors on a timesheet shift. This means they've changed jobs part-way through the shift:

This shift has 3 different colored stripes to the left - meaning there are 3 different segments to this shift.

Clicking on any part of the shift (except for the thumbs up to approve, edit, or thumbs down) will expand and show you details of each segment. Below is a shift with 6 separate segments:

The total time worked for the shift appears in dark writing at the bottom (3.57 hours).

Above this, each job worked appears on the left, next to the exact times they worked before switching job.

Note: Workforce Management will show a maximum of 5 colors on a shift, even if more than 5 different jobs are worked.

Note: The Windows version of SuitePeople Time Clock doesn't allow staff to change jobs during their shift. They'll need to fully punch out and back in to change jobs.

Editing segments

To edit each segment you can click the pencil icon.

Note: You can only edit the finish time of the last segment.

To edit a segment part-way through a shift you'll need to click 'remove' to remove the final segment. You can then make a change and then 'add' the final segment. Tick the 'break' button if a break occurred at this time.

Forecasting

Why should I do this?

Having an accurate weekly sales forecast will let you:

- Meet your expected sales demands
- Optimize sales growth both during and off-peak
- Display KPIs to deploy labor that meets the business needs

How does Workforce Management help with this?

Workforce Management has user workflows to help you from start to finish with planning your labor deployment, starting with building your sales forecast.

Workforce Management has the ability to:

- Forecast sales taking a rolling average for multiple weeks
- View forecast by day part and hours
- Edit forecast by day, day-part and hours

Set Up

Top level users can set "default stats" for their entire organization or a group of locations by going through the **Setup > Brands** menu.

Defaults can be created for the following additional items within a brand:

- Schedule start day
- Shift intervals
- Break lengths
- Break required after X Hours

In this screen, you can set defaults for Sales forecasting that apply to all locations within this brand.

Two you'll have when selecting a period for the default stats are:

- 52 weeks ago (last year's actual sales)
- 2-4 weeks ago (current sales pattern)

Use rolling average, on or off?

- This option when turned on uses multiple weeks to average the hourly POS KPIs. This removes abnormalities in a single day's POS data.
- Rolling average calculates backwards in time, for example, a rolling average of 4 weeks starting 2 weeks ago will take the average of your stats from 2, 3, 4 and 5 weeks ago.

Apply an index of?

Applying an index should be used to apply your current sales comp when using POS data from last year.

- To apply a sales comp of 15%, you would enter an index of 15
- To apply a sales comp of -10% you would enter an index of -10

Additionally, you can set individual default stats for their locations by going through **Setup > Locations**.

Generating the forecast

Generating an accurate sales forecast is the first step in creating a weekly schedule that meets the expected volume demand, grows sales, and provides business outcomes. You have three options to create a sales forecast.

POS defaults

Selecting this option uses the locations default settings. Setting up default settings is explained under Set Up. If you don't have access to set this up, your manager or Franchisee will.

This option uses historical POS hourly sales data and has the flexibility to let you to use a rolling average and apply an index (Multiplier or Sales Comp) to the selected data.

Use custom POS settings

This option is the equivalent of use POS defaults; however it lets you override the locations defaults and use POS data relevant for an individual week.

Understanding the sales forecast screen

When your sales have been generated, the "view forecast" screen displays total week by day, representing the current forecasted Sales and transactions by day of the week. Sales are the blue bar using the left axis. Units are the red bars using the right axis.

Above also shows the daily break down of Sales and transactions used, index applied, and type of POS data used. Pencils available at the end of each row can edit an individual day's forecast, and the expand section will direct you to another graph which shows the day part and hourly sales for that day.

Day part and hourly forecasting

By clicking "expand" on the right of any individual day, you can now see the day part and hourly breakdown of the sales forecast. This is represented by both a graph and summary of the actual

projection; the graph details both the Sales (Blue line) and Units (Red Line). The graph also uses vertical exponential data bars to highlight the variance in the data set used for the forecasted hour.

Large bars represent a large fluctuating data set; low bars represent a consistent data set.

In the below example the lunch 12-1pm period is showing a large vertical bar, this means that the rolling average data used for that hour wasn't consistent and might have a week included that's causing an abnormality in the data, this could be because a day was unusually busy, or unusually quiet.

Hours with a large vertical bar should be checked for accuracy in the forecast. Within this screen, you can edit an individual day part or particular time of day. This targeted approach to sales forecasting lets you accurately deploy labor at the appropriate times.

Forecasting with sales subcategories

The forecasting screen is split into 3 widgets (2 on top, one underneath):

- View
- Basic
- Graph/Advanced

View

Changing the options here will change the week and location you are forecasting for. Move between locations you manage as well as forward through the future. You can also create forecasts ahead of time.

Basic

Basic forecasting information to help you get started.

Select a week in the past that you want to forecast sales to. If you have setup a default fetch period, it'll automatically show fetch period (and pre-load it if all the data is available).

This is a week in the past which you think may have similar sales due to factors such as events, weather, or promotions. After it has been selected, you can add a rolling average or change the index percentage (ie. if you expect the forecast for the week to be a 2% increase from the period you selected, type '2')

Graph/advanced

Comparative graphs show you the sales & units that you have forecasted for each day of the week ahead. This helps with visualizing which days of the week will have the busiest demand.

The "Summary" lets you edit the sales or units for each day that week by clicking the pencil icon next to the day & stats type. You'll get a popup box similar to the "Basic" widget - this lets you change that day/ stats type you've selected - this won't affect the rest of your forecast. For example, you may want to edit only a public holiday as you're expecting increased demand.

Selecting "Sales" or "Units" at the top of the widget lets you edit the values for different sale subtypes - for example if you're expecting increased takeaway & drive-thru orders.

Publishing schedules

You can play around with and change as much of the schedule and shifts as you need (so long as they're on a future day).

During this time, no employees can see their shifts. For employees to receive their schedule and view the schedule in the phone app/ online, you'll need to publish the schedule.

There are up to 4 ways for employees to receive their shifts when you've published the schedule:

1. Push notification to the SuitePeople Workforce Management (Adi Insights) phone app
2. Email with their own shifts
3. SMS with their own shifts (only if SMS is enabled for the company)
4. Printing a PDF of staff shifts

You can publish on any of the scheduling screens (this includes Daily, Weekly & Multi-location screens):

First, make sure you're on the week you want to publish (or if you're on the Daily, on a day in the week you want to publish - this will publish the whole week you're currently in). Scroll down if you're using the Multi-location screen to publish as the instructions differ.

Publishing the daily and weekly schedules

1. Click **Actions**, then **Publish Schedules**.
2. The publish interface will pop-up and you can pick if you want employees to receive the schedule via SMS and/or email.
3. Employees will always receive a push notification to the SuitePeople Workforce Management (Adi Insights) phone app - so if you're only using the phone app, you can press the blue **Publish** button to confirm. Employees will receive a push notification to their mobile phone & can see all published shifts at locations they can work.

If you aren't using the phone app, or you'd also like to send emails to Employees with their shifts:

1. Check "Email schedules to staff" - extra options will appear allowing you to change the email staff get by:
 - Changing the reply-to email (if staff have questions and need to reply). By default, this is your Workforce Management email address.
 - Pre-fills your name, so employees know who's sending it out.
 - Add an additional short message to the email - for example, reminding employees about temperature and wellness checks, or a special event or team meeting.

Note: You'll need to select which employees receive this email by selecting employees in the list on the left, and moving them to the right.

2. Alternatively click **Choose All** to move all employees to the right. Only employees on the right-hand side will receive this email, and only employees with shifts will receive an email. This means

if an employee is selected but don't have any scheduled shifts, they won't receive an email. Employees will receive their shifts for the week at the location you've published

The SuitePeople Workforce Management (Adi Insights) phone app will show employees all shifts at locations they can work, and can filter it to show only their shifts within the filtering options.

The SMS function works in the same way - however SMS will only send if they're enabled on your company (you'll receive an error message if you can't send them).

Publishing and validation messages

1. When the publish interface appears, a validation check runs to make sure there aren't any issues preventing publish. If there are no validation warnings or errors, you'll be able to press **Publish** at the bottom
2. If you see an orange bar at the top - this means there's a validation warning. If there are multiple - click the arrow to expand and show them all. However, you can still **Publish Anyway**, otherwise you can cancel & address the warning before coming back here to publish.
3. If you see the red bar appear, this means there's at least one validation error preventing you from publishing. Clicking **View** will slide-out a list of these validation errors.

Common errors are minimum hours on an employee's wage haven't been reached, schedule validation rules not being met (Require X employees between X times), and if you have configured either Minimum Shift Length and Contract Hours to flag as an error.

Unpublish schedules

If you've published schedules but need to make changes ahead of time, you'll need to unpublish the schedule.

This can be done by heading to the Daily & Weekly, pressing **Actions** and then **Unpublish Schedule**.

Press the orange **Unpublish**, and you'll be able to make changes to that week. Don't forget to **Publish** after you've made your changes!

If you've only changed 1 or 2 employees shifts and publish by email - you can select only the affected employees to receive email notifications.

Note: You're only able to change scheduled shifts for days in the future - if you're trying to change shifts for later today it's recommended to use the fill/swap shift function in the phone app. For shifts in the past, you can deny the scheduled shift (if the employee didn't work) and you'll approve the timesheet or add an actual shift for the employee (if any) worked that shift.

Multi-location publishing

1. To publish shifts on the multi-location, make sure you're on the week to publish with the locations you'd like to publish. Press **Publish** at the top center of the screen:
The same publish interface appears as in Daily and Weekly. This time, you'll see a box at the top of the screen for each location. Each location has its own validation - and if one location has validation errors you won't be able to publish (and you'll need to view & resolve the validation error first).
2. You can publish with email or SMS - Phone app push notifications will also send when you press publish. Employees will receive a separate email per location - so if 1 employee works across 2 locations, they'll receive 2 emails - both with shifts for that location

If you're not seeing a location you are expecting to see on this screen - make sure you're viewing it. Go back to the multi-location & check the locations that are appearing:

3. When you've addressed all errors - you can publish. If there's a location that you don't want to publish you can un-check it at the top. When you publish - all other locations will publish, except for the one you've un-checked.

Copy and paste shifts

Quickly create new schedules by copy & pasting previous shifts and schedules.

Copying shifts and schedules will copy:

- Shifts
- Shift Breaks
- Employees associated with the shifts
- Jobs on each shift

After being copied, you can still add & remove shifts, change shift length, and reassign employees to different shifts.

This is intended as a quick way to create a schedule by copying an optimized schedule and optimizing it further for the week it's copied to.

There is a copy dialogue available on both **Daily** and **Weekly** views.

Hovering over the **Copy** button provides the following quick actions:

- Copy to next week
- Copy to 2 weeks away
- Advanced week copy
- Advanced day copy

The first choice will be to copy specific days from one week to another week.

Select the days in your base week that you want to copy, and then select the week that you want to paste them onto.

For multiple weeks select the "Paste Repeating" option, and then how many times you want for the week to repeat itself.

OR you can copy a single day to another day, select the day you want to copy, and then the day(s) that you want to paste the day onto.

Tip: When pasting day shifts, all the shown days are from the following week, always double check the date when copying and pasting shifts.

When you're happy with what you've created, select the "Copy" button to save all changes.

If you've overlapped shifts, you'll be given a warning for every shift that is in danger, to confirm the changes select "Remove all of these changes" and then "Copy" again.

Viewing Published Shifts

Employees can view the published schedules of the units they belong to.

Select "Shifts" from the top menu bar.

You'll be able to select "View Published Schedules" - Select a unit, as well as a week to view.

If a schedule has been published for that week, the weekly schedule will appear - if it hasn't been published, a message will inform you.

An example of a successfully published schedule can be seen below.

A published schedule will only show staff members with shifts, on the example below you can see that the times, job, and date are all shown; the necessary information for a staff to see.

Schedule for test roster unit, week starting Monday, August 27th 2018

Staff member	Mon 27th Aug	Tue 28th Aug	Wed 29th Aug	Thu 30th Aug	Fri 31st Aug
Abbie Gibson	10 a.m. - 4 p.m. FOH	5 p.m. - 8 p.m. FOH	noon - 4 p.m. FOH		
Akeem Tremblay	5 p.m. - 8 p.m. Line Counter	9 a.m. - 2 p.m. BOH	9 a.m. - 4 p.m. BOH		
Alan Cronin	9 a.m. - 4 p.m. Manager		4 p.m. - 10 p.m. Manager		

Schedule Validation

An advanced feature in Workforce Management is the use of validation rules.

You can set shift goals which must be achieved to successfully publish a schedule or print a report.

An example of a validation rule may be: 'There must be at least 1 manager working from Monday to Friday.'

If you don't achieve your validation goals you'll receive an error when you attempt to print a report or publish a schedule.

Shifts will also be validated if they overlap with another shift or with leave, preventing employees from being scheduled for multiple shifts or leaves at the same time.

If you attempt to print a shift report for a schedule that has validation errors, you'll receive an error, blocking you from publishing a schedule. Fix any validation errors and you can then continue with publishing schedules and printing reports.

Printing Schedules

To print a report, head to the **Print** button in the Daily or Weekly view or go to **Reports > Shifts > Print Ready**.

Select your report and click the **Generate Report** button.

The report will appear in your notifications when generated in about 15-30 seconds.

Filling Shifts

Fill shift can be used to find another available employees member to work an already existing shift on the current day/in the future, after a schedule has been published.

This is commonly used after an employee is unable to work a shift last minute.

Head to the Weekly view and find the shift you need to 'fill' - you'll see the below icon on the shift; click this to open the fill shift prompt.

Note: You'll only see this icon if the schedule for the week has been published

Copy Options Print Edit forecast Switch → PUBLISHED			
Thursday, Jun 27th	Friday, Jun 28th	Saturday, Jun 29th	Sunday, Jun 30th
10am-2pm 4hrs \$94.91 FOH	6pm-9pm 3hrs \$71.61 FOH	12pm-4pm 4hrs \$141.52 FOH	12:30pm-4pm 3.5hrs \$103.63 FOH

From here, you'll see the 'Fill shift' dialog box. It shows the same information as the 'select staff' dialog when you're creating or reassigning the shift, however, also includes employee mobile numbers (if set up.)

Select the checkbox on the left-hand side to select that employee member to be notified about the shift fill. They'll receive a notification in the SuitePeople Workforce Management (Adi Insights) phone app (if they've installed and set it up). You can also check the 'also send via SMS' box to send them an SMS with this information (if they have a mobile number).

Available employees can reach out and accept the shift via reply; the employee can then work the shift and the shift can be 'reassigned' during approvals. If the employee accepts the fill via the Phone App, it will swap the shift over to them.

Daylight Savings Times (DST)

There are two DST transitions: skipping an hour (clocks move forward) and repeating an hour (clocks move back)

Workforce Management calculates the hours and cost of shifts that cross over a DST transition, taking into account the two transitions; however when clocks move back there are some complicated situations that need your attention, so we added the 'DST ambiguous report'. See more information below:

Clocks move forward

The simpler transition is skipping an hour, and Workforce Management handles this in two ways:

1. Workforce Management doesn't let you have a shift:
 - start
 - finish
 - have break times
 - job changes
 during an hour that doesn't exist.
2. The cost of a shift and length of a shift won't include the hour that isn't worked.

For example, a shift going from 11 pm to 7 am with no break, as this shift goes over the transition period the actual worked time will be 7 hours (rather than the standard 8).

Clocks move backward

The complicated transition is when the hour between 2 am and 3 am is repeated. If the shift doesn't start, end or not breaks or job changes that occur within this two-hour window a shift's hours and cost will be calculated without any issues.

Using the 11 pm to 7 am example again, this would now be 9 hours worked instead of the standard 8 hour shift.

When there are any shift events that occur during this 2-hour window, the shift is considered ambiguous as there is more than one possible length of the shift.

If a shift started at 7pm and finished at 2:30 am, this shift could be either 7.5 or 8.5 hours long depending on which 2:30 am the employee finished at. You'll need to manually confirm and correct the hours exported to payroll for these shifts.

To assist you with this process there is a new report available that highlights ambiguous shifts. Head to **Reports > Shifts > DST ambiguous shifts**, pick the day that the DST backward transition occurred and click search for shifts, you can also download this as a CSV.

Open Shift

An Open Shift is created like a regular scheduled shift; but there isn't an employee assigned to it.

Open Shifts are available for any employee to 'pick up' and work - in addition to any of their regular scheduled shifts. Offering to work an Open Shift requires employees to be using the SuitePeople Workforce Management (Adi Insights) phone app.

Requirements:

Employees must be using the SuitePeople Workforce Management (Adi Insights) phone app, and Open Shifts must be activated on your Workforce Management company.

Below are some examples of what Open Shifts look like when they're created and before an employee is allocated on scheduling interfaces and the phone app.

Weekly - Open Shifts appear in the top row

Daily - Open Shifts appear in red with an exclamation mark

show Starting at

	7am	8am	9am	10am	11am	12pm	1pm	2pm	3pm	4pm	5pm	6pm	T
⚠ Open Shift			⚠ 9am-6pm (9 hrs) Sales										
⚠ Open Shift			⚠ 9am-6pm (9 hrs) Sales										
⚠ Open Shift			⚠ 9am-6pm (9 hrs) Sales										
Scheduled Hours	0	0	3	3	3	3	3	3	3	3	3	3	0

Phone app - Open Shifts appear in normal shift view with an orange background

Creating an Open Shift

An Open Shift can be added to a schedule on the Daily, Weekly, and Multi Location views, as well as on Shift Templates (if enabled on your account).

On the Weekly & Daily View

1. To create an Open Shift, go to any unpublished future schedule (or unpublish your current schedule if you need to add Open Shifts for the remaining days).
2. Click on the blue **Actions** button, then select **Create Open Shift**. This option is highlighted in the image below.

3. Select the date you want to add this Open Shift.
4. Enter the start & finish times of the shift.
5. Enter the break start & finish times (this step is optional - otherwise leave blank).
6. Add the desired job to apply to the Open Shift.
7. Changing the 'Shift count' will create that number of Open Shifts with the configuration you've set.
8. Click **Save**.

A window will appear with the following fields:

- Date
- Start
- Finish
- Break
- Job
- Comments
- Shift Count

A shift count is the number of Open Shifts with the same date, times, and job as you have set in the pop-up.

For example - if you need three half-day shifts at short notice for tomorrow, all at the same time and employees working the same job, set the shift count to three.

Template Shifts - Open Shift Creation

You can create Open Shifts by using shift templates, found in your location configuration.

When creating your template shifts, if 'All staff' is selected on the template. All of these shifts will be created as Open Shifts within the schedule.

Start	Break start	Break finish	Finish	Job	Comments	Staff	Count
Monday							
Tuesday							
09:00 AM	--:--	--:--	06:00 PM	Sales	shift comments	All staff	3
11:00 AM	--:--	--:--	06:00 PM	Manager	shift comments	1 staff selected	1

The below image shows how some of the above shift templates would appear in the Multi-location view.

	Monday, Jul 19th	Tuesday, Jul 20th
Colorado Store		
Shift Templates		9am-6pm Manager x 1 9am-6pm Sales x 3 11am-6pm Manager x 1

1. When your templates have been created, head to the Multi-location view and make sure shift templates have been enabled in your view options.
2. Click the 'Allocate template shifts button', which is in the top bar as highlighted below.
3. Select the locations that you'd like to have the shift templates automatically fill for and click **Allocate templates**. An example of the pop-up that appears is below.
4. This allocates employees to the templates you've created.

Note: If specific employees are selected for a set of shifts in your shift template but some are unavailable when the template is used, it creates an Open Shift automatically to fill the vacancy. You'll receive a notification within Workforce Management when this happens, giving you the reason why the template shift was turned into an Open Shift.

Multi-Location View

Within the Multi-location view, if overseeing and creating shifts for multiple locations, you can create Open Shifts here quickly and efficiently.

1. Select the locations you want to view or add Open Shifts to.
2. Select the blue **Add open shift** button (highlighted below).
3. Fill in the pop-up with the required information - this is similar to the pop-up that appears on the Daily & Weekly views when creating Open Shifts, however you'll need to input a Location for this Open Shift to be attached to.

The window includes the following fields:

- Date
- Location
- Start
- Finish
- Break
- Comments
- Shift Count

Editing Shifts

The below will guide you through how to convert existing scheduled shifts to Open Shifts.

An Open Shift can be created by converting an existing scheduled shift. Either on the Weekly, Daily, or Multi-location views.

1. Unpublish a current schedule (or go to an unpublished future week).
2. When in the Daily view, select the shift you want to convert and then click the red 'Remove' button; if you're not in the Daily view you can directly click the 'Remove' button on the shift.
3. Click on the Open Shift box and click on the green Open Shift button.
4. This shift has now been converted to an Open Shift. When you're ready, republish the schedule.

Any employee available to work this shift and job will receive a notification on the phone app if there is an Open Shift available.

Copying Open Shifts

Open Shift also creates new opportunities when copying a week forward.

When using the 'Advanced week copy' (found by hovering over the 'Copy' function) you can change the 'Keep staff on shifts' option to 'No', which will copy all the desired shifts into the chosen weeks as Open Shifts.

When completed, don't forget to publish your schedules.

Mobile App and Open Shifts

When a schedule is published containing Open Shifts, some employees will receive notifications that there are Open Shifts available to pick-up. You'll receive these notifications in addition to your regular 'shifts published' notifications.

You're eligible to pick up an Open Shift if you:

- Are able to be scheduled at the location.
- Are able to work the job allocated to the Open Shift.

Managers can also allocate employees to Open Shifts.

How to request a pick-up

When you receive a notification about a published schedule, open the phone app & head to the 'Trade' tab on the shifts page. The image below gives an example of some Open Shifts and where to find them in the phone app.

Open Shifts are highlighted in orange and say "Open Shift" in the title.

You can request to pick up the Open Shift by pressing the arrow icon - this will send a request to your manager.

After your manager approves the request, you'll be notified that your request has been approved.

Note: Sending a pick-up request doesn't guarantee that you'll be allocated to the shift - this sends a notification to your manager, but they have the final say on who will be allocated to the shift. If assigned the shift, you'll receive a notification that the Open Shift has been assigned to you.

If you've requested to take up an Open Shift but aren't selected, you'll receive a notification within the mobile app to that effect. An example of the message you'd receive is: Your pick up offer was denied by (employee name).

How managers can assign open shifts in the SuitePeople Workforce Management phone app

When employees request to work an Open Shift, the manager will see a list of the employees which have requested to pick-up the Open Shift.

To access this list, click on the 'Trade' tab.

Press the 'Assign' button to assign the employee to the requested shift. Any other employees that have requested to pick up that shift will disappear from this list. An example of the employee list that will appear when viewing an Open Shift is shown below.

If an employee hasn't been notified of the Open Shift, due to availability, the notify button (envelope) will let the manager to notify a specific employee of the Open Shift. If grayed out (as it is in the image above), the employee has already been notified by the app.

Note: The "unavailable at that time" messages relates to employee availability in Workforce Management, however you can still allocate these employees to the Open Shift if they've requested to work it.

Open Shift FAQ

Question: Can I assign employees an Open Shift without unpublishing and then re-publishing the schedule?

Answer: Yes!

Open Shifts let you assign someone to a schedule even after it has been published. Eliminating the need to unpublish and then republish a schedule. By using the arrow on the Open Shift, employees can be assigned.

Question: Are employees notified of the shift assignment even though I didn't unpublish and re-publish the schedule after the assignment?

Answer: Yes!

Employees are notified of being assigned to an Open Shift through the SuitePeople Workforce Management (Adi Insights) phone app even if the schedule is already published.

Question: I'm receiving a schedule validation error when I attempt to publish my schedule with Open Shifts. The validation error is stating that my KPI targets are not being met. How do I publish my schedule?

Answer:

KPI's, e.g. Labor Percent, Hours, etc., are incalculable if Open Shifts are left unassigned. Workforce Management is looking for specific metrics before your schedule can be published. To prevent this validation error, ensure under your locations 'KPI Targets' that you have unticked the 'Values outside of this range should prevent schedule publish' box. The below image shows an example of one of the boxes you may need to untick in 'KPI Targets'.

Question: I have templates already available in my account and use them. What is the difference between Templated Shifts and Open Shifts?

Answer:

Template Shifts require someone with Manager access, or higher, to manually assign employees to vacant template schedules. Whereas, Open Shifts are visible to employees and therefore can be filled by their volunteering, followed by manager approval, through the SuitePeople Workforce Management (Adi Insights) phone app.

Contract Hours

The Contract Hours module is designed to help employers manage compliance regarding employees working hours that are different from their contracted hours (sometimes known as regular pattern of work). This module ensures that employees have agreed to the hours they're working, helps them manage labor and communication with their team around their contractual obligations & variations to those obligations. This is a digital and paperless way to track employee shift variations.

Contract hours can help manage labor (depending on your set up) by:

- Automating recording requirements for employees working outside contract hours (For example, regular pattern of work and agreement to vary)
- Automating overtime entitlements if an employee needs to work outside contract hours
- Providing real-time workflows to ensure seamless electronic recording
- Minimizing any unnecessary overtime associated with contract hours requirements

How do I enable the Contract Hours module?

If you'd like to find out more about turning on Contract Hours and any associated fees, reach out to your Account Manager.

Overview

Employees need to be using the SuitePeople Workforce Management phone app, and punch-in using SuitePeople Time Clock on iPad/Android.

Contract Hours are configured per Wage Agreement and employment status.

When contract hours are enabled & configured, managers will talk employees through their contract hours. Managers enter these into Workforce Management - employees will login & accept the contract hours in Workforce Management.

When an employee agrees to the Contract Hours entered by their manager, the process is complete. The process goes as follows:

1: Employee Agrees to their Contract Hours

For example, the employee's agreed Contract Hours are as follows: on Mondays, Tuesdays, and Saturdays every week at those times.

- Monday – Working 5.5 hours between 2:15 pm and 8:15 pm, with a 30-minute break at 4 pm
- Tuesday – Working 3 hours between noon and 3 pm
- Saturday – Working 5.5 hours between noon and 6 pm, with a 30-minute break at 3 pm

2: Manager is aware of the employee Contract Hours during scheduling and alerted to issues

When entering shifts, managers can visually see when an employee is required to be scheduled for these Contract Hours:

	8am	9am	10am	11am	12pm	1pm	2pm	3pm
No Team								
McGuire, Joe					←-----→			

The dotted line with arrows at the end (showing the employee Contract Hours) will disappear when you draw the shifts in for the employee.

You can schedule other shifts for these employees - a button will appear in the phone app where employees can agree to work each extra shift or extra hours.

Workforce Management will run compliance checks and alert managers when publishing if there are any missing Contract Hours or extra hours in addition to their Contract Hours

3: Employees whose published shifts differ from their Contract Hours will get a notification to agree to the variation on the Phone App

All employees will receive a push notification with their shifts. If they have shifts outside of their contract hours, these shifts have the option for employees to agree to the shift.

After they press agree, this will appear as a “variation” to their Contract Hours - meaning the employee has agreed to work additional/different shifts to their Contract Hours.

If employees haven't agreed to this in the phone app, they'll be presented with a similar screen when they punch-in to SuitePeople Time Clock.

4: Employees will agree to variations as they punch for work on SuitePeople Time Clock if it is different to their current agreed Contract Hours

If employees punch for their shift early or late, they'll receive a similar message indicating they're punching in different to their agreed variation to Contract Hours - and will need to agree to the variation message. They'll also see this message if they punch-out early or late. If employees take a break at a different time to their contract or agreed Contract Hours variation, including for a different break length - this message will pop-up when they punch out for their shift.

These messages appearing when employees punch-in differently to their Contract Hours can give you confidence that you're being compliant to clauses in your labor agreements (when you've configured the parameters correctly based on your legal advice).

You'll notice employees have the option to Decline next to the agree button at all stages. If employees decline at any point, there's a different action depending on what stage Decline is pressed.

5: Check variation messages and icons while doing approvals

When an employee is scheduled for a Contract Hours shift & works the shift as normal - you won't see any extra messages.

When an employee has agreed to a variation - either agreed based on the scheduled shift, or punches in & out different to their scheduled shift - and agrees to it, these will appear on the approved shift as “Agreed Variation”

If an employee declines a variation to a scheduled shift, the shift will appear as “outside of contract hours”. Note that when you create a shift outside of their contract hours, it will show as already show “outside of contract hours” until the employee agrees to it.

If employees decline a variation - either from the schedule or when they punch in/out, this shift will show “Outside of contract hours” and trigger overtime (if you've set the rule up).

Enable and Configure Contract Hours

If you'd like to find out more about turning on Contract Hours and any associated fees please contact your Account Manager.

Warning: Clauses in Awards, Enterprise Agreements and other Labor law legislation related to working outside something like Contract Hours is often complicated. You must seek independent legal advice to determine how using Contract Hours may help with these types of clauses.

Configuring Contract Hours Parameters

When the Contract hours module is enabled a new menu item will appear under Setup > Contract Hours. Only finance & above users can access this new page.

This configuration area lets you customize the Contract Hours fields and table that appear in an employee's profile under their Contract Hours tab.

Configure Contract Hours

Click the "Create" button to begin (note: default settings aren't required to be set up, so skip that heading)

Select the agreement & employment status these Contract Hours are being set up for.

You can create multiple Contract Hours sets for employment status and agreements if you have multiple agreements.

The screenshot below is an example of a set of Contract Hours for one of the Australian Modern Awards for Part-time employees.

Contract hours settings

The settings in this page are used to restrict the selections allowable in Staff Members' Contract Hours configuration. They do not have a direct effect upon the validation or overtime costs for shifts for a given staff member until they have been configured for that staff member. It is possible to configure global default settings, and then override settings for any Employment Status or Agreement, or any combination of the two.

Strict mode ☒ Automatically set the required hours on any given day to the value calculated from the start/finish times and meal time/break length. This sets the selected and required fields, and makes some settings required.

Selected fields

	Include on form	Require entry	
Start Time	☒	☒	Required in Strict Mode.
Finish Time	☒	☒	Required in Strict Mode.
Meal Time	☒	☐	ⓘ This value is used as a scheduling guide only. Optional (based on length) in Strict Mode.
All Day	☐	☐	Disabled when Start Time or Finish Time are required.
Min Length	☐	☐	Automatically populated in Strict Mode.
Max Length	☐	☐	Automatically populated in Strict Mode.
Break Length	☒	☐	Shown, but not editable in Strict Mode.

Breaks

⚠ These fields are required in Strict Mode.

Break required after hours Require a meal break on shifts longer than this amount.

Fixed break length minutes

Automatically set the break length to this value on Contract Hours that have a meal break.

Hours per day

Minimum Hours Per Day hours Required in Strict Mode

Maximum Hours Per Day hours

Restrictions

Allow split shifts ☐

Allow changes before days

The period of time before a new set of Contract Hours comes into effect that it may be edited/approved.

Apart from the Agreement & Employment status options at the top - the same options appear as they do on the Default settings configuration. If you need to change Contract Hours options for that agreement & employment type, select that combination from this list before making changes.

After you've selected the correct options & save, you'll see the agreement name & employment type for the Contract Hours configuration you've set up.

Contract Hour settings you can configure

Contract Hours settings you can configure:

Strict Mode

Strict mode is the easiest way to configure Contract Hours Options. All that managers will need to fill out for each employee's Contract Hours are:

- Start time
- Finish time
- Meal time (only if the shift is longer than the length specified above)

Strict mode doesn't let you change any options under "Selected fields".

If you don't use strict mode, you can customize any of these options.

Whenever Contract Hours are entered or updated, any of the fields shown in the "Include on form" column will be shown in the form to the user. Any fields that have a check in the "Require entry" column will be required.

Breaks

"Break required after" ensures that when Contract Hours longer than this length are created, a "Meal Time" is also entered.

"Fixed break length" prevents users from being able to enter a break length for Contract Hours.

Hours per day

Using these fields, it's possible to restrict the range of values that users may enter in the "Min Length" and "Max Length" fields of a Contract Hours object. Strict Mode requires a "Minimum hours per day", and ensures that the shift created is at least this long.

Restrictions

Allow split shifts enables the creation of multiple Contract Hours objects on the same day.

"Allow changes before" will restrict the creation, editing or agreement of Contract Hours changes so that they start at least this many days from today. If you leave this field blank - Contract Hours can be entered to start from tomorrow onwards - you can't create Contract Hours in the past. This also means if employees don't agree to Contract Hours before the start day - these will change into expired Contract Hours and you'll need to add Contract Hours for the employees again.

If you set this field to 7 days - a manager can't create Contract Hours to start within 7 days of the date they're creating these on, and the employees must agree to these before 7 days of the Contract Hours start date.

In most cases, Strict Mode, with no Restrictions (and appropriate values for Break Required After, Fixed Break Length and Minimum Hours Per Day) should be configured.

Agreement/Employment Status settings selection

When one or more Agreement and/or Employment Status based options are present, the "best match" will be used. If an employee is working Part-Time on the FFIA, then an options object for "FFIA -> Part-time" would be applied, followed by one for "FFIA" with no Employment Status, followed by one for "Part-time" with no Agreement.

When there are Agreement/Employment Status options created within a company, this triggers the requirement that employees matching these have Agreed Contract Hours. Failure to configure Contract Hours for employees will prevent the publishing of a schedule containing those employees.

Configure contract hour overtime rules

The following section describes how to set up overtime to automatically apply to any hours worked or scheduled outside of Contract Hours if overtime applies when there is no Agreed Variation through the Workforce Management functionality.

If you don't set up overtime options, Contract Hours will still work - and hours outside of contract will still be shown to users - however, no automatic overtime will apply, (In this instance you can generate reports with a list of hours worked outside of Contract Hours).

Setup

There is a rule that can be set to calculate appropriate penalties/overtime rates for periods of time outside of their Agreed Contract Hours (or Agreed variations to their Contract Hours) that they work.

This can be enabled within any Agreement by creating a new overtime condition, or updating an existing overtime condition (by adding extra rules).

The option "fall outside of contract hours" will be used to create the rule for contract hours. Keep in mind that multiple clauses within a single rule will only apply if all clauses are met, allowing for different rates for time outside of Contract Hours on a public holiday, for instance.

For example purposes only, below we walk through the creation a new wage condition. To create a new condition, make sure your user has access to edit Wage Agreement & go to Setup > Wage Setup. Select the agreement you are adding to, and click the Conditions tab:

At the bottom you'll see an option to Create new.

Name the condition & select Overtime Rate.

Select this option from the list

A typical Outside Contract Hours condition/rule may apply only for specified dates or stop applying after a given date. In most cases, the **Apply only for the dates** fields should be left blank.

When you've configured this, you'll need to make sure you add it to any applicable classifications.

To add this extra rule onto any of your existing overtime conditions instead of creating new ones, you can edit the overtime conditions you need & add this extra rule.

Note: In this situation, you can create this rule to only apply from a certain date, so it doesn't affect any historical data:

Setup contract hours on Employees profile

All changes to Contract Hours must be agreed to by both parties within Workforce Management. Depending on the package selected, this could mean that all Contract Hours changes must be initiated by the manager/ employer and agreed to by employees.

The processes are largely the same for whoever is requesting the changes: the restrictions that apply according to the "active" options object still apply regardless of who is creating the changes, and all changes must be agreed to AS-IS (ie, without adjustments) by both parties before they're deemed to be

"Agreed". These changes must be agreed to before they start (or several days in advance, according to the configuration).

Viewing existing Agreed Contract Hours

The employee's Contract Hours page shows the current (or selected) Agreed Contract Hours, if one is present. It also shows any pending changes and allows the viewing of declined or expired changes.

Changing Contract Hours

Creating a new set of Contract Hours requires at least two steps. The first is the creation of the change request, which must have a start date, may have a finish date, and may have notes for the communication process. It may also have Contract Hours data for each weekday.

The actual columns will be shown depending on the selected columns from the active options for this employee. These may change depending on the start date of the valid period if this changes the employment status or agreement of the employee.

Whatever options are in-place at the start of the employee's Contract Hours will be used.

On any given weekday, an employee may be marked as "Not working", or have their Contract Hours defined for that day. As mentioned above, the different restrictions based on the options configuration will change which columns are available and/or required. Some values may be automatically calculated (the required shift length in strict mode).

When submitted, employees will get notifications.

Ending Contract Hours

If a contracted employee no longer needs to have contract hours applied, an end date can be set which prevents contract hours related rules and restrictions from applying from the specified end date. This can be useful when part-time employees that are currently on a set contract are moved to full-time and no longer need contract hours restrictions to be applied.

Ending contract hours doesn't need to be approved by employees.

How do employees agree to Contract Hours changes?

When the data is saved, it moves into a state that requires the other party (For example, the employee themselves if it was a change initiated by the manager/employer) to agree to it.

If the contract hours are agreed to by both parties, they're "committed", and will override any existing agreed contract hours for the period which they're valid. This could replace any existing objects or split or truncate them. For instance, it could be possible to have a change of Contract Hours that applies for the 6-week period of school holidays over summer as an employee changes their work pattern due to parenting responsibilities.

Notifications will be generated for pending change requests (and adjustments that are made). These will appear in the phone app for logged in users.

When an agreement to change Contract Hours is completed, the employee's member's availability for the period of the Contract Hours is automatically updated to ensure that they're available for the entirety of their Contract Hours.

Scheduling with contract hours

Employees without Contract Hours

If an employee member should have an Agreed Contract Hours: this could mean they're on an Agreement with one or more Contract Hours rules, or there is a matching "Contract Hours Options" for

their employment status and/or agreement. They'll not be able to be scheduled until they have an Agreed Contract hours that is valid for that date.

The schedule also can't be published under these circumstances, which could result when Contract Hours are enabled for a period of time after the schedule has been created, but before it has been published.

Employees scheduled outside of their Contract Hours

When an employee is scheduled, and an Agreed Contract Hours is found that applies to that date, the shift is compared to the Contract Hours. If the shift falls "outside" of the Contract Hours, then this will trigger any rules that need to apply.

The shift will also be tagged as "Outside Contract Hours" in the Workforce Management.

Employees who are working outside of their Contract Hours are grouped with Unavailable employees and appear further down the list of employees in the "Employee Selection" dialog boxes.

When the schedule is published, the user is notified that employees scheduled outside of contract will receive a notification to agree to work this shift, otherwise known as an agreed variation.

Employees working less than the Minimum Hours

When an Agreed Contract Hours contains a minimum length (or the Agreement under which an employee is paid contains a Minimum Hours amount), then any shifts that fail to meet these minimum hours requirements is "topped up" to the largest matching minimum hours. That is, if an employee is employed under an agreement that indicates they're permitted to work a minimum of 3 hours, but their Contract Hours state they're guaranteed a minimum of 4 hours, any shift they work that is less than 4 hours would be eligible for a "top-up" payment as if they had worked the 4 hours.

This type of payment is shown in the Workforce Management interface. It may result in a shift longer than their worked hours being sent to a payroll system to ensure that the minimum payment is applied.

Top-up hours do count toward monetary values for calculating KPIs but doesn't count toward number of hours for the same. That is, top-up hours affect Labor Cost Percentage, but don't affect Productivity.

Agreed variations

Most agreements that relate to Contract Hours have some concept of Variations. These are the mutually agreed non-permanent changes to Contract Hours for a single day. This lets employers/managers and employees use Workforce Management to store their mutual agreement to the changed hours that an employee works.

An agreed Variation will change the effective Contract Hours on that day, for Outside Contract Hours (or potentially the Minimum Hours to pup value, but this can't reduce that value below the Agreement Minimum Hours).

Any subsequent agreed Variation on the same date will result in the existing variation becoming Superseded. It's still visible within the system (for auditing purposes) but won't affect shifts on that date.

Publishing schedules with Contract Hours Violations

When a schedule is published that has any employees who are scheduled outside of their contract hours, Workforce Management will first show a summary of these employees. The process of publishing the schedule will then result in the generation of a Pending Variation for each employee, allowing them to agree or decline to the variation. If they agree, it will alter the effective Agreed Contract Hours on that date, and potentially remove their eligibility for overtime.

Employees are under no obligation to agree to Variation, and if they fail to agree prior to the end of the shift, the effect is the same as if they had declined it.

Swap/Drop/Fill Variations

When a "Swap" is initiated by two employees using the phone app, this is taken to mean that both employees are requesting a variation for their contract hours on the day or days of the shifts. The manager agreeing to the swap is deemed to be the other end of the agreement, and both employees will have an Agreed Variation created within Workforce Management.

When a Drop or Fill is initiated, employees will be able to select if they agree to a variation on that date, and that data will be used to calculate the differences in cost for the shift. When the drop or fill is completed, the agree/decline status to the Variation will result in the creation of a Variation with the same status.

Reporting

There are several different reports that may be used to gather data about how the Contract Hours features have been used.

Agreed Contract Hours Report

This report shows, for a given date, exactly what Contract Hours objects are in operation.

It shows a line for each employee, on each weekday that have any Contract Hours. It doesn't show days that they don't have Contract Hours and doesn't show employees who don't have any Contract Hours.

Contract Hours Variations Reports

There are reports for each type of Variation: Pending, Agreed, Declined and Superseded.

All variations matching the selected type that are on any of the days of the report will be shown, showing both the varied hours and the original agreed Contract Hours on that day.

Changed Contract Hours Report

Rather than showing the data that affects a given date or date range, this report instead shows all the agreements to Contract hours changes that were made during a given period. If a manager requests an employee change their agreed contract hours effective July 4th, but this is agreed to on June 22nd, then this report will use that date to collect data.

This report shows a line per agreed change, with a sub-line for each weekday within that period.

The CSV version of this report provides a structured breakdown of the agreed changes (each field is provided, rather than only a textual representation).

Pending Contract Hours Changes Report

This report shows all Pending Contract Hours Changes at the company that affect the given date range (which defaults to today onwards).

It's also possible to view expired changes (those that weren't agreed to or declined before they came into effect).

Pending Contract Hours Variations Report

This report shows all currently Pending Variations. It doesn't allow selecting a date range, as only variations from today onwards are deemed to be "Pending".

This report shows a single line for each variation, with both the varied and original contract hours visible.

Scheduling colors reference sheet

Shift colors

If you've colored the daily or weekly scheduling views by 'Availability', you'll notice 4 different colors shifts can be.

- Green
- Blue
- Red
- Yellow

You can enable this option by clicking 'Options' and selecting 'Availability' from the 'Shift color' option.

Green

Green shifts mean the shift is within the employee's availability, and there are no issues found with the shift.

Red

Red usually means the shift is outside of the employee's availability.

It can also mean another issue with the shift - either the employee is on leave, the shift takes them above their "maximum hours", there is a clash with another shift they're working - such as scheduled elsewhere at the same time, or they're no longer employed.

Orange

Orange indicates something that may need your attention - they might be scheduled to work a split shift, have another shift on that day but at another location, or the shift is outside of their Contract Hours and has not yet been agreed to.

Blue

Blue shifts let you know the employee has hit their weekly 'Target hours'.

Shift Icons

You may notice some status icons which appear on some shifts. They are:

- **Red clock icon** – Indicates overtime will apply to this shift.
- **Arrow pointing up icon and Minimum Hours top-up text** – Indicates this shift is less than the employee's 'minimum hours' and will be paid a top-up.
- **Warning icon and Outside Contract Hours text** – Indicates this shift is outside of the employee's contract hours.

Tip Pooling

Tip Pools can be used to automatically pool tips based on location, job, or group.

This feature is available with some integrations already in Workforce Management (WFM). If you'd like to confirm if your POS or Payroll integration works with WFM tip pooling, contact your NetSuite account manager.

Tip Pool Overview

The overview window for each tip pool report or calculation shows important information about the pool. The page varies depending on if the pool is aggregated by day or by period.

The overview window includes the following details:

- Pool name
- Period
- Created at
- Created by
- Pool calculations
 - **Unallocated** – Contains tips that couldn't be divided evenly among staff due to rounding/the way the Tip Pool is configured
 - **Total** – Contains tips that couldn't be divided evenly among staff due to rounding/the way the Tip Pool is configured

Important: Staff tips are rounded down to two decimal places. Unallocated and totals tips for a day or period, however, aren't rounded down. Using the exact numbers ensures the accuracy of the imported data and any card processing fees.

- Settings used
 - Locations
 - Tip sources
 - Cash adjustment
 - Staff for pool
 - Aggregated by
 - Distributed by
 - Jobs for distribution
 - Tip types for pool
 - Card processing fee

Creating a Tip Pool

Follow the procedure below.

To create a tip pool:

1. Go to Workforce Management.
2. Go to Setup > Pooling.
3. Click **+ New Pool**.
The New Tip Pool form appears.
4. In the **Name** field, enter the name for the tip pool.
5. From the **Pool By** field, select how you want to create the pool.
 - **Group**– Select this option if you want to create a pool based on a predetermined group setup in WFM.
 - **Location**– Select this option if you want to manually select the locations in a pool. If you want to pool locations separate from each other you'll need to configure a pool for each location.
6. If you're pooling by group, from the **Group** field, select the predetermined group.

7. If you're pooling by location, select the locations.
 - a. From the **Available Choices** panel on the left, select the locations where you want the tip pool to apply.
If you want to select all locations, click **Choose All**.
 - b. To move the chosen locations to the **Chosen Items** panel on the right, click the blue right arrow symbol at the middle of the panels.
If you want to clear your chosen items, click **Clear All**.
8. From the **Aggregate by** field, select how you want to group the total tips and approved hours.
 - **Day** – Select this option if you want to group the totals for each day. Tips distributed daily are based on the hours approved for that day.
 - **Period** – Select this option if you want to group the totals according to your chosen period. Tips distributed during that period are based on the hours approved for that period.
9. From the **Distribute tips by** field, select how you want to distribute the tips to employees.
 - **Hours worked** – Select this option if you want to distribute tips based on the hours an employee worked compared to the total hours that all employees worked.
 - **Job worked** – Select this option if you want to distribute tips based on the hours an employee worked on a chosen job compared to the total hours that all employees worked on chosen jobs.
10. On the **Jobs** panels, follow the steps in Step 7.
11. If your POS system only provides tip data on card payments, select the tip pool sources from the **Tips for pool** panels. Follow the steps in Step 7.
12. If a fee is taken when processing credit card payments, from the **Card processing fee** field, enter the percentage taken out of the tip pool.
13. Click **Save**.

Creating Tip Pool Reports

After you create your tip pools, you can create reports to run calculations on those pools.

To create tip pool reports:

1. Go to Workforce Management.
2. Go to Shifts > Tip Pooling.
3. Click **+ New**.
A tip pool report setting window appears.
4. From the **Tip pool** field, select the name of the tip pool.
5. In the **Start** field, select the start date for the tip pool calculations.
6. In the **Finish** field, select the end date for the tip pool calculations.
7. In the **Cash adjustment** field, enter any cash tips or other POS corrections. This number can be positive or negative.

For example, the management team has \$200 of tips on hand for distribution to staff. An employee also mentioned that they reported an excess of \$25 in POS tips. The cash adjustment would reflect the additional \$200 and subtract the excess of \$25. On this field, the proper entry is \$175.
8. Click **Create**.

The tip pool report row will appear on top of the table, and WFM will start running the calculations.

When the **Status** column shows a green tick mark for the report, the report is ready for viewing.

9. From the Report column, click **View**.

The Overview window will then appear.

Timesheet Uploader

The Timesheet uploader lets you to import timesheets via a CSV file.

To access the feature, go to Shifts > Upload Timesheet.

When you visit the page, the first thing you'll see is a guideline showing the columns that are required to be included in any CSV files, and a description of what each column is used for.

Select the Template button to download a CSV file with all the column headers prefilled.

Header	Required	Description
Employee	#	A unique identifier for the employee can be their UUID, WFM ID, or their name Name matching format for Employee with no Preferred Name set: <First Name> <Last Name> Name matching format for Employee with Preferred Name set: <First Name> (<Preferred Name>) <Last Name>
Location	#	A unique identifier for the Location the employee worked at, can be the UUID, WFM ID, or the name
Date	#	The date this segment began, all dates in the file must use the same format
Start	#	The start time for this segment, all times in the file must use the same format
Finish	#	The finish time for this segment, all times in the file must use the same format
Segment Type	#	Unpaid break, Break, or Unpaid to indicate a Meal Break or Unpaid Break A unique identifier for the Job the employee worked during this segment, can be the UUID, Adi ID, or the name

When filling out the CSV, it is important to note that all entries in a column must use the same format. For example, if you've decided to use WFM ID to identify your locations, employees, and jobs, all rows in the CSV for these must use the WFM ID.

After you've uploaded your completed timesheet CSV, the system will display a mapping interface that lets you select which columns map to each field in WFM.

If you're using the provided template, the mapped headers will be selected automatically based on the header names in the files. If any headers aren't mapped or are mapped incorrectly, these can be updated [here](#).

In the CSV Header Mappings page, you can map your CSV headers to the WFM headers. The headers you can map include:

- Employee
- Location

- Date
- Start
- Finish
- Segment Type

You can select file formats for:

- Date
- Time
- Identifier

When selecting the header mappings, the system will show the selected file in a Mapping Preview window. This preview is to assist with troubleshooting the mapping of the provided data.

Data is shown against the WFM headers and will show any errors, such as data that isn't formatted correctly based on the selected options.

When all of the headers have been mapped, the system will display an Upload Preview page, which can be used to confirm that the timesheets picked up from the CSV look correct before completing the upload.

Troubleshooting Errors

If any errors are detected while uploading the timesheets, WFM will show how many timesheets were created successfully, and how many failed to be created.

In the event that some timesheets failed to import, selecting the Errors button will download a file showing exactly which rows in the original file caused an error, and what the error was. This helps you check which rows need to be processed again and what needs to be changed in the original file before uploading again. Any timesheets that import correctly should be removed from the file before uploading again, ensure that any subsequent uploads only include timesheets that weren't already imported.

Weekly Timesheets with Workforce Management

When used with Workforce Management (WFM), the weekly timesheets interface is updated with added features. These updates ensure that you can accurately track employee hours and minimize errors.

If you are using weekly timesheets with the Enhanced Timesheets Using WFM Wage Rules feature, see [Enhanced Timesheets Using WFM Wage Rules](#).

If you are tracking hours on weekly timesheets and use both WFM and Field Service Management (FSM) SuiteApps, see [Tracking Weekly Timesheets with WFM and FSM Hours](#).

To ensure that total payroll hours for WFM records show up in weekly timesheets, see [Setting Custom Forms to Show WFM Payroll Hours](#).

Enhanced Timesheets Using WFM Wage Rules

With the Enhanced Timesheets Using Workforce Management Wage Rules feature, employees can enter time in weekly timesheets, preview a breakdown of their hours, and send those hours for approval.

The feature automatically calculates overtime hours based on the employees' entries and the WFM wage rules enabled in the account.

By enabling this feature, organizations can save time, reduce errors, and ensure payroll accuracy with minimal manual effort.

The person in the company who manages WFM and NetSuite, such as a manager or bookkeeper, can configure the time entry options available to employees.

Important: If your employees mostly use weekly timesheets to enter time, you should enable this feature for quicker overtime calculations.

If your organization uses WFM mobile apps to capture time, your employees shouldn't manually enter time in weekly timesheets to avoid discrepancies.

Employee Type

This feature is applicable for **nonexempt employees** who must be paid overtime work, most commonly employees who need to enter work hours and are paid hourly wages.

Benefits of Enhanced Timesheets Using WFM

When enabled, the Enhanced Timesheets Using Workforce Management Wage Rules feature provides the following benefits:

- HR Managers or similar roles
 - Use the **Require Employees to Enter Shift Start and End Times on Timesheets** preference to ensure that employees enter complete shift details. For more information, see [Configuring Enhanced Timesheets Using WFM](#).
 - To aid when approving timesheets, view a breakdown of each employee's total regular and overtime hours for the week. See [Approving Hours in Enhanced Timesheets Using WFM](#).
- Employees
 - When entering time, either enter the shift and break times or enter the number of hours worked. See [Entering Time in Enhanced Timesheets Using WFM](#).
 - The feature automatically calculates regular and overtime hours based on the shift and break times you provide. You don't need to create separate entries for overtime hours.
 - View a graphical display of your total weekly hours color-coded between regular and overtime hours.
- Bookkeepers, payroll managers, or similar roles

Important: The Enhanced Timesheets Using Workforce Management Wage Rules feature is not available for integration with third-party payroll systems.

User Interface of Enhanced Timesheets Using WFM

When the Enhanced Timesheets Using Workforce Management Wage Rules feature is enabled, an updated version of the new weekly timesheets interface is available to WFM customers.

Hours Breakdown

The enhanced UI includes an **Hours Breakdown** section where employees and managers can view time entries and applicable overtime conditions in a calendar.

The following screenshot shows the UI when you view a weekly timesheet with hours entered:

Weekly Timesheet
John Adams 8/10/2025

Customer	Payroll Item	Service Item	Department	Class	Sun, 17	Mon, 18	Tue, 19	Wed, 20	Thu, 21	Fri, 22	Sat, 23	Total
Blue Semiconductor	Wage		Sales		0:00	9:00	10:00	11:00	12:00	13:00	0:00	55:00

Hours Breakdown

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
17	18	19	20	21	22	23
	Regular Hours 8:00	Regular Hours 8:00	Regular Hours 8:00	Regular Hours 8:00	Regular Hours 8:00	
	OT1.5 day over 8hrs 1:00	Missed Meal Break 1:00	Missed Meal Break 1:00	Missed Meal Break 1:00	Missed Meal Break 1:00	
		OT1.5 day over 8hrs 2:00	OT1.5 day over 8hrs 3:00	OT1.5 day over 8hrs 4:00	OT1.5 day over 8hrs 4:00	
					OT2.0 day over 12hrs 1:00	

Current Week

Regular Hours 40:00	Missed Meal Break 4:00	OT1.5 day over 8hrs 14:00	OT2.0 day over 12hrs 1:00
---------------------	------------------------	---------------------------	---------------------------

On the **Enter Time** table, the approval status colors are as follows:

- **Open** – White
- **Pending** – Light orange
- **Approved** – Green
- **Rejected** – Red

On the **Hours Breakdown** section, time entries are color-coded to distinguish between regular and overtime hours, as follows:

- **Regular Hours** – Blue
- **Overtime Hours** – Lilac

The overtime entries show the name of the corresponding WFM condition that apply to the specific hour or hours.

Time Entry

The feature provides additional fields for employees to enter details about their shift.

The following screenshot shows the fields that appear when you click the lower right corner of any day's cell:

Shift Start Time
8:00 am

Shift End Time
5:00 pm

Break Start Time
12:00 pm

Break End Time

For more information, see [Entering Time in Enhanced Timesheets Using WFM](#).

Sample Workflow with Enhanced Timesheets Using WFM

The following diagram shows the steps to a sample business workflow where the Enhanced Timesheets Using Workforce Management Wage Rules feature is enabled:

Automated Calculations with Enhanced Timesheets Using WFM

When automating regular and overtime hour calculations, the Enhanced Timesheets Using Workforce Management (WFM) Wage Rules feature aligns with existing WFM conditions and payroll preferences.

Wage Setup

The feature applies WFM wage agreements or region-based conditions set up in the account. It considers conditions, rules, and parameters that apply to each time entry.

These include default conditions, such as regular hours, standard overtime, extended overtime, and more. As an administrator, you can review existing conditions for employee accounts. For more information, see [Managing Conditions and Rules](#).

WFM Mapping

To ensure proper linking with WFM fields and records, you will need to complete the prerequisites, which includes mapping time bill fields. For more information, see [Prerequisites of Enhanced Timesheets Using WFM](#).

Payroll Items

The feature calculates overtime for timesheet entries that use the **Wage** or **Salary** payroll item types. It excludes overtime calculation for entries that use overtime payroll items.

Before entering time as an employee, to ensure that you're using the correct payroll item, check with your manager, payroll manager, or administrator.

Important: For administrators or roles setting up the feature, the payroll items eligible for automatic overtime calculations include:

- Earning: Wage
- Earning: Salary

The feature automatically calculates regular and overtime hours and will exclude entries that use payroll items associated with overtime. When providing payroll items for employees, don't use ones with overtime pay codes. These may include **Overtime Premium** or **Overtime Straight**.

While employees shouldn't use payroll items associated with overtime codes when entering time, you should still link the appropriate overtime payroll items that an employee is eligible for.

For more information about verifying payroll settings, see [Prerequisites of Enhanced Timesheets Using WFM](#).

Paid Time Processing

Note the following guidelines on how the feature processes time entries that are considered paid.

Entries for the Current Week or Next Payroll Batch

If an employee is included in the next payroll batch, the feature automatically calculates overtime for their approved time entries. The feature ensures that entries with overtime information are compatible and ready for payroll processing.

To allow for accurate calculations, the feature considers these time entries included in the next payroll batch as paid. The following guidelines apply:

- **Employees**
 - Can continue to enter time on the same payroll batch only if they don't overlap with paid time
 - Can't enter time that changes overtime calculations for the batch's paid time
- **Administrators**
 - Can only edit paid time entries if they don't affect the batch's paid time
 - Can't delete the paid time entries
 - Can only approve and edit unpaid time entries for the same payroll batch if they don't overlap with paid time
 - Can't update or delete unpaid time entries if doing so can change overtime calculations for the batch's paid time

After time entries are included in a payroll batch, neither employees nor administrators can make changes that would affect overtime calculations for those entries. Only new, nonoverlapping, and nonimpactful entries can be added or updated.

See the following example:

An office employee has the following approved hours for the week.

Sun, 19	Mon, 20	Tue, 21	Wed, 22	Thu, 23	Fri, 24	Sat, 25
—	8:00	8:00	8:00	—	9:00	—

The company set up the following WFM conditions when overtime applies:

- Every day when, during the day, time worked exceeds 8 hours
- Every day, when, during the week, time worked exceeds 40 hours

The employee is eligible for one hour of overtime on Friday. The payroll manager then runs a payroll batch, and the overtime pay is included in the calculations. The payroll manager notifies employees that the payroll is processed for the week.

The employee, however, remembers the following:

- On Thursday, they worked for 4 hours and was unable to record
- On Friday, they were requested to work for 2 more hours

At this point, the employee can add an entry for Thursday for 4 hours. This entry doesn't overlap with paid time and is saved.

When the employee tries to update the entry for Friday for 11 hours, however, the entry does not save. Adding more hours on that day will affect paid overtime calculations for the week. The employee should discuss how to handle the case with their manager or payroll department.

Entries for Previous Weeks

Any new or updated entries for the previous week are only allowed if they don't overlap with already paid time and won't affect the overtime calculations for the current week's paid time. This condition ensures payroll accuracy and prevents retroactive changes that could impact overtime already processed for the current week.

If an employee included in the next weekly payroll batch has approved time entries for current and previous weeks, the following guidelines apply:

- Employees
 - Can continue to enter time for the previous week only if they don't overlap with paid time
 - Can't enter time for the previous week if doing so can change overtime calculations for the current week's paid time
- Administrators
 - Can approve and update unpaid time entries for the previous week only if they don't overlap with paid time
 - Can't delete unpaid time entries for the previous week if doing so can change overtime calculations for the current week's paid time

After an employee's time entries for the current week are approved and included in the next payroll batch, both employees and administrators have limited ability to add or change time entries for the previous week.

As a best practice, employees should always ensure that entries from the previous week are approved before entering time for the current week. To effectively manage employee time entries, see [Best Practices and Limitations of Enhanced Timesheets Using WFM](#).

Best Practices and Limitations of Enhanced Timesheets Using WFM

Know more about the best practices and limitations when using the feature.

Best Practices for Entering Payroll Hours

When entering payroll hours, keep these in mind:

- Approved time entries from the previous week may be used to calculate overtime for the following week. Before adding time entries for the week, ensure that entries from the previous week are approved. See [Automated Calculations with Enhanced Timesheets Using WFM](#).
- Before entering time, ensure that you're using the correct payroll item type that your supervisor, payroll manager, or administrator provided.
- Ensure that there are no overlapping hours across your entries for the week.
- Ensure that new or updated entries wouldn't overlap nor change overtime calculations of paid time for current or previous weeks.
- Before saving your entry, verify that the details are correct and complete. After an entry is approved, only employees with the Administrator role can update them.

For more information about entering time with the feature, see [Entering Time in Enhanced Timesheets Using WFM](#).

Best Practices for Approving Hours

When approving hours, verify time entries before approving. Approved time entries for employees included in the next payroll batch are considered paid. Administrators can no longer edit or delete these entries.

For more information, see [Approving Hours in Enhanced Timesheets Using WFM](#).

Limitations

The following are known limitations.

- Overtime Calculations
 - Overtime calculations are currently available only with time entered on the New Weekly Timesheet interface.
 - Overtime calculations apply only when time entries do not go over the next day. Shifts that cross over to the next day should be divided into two different entries.
 - Overtime calculations are currently unavailable for time entries allocated across multiple projects. This limitation includes entries added using **SuiteProjects** or **SuiteProjects Pro**.
 - Overtime calculations are currently unavailable for time on events, tasks, or calls that were added using the **Time Tracking for CRM** feature.
- Payroll

The feature can only be used with SuitePeople U.S. Payroll. Use with third-party payroll systems is currently unavailable
- CSV File Import

When importing employee timesheets with a CSV file, you won't be able to provide specific shift and break times. The feature can only map the duration and other employee details. For more information, see [Using Enhanced Timesheets with CSV File Import](#).
- WFM Features
 - The feature provides timesheet enhancements only in weekly timesheets. Managing timesheets using WFM features, such as approvals, reporting, and attestation is currently unavailable.
 - The feature can't be used with dashboard widgets in WFM.

Setting Up Enhanced Timesheets Using WFM

This topic explains how employees with the Administrator role can set up the feature.

Follow the steps in the table.

Step	Related Help Topic
1. Log in as an Administrator.	Roles and Accounts
2. Complete the prerequisites.	Prerequisites of Enhanced Timesheets Using WFM
3. Map time bill fields.	Mapping Time Bill Fields for Enhanced Timesheets Using WFM
4. Enable the feature.	Enabling Enhanced Timesheets Using WFM
5. Assign custom role permissions.	Granting Permissions for Enhanced Timesheets Using WFM
6. Configure options for employees.	Configuring Enhanced Timesheets Using WFM

Step	Related Help Topic
7. (Optional) Disable the feature.	Disabling Enhanced Timesheets Using WFM

Prerequisites of Enhanced Timesheets Using WFM

Before you enable the feature, note the following prerequisites.

Prerequisite	Action
The New Weekly Timesheets Interface feature must be enabled in your account.	In NetSuite, enable the feature. See the help topic Weekly Timesheet .
SuitePeople Workforce Management and SuitePeople U.S. Payroll must be part of your implementation.	To learn more, contact your NetSuite account manager. See the following topics: ■ SuitePeople Workforce Management ■ SuitePeople U.S. Payroll
 Important: The Enhanced Timesheets Using Workforce Management Wage Rules feature is not available for integration with third-party payroll systems.	
The SuitePeople Workforce Management (WFM) SuiteApp must be installed in the account.	Install the SuiteApp. See Installing Workforce Management .
WFM is properly integrated in your NetSuite account. This includes ensuring the proper linking of records, fields, and employees.	In WFM, do the following: ■ Import and sync employees. See: □ Importing Employees to WFM □ Employee Sync Settings ■ Verify payroll settings. See: □ Linking Payroll Items in WFM □ Managing Wages for WFM Employees □ Managing Conditions and Rules ■ Verify any other applicable NetSuite integration settings. See Integrating Workforce Management with NetSuite. ■ Map time bill records. See Mapping Time Bill Fields for Enhanced Timesheets Using WFM.

To read about the complete setup instructions for the feature, see [Setting Up Enhanced Timesheets Using WFM](#).

Mapping Time Bill Fields for Enhanced Timesheets Using WFM

In Workforce Management, ensure that you map the NetSuite time bill records with the corresponding locations and jobs in WFM.

To map the time bill fields for the feature:

1. Go to Workforce Management.
2. Go to Setup > NetSuite Integration > Settings.
3. Click the **Records** subtab.
4. Beside the **Timebill** record, click **Fields**.

5. Create a field to map the WFM location to the time bill record.
 - a. Beside the **Location** record, click **Edit**. Note the existing record type and field name.
 - b. Click **Create new field**.
 - In the **Record type** field, enter the current type of the Location record.
 - In the **Field name** field, enter the current type of the Location record.
 - From the **Purpose** list, under Enhanced Timesheets Using Workforce Management Wage Rules, select **Mapping to Location**.
 - c. Click **Submit**.
6. Create a field to map the WFM job to the time bill record.
 - a. Beside the **Job** record, click **Edit**. Note the existing record type and field name.
 - b. Click **Create new field**.
 - In the **Record type** field, enter the current type of the Job record.
 - In the **Field name** field, enter the current type of the Job record.
 - From the **Purpose** list, under Enhanced Timesheets Using Workforce Management Wage Rules, select **Mapping to Job**.
 - c. Click **Submit**.

To read about the complete setup instructions for the feature, see [Setting Up Enhanced Timesheets Using WFM](#).

Enabling Enhanced Timesheets Using WFM

If you have the Administrator role, you can enable the feature required to view an enhanced weekly timesheets interface using Workforce Management (WFM). If you don't have the role, reach out to the person in your company who manages NetSuite.

To enable the feature:

1. Go to Setup > Company > Enable Features.
2. On the **Employees** subtab, go to **Time & Expenses**.
3. Check the **Enhanced Timesheets Using Workforce Management Wage Rules** box.
4. Click **Save**.

To read about the complete setup instructions for the feature, see [Setting Up Enhanced Timesheets Using WFM](#).

Granting Permissions for Enhanced Timesheets Using WFM

Review the procedures in this topic to provide the appropriate permissions to custom roles.

Granting Permissions for Viewing Enhanced Timesheets

If you want to ensure that custom permissions can access the enhanced weekly timesheets with overtime calculations, follow the procedure.

To grant permissions for viewing enhanced timesheets:

1. Go to Setup > Users/Roles > User Management > Manage Roles (Administrator).

2. On the Manage Roles list page, beside the role that needs the permissions, click **Customize**.
3. On the **Permissions** subtab, click the **Transactions** subtab.
4. From the **Permissions** list, select **Track Time**.
5. In the corresponding **Level** column, select **View** or any higher level of permission.
6. Click **Add**. Click **Save**.

Granting Permissions for Setting Feature Preferences

You can assign feature permissions to custom roles to allow employees in non-administrative roles to set feature preferences.

Feature permissions are only available for roles that are assigned the Accounting or Classic center types.

Important: Important: The following procedure assigns full level Accounting Preferences permission to custom roles. It allows the role access to multiple other features, such as intercompany preferences. Assign this role only to the right employees.

To grant permissions for setting feature preferences:

1. Go to Setup > Users/Roles > User Management > Manage Roles (Administrator).
2. On the Manage Roles list page, beside the role that needs the permissions, click **Customize**.
3. On the **Permissions** subtab, click the Setup subtab.
4. From the **Permissions** list, select **Accounting Preferences**.
5. In the corresponding **Level** column, select **Full**.
6. Click **Add**. Click **Save**.

To read about the complete setup instructions for the feature, see [Setting Up Enhanced Timesheets Using WFM](#).

Configuring Enhanced Timesheets Using WFM

After Enhanced Timesheets Using Workforce Management Wage Rules is enabled, the following general configuration options are available.

General Use Case	Configuration	Changes on Timesheets
Most employees have different work schedules	Require employees to enter work and break times	On the time entry window for each day, employees must enter shift and break times
Most employees have the same work schedule	Set default shift and break times	On the time entry window for each day: - For shifts that follow the default times, employees only need to enter the number of hours worked - For shifts that differ from the default times, employees can enter their actual shift and break times

The person in your company who manages Workforce Management (WFM) and NetSuite, such as a manager or bookkeeper, can adjust these configurations.

To configure enhanced timesheets using WFM:

1. Go to Setup > Accounting > Accounting Preferences.
2. On the **Time & Expenses** subtab, go to **Time Tracking**.
3. Choose the use case that applies to your organization.
 - a. If most employees have different schedules, you may require employees to enter shift and break times. If you choose this option, you cannot enter default shift and break times. See **Step 4**.
 - b. If most employees have the same schedule, you may set default shift and break times. See **Step 5**.
4. If you want to require employees to enter shift and break times, check the **Require Employees to Enter Shift Start and End Times on Timesheets** box.

When you check the box, the entries for default shift and break times are disabled.

Important: This requirement will only be enforced for time entries that may require overtime calculation. Time entries that logically don't qualify for overtime, such as time-offs, are not included.

5. If you want to set default shift and break times:
 - a. Clear the **Require Employees to Enter Shift Start and End Times on Timesheets** box.
 - b. In the **Default Shift Start Time** field, enter the default time when the employee shift starts. This time is used to calculate the cost of the shift when employees are not required to enter their shift start time.
 - c. (Optional) If you do not need to set default break preferences, check the **Disable Break** box. When this field is checked, the **Default Hours Worked Before Break and Default Break Duration in Hours** fields are both set to 0. If needed, employees can still enter their actual break times to override this default.
 - d. In the **Default Hours Worked Before Break** field, enter the default number of hours that an employee has to work before they are required to take a break during their shift. Enter a value greater than 0 but less than 24 in decimal (4.5) or hour and minute (4:30) format.
 - e. In the **Default Break Duration in Hours** field, enter the default length of the breaks that an employee should take after they have worked the prescribed number of hours during their shift. Enter a value greater than 0 but less than 24 in decimal (1.5) or hour and minute (1:30) format.
6. Click **Save**.

To read about the complete setup instructions for the feature, see [Setting Up Enhanced Timesheets Using WFM](#).

Disabling Enhanced Timesheets Using WFM

If you need to uninstall the SuitePeople WFM SuiteApp after enabling this feature, disable this feature first.

Expect the following changes when you disable the feature:

- WFM will stop calculating overtime hours in timesheets.
- Time entries with overtime hours must be manually changed to differentiate between regular and overtime hours. For more information, see [Editing Time Entries After Disabling Enhanced Timesheets Using WFM](#).

- For approved time entries, only employees who have the Administrator role can make these changes.
- For unapproved time entries, employees with or without the Administrator role can make the changes.

Editing Time Entries After Disabling Enhanced Timesheets Using WFM

If you disabled the Enhanced Timesheets Using Workforce Management Wage Rules feature, you must manually change submitted time entries to differentiate between regular and overtime hours.

When editing time entries, note the expected changes and expectations mentioned at the start of this topic.

To resolve the entries, you may choose to do either of the following:

- Edit an existing time entry to represent only the regular hours, then create an additional time entry for the overtime hours.
- Delete the existing time entry. Create two new time entries for the regular and overtime hours.

See the following example:

An employee worked for 11 hours during their shift. They worked for 8 hours as part of their regular shift then had to extend for 3 hours overtime.

While the feature was turned on, the employee submitted an entry for those hours using weekly timesheets. Because the feature automatically calculates overtime hours, they submitted only one entry for 11 hours.

Their manager approved the entry. The company disables the feature. Because the entry was approved, an administrator must manually process the employee's entry to differentiate regular and overtime hours.

They can choose to do either of the following:

- Edit the employee's time entry to show only 8 hours of regular work. Then, create a new time entry to show 3 hours of overtime.
- Delete the single time entry showing 11 hours of work. Then, create two new entries, one for 8 hours of regular work and one for 3 hours of overtime.

To read about the complete setup instructions for the feature, see [Setting Up Enhanced Timesheets Using WFM](#).

Entering Time in Enhanced Timesheets Using WFM

This topic explains how employees can use the weekly timesheets with the Workforce Management (WFM) SuiteApp and the Enhanced Timesheets Using Workforce Management Wage Rules feature.

To ensure that you're following the correct procedure, check with the person in your company who manages NetSuite and WFM. For more information, see the following help topics:

- If you use weekly timesheets without the WFM SuiteApp and the enhanced timesheets feature, see [Weekly Timesheets](#).
- If you use weekly timesheets with WFM and FSM SuiteApps without the enhanced timesheets feature, see [Tracking Weekly Timesheets with WFM and FSM Hours](#).

Before you start entering time with the feature enabled, note the follow guidelines:

- To see best practices when using the feature, see [Best Practices and Limitations of Enhanced Timesheets Using WFM](#).
- To understand the conditions around paid time entries, see [Paid Time Processing](#).

As an employee, complete the following procedure to enter time in weekly timesheets with the feature enabled.

Administrators may also opt to upload CSV files containing employee time. For more information, see [Using Enhanced Timesheets with CSV File Import](#).

Important: To avoid errors, complete the fields as instructed in the procedure. For instance, if you miss adding a location, the page is unable to calculate for overtime and show the hours breakdown.

To enter time in weekly timesheets:

1. Open Weekly Timesheets.
 - On the Employee Center, go to the **Home Links** portlet. Under **Time Tracking**, click **Weekly Timesheet**.
 - With an Administrator role, go to Transactions > Employees > Weekly Time Tracking.
 - With an Administrator role, go to Transactions > Employees > Weekly Timesheet.
2. In the **Primary Information** section, in the **Week of** field, enter the first day of the week you want to track time for, or click the calendar icon to choose a date.
The page loads a new or existing timesheet.
3. In the **Enter Time** section, complete the required information.
 - a. From the **Payroll Item** list, select the payroll type that applies to the entry. To ensure automatic overtime calculations, select the correct payroll item type that your supervisor, payroll manager, or administrator provided.
 - b. From the **Location** list, select the location where you worked.
 - c. Complete the other columns as prescribed by your company. For more information about filling up the columns, see [Weekly Timesheets](#).
4. For each day of the week, enter your payroll hours.
 - a. If your company requires you to enter shift and break times, click the day of the week. Enter values for the following fields:
 - Shift Start Time
 - Shift End Time
 - Break Start Time
 - Break End Time
 - (Optional) Memo

The total number of hours shown for the day is calculated by subtracting the length of the break from the length of the shift.
 - b. If your company has set up default shift values, you are not required to fill in each field mentioned. Instead, enter the number of hours you worked for the day.
However, if your actual hours are different from the default values, enter the correct times in the fields.

Important: The feature does not calculate overtime for time entries in the following scenarios:

- Entries that go over the next day
- Entries allocated across multiple projects, including entries adding using **SuiteProjects** or **SuiteProjects Pro**
- Initial entries added using the **Time Tracking for CRM** feature

For more information about feature limitations, see [Best Practices and Limitations of Enhanced Timesheets Using WFM](#).

5. Review the **Hours Breakdown** section. When you enter your hours for each day, this section automatically displays time entries color-coded to distinguish between regular and overtime hours.
6. On the **Current Week** section, review the total hours for regular and overtime work.

Important: To keep your timesheets accurate and avoid errors, ensure that there are no overlapping hours across your entries for the week. Entries you add shouldn't overlap nor change overtime calculations of paid time for current or previous weeks.

7. Click **Save**.

The timesheet is sent over to your manager for approval. On the **Primary Information** section, the status on the **Approval Status** field shows as **Pending Approval**.

Using Enhanced Timesheets with CSV File Import

As an Administrator, you can upload CSV files to import employee time.

To import CSV records, prepare the CSV file. Refer to the following table for the sample format.

Date	Employee	Payroll Item	Duration	Location
7/13/2025	John Adams	Wage	10:00	Warehouse - East Coast
7/14/2025	John Adams	Wage	12:00	Warehouse - East Coast
7/15/2025	John Adams	Wage	14:00	Warehouse - East Coast

After preparing the file, complete the procedure.

To use enhanced timesheets with CSV files import:

1. Go to Setup > Import/Export > Import Tasks > Import CSV Records.
The Import Assistant opens.
2. On the Scan & Upload File page, update the following fields.
 - **Import Type** – Employees
 - **Record Type** – Track Time
3. On the **CSV File(s)** section, choose **One File to Upload**.

4. Click **Select**, then find the CSV file you prepared. Click **Next**.
5. On the Import Options page, on the **Data Handling** section, choose your preferred handling. Click **Next**.
6. On the Field Mapping page, verify that your fields are mapped to NetSuite fields as shown in the following table. Click **Next**.

Your Fields	NetSuite Fields
Date	Time: Date
Employee	Time: Employee
Payroll Item	Time: Payroll Item
Duration	Time: Duration
Location	Time: Location

For more information, see the help topic [Step Four Field Mapping](#).

7. In the Save mapping & Start Import page, complete the required fields. For more information, see the help topic [Step Five Save Mapping & Start Import](#).
8. Click the save or run button corresponding to your desired option.

Approving Hours in Enhanced Timesheets Using WFM

This topic explains how managers, administrators, and other configured roles can approve time entries that employees submitted.

Using SuitePeople U.S. Payroll and Workforce Management, approved time entries are used to process payroll for employees.

Approved entries can only be edited by employees with the Administrator role. Regular employee roles can edit entries only if they're not yet approved.

Approved time entries for employees included in the next payroll batch are considered paid. Administrators can no longer edit or delete these entries.

Keep best practices in mind when approving hours. For more information, see [Best Practices and Limitations of Enhanced Timesheets Using WFM](#).

You can approve time through the following options:

- **Use the Approve Time page** – For more information, see [Approving or Rejecting a Time Transaction](#).
- **Use the Weekly Timesheets page** – You should approve time on this page because doing so shows you the visual breakdown of regular and overtime hours for the submitted timesheet. Refer to the procedure that follows.

To approve payroll hours using weekly timesheets:

1. Open the Approve Timesheets page.
 - With an Administrator role, go to Transactions > Employees > Weekly Time Tracking.
 - On the Employee Center, go to the **Home Links** portlet. Under **Time Tracking**, click **Approve Time**.
2. On the Approve Timesheets page, locate the name of the employee whose time you want to approve.

3. From the **Period** column, click the specific pay period you want to review.
The submitted timesheet opens.
4. Review the **Hours Breakdown** section. This section automatically displays time entries color-coded to distinguish between regular and overtime hours.
5. On the **Current Week** section, review the total hours for regular and overtime work.
6. On the **Enter Time** section, choose to approve time entries one at a time or all at once.
 - To approve all pending work hours, click Approve All Pending.
 - To approve individual time entries, click the entry for the day. Click Approve.

Tracking Weekly Timesheets with WFM and FSM Hours

To help you accurately track employee hours, weekly timesheets contain added features when used with Workforce Management (WFM) and Field Service Management (FSM).

If you're using WFM with the Enhanced Timesheets Using Workforce Management Wage Rules feature, see [Enhanced Timesheets Using WFM Wage Rules](#).

Weekly Timesheets Features with WFM and FSM

When used with both the WFM and FSM SuiteApps, the Weekly Timesheets page shows the following changes:

- On the **Enter Time** subtab, on both **Edit** and **View** modes, the row showing the daily total hours under the table header is removed.
- On the same subtab, on **View** mode, the removed row is replaced with the following totals appearing at the end of the list:
 - **Service Hours Total** – Shows the total number of hours of field service time sourced from FSM and other sources for each day of the week.
 - **WFM Payroll Hours Total** – Shows the total number of payroll hours sourced only from WFM, which are checked in the **Created by SuitePeople WFM** column, for each day of the week.

To view total WFM and FSM hours, open the Weekly Timesheets page. For more information, see [Weekly Timesheets](#).

Guidelines for Tracking WFM and FSM Hours on Weekly Timesheets

If you're tracking weekly hours on weekly timesheets and use both WFM and FSM, review the following guidelines:

- If you're entering hours in WFM, avoid adding hours manually on weekly timesheets. To ensure that the total calculations can accurately represent the time employees worked, enter hours in WFM and only view the total hours in weekly timesheets.
- Use the FSM mobile application to log field service hours. This ensures you capture accurate and complete service time records.
- The **Created by SuitePeople WFM** column on weekly timesheets is available by default when you have WFM installed. This column is checked when the line item is sourced from WFM. Checked items count toward the **WFM Payroll Hours Total** row.

If the column doesn't appear, you can check that the custom entry form for time tracking is set properly. For more information, see [Setting Custom Forms to Show WFM Payroll Hours](#).

Setting Custom Forms to Show WFM Payroll Hours

When you install the Workforce Management (WFM) SuiteApp, the Created by SuitePeople WFM column becomes available by default, including on weekly timesheets.

If the column doesn't appear, you can check that the custom entry form for time tracking is set properly.

 **Warning:** The **Created by SuitePeople WFM** field is a component used across WFM to calculate total payroll hours accurately. For records coming from WFM, ensure that the **Show** box is always checked.

Don't clear the box. If you clear the box, the WFM Payroll Hours Total count won't be available in weekly timesheets.

You don't need to verify this box for records coming from FSM.

To set custom entry forms to show WFM hours:

1. Open the custom form used for tracking time. For more information, go to [Creating Custom Entry and Transaction Forms](#)
2. On the Custom Entry Form page, click the **Fields** subtab.
3. Beside the **Created by SuitePeople WFM** field, check the **Show** box.
4. Click **Save**.

SuitePeople Workforce Management Phone App

WFM Phone App

 **Important:** Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

Employees can view their shifts and receive shift notifications in the SuitePeople Workforce Management phone app. The app is called **NetSuite Workforce Management** in the App Store for iOS and the Google Play store for Android.

In the SuitePeople Workforce Management phone app, employees can do the following:

- Receive notifications when their scheduled shifts are published or changed
- View their own published scheduled shifts
- View other published scheduled shifts at locations they work at
- Receive notifications for open shift trades

If employees have additional features enabled in their account, they can do the following:

- Clock in and clock out in mobile timesheets
- Request a shift drop
- Request a shift swap
- Confirm scheduled shifts
- View approved shifts
- Accept or dispute approved shifts

In the SuitePeople Workforce Management phone app, managers can do the following:

- Receive notifications when their scheduled shifts are published or changed
- View their own published scheduled shifts
- View other published scheduled shifts at locations they work at
- Receive notifications for open shift trades
- Manage employee shift trades and notify affected employees
- Initiate and manage a fill shift request

If managers have additional features enabled in their account, they can do the following:

- Clock in and clock out in mobile timesheets
- Request a shift drop
- Review and manage shift drop requests
- Request a shift swap
- Review and manage shift swap requests
- Confirm scheduled shifts

For more information about SuitePeople Time Clock, see the following topics:

- [Quick Start Guide for Employees](#)
- [Quick Start Guide for Managers](#)
- [Viewing Shifts](#)
- [Filling Shifts](#)
- [Dropping Shifts](#)
- [Swapping Shifts](#)
- [Viewing Approved Hours in the SuitePeople Workforce Management Phone App](#)
- [Attestation](#)
- [Checking that the SuitePeople Workforce Management phone app is up to date](#)
- [Offline Mode](#)
- [Shift Confirmation](#)
- [Paid Rest Breaks for the SuitePeople Workforce Management Phone App](#)

Minimum Requirements for WFM Mobile Apps

Following are the minimum requirements for mobile devices to run **NetSuite Workforce Management** apps.

Requirement Type	Details	Related Link
Hardware Requirements	- Global Positioning System (GPS) - Front-facing and rear-facing cameras with autofocus	—
Software Requirements	- Android version 12.0 or later  Important: As of February 18, 2025, support ends for SuitePeople Workforce Management Time Clock and SuitePeople Workforce Management mobile applications on Android 11 and earlier versions. For more information, see SuitePeople Workforce Management on Unsupported Android Devices. - iPad OS version 13 or later	NetSuite Workforce Management for Android NetSuite Workforce Management for iOS

Quick Start Guide for Employees

 **Important:** Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

To log into the SuitePeople Workforce Management phone app, use the same login information you use to log into SuitePeople Workforce Management online.

Navigating the SuitePeople Workforce Management Phone App

After you log in, the SuitePeople Workforce Management app shows you all the published shifts for today.

You can filter by location or show only your shifts on one page.

The dates show each day of the month and week. You can move forward or back and pick any day you want to see shifts for. Click the **Today** button to jump to the current day.

In the navigation bar, you'll see the time clock if your company and location have it turned on.

To view your shifts:

1. Click the icon on the top right of **Scheduled Shifts**.

2. Select **Only My Shifts**.

Notifications

A number icon appears on your profile tab if you have notifications. To view them, click on the profile tab and then the number icon at the top right.

If any changes are made to the schedule during the week, you'll receive a notification for them. Greyed out shifts means you're not working them. When your manager publishes the schedule again, your shifts will appear in black.

You will also receive notifications for any open shift trades, as well as if you are late for your shift or need to clock in.

For information about the quick start guide for managers, see [Quick Start Guide for Managers](#).

Quick Start Guide for Managers

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

To log into the SuitePeople Workforce Management phone app, use the same login information you use to log into SuitePeople Workforce Management online.

For more information about the quick start guide for managers, see the following topics:

- [Navigating the SuitePeople Workforce Management Phone App](#)
- [Viewing Employees' Clock-in and Clock-out Events](#)
- [Mobile Time and Attendance](#)

Navigating the SuitePeople Workforce Management Phone App

After you log in, the SuitePeople Workforce Management app shows you all the published shifts for today.

You can filter by location, or show only your shifts on one page.

The dates show each day of the month and week. You can move forward or back and select any day you want to see shifts for. Click the **Today** button to jump to the current day.

In the navigation bar, you'll see the time clock if your company and location have it turned on.

Viewing Employees' Clock-in and Clock-out Events

If an employee hasn't clocked in at the start of their shift, you'll get a notification. In the Shifts view, you'll see a red exclamation point and a note showing how many minutes late they are.

When an employee clocks in, a clock icon shows up next to their shift. The clock-in time appears in black, and the scheduled finish time shows up in grey.

When the employee clocks out, the clock-out time appears in black and replaces the scheduled finish time. These times stay visible for 15 hours, then go back to showing the scheduled times.

Mobile Time and Attendance

If Mobile Time and Attendance is activated for your account, employees see **Time Clock** on the bottom menu bar.

When an employee clocks in, the Time Clock shows their next shift as an option to clock in to. If that's the shift they've come in for, they can tap **Punch-In**. If they've been called in for an unscheduled shift or need to work at a different job or location, they can tap **Change** to pick the new location or job.

If they're clocking in manually, employees see a list of locations they can clock in to. They just select a location and click **Next**.

Employees will then select a job from a list of eligible jobs for this location and then select **Punch-In**.

They'll see the following after they've successfully clocked in:

- The current date and time
- The **At Location** option or the **Away from location** option
- The location and job of the clocked in shift
- The **Start Break** option
- The **Punch Out** option

At Location means the employee clocked in within 50 meters of the job site's address. You can check this during approvals by clicking the employee's timesheet shift in Weekly View. **Away from Location** means they clocked in off site, based on the address set in SuitePeople Workforce Management.

When employees take an unpaid break, they can click **Start Break** in the app. When they're ready to return, they click **Finish Break** to end the break and start the next part of their shift.

For information about the quick start guide for employees, see [Quick Start Guide for Employees](#).

Viewing Shifts

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

When you're logged in, you'll land on a page that shows all today's published shifts and includes:

- Clicking the icon at the top right displays different options for viewing shifts. For example, you can filter by location, or view only your shifts.

- The dates show each date of the month and week. You can select any days you want to view shifts for and click the **Today** button to return to the current day.
- The navigation bar is located at the bottom of the app. You'll only see Time Clock if your company and locations have it set up. The tabs from left to right are: published shifts, Time Clock (if set up), trades, notifications, and your profile.
- A list of published shifts.

For information about filling shifts, see [Filling Shifts](#).

For information about dropping shifts, see [Dropping Shifts](#).

For more information about swapping shifts, see [Swapping Shifts](#).

Viewing Employee Clock-in and Clock-out Events

As a manager, you'll get a notification if an employee's shift starts and they haven't clocked in yet.

If employees are late to clock in, the app shows you how late they are with the minutes in red and an exclamation point next to their shift.

When they're clocked in, a clock icon appears next to their shift. The clock-in time appears in black and replaces their scheduled start time, and the scheduled finish time appears in grey.

When the employee clocks out, the clock-out time appears in black and replaces the scheduled finish time. These punch times stay visible for 15 hours, then return to showing the scheduled times.

Filling Shifts

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

When employees can't make it to their shifts, managers can fill shifts quickly in the SuitePeople Workforce Management phone app.

To fill a shift from the SuitePeople Workforce Management phone app, a manager can click on the scheduled shift they want to fill then click the **Fill** button. From here, they'll see anyone else who can work that job at that location, along with any associated cost difference for filling that shift.

The manager can click on employees to notify them and ask if they can fill the shift, or assign it directly.

Instead of notifying individuals, the manager can notify everyone by clicking the **+** button at the bottom right. The manager will receive notifications when employees offer to pick up the shift and can choose who to assign it to.

For information about viewing shifts, see [Viewing Shifts](#)

For information about dropping shifts, see [Dropping Shifts](#).

For more information about swapping shifts, see [Swapping Shifts](#).

Dropping Shifts

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

If the **Drop Shifts** feature is enabled in your account, employees can start a drop shift request in the app if they can't make their shift.

To drop a shift, the employee selects their scheduled shift in the app and selects **Drop**. They'll be asked to enter a reason and told the shift is still theirs until the manager approves the drop. After entering the reason, they click **Request**.

The manager then receives a trade notification in the app. They can review the reason and either deny the request by clicking **No** or pre-approve the drop and find a fill-in by clicking **Fill**.

Note: By default, the **Drop Pre-Approval** feature is enabled. If this feature is off, managers don't need to approve the dropped shift. The dropped shift will automatically send a request to all available employees. When someone picks up the shift, the manager will be notified to approve or deny the change. You can change this by going to **Setup > Adi phone app**.

For information about viewing shifts, see [Viewing Shifts](#)

For information about filling shifts, see [Filling Shifts](#).

For more information about swapping shifts, see [Swapping Shifts](#).

Swapping Shifts

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

To start a shift swap, the employee selects their scheduled shift in the app and clicks **Swap**. They'll be asked to enter a reason and told the shift is still theirs until the manager approves the swap.

After entering a reason, they click **Request**. Then, employees who can work that job at that location are notified in the app. If someone wants to offer a shift to swap, they click the trade notification and the swap icon to offer a shift in return.

The employee selects the shifts they want to offer and then clicks **Offer**. The original employee receives notifications in the app when others make swap offers. They can click the Trade icon to see their open trades and click the number tag to see swap options.

After looking over the options, they select the shift swap they want to accept and click **Accept**. When the swap is accepted, the manager receives a notification in the app. They can see the proposed swap, any cost difference, and the reason for the swap, then approve it by clicking **Yes** or deny it by clicking **No**.

If denied, the employee is notified and can choose to pick up a different shift. The manager will receive a new notification to approve or deny the next swap request.

For information about viewing shifts, see [Viewing Shifts](#)

For information about filling shifts, see [Filling Shifts](#).

For information about dropping shifts, see [Dropping Shifts](#).

Viewing Approved Hours in the SuitePeople Workforce Management Phone App

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

Employees can see their worked shifts that have been approved by their manager in the SuitePeople Workforce Management phone app. They can use the **Attestation** feature to accept or dispute approved hours.

To view approved hours:

1. Open the SuitePeople Workforce Management phone app. The **Scheduled Shifts** screen is displayed by default.
2. If your manager approved your shifts, a red notification badge appears on the **Shifts** icon. You'll also receive a notification to your general notifications folder in your profile. Click on the Shifts tab.
3. Select the **Shifts** tab.
4. Click **Approved Hours** in the upper right-hand corner.

To compare approved hours to your timesheet and scheduled shift, click the chevron arrow icon. The following screenshot shows this view:

Attestation

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

The **Attestation** feature allows employees to accept or dispute their approved hours with their manager.

To enable the Attestation feature, contact your account manager.

Navigating to the Attestation feature in the SuitePeople Workforce Management Phone App

1. When your manager approves your shifts, you'll see a red badge on the Shifts icon in the lower left corner. This means you have shifts that need to be attested.
2. Click on the Shifts tab then Approved Hours in the upper right-hand side.

Note: The red notification badge will have a number associated with it. This informs you about how many shifts that need to be attested by you.

3. After you click Approved Hours, the approved shifts you need to accept or dispute will load. These are the shifts your manager approved in the weekly schedule view.
 - To view more details about a shift or to compare it against your timesheet and scheduled shifts, click the chevron arrow icon to expand the details about the shift.

Navigating to the Attestation Feature on SuitePeople Time Clock for Android and iOS tablets

1. Enter your PIN to log into SuitePeople Time Clock.
2. Click the **Shifts** icon to view your approved shifts.

Note: If there's a red notification badge on the **Shifts** icon, it tells you how many approved shifts are waiting to be attested.

3. To view more details about a shift, click the arrow icon. This shows the related timesheet and scheduled shift.

For more information about attestation, see the following topics:

- [Attesting Approved Shifts](#)
- [Preventing Clock-in Events with Attestation](#)
- [Attestation Feature in SuitePeople Time Clock](#)
- [Attestation Feature in the SuitePeople Workforce Management phone app](#)

Attesting Approved Shifts

Employees can accept or dispute approved shifts by starting a chat with their manager. Attesting approved shifts works the same way in both the SuitePeople Workforce Management phone app and SuitePeople Time Clock for iOS and Android tablet.

Accepting an Approved Shift

To accept the approved shift, click **Accept**. The dollar sign icon on the shift will turn green.

After the employee accepts their approved shift, a green checkmark icon appears on that shift in the weekly schedule view.

Disputing an Approved Shift

To dispute an approved shift, click **Dispute**.

After the employee enters a reason for the dispute and clicks **Create**, a chat with your manager opens and your reason is shown.

A dispute appears as a red approved shift in the weekly schedule view.

The manager can click **View Disputes** in the right corner of weekly schedule view to view disputed shifts.

Preventing Clock-in Events with Attestation

With this advanced Attestation feature, employees have to accept or dispute all approved shifts before they can clock in. This makes sure everyone knows their approved hours so any issues can be fixed before the next payroll run.

Attestation Feature in SuitePeople Time Clock

To use the Attestation feature in SuitePeople Time Clock as an employee:

1. Enter your PIN code to log into SuitePeople Time Clock.
2. SuitePeople Time Clock determines there's a required attestation
3. A screen lets you know that an attestation is required.
4. Click **Resolve**.
5. Accept or dispute the shift in the **Approved Shifts** tab.
6. Select the Time Clock icon to clock in successfully.

For information about the Attestation feature in the SuitePeople Workforce Management phone app, see [Attestation Feature in the SuitePeople Workforce Management phone app](#).

Attestation Feature in the SuitePeople Workforce Management phone app

To use the Attestation feature in the SuitePeople Workforce Management phone app as an employee:

1. Open the app and select the Time Clock icon.
2. SuitePeople Workforce Management determines that there is an attestation action required.
3. A screen alerts you that there is an attestation action required.

4. Click **Resolve**.
5. Accept or dispute the shift in the **Approved Shifts** tab.
6. Select the Time Clock icon to clock in successfully.

For information about the Attestation feature in SuitePeople Time Clock, see [Attestation Feature in SuitePeople Time Clock](#).

Checking that the SuitePeople Workforce Management phone app is up to date

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

Sometimes, the SuitePeople Workforce Management (WFM) phone app gets small tweaks or updates that just need you to reload the app instead of doing a full update.

Guidelines for SuitePeople WFM App Updates

Read the guidelines before updating your SuitePeople WFM phone app.

- Refer to the changed names when updating apps.
 - Adiclock is called SuitePeople Time Clock.
 - In the iOS App Store and Google Play Store, SuitePeople Time Clock is called **NetSuite Time Clock**.
- Before updating your WFM apps, ensure that any time punches captured while your device was offline are completely synced with the SuitePeople WFM system.

For more information, see [Syncing Time Punches Captured Offline](#).

Syncing Time Punches Captured Offline

When you're planning to upgrade your WFM apps, first ensure all time punches are synced with the SuitePeople WFM system.

To sync time punches captured offline

1. Before an upcoming upgrade release, turn off automatic updates on your mobile devices.
2. After the upgrade release, complete the following steps.
 - a. Connect your mobile device to a cellular or Wi-Fi connection.
 - b. Open the SuitePeople Workforce Management or SuitePeople Time Clock mobile app.
The app will automatically sync with WFM servers and ensure all employee time are saved, including any recorded while the device was offline.

- c. Download the latest version of the app from the Apple App Store or Google Play Store.
- d. Turn on automatic updates.
- e. Repeat steps A to D for each app.

Checking for app updates

There are two ways to check if your version of the NetSuite Workforce Management phone app is up to date:

- Check for updates in the SuitePeople Workforce Management phone app
- Check for updates in the Google Play Store and the iOS App Store

To check for updates in the SuitePeople Workforce Management phone app:

1. Enter your username and password to log in.
2. Click the **Profile** tab.

The version number and build is displayed under the device menu section.

To check for updates in the Google Play Store:

1. Open the Google Play Store.
2. Search for **NetSuite Workforce Management** and select it from the list.
3. If an update is available, click **Update**. To check the current version of the app, go to the **Read More** section of the app's description.

To check for updates in the iOS App Store:

1. Open the iOS App Store.
2. Search for **NetSuite Workforce Management** and select it from the list.
3. If an update is available, click **Update**. To check the current version of the app, go to the **What's New** section of the app's description.

Offline Mode

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

If the SuitePeople Workforce Management phone app loses Internet connection, the **Offline** badge will appear above your profile icon.

The following functions are still available without Internet connection:

- Viewing your published shifts
- Clocking in and out of your shifts (if this feature is enabled in your account)

After you restore Internet connection, a red loading badge appears above the time clock icon. This indicates that the app is retrieving and sending data.

Shift Confirmation

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

When you publish your schedule and employees receive their shifts, they need to confirm the shifts they can work if you enable shift confirmation.

To confirm a published shift, the employee clicks the grey arrow next to their shift in the SuitePeople Workforce Management phone app. The grey arrow turns green and a green check mark appears on the scheduled shift in the weekly scheduling view on the manager's end.

Paid Rest Breaks for the SuitePeople Workforce Management Phone App

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

When employees select the **Time Clock** icon, they are taken to the **Time Clock** page.

An employee can start a paid rest break by selecting **Rest**. The app automatically clocks in the employee to their break. If a employee starts an unpaid break, they need to select **Start Break**.

Employees can only take one unpaid break but they can take multiple paid breaks. After the unpaid break is completed, the **Start Break** option is unavailable.

If you have rest breaks enabled and an employee hasn't clocked in for a paid rest break during their shift, the app asks the employee if they've taken a paid rest break.

Answering either **Yes** or **No** will change the message that appears on their timesheet shift in the weekly view.

If the employee selects **No**, their timesheet shift will display a message that says: "Employee has indicated they did not take a Rest Break".

Workforce Management AdiOrg

Important: The AdiOrg feature is available only to accounts where it is already provisioned. It's not included with the current SuitePeople WFM solution.

In Workforce Management (WFM), the AdiOrg feature helps large organizations manage several brands and enables organizations to generate specific reports.

AdiOrg Reports

Refer to the table for the reports available with AdiOrg.

Report	Description
Variance	Lets you sort locations by region and sub-region. It also lets you see your scheduled shifts, actual shifts, the variance of your wage cost, hours worked, sales, units, labor cost percentage, and other KPIs. For more information, see Variance .
Shift	Lets you view rostered or actual shifts from any of your roster units.
Labor	Lets you see a location's worked hours, leave, and total wages broken down by hours, amounts, and rate.
Hourly Breakdown	Lets you view the number of hours worked at a selected location between two chosen dates.

Granting Access to AdiOrg

Access to AdiOrg is managed separately from Workforce Management.

You can grant access to AdiOrg by doing one of the following:

- Grant access to an existing WFM user
- Create a new user

To grant access to an existing WFM user:

1. Go to Workforce Management.
2. Go to AdiOrg > Manage.
3. Select **Create from Adi User**.
4. Select the user you want to give access to and select **Permit access to AdiOrg**.
5. Select the location you want to give them access to.
6. (Optional) Customize the tags assigned to a location.
7. Click **Save**.

The next time the WFM user logs in, they can see a menu item for AdiOrg.

SuitePeople Time Clock

SuitePeople Time Clock is the SuitePeople Workforce Management time and attendance app previously referred to as AdiClock.

The app enables organizations to efficiently measure, record, and manage employee work hours digitally. It is a cloud-based app that syncs employees' clock-in and clock-out times with WFM. During approvals, managers or HR employees can compare employee punch data with their scheduled shifts.

Benefits of SuitePeople Time Clock

Following are some benefits of using the app:

- Employees can clock in and out of shifts directly using an iOS or Android mobile device or a Windows computer.
- Organizations can accurately track employee time. SuitePeople Time Clock automatically records start or end times, breaks, and meal periods. These features reduce manual entry errors and buddy punching.
- Managers and employees experience streamlined calculations for wages and overtime. The app feeds accurate time and attendance data directly into approval processes.
- By accurately tracking work hours and breaks, the app helps organizations comply with labor laws and company attendance policies.
- Managers and HR employees gain real-time visibility into attendance, absences, and labor costs, supporting workforce planning and management.

Device Support for SuitePeople Time Clock

As a bring-your-own-device model, SuitePeople Time Clock can be downloaded on the devices in the table.

Device	App Name	Download Method	Related Help Topic
iOS and Android	NetSuite Time Clock	Official app stores	Minimum Requirements for SuitePeople Time Clock Mobile Apps
Windows	SuitePeople Time Clock	WFM platform	Installing SuitePeople Time Clock Components for Windows

Login Options for SuitePeople Time Clock

Refer to the table for the login options available for supported devices.

Device	PIN Code	Visual Verification	Fingerprint Scanning
iOS and Android	Yes	Yes, as an option after every punch	No

Device	PIN Code	Visual Verification	Fingerprint Scanning
Windows	Yes	No	Yes, as a two-factor authentication method option to prevent buddy punching  Important: To follow the Biometric Information Privacy Act (BIPA), you can't use fingerprint scanning on Windows devices in Illinois. If you're setting up a Windows device there, employees can only punch in with pin codes.

For more information about SuitePeople Time Clock, see the following topics:

- [Minimum Requirements for SuitePeople Time Clock Mobile Apps](#)
- [Setting up SuitePeople Time Clock](#)
- [Troubleshooting SuitePeople Time Clock](#)
- [Updating SuitePeople Time Clock](#)
- [Breaks for SuitePeople Time Clock](#)
- [SuitePeople Time Clock for Windows](#)
- [Timesheets and SuitePeople Time Clock](#)
- [Contract Hours in SuitePeople Time Clock](#)

Minimum Requirements for SuitePeople Time Clock Mobile Apps

The following table shows the minimum requirements for devices to run SuitePeople Time Clock.

Requirement Type	Details	Related Link
Hardware Requirements	■ Global Positioning System (GPS) ■ Front-facing and rear-facing cameras with autofocus	—
Software Requirements	■ Android version 12.0 or later ■ iPad OS version 13 or later	■ NetSuite Time Clock for Android ■ NetSuite Time Clock for iPadOS

Setting up SuitePeople Time Clock

Only certain users can access the setup options for SuitePeople Time Clock. If you think you should have access to this page, consult an employee with an Administrator role.

To set up SuitePeople Time Clock, complete the following procedures:

- [Generating an Activation Code](#)
- [Installing SuitePeople Time Clock](#)
- [Activating a New Device](#)
- [Setting up Employee PIN Codes](#)

- [Preventing Early Punches](#)
- [Preventing Short Breaks](#)

Generating an Activation Code

Generate an activation code for the device where SuitePeople Time Clock will be installed.

You must have a Manager role or higher level of access to generate an activation code.

To generate an activation code:

1. Go to Workforce Management.
2. Go to Setup > Time Clock.
3. Click **New Device**.
4. In the New Device wizard, complete the required fields.
 - **Name and Operating System** – Complete the fields.
 - **Name** – Enter the name you'd like to assign to the new device.
 - **Operating System** – Select the operating system running on the device. Your options are:
 - Android
 - iOS/iPadOS
 - Windows

The available punch-in options depends on the operating system you're setting up.

- **Locations** – From the **Available Choices** panel on the left, select the locations for employees to clock in and out of this device.

If you want to select all locations, click **Choose All**.

To move the chosen locations to the **Chosen Items** panel on the right, click the blue right arrow symbol at the middle of the panels.

If you want to clear your chosen items, click **Clear All**.

Important: To follow the Biometric Information Privacy Act (BIPA), you can't use fingerprint scanning on Windows devices in Illinois. If you're setting up a Windows device there, employees can only punch in with pin codes.

- **Options** – Refer to the table to configure the available punch-in options for each operating system.

Operating System	Available Options
Android and iOS/ iPadOS	Visual Verification – By default, Android and iOS devices lets employees punch in with pin codes only. If you turn this option on, the device takes a photo of each employee after every punch.
Windows	Authenticate by – Select the authentication method available for employees during punch-in. The options are: □ PIN only □ Finger scan only □ PIN or Finger scan □ Two-factor authentication (PIN then Finger scan)

Operating System	Available Options
	 Note: If you are setting up a Windows device in Illinois, your employees can only punch in using a PIN code. Check for updates every – Enter how many minutes (at least 5) you'd like the device to wait before syncing updates from WFM. Time Clock automatically syncs with WFM, so timesheets go through without needing to refresh or wait.

- **Confirm** – Review the device details.

If you choose to capture biometric information with finger scanning, you'll need to agree to the customer responsibilities for biometric or fingerprint features. Check the **Agree** box.

5. Click **Create**.

On the Time Clock page, view the 8-letter activation code for the new device on the **Activation code** column.

You'll use the activation code as the password and your email as the username when you launch SuitePeople Time Clock for the first time.

After you've generated the activation code, install SuitePeople Time Clock on the new device. For more information, see [Installing SuitePeople Time Clock](#).

Installing SuitePeople Time Clock

Install SuitePeople Time Clock on a supported device before you activate it. For more information, see [Minimum Requirements for SuitePeople Time Clock Mobile Apps](#).

To install SuitePeople Time Clock on mobile devices:

1. Go to the designated app store, either the App Store for iOS or iPadOS or Google Play for Android.
2. Search **NetSuite Time Clock**.
3. Install the app.

To install SuitePeople Time Clock on Windows, see [Installing SuitePeople Time Clock Components for Windows](#).

After installing SuitePeople Time Clock, activate the new device. For more information, see [Activating a New Device](#).

Activating a New Device

When you open SuitePeople Time Clock for the first time, you need to activate the device using a previously generated activation code. For more information, see [Generating an Activation Code](#).

To activate a new device:

1. Open the SuitePeople Time Clock app on your device.
2. In the **Username** field, enter your email address.
3. In the **Password** field, enter the unique activation code that was generated for the device.

To find the code, go to Setup > Time Clock. From the **Pending Activation Devices** subtab, locate the device code on the corresponding Activation code column.

4. Click **Register**.

After you successfully activate the device, the clock-in page appears.

For employees at locations registered with the device to start clocking in and out, you'll need to set up employee PIN codes. For more information, see [Setting up Employee PIN Codes](#).

Setting up Employee PIN Codes

WFM assigns randomly generated PIN codes to employees. Employees use PIN codes to log in to SuitePeople Time Clock.

If you're an employee with access to a WFM account, you can find your PIN code when you log in. On the Your Details page, click Access. If you need to change your code, reach out to someone with a Manager role or higher.

If your account has a Manager role or higher level of access, you can set up employee PIN codes.

To set up employee PIN codes:

1. Go to Workforce Management.
2. Go to Setup > Employees > List.
The employee list appears with corresponding PINS on the **Timesheet PIN** column.
3. Click an employee name.
4. On the employee profile, on the lefthand panel, click **Details**.
5. On the AdiClock PIN section, click **Edit**.
6. Choose how you want to set the PIN code.
 - To assign a PIN, enter a unique 6-digit PIN on the **Timesheet pin** field.
 - To let WFM create a PIN, **Click Generate Random PIN**.
7. Click **Save PIN**.

Preventing Early Punches

If you have a Manager role or higher level of access, you can turn on Early Punch Prevention for certain locations to stop employees from punching in before a set time.

To prevent early punches:

1. Go to Workforce Management.
2. Go to Setup > Time Clock.
3. At the top right corner, click **Early Punch Prevention**.
The Early Punch-in Prevention window appears.
4. From the **Filter by** field, select an option to filter locations.
5. From the **Available Choices** panel on the left, select the locations where you want to prevent early punches.

If you want to select all locations, click **Choose All**.

To move the chosen locations to the **Chosen Items** panel on the right, click the blue right arrow symbol at the middle of the panels.

If you want to clear your chosen items, click **Clear All**.

6. Click the Early Punch-in prevention switch to turn it green.
7. In the **Grace period** field, enter how many minutes before a shift employees aren't allowed to punch in.
8. Click **Save**.

Preventing Short Breaks

If you have a Manager role or higher level of access, you can turn on Short Break Prevention to stop employees from taking breaks that are too short or don't meet the minimum required length.

Note: This setting is system-wide and applies to all Workforce Management locations and devices employees use to punch in.

This change stops employees from coming back from their break before the minimum time has passed.

If an employee tries to clock in before their break is over, SuitePeople Time Clock will stop them from punching back in and let them know when their break ends.

To prevent short breaks:

1. Go to Workforce Management.
2. Go to Setup > Account Settings > Time & Attendance.
3. On the Time & Attendance page, check the **Short break prevention** box.
4. In the **Unpaid break minimum length** field, enter the minimum number of minutes for unpaid breaks.
5. In the **Paid break minimum length** field, enter the minimum number of minutes for paid breaks.
6. Click **Save**.

Troubleshooting SuitePeople Time Clock

Before you troubleshoot any issues, ensure SuitePeople Time Clock is using the latest version. For more information, see [Updating SuitePeople Time Clock](#).

To learn more about troubleshooting SuitePeople Time Clock issues, see the following procedures:

- [To help employees unable to clock in after device activation:](#)
- [To help employees unable to clock in with their PIN code:](#)
- [To see timesheets in the weekly view:](#)
- [To help employees clock in if the device registered them as clocked in already:](#)
- [To resolve a blank screen on the Android app:](#)
- [To resolve incorrect time on the app:](#)

To help employees unable to clock in after device activation:

1. Check that the device has an Internet connection.
2. Ensure the device is online and doesn't show any label saying it's offline.
3. Update the device name and wait for the change to go through.
 - a. Go to Workforce Management.
 - b. Go to Setup > Time Clock.
 - c. Click the device name.
 - d. On the device settings window, edit the entry in the **Name** field.
 - e. Click **Save**.
4. Check the app version.
 - Check that the device is running the latest app version by looking at the version number at the bottom of the app pages. Compare it with the latest version in the app store. For more information, see [Minimum Requirements for SuitePeople Time Clock Mobile Apps](#).
 - If the app is outdated, update it. For more information, see [Updating SuitePeople Time Clock](#).
5. Restart the app.
6. Check if the required locations are set to be available on the device.
 - a. Open the device settings window. See instructions in Step 3.
 - b. On the Locations section, check that the required locations are added on the **Chosen Items** panel. Edit the entry in the **Name** field.

 From the **Available Choices** panel on the left, select the locations you want to add.

 If you want to select all locations, click **Choose All**.

 To move the chosen locations to the **Chosen Items** panel on the right, click the blue right arrow symbol at the middle of the panels.

 If you want to clear your chosen items, click **Clear All**.
 - c. Click **Save**.
7. Check if the employee can work at the location and has a PIN set.
 - a. Go to Workforce Management.
 - b. Go to Setup > Employees > List.
 - c. Click the employee name.
 - d. On the employee profile, from the left-hand panel, click **Location**.
 - e. Verify that the employee is assigned to work at the specified location. To add a location, on the **Can work at** section, click **Edit**. From the **Available Choices** panel on the left, move the required location to the **Chosen Items** panel. Click **Save**.
 - f. From the left-hand panel, click **Details**. On the Adiclock PIN section, check that a PIN code is assigned. To assign a PIN code, see [Setting up Employee PIN Codes](#).

To help employees unable to clock in with their PIN code:

1. Check if SuitePeople Time Clock is offline.
2. Check if the employee's PIN code was recently updated. If so, connect the device online to update any PIN codes that were recently changed.
3. Repeat the steps in the earlier procedure. See [To help employees unable to clock in after device activation](#).

To see timesheets in the weekly view:

1. Check that the device is connected to the Internet.
2. When the device is connected to the Internet, it will upload any timesheets that haven't appeared in the weekly view.

To help employees clock in if the device registered them as clocked in already:

1. Verify if the employee is clocked in.
 - a. On SuitePeople Time Clock, click the **IN** tab on the top left corner.
 - b. Check if the employee is on the list of currently clocked-in shifts and note how long they've been clocked in.
2. Verify if the employee clocked out from their previous shift.
3. Verify if the employee accidentally clocked in with another employee's PIN code.
4. Verify if the employee can clock out. If they can't clock out, verify if a manager can clock out the employee for them.

To resolve a blank screen on the Android app:

1. Fully close the app.
 - a. On your Android device, swipe up from the bottom and let go. This automatically closes the app.
 - b. Open SuitePeople Time Clock. If the white screen is still present, clear the app data.
2. Clear the app data.
 - a. On your device's home screen, press and hold the app.
 - b. Select **App info**.
 - c. Select **Storage**.
 - d. Select **Clear data**.

 **Note:** SuitePeople Time Clock syncs with the server to show the correct time. Even if the system clock changes, it'll always show the correct time.

To resolve incorrect time on the app:

1. If SuitePeople Time Clock shows incorrect time but your system time is correct, check your device's time and date settings.
On iOS devices, ensure the **Set automatically** feature is on.
2. Alternatively, ensure the correct time zone is set on the device. If you have set a different time zone in SuitePeople Time Clock but your device's time is different, there'll be a mismatch.
This will also affect the final timesheet.

Updating SuitePeople Time Clock

To update SuitePeople Time Clock, follow the procedure.

To update SuitePeople Time Clock:

1. Check the current version of SuitePeople Time Clock at the bottom of the app screen.
2. Compare the app version with the latest version of SuitePeople Time Clock.
 - **Android** – Open the Google Play store and search for NetSuite Time Clock. It's available under the **Read More** section in the app description.
 - **iOS or iPadOS** – Open the iOS App Store and search for NetSuite Time Clock. It's available under the **What's New** section in the app's description.
3. On the app, click **Update**.

Breaks for SuitePeople Time Clock

The following table shows the options for employees to track breaks after clocking in on SuitePeople Time Clock.

Break Type	Actions	Description
Paid Breaks	Click Rest .	The employee is punched into a paid break event. If you have the Rest Breaks (Paid) feature and an employee hasn't punched in for a paid rest break during their shift, SuitePeople Time Clock will show a message asking if they've taken a paid rest break. When an employee answers Yes or No, it'll change the message that appears on their timesheet shift in the Weekly view. If the employee chooses No, the message on their timesheet shift will say: "Employee has indicated they did not take a Rest Break."
Unpaid Breaks	Click Start Break .	The employee is punched into an unpaid break event. Employees can take one unpaid break but can take multiple paid rest breaks. After an employee takes one unpaid break, Start Break will be unavailable.

SuitePeople Time Clock for Windows

For more information about SuitePeople Time Clock for Windows, see the following topics:

- Preparations before installation
 - [Registering Fingerprints for SuitePeople Time Clock](#)
 - [Activating SuitePeople Time Clock for Windows](#)
- App installation
 - [Installing SuitePeople Time Clock Components for Windows](#)

Minimum Screen Requirements for SuitePeople Time Clock for Windows

The following table shows the minimum screen requirements for Windows devices to run SuitePeople Time Clock.

Device	Screen Resolution
Desktop	1440 × 900 pixels
Tablet	768 × 1024 pixels

SuitePeople Time Clock for Windows Limitations

Following are some known limitations when using SuitePeople Time Clock for Windows:

- The Windows app is designed for use with the Futronics FS88H device. Right now, it doesn't work with other fingerprint scanners.
- Fingerprint quality is different for everyone, and sometimes the Windows app can't capture prints because of physical issues or other reasons. If that happens, employees can use the PIN only option. For more information, see [Setting up SuitePeople Time Clock for Windows](#).

Registering Fingerprints for SuitePeople Time Clock

SuitePeople Time Clock for Windows is required if you are using a fingerprint scanner.

Important: To follow the Biometric Information Privacy Act (BIPA), you can't use fingerprint scanning on Windows devices in Illinois. If you're setting up a Windows device there, employees can only punch in with pin codes.

To enroll a new employee with the scanner, SuitePeople Time Clock requires the following:

- An active Internet connection
- The Futronic fingerprint scanner driver

To install the fingerprint scanner driver, see [Installing SuitePeople Time Clock Components for Windows](#).

New employees can be set up to use either their PIN code, fingerprint, or both.

To register an employee to use the fingerprint scanner:

1. Authenticate as a manager (requires manager access or higher).
2. Click the Settings icon in the bottom-left corner of SuitePeople Time Clock.
3. Click **Enroll Employee**.
4. Select the employee you want to set up from the employee list.

5. Select the finger you want to enroll for the employee. You can register all 10 fingers for the employee.
6. SuitePeople Time Clock will prompt the employee to place their finger on the scanner. This process will occur eight times per finger.
7. Click **OK** to continue.
8. Follow this process for each finger you're registering.
9. After you've registered all the employee's fingers, click **Save** to finish setting up the new employee.

If you are encountering issues, see [Troubleshooting SuitePeople Time Clock for Windows](#).

Activating SuitePeople Time Clock for Windows

The first time you run SuitePeople Time Clock, it'll ask for an activation code to link the installation with a roster unit.

For more information about activating a Windows device, see the following topics:

- [Generating an Activation Code](#)
- [Activating a New Device](#)

If you can't see the option for SuitePeople Time Clock in your configuration menu, you'll need to speak to someone who has higher access to the system.

Save the activation code—you'll need it when you install SuitePeople Time Clock for Windows.

Activating Additional Units

To activate additional units, select **Actions** from the main menu bar and select **Activate Unit** from the dropdown menu.

SuitePeople Time Clock will require an activation code to authenticate use on the additional unit.

When the new unit has been successfully activated, their name will appear under the green header.

Installing SuitePeople Time Clock Components for Windows

With your activation code ready, prepare to install the SuitePeople Time Clock components on your Windows device.

Confirm that your Windows device meet the minimum screen requirements for Time Clock. For more information, see [Minimum Screen Requirements for SuitePeople Time Clock for Windows](#)

To install SuitePeople Time Clock components for Windows:

1. Go to Workforce Management.
2. Go to Setup > Time Clock.
3. On the upper right corner of the Time Clock page, click **Download Apps**.
4. On the **Download Time Clock Apps** window, click **Download** beside the Windows platform.

The file downloads in the background.

5. To verify the integrity of the installed file, note the installer hash in the window. Then follow the procedure to verify the installer. For more information, see [Verifying the SuitePeople Time Clock for Windows Installer](#).
6. Run the SuitePeople Time Clock installer.
7. On the Choose Components page, select components to install.
 - If you don't have the Futronic fingerprint scanner, check only **SuitePeople Time Clock**.
 - If you have the Futronic fingerprint scanner and don't have Time Clock installed, check both the **SuitePeople Time Clock** and **Futronic Fingerscanner Drivers** components.
 - If you already have Time Clock installed and is installing the Futronic fingerprint scanner, check only **Futronic Fingerscanner Drivers**.
8. Click **Next**.
9. Choose the install location. Click **Install**.
The wizard automatically installs the components.
10. If you checked the **Futronic Fingerscanner Drivers** box, the Futronic Fingerprint Scanner Setup page appears. Click **Next**.
The installer adds the driver.
11. Click **Finish**. Click **Close**.
12. If your installation includes SuitePeople Time Clock, open the app on your Windows device.
13. Enter the activation code. Click **Activate**.
SuitePeople Time Clock opens to a number pad screen that employees can use to clock in.
For more information about clocking in and out, see [Using SuitePeople Time Clock for Windows](#).

Verifying the SuitePeople Time Clock for Windows Installer

To verify the integrity of the Windows application file installed, you can compare the hash code of the downloaded installer with the WFM hash code.

The WFM installer hash code is available on the Download Time Clock Apps window, as noted in **Step 3** of the procedure [To install SuitePeople Time Clock components for Windows](#).

To verify the Windows app installer:

1. After noting the installer hash code, open Windows PowerShell. For reference, read the article [Starting Windows PowerShell](#).
2. In the following command, replace *path to installer* with the file path for the installer file. For example, replace it with `C:\Users\user\Downloads\timeclock_2_0_1_0.exe`.

```
1 | Get-FileHash path to installer -Algorithm SHA512 | Format-List
```

3. Run the command.

The window displays the results of the command. In the following example, the set of numbers in bold formatting represents the hash code.

```
1 | Get-FileHash C:\Users\user\Downloads\timeclock_2_0_1_0.exe -Algorithm SHA512 | Format-List
2
3 Algorithm : SHA512
4 Hash      : 1235C1E7F9DBC8CBEA6924D0CAA1B62C53034044A255C824F6ABA8175AA2D
              F1396A62C31F5FD03332678CE9D74C5512CEE4AE71762D9D2BC8487A707C21A5123
```

5 | Path : C:\Users\user\Downloads\timeclock_2_0_1_0.exe

4. Compare this hash code with the hash code on the WFM window.

If the codes are similar, proceed to **Step 6** of the procedure [To install SuitePeople Time Clock components for Windows](#).

Warning: If the hash codes are different, the installer file may have been modified. In this case, **do not run** the installer. Perform security measures that follow the policies of your organization.

Setting up SuitePeople Time Clock for Windows

If you have access to an account with higher permissions than an employee, you can complete the following configurations in SuitePeople Time Clock for Windows:

- [Managing Settings in SuitePeople Time Clock for Windows](#)
- [Setting the SuitePeople Time Clock for Windows Authentication Method](#)
- [Enabling Two-Factor Authentication in SuitePeople Time Clock for Windows](#)

Managing Settings in SuitePeople Time Clock for Windows

In SuitePeople Time Clock for Windows, you can edit various settings to manage how the app functions.

To view the available settings, open SuitePeople Time Clock on your Windows device, then log in to the app. Click the cog or settings icon on the bottom left corner of the screen.

The following table shows the available settings.

Setting	Description
Refresh	This option synchronizes data in the Windows device to WFM.
Check for updates	This option lets you check for the most recent Time Clock version.
Enroll Employee	If you have a fingerprint scanner installed and have the authentication method set to an option that is not PIN only, this option lets you register fingerprints for an employee.

Setting the SuitePeople Time Clock for Windows Authentication Method

The following table shows the available authentication methods you can update on the Workforce Management SuiteApp or the standalone WFM website.

Important: To follow the Biometric Information Privacy Act (BIPA), you can't use fingerprint scanning on Windows devices in Illinois. If you're setting up a Windows device there, employees can only punch in with pin codes.

Setting	Description
PIN only	This option enables the PIN authentication option. SuitePeople Time Clock needs to restart for this change to take effect.
Finger scan only	This option enables the fingerprint authentication options. SuitePeople Time Clock needs to restart for this change to take effect.

Setting	Description
Pin or finger scan	This option enables either the PIN or finger scan options.
Two-factor authentication (PIN then finger scan)	This option enables two factor authentication. This allows users to sign in with both a PIN then finger scanning.

To set the authentication method for SuitePeople Time Clock for Windows:

1. Log in to Workforce Management.
2. Go to Setup > Time Clock.
3. Click the **Activated Devices** subtab.
4. Click the device name. Click **Edit**.
The wizard appears.
5. On the Options page, from the **Authenticated By** field, select the authentication method. Click **Next**.
6. On the Confirmation page, review the changes. Click **Update**.

Enabling Two-Factor Authentication in SuitePeople Time Clock for Windows

SuitePeople Time Clock for Windows offers two-factor authentication for when employees clock in and out. Two-factor authentication includes a fingerprint option and a PIN option for the user to verify their identity.

Important: To follow the Biometric Information Privacy Act (BIPA), you can't use fingerprint scanning on Windows devices in Illinois. If you're setting up a Windows device there, employees can only punch in with pin codes.

To view device settings, log in to Workforce Management. Go to Setup > Time Clock. From the **Activated Devices** subtab, click the device name. On the Options page of the wizard, from the **Authenticate by** field, select **PIN only** as the authentication method.

Before you enable this setting, ensure employees have enrolled their fingerprints and set up their PIN codes. For more information, see the following help topics:

- [Registering Fingerprints for SuitePeople Time Clock](#)
- [Setting up Employee PIN Codes](#)

To manage Time Clock settings on WFM SuiteApp or stand-alone website:

1. Log in to Workforce Management.
2. Go to Setup > Time Clock.
3. Click the **Activated Devices** subtab.
4. Click the device name. Click **Edit**.
The wizard appears.
5. On the Options page, from the **Authenticated By** field, select **Two-factor authentication (PIN then finger scan)**. Click **Next**.

6. On the Confirmation page, review the changes. Click **Update**.

Updating SuitePeople Time Clock for Windows

To keep things running smoothly with WFM, update to the latest SuitePeople Time Clock version as soon as you can. Updates are designed to address security and compliance considerations and improve overall performance.

Important: After you update SuitePeople Time Clock for Windows, you can no longer revert it to the previous version.

To update SuitePeople Time Clock for Windows:

1. Install the update.
 - If you've set up the app to automatically check for updates, you'll see a notification that a new version is available. On the notification window, click **Install update**.
 - If you haven't set up automatic checks for updates or if you haven't seen the notification, manually check for updates in SuitePeople Time Clock. You will need an account with higher permissions than an employee. See [Manually Updating SuitePeople Time Clock for Windows](#).
2. Restart the app.

After you've updated and restarted SuitePeople Time Clock, you'll see the new version number at the bottom of the keypad screen.

For more information about troubleshooting issues, see [Troubleshooting SuitePeople Time Clock for Windows](#).

Manually Updating SuitePeople Time Clock for Windows

If you have access to an account with higher permissions than an employee, you can check for updates in SuitePeople Time Clock for Windows. For more information about the different access groups available in WFM, see [Employee Access in WFM](#).

To manually update SuitePeople Time Clock for Windows:

1. Open SuitePeople Time Clock on your device.
2. Enter your PIN code.
3. On the lower left corner of the screen, click the settings icon.
4. From the list, select **Check for update**.
 - If an update is available, click **Install update**. After the update, restart the app.
 - If SuitePeople Time Clock is up to date, a window appears confirming that you're using the newest available version.

Using SuitePeople Time Clock for Windows

For more information about different ways to use the app, see the following sections:

- [Clocking in on a Scheduled Shift](#)

- [Clocking in on an Unscheduled Shift](#)
- [Changing Jobs During a Shift](#)
- [Clocking Out of a Shift](#)

If you're encountering issues with using Time Clock for Windows, see [Troubleshooting SuitePeople Time Clock for Windows](#).

You'll see different options when employees clock in with or without a scheduled shift.

Clocking in on a Scheduled Shift

Employees who clock in with a scheduled shift can use the Quick Punch feature.

The Quick Punch feature is available if the schedule's been published when employees punch in. If they don't see it, the schedule might not be published or the might not have any scheduled shifts.

To clock in with Quick Punch on a scheduled shift:

1. Open SuitePeople Time Clock on your Windows device.
2. On the keypad screen, enter your PIN code.
3. Click **Enter**.
If the schedule was published, the screen shows a green **Quick Punch** button.
4. (Optional) In the **Notes** field, enter details related to the clock-in event.
5. If you need to clock in to a job or location that's different than what's scheduled, click **Change**.
6. Select the new location and job.
7. Click **Quick Punch**.

Clocking in on an Unscheduled Shift

If an employee clocks in for an unscheduled shift, they'll need to select the location and job they are clocking into.

To clock in on an unscheduled shift:

1. Open SuitePeople Time Clock on your Windows device.
2. On the keypad screen, enter your PIN code.
3. Click **Enter**.
4. On the **Locations** section, select the location where you will work your shift.
5. On the **Jobs** section, select the job that you will take for this shift.
6. (Optional) In the **Notes** field, enter details related to the clock-in event.
7. Click **Punch-in**.

The screen shows a green screen that confirms your location, job, and punch-in time.

 **Note:** When you successfully clock in, you won't be able to clock out for 10 seconds.

The next screen shows the main Time Clock screen, with the employee name listed in the **Currently Working** panel.

Changing Jobs During a Shift

If you have multiple jobs set up for the location where you are clocked in, you can change jobs during your shift.

To change jobs during a shift:

1. Open SuitePeople Time Clock on your Windows device.
On the main Time Clock screen, your name is listed in the **Currently Working** panel.
2. On the keypad screen, enter your PIN code.
3. Click **Enter**.
4. On the **Jobs** section, select the job that you must change to for this shift.
5. Click **Job Change**.
The screen shows confirmation of the job change, including the location and current job on the shift.

Clocking Out of a Shift

Clock out of shifts on the main screen of SuitePeople Time Clock.

To clock out of a shift:

1. Open SuitePeople Time Clock on your Windows device.
On the main Time Clock screen, your name is listed in the **Currently Working** panel.
2. On the keypad screen, enter your PIN code.
3. Click **Enter**.
4. On the **Jobs** section, select the job that you'll take for this shift.
5. (Optional) In the **Notes** field, enter details related to the job change event.
6. Click **Punch-out**.
The screen shows a screen that confirms that you have punched out.
The next screen shows the main Time Clock screen, with the employee name listed in the **Recently Finished** panel.

Clocking In and Out for Multiple Units

On the SuitePeople Time Clock main window, enter your PIN. Select **Enter**.

If multiple locations are active, a dialog appears asking the employee to select where they're working.

Note: The **Please select a unit** dialog appears if the employee clocking in is available at both locations. It can also appear if the **Show all staff** option was selected when the activation code was generated.

In the **Currently active staff** list, you will see the employee you have clocked in.

Troubleshooting SuitePeople Time Clock for Windows

Refer to the table on how to troubleshoot errors in SuitePeople Time Clock for Windows.

Error	Description	Required Action
Sorry Try Again	The error occurs when the employee displayed an incorrect PIN code or the fingerprint was not recognized.	If you unsuccessfully clock in or out, you can try again in 3 seconds. Verify that the PIN code of the employee is correct. For more information about resolving fingerprint scanner issues, see Troubleshooting Scanner Issues in Time Clock for Windows.

For information about force clocking out employees, see [Force Clocking out Employees](#).

Troubleshooting UI Issues in Time Clock for Windows

If you're experiencing issues with viewing SuitePeople Time Clock for Windows correctly on your device, try the following options:

- Change your display scale to ensure all UI components appear on screen. For more information, refer to [Change your screen resolution and layout in Windows](#).

If you're working on a small screen, cast or extend the screen to a larger display.

If some UI components aren't visible or partly visible under the taskbar, hide the taskbar. For more information, refer to [Customize the Taskbar in Windows](#).

Troubleshooting Scanner Issues in Time Clock for Windows

If the fingerprint scanner doesn't read fingerprints, you can try the following options:

- Check your hardware.
 - Check that the fingerprint scanner driver is installed. For more information, see [Installing SuitePeople Time Clock Components for Windows](#).
 - Check that the USB port for the fingerprint scanner is firmly plugged into the computer to ensure a stable connection.
 - Unplug the fingerprint scanner and plug it back in.
- Ensure a clear scan.
 - Before scanning, help raise the ridges of the finger by doing any of the following:
 - Apply gentle downward pressure or rub the finger that's to be scanned between the thumb and forefinger.
 - Moisturize by applying lotion or corn huskers oil on the hands. Clean the scanner after each use.
 - Press firmly on the glass of the fingerprint scanner with the finger in the correct position.
 - Clean the glass scanning area with a tissue or cloth to remove residue from previous fingerprint scans.
- Explore other fingerprint registration and scanning options.
 - Use another registered fingerprint.
 - Have the employee register their fingerprints for all 10 fingers.
 - If all of the previous troubleshooting steps haven't worked, remove the current registered fingerprints of the employee and register the fingerprints again.
- Try using the Futronic ScanAPI Demo Application for Windows, which gives you a video feed of the scanner's capture process. You can compare scans from employees who have trouble with those who scan successfully. For more information, go to the [Microsoft Store](#).

Timesheets and SuitePeople Time Clock

Important: As of February 18, 2025, support ends for SuitePeople Workforce Management Time Clock and SuitePeople Workforce Management mobile applications on Android 11 and earlier versions.

If you're using these versions, update your Android devices to version 12 or later to continue using WFM apps.

For more information, see [SuitePeople Workforce Management on Unsupported Android Devices](#).

Read this page to know more about how SuitePeople Time Clock works with timesheets.

Timesheet Sources

There are different icons on a timesheet shift that show how the employee clocked in or clocked out for a shift.

Note: Adiclock is now called SuitePeople Time Clock.

In the iOS App Store and Google Play Store, SuitePeople Time Clock is called **NetSuite Time Clock**.

In Windows, the app is targeted to be renamed **SuitePeople Time Clock** in June 2024.

- Phone app - The following screenshot shows an employee's timesheet shift that has a phone icon. This indicates the employee clocked in and out on their phone.
- SuitePeople Time Clock - The following screenshot shows an employee's timesheet shift that has a building icon. This indicates the employee clocked in and out of SuitePeople Time Clock app at their shift's location.
- Mixed or multiple sources - The following screenshot shows an employee's timesheet shift that has a two-arrow icon. This indicates the employee clocked in and out of SuitePeople Time Clock from more than one source. For example, the employee may have clocked in on their phone and clocked out at their shift's location.

To display a detailed breakdown of an employee's clock-in and clock-out events during their shift, you can click on the timesheet shift to expand it.

The clock-in and clock-out events have a green pin icon beside them, which means the clock-in and clock-out events were completed on the job site.

Force Clocking out Employees

There are two ways to clock out an employee if they have forgotten to clock out:

- From the Weekly or Multi-Location view
- Ask a manager to clock out an employee from the device using SuitePeople Time Clock.

Note: SuitePeople Time Clock force clocks out employees after 24 hours.

From the Weekly or Multi-Location view, you can click the **Eject** button on an employee's open timesheet.

After the employee's been clocked out, their timesheet will keep the original start time of the shift and the time they clocked out at.

For more information about clocking out employees, see [Using SuitePeople Time Clock for Windows](#).

Auto-closing Timesheets

Timesheets will automatically close if they're left open for 24 hours and employees will automatically be clocked out. This occurs on the phone app and SuitePeople Time Clock for Windows, Android, and iOS.

Contract Hours in SuitePeople Time Clock

Important: As of February 18, 2025, support ends for SuitePeople Workforce Management Time Clock and SuitePeople Workforce Management mobile applications on Android 11 and earlier versions.

If you're using these versions, update your Android devices to version 12 or later to continue using WFM apps.

For more information, see [SuitePeople Workforce Management on Unsupported Android Devices](#).

You can set up contract hours for employees. Once that's done, employees can create variations to these hours by clocking in or out.

If an employee's clock-in or clock-out time is different from their agreed contract or a previous variation, they'll be prompted to agree to a new variation for that day. They might be prompted at the start and end of their shift to agree to the new hours.

For information about contract hours in SuitePeople Time Clock for Windows, see [Contract Hours in SuitePeople Time Clock for Windows](#).

For information about contract hours in SuitePeople Time Clock for Android and iOS, see [Contract Hours in SuitePeople Time Clock for Android and iOS](#).

Contract Hours in SuitePeople Time Clock for Windows

The **Action Required** window displays the modified contract hours for the employee. For example, this employee's modified contract hours are from 2:45 pm to 5:45 pm.

If the employee selects **Agree**, their shift begins with the modified contract hours.

If the employee selects **Decline**, their shift won't begin with the modified contract hours and SuitePeople Time Clock will return to the PIN entry screen.

Before the employee selects **Decline**, they must enter a reason in the **Comments** field for declining the modified contract hours. A manager needs to enter their PIN and provide a reason for agreeing or declining a employee's choice to decline their modified contract hours.

The employee can then clock in to their shift.

For more information about contract hours, see [Contract Hours in SuitePeople Time Clock](#).

For information about contract hours in SuitePeople Time Clock for Android and iOS, see [Contract Hours in SuitePeople Time Clock for Android and iOS](#).

Contract Hours in SuitePeople Time Clock for Android and iOS

Note: AdClock is now referred to as SuitePeople Time Clock.

In the iOS App Store and Google Play Store, SuitePeople Time Clock is called **NetSuite Time Clock**.

In Windows, the app is targeted to be renamed **SuitePeople Time Clock** in June 2024.

The **Action Required** window displays the modified contract hours for the employee. For example, this employee's modified contract hours are from 4 pm to 8 pm.

If an employee attempts to clock in with modified contract hours, an **Action Required** window will appear.

The **Action Required** window displays the employee's original contract hours and the proposed modified contract hours.

If the employee selects **Agree**, their shift begins with the modified contract hours.

To stop the clock-in attempt, the employee can select the arrow icon in the top-left corner to return them to the PIN entry screen. They won't be clocked in or clocked out.

If the employee selects **Decline**, their shift won't begin with the modified contract hours and SuitePeople Time Clock will return to the PIN entry screen. They must enter a reason for the decline and require a manager to authorize this decision.

If an employee enters a reason and tries to clock in with modified contract hours, it will then go the manager.

After the manager enters their PIN to approve the change in the employee's contract hours, they need to enter a reason for the change and accept or decline the variation in contract hours.

The employee can now successfully clock in to their shift.

For more information about contract hours, see [Contract Hours in SuitePeople Time Clock](#).

For information about contract hours in SuitePeople Time Clock for Windows, see [Contract Hours in SuitePeople Time Clock for Windows](#).

Workforce Management Reports

You can export data from SuitePeople Workforce Management (WFM) by generating any of the available reports under the following categories:

- [Shifts Reports](#)
- [Employee Reports](#)
- [Location Reports](#)

To access the report categories and audit logs, go to Workforce Management > Reports.

To find instructions and details about each report, see [Extracting Data Through WFM Reports](#).

Extracting Data Through WFM Reports

SuitePeople Workforce Management (WFM) lets you extract different reports for your own purpose and records. To extract data, select from the seven report types and generate the report.

Maximum Report Duration

For most report types, you can generate reports for up to two months at a time.

Depending on the report, you may need to generate multiple reports if you need to export data for more than two months.

Refer to the following table for details and instructions for each report.

Shifts Reports

Refer to the table for reports about employee shifts. For more information, see [Shifts Reports](#).

Report	Available Metrics	Help Topic with Instructions
Print Ready	■ Daily by Day ■ Daily Master ■ Daily ■ Actual Timesheet Report ■ Staff Report ■ Timesheet Report ■ Multi Unit Staff Report ■ Master Report ■ Actual Report	Print Ready
Hours	■ ID ■ First name ■ Last name ■ Payroll ID ■ Age ■ Location ■ Job ■ Date ■ Condition ■ Rate ■ Minimum hours top up ■ Blended OT ■ Leave metrics ■ Total hours ■ Total costs ■ Phone ■ Mobile ■ Email ■ Address metrics	Hours
Hours and Times	Various metrics based on the two report types: ■ Actual Shifts ■ Scheduled Shifts	Hours and Times

Report	Available Metrics	Help Topic with Instructions
Approved Hours, Times And Stats	■ ID ■ First Name ■ Last Name ■ Date ■ Start Time ■ Finish Time ■ Hours ■ Location ■ Job ■ Shift Metric ■ Tips	Approved Hours, Times, and Stats
Variance (Tardy+)	Various metrics based on the four report types: ■ Tardy ■ Company time fraud ■ Employee time fraud ■ Custom (Advanced)	Variance (Tardy+)
Timesheet	Various metrics based on two report types: ■ Hours summary ■ Punch events	Timesheet
Overtime Checks	Available metrics are: ■ Name ■ Date ■ Current employment ■ Location name ■ Job name ■ Shift Times ■ Employment Status ■ Wage Agreement/ Classification ■ Consecutive Day Count ■ Shift Length ■ Hours on day ■ Average hours/week ■ Clear break between shifts Allows for filtering and flagging based on: ■ Consecutive Days Worked ■ Hours on day worked ■ Average weekly hours ■ Clear break between days ■ Time since last shift	Overtime Checks

Report	Available Metrics	Help Topic with Instructions
Percent Approved	■ Location ID ■ Location Name ■ Week Start ■ % Approved ■ % Accepted ■ Unapproved ■ Approved ■ Approvable ■ Disputed ■ Accepted ■ Unaccepted ■ Unapproved Staff ■ Disputed Staff ■ Unaccepted Staff	Percent Approved
Weekday Split	■ ID ■ Staff member ■ % Weekday Scheduled ■ % Weekday Approved ■ % Weekend Scheduled ■ % Weekend Approved ■ % Sat Scheduled ■ % Sat Approved ■ % Sun Scheduled ■ % Sun Approved ■ Hours Weekday Scheduled ■ Hours Weekday Approved ■ Hours Sat Scheduled ■ Hours Sat Approved ■ Hours Sun Scheduled ■ Hours Sun Approved ■ Hours Total Scheduled ■ Hours Total Approved	Weekday Split
Allowances	■ ID ■ First name ■ Last name ■ Export status	Allowances
Employee Payroll Query	■ Location ■ Date ■ Start time ■ Finish time ■ Length	Employee Payroll Query

Report	Available Metrics	Help Topic with Instructions
	Status	
Day Worked Frequency	- Person ID - First name - Last name - Employment status - Wage type - Calculation type - Primary location name - Weekday - Total days - Total hours - Average day hours - Start date - Date of birth - Classification ID - Classification name - Age - Rate	Day Worked Frequency
Zero Hours	- ID - First name - Last name - Primary location - Access group name - Employment period start - Employment period finish	Zero Hours
DST Ambiguous Shifts	If it is identified that there are shifts that occur over the 2-hour window, these shifts are considered ambiguous and will be available to download in a report that includes: - Name - Location - Job - Start Time - Finish Time	DST Ambiguous Shifts
Punch Breaks	- First name - Preferred name - Last name - ID - Employment status - Date - Start - Finish	Punch Breaks

Report	Available Metrics	Help Topic with Instructions
	■ Paid breaks ■ Unpaid breaks ■ Staff said they took paid break	

Employee Reports

Refer to the table for reports about employee metrics. For more information, see [Employee Reports](#).

Report	Available Metrics	Help Topic with Instructions
All	■ ID ■ First name ■ Last name ■ Preferred name ■ Email ■ Mobile ■ Phone ■ Dob ■ Gender ■ Street ■ Postcode ■ Suburb ■ State ■ Country ■ Username ■ Group ■ Timesheet pin ■ Primary location ■ Employment date ■ Termination date ■ Wage calculation ■ Employment status ■ Payroll ID	All
Terminated	■ WFM ID ■ Employee ■ Start ■ Finish ■ Primary location ■ Termination reason ■ Updated by	Terminated
Wage Changes	■ Staff ID ■ First name ■ Last name	Wage Changes

Report	Available Metrics	Help Topic with Instructions
	- Change type - Age - Date - Base rate - Wage type - Classification name - Termination date	
Birthdays	- First name - Last name - Date of birth - Age on birthday - Primary location	Birthdays
Missing Details	- Employee - Primary location - Personal details	Missing Details
Average Ages	- First name - Last name - Date of birth - Age - State - Job - Location	Average Ages
Monthly Turnover	- Location ID - Location Name - Metric - Percentage - Short Employment Percentage - Terminated - Total - Short Employment	Monthly Turnover
Leave/Time-Off	- Person - Leave type - Location - Start and finish times - Hours - Reason	Leave/Time-Off
Work Permits	Content generated using the template provided by the Victorian State Government	Work Permits

Location Reports

Refer to the table for reports about location metrics. For more information, see [Location Reports](#).

Report	Available Metrics	Help Topic with Instructions
Location	- Scheduled shifts - Actual shifts - Wages - Hours - Average hourly cost - Labor cost % - Sales - Sales per man hour - Units - Productivity	Variance
Forecasting Analysis	- Location - Day - Stats type (sales or units) - Forecast - Actual - Mean Absolute Percentage Error (MAPE) - Symmetric Mean Absolute Percentage Error (SMAPE)	Forecasting Analysis
Percent Hours Per Location	- ID - Person name - Week	Percent Hours Per Location

Shifts Reports

With Workforce Management (WFM), you can generate reports about various shift metrics affecting your operations.

The available shifts reports are:

- [Print Ready](#)
- [Hours](#)
- [Hours and Times](#)
- [Approved Hours, Times, and Stats](#)
- [Variance \(Tardy+\)](#)
- [Timesheet](#)
- [Overtime Checks](#)
- [Percent Approved](#)
- [Weekday Split](#)
- [Allowances](#)
- [Employee Payroll Query](#)
- [Day Worked Frequency](#)
- [Zero Hours](#)

- [DST Ambiguous Shifts](#)
- [Punch Breaks](#)

For a list of all available metrics in each report, see [Extracting Data Through WFM Reports](#).

Print Ready

To access the **Print Ready** report, from the Workforce Management tab, go to Reports > Shifts > Print Ready.

For more information about the Print Ready report, see [Printing Schedules](#).

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Hours

To access the **Hours** report, from the Workforce Management tab, go to Reports > Shifts > Hours.

The **Hours** report lets you generate scheduled data and approved shift data.

You can change the shift type on the reporting screen. If you choose **Actual shifts**, it displays shifts approved shifts. If you choose **Schedule shifts**, it displays scheduled shifts.

You can filter the **Hours** report and **Hours and times** report by employment status and staff members' age. These filters are helpful if you want to run a report for only casual or junior-aged staff.

The **Hours** and **Hours and Times** reports are related to employees' scheduled, timesheet, and approved shifts. The Hours reports display the wage breakdown which includes penalty rates and overtime setup in your account.

After setting the Hours report options, you can print employees' shifts by downloading a PDF file of the report.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Blended Overtime

 **Note:** Blended overtime is not available if your setup uses wage agreements, fixed hourly rates, or salary wages.

WFM can calculate a blended or weighted overtime rate for payroll.

The blended overtime rate is calculated using the following formula:

Blended OT Rate = (Total Wage of Regular Hours ÷ Total Number of Regular Hours Worked) × Overtime Rate

The Total Wage of Regular hours covers differing pay rates.

The Overtime Rate is 0.5, or the rate is halved.

Calculating for Blended Overtime

Refer to the following example:

Abbie Gibson works in an office as a Clerical Administrator for \$10 per hour. She answers phones from home at \$8 per hour. During the week, she works 44.5 hours of as a Clerical Administrator and 8 hours answering phones. She is paid overtime for any hours worked over 40 during the week.

Because Abbie worked a total of 52.5 hours during the week, she will be paid 12.5 hours of overtime.

Abbie's overtime rate multiplier is 1.5 times the regular rate.

In WFM, you can enter her extra hours for the fixed period type. For example, between 9 am and 11 am, for a total of 2 hours.

To calculate for blended overtime:

1. Calculate the employee's base pay without any overtime.

$$\text{Abbie's Base Pay} = (8 \text{ Hours} \times \$8 \text{ per Hour}) + (44.5 \text{ Hours} \times \$10 \text{ per Hour})$$

$$\text{Abbie's Base Pay} = \$509$$
2. Calculate the employee's weighted base rate.

$$\text{Abbie's Weighted Base Rate} = \text{Base Pay} \div \text{Total Number of Regular Hours Worked}$$

$$\text{Abbie's Weighted Base Rate} = \$509 \div 52.5 \text{ Hours}$$

$$\text{Abbie's Weighted Base Rate} = \$9.70 \text{ per Hour}$$
3. Calculate the additional loading for overtime.

$$\text{Additional OT Loading per Hour} = \text{Weighted Base Rate} \times 0.5 \text{ OT Multiplier}$$

$$\text{Additional OT Loading per Hour} = \$9.70 \text{ per Hour} \times 0.5 \text{ OT Multiplier}$$

$$\text{Additional OT Loading per Hour} = \$4.85$$
4. Calculate the cost of the overtime segments within the Clerical Admin shifts.

$$\text{Cost of Overtime Segments} = \text{Clerical Administrator Hourly Pay} + \text{Additional OT Loading per Hour}$$

$$\text{Cost of Overtime Segments} = \$10 \text{ per Hour} + \$4.85 \text{ per Hour}$$

$$\text{Cost of Overtime Segments} = \$14.85 \text{ per Hour}$$

Looking at the totals from the shift hours report, you can see that Abbie will be paid \$569.60.

Hours and Times

To access the **Hours and times** report, from the Workforce Management tab, go to Reports > Shifts > Hours And Times.

After setting the Hours and Times report options, you can print employees' shifts by downloading a PDF file of the report.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Approved Hours, Times, and Stats

To access the **Approved Hours, Times, and Stats** report, from the Workforce Management tab, go to Reports > Shifts > Approved Hours, Times, and Stats.

The **Approved Hours, Times, and Stats** report shows a breakdown of approved times alongside shift metrics specified by the manager, and includes tips.

You can specify the period and locations that you want to appear in the report.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Variance (Tardy+)

To access the **Variance (Tardy+)** report, from the Workforce Management tab, go to Reports > Shifts > Variance (Tardy+).

The Variance (Tardy+) report lets you use presets of company or employee time fraud. You can also create your own report to compare two shift types over a period of time. For example, you can compare timesheet shifts to actual shifts for staff members.

The Variance (Tardy+) report will display the approvers' names for staff members' shifts. If the shift is automatically matched, there won't be an approver's name displayed.

The Variance (Tardy+) report also displays total shift costs. You can compare the variance of hours between the two shifts for a staff member and the cost variance of those shifts.

 **Note:** You'll only see costs for users in lower access groups.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Timesheet

To access the **Timesheet** report, from the Workforce Management tab, go to Reports > Shifts > Timesheet.

The Timesheet report allows you to generate a CSV file with time data from SuitePeople Time Clock or time and attendance data from SuitePeople Workforce Management.

For more information, see [Timesheet Report](#).

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Overtime Checks

To access the **Overtime Checks** report, from the Workforce Management tab, go to Reports > Shifts > Overtime Checks.

This report lets you flag consecutive work days, excessive hours, and clear breaks across specific locations and durations.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Percent Approved

To access the **Percent Approved** report, from the Workforce Management tab, go to Reports > Shifts > Percent Approved.

The report identifies the rate of shifts actioned or approved for each location.

You should have your time approved daily by your managers. The schedule should be 100% actioned or approved before processing the payroll.

You can download a CSV file of the data included in the report.

For more information, see [The Percent Approved Report](#).

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Weekday Split

To access the **Weekday Split** report, from the Workforce Management tab, go to Reports > Shifts > Weekday Split.

This report provides a summary of the percentage of hours each staff member in the company worked in the report period that fell on a weekday.

Only staff who have shifts during the report period will appear in the list.

The report lets you download a CSV file with detailed information and raw data used to calculate the percentages.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Allowances

To access the **Allowances** report, from the Workforce Management tab, go to Reports > Shifts > Allowances.

This report provides a summary of the allowances for your employees.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Employee Payroll Query

To access the **Employee Payroll Query** report, from the Workforce Management tab, go to Reports > Shifts > Employee Payroll Query.

The Employee Payroll Query report lets you view employees' scheduled, timesheet, and approved shifts.

You can download a CSV file of the data included in the report.

For more information, see [Employee Payroll Query Report](#).

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Day Worked Frequency

To access the **Day Worked Frequency** report, from the Workforce Management tab, go to Reports > Shifts > Day Worked Frequency.

The Day Worked Frequency report lets you identify the frequency that employees work on a specific day of the week.

The report lets you download a CSV file with detailed information and raw data used to calculate the frequency.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Zero Hours

To access the **Zero Hours** report, from the Workforce Management tab, go to Reports > Shifts > Zero Hours.

The Zero Hours Report allows you to track staff members who work intermittently or when staff members have stopped working altogether. It also tracks when staff members have not worked any shifts or taken leave.

You can select the start date and end date for the time period in which you want to view shifts or leave. This lists staff without any:

- Scheduled shifts
- Timesheet shifts
- Actual shifts
- Approved leave

You can download a CSV file of the data included in the report.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

DST Ambiguous Shifts

To access the **DST Ambiguous Shifts** report, from the Workforce Management tab, go to Reports > Shifts > DST Ambiguous Shifts.

During a daylight savings time (DST) backward transition, the times between 2:00 am and 3:00 am, or other times depending on your timezone, are repeated. Because of this, any punch in or out events that occur during this two-hour period can be ambiguous. This report shows all actual shifts at every location with events during this period on a selected DST transition day. It won't show any shifts if the selected day isn't a backward DST transition day.

You can download a CSV file of the data included in the report.

For more information, see [Daylight Savings Times \(DST\)](#).

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Punch Breaks

To access the **Punch Breaks** report, from the Workforce Management tab, go to Reports > Shifts > Punch Breaks.

This report lets you identify paid and unpaid breaks taken by employees. With this report, you can filter by punch breaks by location, break type, shift length, employment status, age range, and number of breaks.

When you run the report, you can filter by:

- Date range
- Locations
- Employment status
- Age range
- Shift Length (including breaks)
- Minimum unpaid breaks
- Minimum number of paid breaks
- Types of break taken

Note: If you don't select a type of break, shifts with that break type won't be included. For example, if you don't select unpaid breaks, shifts with unpaid breaks won't show up. The same goes for paid breaks, even if you selected the paid break option.

The report lets you download a CSV file with detailed information relevant to punch breaks.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Timesheet Report

To access the Timesheet report, from the Workforce Management tab, go to Reports > Shifts > Timesheet.

The Timesheet report allows you to generate a CSV file with time data from SuitePeople Time Clock or time and attendance data from SuitePeople Workforce Management.

You can generate the Timesheet report up to a maximum of two months at a time for any number of locations.

Note: This report includes raw timesheet data. If a manager approves a different time that a staff member worked, you'll still see the original clock-in and clock-out time here.

The two report types available to be generated are:

- Hours summary
- Punch events

Hours summary

The Hours summary report type displays information about shift hours for the staff member, including timesheet length and start and end times for shifts and breaks.

Punch events

The Punch events report type displays more shift information than the Hours summary report type. The Punch events report type displays a row for each punch event with detailed information about each shift punch.

The Punch events report type includes the following columns:

- **Time** – The time when the punch event occurred.
- **Event** – A punch event occurs when a staff member tracks time through SuitePeople Time Clock or Adi Insights mobile time and attendance. The events are recorded each time a staff member clocks in or out and records an action on the device. The types of actions include:
 - **Shift start** – Clock in to start a shift.
 - **Shift finish** – Clock out to finish a shift.
 - **Break start** – Clock in to start an unpaid break.
 - **Break finish** – Clock out to finish an unpaid break.
 - **Change job** – Some staff members may change their job roles in the middle of their shift.
 - **Server** – SuitePeople Workforce Management automatically clocks out staff members 24 hours after their shift ends if they have forgotten to clock out manually. Managers can also clock out staff members if they notice this during shift approvals on the Weekly.

- **Source** – The device type on which the punch event was made on. SuitePeople Workforce Management supports three different device types:
 - **SuitePeople Time Clock** – The app is available on Windows, iOS, or Android.
 - **SuitePeople Workforce Management mobile app** – The app is installed on staff members' mobile devices. This will only appear if enabled on the company configuration.
- **Geo** – Yes or No - This displays the GPS coordinates if a staff member clocks in or out from the app. These coordinates appear in the "Longitude" and "Latitude" columns. This will only appear as "Yes" if time punches in the Adi Insights phone app are available.

 **Note:** GPS coordinates aren't available from SuitePeople Time Clock. Staff members must physically be at the device to clock in and out of their shifts.

- **Authentication Method** – This only appears on punches completed in SuitePeople Time Clock. You will see the **PIN code** option or the **Left or Right (finger name)** option.
 - **PIN Code** – The punch-in event was completed by entering a PIN code.
 - **Left/Right** – SuitePeople Time Clock uses a fingerprint scanner to track which registered finger a staff member used for the punch event. For example, they can use their left index finger or right thumb to complete the punch event.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Employee Payroll Query Report

The Employee Payroll Query report lets you view information for staff members' scheduled shifts, timesheet shifts, and approved shifts.

You can run the report for one staff member at a time for any time period.

To run the Employee Payroll Query report:

1. From the Workforce Management tab, go to Reports > Shifts > Employee Payroll Query.
2. Choose the staff member whose shift you want to see, and select the start and end dates for the time period you want to view.
3. Choose whether you want to view the staff member's scheduled shifts, timesheet shifts, or approved shifts. You can also select all the options.
4. Select **Fetch**.

 **Note:** You can download this report as a CSV file.

Scheduled and Timesheet Shifts

Scheduled shifts and timesheet shifts can have the following statuses:

- **Approved** – Approved shifts have been approved by a manager. An approved shift has a thumbs-up icon or a dialog to edit and approve the shift.
- **Denied** – Denied shifts have been denied by a manager. A denied shift has a thumbs-down icon.
- **Unprocessed** – Unprocessed shifts have been neither approved nor denied by a manager.

If there is a matching scheduled shift and timesheet shift, one of them will be approved and the other will be unprocessed. New shifts appear on new lines.

Actual Shifts

Actual shifts are scheduled shifts or timesheet shifts which have been approved. Actual shifts may or may not have a matching scheduled shift or timesheet shift.

Actual shifts can have the following statuses:

- **Processed** – Processed shifts are exported to payroll, or the pay period has been entered in Adi Insights as a locked period.
- **Unprocessed** – Unprocessed shifts are not exported to payroll.

If an actual shift hasn't been processed, the "i" icon beside the shift will show which manager approved the shift and when it was approved.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Employee Reports

With Workforce Management (WFM), you can generate reports about various employee metrics.

The available shifts reports are:

- [All](#)
- [Terminated](#)
- [Wage Changes](#)
- [Birthdays](#)
- [Missing Details](#)
- [Average Ages](#)
- [Monthly Turnover](#)
- [Leave/Time-Off](#)
- [Work Permits](#)

For a list of all available metrics in each report, see [Extracting Data Through WFM Reports](#).

All

To access the **All** report, from the Workforce Management tab, go to Reports > Employee > All.

This report lets you generate information about all available details about your employees.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Terminated

To access the **Terminated** report, from the Workforce Management tab, go to Reports > Employee > Terminated.

This report lets you generate a list of terminated employees during a specified period. It includes information relevant to their termination.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Wage Changes

To access the **Wage Changes** report, from the Workforce Management tab, go to Reports > Employee > Wage Changes.

This report lets you make a list of wage rate changes for all employees hire during a set period. It covers rate changes from birthdays that move employees to a new rate bracket, as well as updates from new agreement revisions. Employees with the wrong birth date might show the wrong rates.

This report will not include employees who did not have a change in wage during the selected period.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Birthdays

To access the **Birthdays** report, from the Workforce Management tab, go to Reports > Employee > Birthdays.

This report lets you generate a list of employee birthdays, ages, and primary locations during a specified period.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Missing Details

To access the **Missing Details** report, from the Workforce Management tab, go to Reports > Employee > Missing Details.

The Missing Staff details report identifies if any staff are missing required information such as personal details, bank account information, or emergency contacts.

You can notify the staff members that are listed in the Missing Staff details report by email or SMS.

You can run this report after onboarding new staff members to ensure all their details are entered in SuitePeople Workforce Management.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Average Ages

To access the **Average Ages** report, from the Workforce Management tab, go to Reports > Employee > Average Ages.

This report calculates average ages using the current age (in years) of each employee who has a date of birth on record. It can be used to view the average employee age and employee count by job, location, state, or by all these criteria.

To view a list of employees with their age and other information, select **Show staff ages and dates of birth**.

Including data about Job(s) will result in staff who are available to work multiple jobs to be counted for each job.

You may only view an aggregate report when reporting on a master brand.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Monthly Turnover

To access the **Monthly Turnover** report, from the Workforce Management tab, go to Reports > Employee > Monthly Turnover.

This report provides a breakdown of employee turnover for all active locations associated with the given brand.

Three rows are provided for each location, showing the monthly, annualized (year-to-date) and rolling 12-month turnover.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Leave/Time-Off

To access the **Leave/Time-Off** report, from the Workforce Management tab, go to Reports > Employee > Leave/Time-Off.

This report lets you see employees' leave periods by choosing a pay period when the leave happened. Pick the start and end dates for the pay period, then click **Fetch**.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Work Permits

To access the **Work Permits** report, from the Workforce Management tab, go to Reports > Employee > Work Permits.

This report lets you generate Permitted Worker Permits for employees working in Victoria. You're responsible for making sure you have the right address and shift information for all locations you generate reports for.

This report is generated using the template provided by the Victorian State Government.

You can download a ZIP file of the work permits that the report generates.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Location Reports

With Workforce Management (WFM), you can generate reports about various location metrics affecting your operations.

The available location reports are:

- [Variance](#)
- [Forecasting Analysis](#)
- [Percent Hours Per Location](#)

For a list of all available metrics in each report, see [Extracting Data Through WFM Reports](#).

Variance

To access the **Variance** report, from the Workforce Management tab, go to Reports > Location > Variance.

This report lets you view the variance between the scheduled and actual figures for specific metrics, including wages, hours worked, average hourly cost, and others.

You can download a CSV file of the data included in the report.

For more information about running, see [Variance Report](#).

For a list of all available metrics in each location report, see [Location Reports](#).

Forecasting Analysis

To access the **Forecasting Analysis** report, from the Workforce Management tab, go to Reports > Location > Forecasting Analysis.

This report is used to evaluate the accuracy in forecasting for the selected period and locations.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each location report, see [Location Reports](#).

Percent Hours Per Location

To access the **Percent Hours Per Location** report, from the Workforce Management tab, go to Reports > Location > Percent Hours Per Location.

This report lets you view the percentage of hours that each staff member worked at each location. You can compare between two periods.

 **Note:** This report shows only approved and unscheduled shifts.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each location report, see [Location Reports](#).

Variance Report

You can generate and configure a Variance report across different locations .

To run the Location variance report:

1. From the Workforce Management tab, go to Reports > Location > Variance.
2. Select the time period in which you want to view the variance of shifts and applicable KPIs.
3. Choose the locations you want to view.
4. Choose how you want the report to be grouped. This can be based on:
 - Location
 - Job/Leave Type
 - Day

- Week

5. You can choose from the following advanced options:

- Include leave in the totals
- Include modifiers or loadings
- Displays variances as percentages

You can also choose to hide or view the following KPIs:

- Wages
- Hours
- Average Hourly Cost
- Labor Cost %
- Sales
- Sales per Man hour
- Units
- Productivity

Approved and unapproved wages will appear in the Location variance report.

Since the Location variance report recalculates overnight, all approvals must be completed by end of day. If the approvals aren't completed then, they won't appear in the Location variance report until the following day.

Workforce Management Payroll

When the actual data is finalized it can be exported to payroll packages like Xero. For more information about the integration, see the following help topics:

- [ADP \(US\)](#)
- [ADP \(Canada\)](#)
- [MYOB AccountRight Live](#)
- [WageEasy](#)
- [Xero](#)
- [Paypac](#)
- [Attaché](#)

Linking Payroll Items in WFM

Workforce Management (WFM) lets you to link your wage agreements to your payroll system.

Make sure your payroll system's pay items are linked to WFM. These items may have different names depending on your payroll system. Proper linking ensures that WFM conditions, such as regular hours or public holidays, are recorded in the right place.

Before linking payroll items, make sure your wage agreements are set up on your account. For more information, see [Wage Setup](#).

WFM lets you link payroll items to the following configurations:

- **Conditions** – This configuration lets you link a single payroll item to a condition within your agreements. It's useful for payroll systems that don't have individual pay items for each age rate. For example, if all regular hours can be sent to the same item, you should use this configuration. Items linked here will be retained for each revision within your agreements, and will be applied to all classifications within the your agreements.
- **Classifications** – This configuration lets you link multiple pay items for each condition in your Payroll system. For example, if you have different regular hours for different age levels, you should use this configuration.
- **Allowances** – This configuration lets you link payroll items to allowances, like for laundry or food.
- **Penalties** – This configuration lets you link payroll items to penalties or time worked outside contract hours.

Employees with the Administrator role can link payroll items to WFM.

To link payroll items in WFM:

1. Go to Workforce Management.
2. Go to Setup > NetSuite Integration > Agreements.
The Link objects to Payrollitems page opens to the **Conditions** subtab.
3. Link items to conditions.
 - a. Locate the WFM wage agreement with conditions that you want to link to your payroll items.
The following conditions are available:
 - Regular Hours
 - Public Holiday
 - Saturday
 - Sunday
 - Standard Overtime
 - Extended Overtime
 - b. From each condition field, search then select the payroll item you want to link.

Note: This search will only display up to 15 items at a time, so you may need to increase your search terms if you're not seeing the item you're looking for.

When you select an item, that item is linked to WFM.

- c. If you want to unlink a payroll item from a condition, click **Unlink**.
4. Link items to classifications.
 - a. Click the **Classifications** subtab.
 - b. From the list on the upper left, select the wage agreement where you want to link payroll items.
 - c. From the list on the upper right, select the revision date. Generally, you should select the latest revision date to ensure you're linking payroll items to the current version of the agreement.
All classifications that belong to that agreement and revision appears, divided across multiple subtabs for each age or age range and across multiple condition levels.
 - d. Expand the classification level where the payroll item you want to link is mapped.

- e. From the appropriate classification, select the age or age range.
 - f. Repeat Steps 3a to 3c.
5. Link items to allowances.
- a. Click the **Allowances** subtab.
- All associated allowances for each wage agreement will appear on the page.

 **Note:** If an allowance or penalty doesn't load from the page, make sure that it's created within payroll.

- b. Repeat Steps 3a to 3c.
6. Link items to penalties.
- a. Click the **Penalties** subtab.
- All associated penalties for each wage agreement will appear on the page.
- b. Repeat Steps 3a to 3c.

ADP (US)

 **Important:** The ADP (US) integration is only available to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

With Workforce Management (WFM), you can export both leave and hours worked to a CSV file compatible with ADP (US).

For more information about setting up ADP (US) integrations in WFM, see the following help topics:

- [Creating an ADP \(US\) Configuration in WFM](#)
- [ADP \(US\) Configuration Settings in WFM](#)
- [Linking Employees to ADP \(US\)](#)
- [Linking Locations to ADP \(US\)](#)
- [Linking a Location and Job to ADP \(US\)](#)
- [Linking Leave Types to ADP \(US\)](#)
- [Linking Agreements to ADP \(US\)](#)
- [Exporting ADP \(US\) Reports](#)

Creating an ADP (US) Configuration in WFM

Follow the steps in the procedure below.

To create a new ADP (US) payroll configuration in WFM:

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **ADP (US)**.
3. On the ADP (US) configurations page, click **+ Create new**.
4. On the Create new ADP (US) Payroll configuration page, complete the fields.
 - **Company code** – Enter the two or three alphanumeric characters representing your company. ADP provides this code. You may also enter a dash (-) or ampersand (&).

- **Use expanded fields** – If this setting is enabled in your ADP company, check this box.
 - **Send rates** – If you want WFM to include wage rates with each row in the exported ADP files, check the box. If this box is cleared, exported file will include only the number of hours worked.
 - **Department length** – Choose the length of the department name which matches the setting in ADP. You can choose from:
 - Never send department
 - 3 characters
 - 6 characters
 - **Cost code** – If you want to override the default cost code on the exported hours and link location and job combinations, check the box.
 - **Export hours to calendar day** – If you want to export all hours to the calendar day where they belong instead of the work day, check the box. When checked, shifts may be split when they go over midnight.
 - **Auto link to new revisions** – If you want to automatically link allowances, penalties, rates, and multipliers from newly created revisions, check the box.
- WFM notifies you when any linked agreements, regions, or location overrides are revised.

5. Click **+ Create**.

After creating your ADP (US) configuration, you must link the following to an ADP code:

- Employees
- Locations
- Leave types
- Agreements

ADP (US) Configuration Settings in WFM

On the ADP configuration page, you'll see the following options:

- **Detail** – Adjust the initial settings you made when you created the configuration.
- **Employees** – Link your employees to an ADP code.
- **Locations** – Link WFM locations to an ADP department.
- **Location + Job** – Link WFM location and job combinations to the ADP cost codes.
- **Leave** – Link leave types to an ADP code.
- **Agreements** – Link WFM agreement to an ADP company.
- **Wages** – (Pending)
- **Report** – Export files about employee leave and work hours.
- **Deactivate** – Deactivate an ADP configuration that is no longer needed.

Linking Employees to ADP (US)

Follow the procedure below.

To link employees to ADP (US):

1. Go to Workforce Management > Setup > Integrations > ADP (US).
2. Click **Employees**.
3. Locate the employee or employees you want to link.
 - In the Search field, enter the name of the employee.
 - From the list beside the Search field, filter to view either:
 - All Employees
 - Unlinked Employees
 - Linked Employees
 - Linked to other ADP
 - From the list on the upper right of the page, filter to view employees:
 - Employed now or in the future
 - Terminated
4. In the **File #** column of the employee, enter the ADP code.
5. (Optional) To unlink an employee from a code, click **Unlink** on the corresponding row.

Linking Locations to ADP (US)

Follow the procedure below.

To link locations to ADP (US) in WFM:

1. Go to Workforce Management > Setup > Integrations > ADP (US).
2. Click **Locations**.
3. Find the locations you want to link.
 - In the Search field, enter the name of the location.
 - From the list beside the Search field, filter to view either:
 - All Locations
 - Unlinked Locations
 - Linked Locations
4. In the **Department number** column of the location, enter the ADP department number.
 Department numbers have either 3 or 6 characters, depending on what you have set this to in the initial setup of the integration. To change character count settings, go to Workforce Management > Payroll > ADP (US) > Detail.
5. (Optional) To unlink a location from a department, click **Unlink** on the corresponding row.

Linking a Location and Job to ADP (US)

Follow the procedure below.

To link a location and job to ADP (US) in WFM:

1. Go to Workforce Management > Setup > Integrations > ADP (US).
2. Click **Location + Job**.

3. Find the location and job combination you want to link.
 - In the Search field, enter the name of the location or job.
 - From the list beside the Search field, filter to view either:
 - **All** – Shows all location and job combinations.
 - **Unlinked** – Shows only unlinked combinations.
 - **Linked** – Shows only linked combinations.
4. In the **ADP cost code** column of the location, enter the code.
This code may have up to 50 characters.
5. (Optional) To unlink a combination from a cost code, click **Unlink** on the corresponding row.

Linking Leave Types to ADP (US)

Follow the procedure below.

To link a leave type to ADP (US) in WFM:

1. Go to Workforce Management > Setup > Integrations > ADP (US).
2. Click **Leave**.
3. Find the leave type you want to link.
 - In the Search field, enter the name of the leave type.
 - From the list beside the Search field, filter to view either:
 - All leave types
 - Unlinked leave types
 - Linked leave types
4. In the **Payroll ID** column of the leave type, select between **Hours 3 Code** or **Hours 4 Code**.
5. On the corresponding field beside the payroll ID, enter the ADP payroll code you want to link to the leave type.
If you're unsure of the payroll code, contact your ADP representative.
6. (Optional) To unlink a leave type from a payroll ID and code, click **Unlink** on the corresponding row.

Linking Agreements to ADP (US)

Linking agreements to ADP (US) can be done in the same way as linking payroll items in WFM.

To know more about these options, see [Linking Payroll Items in WFM](#).

The ADP Configuration Agreements page contain subtabs available for configuring conditions, allowances, penalties, and classifications.

To link agreements to ADP (US):

1. Go to Workforce Management > Setup > Integrations > ADP (US).
2. Click **Agreements**.
3. Select the subtab that matches the agreement you want to link to ADP (US).
4. After selecting the subtab, complete the required fields to configure items.

The ADP Configuration Agreements page has fewer conditions than the Link objects to Payrollitems page. On the ADP agreements page, you can link items for the following conditions:

- Regular Hours
- Public Holiday
 - Regular Hours
 - Overtime Hours
 - Hours 3 Code
 - Hours 4 Code
- Weekend

For more information about completing the fields, see [Linking Payroll Items in WFM](#).

Exporting ADP (US) Reports

After linking ADP (US) components to WFM, you can export a report containing leave and work hours.

To export ADP (US) reports:

1. Go to Workforce Management > (Pending).
2. Select the start and end dates of the period you would like to export.
3. On the **Available Choices** panel, select the locations that you want to include in the report. To select multiple locations, press and hold Ctrl as you click each location.
If you want to include all locations, click **Choose all**.
4. To move your selections to the **Chosen Items** panel, click the blue right arrow in the middle of the panels.
If you want to clear your selections, click **Clear All**.
5. To generate a copy of the data, click **Preview**.
6. To download a CSV file of the data, click **Download**.

You can also set a **Batch ID**, **Memo Code** or **Memo Amount** before exporting data. If you need more information about these fields, reach out to an ADP representative.

ADP (Canada)

Important: The ADP (Canada) integration is available only to accounts where it is already provisioned. It is not included with the current SuitePeople WFM solution.

With Workforce Management (WFM), you can export employee start and stop time to a file compatible with ADP (Canada). This file lets you export the approved actual hours that employees worked by day and let ADP (Canada) calculate pay for specific state and local holidays that may apply.

Note: Leaves must be added in both ADP (Canada) and WFM). This data is not currently exported to ADP (Canada) using the start and stop export format.

Creating an ADP (Canada) Configuration

Follow the steps in the procedure.

To create a new ADP (Canada) configuration:

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **ADP (Canada)**.
3. On the ADP (Canada) configurations page, click **+ Create new**.
4. On the Create new ADP (Canada) Payroll configuration page, complete the fields.
 - **Company code** – Enter the two or three alphanumeric characters representing your company. ADP provides this code. You may also enter a dash (-) or ampersand (&).
 - **Report format** – Select the format for the ADP report.
 - **Export by Earnings Code** – This option will send over total hours worked for the pay period.
 - **Export by Start/Stop Times** – This export will include the start and stops times by date, with total worked hours by date to ADP. This will allow for the payroll system, ADP, to account for any state and local holidays to be accounted for when processing payroll.
 - **Start/Stop times export options** – Set optional fields for exporting start and stop times.
 - **Department map** – Select how you want to allocate approved hours in WFM to ADP departments. You can choose between **Location** and **Job**.
 If you do not select an option, work hours will be allocated to the home department in ADP.
 If you link WFM locations to ADP departments, you can ensure that employees who may work at various locations are allocated to the correct departments for payment.
 - **Job map** – Select how you want to map WFM jobs to ADP jobs. You can choose between **Location** and **Job**. This map benefits is useful when you need to track pay to jobs.
5. Click **+Create**.

After you have created your configuration, you can link the following data from WFM to ADP (Canada):

- employees
- locations, available if you chose to link WFM locations to ADP departments
- jobs, available if you chose to link WFM jobs to ADP jobs

Linking Employees to ADP (Canada)

To link your Adi Staff to an ADP Badge Number, select the Staff menu item under Payroll Configuration. You can use the drop-down boxes at the top of this page to view All Staff, Unlinked Staff, Linked Staff.

You can also filter to staff who are employed now or in the future, or terminated.

Follow the procedure to link WFM employees.

To link employees to ADP (Canada):

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **ADP (Canada)**.
3. On the ADP (Canada) configurations page, click the configuration you created.
4. On the configuration page, click **Staff**.
5. Locate the employee or employees you want to link.
 - In the Search field, enter the name of the employee.
 - From the list beside the Search field, filter to view either:

- All Employees
 - Unlinked Employees
 - Linked Employees
- From the list on the upper right of the page, filter to view employees:
 - employed now or in the future
 - employment terminated
- 6. In the **ADP Badge Number** column of the employee you want to link, enter the ADP code.
- 7. To link the employee, press **Enter**.
- 8. (Optional) To unlink an employee from a code, click **Unlink** on the corresponding row.

Linking Locations to ADP (Canada)

If you chose to link WFM locations to ADP departments, follow the procedure.

To link locations to ADP (Canada):

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **ADP (Canada)**.
3. On the ADP (Canada) configurations page, click the configuration you created.
4. On the configuration page, click **Locations**.
5. Locate the locations you want to link.
 - In the Search field, enter the name of the location.
 - From the list beside the Search field, filter to view either:
 - All Locations
 - Unlinked Locations
 - Linked Locations
6. In the **ADP Department number** column of the employee you want to link, enter the number.
7. To link the location, press **Enter**.
8. (Optional) To unlink a location from a code, click **Unlink** on the corresponding row.

Linking Jobs to ADP (Canada)

If you've opted to link Workforce Management Jobs to ADP Jobs, click on the Jobs menu item. From there, you'll see a list of your Workforce Management Jobs. To link these Job to ADP Jobs, enter in the ADP Number associated with the Workforce Management Job you're wanting to link in the ADP Number data field.

After you link your Workforce Management Jobs to ADP Jobs, you can now export files and process payroll.

To link jobs to ADP (Canada):

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **ADP (Canada)**.

3. On the ADP (Canada) configurations page, click the configuration you created.
4. On the configuration page, click **Jobs**.
5. Locate the jobs you want to link.
 - In the Search field, enter the name of the job.
 - From the list beside the Search field, filter to view either:
 - All Jobs
 - Unlinked Jobs
 - Linked Jobs
6. In the **ADP Number** column of the employee you want to link, enter the number.
7. To link the job, press **Enter**.
8. (Optional) To unlink the job, click **Unlink** on the corresponding row.

Exporting Data to ADP (Canada)

Exporting to ADP (Canada)

After you've completed establishing the links between Workforce Management and ADP, you can export leave and hours worked.

To generate the export file, enter the start and finish dates of the period you'd like to export and select which Workforce Management locations are to be included in the export.

Also, if needed, you can select the type of Employment Status and OT Exemption status to export from Workforce Management to ADP by clicking on the arrow next to the Employment/Wage item.

To export data to ADP (Canada):

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **ADP (Canada)**.
3. On the ADP (Canada) configurations page, click the configuration you created.
4. On the configuration page, click **Report**.
5. On the **Period** section, select the start and finish dates for the report.
6. On the **Location** section, choose the locations you want to include in the report.
 - a. Set the filters.
 - b. From the **Available Choices** panel on the left, select the locations.

If you want to select all locations, click **Choose All**.
 - c. To move the chosen locations to the **Chosen Items** panel on the right, click the blue right arrow symbol at the middle of the panels.

If you want to clear your chosen items, click **Clear All**.
7. On the **Employment/wage** section, select the employment status or statuses.
 - Full-time
 - Part-time
 - Casual
 - Contract
8. From the Exemption status list, select a status.

- Both exempt and non-exempt
 - Only exempt from overtime
 - Only non-exempt from overtime
9. (Optional) On the **Employee(s)** section, enter the name of an employee. Click to add them. You can add multiple employees.
If you don't select employees, the report will include data for all employees.
 10. To view a sample of the report, click **Preview**.
 11. To export an ADP-compatible CSV file of the report, click **Download**.

MYOB AccountRight Live

Important: The MYOB AccountRight Live integration is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

With Workforce Management (WFM), you can export employee hours to a file compatible with MYOB AccountRight Live.

To integrate WFM with MYOB AccountRight Live, follow the steps in the table.

Step	Related Topic
1. Create an MYOB username and password.	text
2. Authenticate WFM.	Authenticating WFM for MYOB AccountRight Live
3. Set up company files.	Setting up MYOB Company Files
4. Link employees.	Linking Employees to MYOB
5. Link wage agreements.	Linking Wage Agreements to MYOB
6. Link leave types.	Linking Leave Types to MYOB
7.(Optional) Link locations to jobs.	Linking Locations to MYOB Jobs

Creating an MYOB Username and Password

Before you can authenticate WFM, you need to set up an offline username and password in MYOB.

Note: Check if you have MYOB cloud or online enabled.

To create an MYOB username and password:

1. In MYOB, go to Setup > User Access.
2. Follow the instructions to set up an offline password.

Authenticating WFM for MYOB AccountRight Live

To authenticate WFM for use with MYOB AccountRight Live, follow the procedure below.

To authenticate WFM for MYOB AccountRight Live:

1. Go to (navigation path).
2. On the (page), select **Get Company Files**.
3. Log in to the my.MYOB site.
WFM opens, and a list of your MYOB files appears.
4. For each company file that you want to integrate to WFM, click **Authorise**.
All authorized files appear on the left of the page. Each company file includes a menu that you can use to link employees, agreements, leaves, and locations to the file.

Setting up MYOB Company Files

After you've authenticated WFM for MYOB AccountRight Live, the authorized files appear on the left.

You must confirm settings for MYOB company files to properly sync with WFM.

To set up MYOB company files:

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **MYOB**.
3. On the MYOB page, click a company file.
4. On the company file page, confirm the settings.
 - a. In the **Authorisation Details** section, note the level of authorization and available fields.
 - b. (Optional) If you change the credentials used to access your company files, you should update them using the username and password fields.
 - c. (Optional) If you want to synchronize employee details between WFM and MYOB, check the **Sync employee details** box.
5. On the **Default Hourly Wage** section, choose the action that applies to you.
 - If you pay employees on the hourly wage classification, select an option from **The hourly wage category** field.
 - If you don't pay employees on the hourly wage classification, leave this field blank.

Linking Employees to MYOB

Follow the procedure below.

To link employees to MYOB:

1. Go to Workforce Management > Setup > Integrations > MYOB.
2. Click **Employees**.
3. Select the subtab that best fits your purpose.
 - **Link Employee** – Select this subtab if you want to link or unlink employees that are available in both WFM and MYOB.
 - **Import Employee** – Select this subtab if you want to import employees from MYOB to WFM.
 - **Export Employee** – Select this subtab if you want to export employees from WFM to MYOB.

4. If you're on the **Link Employee** subtab, a list of MYOB employees appear.
 - a. From the list, locate the employee to link to WFM. If they're not on the list, they're not listed in MYOB.
 - b. On the corresponding employee field, select the employee file in MYOB.
 - c. Click **Link**.
 - d. (Optional) If you want to unlink an employee, click **Unlink**.
 - e. (Optional) If you want to retrieve employee information from MYOB to WFM, click **Pull**.
 - f. (Optional) If you want to update employee information from WFM to MYOB, click **Push**.
5. If you're on the **Import Employee** subtab, a list of MYOB employees appears.
 - a. From the list, locate the employee to import to WFM. If they're not on the list, they're not listed in MYOB or they're already linked with WFM.
 - b. Import the locations where employees are available.
6. If you're on the **Export Employee** subtab, a list of WFM employees appears.
 From the list, locate the employee to export to MYOB. If they're not on the list, they're not listed in WFM or they're already linked to an MYOB staff card.

Linking Wage Agreements to MYOB

To export shifts, you must link wage agreements to MYOB.

To link wage agreements to MYOB:

1. Go to Workforce Management > Setup > Integrations > MYOB.
2. Click **Agreements**.
3. The Link objects to Payrollitems page opens to the **Conditions** subtab.
 Determine the payroll items you need to link with each condition, including age group, if required.
4. Link the payroll items. For more information, see [Linking Payroll Items in WFM](#).

Linking Leave Types to MYOB

Link at least one leave type from WFM to MYOB.

WFM uses the linked leave types for the following:

- To link leave types between WFM and MYOB when exporting payroll reports
- To show the available leave balances in each employee's leave page in WFM

When employees request for a leave, they can immediately see their available leave balance on their employee leave page.

To link leave types to MYOB

1. Go to Workforce Management > Setup > Integrations > MYOB.
2. Click **Leaves**.
3. Locate the leave type you need to link to MYOB.
4. On the corresponding WFM leave type field, select the leave type in MYOB.

5. Click **Link**.
6. (Optional) If you want to unlink a leave type, click **Unlink** next to the corresponding type.

Linking Locations to MYOB Jobs

If you use MYOB jobs, you can link them to WFM locations for tracking in MYOB.

This is optional to set up. When Workforce Management exports shifts to MYOB, shifts which are worked at each linked location will export for cost-tracking purposes.

To link locations to MYOB jobs:

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **MYOB**.
3. On the MYOB page, click a company file.
4. Click **Locations**.
WFM locations appear on the left, and MYOB jobs appear on the right with corresponding lists.
5. Locate the WFM location you want to link, then select the corresponding MYOB job from the list.
6. Click **Link**.

WageEasy

Important: The WageEasy integration is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

With Workforce Management (WFM), you can export worked time to WageEasy.

To set up and export hours to WageEasy, see the following procedures in this section.

1. [Setting Up Unique WFM IDs](#)
2. [Setting up WFM Schedules to Export to a WageEasy Department](#)
3. [Exporting Hours Worked to Import to WageEasy](#)
4. [Importing Hours Worked to WageEasy](#)

Setting Up Unique WFM IDs

All employees in WageEasy need to have their employee numbers and time cards set to the WFM unique ID.

To set up a unique WFM ID:

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **WageEasy**.
3. Select the Roster Locations and pay range.
4. Click **View Staff**.
5. The column titled ID is the unique ID.

Setting up WFM Schedules to Export to a WageEasy Department

To have the approved hours from WFM appear in WageEasy departments, contact NetSuite Customer Support.

When the setup is ready, you'll see a list of WFM Roster Units with the corresponding department numbers appears in WageEasy. If you try to export before these are set up, the schedules won't export correctly.

If you've created a new roster unit with exportable shifts before the linking is complete, you'll also be unable to export. Send an email message with the correct department ID to the address mentioned.

Exporting Hours Worked to Import to WageEasy

Follow the procedure below.

To export hours worked from WFM:

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **WageEasy**.
3. Select the date range for the pay period.
4. Select the rosters you want to export.
5. To show all approved leave for the period, click **Leave Report**
6. Open WageEasy and enter the leave before importing the hours from WFM.
7. Go back to the WageEasy page in WFM.
8. To show the approved hours for the locations selected, click **Preview Shifts**.
Make sure the hours approved are correct.
9. To export the approved hours, click **Export Shifts**.
10. Save the file to a known location to import into WageEasy.

Importing Hours Worked to WageEasy

After you've saved a file of hours worked from WFM, you can import the hours to WageEasy.

To import hours worked to WageEasy:

1. Open WageEasy.
2. Enter any employee leaves.
3. In WageEasy, go to Wages > Auto.
4. To import the timesheets, follow the prompts.

Xero

Important: The Xero integration is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

With Workforce Management (WFM), you can export worked hours to Xero.

Linking WFM with Xero lets you:

- Export employee hours to Xero
- Create an employee in Xero from WFM
- Create an employee in WFM from Xero
- Automatically sync employee details updated in WFM with those in Xero
- Manually update employee details in WFM from the details in Xero

Linked data can then be used for payroll and can help you save time and avoid data entry errors.

To manage your Xero integration, see the following procedures in this section.

- [Setting up a Xero Integration](#)
- [Linking Multiple Xero Files to One WFM Account](#)
- Managing WFM Employees for Xero
- Exporting Shifts to Xero

Setting up a Xero Integration

Before you can export approved hours to Xero from WFM, you'll need to complete your initial setup.

To set up WFM with Xero, follow the steps in the table.

Step	Related Topic
1. Complete the requirements for the setup.	Prerequisites for Setting up Xero
2. Set up timesheet tracking in Xero.	Setting up Timesheet Tracking in Xero
3. Link WFM items to Xero.	Linking WFM Items to Xero

Prerequisites for Setting up Xero

Before you set up Xero for WFM, complete the following requirements:

- In Xero, ensure that you have access to the Payroll Administrator role.
- In WFM, ensure that you have access to a Finance Coordinator or higher level of access.

After completing your prerequisites, you can set up timesheet tracking in Xero.

Setting up Timesheet Tracking in Xero

To set up timesheet tracking In Xero:

1. Go to Xero.
2. On the top left, click your Xero file name. Click **Settings**.
3. Set up tracking categories and options. Refer to the table for specific settings.

Settings	Guidelines
Tracking Categories	Ensure that you set up options.

Settings	Guidelines
Category Options	Create one option for each WFM location.
Location	Each location in WFM must be mapped to a tracking category. Tracking categories and options may use the same names as your WFM locations.

For more information, see [Set up tracking categories and options](#) at Xero Central.

4. After saving your tracking categories, assign them to timesheet categories.
 - a. Go to Settings. Click **Payroll Settings**.
 - b. In the Payroll Tracking section, go to **Timesheet Categories**.

Note: When we export approved hours to Xero, the hours worked are allocated against a timesheet category. Don't map this to **Employee Groups** because these groups don't track hours.

If employees work across two stores, you can track this in Xero if you have one Xero file. Each store's hours will go to a different tracking category option.

- c. From the **Region** field, select the tracking category that you created.
 - d. Click **Save**.
5. Close Xero.
6. Go to Workforce Management.
7. Go to Setup > Integrations > Payroll Integrations > Xero.
8. Click **Link to new organisation**.
You'll be redirected to Xero.
9. Complete the steps to authenticate your Xero account.
You'll be redirected to WFM.
10. From the list that appears on the page, select your Xero file.

After opening your Xero file, you can link items in WFM to Xero.

Linking WFM Items to Xero

To ensure complete integration, you must link multiple WFM items to Xero. You only need to link most items the first time. If you create new employees, wages, or locations, you need to link them to Xero.

To continue linking WFM items, follow the procedure. You should already have your Xero file open on your screen.

To link WFM items to Xero:

1. From the Xero file page in Workforce Management, go to the **Defaults** subtab.
2. Complete the fields based on your setup in Xero.
 - Staff employment
 - Default ordinary earnings rate
 - Default payroll calendar
 - Superannuation
 - Default superannuation expense account
 - Default superannuation liability account

- Bank details
 - **Statement text** – This text appears on the employee's bank statement when they receive payment. WFM is required to send bank account details to Xero.
You're required to enter a statement text only if you have ESS Extended and want to send bank details to Xero.
- Wage revisions
 - **Auto link new revisions** – To automatically re-link allowances, penalties, rates, and multipliers from newly created revisions, check the box. WFM generates a notification when a new revision has been created for any linked agreements, regions, or location overrides.

3. Click **Save**.

4. Click the **Locations** subtab.

5. From each WFM location field, select the matching Xero tracking category option.

For example, for the **Harbour Town - Perth** location in WFM, select **Harbour Town - Perth** from the list of category options.

Ensure you select a timesheet category for each location to make sure that the hours for all locations are exported to Xero.

WFM automatically saves the mapping after you select a category.

If you want to add more tracking category options, you may do so then return to the Xero configuration page to select the option you added.

6. Link WFM employees to their Xero profiles.

For each Xero file, map the employees who will be paid from that file. You can't map an employee to multiple Xero files.

- a. Click the **Staff** subtab.
- b. Beside the name of the employee in WFM, select their corresponding name in Xero.
- c. Click **Link**.

 **Note:** When you link WFM employees to Xero, WFM applies changes made to employee profiles to their profiles in Xero.
For more information about applying Xero profile changes to WFM profiles and other ways to manage WFM employees with Xero, see [Managing WFM Employees for Xero](#).

7. Map WFM classifications or conditions to Xero payroll items. For more information, see [Linking Payroll Items in WFM](#).

If you have multiple locations in WFM and your employees regularly work at multiple locations, you can ensure that WFM transfers these hours to Xero. For more information, see [Linking Multiple Xero Files to One WFM Account](#).

Now that you've completed your integration setup and, if needed, linked multiple files to one account, you can export approved shifts. For more information about exporting, see [Exporting Shifts to Xero](#).

Linking Multiple Xero Files to One WFM Account

 **Note:** If you have only one Xero file that's set up with timesheet tracking category options matching WFM locations, no further actions are required.

If you have multiple locations in WFM and your employees regularly work at multiple locations, you can ensure that WFM transfers these hours to Xero.

If you have separate companies or ABNs for each location and use separate Xero files for them, you can link them to one WFM account. This account can capture all of your locations, so you can link the account to any employee record and ensure that you track their work across multiple locations.

The benefits of linking multiple Xero files or locations to one WFM account include:

- Easily sharing your employees across your locations
- Avoid over-scheduling your employees
- Calculating the correct wage triggers, like overtime, for hours worked across multiple locations

Before you begin linking Xero files, make sure that you have the correct access level so you can authorize access for each file.

To link multiple Xero files to one WFM account:

1. Go to Workforce Management.
2. Go to Setup > Integrations > Payroll Integrations > Xero.
3. Authenticate the Xero files you must link to the WFM account.
 - a. From the **Setup** menu, click **Link to new organisation**.
You'll be redirected to Xero.
 - b. Complete the steps to authenticate your Xero file.
You'll be redirected to WFM. The file you authorized is available from the dropdown field following the **Link to new organisation** button.
 - c. Repeat Steps 3 and 4 for each Xero file you must link to the account.
4. Configure the settings for each Xero file.
 - a. From the **Setup** menu, select the first Xero file from the list.
 - b. Configure mapping and options by linking WFM items to their corresponding settings in Xero. For more information, see [Linking WFM Items to Xero](#).

Guidelines for Linking Multiple Xero Files in WFM

For a proper integration, follow these guidelines:

- General
 - Correctly map the items in the Defaults, Agreements, and Locations subtabs. Make sure all of these options are correct for each Xero file. In general, the mapping on each Xero file is the same.
- Locations
 - Map locations to timesheet tracking category options. Each Xero file needs timesheet tracking setup so WFM can successfully send times to Xero.
 - Use tracking categories to track accurate allocation and reporting of employee hours and wages.
 - Each of the options that you set in timesheet tracking in each Xero file should match all locations you have in Xero.
- Employees
 - In WFM, **do not** map an employee to multiple Xero files. Map each employee to only one Xero organization. By mapping an employee to one organization, you ensure that Xero applies superannuation correctly.
 - Map employees to their primary work location.
 - Make sure that employee costs are applied and cross-invoiced to the correct Xero file.

■ Export

- Exporting staff approved hours works the same as when you're mapped to a single Xero file. After you've completed your payroll checks and mapped employees to Xero, you can click **Export** on the Xero configuration page.
- WFM exports all staff shift data for the same pay period and frequency at the same time.
- You don't need to run the export for each Xero file. You only need to click **Export** one time, and WFM creates the draft payruns in all your Xero files and exports the hours.
- If you have multiple pay frequencies of different pay periods for each file (or even in the same file) you'll need to run the export for them separately.

For example, if you have a weekly calendar starting on Monday at one Xero file and a two-week or fortnightly calendar starting on the first Tuesday of the month for other locations, first run an export for the weekly calendar. When that export is complete, run another export for the two-week or fortnightly calendar.

FAQ: Xero Integration with WFM

See the questions and answers below for information about the Xero integration in WFM.

Why do draft payruns from archived payroll calendars appear in export files?

The Xero Payroll API doesn't give an inactive status on payroll calendars, so when we create payruns, Xero is creating them for all payroll calendars including inactive payroll calendars.

It can be helpful to check with Xero support to see if you can completely delete a payroll calendar, and any ramifications in doing so.

How do I resolve a missing earnings rate or location error when exporting files?

If you run a payroll export and encounter an error about an archived or missing earnings rate or location linking, check your Xero mapping. For example, "There is one Earnings Rate that is archived or missing from Xero."

To resolve the error, go to Payroll Export > Setup, then select your organization.

Review the mapping based on the type of error you received.

- For earnings rate or allowance errors, go to **Agreements**
- For employees, go to **Staff**
- For timesheet tracking errors, go to **Locations**

When you find the mapping that's causing issues, remove this mapping and correct the error in Xero, if needed. On the mapping page, click **Refresh**, then correct the link.

How do I ensure the date field shows correct date by default when I load the payroll for the week?

In Xero, go to a list of your pay calendars. In each pay calendar you'll need to change the 'next payment date' and set it to the correct date (for example, pay date next week).

You'll also need to do this on any archived pay calendars. Re-enable these calendars and then change this setting. When you're done, archive the pay calendar again.

When they're all set to the same date, the next time you load payroll in WFM, the date will then show correctly on this page.

If you're unsure about where you can find your pay calendars in Xero, contact your Xero advisor.

How do I resolve a negative value in payruns when I try to export shifts?

Before running an export, WFM checks if there are any errors from Xero that could cause issues with the export.

You can't re-export timesheets if there was a partial export or a failure with the creation of allowances detected. This is a safety measure to ensure that hours worked are successfully exported while minimizing the chance of an error or manual entry of all hours for staff.

If WFM shows an error about a negative value in payruns, this indicates an issue in Xero where the pay template has a negative value. You must remove this value before running the export.

The negative value is generally a result of a deduction that has been applied to a staff member resulting in a negative value. For example, check if any new deductions were recently added to the employee.

Why do I need to set up tracking category mapping?

As a requirement for sending work hours to Xero, you need to set up tracking categories that break down these hours in WFM. Category mapping ensures you can track the accurate allocation of hours and wages in both WFM and Xero.

How do I resolve an issue where only part of the shifts for the week are exported?

WFM is unable to export hours to Xero when there's a timesheet for a payrun. In this case, you must manually update the data in Xero.

If only part of the week's hours have been exported, follow the steps to complete your payrun.

1. Run your export as normal. When all shifts have exported, click continue and head back to the export screen (with the list of staff names).
2. When all shifts have exported, click **Continue**.
3. Go to the Export page with the list of employee names.
You'll see the list of employees whose shifts were only partially exported to Xero.
4. Click each employee's name.
WFM shows the approved hours worked and how the hours are broken down and exported to Xero.
5. For each employee, note the hours that weren't exported and add them to the employee's pay run in Xero.

How can an employee sync their superannuation fund to Xero?

WFM lets linked employees select and update their superannuation fund details on their WFM profiles.

If your fund is not yet linked to Xero, you need to complete the following steps before you sync your fund.

1. Go to Workforce Management.
2. Go to Setup > Financial.
3. On the Superannuation fund details page, enter your super fund name, superannuation product identification number (SPIN), and account number.
4. Click **Save**.

After linking your fund, sync your superannuation fund to Xero by following the steps.

1. Go to Workforce Management.

2. Go to Setup > Financial.
3. On the Superannuation fund details page, select the fund that you want to sync to Xero.
4. Enter your account number.
5. Click **Save**.

How do I onboard new employees so their superannuation details are sent to Xero?

Ensure that you link your employees to Xero before they fill in their superannuation details.

To properly onboard employees and their superannuation fund details:

1. Create the employee in WFM.
2. Export or link the WFM employee to Xero.
3. When the employee first logs in to their WFM profile, they can set their superannuation fund details, and these details will sync to Xero.

If employees fill in the fund details before you link or export them to Xero, the superannuation data won't sync with Xero when you try to run payroll for them. You'd need to enter the information to Xero.

How do I resolve a 'Super guarantee' error when exporting shifts?

Before processing the export, WFM checks if there are any errors from Xero that could cause issues. This error occurs when an employee in Xero is 18 or older and has a superannuation line on their payslip.

Find and correct the employee's superannuation line in Xero. Then check if any new employees were recently added to Xero or have recently turned 18. If you're unsure, contact your Xero representative or advisor.

This error occurs because you can't re-export timesheets if there was a partial export or a failure with the creation of allowances. This is a safety measure to ensure that hours worked are successfully exported while minimizing the chance of an error or manual entry of all hours for employees.

Paypac

Important: The Paypac integration is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

You can set up Workforce Management to integrate with Attaché.

After the setup, you can generate a Paypac-compatible file of approved hours worked to import for payroll.

Configuring Paypac with Workforce Management

The Paypac file format is available in the Generic Payroll exporter.

To configure Paypac with WFM

1. Go to Setup > Integrations > Payroll Integrations > Paypac.
2. Create a new payroll configuration.
 - a. Click **Create new**.
 - b. On the Create new payroll configuration page, complete the required fields.

- **Name** – Enter a name to identify this specific Paypac configuration. You can create multiple Paypac configurations, such as when you have multiple databases or files and need to generate separate ones.
 - **Icon** – Select an icon to identify this configuration.
 - **Report type** – From the list, select **Paypac**.
 - **Date format** – From the list, select **World Long**.
 - (Optional) **Hourly payroll id** – If you have employees on flat rates, enter their ID here. Staff on flat rates are those whose wage on their staff members profile is set to **Hourly**.
- c. Click **Create**.
- The Detail page appears.
3. (Optional) On the Detail page, verify your configured settings and change as needed.

Important: If the Detail page doesn't appear, you must link the data you want to export.

Linking Data from Paypac to WFM

After you've configured Paypac for WFM, you should see the Detail page with your chosen settings. If this isn't the case, link the data you intend to export.

To link data from Paypac to WFM

1. Go to Setup > Integrations > Payroll Integrations > Paypac.
 2. Click **Detail**.
 3. Link employees.
 - a. From the Detail page, click **Employees**.
 - b. (Optional) On the top of the page, use the filters to update the names that appear on the table.
 - c. From the employee list, find the employee whose data you need to export.
 - d. (Optional) On the top of the page, search for the name of a specific employee.
 - e. In the corresponding **Payroll ID** column, enter the unique Paypac payroll ID of the employee.
-  **Note:** You can also link Attaché IDs to employees on the Employee List page. To do so, go to Setup > Employees > List. For each employee you need to link to WFM, enter their Attaché IDs in the corresponding **Payroll ID** column.
- f. Click **Link**.
A page to link the employee to payroll will then appear.
 - g. From the **Config** list, select the name of the corresponding payroll configuration.
 - h. In the **Payroll id** field, enter the employee's Paypac ID.
 - i. Click **Link**.
 - j. Complete Steps E to I for all employees you need to export.
4. Link locations.
- a. From the Detail page, click **Locations**.
 - b. (Optional) On the top of the page, use the filters to update the locations that appear on the table.

- c. From the locations list, find the location you need to export.
 - d. (Optional) On the top of the page, search for the name of a specific location.
 - e. In the corresponding **Payroll ID** column, enter the unique location or department ID.
 - f. Click **Link**.
 - g. Complete Steps E to F for all locations you need to export.
5. Link leaves.
- a. From the Detail page, click **Leave**.
 - b. (Optional) On the top of the page, use the filters to update the leave types that appear on the table.
 - c. From the leave types list, find the type you need to export.
 - d. (Optional) On the top of the page, search for the name of a specific leave type.
 - e. In the corresponding **Payroll ID** column, enter the unique leave type ID.
 - f. Click **Link**.
 - g. Complete Steps E to F for all leave types you need to export.
6. Link agreements.
- a. From the Detail page, click **Agreements**.
 - b. Select from the following options:
 - **Conditions** – You should link conditions for instances when a single set of payroll ID apply to all the employees associated with the agreement, regardless of wage level and employment status.
 - Allowances
 - Penalties
 - **Classifications** – You should link classifications if your payment setup require multiple payroll IDs to be associated with employees depending on their employment conditions.
 - c. (Optional) Select **Conditions**.
 - d. On the Enterprise Agreement page, enter the payroll ID for each unlinked agreement.
 - e. (Optional) Select **Classifications**.
 - f. On the Classifications page, filter the results by wage agreement and revision.
Conditions are shown on the page based on the different classifications set up in WFM.
 - g. Find the condition that you need to identify.
 - h. Enter the payroll ID. Press **Enter**.
 - i. Repeat steps G to H for all the conditions you need to identify across the different classifications.

Attaché

Important: The Attaché integration is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

You can set up Workforce Management to integrate with Attaché.

After the setup, you can generate an Attaché-compatible file of approved hours worked to import for payroll.

Configuring Attaché with Workforce Management

The Attaché file format is available in the Generic Payroll exporter.

To configure Attaché with WFM

1. Go to Setup > Integrations > Payroll Integrations > Attaché.
2. Create a new payroll configuration.
 - a. Click **Create new**.
 - b. On the Create new payroll configuration page, complete the required fields.
 - **Name** – Enter a name to identify this specific Attaché configuration. You can create multiple Attaché configurations, such as when you have multiple Attaché files and need to generate separate export files.
 - **Icon** – Select an icon to identify this configuration.
 - **Report type** – From the list, select **Attaché**.
 - **Date format** – From the list, select **World Long**.
 - (Optional) **Hourly payroll id** – If you have staff on flat rates, enter their ID here. Staff on flat rates are those whose wage on their staff members profile is set to **Hourly**.
 - c. Click **Create**.
The Detail page appears.
3. (Optional) On the Detail page, verify your configured settings and change as needed.

Important: If the Detail page does not appear, you must link the data you intend to export.

Linking Data from Attaché to WFM

After you've configured Attaché for WFM, you should see the Detail page with your chosen settings. If this isn't the case, link the data you want to export.

To link data from Attaché to WFM

1. Go to Setup > Integrations > Payroll Integrations > Attaché.
2. Click **Detail**.
3. Link employees.
 - a. From the Detail page, click **Employees**.
 - b. (Optional) On the top of the page, use the filters to update the names that appear on the table.
 - c. From the employee list, find the employee whose data you need to export.
 - d. (Optional) On the top of the page, search for the name of a specific employee.
 - e. In the corresponding **Payroll ID** column, enter the unique Attaché payroll ID of the employee.

Note: You can also link Attaché IDs to employees on the Employee List page. To do so, go to Setup > Employees > List. For each employee you need to link to WFM, enter their Attaché IDs in the corresponding **Payroll ID** column.

- f. Click **Link**.

A page to link the employee to payroll will appear.

- g. From the **Config** list, select the name of the corresponding payroll configuration.
 - h. In the **Payroll id** field, enter the employee's Attaché ID.
 - i. Click **Link**.
 - j. Complete Steps E to I for all employees you need to export.
4. Link locations.
- a. From the Detail page, click **Locations**.
 - b. (Optional) On the top of the page, use the filters to update the locations that appear on the table.
 - c. From the locations list, find the location you need to export.
 - d. (Optional) On the top of the page, search for the name of a specific location.
 - e. In the corresponding **Payroll ID** column, enter the unique location or department ID.
 - f. Click **Link**.
 - g. Complete Steps E to F for all locations you need to export.
5. Link leaves.
- a. From the Detail page, click **Leave**.
 - b. (Optional) On the top of the page, use the filters to update the leave types that appear on the table.
 - c. From the leave types list, find the type you need to export.
 - d. (Optional) On the top of the page, search for the name of a specific leave type.
 - e. In the corresponding **Payroll ID** column, enter the unique leave type ID.
 - f. Click **Link**.
 - g. Complete Steps E to F for all leave types you need to export.
6. Link agreements.
- a. From the Detail page, click **Agreements**.
 - b. Select from the following options:
 - **Conditions** – You should link conditions for instances when a single set of payroll ID apply to all the employees associated with the agreement, regardless of wage level and employment status.
 - Allowances
 - Penalties
 - **Classifications** – You should link classifications if your payment setup requires multiple payroll IDs to be associated with employees depending on their employment conditions.
 - c. (Optional) Select **Conditions**.
 - d. On the Enterprise Agreement page, enter the payroll ID for each unlinked agreement.
 - e. (Optional) Select **Classifications**.
 - f. On the Classifications page, filter the results by wage agreement and revision.
Conditions are shown on the page based on the different classifications set up in WFM.
 - g. Find the condition that you need to identify.
 - h. Enter the payroll ID. Press **Enter**.
 - i. Repeat steps G to H for all the conditions you need to identify across the different classifications.

Workforce Management Integrations

SuitePeople Workforce Management (WFM) can integrate with many platforms for many purposes.

From the Workforce Management tab, go to Setup > Integrations for a full list of available platforms.

The following integrations are available:

- [Email Sales Importer](#)
- [Oracle Hospitality](#)
- [OrderMate](#)
- [World Manager](#)
- [Redcat POS](#)

Contact NetSuite Customer Support if you don't see an integration listed.

To know more about integrating NetSuite with WFM, see [Integrating Workforce Management with NetSuite](#).

Payroll

Direct integrations between Workforce Management and third-party payroll providers aren't supported in the U.S.

Payroll data can be shared by doing one of the following:

- You can export approved hours from Workforce Management to NetSuite. For more information, contact NetSuite Customer Support.
- If you are a cloud services customer, you can access the Workforce Management API. API keys are provided only to you, not to third-party partners. For more information, see <http://docs.adiinsights.info> and contact NetSuite Customer Support.
- Workforce Management has a range of generic CSV reports that aren't specific to any third-party partner's file specifications. For more information, see [Workforce Management Reports](#).

Point of Sales (POS)

WFM supports POS integrations with Oracle Hospitality.

Send sales data to Workforce Management by doing one of the following:

- [Email Sales Importer](#)
- If you are a cloud services customer, you can access the Workforce Management API. API keys are provided only to you, not to third-party partners. For more information, see <http://docs.adiinsights.info> and contact NetSuite Customer Support.

Email Sales Importer

You can configure an email to be imported automatically into WFM. You can schedule the import from your POS or system automatically. Otherwise, you can manually email this data each day, week, or at any point.

Note: Make sure each time row is correct based on the resolution that you set. Each row should be in a multiple of the start of the hour.

For example, refer to the following intervals:

- **15-minute interval** – 11:00:00, 11:15:00, 11:30:00, 11:45:00, 12:00:00
- **30-minute interval** – 11:00:00, 11:30:00, 12:00:00
- **60-minute interval** – 11:00:00, 12:00:00

Each interval contains sales and units from that time period. In the sample intervals, the row of 10:45:00 contains sales only from 10:31:00 to 10:45:00. WFM automatically aggregates sales throughout the day.

To automatically import an email into WFM, follow the procedures:

- [Creating an Email Configuration](#)
- [Formatting the CSV File for Email Sales Importer](#)
- [Setting up Email Sales Importer](#)

Creating an Email Configuration

Before you set up Email Sales Importer, create the required email configuration.

To create an email configuration:

1. Go to Workforce Management.
2. Go to Setup > Integrations.
3. On the Integrations with external systems page, click **Email**.
4. On the Active configurations page, click **Add**.
5. Complete the fields.
 - **Name** – Enter a name for the email configuration that you will use to identify it.
 - **Stats period** – Enter the resolution of your data. Choose from 15 minutes, 30 minutes, or 60 minutes.
 - **Import as** – Select the type of data you want to import, either **Actual** or **Forecast**.
 - **Location matching** – Select the location naming convention that will be applied on the CSV file.
 The CSV file can contain one or more locations. WFM determines the locations based on what you select from the **Location** field.
 Following are the Location matching options:
 - **WFM Location ID** – Needs to match the WFM location ID. This ID will appear beside the location names in the location selection.
 - **WFM Location name** – Needs to match exactly with the location name in WFM.
 - **Custom ID** – Needs to match the WFM location **Custom ID**. You can change or set the custom ID for each location at Setup > Locations > Select a location > Custom ID. This ID will appear next to the location names in the location selection.
 - **Locations** – Select the locations that will be added in the CSV file.

- **Contact** – Enter the email address to contact if there are any import failures.
- 6. Click **Save**.
The configuration window closes.
- 7. Click **Show keys**.
- 8. To verify your identity, enter your password.
- 9. Note the secret key.

Warning: Do not share this key with unauthorized people.

Formatting the CSV File for Email Sales Importer

You can format your statistical data on a CSV file to set it up for the email sales importer.

On the CSV file, enter the information using the headers or columns on the table.

Important: Enter the header names as they are shown on the table. The headers are case-sensitive and must be exact.

Header	Description
location	This value tells WFM which location the row belongs to, based on your location matching setting.
date	This header shows the relevant date of the data according to the ISO-8601 format YYYY-MM-DD . For example, enter October 31st, 2023 as 2023-10-31 .
time	This header shows the time the data begins in the ISO-8601 string format hh:mm:ss . For example, enter 11:30 pm as 23:00:00 .
sales	Enter the total sales amount. It can contain 0 or any positive or negative number. Leave the cell blank if there's no data.
units	Enter the total unit count. It can contain 0 or any positive or negative number. Leave the cell blank if there's no data.

The following table is an example of a CSV file you can use to import data with location matching.

location	date	time	sales	units
1	2017-08-18	10:00:00	—	—
1	2017-08-18	10:15:00	0	0
1	2017-08-18	10:30:00	25.22	5
1	2017-08-18	10:45:00	33.54	5

Setting up Email Sales Importer

After you've set up your email, generated the secret key, and formatted your data on a CSV file, you can set up the email sales importer.

To set up email sales importer:

1. Schedule an email to **stats@adiinsights.com** and attach a CSV file with your statistical data.
2. In the subject line, use the format **WFM-IMPORTER:<secret key>** . Make sure to use the secret key you generated earlier.

For example, a complete subject heading is **WFM-IMPORTER:12345678-1234-1234-1234-123456789012**.

Oracle Hospitality

To interact with this integration in Workforce Management (WFM) head to Config > Integrations and select Oracle Hospitality from the list. If you haven't set up an Oracle Hospitality Integration before, you'll be prompted to create a new one.

Setting up a new integration

To set up a new integration, go to the Oracle Hospitality integration area (if you don't have one set up already) or just click New from the menu on the left.

Enter a name for the integration—this helps you tell different Oracle Hospitality setups apart.

Enter the base URL (the one you see when you're logged into Oracle Hospitality Report and Analytics) e.g. <https://mta4-ohra.oracleindustry.com/>

Enter the auth URL (the one you see for the login page for Reporting and Analytics. e.g. <https://mta4-ohra-idm.oracleindustry.com/>

Enter the username and password to generate the authentication token—they're only used for this step and aren't stored. You will need to generate an API account – see https://docs.oracle.com/en/industries/food-beverage/back-office/20.1/biapi/obtain_acct_info.html for more information.

Once you click Authenticate, a configuration is created. See below for more information about editing a configuration and what settings need to be applied.

Editing a configuration

To edit a configuration, select Config from the menu on the left. Here, you can change the config name, update brands, set up sales and units fields, and view the URLs.

When you pick brands from the list, you'll see all active locations from those brands that you can link. In a franchise setup, this includes locations from a franchisee account.

You can choose what data the sales and units fields pull from—just pick the right options from the dropdown.

Linking Locations

To link locations in WFM to locations from Oracle Hospitality, select locations from the menu on the left. You'll see a list of locations from WFM on the left and a search box to find a location from Oracle Hospitality. If the location from Oracle Hospitality isn't in the search list, click "Reload Locations" to update the list of linkable locations.

If a location is linked incorrectly, it can be unlinked by clicking Unlink next to the link option.

Importing Guest Checks

If you linked a location and need to import its historical data from Oracle Hospitality, you can refetch data that automatic import missed.

To re-import guest checks, select "Import Guest Checks" from the menu on the left. Choose the start and end dates, choose the locations, and WFM will queue up the task and update sales and units once it's done.

Note: In a franchisee environment, a franchisee can only access the "Import Guest Checks" option for available locations in the WFM account.

OrderMate

Important: The OrderMate integration is available only to accounts where it is already provisioned. It isn't included with the current SuitePeople WFM solution.

Set up and manage your OrderMate integration in WFM. You can import your sales data to accurately forecast and know your labor cost percentage during the day on your dashboard.

Setting up OrderMate in WFM

To set up OrderMate in WFM, follow the procedure.

To set up OrderMate in WFM:

1. Go to Workforce Management.
2. Go to Setup > Integrations > OrderMate.
3. On the Create new OrderMate configuration page, choose an action.
 - If you have an existing OrderMate integration, select it from the left-hand panel.
 - If you need to create an integration, click **+ Create new**.
4. If you created an integration, complete the fields.
 - **Name** – Enter a name for the integration.
 - **Brand** – Select the brand or company that include the locations you need to map to WFM.
 - **User** – Enter the user name provided by OrderMate.
 - **Password** – Enter the password provided by OrderMate.
 - **Store id** – Enter the store ID provided by OrderMate.

Note: The store ID is unique for each location or venue. If you have multiple locations and venues, you may need to set up multiple integrations.

- **Add discounts** – To add any applied discounts back to the sales and show projected sales without discounts applied, check the box.
 - **Exclude surcharges** – To remove any applied surcharges to the sales and show sales without surcharges applied, check the box.
5. Click **+ Create**.

After you have selected an integration or finished creating a new one, the Edit page appears.

6. Map the locations to WFM.

- a. On the left-hand panel, click **Locations**.
- b. For the locations that will have the sales importing for this configuration, click **Link**.
After linking the location, all sales from today onwards will import to this location.

 **Note:** You can link any other locations you need, and their sales will import too.
For example, if FOH and BOH are both linked, they'll both import the venue's sales. All sales will show up in both locations.

- c. (Optional) To change the percentage of sales allocated to a linked location, click **Advanced** beside the location name.

The Advanced linking window for the location appears.

 **Note:** In the earlier example, you can split sales percentages between BOH and FOH, or leave it at the default (100%) if each department reports on total sales.

- **Fetch sales** – Click the box.
- **Sales percentage** – Enter the percentage of sales allotted for the location.
- **Units percentage** – Enter the percentage of units allotted for the location.

- d. Click **Save**.

7. Fetch historical data.

If there's an internet outage that delays data uploads, you can fetch the missing sales later.

- a. On the left-hand panel, click **Fetch Orders**.
- b. In the **Start** and **Finish** fields, select the dates to establish the duration of orders for import.
- c. Click **Fetch**.

 **Note:** Sales may not appear straight away. Data may be delayed, especially when fetching orders from long date ranges.

8. (Optional) If you're not using the OrderMate configuration anymore, click - **Deactivate**.

World Manager

 **Important:** The World Manager integration is available only to accounts where it's already provisioned. It is not included with the current SuitePeople WFM solution.

The World Manager integration gives your managers access to a fifth suite in the platform. This is a scheduling suite that includes shift drops and swaps.

When World Manager is integrated with WFM through Single Sign On, employees and managers experience a seamless onboarding process. Employees hired through World Manager are automatically created in WFM, where they can perform the following:

- Enter all personal and financial details
- See schedules
- Swap shifts
- Drop shifts

When new employees arrive for their first shift, everyone is aware that the person is on-site. The employee receives a PIN to clock on to time and attendance.

If you operate in a Franchise environment where your franchisor provides you with World Manager access, you must review the Importing Staff options.

Use the following links for more information about the integration:

- [Setting up World Manager for WFM](#)
- [Linking Locations to World Manager](#)
- [Importing Employees from World Manager](#)
- [Linking Employees to World Manager](#)
- [Syncing and Importing World Manager Fields](#)

Setting up World Manager for WFM

Before you can configure and manage World Manager for WFM, contact NetSuite Customer Support and request to enable the integration in your account.

After the integration is activated, you can continue to set up World Manager for WFM.

To set up World Manager for WFM:

1. Go to Workforce Management.
2. Go to Setup > Integrations > World Manager.
3. On the World Manager configuration page, complete the required details.
 - a. Enter the required data on the following fields:
 - **Name** – Enter the name of your World Manager platform.
 - **Base URL** – Enter the URL of the platform.
 - **Username** – Enter the username of a World Manager level user in World Manager.
 - **Password** – Enter the password of the username you entered.
 - **Create missing staff** – If you want WFM to automatically create staff from World Manager, check the box.
 - **Generate missing timesheet pin** – If you want employees to get a random four-digit pin for WFM, check the box.
 - **Send new staff emails** – If you want new staff to receive a welcome email to WFM, check the box.
 - b. Enter information from World Manager and enter them on the following fields:
 - API key
 - OAuth client id
 - OAuth client secret

For more information, go to [Get WFM Requirements from World Manager](#).

Get WFM Requirements from World Manager

Follow the procedure to get the API Key, OAuth client ID and OAuth secret from World Manager.

To get WFM requirements from World Manager:

1. Go to World Manager.
2. Create a new integration client and call it WFM Scheduling.
3. On the Update Integration Client page, complete the fields.
 - a. In the **Name** field, enter **WFM Scheduling**.
 - b. In the **Scopes** section, check all the boxes.
 - c. In the **Authorisation Message** box, enter the message that employees will see when they log into WFM from World Manager.
 A sample message is: When you sign in to Workforce Management using your World Manager login details, you can sign in without using your WFM username and password.
 - d. In the **Redirect URL** field, enter **https://go.adiinsights.com/complete/world_manager/**.
4. Copy the following fields to WFM:
 - **Client ID** – Use this as the **OAuth Client ID** in WFM.
 - **Client Secret** – Use this as the **API key** and **OAuth Client secret** in WFM.

Linking Locations to World Manager

To import staff from World Manager, you'll need to link a WFM Location with a World Manager Location.

If you're in a franchisee environment, your franchisor will manage this for you.

On the Link Locations to World Manager page, select a location from the drop down list to link the locations between the two systems.

Importing Employees from World Manager

Employees are automatically imported from World Manager to WFM.

If you need to import employees, follow the procedure.

To import employees from World Manager:

1. Go to Workforce Management.
2. Go to Setup > Integrations > World Manager.
 A list of employees that have not imported is available.
3. For each employee that you must import, click **Import** next to their name.
 The screen shows any issues that prevent the import of the employees.
4. In World Manager, fix the issues preventing the import.

After the issues are fixed, the employees are automatically imported to WFM. If the employees remain unavailable, complete the procedure to import them again.

Linking Employees to World Manager

When WFM imports employees from World Manager, it verifies that the employee to be imported doesn't currently exist in WFM.

If a similar name exists in your WFM account, the employee won't automatically import. To resolve the issue, link the existing WFM profile to the employee's World Manager profile rather than create duplicate profiles in WFM.

To link employees to World Manager:

1. Go to Workforce Management.
2. Go to Setup > Integrations > World Manager.
3. Click **Staff**.
4. Beside the name of the employee with an existing WFM profile, click **Select Person**.
The **Select Person** list shows WFM profiles that are not currently linked to a World Manager profile.
5. From the list, select the corresponding WFM profile.
6. Click **Link**.

Syncing and Importing World Manager Fields

When employee profiles are imported from World Manager, WFM imports a select set of fields and synchronizes a subset of these fields.

WFM imports the following World Manager fields:

- Name (Required to Import)
- Preferred Name (Custom Field in World Manager)
- Email address
- Phone
- Mobile
- Date Of Birth (Custom Field in World Manager)
- Gender (Custom Field in World Manager)
- Jobs (Based on Group Name)

After an employee profile is imported, WFM synchronizes the following fields between both platforms:

- Preferred Name (Custom Field)
- Email
- Phone
- Mobile
- DOB (Custom Field)
- Gender

Redcat POS

Important: The Redcat POS integration is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

To set up the Redcat integration, you will need a Redcat login with access to API reporting. If you're unsure if you have access, contact your Redcat representative.

Creating a Redcat POS Integration

Follow the procedure.

To create a Redcat POS integration:

1. Go to Workforce Management.
2. Go to Setup > Integrations > Redcat.
3. On the Create page, complete the required fields.
 - **Base url** – Enter your Redcat cloud URL. Ensure that the format matches the following: **https://MYURL.redcatcloud.com.au**.
 - **Credentials** – Enter the username and password from your Redcat representative.
4. Click **Save**.

The following fields are available after you create the integration:

- Sales field
- Units field

The fields refer to sales and units in WFM. From each list, select the corresponding fields that you want to fetch from Redcat.

 **Note:** You can change this later, but you'll need to re-fetch any data you imported before.

Setting up Additional Redcat Sale Types

If you have additional sale types in Redcat and would like to use these in conjunction with your labor deployment model, contact NetSuite Customer Support.

After the sale types are set up, you'll see the **Sales subcategories** menu on the page. Subcategories are only for labor deployment.

For more information, see [Labor Deployment](#).

To set up additional Redcat sale types:

1. Go to Workforce Management.
2. Go to Setup > Integrations > Redcat.
3. Select **edit** next to the sales or unit field where you want to add additional subcategories.
4. (Optional) If you don't see what you're looking for, the field may already be mapped. To view linked fields, check the **Include items that are already linked** box at the top of the page.
5. Map WFM locations to Redcat locations.
 - a. On the left-hand panel, click **Locations**.
A list of locations appears.
 - b. From each location field, search the corresponding Redcat location.
 - c. Click **Save**.
Redcat sales will start fetching to the linked units.

Guidelines when Integrating Redcat with WFM

Note the following guidelines.

- Sales will update in WFM once per hour.

- WFM fetches data at a 15-minute resolution.
- Every time WFM fetches data, it pulls all of today's data. If sales change later (like when discounts are added), those updates will appear next time WFM fetches data.
- If you don't see any data after a successful fetch, make sure the data shows up in Redcat reporting, then try fetching historical data. For more information, see

Fetching Historical Data from Redcat

After you set up the Redcat integration you can fetch historical data to WFM. This data doesn't transfer automatically.

To fetch historical data from Redcat:

1. Go to Workforce Management.
2. Go to Setup > Integrations > Redcat.
3. From the left-hand panel, click **Fetch stats**.
4. Select the start and end date of the period you want to fetch. No date limit is applied.
5. Select the locations with historical data that you want to fetch.

If you're fetching data for a short period, such as one location for one week, the page updates to let you know when the process is complete.

If you're fetching data for longer periods (such as for multiple locations for more than two weeks), a message appears to inform you the process is working in the background. WFM notifies you when the process is complete.

Workforce Management Security Guide

The Workforce Management (WFM) Security Guide provides detailed guidelines that let you securely use and manage the WFM solution.

Audience

This guide is for WFM users who access, use, or manage the WFM solution, like administrators, managers, employees, and other company tasks.

Security as a Shared Responsibility

As a global provider of enterprise cloud computing, Oracle builds secure software through a rigorous set of formal, always evolving security standards and practices known as Oracle Software Security Assurance (OSSA). For more information, refer to [Oracle Corporate Security Practices](#).

If you use WFM for your tasks, you need to take an active role in keeping data secure shared across different cloud and on-premises endpoints. Review the topics in the WFM Security Guide to familiarize yourself with ways to secure your employee and shift data.

WFM provides features to help you enhance security, but they don't guarantee regulatory compliance. You should verify if the security settings cover the right rules for the business or industry and locations where you operate.

The security guide includes the following help topics:

- [Workforce Management Security Overview](#)
- [Workforce Management Installation Security](#)
- [Maintaining Workforce Management Security](#)
- [Using Workforce Management Securely](#)

WFM Security Documentation

The security guide includes the following help topics:

- [Workforce Management Security Overview](#)
- [Workforce Management Installation Security](#)
- [Maintaining Workforce Management Security](#)
- [Using Workforce Management Securely](#)

WFM Product Documentation

For more information about the use and management of WFM, see the following help topics:

- [Workforce Management Setup Guide](#)
- [Configuring Workforce Management](#)
- [Managing Workforce Management Employees](#)
- [Managing Workforce Management Shifts](#)
- [SuitePeople Workforce Management Phone App](#)
- [Workforce Management AdiOrg](#)
- [SuitePeople Time Clock](#)
- [Workforce Management Reports](#)
- [Workforce Management Payroll](#)
- [Workforce Management Integrations](#)

Workforce Management Security Overview

With Workforce Management (WFM), you can streamline shift scheduling, track time and attendance across your workforce, and calculate wages. You may use WFM to access, enter, and share employee and shift data across different platforms.

Applications

You can access WFM features and data using the following applications:

- [Workforce Management SuiteApp](#)
- [Stand-alone WFM website](#)
- [SuitePeople Time Clock for Windows](#)

- WFM apps
 - NetSuite Workforce Management for Android and iOS
 - NetSuite Time Clock for Android and iPadOS

Operating Systems and Minimum Requirements

Refer to the following help topics:

- [Minimum Requirements for SuitePeople Time Clock Mobile Apps](#)
- [Minimum Requirements for WFM Mobile Apps](#)

Roles and Permissions

After the Workforce Management SuiteApp is installed to a NetSuite account, users may access WFM features using the Accounting Center or Employee Center roles. WFM also provides the SuitePeople WFM Integration role for users setting up an integration.

If employees need access to other roles, WFM permissions must be added on those roles. For more information, see [Assigning WFM Permissions to Roles](#).

Personal Information

The following table shows personal identifiable information captured and processed in WFM solutions.

Personal Information	Specific Data
Personal details	Name, date of birth, gender, marital status, number of children, names of children
Personal contact details	Home address, home telephone or mobile number, e-mail address, password, pin code
Photos or images	Profile images and punch-in images
Employee ID	Employee or staff ID
Wages	Salary and rates
Web attributes	IP addresses and visited pages
Electronic identifiers	Platform name, version, model, device fingerprint, and host operating system
Geolocation	GPS coordinates

Biometric Data

You can set up Time Clock for Windows to capture and record biometric data, like fingerprints, for employee punch-in.

Security Settings

You can enable two-factor authentication (2FA) to add a layer of security to your account.

- To enable 2FA for the WFM SuiteApp and stand-alone website, refer to Security Settings in WFM.

- To enable 2FA for Time Clock for Windows, refer to [Enabling Two-Factor Authentication in SuitePeople Time Clock for Windows](#).

Punch-in Authentication Methods

WFM provides multiple methods to authenticate users. Employees can punch in using a pin code, a finger scan, either one, or both methods.

Authentication options may vary across different applications and locations. In some locations, employees may be limited to certain authentication methods to meet regulatory requirements.

In Time Clock for Windows, managers can set up authentication methods for employees. For more information, see [Managing Settings in SuitePeople Time Clock for Windows](#).

Time Clock Device Activation

Installing SuitePeople Time Clock require managers to generate an activation code for each device you add. Activation codes are generated on the WFM SuiteApp or stand-alone website. You can also deactivate devices on the SuiteApp or site.

Product and Security Updates

WFM security updates may be shared with affected customers through feature change notifications, in-app messages, release notes, SuiteAnswers, and the NetSuite and Oracle Help Center.

Workforce Management Installation Security

This section includes recommendations about the installation and management of the WFM solution and its applications. Only users with administrator access should handle installation.

Installer Considerations

To securely install WFM applications, refer to the following guidelines:

- **SuitePeople Workforce Management SuiteApp** – Install the latest version available on the SuiteApp Marketplace. For more information, see [Installing the SuitePeople Workforce Management SuiteApp](#).
Stop using older Adi Insights SuiteApps, Adi Insights (Bundle ID: 317115) and Adi Insights – Embedded (Bundle ID: 401708), in your account. Be aware that, when your NetSuite account is upgraded to 2025.1, you won't be able to log in and use the older Adi Insights SuiteApps to access WFM features.
- **SuitePeople Time Clock for Windows** – Install Time Clock for Windows only from the Workforce Management SuiteApp or stand-alone website. For more information, see [Installing SuitePeople Time Clock Components for Windows](#).
- **WFM apps** – Install the WFM apps only from the official Apple and Google Play stores. See [Operating Systems and Minimum Requirements](#).

Account Password Considerations

When providing access to WFM for employees, administrators or managers can send an email with their username and a link to reset their password.

When resetting a password, note the following criteria:

- It can't be similar to other personal information, such as names, addresses, or birthdays.
- It can't be a commonly used password.
- It needs at least 10 characters.
- It should include letters, numbers, and special characters.
 - It can't be all numbers.
 - It needs at least one lowercase letter, one uppercase letter, one number, and one special character.

Password reset options are also available on the WFM SuiteApp or stand-alone website login pages.

Pin Code Considerations

WFM assigns randomly generated pin codes to employees, and managers can help employees change their codes. Pin codes can be 4, 5, or 6 digits long. When changing a code, managers should opt to set up a 6-digit code to enhance security.

Time Clock for Windows Installation Security

Note the following information when installing Time Clock for Windows:

- Use Time Clock with devices that meet minimum hardware and software requirements.
- When installing Time Clock for Windows, ensure that you have system administrator rights.
- Install Time Clock updates only from the application.
- Be aware that the Time Clock installer includes the Microsoft Visual C++ Redistributable component during installation. This component installs the essential libraries needed for the application to work smoothly on the computer or device.
- If you use the Futronic fingerprint scanner, use the installer to install the required components.
- After Time Clock is installed, data is synced with the WFM servers. When offline, WFM data is stored in an encrypted local database until the application goes online and uploads it to the central server.

WFM Mobile Apps Installation Security

Note the following guidance when installing WFM mobile apps:

- To maximize app security, avoid installing and using WFM mobile apps on rooted devices. These devices may be more exposed to malware attacks and other security threats.
- Use WFM mobile apps with the devices that meet minimum hardware and software requirements.
- After installing the mobile apps, always keep the operating systems up to date.
- If possible, enable the auto-update feature on mobile devices to receive new versions on time.

Maintaining Workforce Management Security

For managers and administrators, refer to the guidelines in this section to ensure that WFM applications are maintained securely.

Policies for Maintaining Security

The following are some guidelines for organizational policies to help maintain WFM data security:

- Check which employees have access and know how to securely grant or remove it.
- Set reasonable password expiration and reset policies for WFM pins and passwords. Changing passwords too often can lead to reuse or predictable patterns.
- Monitor WFM product and security updates in community channels and take action when needed.
- When registering user biometric data, ensure that a manager is present to validate it.
- Strongly discourage sharing of pin codes and passwords among employees.
- Discourage users from using the same mobile device to punch in on mobile apps.
- Plan to sign WFM applications out of devices when employees aren't using them.

Guidelines for Managing Application Security

The following are some guidelines to manage and configure WFM applications.

- To better secure access to WFM, take advantage of available security settings, including longer pin code options and 2FA authentication.
- Regularly patch and update device operating systems.
- For efficient tracking of security incidents, encourage use of the **Notes** field when punching in to WFM applications.

Using Workforce Management Securely

For employees, refer to the guidelines in this section to securely use WFM applications.

Securing WFM Accounts

The following are some guidelines to secure WFM accounts:

- Never share your pin code and password with other employees.
- Punch in to WFM applications using only your own account.
- Always sign out of your WFM account after punching in or out.

Using Time Clock for Windows Securely

The following are some considerations for using Time Clock for Windows securely:

- Keep your pin code or password secure, and don't write them down so others can't get them.
When entering your pin code or password on company premises, make sure no one sees your screen.

Using WFM Mobile Apps Securely

The following are some guidelines for using WFM mobile apps securely:

- If you need visual verification, make sure your face is facing the camera for a clear image.
To avoid other employees hijacking your account, lock your personal device when not in use.

Workforce Management Data Management

Note: This topic applies to data management and personal information management for SuitePeople Workforce Management.

This topic does not relate to the Personal Information (PI) Removal feature available for NetSuite fields, records, and audit logs. For more information about that feature, see the help topic [Personal Information \(PI\) Removal](#).

This topic is intended to assist you in addressing your obligations related to privacy laws such as GDPR, CCPA, and other similar regulations.

Personal Information Removal

If you're a Workforce Management (WFM) customer, you must contact NetSuite Customer Support to request for the removal of personal information (PI). A NetSuite authorized contact must make the request.

Guidelines for Personal Information Removal

Before you initiate the request, note the following guidelines:

- If you have configured WFM to sync data with NetSuite records, such as employee records, prepare to share this information with NetSuite Customer Support. You may need to conduct additional steps to help you comply with your PI removal obligations.
- If you have third-party payroll integrations, you may need to manage data that may flow through them. Refer to available third-party documentation or reach out to the solution's support department, as needed. Sample integrations include API, payroll, and onboarding.
- Verify whether PI removal affects your compliance with any applicable local or federal labor laws. Consult your own attorney or expert on the applicable rules for your business or industry in all jurisdictions in which you operate.

Performance Management

SuitePeople HR's Performance Management features help employees stay on track to meet their career goals and objectives. The following three tools are included in the Performance Management feature:

- [Goal Management](#)– Enables employees to create and track goals in collaborations with their managers.
- [Performance Reviews](#) – Enables the set up of performance reviews to help employees and managers assess their performance.
- [Areas of Focus](#) – Enables employees to reflect and plan their career management in collaboration with their managers.

The Performance Management tools must be enabled in NetSuite before they can be used. For more information, see [Performance Management Prerequisites](#).

Employees can also recognize the accomplishments, achievements, or milestones of their coworkers by giving [Kudos](#). Kudos must be activated separately from the other Performance Management tools.

Goal Management and Performance Reviews

With the Performance Management feature, you can track and review employee performance. Performance Management includes the following tools:

- [Goal Management](#)– Employees can create and manage their own goals. Managers can approve and interact with their employees' goals. You can also set up email notifications and check performance metrics.
- [Areas of Focus](#)– Employees can create and manage their own areas of focus. Managers can create areas of focus for their employees.
- [Performance Reviews](#)– You can create and schedule performance reviews for one employee or a group. As a reviewer, can edit and comment on employees' self-reviews. When performance reviews are completed, the employee's completed goals and kudos.
- [Performance Management Saved Searches](#)– You can use saved searches to find information about and inside goals and performance reviews. You can customize saved searches to show what you need.
- [Performance Management Workbook](#)– Using SuiteAnalytics Workbook, you can use and customize workbook and dataset templates for goals and performance reviews.

To use the Performance Management feature, you must activate it on your account. See [Performance Management Prerequisites](#)

Performance Management Prerequisites

Before you can use the Performance Management feature, you'll need the following:

- SuitePeople HR. Contact your NetSuite account manager about setting up SuitePeople HR and Performance Management in your NetSuite account. For more information, see [SuitePeople Overview](#).
- You'll need to enable the Performance Management feature in your account. For more information, see [Enabling the Performance Management Feature](#).
- Your role needs to have the Talent Administration permission with the full access level. Standard roles that include this permission are Human Resources Generalist, Administrator, and Chief People Officer (CPO). For more information, see [Performance Management Permission Requirements](#).

Enabling the Performance Management Feature

Before you can use the Performance Management feature, you need to enable it in your account.

To enable the Performance Management feature:

1. Go to Setup > Company > Enable Features.
2. Select the **Employees** subtab.
3. Scroll down to the Performance Management section, and check the **Performance Management** box.
4. Click **Save**.

Performance Management Permission Requirements

If you've enabled the Performance Management feature, there are two permissions that control access to goal and performance review information: Talent Administration and Talent Employee. Roles that have both of these permissions can:

- Create metrics for tracking employee performance
- View, inactivate, and delete employees' goals
- Create and manage performance review questions, rating scales, and templates
- Create, schedule, and approve performance reviews
- Edit, delete, and cancel performance reviews

The Talent Administration and Talent Employee permissions are automatically applied to the Chief People Officer and Human Resources Generalist roles, as well as customized versions of these standard roles. You will need to add both permissions to any other roles that need to have access to Performance Management features. .

Roles with just the Talent Employee permission, such as Employee Center, allow employees to work with their own performance reviews and goals, as well as those of their direct reports.

For a list of standard roles and their permissions, see the help topic [Standard Roles Permissions Table](#). You can also create custom roles that include this permission. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

Permission	Permissions Subtab	Permission Access Level	Supported Functionality
Talent Administration	Lists	View	Enables you to view and search for performance metrics, performance review questions, performance review rating scales, and performance review templates. You can't create or edit any of these.
		Full	You can create, edit, or delete performance metrics, performance review questions, performance review rating scales, performance review templates, performance reviews, and performance review schedules, with some limitations.
Talent Employee	Lists	Full	You can create and edit your own goals or those of your direct reports. You can approve and delete your own goals or those of your direct reports.

Permission	Permissions Subtab	Permission Access Level	Supported Functionality
			When combined with the Talent Administration permission at level: View, you can view and search for goal and performance review information. You can view all goals and performance reviews for employees. When combined with Talent Administration at level: Full, you can also approve and cancel performance reviews for all employees.

Goal Management

Goal management includes the following:

- [Goal Management for Employees and Managers](#)
 - Employees can create their own goals in collaboration with managers. They can record decisions and conversations by adding comments to goals.
 - Employees can manage their current and past goals to identify key trends.
 - Managers and employees can set up notifications for goals at key events.
 - After goals are closed, employees and managers can write reflections on the outcome.
- [Goal Tracking with Performance Metrics](#)
 - Access real-time data in NetSuite to automatically update the actual value of a goal. NetSuite provides default performance metrics, and you can create your own.
- [Goal Saved Searches](#)
 - Use saved searches to find information about goals in your organization.
- [Performance Management Workbook](#)
 - You can use the performance management datasets and workbook templates to analyze goal information for the employees in your organization.

Goal Management for Employees and Managers

With the Performance Management feature, you can create, manage, and set targets for your own goals. You can use performance metrics to automatically update the actual value of your goal with data from NetSuite. You can also associate your goals with an area of focus.

If you're a manager, you're responsible for approving your direct reports' planned goals. Your direct reports can't change the status of goals to in progress until they're approved. You can comment on your direct reports' goals to provide guidance, but you can't edit your direct reports' goals or create goals for them.

The best way to manage goals is to use your Employee Center role. You can also manage your goals at Setup > Performance Management > Goals.

Watch the following help video for information about managing your own goals in the Employee Center:

 [Managing Goals in the Employee Center](#)

Watch the following help video for information about interacting with the goals of your direct reports in the Employee Center:

 [Interacting with the Goals of Your Direct Reports](#)

Learn more in the following topics:

- [Creating Goals](#)
- [Approving Goals](#)
- [Adding Comments to Goals](#)
- [Editing Goals](#)
- [Inactivating Goals](#)
- [Viewing Goals](#)
- [Closing Goals](#)

Creating Goals

With the Performance Management feature, you can create and manage goals for yourself.

To create a goal:

1. From the home screen of your Employee Center role, go to Talent > Goals.
 2. Click **New Goal**.
 3. In the **Goal Name** field, enter a name for the goal.
 4. In the **Details** field, describe the goal and how you plan to achieve it. You can use Text Enhance to generate new goal details, clean up the goal details, or make the goal details longer or shorter. To use Text Enhance, click the Text Enhance icon beside the **Details** field. For more information on Text Enhance, see the help topic [Text Enhance](#).
 5. If you have at least one ongoing area of focus, you can select it to associate with your goal from the **Area of Focus** list.
 6. From the **Start Date** field, select the date you plan to start working on the goal. You can change this date at any time.
 7. In the **Target Completion Date** field, select the date you plan to complete the goal. You can change this date at any time.
 8. (Optional) To set a target for your goal and to track if you are achieving that target, do the following:
 - a. Choose **Manual** or **Performance Metric** to determine how to track your goal.
 - b. If you track your goal manually, from the **Format** list, select to track your goal as a number, percent, or currency.
 - c. If you track your goal with a performance metric, from the **Performance Metric** list, select a performance metric. For example, to track how many customers you gain, use the performance metric New Customers. If you use a performance metric, when you move the goal to in progress, NetSuite updates the **Actual** field.
-  **Tip:** Click the info icon to read a description of the performance metric you select.
- d. In the **Start** field, enter a number that represents the value that you achieved before the start date.
 - e. In the **Target** field, enter a number that represents the value that you want to achieve. For example, if you want to gain three new customers, enter 3 in the Target field.
9. Click **Save**.

After you save a goal, your manager receives an email notification. Your manager needs to approve your goal before you can change the status from planned to in progress. After your manager approves your goal, you can't make any more changes to the Name and Details fields.

Approving Goals

If you're a manager, approving a goal is an opportunity for you to provide input on the employee's goal. This step is required before employees can change the status of their goals to in progress.

You can't reject a goal. Instead, add comments to the goal or meet with your employee to discuss any changes that need to be made before you want to approve the goal.

To approve a goal:

1. From the home screen of your Employee Center role, go to Talent > Goals.
2. From the list of your direct reports, select a direct report.
3. From the **Planned** column, click a goal. Goals that require approval have a **Pending Approval** banner.
4. Review the goal details, targets, and dates.

Note: After you approve a goal, the employee can't edit the Goal Name and Details fields. Make sure these fields are acceptable before you approve a goal.

5. (Optional) To add a comment to the goal, click the **Comments** subtab. Enter a comment, and then click **Submit**.
6. To approve the goal, in the **Goal** subtab, click **Approve**.

After you approve a goal, the employee will receive an email.

Adding Comments to Goals

As an employee, you can add comments to your goals to keep your manager up-to-date on your progress.

As a manager, you can add comments to your employees' goals to provide guidance. After you add a comment to a goal, NetSuite notifies your employee.

To add a comment to a goal:

1. From the home screen of your Employee Center role, go to Talent > Goals.
2. From the list of your direct reports, select a direct report.
3. Click the goal that you want to add a comment to.
4. Click the **Comments** subtab.
5. Enter your comment.
6. Click **Submit**.

After you submit a comment, you can't edit or delete it.

Editing Goals

As an employee, you're the only one who can edit your own goals. If your manager hasn't approved a goal yet, you can change the goal's name and details. You can only change your goal's status after your manager approves it.

To edit your goals:

1. From the home screen of your Employee Center role, go to Talent > Goals.

2. Click the goal you want to change.
3. Do any of the following:
 - If your manager has approved your goal, you can update its status. To update your goal's status, select one of the following from the **Status** field:
 - **Planned** - The initial status for goals that you create.
 - **In Progress** - You are ready to start working on the goal. When you set a goal with a performance metric to In Progress, the Actual field updates with your goal's actual value.
 - **Completed** - The goal is completed.
 - **Not Completed** - The goal wasn't finished by the target date. If you can keep working on it, update the target date to give yourself more time.
 - **Canceled** - The goal was canceled (for example, it is no longer relevant).

Tip: On the Goals page, drag the goal into a status column to update its status. You can also reorder goals in a column to match your priorities.

- To add an Area of Focus from a goal, click the dropdown menu and select the area of focus. To remove an Area of Focus from a goal, click **X** in the dropdown menu.

Note: When you edit an area of focus, the changes are reflected on all goals that are linked to the area of focus.

- To change the start date or target completion date of the goal, enter new dates in the **Start Date** or **Target Completion Date** fields.
 - To indicate how you feel about the status of your goal, select a **Mood**:
 - **On Track** – You're on track to reach your goal.
 - **Behind** – You're behind on your goal.
 - **At Risk** – You're at risk of missing your goal.
 - To edit the details of your goal, you can use Text Enhance to generate new goal details, clean up the goal details, or make the goal details longer or shorter. To use Text Enhance, click the Text Enhance icon beside the **Details** field.
 - To change the performance tracking method for your goal, choose either **Manual** or **Performance Metric**.
 - To change the format for a manually tracked goal, from the **Format** list, select a format.
 - To change the performance metric of your goal, from the **Performance Metric** list, select a performance metric.
 - To change the value you completed when your goal started, in the **Start** field, enter a number.
 - To change the value you want to achieve, in the **Target** field, enter a number.
 - To update the actual value of your goal, in the **Actual** field, enter a number.
If you're using a performance metric to track the actual value of your goal, you can't enter a number here.
 - To add comments to your goal, see [Adding Comments to Goals](#).
4. When you finish editing, click **Save**.

Inactivating Goals

You can only inactivate your own goals. When you inactivate a goal, it doesn't appear on the Goals page in your Employee Center anymore.

To inactivate a goal:

1. Go to Setup > Performance Management > Goals.
2. Beside the goal you want to make inactive, click **View**.
3. Click **Edit**.
4. Check the **Inactive** box.
5. Click **Save**.

To view inactive goals, click **Search** from the list page view. Select **Yes** beside the **Inactive** field and click **Submit**.

Viewing Goals

Employees can view their own goals. Managers can view their own goals and the goals of their direct reports. Employees and managers can also use the Goals portlet to view their own goals and the goals of their direct reports. Goals that are closed for three months don't appear on the Goals page anymore, but you can still view them on the All Goals page.

Viewing the Goals of Your Direct Reports

If you're a manager, you can view the goals of your direct reports. You can't create or edit goals for your direct reports, but you can provide feedback by adding comments to their goals. You need to approve your direct reports' planned goals before they can move the goals to in progress. For more information about approving goals, see [Approving Goals](#).

To view the goals of your direct reports:

1. From the home screen of your Employee Center role, go to Talent > Goals.
2. From the **My Team** list, select a direct report.
3. Click the goal that you want to view.

Viewing Goals in the Goals Portlet

The Goals portlet provides an overview of your own goals and the goals of your direct reports. It can be added to any dashboard.

 **Tip:** Click the name of any goal in the portlet to view the goal card on the Goals page.

Portlet Tab	Description
My Actions	Displays the following information about your own goals: ■ Goals Starting Soon — Displays goals that are starting in two weeks or less. ■ Goals Due Soon — Displays goals that are due in two weeks or less. If a goal isn't started or closed on time, the start date and target date can be updated. Only goals approved by your manager are displayed. ■ Overdue Goals — Displays goals that aren't started on time and goals that aren't closed on time. If a goal isn't started on time, the date in the Start Date column is bold. If a goal isn't closed on time, the date in the Target Completion Date column is bolded.
My Goals	Displays progress, time elapsed, and days remaining for the three goals that are on the top of the In Progress column on your Goals page.
Team Actions	Displays the following information about the goals of your direct reports:

Portlet Tab	Description
	■ Approval Required — Displays goals you need to approve. For more information, see Approving Goals. ■ Overdue Goals — Displays goals that aren't started on time and goals that aren't closed on time. If a goal isn't started on time, the date in the Start Date column is bolded. If a goal isn't closed on time, the date in the Target Completion Date column is bold. ■ Reflect on Goals — Displays goals closed within the last three months that you haven't written a reflection for yet. For more information, see Closing Goals.  Note: This tab only appears if you're assigned as a supervisor to a minimum of one employee in NetSuite. If you use the portlet in your Employee Center role, this tab appears on the Manager Dashboard.
Team Goals	Displays all the goals of your direct reports that are in progress. Goals are displayed in a scatter plot graph by progress and time elapsed.  Note: This tab only appears if you're assigned as a supervisor to a minimum of one employee in NetSuite. If you use the portlet in your Employee Center role, this tab appears on the Manager Dashboard.  Note: The legend and criteria of the graph are interpretations. Review your employees' goals with them to be notified of their progress.

Viewing All Goals

The All Goals page allows you to view all your goals and all the goals of your direct reports in one place. You can filter the All Goals page to search for and view specific goals.

To view all goals:

1. From the home screen of your Employee Center role, go to Talent > Goals.
2. At the bottom of the Closed column, click the **Looking for all your goals?** link.

 **Note:** If you select a direct report from the **My Team** list, the link appears at the bottom of the Closed column with that employee's name. For example, if you select John Smith from your My Team list, you will see the following link: **Looking for all goals for John Smith?**

3. If you want to filter the All Goals page, do any of the following:
 - To filter by employee, In the **Employee** list, click an employee's name to view or hide their goals in the table.

 **Note:** If you don't have direct reports, you can only view your own goals on the All Goals page.

- To filter by goal name, in the **Search by Goal** field, search for a goal.
- To filter by closed date, from the **Closed Date Range** fields, enter a date range.
- To filter by status, from the **Status** list, select a status.
- To filter by performance metric, from the **Performance Metric** list, select a performance metric.
- To filter by an area of focus, select one from the **Area of Focus** list. You can only use this filter if you are an employee, or if you are a manager and have one employee selected in the **Employee** filter.

- To clear all the filters on the page, click **Clear All Filters**.

Note: All filters will only show the current statuses of employee goals. From the status dropdown menu, only those statuses will be visible.

Managers and employees can view a history of all the changes to an employee's goal marked 'In Progress' so they can stay aligned on the goal's progress.

To view goal change history as a manager:

1. From the Goals portlet, select the goal that you want to view the history of.
2. Click the **History** subtab on the goal window.

The History subtab shows which fields of the goal were changed, the content of the changes, and when the changes were made. Only employees can make these changes to their own goals.

Changes to a goal are only tracked after the manager approves the goal.

Note: When you view a goal from an employee's performance review, only the changes up to the date the employee submitted the performance review will be displayed.

To view goal change history as an employee:

1. From the home screen of your Employee Center role, go to Talent > Goals.
2. Select the goal you want to view the history of.
3. Click the **History** subtab on the goal window.

Deleting Goals

As an employee, you can delete any of your goals if they have not been approved by their manager. Once a goal is deleted, it is gone forever.

To delete a goal:

1. From the home screen of your Employee Center role, go to Talent > Goals.
2. Select the goal you want to delete.
3. From the **Actions** list, click **Delete**.
4. Click **Ok**.

Closing Goals

After you finish working on a goal, you can close it and add a reflection that details the goal's outcome.

You can't edit a closed goal, but you and your manager can still add comments to it.

Note: After you close a goal, the goal's actual value and progress are locked.

To close a goal:

1. From the home screen of your Employee Center role, go to Talent > Goals.
2. Move the goal that you want to close from the **In Progress** column to the **Closed** column.
3. From the **Status** list, select a closed status:
 - **Completed** – The goal is complete.
 - **Not Completed** – The goal isn't completed. For example, you may have a goal that depends on a project that wasn't completed on time.
 - **Canceled** – The goal isn't needed anymore.
4. In the Reflection section, enter your thoughts about the outcome of the goal.
5. Click **Save**.

Your manager will receive an email after you close a goal. Your manager can then enter a reflection about the outcome of the goal, and you will receive an email detailing this.

 **Note:** If you close a goal with an area of focus attached to it, you can't delete the area of focus.

After your goal is closed for three months, it doesn't appear on your Goals page anymore. You can view goals that are older than three months on the All Goals page. For more information about goals, see [Viewing All Goals](#).

Goal Tracking with Performance Metrics

Performance metrics use real-time data in NetSuite to automatically update your goal's actual value. For example, if your goal is to win 10 new customers, you can use the New Customers metric. The New Customers metric finds how many customers placed their first order with you as their sales representative. NetSuite also gives you default performance metrics, but you can also create your own.

A performance metric starts calculating the actual value when you move the goal to In Progress. The results are locked when you close the goal (when the status is completed, not completed, or canceled). When you close a goal, any transactions in the goal period that happen after the closing date aren't included.

Watch the following help video for more information about performance metrics:

 [Real-Time Updates to Goals with Performance Metrics](#)

Learn more in the following topics:

- [Default Performance Metrics](#)
- [Creating Performance Metrics](#)
- [Editing, Inactivating, or Deleting a Performance Metric](#)

Default Performance Metrics

Depending on the features enabled in your account, your employees can use the provided performance metrics to keep the actual value of their goals up-to-date.

Performance Metric	Description
Average Days to Close	The average number of days that it takes you to close a case.
Average Discount (%)	The average percent discount that you apply to sales orders.

Performance Metric	Description
	 Note: This performance metric uses discounts that you apply to individual line items on a sales order, not to the overall sales transaction.
Average Opportunity Duration (days)	The average number of days between creating an opportunity and closing it with the status Closed - Won.
Billable Hours	The number of your hours worked that can be billed to customers.
Cases Closed (#)	The number of cases that you close.
Kudos Received	The number of Kudos that you receive.
New Customers	The number of your customers who place their first order.
Opportunities Won	The number of opportunities that are closed with the status Closed – Won.
Projects Completed on Time (%)	The percentage of projects that you complete on time.  Note: To use this performance metric, the projects that you are a part of should use both project tasks and baselines.
Quote Conversion Rate (%)	The percentage of your quotes that are converted to sales orders.
Revenue Target	The total monetary value of your closed won opportunities.
Win Rate	The percentage of your opportunities with the status Closed – Won

You can also create your own performance metrics. For more information, see [Creating Performance Metrics](#).

Creating Performance Metrics

Creating a performance metric involves the following steps:

1. [Creating a Saved Search for a Performance Metric](#)
2. [Creating a Performance Metric](#)

 **Tip:** You may want to create performance metrics in a sandbox account first so you can test that they work, then you can set them up in your production account. For more information about sandbox accounts, see the help topic [NetSuite Sandbox](#).

Creating a Saved Search for a Performance Metric

Before you create a performance metric, you need to create a saved search with the right criteria to track your goal's progress. Saved searches that you use for performance metrics require the following:

- The saved search needs to be public, so everyone can run it and see the results.
- The search results need to include a summary type. For more information about summary types, see the help topic [Summary Types for Search Results](#).

To learn how to create a saved search, see the help topic [Defining a Saved Search](#).

The following example outlines how to define a saved search for tracking sales orders within a specific period. You change the saved search criteria depending on what you want to track.

For example, to create a performance metric saved search to track sales orders:

1. Go to Reports > Saved Searches > All Saved Searches > New.
2. From the New Saved Search list page, select **Transactions**.
3. In the **Search Title** field, give your saved search a unique name.
4. To make the saved search public, check the **Public** box. This lets everyone run the search and see the results.
5. Click the **Criteria** subtab, and then do the following:
 - a. In the **Standard** subtab, from the **Filters** list, select **Type**.
 - b. In the **Saved Transaction Search** window, select **Sales Order** from the list.
 - c. Click **Set**.
6. Click the **Results** subtab, and then do the following:
 - a. From the **Field** list, select **Amount (Transaction Total)**.
 - b. From the **Summary Type** column, select **Sum**.
 - c. Click **Add**.
7. Click **Save**.

 **Note:** If you edit a saved search, the changes affect the associated performance metric and any open goals that use it.

Creating a Performance Metric

After you create a saved search, you can create a performance metric.

To create a performance metric:

1. Go to Setup > Performance Management > Performance Metrics > New.
2. In the **Name** field, give the metric a unique name that makes it clear what data and unit it tracks.
3. In the **Description** field, enter a description of the performance metric. Employees will see this when they create a goal with it.
4. From the **Format** list, select if you want the performance metric to be tracked as a number, percent, or currency.
5. From the **Saved Search** list, select the saved search to associate with this metric.
6. From the **Employee Filter** list, choose the type of employee you want to link to this metric. For example, you might pick Sales Representative for a revenue target metric. The metric will then use the revenue from the Sales Representative on a transaction to fill in the goal's actual value.
7. From the **Date Filter** list, select the type of date you want to use for this metric.
8. Click **Save**.

Editing, Inactivating, or Deleting a Performance Metric

You can edit a performance metric anytime. Any changes you make will directly affect any goals linked to it.

When you inactivate a performance metric, employees can't pick it for new goals, but anyone already using it for existing goals can keep using.

You can delete a performance metric only if the metric isn't associated with a goal.

To edit, inactivate, or delete a performance metric:

1. Go to Setup > Performance Management > Performance Metrics.
2. Beside a metric, click **Edit**.
3. Do one of the following:
 - To edit the metric, make your changes and click **Save**.
 - To inactivate the metric, check the **Inactive** box and click **Save**.
To view inactive performance metrics, check the **Show Inactives** box on the Performance Metrics list page.
 - To delete the metric, from the **Actions** list, select **Delete**. When asked to confirm, click **OK**.

Areas of Focus

Areas of focus enable employees and managers to work together on a list of focus areas to help grow the employee's career.

If you are an employee, you can do the following:

- Create and manage your own areas of focus. For more information, see [Managing Your Areas of Focus](#).
- Connect your goals to areas of focus to make sure your goals are contributing to your career development. For more information, see [Creating Goals](#).

If you are a manager, you can provide guidance to your direct reports by creating areas of focus for them. For more information, see [Creating Areas of Focus for Your Direct Reports](#).

Managing Your Areas of Focus

You use areas of focus to plan the areas of your career development you want to work on. You can create, edit, delete, and archive your areas of focus whenever you need. Areas of focus are available on your performance reviews or from the Goals page.

 **Note:** You can sort the All Goals page by using the Area of Focus filter.

Creating an Area of Focus

You can create an area of focus from your performance review or from your Goals page. For more information about creating an area of focus on your performance review, see [Completing Your Self Review](#).

To create an area of focus:

1. From the home page of your Employee Center role, go to Talent > Goals.
2. Click the **View My Areas of Focus** link.
3. Enter an area of focus, then click **Add**.

Editing an Area of Focus

You can edit an area of focus after you or your manager creates it. For more information about editing an area of focus on your performance review, see [Completing Your Self Review](#).

To edit an area of focus:

1. From the home page of your Employee Center role, go to Talent > Goals.
2. Click the **View My Areas of Focus** link.
3. Beside the area of focus you want to edit, click the More icon , then select **Edit**.
4. Make your edits, then click **Save**.

Deleting an Area of Focus

You can delete an area of focus that isn't included on a closed goal. If you delete an area of focus, it's also deleted from all planned and in progress goals that use it. For more information about deleting an area of focus on your performance review, see [Completing Your Self Review](#).

To delete an area of focus:

1. From the home page of your Employee Center role, go to Talent > Goals.
2. Click the **View My Areas of Focus** link.
3. Beside the area of focus you want to delete, click the More icon , then select **Delete**.
4. In the confirmation, click **Delete**.

Archiving an Area of Focus

You can archive an area of focus when you don't need it anymore. For more information about archiving an area of focus on your performance review, see [Completing Your Self Review](#).

To archive an area of focus:

1. From the home page of your Employee Center role, go to Talent > Goals.
2. Click the **View My Areas of Focus** link.
3. Beside the area of focus you want to archive, click the More icon , then select **Archive**.
4. In the confirmation, click **Archive**.

Warning: Once the area of focus is archived, it can't be edited or moved back to the list of current areas of focus.

Creating Areas of Focus for Your Direct Reports

If you're a manager, you can guide your direct reports by creating areas of focus for them. After you create an area of focus for someone, they can edit, delete, or archive it whenever they need. You can create areas of focus for your direct reports on performance reviews or on the Goals page. For more information about creating an area of focus for a direct report on their performance review, see [Completing Performance Reviews as the Reviewer](#).

Creating Areas of Focus for Your Direct Reports

You can create an area of focus for a direct report in the Employee Center from the Goals page.

To create an area of focus for a direct report:

1. From the home screen of your Employee Center role, go to Talent > Goals.
2. From the **My Team** list, select a direct report.
3. Click the **View Areas of Focus for "Employee's Name"** link. For example, if you select John Smith from your My Team list, you will click the following link: **View Areas of Focus for John Smith**.
4. Click the **Current** subtab.
5. Enter an area of focus for the employee, then click **Add**.

Manager Digest

The Manager Digest is a monthly email sent to managers to update you on your team's Kudos, goal progress, Areas of Focus, and performance reviews.

The Manager Digest is sent out on the first Monday of every month. The Manager Digest period starts on the day the last Manager Digest was sent and ends on the day before the current Manager Digest is sent.

The following examples show how the Manager Digest period works:

- If the first Manager Digest has a period from Tuesday, June 1 to Thursday, June 30, the Manager Digest will send on Friday, July 1.
- If the second Manager Digest has a period from Friday, July 1 to Sunday, August 1, the Manager Digest will send on Monday, August 2.

The Manager Digest displays information for the following:

- Your team's achievements. You can view who received Kudos and who has goals ahead of schedule.
- Updates on your team's goals. You can view how many of your team's goals are in progress, completed, not completed, and canceled. You can also view who has left comments on your team's goals, and how many goals are behind schedule.
- How to support your team and their goals. You can support your team by checking which goals were updated or not, and which ones are connected to Areas of Focus.
- Any ongoing performance reviews for your team.
- Any new performance metrics created to track your team's goals.

The Manager digest only displays information for sections where there's been activity. For example, if no new performance metrics were created last month, that section won't show up.

The Manager Digest only includes employees who are active and not terminated.

 **Note:** You will receive the Manager Digest if your team has at least one goal in progress, or you have to complete your team's performance reviews.

For more information, see [Goal Management for Employees and Managers](#) and [Areas of Focus](#).

Performance Reviews

With the Performance Management feature, you can create and schedule performance reviews for employees using templates. Performance review templates include questions and an overall rating. Reviews also show the goals worked on during the review period.

Performance reviews show any goals worked on and Kudos received during the review period. Employees and managers can update the employee's area of focus right from the review to help plan for future development.

Learn more in the following topics:

- [Performance Review Setup](#) — You can set up review questions and rating scales, create templates, and launch reviews for groups or individual employees.
- [Performance Review Process](#) — Employees complete self reviews, managers complete their reviews, HR approves them, and then employees finalize everything. Employees and managers get an email when they need to take action.
- [Performance Review Saved Searches](#) — Default saved searches provide you with information about performance reviews in your organization.
- [Performance Management Workbook](#) — You can use performance management datasets and workbooks to analyze goal and performance review information for employees.

Performance Review Setup

When you set up performance reviews, consider the data that employees and managers should look at to evaluate performance for a review period.

To set up performance reviews, complete the following tasks:

- [Performance Review Questions](#) — Create a library of performance review questions that you can add to performance review templates.
- [Performance Review Rating Scales](#) — Create rating scales that you can apply to performance review templates. Rating scales are used for questions that require a rating and for the overall rating.
- [Performance Review Templates](#) — Create templates for different performance review scenarios. Templates are made up of performance review questions and a rating scale.

After you complete the setup tasks, you can launch performance reviews for individual or groups of employees:

- [Scheduling Performance Reviews](#) — Launch a performance review for a group of employees by using the Basic performance review schedule or the Advanced performance review schedule.
- [Individual Performance Reviews](#) — Launch a performance review for an individual employee.

Performance Review Questions

You can create performance review questions to add to performance review templates. Both the employee and the reviewer answer each question on performance reviews.

For more information, check out the following:

- [Creating a Performance Review Question](#)
- [Editing, Inactivating, or Deleting a Performance Review Question](#)

Creating a Performance Review Question

You can keep a set of performance review questions in your question library. After you create questions, you can add them to performance review templates.

To create a performance review question:

1. Go to Setup > Performance Management > Question Library > New.
2. From the **Type** list, do one of the following:

- To create a question that requires a text only response, select **Text Only**.
 - To create a question that requires a text response and a rating selection, select **Text with Rating**. For details about rating scales, see [Performance Review Rating Scales](#).
3. In the **Text** field, enter your question.
 4. To finish, click **Save**.

Tip: You can also create questions directly from a performance review template. For details, see [Performance Review Templates](#).

Editing, Inactivating, or Deleting a Performance Review Question

You can edit a question only if it's not used in a performance review, and you can delete a question only if it's not used in a template.

When you inactivate a question, it doesn't show up in lists anymore, but it still appears on performance reviews that were launched before you inactivated it.

To edit, inactivate, or delete a performance review question:

1. Go to Setup > Performance Management > Question Library.
2. Beside a question, click **Edit**.
3. Do one of the following:
 - To edit the question, make your changes, and then click **Save**.
 - To inactivate the question, check the **Inactive** box, and then click **Save**.
To view a list of inactive questions, go to Setup > Performance Management > Question Library and check the **Show Inactives** box.
 - To delete the question, from the **Actions** list, select **Delete**. When prompted to confirm the deletion, click **OK**.

Performance Review Rating Scales

You can create a rating scale to include on a performance review template. Rating scales are used for questions that need both a text response and a rating, and for the overall rating on a performance review. For example, your rating scale might include the options Excellent, Good, Satisfactory, and Needs Improvement.

For more information, check out the following:

- [Creating a Performance Review Rating Scale](#)
- [Editing a Performance Review Rating Scale](#)

Creating a Performance Review Rating Scale

Each performance review template can only contain one rating scale.

To create a performance review rating scale:

1. Go to Setup > Performance Management > Performance Reviews > Rating Scales > New.
2. In the **Name** field, enter a unique name for the rating scale.

3. In the **Description** field, enter a description for the rating scale.
4. In the table, add rating items:
 - a. In the **Name** column, enter a name for the rating item. For example, the name could be Exceeds Expectations.
 - b. In the **Description** field, enter a meaningful description for the rating item. For example, the description could be "Performance and results were consistently above and beyond expectations." Descriptions can be viewed on performance reviews.
 - c. In the **Value** field, enter a number for the rating item. The highest value shows up first in the Rating list, and the lowest shows up last.
 - d. Click **Add**.
 - e. Repeat steps a to d for each rating item you want to add to the rating scale. Rating scales need at least two rating items.

Note: You can't change rating items after the rating scale is included on a performance review template that you use on a performance review.

5. Click **Save**.

Editing a Performance Review Rating Scale

You can edit a rating scale if it's not used in a performance review, or delete it if it's not used in a template.

When you inactivate a rating scale, it doesn't show up in lists anymore, but it still appears on performance reviews that were launched before you inactivated it.

To edit a performance review rating scale:

1. Go to Setup > Performance Management > Performance Reviews > Rating Scales.
2. Beside a rating scale, click **Edit**.
3. Do one of the following:
 - To edit the rating scale, make your changes and click **Save**.
 - To inactivate a performance review rating scale, check the **Inactive** box and click **Save**.
To view a list of inactive rating scales, go to Setup > Performance Management > Performance Reviews > Rating Scales and check the **Show Inactives** box.
 - To delete a performance review rating scale, from the **Actions** list, select **Delete**. When asked to confirm, click **OK**.

Performance Review Templates

After you create performance review questions and rating scales, you need to create performance review templates. Templates let you set up different performance reviews for different groups in your organization or for different time periods. For example, you might have a quarterly performance review template and an annual one.

For more information, check out the following:

- [Creating a Performance Review Template](#)
- [Editing a Performance Review Template](#)
- [Inactivating or Deleting a Performance Review Template](#)

Creating a Performance Review Template

A performance review template includes questions and a rating scale. For more information, see [Performance Review Questions](#) and [Performance Review Rating Scales](#).

To create a performance review template:

1. Go to Setup > Performance Management > Templates > New.
2. In the **Name** field, enter a unique name for the performance review template.
3. To add instructions to the performance review, in the **Instructions** field, enter instructions.
4. From the **Performance Review Rating Scale** list, select the rating scale to use for performance review questions and for the overall rating.
5. If you want to customize instructions for the performance review, in the **Customize Instructions** field, enter instructions for the performance review.

 **Note:** If you don't customize the instructions, a default set will appear.

6. If you want to customize the acknowledgment message, type it in the **Customize Acknowledgment** field. Make sure to include any information your company requires. Employees have to read this message before finishing their reviews.

 **Note:** If you don't customize the acknowledgment message, a default one will appear.

7. From the **Performance Review Question** subtab, click a line in the list and do one of the following:
 - To add an existing question, select a question from the list.
 - To create a question, from the list, select **New**. For more information, see the help topic [Creating a Performance Review Question](#).
8. Click **Add**.
9. Repeat steps 5 to 6 for each question that you want to add to the performance review template.
10. To finish, click **Save**.

Editing a Performance Review Template

Changes made to a template won't take effect on existing performance reviews that use the template.

To edit a performance review template:

1. Go to Setup > Performance Management > Templates.
2. Beside a performance review template, click **Edit**.
3. When you finish editing, click **Save**.

Inactivating or Deleting a Performance Review Template

When you inactivate a performance review template, it doesn't show up in lists anymore, but it still appears on reviews that were launched before you inactivated it.

You can delete a template only if it's not used by a performance review.

To inactivate or delete a performance review template:

1. Go to Setup > Performance Management > Templates.
2. Beside the performance review template, click **Edit**.
3. Do one of the following:
 - To inactivate the template, check the **Inactive** box. Click **Save**.
To view a list of inactive templates, go to Setup > Performance Management > Templates and check the **Show Inactives** box.
 - To delete the template, from the **Actions** list, select **Delete**.

Scheduling Performance Reviews

You can schedule a performance review and assign it to a group of employees. On the launch date, employees and reviewers receive emails to complete their reviews. There are three different performance review schedules you can use: the Basic schedule, the Advanced Fixed Date schedule, and the Advanced Relative Date schedule.

To create a performance review for a single employee, see [Individual Performance Reviews](#).

To create a performance review with the Advanced Fixed Date schedule, see [Scheduling Performance Reviews with the Fixed Date Schedule](#).

To create a performance review with the Advanced Relative Date schedule, see [Scheduling Performance Reviews with the Relative Date Schedule](#).

Scheduling Performance Reviews with the Basic Schedule

You can schedule a performance review using the Basic or Advanced version of the performance review schedule. With the Basic schedule, you can schedule a performance review based on subsidiary, location, department, or job title. For example, you might want to schedule a review for all employees in your sales department. You can schedule performance reviews based on calendar dates for the performance review's launch date and the employee's due date. You can also choose calendar dates for the reviewer's due date, the start of the review period, and the end of the review period.

An employee's supervisor is assigned as their reviewer for scheduled performance reviews. If an employee does not have a supervisor on their employee record, you can assign a reviewer by editing the individual performance review. For more information, see [Assigning a Supervisor to an Employee](#) and [Editing a Performance Review](#).

Note: To schedule performance reviews with the Basic schedule, you need to have a role with the Talent Administrator permission access level at Create or higher.

To schedule a performance review with the Basic schedule:

1. Go to Setup > Performance Management > Scheduler > New.
2. In the **Name** field, enter a name for the performance review schedule. This name should be meaningful to employees and reviewers that will complete the performance review.
3. From the **Performance Review Template** list, select the template to use for this performance review schedule.
4. In the **Launch Date** field, enter the date on which NetSuite sends reviews to employees. This date must be a future date. You can also click the calendar icon  to choose a date from the calendar.
5. In the **Employee Due Date** field, enter the date by which employees should complete their self reviews.

6. In the **Review Due Date** field, enter the date by which reviewers should complete the performance reviews.
7. In the **Review Period Start** field, enter the start date for the performance review period.
8. In the **Review Period End** field, enter the end date for the performance review period.

Note: After the performance review launch date, the start date and end date cannot be changed.

9. To specify the employees who should be included in the performance review, complete one or more of the following options:
 - To include employees based on their subsidiary, from the **Subsidiary** list, select a subsidiary. To include employees from multiple subsidiaries, press and hold Ctrl while you select additional subsidiaries.
 - To include employees based on their location, from the **Location** field, select a location. To include employees from multiple locations, press and hold Ctrl while you select additional locations.
 - To include employees based on their department, select the department from the **Department** list. To include employees from multiple departments, press and hold Ctrl while you select additional departments.
 - To include employees based on their job title, in the **Job** field, enter a job title. To enter multiple job titles, on a new line, start typing another job title.
10. Click **Save**.

When you launch the performance review schedule, you can access performance reviews by going to Setup > Performance Management > Performance Reviews.

Scheduling Performance Reviews with the Fixed Date Schedule

With the Advanced schedule, you can schedule performance reviews for multiple employees simultaneously. The Advanced schedule has two options: scheduling reviews by Fixed Date, and scheduling reviews by Relative Date.

The Fixed Date schedule lets you schedule performance reviews with calendar dates and a dataset that defines all employees you want to give reviews to. The Fixed Date schedule also lets you choose calendar dates for the performance review's launch date and the employee's due date. It also lets you choose calendar dates for the reviewer's due date, the start of the review period, and the end of the review period.

To schedule performance reviews with the Fixed Date schedule, you need to have the following:

- A role with the Talent Administrator permission access level at Create or higher.
- A role with the SuiteAnalytics permission to create an employee dataset.
- The SuiteAnalytics feature enabled.

To schedule a performance review with the Fixed Date Schedule

1. Setup > Performance Management > Scheduler > New.
2. In the **Name** field, enter a name for the performance review schedule. This name should be meaningful to employees and reviewers that will complete the performance review.
3. In the **Performance Review Template** list, select the template to use for this performance review schedule.

4. Under **Schedule Type**, select **Advanced Schedule**. The **Fixed Date** option is selected by default under **Launch Date Type**.
5. In the **Launch Date** field, enter the date on which NetSuite sends reviews to employees. This date must be a future date. You can also click the calendar icon  to choose a date from the calendar.
6. In the **Employee Due Date** field, enter the date by which employees should complete their self reviews. The employee due date must be before the review due date.
7. In the **Review Due Date** field, enter the date by which reviewers should complete the performance reviews.
8. In the **Review Period Start** field, enter the start date for the performance review period.
9. In the **Review Period End** field, enter the end date for the performance review period.
10. In the **Dataset** field, select the dataset that defines all the employees you want to schedule reviews for.

Tip: Ensure the dataset includes your desired restrictions before you attach it to a performance review schedule. Datasets run regardless of your role restrictions. The performance review schedule also automatically excludes any employees who are not active and employees who have been terminated.

11. Click **Save**.

Watch the following help video for information about scheduling a performance review with the Fixed Date Schedule:

[Using the Advanced – Fixed Date and Advanced – Relative Date Performance Review Schedules](#)

For more information on datasets, see [Performance Management Dataset Templates](#).

Scheduling Performance Reviews with the Relative Date Schedule

With the Advanced schedule, you can schedule performance reviews for multiple simultaneously. The Advanced schedule has two options: scheduling reviews by Fixed Date, and scheduling reviews by Relative Date. The Relative Date schedule lets you choose review due dates and a review period that are in relation to the date the review is launched.

You can schedule reviews based on an employee group dataset that defines all the employees you want to give reviews to. Instead of choosing calendar dates, you can enter an offset number of days relative to the day the review is launched. You can enter several days for the following fields:

- **Employee Due Date After Launch (Days)**
- **Review Due Date After Launch (Days)**
- **Review Period Start Before Launch (Days)**
- **Review Period end Before Launch (Days)**

To schedule performance reviews with the Relative Date schedule, you need to have the following:

- A role with the Talent Administrator permission access level at Create or higher.
- A role with the SuiteAnalytics permission to create an employee dataset.
- The SuiteAnalytics feature enabled.

To schedule a performance review with the Relative Date schedule:

1. Go to Setup > Performance Management > Scheduler > New.

2. In the **Name** field, enter a name for the performance review schedule. This name should be meaningful to employees and reviewers that will complete the performance review.
3. In the **Performance Review Template** list, select the template to use for this performance review schedule.
4. Under **Schedule Type**, select **Advanced Schedule**.
5. Under **Launch Date Type**, select **Relative Date**.
6. In the **Employee Due Date After Launch (Days)** field, enter the number of days after the performance review has launched to be the employee's due date.
7. In the **Review Due Date After Launch (Days)** field, enter the number of days after the performance review has launched to be the reviewer's due date.
8. In the **Review Period Start Before Launch (Days)** field, enter the number of days before the performance review launches to be the start of the review period.
9. In the **Review Period End Before Launch (Days)** field, enter the number of days before the performance review launches to be the end of the review period.
10. In the **Dataset** field, select the dataset that includes all the employees you want to schedule reviews for.

Tip: Ensure the dataset includes your desired restrictions before you attach it to a performance review schedule. Datasets run regardless of your role restrictions. The performance review schedule also automatically excludes any employees who are not active and those who are terminated.

11. Click **Save**.

For example, you can create a performance review schedule to send out probationary performance reviews on the ninetieth day after an employee's start date. If your performance review launches on August 25, your field values can be:

- **Review Period Start Before Launch (Days):** 90
- **Review Period End Before Launch (Days):** 1
- **Employee Due Date After Launch (Days):** 14
- **Review Due Date After Launch (Days):** 28

When the performance review scheduler runs on August 25, a performance review will be created with the following dates:

- **Review Period Start Before Launch (Days):** May 27
- **Review Period End Before Launch (Days):** August 24
- **Launch Date:** August 25
- **Employee Due Date After Launch (Days):** September 8
- **Review Due Date After Launch (Days):** September 22

Watch the following help video for more information on scheduling performance reviews with the Relative Date Schedule:

[Using the Advanced – Fixed Date and Advanced – Relative Date Performance Review Schedules](#)

Watch the following help video for more information on using dataset templates with the Relative Date Schedule:

[Using Dataset Templates with the Advanced Scheduler](#)

Editing, Inactivating, or Deleting a Performance Review Schedule

You can edit, inactivate, and delete performance review schedules. Edits aren't applied to performance reviews that were launched before you made the change. If you delete a schedule, performance reviews that were launched through the scheduler are not deleted.

When you inactivate a performance review schedule, it no longer appears in lists. Performance reviews that were launched through the scheduler before you inactivated the schedule are still active.

To edit a performance review schedule:

1. Go to Setup > Performance Management > Scheduler.
2. Beside the performance review schedule name, click **Edit**.
3. Make your changes, and then click **Save**.

To inactivate a performance review schedule:

1. Go to Setup > Performance Management > Scheduler.
2. Beside the performance review schedule name, click **Edit**.
3. Beside the performance review template, check the **Inactive** box. Click **Save**.

Note: To view a list of inactive schedules, go to Setup > Performance Management > Scheduler and check the **Show Inactives** box.

To delete a performance review schedule:

1. Go to Setup > Performance Management > Scheduler.
2. Beside the performance review schedule name, click **Edit**.
3. Above the performance review schedule name, click **Delete**.
4. Click **OK**.

Performance Management Dataset Templates

Note: Before you schedule performance reviews with the Advanced performance review schedule, ensure you have the SuiteAnalytics Workbook feature enabled. To learn how to enable the SuiteAnalytics Workbook feature, see the help topic [Enabling SuiteAnalytics Workbook in Your NetSuite Account](#).

When you schedule reviews with the Advanced schedule, you need to attach datasets to them which define the employees you want to give reviews to. NetSuite provides two dataset templates for you to use when you schedule performance reviews with the Advanced scheduler. They are **Performance Management - Reviews Scheduler** and **Reviews Scheduler by Relative Date Schedule**. These dataset templates are meant to serve as guides for how to set up your datasets when using the Advanced performance review schedule. You can use the dataset templates as they are or customize them.

When SuiteAnalytics is turned off, performance reviews with the Schedule Type marked as "Advanced" will automatically switch to the Schedule Type "Basic". The datasets attached to the schedules will be removed and the performance schedules will be marked as inactive. The following screenshot shows these changes recorded in the **System Notes** tab of the performance review schedule.

For more information about how to edit a dataset, see the help topic [Editing a Dataset](#).

Performance Management – Reviews Scheduler Dataset Template

This dataset template includes all active employees and non-terminated employees. This enables you to create performance reviews for your active employees all at once.

Dataset Configuration

The Performance Management – Reviews Scheduler dataset includes fields from the employee record type that provide relevant information about your employees for creating their performance reviews. This dataset contains the following record fields, formulas, and criteria:

Root Record Type	Data Grid	Custom Formula Fields	Criteria Filters
Employee	The following fields are included in the dataset: - Entity ID - Email - Supervisor - Job Title - Department - Location - Subsidiary	The following custom formula fields are included in the dataset: - Supervisor is Active & Non-Terminated - Employee is not Terminated	The following criteria is used to filter the dataset: - Is Inactive is false - Employee is not Terminated is true

To edit a dataset, see the help topic [Editing a Dataset](#).

Reviews Scheduler by Relative Date Dataset Template

This dataset template can be used for scheduling performance reviews by dates that are relevant and meaningful to you.

Dataset Configuration

The Reviews Scheduler by Relative Date dataset includes fields from the employee record type that provide relevant information about your employees for creating their performance reviews. The dataset contains the following record fields, multiple custom formulas, and criteria:

Root Record Type	Data Grid	Custom Formula Fields	Criteria Filters
Employee	The following fields are included in the dataset: - Entity ID - Hire Date - Email - Supervisor - Job Title - Department - Location - Subsidiary	The following custom formula fields are included in the dataset: - Supervisor is Active & Non-Terminated - Employee is not Terminated - Today is 30 Days After Hire Date - Work Anniversary + 30 Days is Today - Work Anniversary is Today	The following criteria is used to filter the dataset: - Is Inactive is false - Employee is not Terminated is true - Work Anniversary is Today is True

To edit a dataset, see the help topic [Editing a Dataset](#).

Formula Configuration for Dataset Templates

The dataset templates include formulas that are crucial for your performance reviews. You can copy these formulas into your datasets because they include all supervisors and employees who are active and not terminated. The formulas are as follows:

Supervisor is Active and Non-Terminated

```
CASE WHEN ( {supervisor.isinactive}='F' AND ({supervisor.releasedate} IS null OR
{supervisor.releasedate}>CURRENT_DATE) ) THEN 'T'
ELSE 'F'
END
```

Employee is not Terminated

```
CASE WHEN ({releasedate} IS null OR {releasedate} > CURRENT_DATE) THEN 'T'
ELSE 'F'
END
```

The following formulas provide flexibility for how you want to schedule performance reviews with the Relative Date performance review schedule. You can use any of these formulas:

Work Anniversary + 30 Days is Today

This formula can be used in datasets when you want to schedule performance reviews for employees on the thirtieth day after their annual work anniversaries. It is useful if you want to create annual performance reviews for your employees with an additional amount of time. The formula is:

```
CASE WHEN CONCAT(CONCAT(TO_CHAR(EXTRACT(DAY FROM {hiredate}+30)),'/'),
TO_CHAR(EXTRACT(MONTH FROM {hiredate}+30))) = CONCAT(CONCAT(TO_CHAR(EXTRACT(DAY FROM
CURRENT_DATE)),'/'), TO_CHAR(EXTRACT(MONTH FROM CURRENT_DATE))) THEN 'T'
ELSE 'F'
END
```

Today is 30 Days After Hire Date

This formula can be used in datasets when you want to schedule performance reviews for employees who were hired thirty days ago. This formula is useful if you want to create performance reviews for employees during their probationary periods. The formula is:

```
CASE WHEN TRUNC({hiredate} + 30) = TRUNC(CURRENT_DATE) THEN 'T'
ELSE 'F'
END
```

Work Anniversary is Today

This formula can be used in datasets when you want to schedule performance reviews for employees on their work anniversaries. This formula is useful if you want to create annual performance reviews for your employees. The formula is:

```
CASE WHEN CONCAT(CONCAT(TO_CHAR(EXTRACT(DAY FROM {hiredate})),'/'), TO_CHAR(EXTRACT(MONTH
FROM {hiredate}))) = CONCAT(CONCAT(TO_CHAR(EXTRACT(DAY FROM CURRENT_DATE)),'/'),
TO_CHAR(EXTRACT(MONTH FROM CURRENT_DATE))) THEN 'T'
ELSE 'F'
```

END

 **Note:** Some filters or formulas dependent on a feature that is turned off will still apply when datasets run.

For more information about how to use formula fields, see the help topic [Creating Formula Fields in SuiteAnalytics Workbook](#).

To edit a dataset, see the help topic [Editing a Dataset](#).

Individual Performance Reviews

Sometimes, you might need to create a performance review for one employee instead of a whole group. Like scheduled reviews, individual performance reviews use a template, but individual performance reviews launch as soon as you save them. Learn more in the following topics:

- [Creating a Performance Review for an Individual Employee](#)
- [Editing a Performance Review](#)
- [Deleting a Performance Review](#)

To learn how to schedule a performance review for a group of employees, see [Scheduling Performance Reviews](#).

Creating a Performance Review for an Individual Employee

You can create a performance review for an individual employee. If required, you can assign a reviewer other than the employee's supervisor.

To create a performance review:

1. Go to Setup > Performance Management > Performance Reviews > New.
2. In the **Name** field, enter a meaningful name for the performance review.
3. From the **Employee** list, select an employee. After you save the performance review, you can't change this field.
4. From the **Performance Review Template** list, select the template to use for this performance review. The questions, rating scale, and instructions on the template are included on the review. After you save the performance review, you can't change this field.
5. From the **Reviewer** list, select a reviewer for the performance review. After you save the performance review, you can't change this field.
6. In the **Review Period Start** and the **Review Period End** fields, enter the start and end dates for the review period. After you save the performance review, you can't change these dates.
7. In the **Employee Due Date** field, enter the date by which the employee should complete their self review.
8. In the **Review Due Date** field, enter the date by which the reviewer should complete the performance review.
9. Click **Save**.

The performance review launches after you save it, and the employee and the reviewer receive an email. For details, see [Performance Review Process](#).

Editing a Performance Review

After a performance review launches, you can make changes to the following fields:

- **Review Status** — You can make the following changes:
 - You can change all statuses to **Canceled**. For more information, see [Canceling Performance Reviews](#).
 - You can change a **Self Review Submitted** status to **Self Review Draft**.
 - You can change a **Review Submitted** status to **Reviewer Draft** or **HR Approved | Sign Off Required**. For more information on approving a review, see [Approving an Individual Performance Review](#).
- **Reviewer** — You can only edit the reviewer if you schedule a performance review and the employee doesn't have a supervisor assigned to them on their employee record. For more information, see [Scheduling Performance Reviews with the Basic Schedule](#).
- **Employee Due Date**
- **Review Due Date**

You can't change the employee, start or end date of the review period, or performance review template.

To edit a performance review:

1. Go to Setup > Performance Management > Performance Reviews.
2. Beside the performance review, click **Edit**.
3. After you finish editing, click **Save**.

Deleting a Performance Review

You can delete a performance review only when its status is Launched or Canceled. After employees save or submit their responses, you can't delete the performance review, but you can cancel it. For more information about canceling a review, see [Canceling Performance Reviews](#).

To delete a performance review:

1. Go to Setup > Performance Management > Performance Reviews.
2. Next to the performance review, click **Edit**.
3. From the **Actions** list, select **Delete**.
4. When asked to confirm, click **OK**.

Performance Review Process

Once you launch performance reviews, employees fill out self reviews by answering questions and rating their overall performance. Next, reviewers—usually managers—look over employees' responses, add in-line comments, and submit the reviews to HR. At this point, you approve the review. After you approve the reviews, employees can read their reviewer's responses and acknowledge their reviews.

Reviewers and employees should talk about the reviews at some point, but this step isn't required.

The following diagram shows the performance review process.

Completing Your Self Review

A performance review is an opportunity for you to reflect on your performance during a review period and think about your future career goals. When it's time to do your self review, you'll get an email with the due date. Click the link in the email to start your self review.

To help you reflect on your performance, your performance review includes the following:

- Goals you worked on or completed during the review period
- Kudos you received during the review period
- Areas of focus you created to reflect on and plan your career development

The context panel on the right side of your performance review shows all goals you've worked on and all Kudos you've received during your review period.

To complete your self review:

1. From the home screen of your Employee Center role, go to Talent > Performance Reviews.
2. Beside your performance review, click **Edit**.
3. In the Reflection section, enter responses to the questions.
4. In the Overall Rating section, select a rating for your overall performance during the period and enter comments to support that rating.
5. Either save or submit your review:
 - To save a draft version of your responses, click **Save**.
 - To submit your responses to your reviewer, click **Submit**.

After you submit the performance review, you can't make any other changes to it unless your manager or HR Manager sends it back to you.

A copy of your goals and Kudos from the review period is saved with your performance review.

Completing Performance Reviews as the Reviewer

If you're a reviewer for employee performance reviews, you can start completing them after employees submit their self reviews. You can read employees' self review responses and provide your own reflection on their performance for the review period. This includes answering review questions and rating employees' overall performance.

When performance reviews launch, you receive an email. The email includes the self review due date and the due date for your review. After employees submit their self reviews, you receive another email.

To help you reflect on the employee's performance, the performance review includes the following:

- Goals that the employee worked on or completed during the review period
- Kudos from other coworkers during the review period
- Areas of focus you created to reflect on and plan your career development

The context panel on the right side of the employee's performance review shows all goals the employee worked on and all Kudos the employee received during the review period.

To complete a performance review as the reviewer:

1. From the home screen of your Employee Center role, go to Talent > Performance Reviews.
2. Next to the employee's performance review, click **Edit**.

3. In the Reflection section, enter responses to the questions.
4. In the Overall Rating section, select a rating for the employee's overall performance during the period, and enter comments to support that rating.
5. Either save or submit the review:
 - To save a draft of the review, click **Save**.
 - To submit the performance review for Human Resources approval, click **Submit**.

 **Note:** In the Areas of Focus section, you can view the employee's current and archived areas of focus. For more information on how to manage an employee's area of focus as a manager, see the help topic [Creating Areas of Focus for Your Direct Reports](#).

After you submit the performance review, you can't make any other changes to it.

Sending Performance Reviews Back to Employees

Your employees may let you know that they need to edit their self reviews. If you haven't submitted the reviews yet for Human Resource approval, you can send the reviews back to employees. When you return reviews to employees, your draft responses are saved, but employees can't see your responses. Employees can edit their self review and submit their reviews to you again.

 **Tip:** If a performance review is returned to you, you'll receive an email for it.

To send a performance review back to an employee:

1. From the home screen of your Employee Center role, go to Talent > Performance Reviews.
2. Beside a performance review, click **Edit**.
3. Click **Save and Return to Employee**.
4. In the confirmation message, click **Save and Return to Employee**.

Approving Performance Reviews

Once a performance review is completed by both the employee and reviewer, Human Resources can approve the review. After you approve performance reviews, employees are notified by email to read reviewers' responses and finalize their reviews. You can approve performance reviews one at a time, or you may be able to approve multiple performance reviews at the same time.

Approving an Individual Performance Review

After a reviewer submits a performance review, Human Resources needs to approve the review.

To approve a performance review:

1. Go to Setup > Performance Management > Performance Reviews.
2. Next to the employee's performance review, click **Edit**.
3. From the **Status** list, select **HR Approved** | **Sign Off Required**.

 **Note:** If the performance review is not ready for HR approval, from the **Status** list, you can select **Reviewer Draft**. This sends the review back to the reviewer.

4. To finish, click **Save**.

Approving Multiple Performance Reviews

You can use a mass update to approve multiple performance reviews at the same time. To use a mass update, your role needs the Mass Updates permission. For more information about mass updates, see the help topic [Mass Updates](#).

To approve multiple performance reviews:

1. Go to Lists > Mass Update > Mass Updates.
2. From the Mass Update list, select **Performance Management**.
3. Click **Approve Submitted Reviews**.
4. Define the mass update. For more information, see the help topic [Defining a Mass Update](#).

You can also mass approve submitted reviews from an employee's performance review that has either been launched or submitted for review. You can click the **Mass Approve Submitted Reviews** link in the top right of the employee's performance review.

Finalizing Your Performance Review

After your reviewer submits your performance review and HR approves it, you can add final comments and acknowledge your review. After you do this, you can't edit your final comments,

To finalize your performance review:

1. From the home page of your Employee Center, go to Talent > Performance Reviews.
2. Beside your performance review, click **Edit**.
3. Read your reviewer's responses.

Tip: Take some time to discuss your performance review with your reviewer before you finalize it.

4. Click **Complete My Review**.
5. If you want, enter any final comments in the field.

Tip: Take some time to read the acknowledgement carefully. It could contain important information.

6. Click **Acknowledge**.

If your manager was not your reviewer, your manager can see your performance review after you finalize it.

Canceling Performance Reviews

If you launched a performance review that isn't needed anymore, you can cancel it any time during the review and approval process.

To cancel a performance review:

1. Go to Setup > Performance Management > Performance Reviews.
2. Next to the performance review, click **Edit**.
3. From the **Status** list, select **Canceled**.

4. To finish, click **Save**.

Note: The reviewer of the performance review can view canceled reviews by going to Setup > Performance Management > Performance Reviews.

Performance Management Saved Searches

The Performance Management feature includes saved searches you can use to find information about and report on goals and performance reviews. You can customize these saved searches to show what you need. For more information, see the following help topics:

- [Goal Saved Searches](#)
- [Performance Review Saved Searches](#)

Goal Saved Searches

The following are saved searches for goals that are provided for you in your account.

Saved Search	Description	Information Included
Goals in Progress by Days Open	Displays in progress goals and how many days they've been open.	■ Employee names ■ Start date of goals ■ Number of days that goals have been open
Overdue Goals in Progress	Displays goals that are in progress after their target completion dates. Includes employees' moods about goals, and how many days that they are overdue by.	■ Employee names ■ Goal names ■ Employee moods ■ Start date and target completion date of goals ■ Number of days that the goal is overdue by
Overview	Displays all goals in your organization and their statuses, employees' moods about their goals, and dates for the goals (start dates, target completion dates, and closed dates).	■ Status of goals ■ Employee names ■ Goal names ■ Employee moods ■ Start date, target completion date, and closed date of goals

To view a goal saved search:

1. Go to Setup > Performance Management > Goals.
2. From the **View** list, select the saved search you want to view.
3. (Optional) To filter the results, expand the Filters section.
4. (Optional) To export the results of the saved search, do any of the following:
 - To export the results in CSV format, click the Export – CSV icon.
 - To export the results in Microsoft Excel format, click the Export – Microsoft Excel icon.

- To export the results in PDF format, click the Export – PDF icon.
 - To export the results in Tableau Workbook format, click the Export – Tableau Workbook icon.
5. (Optional) To print the results of the saved search, click the print icon.
 6. (Optional) To customize the criteria and results for this saved search, click **Customize View**. For more information about customizing saved searches, see the help topic [Defining a Saved Search](#).

Creating a Goal Saved Search

You can create a saved search based on the goal record.

To create a goals saved search:

1. Go to Reports > Saved Searches > All Saved Searches > New.
2. From the list of search types, select **Goal**.
3. In the **Search Title** field, enter a title for the saved search.
4. Define the criteria, results, and other parameters for the search. For more information about defining saved searches, see the help topic [Defining a Saved Search](#).
5. When you are finished, click **Save**.

Performance Review Saved Searches

The following saved searches for performance reviews are provided for you in your account.

Saved Search	Description	Information Included
Cycle Overview	Displays an overview of the performance review cycle so that you can make sure reviews are being completed on time.	■ Performance review statuses ■ Employee due dates and reviewer due dates ■ If the review is overdue, number of days it is overdue ■ The rating that the reviewer gave to the employee
Employee Performance History	Displays a specific employee's performance history.	■ Review period end date ■ Name of the performance review ■ Reviewer and the value of the rating that they gave to the employee ■ Employee's acknowledgment
Rating Distribution	Displays the performance review rating distribution by percentage so that you can see trends in employee ratings across your organization.	■ Performance review template ■ Review period end date ■ Reviewer rating and the value of that rating ■ Rating distribution

To view a performance review saved search:

1. Go to Setup > Performance Management > Performance Reviews.
2. From the **View** list, select the saved search you want to view.

3. (Optional) To filter the results, expand the Filters section.
4. (Optional) To export the results of the saved search, do any of the following:
 - To export the results in CSV format, click the Export – CSV icon.
 - To export the results in Microsoft Excel format, click the Export – Microsoft Excel icon.
 - To export the results in PDF format, click the Export – PDF icon.
 - To export the results in Tableau Workbook format, click the Export – Tableau Workbook icon.
5. (Optional) To print the results of the saved search, click the print icon.
6. (Optional) To customize the criteria and results for this saved search, click **Customize View**. For more information about customizing saved searches, see the help topic [Defining a Saved Search](#).

Creating a Performance Review Saved Search

You can create a saved search based on the performance review record.

To create a performance review saved search:

1. Go to Reports > Saved Searches > All Saved Searches > New.
2. From the list of search types, select **Performance Review**.
3. In the **Search Title** field, enter a title for the saved search.
4. Define the criteria, results, and other parameters for the search. For more information about defining saved searches, see the help topic [Defining a Saved Search](#).
5. When you are finished, click **Save**.

Performance Management Workbook

SuiteAnalytics Workbook offers many workbook and dataset templates, each with predefined source data, criteria, pivot tables, and charts.

This section contains the following topics for the SuiteAnalytics Performance Management — Goals and Reviews workbook:

- [Performance Management — Goals Dataset](#)
- [Performance Management — Reviews Dataset](#)
- [Performance Management — Goals and Reviews Workbook](#)

For more information about SuiteAnalytics Workbook, see the help topic [SuiteAnalytics Workbook Overview](#).

Performance Management — Goals Dataset

This dataset combines fields from the Goal and Employee record types so that you can view a summary of employees' goals. This dataset is one of the two sources of data for the [Performance Management — Goals and Reviews Workbook](#).

Dataset Configuration

The Performance Management — Goals dataset combines fields from the Goal and Employee record types. To edit the dataset, see the help topic [Defining a Dataset](#).

Root Record Type	Joined Record Type	Custom Formula Fields	Data Grid	Criteria Filters
Goal	Employee	The following custom formula fields are included in the dataset: - Days Overdue — Shows how many days a goal is overdue to start by the start date or overdue to close by the target date. - Modified in Last 30 Days — Only shows goals that have been modified in 30 days or less. - Overdue Type — Shows if the employee is late to start a goal, close a goal, or if the goal isn't overdue. - Recent Goals — Only shows goals that aren't closed and goals that have been closed in 90 days or less. - Status Type — Shows if the goal is planned, in progress, completed, not completed, or cancelled.	The following record fields are included in the dataset: Goal: - Actual - Closed Date - Employee - Internal ID - Name - Performance Metric - Progress (%) - Start Date - Target - Target Completion Date Employee: - Department - Supervisor	(none)

Performance Management — Reviews Dataset

This dataset combines fields from Performance Review and Employee record types so that you can view a summary of employees' performance reviews. This dataset is one of the two sources of data for the [Performance Management — Goals and Reviews Workbook](#).

Dataset Configuration

The Performance Management — Reviews dataset combines fields from five record types. To edit the dataset, see the help topic [Defining a Dataset](#).

Root Record Type	Joined Record Types	Custom Formula Fields	Data Grid	Criteria Filters
Performance Review	Employee Employee Overall Rating Reflection Reviewer Overall Rating	The following custom formula fields are included in the dataset: - Author (Employee or Reviewer) — Shows if the answer was written by the employee or the reviewer. - Characters per Answer — Shows the number of characters the employee or reviewer wrote for their performance review answers. - Days Overdue — Shows the number of days a performance review is overdue. - Overall Rating Difference — Shows the numerical difference between the reviewer's overall rating value	The following record fields are included in the dataset: Performance Review: - Employee - Employee Due Date - Employee Submitted Date - Internal ID - Name - Performance Review Template - Review Completion Date	(none)

Root Record Type	Joined Record Types	Custom Formula Fields	Data Grid	Criteria Filters
		and the employee's overall rating value. Overdue Type — Shows if the employee's self review is overdue, the performance review is overdue, the employee's acknowledgment is overdue by more than 30 days, or the review is not overdue.	- Review Due Date - Review Period End - Review Period Start - Review Status - Reviewer - Reviewer Submitted Date Employee: - Department Employee Overall Rating: - Name - Value Reflection: - Question Reviewer Overall Rating: - Name - Value	

Performance Management — Goals and Reviews Workbook

This workbook uses the Performance Management — Goals dataset and the Performance Management — Reviews dataset. With the Performance Management — Goals and Reviews workbook, you can assess goal and performance review related information for the employees in your organization. The pivot tables and charts included in this workbook have filters to display relevant data.

To access the workbook, click the **Performance Management — Goals and Reviews** link from the Workbook Templates list on the Workbook subtab of the Analytics Home page.

The following pivot tables and charts are predefined in the Performance Management — Goals and Reviews workbook:

- **Goals by Status** — A chart that displays how many goals are in each status.
- **Overdue Goals** — A pivot table that displays how many days an employee is late to start a goal, close a goal, or if their goal is not overdue.
- **Goal Outliers** — A pivot table that displays how many goals an employee has and how many of their goals haven't been updated in two months. Human resources can use this information to follow up with employees on unusual goal activity.
- **Performance Metrics Alignment** — A chart that displays the number of goals that are tracked with each performance metric.
- **Review by Status** — A chart that displays how many performance reviews are in each status.
- **Overdue Reviews** — A pivot table that displays the number of days an employee's self review is late, a reviewer's performance review is late, and an employee's acknowledgment is late by more than thirty days. It doesn't display reviews that aren't overdue.
- **Overall Rating Distribution** — A chart that displays the percentage of performance reviews that were given each type of overall rating.

- **Review Outliers** — A pivot table that displays the difference between a reviewer's overall rating and an employee's overall rating on performance reviews, plus how many characters an employee or reviewer wrote per answer on performance reviews. Human resources can use this information to follow up with employees and reviewers on any unusual performance review activity.

For more information about SuiteAnalytics Workbooks, see the help topic [SuiteAnalytics Workbook Overview](#).

Kudos

With the Kudos feature, your employees can recognize each other for accomplishments, achievements, and milestones. Your employees can use their Employee Center roles to give and interact with Kudos. When employees give Kudos to each other, they can include a short message. This message explains why the employee is being recognized. The writer can also indicate any of your company's organizational values that the employees' actions support.

Completed Kudos then appear in the Employee Center on a newsfeed portlet, where other employees can see them and add their support. You can filter Kudos by department.

The Kudos feature includes a list of sample organization values. You can use, edit, or delete these values, or you can create new values that match your organizational culture.

For more information about Kudos, see the following topics:

- [Kudos Permission Requirements](#)
- [Renaming Kudos](#)
- [Creating Organization Values](#)
- [Giving Kudos to Coworkers in the Employee Center](#)
- [Interacting with Kudos in the Employee Center](#)

Kudos Permission Requirements

If you use the Kudos feature, the Kudos permission needs to be assigned to roles. Additionally, if users need to create or edit organization values, the Organization Values permission should be assigned at access level Create or Edit.

You can find the Kudos and Organization Values permissions on the Lists tab of the Role page. For a list of the standard roles assigned to this permission, see the help topic [Standard Roles Permissions Table](#).

The following table lists the permission level a user must have to perform certain tasks related to these features.

Permission	Subtab	Permission Access Level	Supported Functionality
Kudos	Permissions > Lists	View	Allows you to receive and view Kudos. You can't create new, edit, or delete Kudos.
		Create	Allows you to give Kudos. You can't edit or delete Kudos.
		Edit	Allows you to edit the Inactive field. You can't delete Kudos.

Permission	Subtab	Permission Access Level	Supported Functionality
		Full	Allows you to edit the Inactive field and delete Kudos.
Organization Value	Permissions > Lists	View	Allows you to view company organizational values. You can't create, edit, or delete organizational values.
		Create	Allows you to create and view organizational values. You can't edit or delete organizational values.
		Edit	Allows you to create, view, and edit organizational values. You can't delete organizational values.
		Full	Allows you to create, view, edit, and delete organizational values.

Renaming Kudos

Kudos are used to recognize coworkers for a job well done. You can give Kudos to someone for making an outstanding contribution, providing a great idea, or for helping out on a project. If required, Kudos can be renamed in your NetSuite account to better match your company culture.

Prerequisites

To rename Kudos, the Kudos feature must be enabled in your account and you must be assigned to a role that includes the Kudos permission.

To rename Kudos:

1. Go to Setup > Company > Rename Records/Transactions.
2. On the Rename Records/Transactions page, the default names for records are autofilled in the fields.
3. In the **Name For Kudos** field, enter the name you want to use.
4. Click **Save**.

Creating Organization Values

The Kudos feature includes a list of sample organization values. You can use, edit, or delete these values, or you can create new values that match your organizational culture.

To create an organization value:

1. Go to Setup > Performance Management > Organization Values. The Organization Values list page shows the values that employees can assign to Kudos.
2. Click **New Organization Value**.
3. Enter a unique name for the value in the **Name** field.

4. (Optional) In the **Description** field, enter a description of what the value means.
5. (Optional) From the **Image** list, select an image for the value.
6. Click **Save**.

Giving Kudos to Coworkers in the Employee Center

You use Kudos to recognize your coworkers for a job well done. You could give Kudos to someone for making an outstanding contribution, providing a great idea, or giving you help on a project. You can give Kudos to more than one coworker. You describe why you are giving them Kudos, and then choose some organizational values that your coworker demonstrated.

The best way to give Kudos is to use your Employee Center role.

To give Kudos to coworkers:

1. From the home screen of your Employee Center role, in the Kudos portlet, click in the **Give Kudos to...** box. If your Kudos portlet is in the narrow configuration, click **Give Kudos**.
2. Begin typing a coworker's name. As you type, suggested names appear.
3. If you want to give Kudos to more than one coworker at a time, add more names.
4. In the text field, type a description for the Kudos that explains why you want to recognize your coworkers.
5. In the Supported Values section, click the organizational values that this Kudos demonstrates. When you hover over a values icon, a description of that value appears.
6. Click **Give Kudos**.

Your kudos appear in the Kudos portlet.

 **Note:** You can also give Kudos from other roles by going to Setup > Performance Management > Kudos > New.

Implications of Deleting Employees

When employees leave your company, you should inactivate or terminate them, rather than delete their employee record. If you decide to delete an employee record from your NetSuite account, this has the following effects on Kudos:

- If the employee was the only recipient of any Kudos, those Kudos are deleted.
- If the employee was one of several recipients of Kudos, the employee's name is removed from the Kudos, but the Kudos isn't deleted.
- If the employee gave Kudos to coworkers, you can't delete the employee record until you delete all Kudos that the employee gave. Instead, you may want to inactivate or terminate the employee. For more information, see [Inactivating Employee Records](#) and [Employee Termination](#).

Interacting with Kudos in the Employee Center

The Kudos portlet shows a newsfeed-style display of the Kudos that have been given in your company. The Kudos portlet displays the dates that Kudos are given. Here are some ways you can interact with the Kudos feed:

- To show support for a Kudos that someone else has given, click the Support button beside the Kudos. The button shows how many people have shown their support for the Kudos.
- By default, the Kudos portlet shows Kudos given across your entire company. To filter the Kudos to one department, click the Dropdown button beside **My Company** and select a department.
- To search for a person's name or a word or phrase in Kudos descriptions, enter a term in the search field and click the **Search** button.

Compensation Tracking

With the Compensation Tracking feature, you can track employees' base pay and bonuses. When this feature is enabled, the Compensation Tracking tab appears on the employee record.

If you use [SuitePeople U.S. Payroll](#), you can copy the wage and salary information that you enter in the Compensation Tracking tab to Payroll. When an employee's compensation information changes, you update the information in only one place. As well, bonuses that you enter in the Compensation Tracking tab can be included in payroll batches for the appropriate pay periods. For more information, see [Integrating Employees' Base Pay Information with Payroll](#) and [Integrating Bonuses with Payroll](#).

For information about the permissions required to use the Compensation Tracking feature, see [Compensation Tracking Permission Requirements](#).

The Compensation Tracking feature also includes the Employee Bonus History and Current Compensation Workbook. With this workbook, you can view a summary of employees' current base compensation and a history of employees' bonuses. For more information, see [Employee Bonus History and Current Compensation Workbook](#).

Watch the following help videos for information about using the Compensation Tracking feature:

[Tracking Compensation in NetSuite](#)

[Awarding Bonuses in NetSuite](#)

Compensation Tracking Setup

To set up the Compensation Tracking feature, you need to enable the feature, integrate the feature with SuitePeople U.S. Payroll (if applicable), and create bonus types.

Enabling the Compensation Tracking Feature

The Compensation Tracking feature requires SuitePeople HR. For more information about SuitePeople, see [SuitePeople Overview](#). If your account is set up for SuitePeople HR, you can enable the Compensation Tracking feature.

To enable the Compensation Tracking feature:

1. Go to Setup > Company > Enable Features.
2. Click the **Employees** subtab.
3. Check the **Compensation Tracking** box.
4. Click **Save**.

Note: When you enable the Employee Change Requests feature, the Compensation Tracking feature is automatically enabled.

Integrating Employees' Base Pay Information with Payroll

When both the Payroll and the Compensation Tracking features are enabled, compensation integration options appear on the Set Up Payroll (Setup > Payroll > Set Up Payroll) page. With these options, you

can synchronize employees' base pay information with SuitePeople U.S. Payroll. After you update an employee's salary or wage on the Compensation Tracking Subtab of the employee record, the base wage type and amount are copied to the Payroll subtab.

To use Payroll with Compensation Tracking, complete the steps below:

- Assign a primary payroll item to each employee who is already included in Payroll. If more than one payroll item is associated with an employee, the Compensation Tracking feature updates the primary payroll item with base compensation information. You can set the primary payroll item in the Earnings subtab of the Payroll subtab on the employee record. NOTE: When configuring the payroll items, make sure that the primary payroll item has a rate (not a multiplier), isn't derived from another payroll item, and has an item type of either Earning:Salary or Earning:Wage. For more information, see the help topic [Setting up Earnings for an Employee](#).
- Set a default salary payroll item and a default wage payroll item. Default payroll items are used for one of two reasons:
 - When an employee's pay type is changed from salary to wage or from wage to salary in Compensation Tracking
 - When a wage or salary payroll item isn't already associated with the employee
 If default payroll items aren't set up, your employees might not be paid correctly.

 **Note:** The primary payroll item must have a rate (not a multiplier), can't be derived from another payroll item, and must have an item type of either Earning:Salary or Earning:Wage.

To integrate employees' base pay information with Payroll:

1. Go to Setup > Payroll > Set Up Payroll.
2. On the **Compensation Integration** subtab, check the **Copy Compensation Tracking Data to Payroll** box.
3. In the **Default Salary Payroll Item** list, select a default salary payroll item.
4. In the **Default Wage Payroll Item** list, select a default wage payroll item.
5. Click **Save**.

Integrating Bonuses with Payroll

With SuitePeople U.S. Payroll, you can pay bonuses to employees when you create payroll batches. To ensure that bonuses that you track with the Compensation Tracking feature are included in payroll batches, you need to:

- Create bonus payroll items
- Assign the payroll items to employees
- Create bonus types and associate bonus payroll items with bonus types
- Include bonuses in payroll batches

Throughout these steps, you also need to update payroll information.

To integrate bonuses with payroll:

1. Create a bonus payroll item using the payroll item type **Earning:Addition**. For more information, see the help topics [Payroll Item Types](#) and [Creating Payroll Items](#).

2. Create a bonus type that you associate with the bonus payroll item. For more information, see [Creating Bonus Types](#).
3. To commit your updates to the Payroll server, update payroll information. For more information, see the help topic [Updating Payroll Information](#).
4. Assign the bonus payroll item to the appropriate employees.
 - a. Go to Lists > Employees > Payroll Items.
 - b. In the list, beside the bonus payroll item that you created, click **Edit**.
 - c. In the **Employees** table, beside each employee who should have the payroll item, check the **Apply** box.

Note: Each of these employees must be included in Payroll. For more information, see the help topic [Including an Employee in Payroll](#).

- d. Enter an **Effective Date** and an **Expiration Date** for each applicable employee.
 - e. Leave the **Rate** fields blank.
 - f. Click **Save**.
5. To commit your updates to the Payroll server, update payroll information again. For more information, see the help topic [Updating Payroll Information](#).
6. To make sure that Bonuses are included in payroll batches, on a payroll batch, check the **Pay Bonuses** box. For more information, see the help topic [Selecting Payment Options for a Payroll Batch](#).

Tip: You can set a preference so that the Pay Bonuses box is checked by default on payroll batches. Go to Setup > Payroll > Set Up Payroll. On the **Preferences** tab, check the **Default "Pay Bonuses" on Paychecks** box.

Creating Bonus Types

Before you can create bonuses, you need to define the bonus types that your organization uses. For example, you might have merit bonuses, spot bonuses, sign-on bonuses, or holiday bonuses.

If you want to use SuitePeople U.S. Payroll to pay bonuses to employees, you need to associate a bonus type with a payroll item. If some of your employees are included in SuitePeople U.S. Payroll and other employees aren't, you should create separate bonus types for Payroll. For example, you might create one bonus type called Spot Bonus - Payroll and another called Spot Bonus.

To create a bonus type:

1. Go to Setup > HR Information System > Bonus Type > New.
2. In the **Name** field, enter a name for the bonus type. Each bonus type must have a unique name.
3. In the **Subsidiary** field, select the subsidiary that can use this bonus type.
4. If applicable, in the **Payroll Item** list, select a payroll item to associate with this bonus type.

Note: You add a payroll item only to bonus types that apply to employees who are included in SuitePeople U.S. Payroll. If some of your employees are included in Payroll, and others are paid with a separate payroll solution, then you should create separate bonus types.

5. Click **Save**.

 **Note:** If you're using SuitePeople U.S. Payroll, the payroll item that is associated with the bonus type must be assigned to employees who are eligible for the bonus type. For more information, see [Integrating Bonuses with Payroll](#).

Recording Base Pay Compensation for an Employee

Base pay compensation includes an employee's regular salary or wage earnings.

 **Important:** If base pay information is integrated with SuitePeople U.S. Payroll, before you make updates to base pay fields, make sure that you have permission to edit the fields in the Payroll > Earnings subtab on the employee record. If you don't have permission to edit the fields in the Payroll > Earnings subtab, changes that you make to the Compensation Tracking fields aren't copied to Payroll. This could cause incorrect payments to employees.

To track an employee's base pay compensation:

1. Go to Lists > Employees > Employees.
2. Beside an employee, click **Edit**.
3. Click the **Compensation Tracking** subtab.
4. Enter the employee's base pay information. You must enter values into all base pay fields:
 - From the **Base Wage Type** list, select the base wage type. Selections include annual salary, hourly, and monthly salary.

 **Note:** If base pay information is integrated with SuitePeople U.S. Payroll, and if the employee is included in payroll, the value in the **Base Wage Type** list is copied to the **Compensation Type** field on the Payroll subtab. This value can't be edited.

- From the **Compensation Currency** list, select the currency to use.

 **Note:** If base pay information is integrated with SuitePeople U.S. Payroll, and if the employee is included in payroll, the currency is set to U. S. Dollars (USD) and can't be edited.

- In the **Base Wage** field, enter the employee's base wage.
5. Click **Save**.

Entering a Bonus Target for an Employee

With bonus targets, you can track employees' bonus eligibility. For example, some employees might be eligible for a bonus that is 10 percent of their annual salary, one time a year, so their bonus target is 10 percent, and their target frequency is annually.

Bonus targets are for tracking purposes. Bonus targets don't impact the amount that you award in a bonus or bonuses that are paid using SuitePeople U.S. Payroll.

To enter bonus targets for an employee:

1. Go to Lists > Employees > Employees.
2. Beside an employee, click **Edit**.
3. Click the **Compensation Tracking** subtab.
4. In the **Bonus Target** field, enter a numeric value for the bonus target.

For example, if the bonus target is 10 percent, enter 10. If the bonus target is \$10,000, enter 10,000.

5. In the **Target Type** list, select **Percentage** or **Amount**.

For example, if the bonus target is 10 percent, enter 10 in the Bonus Target field and select Percentage from the Target Type list. If the bonus target is a specific amount, enter the amount in the Bonus Target field and select Amount from the Target Type list.

6. In the **Target Frequency** list, select how often this bonus could be awarded to the employee. You can choose from one time, annually, monthly, or quarterly.
7. To include additional relevant information about the employee's bonus target, enter comments in the **Target Comments** field.
8. Click **Save**.

Awarding a Bonus to an Employee

When you award a bonus to an employee, you either track the bonus in NetSuite and pay the bonus using another system, or pay the bonus using SuitePeople U.S. Payroll.

To award a bonus to an employee:

1. Go to Lists > Employees > Employees.
2. Click an employee.
3. Click the **Compensation Tracking** subtab.
4. Click **Award Bonus**.
5. From the **Bonus Type** list, select a bonus type.

Note: To pay the bonus using SuitePeople U.S. Payroll, select a bonus type that is associated with a payroll item. For more information, see [Creating Bonus Types](#).

6. Enter the bonus amount either as a **Percentage** of the employee's base wage or as a specific **Amount**.

The currency is set to the employee's current compensation currency. The percentage is based on the employee's current base wage. If the employee's base wage changes before the award date, the bonus amount doesn't change.

Note: If the employee's base wage type is hourly, the Percentage option isn't available.

7. In the **Award Date** field, enter the date when the employee should receive the bonus.
If you're using SuitePeople U.S. Payroll to pay this bonus, the bonus is included on a payroll batch when the award date is within the payroll batch's pay period.

 **Note:** If an employee is terminated before the award date, the bonus isn't included in the corresponding payroll batch, even if other payments are made to the employee.

8. If applicable, from the **Payment Status** list, select a payment status that applies to the bonus:
 - **None** – This is the default status. Use this status if you don't track payment statuses.
 - **Ready to Pay** – You're ready to pay this bonus to the employee.
 - **Processing Payment** – Your payroll system is processing the bonus payment.
 - **Paid** – The employee has received the bonus payment.
 - **Canceled** – The bonus has been canceled and won't be paid.

Payment statuses aren't available for bonuses that will be paid with SuitePeople U.S. Payroll.
9. To include additional relevant information about the employee's bonus, enter comments in the **Comments** field.
10. Click **Save**.

Editing a Bonus

If a bonus is **not** paid using SuitePeople U.S. Payroll, you can edit the bonus percentage, amount, award date, payment status, or comments. You can't edit the employee or the bonus type.

If a bonus is paid using SuitePeople U.S. Payroll, you can't edit the bonus. If you included a bonus in a payroll batch by mistake, then you might need to revert the payroll batch and then cancel the bonus. For more information, see the help topics [Creating a Payroll Reversal](#) and [Canceling a Bonus that is in a Reversed Payroll Batch](#).

To edit a bonus:

1. Go to Lists > Employees > Employees.
2. Beside an employee, click **Edit**.
3. Click the **Compensation Tracking** subtab.
4. In the Bonuses section, click the number beside a bonus.
5. Make any changes.
6. Click **Save**.

Deleting a Bonus

If you're using SuitePeople U.S. Payroll to pay a bonus, you can delete a bonus only if it's **not** included in a payroll batch.

If you aren't using SuitePeople U.S. Payroll to pay a bonus, you can delete the bonus at any time.

To delete a bonus:

1. Go to Lists > Employees > Employees.
2. Beside an employee, click **Edit**.
3. Click the **Compensation Tracking** subtab.

4. In the Bonuses section, click the number beside a bonus.
5. From the Actions menu, click **Delete**.

Canceling a Bonus that is in a Reversed Payroll Batch

If a bonus is included in a reversed payroll batch, SuitePeople U.S. Payroll automatically includes the bonus in the next payroll batch. If you don't want to include the bonus in the next payroll batch, you can cancel the bonus. You can't undo this action.

To cancel a bonus from a reversed payroll batch:

1. Go to Lists > Employees > Employees.
2. Beside an employee, click **Edit**.
3. Click the **Compensation Tracking** subtab.
4. In the Bonuses section, click the number beside a bonus.
5. From the Actions menu, click **Exclude From Payroll**.
6. Read the confirmation message. If you still want to cancel the bonus, click **OK**.

Job Management

The Job Management feature enables you to organize your employees according to the jobs that they perform.

Job management consists of two key features:

- Job Management - Lets you create jobs with job descriptions and assign employees to them. For more information, see [Managing Jobs](#).
- Job Requisitions - Lets you create job requisitions for recruiting, and then associate them with jobs that you have defined. Then, you can track their status through the hiring process. For more information, see [Job Requisitions](#).

A job is a description of what work and responsibilities an employee could have. A job can exist in several departments, locations, and subsidiaries. You can assign several employees to one job.

Depending on the level of complexity your organization requires, you can choose to use the Job Management feature alone, or couple it with Job Requisitions.

Here's how these features work together:

- The Job Requisition feature requires that the Job Management feature be enabled.
- When you enable the Job Management feature, job names that exist in the **Job Title** fields on the employees' records are converted to job records. If you disable the Job Management feature, job names in the job records are converted back to text in the **Job Title** fields.

Note: When you enable the Employee Change Requests feature, the Job Management feature is automatically enabled.

Job Management and Job Requisitions Prerequisites

To use the Job Management and Job Requisitions features, you need the following permissions:

- The List > Employees permission is required at a minimum level of Edit for both Job Management and Job Requisitions.
- To use Job Management the List > Job Management permission is required at a minimum level of Create.
- To use Job Requisitions the List > Job Requisitions permission is required at a minimum level of Create.

For information about the permission requirements, see [Job Management and Job Requisitions Permission Requirements](#).

The standard roles with these permissions are HR Generalist, Administrator, and Chief People Officer (CPO).

You can also create custom roles that include this permission. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

Note: If you want more control over what employee information is accessible by different NetSuite users you can use the Advanced Employee Permissions feature. When this feature is enabled, you can use the employee permissions that come with this feature. These permissions give you more control over what employee information certain roles can access. You can also customize employee permission that include all or set of standard fields and sublists from the employee record. For more information, see [Advanced Employee Permissions](#).

Managing Jobs

Job records enable you to store and maintain information about each job in your organization. A job is a description of what work and responsibilities an employee could have. A job can exist in several departments, locations, and subsidiaries. If you are using the Job Management feature alone, you assign jobs to employees.

Adding or Editing Jobs

Use the following procedure to add or edit jobs.

To add or edit a job:

1. Go to Setup > HR Information System > Jobs > New, or click **New Job** on the Jobs list page.
To modify the details of an existing job record, go to Setup > HR Information System > Jobs. Click **Edit** next to the name of the job.
2. In the **Title** field, enter a name for the job.
3. In the **Description** field, enter a short unique description for the job. You can use Text Enhance to generate new job details, clean up the job details, or make the job details longer or shorter. To use Text Enhance, click the Text Enhance icon beside the **Description** field. For more information, see the help topic [Text Enhance](#).
4. Select the category (**Full-time**, **Part-time**) from the **Employment Category** list.
5. If you use NetSuite OneWorld, select the subsidiary in which this job will exist from the **Subsidiary** list.
6. If you want this job to be inactive, check the **Job is Inactive** box. This affects how the job appears on the Jobs list.
7. Click **Save**.

Note: The Job ID is a read-only field generated by NetSuite when the job record is created.

Viewing the List of Jobs

Use the following procedure to view the list of jobs.

To view the list of jobs:

1. Go to Setup > HR Information System > Jobs.
2. To see all inactive job records, check the **Show Inactives** box.
3. To view an individual job record, click **View** beside the job.

Deleting a Job

Use the following procedure to delete a job.

To delete a job:

1. Go to Setup > HR Information System > Jobs.
2. Click **Edit** beside the job you want to delete.
3. Select **Delete** from the **Actions** menu.
4. When prompted to confirm the deletion, click **OK**.

When you attempt to delete a job with one or more employees assigned to it, note the following. NetSuite redirects you to the dependent records page, which lists all the employees currently assigned to the job. Each employee must be unassigned from the job before it can be deleted.

Assigning Employees to Jobs

If you're using the Job Management feature, you can assign employees to jobs. A job is a description of what work and responsibilities an employee could have. A job can exist in several departments, locations, and subsidiaries.

To assign an employee to a job:

1. Go to Lists > Employees > Employees.
2. Click **Edit** beside the employee you want to assign a job to.
3. Select a job from the **Job** list found in the primary information section of the employee record page.
4. If you use both the Job Management and Position Management features, click the **Human Resources** > **Job** subtab, select **Job** under Work Assignment. Then, select a job from the **Job** list. To create a new job from this page, click **New**. For more information about creating a job, see [Adding or Editing Jobs](#).

Note: When an employee is assigned a job you can directly access the associated record by clicking the **Job Title** field from the employee record.

5. Click **Save**.

Job Requisitions

If you're using the Job Management feature, you can also enable the Job Requisition feature to create job requisitions and associate them with jobs.

Creating a Job Requisition

Use the following procedure to create a job requisition.

To create a job requisition:

1. Go to Setup > HR Information System > Job Requisitions > New, or click **New Job Requisition** on the Job Requisition list page.
To modify the details of an existing job requisition, go to Setup > HR Information System > Job Requisition. Click **Edit** beside the name of the job requisition.
2. Select the job associated with this job requisition from the **Job** list. The **Title**, **Job Description**, and **Posting Description** fields are populated from the job description for the selected job. The **Job Description** field is read-only, but you can edit the **Title** and the **Posting Description**. The **Posting Description** is the description used for external job postings.
To edit the details of the posting description, you can use Text Enhance. You can use Text Enhance to generate a new posting description, clean up the existing goal description, or make the posting description longer or shorter. To use Text Enhance, click the Text Enhance icon beside the **Posting Description** field. For more information, see the help topic [Text Enhance](#).

Note: The **Posting Description** is the description used for external job postings.

3. Select a status for the job requisition from the **Status** list: **Pending Approval**, **Draft**, **On-Hold**, **Open**, **Closed**, or **Filled**.
4. In the **Headcount** field, enter the number of employees you need to fill this job requisition.
5. Select whether the job requisition posting is internal, external, or both from the **Posting Type** list.
6. If you use NetSuite OneWorld, select the **Subsidiary** from the list.
7. Select the **Department**, **Location**, and **Class** for the job requisition from the lists.
8. Select the date when this job requisition becomes open from the **Open Date** field.
9. Select the date when this job requisition expires from the **Close Date** field. This must be after the open date.
10. Select the anticipated target date by which this job requisition should be filled from the **Target Hire Date** field. This date must either be between the open date and close date, or on either of these dates.
11. Select the appropriate employees from the **Hiring Manager**, **Recruiter**, and **Approved By** lists.
12. If you want this job requisition to be inactive, check the **Inactive** box. This affects how the job requisition appears on the Job Requisition list.
13. Click **Save**.

Viewing Job Requisitions

Use the following procedure to view job requisitions.

To view the list of job requisitions:

1. Go to Setup > HR Information System > Job Requisitions.
2. To see all inactive job requisitions, check the **Show Inactives** box.
3. To view an individual job requisition record, click **View** beside the job.

Deleting Job Requisitions

Use the following procedure to delete job requisitions.

To delete a job requisition:

1. Go to Setup > HR Information System > Job Requisitions.
2. Click **Edit** beside the job requisition you want to delete.
3. Select **Delete** from the Actions menu.
4. When prompted to complete the deletion, click **OK**.

To access job requisition saved searches, see [Recruiting Reports](#).

Advanced Employee Permissions

This chapter includes the following help topics:

- [Advanced Employee Permissions Overview](#)
- [Before Enabling the Advanced Employee Permissions Feature](#)
- [Advanced Employee Permissions and Standard NetSuite Roles](#)
- [Employee Self Permission Overview](#)
- [Employee Public Permission Overview](#)
- [Employee Confidential Permission Overview](#)
- [Employee Compensation Permission Overview](#)
- [Employee Access Tab Permission Overview](#)
- [Employee Administration Permission Overview](#)
- [Employee Record Full Permission Overview](#)
- [Advanced Employee Permissions Use Cases](#)
- [Setting Employee Access for Advanced Employee Permissions](#)
- [Custom Advanced Employee Permissions](#)
- [Creating Custom Fields for Advanced Employee Permissions](#)
- [Creating Custom Sublists for Advanced Employee Permissions](#)
- [Custom Restrictions for Advanced Employee Permissions](#)

Advanced Employee Permissions Overview

The Advanced Employee Permissions feature gives administrators control over which fields and sublists on the employee record are available to the role. This availability is depends on the assigned employee permissions.

This feature includes the following permissions, which are automatically assigned to a set of standard NetSuite roles, except where otherwise noted. For more information, see [Advanced Employee Permissions and Standard NetSuite Roles](#).

- **Employee Self** – Roles with this permission have access to basic personal information about themselves on their employee record. They can also use their Employee Center role by clicking **My Profile** under **My Information**. For more information, see [Employee Self Permission Overview](#).
- **Employee Public** – Roles with this permission have access to basic employee information, such as job title. For more information, see [Employee Public Permission Overview](#).
- **Employee Confidential** – Roles with this permission have access to a set of fields and sublists. For example, the **Billing Class** field, and the **Time-Off** subtab. For more information, see [Employee Confidential Permission Overview](#).
- **Employee Compensation** – Roles with this permission have access to compensation information, such as base wage and base wage type. For more information, see [Employee Compensation Permission Overview](#).
- **Employee Access Tab** – Roles with this permission can give users access to NetSuite and assign roles to users. The Employee Access Tab permission isn't automatically assigned to any roles when the feature is enabled. For more information, see [Employee Access Tab Permission Overview](#).

- **Employee Administration** – Roles with this permission have access to basic employee information, and fields and sublists based on Class, Department, Location, and Subsidiary (CDLS). The Employee Administration permission isn't automatically assigned to any roles when the feature is enabled. For more information, see [Employee Administration Permission Overview](#).
- **Employee Record Full** – Roles with this permission have access to all employee information. For more information, see [Employee Record Full Permission Overview](#).

If your role has appropriate permission, you can create custom employee permissions to include standard fields and sublists from the employee record. You can also add custom fields and sublists to custom employee permissions. For more information, see [Custom Advanced Employee Permissions](#).

If your role has the appropriate permission, you can also customize restrictions for Advanced Employee Permissions. For more information, see [Custom Restrictions for Advanced Employee Permissions](#).

Note: Inline editing is available only with the Lists > Employees permission at access level Edit or higher.

Note: Advanced Employee Permissions lets users who have access to effective dating logs see content based on the permissions and restrictions assigned to their role. For example, roles with the Employee Confidential permission see effective dating logs only for their direct reports and below. For more information, see [Effective Dating for Employee Information](#).

Advanced Employee Permissions Videos

Watch the following help videos for information about using the Advanced Employee Permissions feature.

- [Advanced Employee Permissions Overview — Video 1 of 4](#)
- [Creating Custom Advanced Employee Permissions — Video 2 of 4](#)
- [Customizing a Role Using Advanced Employee Permissions — Video 3 of 4](#)
- [Using Advanced Employee Permissions — Video 4 of 4](#)

Before Enabling the Advanced Employee Permissions Feature

Note: The Advanced Employee Permissions feature is available only for accounts with SuitePeople HR provisioned. For more information, see [SuitePeople Overview](#).

Warning: The Advanced Employee Permissions feature changes the way employee information is exposed to users. This feature should only be enabled by an administrator who has a thorough understanding of NetSuite. Because these changes extend to all parts of NetSuite, test this feature in a sandbox account before enabling it in a production account.

This section describes how access to the employee record, using different contexts, changes when the Advanced Employee Permissions feature is enabled. You should go through the following list before you enable the feature. If required, complete any of the recommended actions. For more information, contact NetSuite Customer Support.

- [Advanced Employee Permissions and Employee Searches](#)
- [Advanced Employee Permissions and Saved Searches](#)
- [Advanced Employee Permissions and Employee List View Results](#)
- [Advanced Employee Permissions and NetSuite Reports](#)
- [Advanced Employee Permissions and Employee Templates](#)
- [Advanced Employee Permissions and Contact Records](#)
- [Advanced Employee Permissions and Subrecords](#)
- [Advanced Employee Permissions and SuiteScript](#)
- [Advanced Employee Permissions and SuiteFlow](#)
- [Advanced Employee Permissions and SuiteAnalytics Connect](#)
- [Advanced Employee Permissions and CSV Import](#)
- [Advanced Employee Permissions and SOAP Web Services](#)
- [Advanced Employee Permissions and Customizations](#)

Advanced Employee Permissions and Employee Searches

Important: Before you enable Advanced Employee Permissions, review existing saved employee searches, and limit access to any searches that aren't relevant to some users.

Note: The Advanced Employee Permissions feature is available only for accounts with SuitePeople HR provisioned. For more information, see [SuitePeople Overview](#).

When Advanced Employee Permissions isn't enabled, employees can only perform employee searches if they have the following permissions:

- Lists > Employees

- Lists > Employee Record
- Lists > Perform Search

However, when Advanced Employee Permissions is enabled, many standard NetSuite roles automatically have the Employee Public permission, and the Lists > Employee Record permission. These permissions give them the ability to perform employee searches.

Advanced Employee Permissions and Saved Searches

Based on the employee permissions assigned to the role, users see different results when viewing the same employee saved search. Some columns in the search results are hidden, depending on what the role has access to. When the filter criteria of a saved search uses a field unavailable to the employee permissions assigned to the role, the filter is not applied.

The following examples outline what information is exposed to a role when a saved search is run using the same filter criteria. The examples use different Advanced Employee Permissions.

Example 1 – Saved Search Results with Employee Public Permission

Advanced Employee Permissions	Filter Criteria	Reference
Employee Public	Location – Toronto Base Wage – Greater than \$100,000	Employee Public Permission Overview

When a role using this permission runs the saved search, the results filter by Location because this permission doesn't have access to Base Wage.

High Earning Employees in Toronto: Results				List	Search
Return To Criteria Edit this Search

Advanced Employee Permissions and Employee List View Results

The Employees List page generates the available columns, based on the fields the role has access to. The employees listed depend on which employees the role has permission to view all the fields, and that meet the set restrictions. Seeing different employees with a different combination of permissions and restrictions is expected behavior.

The following section gives examples of how the displayed information changes when using Advanced Employee Permissions.

Important: When using Advanced Employee Permissions you should view the Employees List page using the Basic view, instead of the default All view. With the Basic view, you see a more extensive list of employees because the basic field set is contained in most standard employee permissions. With the All view, there are more columns displayed, however, it may restrict the number of employees you see. For more information, see [Example 3 – Employee List Page Results with Employee Confidential and Employee Self Permissions](#).

Example 1 – Employees List Page Results with Employee Confidential Permission

Advanced Employee Permissions	Default Access Level and Restriction?	Default Restriction	Fields Exposed	View	Reference
Employee Confidential	View	Subordinates	- First Name - Last Name - Email - Gender - Job Title	All	Employee Confidential Permission Overview

The employees that directly report to the user are shown in the list. In this example, the user has one direct report and each of the fields that are part of the Employee Confidential permission appear. The Employee Confidential permission has the default restriction of Subordinates.

The screenshot shows the Oracle NetSuite interface. At the top, the header includes the Oracle NetSuite logo, navigation icons, and user information: J Wolfe, SuitePeople, Standard Account - Employee Confidential - List View. The main navigation bar has tabs for Vendors, Payroll and HR, Reports, Setup, and Support. Below this is an 'Information' banner stating: 'Some fields are hidden because your role does not have permission to view them. To change what you are permitted to view, please contact your administrator.' The 'Employees' section has a 'VIEW' dropdown set to 'All' and a 'FILTERS' button. The table below shows one employee: Brad Smith, with email bsmith@abc.com, job title Accounting Manager, and gender Male. The table has columns for NAME, EMAIL, JOB TITLE, and GENDER. A 'QUICK SORT' dropdown and 'TOTAL: 1' are also visible.

NAME	EMAIL	JOB TITLE	GENDER
Brad Smith	bsmith@abc.com	Accounting Manager	Male

Example 2 – Employees List Page Results with Employee Self Permission

Advanced Employee Permissions	Default Access Level	Default Restriction	Fields Exposed	View	Reference
Employee Self	View	Own Only	- First Name - Last Name - Email - Job Title - Birth Date	All	Employee Self Permission Overview

The user sees the fields exposed with the Employee Self permission only for themselves. The Employee Self permission has the default restriction of Own Only. Therefore, the user only has access to this information for themselves on their employee record.

The screenshot shows the Oracle NetSuite interface. At the top, the header includes the Oracle NetSuite logo, navigation icons, and user information: J Wolfe, SuitePeople, Standard Account - Employee Self - List View. The main navigation bar has tabs for Vendors, Payroll and HR, Reports, Setup, and Support. Below this is an 'Information' banner stating: 'Some fields are hidden because your role does not have permission to view them. To change what you are permitted to view, please contact your administrator.' The 'Employees' section has a 'VIEW' dropdown set to 'All' and a 'FILTERS' button. The table below shows one employee: J Wolfe, with email jwolfo@abc.com, job title Account Executive, and birth date 5/6/1964. The table has columns for NAME, EMAIL, JOB TITLE, and BIRTH DATE. A 'QUICK SORT' dropdown and 'TOTAL: 1' are also visible.

NAME	EMAIL	JOB TITLE	BIRTH DATE
J Wolfe	jwolfo@abc.com	Account Executive	5/6/1964

Example 3 – Employee List Page Results with Employee Confidential and Employee Self Permissions

Advanced Employee Permissions	Default Access Level	Default Restrictions	Fields Exposed	Views	References
- Employee Confidential - Employee Self	View	- Subordinates - Own Only	- Employee Confidential Permission - First Name - Last Name - Email Gender - Job Title - Employee Self Permission - First Name - Last Name - Email - Job Title Birth Date	All and Basic	Employee Confidential Permission Overview Employee Self Permission Overview

With the Employee Confidential and Employee Self permission combination, the user sees an empty list. The **All** view on the Employees List page generates the available columns, based on field access for the role, across all roles. It displays all of the employees that match all the fields that the user has access to. When fields are removed from the view, you will see a generated information message.

The screenshot shows the Oracle NetSuite interface. At the top, the header includes the Oracle NetSuite logo, navigation icons, and user information (J Wolfe, SuitePeople 19.1 - Standard Account - Employee Confidential + Employee Self - List View). Below the header is a navigation bar with tabs: Vendors, Payroll and HR, Reports, Setup, and Support. A blue information banner states: "Some fields are hidden because your role does not have permission to view them. To change what you are permitted to view, please contact your administrator." The main section is titled "Employees" and includes a "VIEW" dropdown set to "All", a "FILTERS" button, and a "QUICK SORT" dropdown. Below this is a table header with columns: NAME, EMAIL, JOB TITLE, BIRTH DATE, and GENDER. The table body is empty, displaying the message "No records to show." The total count at the bottom right is "TOTAL: 0".

With the Employee Confidential and Employee Self permission combination, the **Basic** view of the Employees List page displays the users name all their direct reports. The field set contained in the Basic view is contained in most standard employee permissions.

NAME	JOB TITLE
Brad Smith	Accounting Manager
J Wolfe	Account Executive

Advanced Employee Permissions and NetSuite Reports

Information in NetSuite reports isn't governed by Advanced Employee Permissions. This means that it could be possible to accidentally disclose more information than an employee should have access to through a report. Use caution when giving employees access to reports. For more information, see the help topic [Access to Reports](#).

Advanced Employee Permissions and Employee Templates

When Advanced Employee Permissions is enabled you can view employee templates, but you can't create or edit employee templates. Editing or creating employee templates is supported only with the Lists > Employees permission. For more information about employee templates, see [Creating an Employee Template](#).

Advanced Employee Permissions and Contact Records

When Advanced Employee Permissions is enabled, the **Show Employees as Contacts** field on the General Preferences page isn't available. Any employees saved to a contact record don't appear on the Contacts list page. In addition, any information specific to an employee's contact record is no longer accessible.

If required, move any custom fields from the contact record to the employee record before enabling Advanced Employee Permissions.

Advanced Employee Permissions and Subrecords

Subrecords are supported only with the Lists > Employees permission.

Advanced Employee Permissions and SuiteScript

In NetSuite, account administrators have access to all the information on all record types, including the employee record. This can create issues in the following situations:

- When a user is assigned a role that has permission to create scripts.
- When a user sets a script to run as administrator.

A user could write or deploy a script that gains access to employee information that they wouldn't normally have access to. This could potentially be used to compromise employee information.

When Advanced Employee Permissions is enabled, carefully track which roles have permission to create or alter scripts. In addition, track which scripts execute as administrator, and what they do to make sure employee information is not unintentionally leaked.

Assigning any of the Advanced Employee Permissions to a role gives partial access to the employee record. Some scripts (including third-party scripts) may fail when users attempt to access parts of the employee record that they're not permitted to access. For more information, see [Advanced Employee Permissions Overview](#).

If needed, consider running these scripts as administrator, or revise the scripts to handle cases where some fields and sublists aren't accessible.

If you have any scripts that add buttons to the employee record, ensure that they appear only when appropriate. Configure scripts so that the action being added respects the restrictions on the employee record.

Script Access

The following section outlines how script access changes when Advanced Employee Permissions is enabled.

The fields and sublists a user has access to can change depending on which employee record is being viewed or edited. This is different from other records in NetSuite, where permissions granted to a role determine just the instances of the record the role can see.

The search columns available to users are also dependent on the permissions assigned to the role.

In general, scripts should always check to see if the role has access to a field or sublist before trying to do something with it. Simply calling functions and methods that interact with fields and sublists before checking whether the role has access may result in inconsistent behavior.

For example, the **Department** field is permitted on the employee record. You don't have access, therefore, a null value is returned. If the field is empty, an empty string is returned.

Script Access Examples

When you run the following script, errors generate because the script doesn't check if the field exists, or whether you can access it.

```
1 | var employeeRecord = nlapiLoadRecord('employee', '115');
2 | employeeRecord.setFieldValue('department', '2');
3 | nlapiSubmitRecord(employeeRecord);
```

To check if your role has access to a field for a specific employee, load the employee record object and call `getAllFields().includes()`. If the field exists and you do have access, a true value is returned. In the following example, the user has access to the **Department** field for the employee with ID:115.

```
1 | var accessToDepartment = nlapiLoadRecord('employee', '115').getAllFields().includes('department');
```

Taking the previous two script examples into consideration, you should use the following example to make sure your scripts don't fail.

```

1 var employeeRecord = nlapiLoadRecord('employee', '115');
2 var hasAccessToDepartment = employeeRecord.getAllFields().includes('department');
3 if (hasAccessToDepartment)
4 {
5     employeeRecord.setFieldValue('department', '2');
6 }
7 nlapiSubmitRecord(employeeRecord);

```

For more information about working with SuiteScript, see the help topics [Suitelets and UI Object Best Practices](#) and [Client Script Best Practices](#).

Advanced Employee Permissions and SuiteFlow

In NetSuite, account administrators have access to all the information about all record types, including the employee record. This can create issues in the following situations:

- When a user is assigned a role that has permission to create workflows.
- When a user sets a workflow to run as administrator.

A user could write or deploy a workflow that gains access to employee information that they wouldn't normally have access to. This could potentially be used to compromise employee information.

When Advanced Employee Permissions is enabled, carefully track which roles have permission to create or alter workflows. In addition, track which workflows execute as administrator, and what they do to make sure employee information isn't unintentionally leaked.

It isn't possible to know what fields or sublists are present on any employee record when Advanced Employee Permissions is enabled. This means that workflows can't safely perform operations, such as setting a default value on a field. To avoid this, use an After Submit workflow as administrator, to give access to the complete set of fields and sublists on the employee record.

If you have any workflows that add buttons to the employee record, make sure that they appear only when appropriate. Configure scripts so that the action being added respects the restrictions on the employee record.

For more information about workflows, see the help topic [Working with Workflows](#).

Advanced Employee Permissions and SuiteAnalytics Connect

SuiteAnalytics Connect access to the employee record, meaning access through ODBC, JDBC, or ADO.NET drivers, is supported only with the Lists > Employees permission. SuiteAnalytics Connect access is not supported for roles with other employee permissions.

Advanced Employee Permissions and CSV Import

CSV import is supported only with the Lists > Employees permission.

Advanced Employee Permissions and SOAP Web Services

Access to the employee record through SOAP web services respects the permissions that are assigned to a role. However, be aware of the following:

- A value for a field is set on the employee record in a SOAP web services program. The current role doesn't have access to that field. The program completes without errors, but the field isn't set or updated.
- Fields and sublists to which the current role doesn't have access aren't returned through search or filtering.

Advanced Employee Permissions and Customizations

The following section outlines how customizations change when Advanced Employee Permissions is enabled.

Custom Roles

Custom roles created in your NetSuite account aren't automatically updated with the employee permissions introduced by Advanced Employee Permissions. You need to manually update custom roles to include any of the required employee permissions. For more information, see [Setting Employee Access for Advanced Employee Permissions](#).

Roles Using the SuiteScript Permission

Roles that have the Setup > SuiteScript permission can configure scripts to run as administrator, which bypasses the Advanced Employee Permissions feature. Before creating custom roles with this permission, make sure that the role has access to the information that is being exposed.

Customization

By default, any customization created with NetSuite Customization that are included with the standard Lists > Employees permission are preserved. If you customize the permission, the customizations created with Customization aren't preserved. If required, you need to manually add customizations to the custom Lists > Employees permission. For more information, see [Custom Advanced Employee Permissions](#).

Advanced Employee Permissions and Standard NetSuite Roles

The following table highlights which Advanced Employee Permissions are automatically assigned to standard NetSuite roles. It also provides the default access levels and restrictions for each. The Employee Administration and Employee Access Tab permissions aren't automatically assigned to any standard roles. If required, you can manually add these permissions to a role.

Warning: When you assign permissions, be aware that:

- If you change the access level of the Employee Self permission to Edit, employees can make changes to the fields exposed with this permission. This includes their compensation information. You should use the default access level View, however, if required, you can create a custom permission. For more information, see [Custom Advanced Employee Permissions](#).
- If you change the access level of the following permissions to Edit, employees can create employees in NetSuite:
 - Employee Public
 - Employee Confidential
 - Employee Compensation
 - Employee Record Full
 - Employee Administration

Important: The standard NetSuite Lists > Employees permission takes precedence over any of the employee permissions in Advanced Employee Permissions. This change is a step in separating the legacy permission model from the Advanced Employee Permissions feature. The Lists > Employees permission gives full-record access to employee records. You should review the standard and custom roles in your account that include the Lists > Employees permission. Ensure that all users with these roles have full access to employee records. Users who shouldn't have full access to employee records should be assigned a role that doesn't include the Lists > Employees permission. If you have the Administrator role, you can create alternate custom roles for these users. For more information, see [Setting Employee Access for Advanced Employee Permissions](#), [Creating Custom Advanced Employee Permissions](#), and [Custom Restrictions for Advanced Employee Permissions](#).

Employee Self Permission Overview

The Employee Self permission is intended for all employees. Roles that have this permission can view basic personal information about their employee record. Basic personal information includes things such as home address, and passport information. When you enable the Advanced Employee Permissions

feature, NetSuite automatically assigns this permission to the Employee Center role. By default, the access level for this permission is set to View, and the restriction is set to Own Only, but you can make changes. For more information, see [Setting Employee Access for Advanced Employee Permissions](#).

Note: Users aren't able to view or edit future or past-dated changes to their employee information if they have an assigned role with this permission.

Employee Self Permission Fields

This section outlines the default employee record fields that are exposed with the Employee Self permission. If required, you can customize this permission. For more information, see [Custom Advanced Employee Permissions](#).

Employee Self Permission Fields
Primary Information - Employee ID - Mr/Ms - Name - Initials - Job - Supervisor - Image
Email Phone Address - Email - Phone - Office Phone - Mobile Phone - Home Phone - Fax - Address
Classification - Subsidiary - Department - Class - Location

Employee Self Permission Sublists

This section outlines the default employee record sublists, and the fields associated with them that are exposed with the Employee Self Permission. If required, you can customize this permission. For more information, see [Custom Advanced Employee Permissions](#).

*These fields are a part of the bonus record. The Employee Self Permission allows access to these fields, but Advanced Employee Permissions can't further restrict access to these fields.

Employee Public Permission Overview

The Employee Public permission is intended for all employees. Roles that have this permission can view basic employee information. Basic information includes non-sensitive information, such as job title and reporting relationships. When you enable the Advanced Employee Permissions feature, NetSuite automatically assigns this permission to a set of standard roles. By default, the access level for this permission is set to View. The restriction is set to Active and Non-Terminated, but you can make changes. For more information, see [Setting Employee Access for Advanced Employee Permissions](#).

Employee Public Permission Fields

This section outlines the default employee record fields that are exposed with the Employee Public Permission. If required, you can customize this permission. For more information, see [Custom Advanced Employee Permissions](#).

Employee Confidential Permission Overview

The Employee Confidential permission is intended for manager roles. In addition to the employee public fields and sublists, roles with this permission can also access confidential employee information. Confidential information includes job and education information. This permission is automatically added to a set of standard roles when the Advanced Employee Permissions feature is enabled. For more information, see [Advanced Employee Permissions and Standard NetSuite Roles](#). By default, the access level for this permission is set to View, and the restriction is set to Subordinates, but you can make changes. For more information, see [Setting Employee Access for Advanced Employee Permissions](#).

The Employee Compensation Permission allows access to these fields, but Advanced Employee Permissions can't further restrict access to these fields.
Payroll Compensation Type

The following fields are a part of the Compensation Tracking feature:

- Base Wage
- Base Wage Type
- Bonus Target
- Target Comments
- Target Frequency
- Target Type
- Compensation Currency
- Compensation Type

The Compensation Type field is a part of SuitePeople U.S. Payroll. For more information, see [Recording Base Pay Compensation for an Employee](#) and [Including an Employee in Payroll](#).

Employee Access Tab Permission Overview

The Employee Access Tab permission is intended for IT administrators. Roles with this permission give users access to NetSuite and assign roles to users who fall into the restriction policy defined on the Role

page. For example, when restricted by location, a role with this permission can give access and assign roles to employees in their location only.

Note: When the Advanced Employee Permissions feature is enabled, the Employee Access Tab permission is not automatically assigned to any standard roles.

Employee Access Tab Permission Fields

This section outlines the default employee record fields that are exposed with the Employee Access Tab Permission. If required, you can customize this permission. For more information, see [Custom Advanced Employee Permissions](#).

Employee Access Tab Permission Fields

Employee Record Full Permission Overview

The Employee Record Full permission is intended for Human Resources Business Partners, Chief People Officers (CPOs), and Human Resources Directors. Users with this permission have access to all information about the employee record, except for fields and sublists exposed by the Employee Access Tab permission. Roles with this permission can give users access to NetSuite. They can also assign roles to users who fall into the restriction policy defined on the Role page. For more information, see [Employee Access Tab Permission Overview](#).

Advanced Employee Permissions Use Cases

The following section provides five use cases illustrating how to use Advanced Employee Permissions. These are examples only. They're meant to demonstrate how using a combination of permissions exposes only the information that a particular type of employee requires access to.

For a complete list of the fields and sublists exposed with each advanced employee permission, see the following help topics:

- [Employee Self Permission Overview](#)
- [Employee Public Permission Overview](#)
- [Employee Confidential Permission Overview](#)
- [Employee Compensation Permission Overview](#)
- [Employee Access Tab Permission Overview](#)
- [Employee Administration Permission Overview](#)
- [Employee Record Full Permission Overview](#)

Note: These examples use the default Advanced Employee Permissions and the default restrictions, but you can customize both. For more information, see [Custom Advanced Employee Permissions](#) and [Custom Restrictions for Advanced Employee Permissions](#).

Use Case 1: Employee Access for All Employees

The following table provides the permissions, access levels, and restrictions required to give employees access to basic employee information about other employees. It also provides relevant information about themselves.

Important: The Lists > Employee Record and Lists > Perform Search permissions are standard NetSuite permissions, and are not part of Advanced Employee Permissions. However, these permissions are required to access employee menus in NetSuite and to be able to perform searches. For more information about the standard permissions, see the help topic [NetSuite Permissions Overview](#).

Permission	Access Level	Restriction	Gives Employees Access To
Lists > Employee Record	Edit	–	Ability to see NetSuite menus related to employees. For example, List > Employees. This permission doesn't give access to the employee record.

Permission	Access Level	Restriction	Gives Employees Access To
Lists > Perform Search	Full	–	Search for employees.
Employee Public	View	Active and Non-Terminated	View and search basic employee information, such as email address and supervisor, for all active, non-terminated employees.
Employee Self	View	Own Only	View relevant information about themselves on their employee record, such as job description and compensation.

Use Case 2: Employee Access for Managers

The following table gives an example of how to use Advanced Employee Permissions to give the required access to employee information for a manager.

Important: The Lists > Employee Record and Lists > Perform Search permissions are standard NetSuite permissions, and are not part of Advanced Employee Permissions. However, these permissions are required to access employee menus in NetSuite and to be able to perform searches. For more information about the standard permissions, see the help topic [NetSuite Permissions Overview](#).

Permission	Access Level	Restriction	Gives Managers Access To
Lists > Employee Record	View	–	Ability to see NetSuite menus related to employees. For example, List > Employees. This permission doesn't give access to the employee record.
Lists > Perform Search	Full	–	Search for employees.
Employee Confidential	View	Subordinates	View and search confidential employee information, such as hire date and expense limit, for direct reports and below.
Employee Compensation	View	Subordinates	View and search compensation information for direct reports and below.
Employee Public	View	Active and Non-Terminated	View and search basic employee information, such as email address and supervisor, for all active, non-terminated employees.
Employee Self	View	Own Only	View relevant information about themselves on their employee record, such as job description and address.

Use Case 3: Employee Access for Human Resources Generalists

The following table gives an example of how to use Advanced Employee Permissions to give required access to employee information for a Human Resources Generalist.

Important: The Lists > Employee Record and Lists > Perform Search permissions are standard NetSuite permissions, and are not part of Advanced Employee Permissions. However, these permissions are required to access employee menus in NetSuite and to be able to perform searches. For more information about the standard permissions, see the help topic [NetSuite Permissions Overview](#).

Permission	Access Level	Restriction	Gives Human Resources Generalists Access To
Lists > Employee Record	Full	–	Ability to see NetSuite menus related to employees. For example, List > Employees. This permission doesn't give access to the employee record.
Lists > Perform Search	Full	–	Search for employees.
Employee Administration	Full	Inherit from Role	View, create, edit, and search for personal information, such as home phone, for employees who match the restrictions defined on the Role page. If no restrictions are defined, this information is available for all employees.
Employee Confidential	View	Subordinates	View and search confidential employee information, such as hire date and expense limit, for direct reports and below.
Employee Compensation	View	Subordinates	View compensation information for direct reports and below.
Employee Public	View	Active and Non-Terminated	View and search basic employee information, such as email address and supervisor, for all active, non-terminated employees.

Use Case 4: Employee Access for Human Resources Directors

The following table gives an example of how to use Advanced Employee Permissions to give required access to employee information for a Human Resources Director.

Important: The Lists > Employee Record and Lists > Perform Search permissions are standard NetSuite permissions, and are not part of Advanced Employee Permissions. However, these permissions are required to access employee menus in NetSuite and to be able to perform searches. For more information about the standard permissions, see the help topic [NetSuite Permissions Overview](#).

Permission	Access Level	Restriction	Gives Human Resources Directors and Above Access To
Lists > Employee Record*	Full	–	Ability to see NetSuite menus related to employees. For example, List > Employees. This permission doesn't give access to the employee record.
Lists > Perform Search*	Full	–	Search for employees.

Permission	Access Level	Restriction	Gives Human Resources Directors and Above Access To
Employee Record Full	Full	Inherit from Role	View, create, edit, and search all employee record information for employees who match the restrictions defined on the Role page. If no restrictions are defined, this information is available for all employees.
Employee Public	View	Active and Non-Terminated	View and search basic employee information, such as email address and supervisor, for all active, non-terminated employees.

Use Case 5: Employee Access for IT Administrators

The following table gives an example of how to use Advanced Employee Permissions to give the required access to employee information for an IT administrator.

Important: The Lists > Employee Record and Lists > Perform Search permissions are standard NetSuite permissions, and are not part of Advanced Employee Permissions. However, these permissions are required to access employee menus in NetSuite and to be able to perform searches. For more information about the standard permissions, see the help topic [NetSuite Permissions Overview](#).

Permission	Access Level	Restriction	Gives IT Administrators Access To
Lists > Employee Record	View	–	Ability to see NetSuite menus related to employees. For example, List > Employees. This permission doesn't give access to the employee record.
Lists > Perform Search	Full	–	Search for employees.
Employee Access Tab	Full	Inherit from Role	Give access and assign roles to employees who match the restrictions defined on the Role page.
Employee Public	View	Active and Non-Terminated	View and search basic employee information, such as email address and supervisor, for all active, non-terminated employees.

Setting Employee Access for Advanced Employee Permissions

You can specify additional levels of restrictions and access to employee information about the **Employee Access** subtab of the Role page.

To set employee access:

1. Go to Setup > Users/Roles > Manage Roles.
2. From the Manage Roles list page, you can either create a custom or new role that you want to customize employee access for:
 - To create a custom role, click **Customize** or **Edit** beside the role. All of the permissions associated with the parent role are inherited. You can make changes as necessary.

Important: The Lists > Employees permission takes precedence over any of the employee permissions that are part of the Advanced Employee Permissions feature. This change is a step in separating the legacy permission model from the Advanced Employee Permissions feature. The Lists > Employees permission gives full-record access to employee records. When customizing a role, check if this permission is present. If this role shouldn't have full access to employee records, remove the permission.

- To create a new role that doesn't contain a list of associated permissions, click **New Role**.

Important: When creating a new role using Advanced Employee Permissions you must add the Lists > Employee Record permission to the role. This permission is required to see NetSuite menus related to employees. For example, List > Employees.

3. Click the **Employee Access** subtab.
4. From the **Permission** list, select the employee access you want to add to the role. Select from the following:
 - **Employee Administration** – This permission is intended for Human Resources Generalists and Human Resources Administrators. Users assigned to a role with this permission have access to HR-related fields on the employee record. For more information, see [Employee Administration Permission Overview](#).
 - **Employee Compensation** – This permission is intended for managers. Users assigned to a role with this permission have access to compensation information on the employee record. For more information, see [Employee Compensation Permission Overview](#).
 - **Employee Confidential** – This permission is intended for managers. Users assigned to a role with this permission have access to public and confidential information on the employee record. For more information, see [Employee Confidential Permission Overview](#).
 - **Employee Public** – This permission is intended for employees. Users assigned to a role with this permission have access to basic employee information on the employee record. For more information, see [Employee Public Permission Overview](#).
 - **Employee Record Full** – This permission is intended for Human Resources Business Partners, Chief People Officers (CPOs), and Human Resources Directors. Users assigned to a role with this permission have access to all information on the employee record. For more information, see [Employee Record Full Permission Overview](#).
 - **Employee Self** – This permission is intended for employees. Users assigned to a role with this permission have access to basic personal information on the employee record. For more information, see [Employee Self Permission Overview](#).
 - **Employee Access Tab** – This permission is intended for IT Administrators. Users assigned to a role with this permission can give access and assign roles to employees. For more information, see [Employee Access Tab Permission Overview](#).

Note: When you select a permission, the default access level and restriction are applied, but you can change these.

5. If required, change the access level for the selected restriction from the **Level** list. For more information, see the help topic [Access Levels for Permissions](#).

 **Note:** When two employee permissions, one at level View and another at level Edit, are included with a role, note the following. Users assigned to the role see a combination of the fields and sublists they're permitted to view on the employee record. In edit mode, only the fields and sublists that the user can edit are visible on the employee record.

 **Warning:** When you assign permissions, be aware that:

- If you change the access level of the Employee Self permission to Edit, employees can make changes to the fields exposed with this permission. This includes their compensation information. You should use the default access level View, however, if required, you can create a custom permission. For more information, see [Custom Advanced Employee Permissions](#).
- If you change the access level of the following permissions to Edit, users can create employees in NetSuite:
 - Employee Public
 - Employee Confidential
 - Employee Compensation
 - Employee Administration
- The Employee Record Full permission gives roles access to all information on the employee record. This permission is intended for Human Resources Business Partners, Chief People Officers (CPO), and Human Resources Directors. To restrict these roles to see only employee administration information, remove the Employee Record Full permission, and add the Employee Administration permission. For more information, see [Employee Administration Permission Overview](#).

6. If required, from the **Restrictions** list, select a new restriction level. Select from the following:
 - **Active and Non-Terminated** – Select this when you want to restrict the permission to active and non-terminated employees. For example, you could add this restriction to the Employee Public permission. Then, users assigned to this role would have access to basic employee information for all active and non-terminated employees only.
 - **Inherit from Role** – Select this when you want the permission to inherit the restrictions set on the Role page. For more information about setting restrictions on the Role page, see the help topic [Customizing or Creating NetSuite Roles](#).
 - **Own Only** – Select this when you want to restrict the permission to the employee's own record only. Users assigned to this role have access to the fields and sublists exposed with the permission for only themselves. For example, you could add this restriction to the Employee Self permission. Then, users assigned to this role would have access only to basic personal employee information for themselves.
 - **Subordinates** – Select this when you want to restrict the permission by subordinates. For example, you can add this restriction to the Employee Confidential permission. Then, users assigned to this role would have access to public and confidential employee information only for their subordinates.

Note: You can also create custom restrictions. For more information, see [Custom Restrictions for Advanced Employee Permissions](#).

7. Click **Add**.
8. Repeat steps 4 to 7 for each permission you want to assign to the role.
9. To finish, click **Save**.

Note: If you change access to a role that a user currently logged in to NetSuite is using, note the following. That user must log out and log back in to see the newly-assigned access.

Custom Advanced Employee Permissions

This section describes how to create custom Advanced Employee Permissions.

For more information, see the following topics:

- [Before Creating Custom Advanced Employee Permissions](#)
- [Prerequisites for Creating Custom Advanced Employee Permissions](#)
- [Creating Custom Advanced Employee Permissions](#)
- [Adding Standard Fields to Custom Advanced Employee Permissions](#)
- [Adding Standard Sublists to Custom Advanced Employee Permissions](#)

Before Creating Custom Advanced Employee Permissions

Both inline editing and inactivating employees from the Employees List page are disabled for users assigned to a role that has a custom employee permission.

Before deploying client or server side scripts that gain access to employee information, make sure:

- The employee field or sublist is available to the role.
- The role has the correct employee permission to see the employee field or sublist for the types of employees being viewed or edited.
- Some scripts may fail, including third-party scripts. Scripts fail when they attempt to access parts of the employee record they're not permitted to access with the assigned role and permissions.

For more information, see [Before Enabling the Advanced Employee Permissions Feature](#).

Prerequisites for Creating Custom Advanced Employee Permissions

To create custom Advanced Employee Permissions, you need the Setup > Manage Custom Permissions permission at access Level Full. The standard role that comes with this permission is the Administrator role. You can also create custom roles that include this permission. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

Creating Custom Advanced Employee Permissions

You have two choices when creating custom Advanced Employee Permissions:

- You can create a new permission using a custom set of fields and sublists from the employee record.
- You can customize a standard employee permission to include a subset of the fields and sublists that are exposed. You can also customize it to include additional fields and sublists.

Standard employee permissions can't be modified. Use these permissions as templates to create your own custom employee permissions.

Important: Some fields on the employee record are dependent on other fields. Don't add or remove these fields individually. For example, you customize the Employee Access Tab permission. But you have only a partial set of the standard fields that come with this permission. Therefore, the employee record can't load. The employee record only loads when it has either all or none of the access fields.

To create custom Advanced Employee Permissions:

1. Go to Setup > Users/Roles > Manage Permissions.
2. From the Manage Permissions page, you can either create a custom or new employee permission.
 - To create a custom employee permission, click **Customize** beside the employee permission you want to customize. All of the standard fields and sublists associated with the parent permission are inherited. You can make changes as needed.
 - To create a new employee permission that doesn't start with a list of associated fields and sublists, click **New Permission** page.
3. If required, you can add standard and custom fields to the permission. For more information, see the following help topics:
 - [Adding Standard Fields to Custom Advanced Employee Permissions](#)
 - [Adding Standard Sublists to Custom Advanced Employee Permissions](#)
 - [Creating Custom Fields for Advanced Employee Permissions](#)
 - [Adding Custom Fields to Advanced Employee Permission](#)
 - [Creating Custom Sublists for Advanced Employee Permissions](#)
 - [Adding Custom Sublists to Advanced Employee Permission](#)
4. To finish, click **Save**.

Tip: To remove the permission, from the **Actions** list, select **Delete**. When the permission is assigned to a role, you need to remove it from the role before you can delete it.

Adding Standard Fields to Custom Advanced Employee Permissions

When you create a custom Advanced Employee Permissions you can include all or a set of standard employee record fields to the permission.

To add standard fields to custom Advanced Employee Permissions:

1. Go to Setup > Users/Roles > Manage Permissions.

2. From the Manage Permissions page, click **Customize** beside the employee permission you want to customize. All of the standard fields and sublists associated with the parent permission are inherited. You can make changes as needed.
3. To add a standard field, select the **Fields** subtab, and then the **Standard Fields** subtab.
4. Click a line in the list.
5. From the **Record Type** list, select **Employee**.
6. From the **Field** list, select the field to add to the permission.
7. Click **Add**.
8. Repeat steps 4 to 7 for each field you want to include.
9. To finish, click **Save**.

Adding Standard Sublists to Custom Advanced Employee Permissions

When you create custom Advanced Employee Permissions you can include all or a set of standard employee record sublists to the permission.

Important: When you add a sublist to a custom permission that is associated with another feature in NetSuite, note the following. You must also add the specific permission for the feature to the role. If the role doesn't have the required permission for the feature, users don't see any information in the sublist. For example, the Accrued Time and Available Now sublists are associated with the Time-Off Management feature. If you add these sublists to a custom Advanced Employee Permission, ensure that the Time-Off Administration permission is included. For more information, see [SuitePeople Permission Requirements](#) and [Permissions Documentation](#).

To add standard sublists to custom Advanced Employee Permissions:

1. Go to Setup > Users/Roles > Manage Permissions.
2. From the Manage Permissions page, click **Customize** beside the employee permission you want to customize. All of the standard fields and sublists associated with the parent permission are inherited. You can make changes as needed.
3. To add a standard sublist, select the **Sublists** subtab, and then the **Standard Sublists** subtab.
4. Click a line in the list.
5. From the **Record Type** list, select **Employee**.
6. From the **Sublist** list, select the sublist to add to the permission.
7. Click **Add**.
8. Repeat steps 4 to 7 for each sublist you want to include.
9. To finish, click **Save**.

Creating Custom Fields for Advanced Employee Permissions

You can create custom employee fields, which you can then add to custom Advanced Employee Permissions.

Important: When an Advanced Employee Permission is assigned to a role, the permission access level is set on the Role page. Not on the custom entity record. For example, an Advanced Employee Permission is assigned to a role at access level View. Any custom fields that are added to the permission respect that access level.

To create custom fields for Advanced Employee Permissions:

1. Go to Customization > Lists, Records, & Fields > Entity Fields > New.
2. In the **Label** field, enter a name or description for the custom field. You can enter up to 200 characters for the label.
3. On the **Applies To** subtab, check the **Employee** box.
4. Click the **Employee Access** subtab.
5. Click a line in the list.
6. From the **Permission** list, select the custom permission with which you want to associate this custom field. This list displays each of the custom Advanced Employee Permissions that have been created.
7. Click **Add**. Alternatively, click **+Insert**, select the permission, and click **Add**.

Tip: To remove a permission, select it from the list, and click **Remove**.

8. Repeat steps 5 to 7 for each custom permission you want to associate this custom field with.
9. To finish, click **Save**.

The custom field is automatically added to the custom permission. To see a list of the custom fields associated with a permission, click the **Fields** subtab. Then, click the **Custom Fields** subtab on the Permission page.

Note: The Show In List box on the custom entity field record is not supported with Advanced Employee Permissions. This means that custom fields are not shown on the Employees List page when this box is checked. To display custom fields with Advanced Employee Permissions, you need to create a custom view that contains the custom fields. To do this, click Edit from the Employees List page and manually add the custom fields.

Adding Custom Fields to Advanced Employee Permission

Use the following procedure to add custom fields to the Advanced Employee Permission.

To add custom fields to the Advanced Employee Permissions:

1. Go to Setup > Users/Roles > Manage Permissions.
2. Click **Customize** or **Edit** beside the permission to which you want to add a custom sublist to.
3. Select the **Fields** subtab.
4. Select the **Custom Fields** subtab.
5. Click a line in the list.
6. From the **Record Type** list, select **Employee**.
7. From the **Field** list, select the custom field to add to the permission.
8. Click **Add**. Alternatively, click **+Insert**, select the record type and sublist, and click **Add**.

9. Repeat steps 5 to 8 for each custom field you want to add to the permission.
10. To finish, click **Save**.

Creating Custom Sublists for Advanced Employee Permissions

You can create a custom employee sublist, which you can then add to Advanced Employee Permissions.

Important: When an Advanced Employee Permission is assigned to a role, the permission access level is set on the Role page. Not on the custom entity record. For example, an Advanced Employee Permission is assigned to a role at access level View. Any custom fields that are added to the permission respect that access level.

To create custom sublists for Advanced Employee Permissions:

1. Go to Customization > Forms > Sublists > New.
2. From the **Type** list, select **Entity**.
3. Check the **Employee** box.
4. From the **Search** list, select the saved search that returns the results you want to appear on the record. If the saved search doesn't appear in the list, check the saved search settings. The first item listed on the **Available Filters** subtab must be a List/Record type. Otherwise, the saved search isn't available to assign as a sublist. For more information, see the help topic [Saved Searches for Custom Sublists](#).
5. In the **Label** field, enter a label for this sublist.
6. From the **Tab** list, select the subtab under which you want the sublist to appear.
7. Repeat these steps for each custom sublist you want to create.
8. To finish, click **Save**.

The custom sublist you created automatically appears in the **Custom Sublists** subtab on the Permission page. For more information, see [Adding Custom Sublists to Advanced Employee Permission](#).

Adding Custom Sublists to Advanced Employee Permission

Use the following procedure to add custom sublists to Advanced Employee Permission.

To add custom sublists to Advanced Employee Permissions:

1. Go to Setup > Users/Roles > Manage Permissions.
2. Click **Customize** or **Edit** beside the permission to which you want to add a custom sublist to.
3. Select the **Sublists** subtab.
4. Select the **Custom Sublists** subtab.
5. Click a line in the list.
6. From the **Record Type** list, select **Employee**.
7. From the **Sublist** list, select the custom sublist to add to the permission.
8. Click **Add**. Alternatively, click **+Insert**, select the record type and sublist, and click **Add**.

9. Repeat steps 5 to 8 for each custom sublist you want to add to the permission.
10. To finish, click **Save**.

Custom Restrictions for Advanced Employee Permissions

By default, when Advanced Employee Permissions is enabled there are four pre-defined restrictions. This includes, Own Only, Active and Non-Terminated, Subordinates, and Inherit from Role. This section describes how to create custom restrictions for Advanced Employee Permissions and how to assign custom restrictions to a role.

For more information, see the following topics:

- [Prerequisites for Creating Custom Restrictions for Advanced Employee Permissions](#)
- [Creating Custom Restrictions for Advanced Employee Permissions](#)
- [Assigning Custom Restrictions to Advanced Employee Permissions](#)

Prerequisites for Creating Custom Restrictions for Advanced Employee Permissions

To create custom restrictions for Advanced Employee Permissions, the Setup > Manage Custom Restrictions Permission is required at access Level Full. The standard role that comes with this permission is the Administrator role. You can also create custom roles that include this permission. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

Creating Custom Restrictions for Advanced Employee Permissions

You can create custom restrictions to restrict the instances that a role has access to the employee record by class, department, location, and subsidiary. For example, you may have a Human Resources department that is physically located in one location, but who support staff located in a different location. You can create custom Advanced Employee Permissions' restrictions to give this department access to sensitive employee data for the staff they support. You can limit them to less sensitive information for the employees in their location that they don't support.

 **Note:** You can't make changes to the standard restrictions that come with the Advanced Employee Permissions feature. This includes: Active and Non-Terminated, Inherit from Role, Own Only, and Subordinates.

To create custom restrictions for Advanced Employee Permissions:

1. Go to Setup > Users/Roles > Manage Restrictions > New.
2. In the **Name** field, enter a unique name for the restriction. The name entered here appears on the Role page, under the **Employee Access** subtab, in the **Restrictions** list.
3. If required, enter a description for the restriction.
4. In the **Class** list, select the classes that you want to include with the restriction. The classes selected from this list determine the classes this restriction is limited to. This means that roles that have

a permission with this restriction can only access employee information for employees in the selected classes. Hold down the Ctrl key to select multiple classes or to deselect a class from the list.

5. From the **Department** list, select the departments that you want to include with the restriction. The departments selected from this list determine the departments this restriction is limited to. This means that roles that have a permission with this restriction can only access employee information in the selected departments. Hold down the Ctrl key to select the multiple departments or to deselect a location from the list.
6. From the **Locations** list, select the locations that you want to include with the restriction. The locations selected from this list determine the locations this restriction is limited to. This means that roles that have a permission with this restriction can only access employee information for employees in the selected locations. Hold down the Ctrl key to select multiple locations or to deselect a location from the list.
7. From the **Subsidiaries** list, select the subsidiaries that you want to include with the restriction. The subsidiaries selected from this list determine the subsidiaries this restriction is limited to. This means that roles that have a permission with this restriction can only access employee information for employees in the selected subsidiaries. Hold down the Ctrl key to select multiple subsidiaries or to deselect a subsidiary from the list.
8. Click **Save**.

Tip: To remove the restriction, from the **Actions** list, select **Delete**. When the restriction is assigned to a role you need to remove it from the role before you can delete it.

Assigning Custom Restrictions to Advanced Employee Permissions

You can assign a custom restriction to Advanced Employee Permissions on the Role page.

To assign a custom restriction:

1. Go to Setup > Users/Roles > Manage Roles.
2. From the list, click **Customize** or **Edit** beside the role to which you want to assign the custom restriction to.
3. Select the **Employee Access** subtab.
4. From the **Permission** list, select the permission you want to add to the role. Select from the following:
 - **Employee Administration** – This permission is intended for Human Resources Generalists and Human Resources Administrators. Users assigned to a role with this permission have access to HR-related fields on the employee record. For more information, see [Employee Administration Permission Overview](#).
 - **Employee Compensation** – This permission is intended for managers. Users assigned to a role with this permission have access to compensation information on the employee record. For more information, see [Employee Compensation Permission Overview](#).
 - **Employee Confidential** – This permission is intended for managers. Users assigned to a role with this permission have access to public and confidential information on the employee record. For more information, see [Employee Confidential Permission Overview](#).
 - **Employee Public** – This permission is intended for employees. Users assigned to a role with this permission have access to basic employee information on the employee record. For more information, see [Employee Public Permission Overview](#).

- **Employee Record Full** – This permission is intended for Human Resources Business Partners, Chief People Officers (CPOs), and Human Resources Directors. Users assigned to a role with this permission have access to all information on the employee record. For more information, see [Employee Record Full Permission Overview](#).
 - **Employee Self** – This permission is intended for employees. Users assigned to a role with this permission have access to basic personal information on the employee record. For more information, see [Employee Self Permission Overview](#).
 - **Employee Access Tab** – This permission is intended for IT Administrators. Users assigned to a role with this permission can give access and assign roles to employees. For more information, see [Employee Access Tab Permission Overview](#).
5. If required, change the access level for the selected restriction from the **Level** list. For more information, see [Setting Employee Access for Advanced Employee Permissions](#).
 6. From the **Restrictions** list, select the custom restriction to apply to the permission.
 7. Click **Add**.
 8. Repeat steps 4 to 7 for each custom restriction you want to assign to the role.
 9. To finish, click **Save**.

 **Note:** If you add a custom restriction to a role that a user who is currently logged in to NetSuite is using, note the following. That user must log out and log back in to see the newly-assigned restriction.

Time Tracking

- [Managing Time Tracking](#)
- [Timesheets](#)

Managing Time Tracking

A user with the Enable Features permission can enable the Time Tracking feature at Setup > Company > Enable Features, on the Employees subtab. This feature lets employees with time tracking access to record the hours they work.

 **Note:** If you currently use the Timesheets feature, see [Timesheets](#) for additional information.

If you're migrating your time features from Timesheets to Time Tracking, the conversion process can take some time depending on the number of time entries and customizations to be converted. When enabling Time Tracking from Timesheets, administrators will receive an email notification that the process has begun. The message will include a link to a status page that details the migration progress.

Users of products other than NetSuite CRM+ can record time for payroll items and billable time. Recording billable time lets you invoice customers for those hours.

 **Tip:** Billable isn't checked by default. When you select an employee and a customer, billable becomes checked, and you can clear it.

 **Warning:** NetSuite CRM+ users can't record billable time, invoice customers for billable time, or record time for payroll items.

For information about time tracking, see the following:

- [Understanding Time Tracking](#)
- [Setting Up Time Tracking Preferences](#)
- [Giving an Employee Access to Time Tracking](#)
- [Entering a Time Transaction](#)
- [Weekly Time Tracking](#)
- [Using the Timer to Track Time](#)
- [Calculating Total Time Worked](#)
- [Entering Time for a Payroll Item](#)
- [Custom Fields in Time Tracking Pages](#)
- [Approving or Rejecting a Time Transaction](#)

Understanding Time Tracking

Use time tracking to record the hours worked by employees.

You can record billable hours and invoice your customers for them. If you use Projects or Project Management, you can also record how many hours are spent on each project and use time reports to plan for future projects and hiring needs. For more information about Time Tracking and Projects, see the help topic [Using Project Management](#), [Working with Resources in Project Management](#), and [Managing Time and Expenses for Project Resources](#).

With the appropriate role access, you can track time for employee payroll items like hourly wages. Employees who have the Restrict Time and Expenses box checked and the Track Time permission enabled can enter time for themselves using their default roles without having to switch to the Employee Center role to track their time. For more information, see the topics under [NetSuite Users & Roles](#).

 **Warning:** NetSuite CRM+ users can't record billable time, invoice customers for billable time, or record time for payroll items.

If your role has the Track Time permission, customer records include a Time Tracking subtab that shows associated time records and enables you to enter new ones. If you use Projects or Project Management, project records also include a Time Tracking subtab.

A user with the Enable Features permission must enable the Time Tracking feature at Setup > Company > Enable Features, on the Employees subtab.

To set preferences for tracking time, go to Setup > Accounting > Preferences > Accounting Preferences and click the Time & Expenses subtab. For more information, see [Setting Up Time Tracking Preferences](#).

 **Note:** If you use NetSuite OneWorld, the **Intercompany Time and Expense** feature and the related **Intercompany Time** accounting preference affect users' ability to enter time worked for customers or projects with subsidiaries other than their own. If the feature isn't enabled, or if the preference is set to **Disallow**, users can't enter intercompany time transactions. Instead, they can only select customers or projects with the same subsidiary to which they're assigned. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

Time Thresholds

You can set time thresholds to limit how employees and vendors enter time. Time threshold preferences enable you to specify the minimum and maximum number of hours permitted per day and week. You can set one or all of these preferences to limit the number of hours permitted to be tracked on a weekly basis. You can opt to set the limits manually, or you can have the limits set automatically based on the work calendar. You can also choose to permit time transactions to be submitted outside the limits you set. You can choose whether to apply your time thresholds to vendor time.

 **Note:** Time thresholds aren't available when using SuiteScript, SuiteFlow, or custom approval routing.

Daily time threshold preferences account for holidays and non-working days based on the selected work calendar. NetSuite doesn't verify non-working days, holidays, or entries on a timesheet that haven't been filled yet.

For employees without a selected work calendar, time thresholds use the system default work calendar to determine holidays and non-working days. Zero time entries are considered filled entries and are verified according to set limits. Regardless of work calendars, employees can still track time on non-working days and holidays and time threshold limits are applied accordingly.

If you also use advanced approvals, you can choose to require time entries to be entered for each working day.

 **Important:** NetSuite validates set time thresholds within the browser. When an entry is made for the duration of a time transaction, NetSuite validates that the entry fits within the set limits. If an entry is left blank, NetSuite won't validate for that entry. This can create a situation where time transactions are saved that don't meet set threshold limits.

If you use Weekly Timesheets, thresholds are validated on both individual time entries and each timesheet. It's possible for a single time entry to satisfy a daily limit but not the weekly limit. In this

situation the time entry would generate a warning because of the timesheet the entry is a part of. You can choose to allow time to be submitted after warnings are displayed.

Time thresholds are checked upon submission of the time entries. You can also choose to have the time entries validated again when they're approved.

To set time thresholds, go to Setup > Accounting > Accounting Preferences and make selections for time thresholds at the bottom of the Time Tracking section.

For more information about time thresholds, see the help topic [Time & Expenses Accounting Preferences](#).

Enabling Time Tracking for CRM

With Time Tracking for CRM, users can track time on tasks, phone calls, events and cases. Tracking time on these activities can help you manage your company by being aware of how much time is spent on certain activities.

Important: The Time Tracking feature and the associated permissions are required to use Time Tracking for CRM.

An administrator must enable the feature before users can track time.

To enable Time Tracking for CRM:

1. Go to Setup > Company > Enable Features
2. Click the **Employees** subtab, and check the **Time Tracking for CRM** box.
3. Click **Save**.

Important: If you also use the Projects feature and want to track time for customers, you must disable the **Show Projects Only for Time and Expense Entry** preference located on the Time & Expenses subtab at Setup > Accounting > Accounting Preferences. When this preference is enabled, time can only be tracked for CRM Tasks associated with a project record.

Enabling Weekly Timesheets

The Weekly Timesheets feature works in conjunction with the existing Time Tracking feature to offer a method of capturing time entries in a weekly format that can be further customized.

Important: The Time Tracking feature and the associated permissions are required to use Weekly Timesheets.

An administrator must enable the feature before users can track time using the weekly timesheet.

To enable Weekly Timesheets:

1. Go to Setup > Company > Enable Features
2. Click the **Employees** subtab, and check the **Weekly Timesheets** box.
3. Click **Save**.

Note: Weekly Timesheets is an additional feature that offers a method for entering time on a weekly basis. The Time Tracking feature includes a Weekly Time Tracking page which can be used to track time on a weekly basis without any additional customizations. If enabled, Weekly Timesheets will take the place of the included Weekly Time Tracking.

For more information about using weekly timesheets, see [Weekly Timesheets](#).

Setting Up Time Tracking Preferences

Time tracking lets you track the hours you and other employees work. You can record billable hours and invoice your customers for them.

Tip: Billable isn't checked by default. When you select an employee and a customer, billable becomes checked, and you can clear it.

Warning: NetSuite CRM+ users can't record billable time, invoice customers for billable time, or record time for payroll items.

Set time tracking preferences to determine how you process time that you track.

Note: Preferences that appear vary depending on the features you have enabled. If you use NetSuite OneWorld and the **Intercompany Time and Expense** feature is enabled in your account, review the **Intercompany Time** preference available on the **General** subtab of the Accounting Preferences page. This preference indicates whether users can enter time transactions for customers and projects with subsidiaries other than their own. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

To set time tracking preferences:

1. Go to Setup > Accounting > Preferences > Accounting Preferences.
2. Click the **Time & Expenses** subtab and enable or disable preferences as desired.
Available preferences may include the ability to override rates on time records, to automatically round time entries, to require approvals on time records, to make time billable by default, to copy time memos to invoices, to show planned time on time tracking records and weekly timesheets, to lock timesheet periods, and to set time thresholds.
For more information, see the help topic [Time & Expenses Accounting Preferences](#).
3. Click **Save**.
4. Go to Setup > Company > Preferences > General Preferences.
Select the day of the week your company uses as the first day of the business week. The day you select is reflected on time tracking forms and on reports.

Next, you can give your employees limited access to your account so they can enter time transactions. To do this, go to Lists > Employees > Employees. Make sure the appropriate employee records are granted access to the Employee Center.

Giving an Employee Access to Time Tracking

Giving employees access to time tracking enables them to enter the hours they spend working for a particular customer or on a project.

There are three steps you must complete to give employees access to time tracking:

1. An administrator must enable the **Time Tracking** features and set time tracking preferences.
2. You must either set up access on employee records to the Employee Center or assign a custom role with the **Track Time** permission.
3. You must provide access information to the employee.

After you've enabled time tracking, you can set preferences for how you want to use the feature.

Next, if you haven't already, create an employee record for employees that you want to give access to time tracking.

For more information about creating employee records, see the following:

- [Adding an Employee](#)
- [Giving an Employee Access to NetSuite](#)
- [Assigning Roles to an Employee](#)

Give Access to the Employee Center

As of 2018.2, you should use the following procedure and let users set up a NetSuite password for themselves. However, if you prefer to assign user passwords yourself, see [Assign a Password Manually](#) instead.

To give an employee access to the Employee Center:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the employee to whom you want to give access.
3. Under Email | Phone | Address, ensure the employee's email address is entered.
4. Click the **Access** subtab.
5. Check the **Give Access** box.
6. If this is a new employee, check the **Send New Access Notification Email** box to inform the user how to access your NetSuite account. The standard user access notification includes the email address to use for logging in to NetSuite, and also contains a URL so that the user can set up a NetSuite password.
7. On the **Roles** tab, select **Employee Center** from the list.
8. Click **Add**.
9. Click **Save**.

Assign a Password Manually

You should use the procedure in [Give Access to the Employee Center](#) that lets users set up a NetSuite password for themselves. However, if you prefer to assign a user's password yourself, use the following procedure.

To manually assign a password:

1. Do one of the following:

- If the user is an employee, go to Lists > Employees > Employees.
 - If the user is not an employee, go to List > Relationships, and then select **Customers, Partners, or Vendors**.
2. Click **Edit** next to the user that you want to assign a role to.
 3. In the **Email** field, enter the user's email address.
This is the email address used to log in to NetSuite.
 4. Click the **Access** tab.
 5. Check the **Give Access** box.
 6. On the **Roles** tab, select **Employee Center** from the list.
 7. Don't check the **Send New Access Notification Email** box.
 8. Check the **Manually Assign or Change Password** box.
 9. Enter a password for your user. As you type, the characters are validated against the password policy criteria, and the results displayed.

 **Note:** If you need more information, see the help topic [NetSuite Password Requirements](#).

10. Enter the password again for verification.
11. Check the **Require Password Change on Next Login** box to require the user to change the password on the next login to NetSuite.
On the next login, they see the Change Password page and can't access other NetSuite pages until a new password is created and saved.
Requiring this action protects your account from unauthorized access using generic passwords and prepares your account for an audit.

 **Important:** The **Require Password Change on Next Login** box never displays as checked. When you check this box and save the record, an internal flag is set. When the password change occurs, the flag is cleared. If you later check the box again and save the record, the internal flag is reset to require another password change.

12. When you're done with entering information, click **Save**.
13. Next, tell your user the appropriate login page to go to, the email address to use for login, and the password you assigned. For security reasons, don't send the password by email.
For details, see the help topic [Types of Login Pages for Your NetSuite Account](#).

After employees log in to NetSuite, they can enter time and view their time reports.

If you enabled the **Require Approvals on Time Records** preference, supervisors can also approve time reports entered by the employees they supervise. You can also create custom approval routing workflows to enable more customization of your approval process. With custom approval routing on time entries, employees can approve or reject the entries where they are set as the Next Approver from the Employee Center.

Assigning Custom Roles with Access to Time Tracking

To assign an employee a custom role with access to time tracking:

1. Go to Setup > Users/Roles > Manage Roles.
2. Click **Customize** next to the role you want to assign with time tracking permission.

3. Enter a name for this custom role.
4. Check the **Restrict Time and Expenses** box to permit employees to enter time for only themselves.
5. On the **Transactions** subtab, select **Track Time** in the **Permission** column.
6. In the **Level** column, select **Full**.
7. Click **Add**.
8. Click **Save**.
9. On employee records, select this role on the **Access** tab to assign this role and give access to time tracking.

Restricting Employee Time Tracking Entries

Account administrators can control which names display for certain roles in the time entry list by editing user roles. Limits on this list restrict the ability of employees to enter time for other employees.

To restrict employees to enter time for only themselves or their subordinates :

1. Go to Setup > Users/Roles > User Management > Manage Roles.
2. Click the **Customize** link next to the role you want to restrict.
3. Enter a new name for the restricted role.
4. On the Role page, in the **Employee Restrictions** field, select **self and subordinates only**.
5. Click **Save**.
6. Repeat steps 2 through 5 for each role you want to restrict from being able to enter time for every employee.

You must update your employee records to assign the restricted roles. For more information, see [Assigning Roles to an Employee](#).

For the roles that you customize, additional areas of NetSuite are restricted based on the selection you've made. For more information, see the help topic [Setting Employee Restrictions](#).

Period locking is controlled exclusively by the time zone of the subsidiary to which the logged-in user belongs. It can result in up to 26 hours difference in the locking time if logged-in users are out of the subsidiary. If this default behavior causes problems, set the subsidiary time zone to the time zone where the employees usually work. Or adjust the Grace Period so that all employees have enough time to enter their timesheets.

Locking Timesheet Periods

Account administrators can disable the ability for employees to submit, edit, or add a time entry within a specific time period. You can choose to lock timesheets by closed fiscal periods, weekly, or monthly.

 **Note:** The Weekly Timesheets feature is required to enable locking timesheet periods. For more information, see [Weekly Timesheets](#).

To set up a timesheet lock:

1. Go to Setup > Accounting > Accounting Preferences. Click Time & Expenses.

2. Under Time Tracking, in the **Lock Timesheet Period** field, select the time period after which you want time entries to be locked.
 - None - time entries are always allowed.
 - Closed Fiscal Period - time entries are no longer allowed after the accounting period is closed.
 - Weekly - time entries are no longer allowed after the current week has past.
 - Monthly - time entries are no longer allowed after the current month has past.
3. If you select Weekly or Monthly, in the **Grace Period** field, enter the number of days time entries will remain open after the selected period. The grace period is dependent on which day your timesheets begin. For example, if you choose to close timesheets every week and you enter two in the Grace Period field, if your timesheets begin on Monday, they are locked on Wednesday each week.
4. When you're done, click **Save**.

A single timesheet can contain both locked and unlocked time entries if the timesheet spans a locked and unlocked period. Administrators can unlock previously locked timesheets for a specific employee. Administrators can also edit or create time entries for a locked timesheet.

Unlocking Timesheet Periods

You may find it necessary to unlock a time period after it's been locked for employees to update or enter time that may have been forgotten. Administrators can unlock previously locked time periods for individual employees.

To unlock a time period:

1. Go to Transactions > Employees > Unlock Time Period. You can also click **Unlock** on the specific timesheet you want to unlock. To view a specific timesheet, go to Transactions > Employees > Weekly Timesheets.> List. Click **View** next to the timesheet you want to unlock.
2. On the Unlock Time Period page, in the **Employee** field, select the employee you want to unlock the time period for. If you have clicked **Unlock** directly from the timesheet, the employee field is populated with the employee's name.
3. In the **Valid Until** field, select the date you want the lock to be reinstated.
4. In the **Start Date** field, select the start date for the period you want unlocked. If you clicked **Unlock** on a timesheet, the start date for that timesheet is automatically populated in this field.
5. In the **End Date** field, select the end date for the time period you are unlocking. For example, if you want to unlock a two week period of timesheets, select a date that is two weeks after the selected start date.
6. When you're done, click **Save**.

Unlocking timesheet periods is only available for administrators and permission for unlocking timesheet periods is not available for custom roles.

Entering a Time Transaction

Enter time transactions to track the hours you and other employees work.

To enter a time transaction:

1. Go to Transactions > Employees > Track Time.
2. Select a form for this transaction.
3. Select the employee whose time you are recording.
4. NetSuite inserts the current date as the posting date of this entry. Accept or select the date for this time transaction.
5. In the **Duration** field, enter the amount of time worked for the day.

When you enter time, minutes that total more than 59 are automatically converted to hours to be added to the total time. Time entries can have minutes entered and saved in a range of 0 to 59.

For example, if you enter **:125**, it's interpreted as 125 minutes and is converted to display as 2:05. Likewise, these time entries are converted as follows:

- **0:125** is converted to 2:05 (2 hours and 5 minutes)
- **1:80** is converted to 2:20 (2 hours and 20 minutes)
- **1:120** is converted to 3:00 (3 hours and zero minutes)

If you want to time yourself as you work or time the length of your break, click the **Timer icon** next to the **Duration** field. The elapsed time in the timer fills in the **Duration** field when you click **Submit**.

6. Select a customer or project if the time worked is for a customer or project.
If you use NetSuite OneWorld, the **Intercompany Time and Expense** feature and the related **Intercompany Time** accounting preference determine whether you can select a customer or project with a subsidiary different from yours. If the feature is not enabled, or if the preference is set to **Disallow**, you can't enter intercompany time transactions. Instead, you can only select customers or projects with the same subsidiary to which you are assigned. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).
7. If you use the **Project Management** feature and selected a project in the **Customer** field with which this time is associated, you can select a related case, event, or task for the project.
8. Select the service that was provided if you track time spent on services.

If you selected a customer or project, you must select a service item.

Note: The service item description is automatically copied to the memo field for the time transaction. You may turn off this preference at Setup > Accounting > Accounting Preferences on the Time & Expenses subtab.

If you use NetSuite OneWorld, you should set up service items that are available to all subsidiaries to use in intercompany time transactions. In these transactions, users can't save lines unless they contain service items available to both the employee subsidiary and customer subsidiary. See the help topic [Enabling Intercompany Time and Expenses](#).

9. Ensure that the **Billable** box is checked if the time is billable to a customer or project.

Warning: In NetSuite CRM+, the **Billable** box isn't available. NetSuite CRM+ users can't record billable time, invoice customers for billable time, or record time for payroll items.

10. If your company supports Multi-State Calculations for payroll, select the **Payroll Item Workplace** for this time entry.
11. Select a payroll item if you are tracking time for payroll.
12. Check the **Paid Externally** box if time has been or will be paid outside of NetSuite. This removes the time from payroll transactions. You can't check this box if this time record is already associated with a paycheck in NetSuite.
13. Optionally enter a memo. You can search for the text you enter here to find this transaction later.

If you are billing this time back to a customer or project, this memo appears as a description for this line item on the customer invoice.

 **Note:** Always select an activity in the **Case/Task/Event** or **Service Item** fields before entering a memo. When you select a case, task, event, or service item, the memo field is automatically populated with information from these records. Anything you entered in the memo field prior to selecting one of these records will be deleted. Changing your selection in either of these fields will update the memo field with any information from the newly selected record.

14. If your company doesn't use Advanced Approvals for Time, check the **Supervisor Approval** box if you are a supervisor entering time for an employee.

If your company does use Advanced Approvals for Time and you are a supervisor or time approver, select a status for this time entry in the **Approval Status** field. If you use Approval Routing, you can also select another approver in the **Next Approver** field. For more information, see [Approving or Rejecting a Time Transaction](#).

15. Under Classification, select a department, class, or location if your company tracks this information.

 **Important:** If you use NetSuite OneWorld and you are entering intercompany time transactions, you must determine a strategy for using classifications on these transactions. Best practice is to omit them. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

16. If the **Override Rates on Time Records** preference has been enabled on the **Time & Expenses** subtab at Setup > Accounting > Accounting Preferences, the following fields display:

- **Price Level** - Select a price level. You can use different price levels by going to Setup > Enable Features > Customers/Sales, and checking the **Use Multiple Prices** box.
- **Rate** - If you selected a price in the **Price Level** field, it automatically appears here. If you don't use multiple prices or if you selected **Custom** in the **Price Level** field, enter a rate for this time transaction. If you are entering time for a payroll item like vacation time, leave this field blank.
- **Lock this Rate** - If you are billing this time back to a customer, check this box to lock the rate you enter so it's not affected by rate changes that happen before the customer is billed. If you are entering time for a payroll item like vacation time, leave this field blank.

17. Click **Save**.

If your company uses Approval Routing or Advanced Approvals for Time, the employee's supervisor or time approver receives an email notification when time is entered or edited. The employee receives an email notification when the status on the Time record changes. The subject of this email says either that the time was approved or that the time was rejected.

You can also enter a time transaction on a customer or project record. To do so, go to Transactions > Employees > Track Time. Click **Edit** next to the customer.

If you billed time back to a customer or project, it appears when you click **Billable Time** on the corresponding invoice page.

If you tracked time for hourly wage payroll items and did not check the **Paid Externally** box, the time appears in the **Hours** column for this employee on the Payroll Run page.

Deleting or Editing Time Entries

You can delete or edit time entries that you have created for yourself or other employees if they haven't been approved by a supervisor or time approver. Administrators can delete approved time entries if they haven't been billed.

To delete or edit an unapproved time entry:

1. Go to Transactions > Employees > Track Time > List .
2. On the Time Entries page, click **Edit** next to time entry you want to edit or delete.
You can filter the entries shown by clicking **Filters** to expand the available list filters.
3. On the Time Tracking page, do one of the following:
 - To edit the time entry, enter a new amount of time in the **Duration** field. Change any other information about the time entry as needed.
 - To delete the time entry, choose Actions > Delete.
4. Click **Save**.

If your company uses Approval Routing or Advanced Approvals for Time, the employee's supervisor or time approver receives an email notification each time a time entry is edited.

Weekly Time Tracking

With weekly time tracking, you can track the hours you and other employees work for a week at a time.

To track time, an administrator should go to Setup > Enable Features > Employees, check the Time Tracking box, and click Save.

 **Note:** If your company uses weekly timesheets, see [Weekly Timesheets](#).

To use weekly time tracking:

1. Go to Transactions > Employees > Weekly Time Tracking.
2. Select the employee whose time you are recording.
3. In the **Date** field, enter the first day of the week you want to track time for, or click the **Pick** link to choose a date.
NetSuite inserts the date that the current week begins as the posting date of this week's time.
You can set the day your company's business week starts by going to Setup > Accounting > Preferences > Accounting Preferences. Click the **General** subtab.
4. If you use Project Management, you can import any planned time entries for the selected employee and week. Click **Import Planned Time** to automatically import the project time entries for the current week.
5. If you don't use the Advanced Approvals preference, check the **Supervisor Approval** box if you are a supervisor entering time for an employee.
6. On the **Enter Time** subtab, in the **Customer** column, select a customer or project if the time worked is for a customer or project.
If you use NetSuite OneWorld, the **Intercompany Time and Expense** feature and the related **Intercompany Time** accounting preference determine whether you can select a customer or project with a subsidiary different from yours. If the feature is not enabled, or if the preference is set to **Disallow**, you can't enter intercompany time transactions. Instead, you can select only those customers or projects with the same subsidiary to which you are assigned. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).
7. If you use the **Project Management** feature and selected a project in the **Customer** field, use the **Case/Task/Event** column to select an activity associated with the project and time.
8. If your company uses multi-state calculations for payroll, select a **Payroll Item Workplace**.

9. Ensure that the **Billable** box is checked if the time is billable to a customer or project. If this time is billable, you must select a customer or project.

Warning: In NetSuite CRM+, the **Billable** box is not available. NetSuite CRM+ users can't record billable time, invoice customers for billable time, or record time for payroll items.

10. Select a payroll item if you are tracking time for payroll.
11. Select the service that was provided if you track time spent on services.

If the **Billable** box is enabled, you must select a service item.

If you use NetSuite OneWorld, you should set up service items that are available to all subsidiaries to use in intercompany time transactions. In these transactions, users can't save lines unless they contain service items available to both the employee subsidiary and customer subsidiary. See the help topic [Enabling Intercompany Time and Expenses](#).

12. Select a department, class, or location if you track this information.

Important: If you use NetSuite OneWorld and you are entering intercompany time transactions, you must determine a strategy for using classifications on these transactions. Best practice is to omit them. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

13. If the **Override Rates on Time Records** preference has been enabled on the **Time & Expenses** subtab at Setup > Accounting > Accounting Preferences, the following fields display:
 - **Price Level** - Select a price level. You can use different price levels by going to Setup > Enable Features > Customers/Sales, and checking the **Use Multiple Prices** box.
 - **Rate** - If you selected a price in the **Price Level** field, it automatically appears here. If you don't use multiple prices or if you selected **Custom** in the **Price Level** field, enter a rate for this time transaction. If you are entering time for a payroll item like vacation time, leave this field blank.
 - **Lock this Rate** - If you are billing this time back to a customer, check this box to lock the rate you enter so it's not affected by rate changes that happen before the customer is billed. If you are entering time for a payroll item like vacation time, leave this field blank.
14. Enter a memo.

If you are billing this time back to a customer or project, this memo appears as a description for this line item on the customer invoice.

Note: Always select an activity in the **Case/Task/Event** or **Service Item** fields before entering a memo. When you select a case, task, event, or service item, the memo field is automatically populated with information from these records. Anything you entered in the memo field prior to selecting one of these records will be deleted. Changing your selection in either of these fields will update the memo field with any information from the newly selected record.

15. Enter the hours for each day in this week.
16. Click **Add**.
17. Repeat steps above for each customer or project you need to enter time against.
18. Click **Save** to save the entries. If you use Advanced Approvals, you can also click **Submit** to save and submit the entries

When time is saved, the time then appears on the Time Details subtab of the time tracking for that week.

If you billed time back to a customer or project, it appears when you click Billable Time on the corresponding invoice page.

If you tracked time for hourly wage payroll items, it appears in the Hours column for this employee on the Payroll Run page.

Copying a Previous Week for a Weekly Timesheet

In addition to entering new time each week, you can also copy the time entries from a previous week on to the current week.

To copy a previous week for weekly time tracking:

1. Go to Transactions > Employees > Weekly Time Tracking.
2. Click **Copy from Week**. A window opens with the start date of the previous week's time automatically populated.
3. In the **Date** field, you can accept the date automatically entered or use the date selector to select a different date.
4. If your company enables employees to choose to copy hours and memos, clear the **Copy Hours and Memos** box if you don't want hours and memos from the selected week to be copied to the current week.
5. Click **Copy**. Time entries within the selected week are copied to the weekly time tracking page currently being edited. Depending on your company's preferences, copied time entries may include hours and memos.
6. Continue to fill in required information for this time. When you're done, click **Save**.

To view a list of all weekly time tracking entries you have permission to view, go to Transactions > Employees > Weekly Time Tracking > List. This list displays the employee, date, hours, and approval status of each week.

Advanced Approvals

If your company uses the Advanced Approvals on Time preference, after time is saved on your Weekly Time Tracking page, the background of each entry reflects that entry's approval status.

- Open — white
- Approved — green
- Rejected — red
- Pending — blue

Advanced approvals enables your employees to know the status of their time entries within a single week by looking at the Weekly Time Tracking page. When rejecting transactions, advanced approvals enables you to add a rejection note. For more information about Advanced Approvals, see [Approving or Rejecting a Time Transaction](#).

Using the Timer to Track Time

Time tracking lets you track the hours you and other employees work. You can enter the hours worked manually, use the NetSuite time calculator, or use the NetSuite Timer.

You can use the Timer to time your break or to time your entire day's work.

If you use the Timer, you can't exit the Time Tracking page and the Timer popup window. If you do, the Timer is stopped and NetSuite doesn't save the elapsed time.

Using the Timer for your Break

To use the Timer for your break:

1. Go to Transactions > Employees > Track Time.
2. Enter the time tracking details as appropriate.
3. Next to the **Duration** field, click the **Timer** icon.
4. When the Timer popup window appears, click **Start** when your break begins.
5. Click **Stop** when your break is over.
6. Click **Submit**.

The elapsed time automatically appears in the **Break** field. NetSuite rounds down to the nearest minute. For example, if the **Elapsed Time** field says **0:03:55**, **0:03** appears in the **Duration** field.

7. Fill in any additional information, and then click **Save**.

You can also use the Timer to time your entire day's work, rather than your break.

Using the Timer for an Entire Day's Work

To use the Timer for an entire day's work:

1. Go to Transactions > Employees > Track Time.
2. Enter the time tracking details as appropriate.
3. Next to the **Duration** field, click the **Timer** icon.
4. When the Timer popup window appears, click **Start** when you begin working.
5. Click **Pause** when you take a break.
6. Click **Start** again when you return from your break.
7. Click **Stop** when you finish working.
8. Click **Submit**.

The elapsed time automatically appears in the **Duration** field. NetSuite rounds down to the nearest minute. For example, if the **Elapsed Time** field says **0:03:55**, **0:03** appears in the **Duration** field.

9. Fill in any additional information, and then click **Save**.

Using the Timer, NetSuite tracks your hours for you so you don't have to enter them manually.

Calculating Total Time Worked

Time tracking lets you track the hours you and other employees work. You can enter the hours worked manually, use the NetSuite Timer, or use the NetSuite time calculator.

To calculate your total time:

1. Go to Transactions > Employees > Track Time.

2. Enter the time tracking details as appropriate.
3. Next to the **Duration** field, click the **Calculate** link.
4. In the **Start Time** field, enter the time that the employee started working.
Enter the time in hours and minutes and include **AM** or **PM**, otherwise NetSuite automatically uses **AM**.
5. In the **End Time** field, enter the time the employee stopped working.
6. In the **Break** field, enter the length time of the employee's break.
NetSuite automatically calculates the total time for you.
7. Click **Save**.
The total time appears in the **Duration** field of the Time Tracking page.
8. Fill in any additional information, and then click **Save**.

Using the NetSuite time calculator, you can calculate your total time so you don't have to enter them manually.

Entering Time for a Payroll Item

Time tracking lets you track the hours you and other employees work. If you are in the U.S. and you have the appropriate privileges, you can track time for employee payroll items like hourly wages.

 **Warning:** NetSuite CRM+ users can't record time for payroll items.

If you track time for employee payroll items and want these hours to be included in the payroll period, you must enable this feature on the appropriate employee records.

 **Note:** If an employee enters PTO after payroll cut-off date, the PTO is processed and recorded in the following regular payroll.

Setting up Employees' Records

To set up employees' records so that their time transactions are included in payroll:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the name of the appropriate employee.
3. When the employee's record appears, click the **Payroll** subtab.
4. In the **Compensation Type** field, select **Wage** to pay this employee based on an hourly wage and hours worked.
5. Click **Save**.
6. Repeat steps 2 through 5 for any other employees you want to set up.

Entering Time for a Payroll Item

To enter time for a payroll item:

1. Go to Transactions > Employees > Track Time.
 2. Choose an entry form to use.
 3. Select the employee whose time you are recording.
 4. NetSuite inserts the current date as the posting date of this time transaction.
 5. In the **Duration** field, enter the amount of time worked for the day.
Click the timer icon next to the **Duration** field to time yourself as you work or time the length of your break. When you click **Submit**, the elapsed time in the timer fills in the **Duration** field of the Time Tracking page.
 6. If applicable, select the **Customer or Project** associated with the tracked time.
If you use NetSuite OneWorld, the **Intercompany Time and Expense** feature and the related **Intercompany Time** accounting preference determine whether you can select a customer or project with a subsidiary different from yours. If the feature is not enabled, or if the preference is set to **Disallow**, you can't enter intercompany time transactions. Instead, you can select only those customers or projects with the same subsidiary to which you are assigned. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).
 7. Select a case, task, event or call for the customer or project you selected, to associate this time with an activity. This time entry is added to the record you select.
 8. If applicable, select the service item that was provided. If you select a service item, you must also select a customer or project. Click **New** to set up a new service item.
If you use NetSuite OneWorld, you should set up service items that are available to all subsidiaries to use in intercompany time transactions. In these transactions, users can't save lines unless they contain service items available to both the employee subsidiary and customer subsidiary. See the help topic [Enabling Intercompany Time and Expenses](#).
 9. Check **Billable** if you want to bill the time entered to a customer or project.
-  **Warning:** In NetSuite CRM+, the **Billable** box is not available. NetSuite CRM+ users can't record billable time, invoice customers for billable time.
10. If your company using multi-state calculations for payroll, select a **Payroll Item Workplace**.
 11. Select a payroll item in the **Payroll Item** field.
 12. Check the **Paid Externally** box if this time has been or will be paid outside of NetSuite. This removes this time from payroll transactions. You can't check this box if this time is already associated with a paycheck in NetSuite.
 13. Optionally enter a memo.
 14. If you are a supervisor entering time for an employee, check the **Supervisor Approval** box.
 15. Select a department, class, or location if you track this information.
-  **Important:** If you use NetSuite OneWorld and you are entering intercompany time transactions, you must determine a strategy for using classifications on these transactions. Best practice is to omit them. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).
16. If you selected a **Customer or Project**, NetSuite inserts the price level for that customer or project in the **Price Level** field.
The **Rate** field autofills with the amount associated with the price level.
 17. If you are billing this time back to a customer, check **Lock the Rate** to lock the present rate so it's not affected by any rate changes made before the customer is billed.
 18. Click **Save**.

If you tracked time for hourly wage payroll items, it appears in the Hours column for this employee on the Payroll Run page.

Custom Fields in Time Tracking Pages

You can create a custom field that appears on time tracking pages. This gives you additional flexibility in tracking information that's important to your business.

You can add a custom field to the column area on time tracking pages.

Adding a Custom Column Field to Time Transactions

To add a custom column field to time transactions:

1. Go to Customization > Lists, Records, & Fields > Transaction Column Fields > New.
2. In the **Label** field, enter a name or description for this field. The name appears as a column heading on transactions.
3. If you use custom code, enter a unique ID for this custom field.
NetSuite enables you to enter custom JavaScript files to perform functions specific to your business. If you don't enter an ID now, NetSuite automatically assigns one. You can't edit this ID after it's been created.
4. Select the owner of this field. Only the owner can edit this record.
5. Enter a description for your custom field.
This description appears next to the field on time tracking pages.
6. Select the type of custom field you want to add.
7. If you entered a custom list and you want to attach it to your transaction custom field, select the appropriate list in the **List/Record** field.
8. The **Store Value** box is checked by default. This means that information entered in this custom field is stored in your NetSuite account.
Clear this box to indicate that the information stored in this custom field is for display only. The information is not stored in your account.
9. On the **Applies To** subtab, check the **Time** box.
10. On the **Validation & Defaulting** subtab, check the **Mandatory** box to make this a required field on the transactions you select.
11. Enter a **Default Value** for this field.
12. If you selected **List/Record** in the type field and you want to assign a default value, assign the appropriate selection in the **Default Selection** field.
13. Check **Default Checked** if you want this box to default to a checked state on the transactions pages you select.
14. On the **Sourcing & Filtering** subtab, if you have entered an item custom field and want to attach it to your transaction custom field, select it in the **Source** field.
15. Click **Save**.

Your custom field automatically appears on the Time Tracking page. When tracking weekly time, your custom field appears in the columns of Weekly Time Tracking or Weekly Timesheet pages.

If your company doesn't use the Combine Time Items on Invoices preference and you bill the cost of a time transaction back to a customer, you can choose to include your custom field on all custom invoices except finance charge invoices.

 **Warning:** NetSuite CRM+ users can't record billable time or invoice customers for billable time.

Including your Transaction Custom Field on a Custom Invoice

To include your transaction custom field on a custom invoice:

1. Go to Customization > Forms > Transaction Forms.
2. In the **Edit** column, choose one of two options:
 - Click **Customize** next to the appropriate form name to create a new custom form.
 - Click **Edit** next to the appropriate form name to include your custom field on an existing custom form.
3. When the Custom Form page appears, enter a name for your form so it's recognizable when selecting it on the Invoice page.
4. Click the **Printing Fields** subtab.
5. Click the **Columns** subtab.
6. Locate the name of your transaction custom field in the **Description** column.
7. Check the corresponding **Screen** and **Print/Email** boxes.
8. Click **Save**.

The information you enter in your transaction custom field on the Time Tracking page now appears on the corresponding invoice you create.

If your company uses the Combine Time Items on Invoices preference, you can't include transaction custom fields on invoices because the information you enter in these fields may be different for each time record.

If your company uses Weekly Timesheets, you can also add custom body fields to the top of timesheets.

Adding a Custom Body Field to Weekly Timesheets

To add a custom body field to weekly timesheets:

1. Go to Customization > Lists, Records, & Fields > Other Custom Fields > New.
2. In the **Record Type** field, select **Timesheet**.
3. In the **Label** field, enter a name or description for this field.
4. If you use custom code, enter a unique ID for this custom field.

NetSuite enables you to enter custom JavaScript files to perform functions specific to your business. If you don't enter an ID now, NetSuite automatically assigns one. You can't edit the ID after it's been created.
5. Select the owner of this field. Only the owner can edit this record.
6. Enter a description for your custom field.

This description appears next to the field on time tracking pages.
7. Select the type of custom field you want to add.
8. If you entered a custom list and you want to attach it to your custom field, select the appropriate list in the **List/Record** field.

9. The **Store Value** box is checked by default. This means that information entered in this custom field is stored in your NetSuite account.
Clear this box to indicate that the information stored in this custom field is for display only. The information is not stored in your account.
10. On the **Validation & Defaulting** subtab, check the **Mandatory** box to make this a required field on the transactions you select.
11. Enter a **Default Value** for this field.
12. If you selected **List/Record** in the type field and you want to assign a default value, assign the appropriate selection in the **Default Selection** field.
13. Check **Default Checked** if you want this box to default to a checked state on the transactions pages you select.
14. On the **Sourcing & Filtering** subtab, if you have entered an item custom field and want to attach it to your transaction custom field, select it in the **Source** field.
15. Click **Save**.

You new custom field automatically appears in the top portion of weekly timesheets.

Approving or Rejecting a Time Transaction

Time approval is restricted to the Employee Center and the user role. You can either have your users track and approve time in the Employee Center or you can edit the user role and set employee restrictions. If you don't set employee restrictions on the user role, users can approve all time entries rather than only those of their subordinates.

You can select either a time approver or supervisor.

- The Time Approver field appears on the Time Tracking subtab of an employee record.
- The Supervisor field shows under Primary Information about an employee record.

After you assign a time approver or supervisor to an employee record, that user has the authority to approve time for the employee. Time approvers can't edit or delete existing time entries. If no time approver is selected, then the employee's supervisor approves time entries. If both a supervisor and a time approver are selected, then only the time approver can approve time entries using their Employee Center role. For more information, see [Adding an Employee](#).

With **Customize View** you can specify details that you want to appear on timesheets. For example, Allocated Hours or Approval Status.

The employee's supervisor or time approver receives an email notification when time is entered or edited.

If you also use Project Management, you have additional options for approving project time. For more information, see the help topic [Approving Time and Expenses for Projects](#).

Advanced Approvals

The Advanced Approvals preference offers additional statuses, a color-coded display when viewing weekly time tracking and weekly timesheets, and the ability to reject time entries and add a rejection note. After you have enabled the preference, the Supervisor Approval field on time entries and weekly time tracking and timesheets is replaced by an Approval Status field.

This field is editable by administrators and any role without time and expense restrictions. This field enables you to set the status of time entries to Open, Pending Approval, Approved, or Rejected. When viewing weekly time tracking or timesheets, approved entries are displayed with a green background,

open entries have a white background, rejected entries have a red background, and pending entries have a blue background.

Setting Approval Preferences

To set approval preferences:

1. Go to Setup > Accounting > Accounting Preferences.
2. Click the **Time & Expenses** subtab.
3. Check the **Require Approvals on Time Records** box.
4. If you'd like to use Advanced Approvals, check the **Advanced Approvals on Time Records** box.
5. Click **Save**.

 **Warning:** If you decide at a later date to disable the Advanced Approvals preference, you must first adjust any time transactions with an Open or Rejected status to a Pending Approval status. Making these adjustments will prevent any further complications when the preference is turned off.

If you choose to enable Advanced Approvals on Time Records, you can also use SuiteFlow and Approval Routing to create custom approval workflows for your time entries. When using custom approval workflows, the Approve Time page is only available for time entry records. The Approve Timesheets pages is not available for custom approval workflows. For more information, see the help topics [SuiteFlow Overview](#) and [Approval Routing](#).

For more help setting up the time tracking feature and related preferences, see [Setting Up Time Tracking Preferences](#).

With Time Tracking, you can approve individual time entries from the Approve Time page.

Approving or Rejecting Time with Time Tracking

To approve or reject time with Time Tracking:

1. Go to Transactions > Employees > Approve Time.

 **Note:** If you also use Weekly Timesheets, approving time defaults to the Approve Timesheets view. For more information see below. You can click **Switch to Time Entry view** to proceed with approving or rejecting time entries individually.

2. On the Approve Time page, select the name of the employee whose time you want to approve or reject.

You can also identify a specific pay period for that employee by selecting a date in the **Week Of** field.

For this employee, each time record displays the following information by default:

- **Employee name**
- **Date of the time record**
- **Case/Task/Event**
- **Customer**
- **Service Item**
- **Payroll Item**

- **Number of hours entered**
 - **Memo**
 - The **Billable** column indicates if the time entered can be billed back to the customer.
3. Optionally, click **Customize** to add filters or to select the columns to display on the Approve Time page. On the Customize page:
 1. Click the **Criteria**, **Results**, or **Available Filters** subtabs.
 2. Add or remove fields on the **Criteria** subtab to filter the results by other fields. Add or remove fields on the **Results** subtab to change the columns displayed. Add or remove fields on the **Additional Filters** to add filters to the page.
 4. In the **Select** column, check the boxes next to the time records you want to approve or reject.

Important: You can't approve and reject entries together. All the entries you select will either be all approved or all rejected. If you have multiple entries to both approve and reject, you must repeat this process for approval and again for rejection.

Note: You can approve or reject multiple time entries at one time, but record must be selected. You can't select time entries on a weekly basis from the Approve Time page.

5. Click **Approve** to approve the selected time entries.
Click **Reject** to reject the selected time entries without a rejection note.
Click **Reject with Note** to reject the selected time entries and add a rejection note to each selected entry. You can only add a single rejection note. The note you enter is copied to all the selected time entries.

Warning: Employees with appropriate permissions can modify previously approved time.

If you use Weekly Timesheets, you can approve or reject multiple entries in bulk.

Approving or Rejecting Time with Weekly Timesheets

To approve or reject time with Weekly Timesheets:

1. Go to Transactions > Employees > Approve Time.
2. On the Approve Timesheets page, select the name of the employee whose time you want to approve.

You can also identify a specific pay period for that employee by selecting a date in the **Week Of** field.

For this employee, each time record displays the following information by default:
 - **Employee**
 - **Period**
 - **Approvable Hours**
 You can click the link in the **Approvable Hours** column to open a popup that displays the individual time entries.

Optionally, you can click **Switch to Time Entry view** to display each time entry.
3. Optionally, click **Customize** to add filters or to select the columns to display on the Approve Timesheets page. On the Customize page:
 1. Click the **Criteria**, **Results**, or **Available Filters** subtabs.

2. Add or remove fields on the **Criteria** subtab to filter the results by other fields. Add or remove fields on the **Results** subtab to change the columns displayed. Add or remove fields on the **Additional Filters** to add filters to the page.
4. In the **Select** column, check the boxes next to the timesheets you want to approve or reject.

Important: You can't approve and reject timesheets together. All the timesheets you select will either be all approved or all rejected. If you have multiple timesheets to both approve and reject, you must repeat this process for approval and again for rejection.

Note: When approving or rejecting time entries from the timesheet view, checking the box next to a timesheet will approve or reject all entries listed on the timesheet. When approving or rejecting time entries from the time entry view, each box approves or rejects only the individual time entry.

5. Click **Approve** to approve the selected timesheets.

Click **Reject** to reject the selected timesheets without a rejection note.

Click **Reject with Note** to reject the selected timesheets and add a rejection note to each selected entry. You can only add a single rejection note. The note you enter is copied to all the selected time entries.

Warning: Employees with appropriate permissions can modify previously approved time.

Approved time can be used to bill customers and process payroll.

If you bill time back to a customer or project, the time shows on the Billable Time subtab on the invoice.

If you track time for hourly wage payroll items, the time shows in the Hours column for each employee on the Payroll Run page.

Warning: NetSuite CRM+ users can't record billable time, invoice customers for billable time, or record time for payroll items.

Approving or Rejecting Time from the Time Transaction List

You can use inline editing and the time transactions list to approve or reject time. If you use the Require Approvals on Time Records preference, you can check the box in the Approved column to update the approval status of individual time transactions with inline editing. The Approval Status field is not available for inline editing with only the approvals preference. If you also use the Advanced Approvals on Time Records preference, you can update the Approval Status field using inline editing.

For more information about Advanced Approvals, see [Advanced Approvals](#).

Custom Workflow-based Approvals for Time Tracking

You can choose to use SuiteFlow to create your own custom workflows to process approvals for time tracking. Using SuiteFlow for time tracking allows greater control over the approval process.

Approval Status Field

When using SuiteFlow for time tracking approvals, an Approval Status field is added to the approvals page. The Approval Status field reflects where the time report is in the approval process.

Time reports can have one of the following statuses:

- Open – No action has been taken with the report yet.
- Pending Approval – The report has been sent to the Next Approver and is in the approval queue.
- Approved – The report has been given approval for processing.
- Rejected – The report hasn't been approved and won't be processed.

The approval statuses listed above are standard. No additional statuses can be specified. The possibility to change the Approval Status field depends on your SuiteFlow setup. A typical approval workflow is illustrated below:

Next Approver Field

When using SuiteFlow for time tracking approvals, a Next Approver field is added to the approval page. This field is populated according to the corresponding workflow.

The Next Approver must be defined on the timebill. The next approver can be the employee's supervisor, a project approver, or anyone else with permission to approve time for the employee. The Next Approver field is only available when the approval routing is set to be completely customized (not only partially) and when Time Bills at Accounting Preferences > Approval Routing is enabled as well. Otherwise, the approval routing will keep using the Supervisor and Time Approver standard fields to determine the approver. And the Next Approver field will be unavailable.

Note: Supervisors who used to be a Next Approver are able to look up timesheets of former employees retrospectively using an appropriate role. They don't appear in the Employee center role, this is reserved for current approvals only.

Updating Time Entries

You can update and transfer multiple time entries between projects at Transactions > Employees > Update Time Entries.

To update time entries in bulk, you must enable the Time Tracking and Project Management features. Administrators can use time modification to change the customer, project, or task. You can update the service item, location, department, class, or if the entry is billable. You can transfer some or all of the hours on a time entry to a different project. This enables administrators to correct time entries or change how time is billed to their customers.

If you want to enable project managers to update time entries submitted for their assigned projects, you must give access to the Bulk Time Entry Modification permission for the project manager's assigned role. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

Note: If you use Charge-Based Billing, you can update unbilled or non-posted time entries with generated charges. When you update time entries with generated charges, NetSuite deletes all charges associated with the modified time and generates new charges at the next scheduled charge generation. Billed or posted time is not yet available for modification.

To update time entries:

1. Go to Transactions > Employees > Update Time Entries.
2. Use the filters at the top of the page to narrow down the listed time entries. Depending on the features your company uses, you can filter by customer, project, task, employee, department, class, location, subsidiary, service item, date, and if the time is billable. When you filter time entries, only time entries you have permission to edit appear in the list for selection.
3. Check the box next to each time entry you want to update. Click **Next**.
4. For fields you want to change, select the new values. When you're done, click **Next**.

Note: To update the project field, you must first select the customer. To update the task field, you must first select the customer and project. If you want to transfer time, see [Transferring Time Between Projects](#) for additional information.

5. The next page shows a preview of the updated fields with the new information. Any errors are highlighted in red. You must correct errors before you can submit the changes.
6. When you have verified the changes are correct, click **Submit**.

After you submit your changes, a message appears at the top of the page confirming your submission. Click View Status to go to the Processed Records page to see the progress of your changes. Click Refresh to update the status.

Transferring Time Between Projects

There are additional considerations for transferring time between projects to avoid any errors before submitting your changes.

If you don't use Resource Allocations, the following are required to transfer time between projects:

- The employee must be listed as a resource on the new project.
- If you want to update the task, the employee must be assigned to the new task.

If you use Resource Allocations, the following are required to transfer time between projects:

- The employee must be allocated to the new project.
- If you want to update the task and the Allow Allocated Resources to Enter Time to All Tasks project preference is not enabled, the employee must be assigned to the new task. To remove this requirement, when creating project records, on the Preferences subtab, check Allow Allocated Resources to Enter Time to All Tasks. For more information, see the help topic [Setting Up Project Record Preferences](#).

If you want to partially transfer time between projects, on the review page, update the transfer hours field with the number of hours you want transferred to the new project before submitting the changes.

NetSuite updates the existing time entry to reflect the reduced hours and creates a new time entry for the transfer hours on the updated project.

Weekly Timesheets

Weekly timesheets works in conjunction with the existing Time Tracking feature to offer a method of capturing time entries in a weekly format.

To track time with weekly timesheets, an administrator should go to Setup > Company > Enable Features and select the Employee subtab. In Time & Expenses check the Time Tracking and Weekly Timesheets boxes, and click Save.

Weekly timesheets contain added features when used with Workforce Management (WFM). For more information, see [Weekly Timesheets with Workforce Management](#).

 **Note:** If your company uses weekly time tracking, see [Weekly Time Tracking](#).

 **Important:** If your company has enabled the Weekly Timesheet Interface, the user interface will differ slightly from the steps described below.

Using Weekly Timesheets

To use weekly timesheets:

1. Go to Transactions > Employees > Weekly Timesheet.
2. Select the employee whose time you are recording. If a timesheet for the selected employee and week already exists, NetSuite loads the existing timesheet.
3. In the **Week of** field, enter the first day of the week you want to track time for, or click the  icon to choose a date. NetSuite loads a new or existing timesheet.

NetSuite inserts the date that the current week begins as the posting date of this week's time.

You can set the day your company's business week starts by going to Setup > Company > General Preferences. Select the day from the **First Day of Week** list.

 **Note:** If you change the first day of the week preference for your company, the newly selected first day of the week will be used for any new timesheets. Any existing timesheets will remain unchanged. New timesheets may be shorter to accommodate the new first day of the week. The first day of the week preference can be set at the company, subsidiary (for OneWorld accounts), and user level. Weekly Timesheets is only affected by the company and subsidiary preference. The user level preference has no effect on the first day of the week for weekly timesheets.

4. If you use Project Management, you can import any planned time entries for the selected employee and week. Click **Import Planned Time** to automatically import the project time entries for the current week.
5. On the **Enter Time** subtab, in the **Customer** column, select a customer or project if the time worked is for a customer or project.

If you use NetSuite OneWorld, the **Intercompany Time and Expense** feature and the related **Intercompany Time** accounting preference determine whether you can select a customer or project with a subsidiary different from yours. If the feature is not enabled, or if the preference is set to **Disallow**, you can't enter intercompany time transactions. Instead, you can select only those

customers or projects with the same subsidiary to which you are assigned. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

6. If you use the **Project Management** feature and selected a project in the **Customer** field, use the **Case/Task/Event** column to select an activity associated with the project and time.
7. If your company uses multi-state calculations for payroll, select a **Payroll Item Workplace**.
8. Ensure that the **Billable** box is checked if the time is billable to a customer or project.

Warning: In NetSuite CRM+, the **Billable** box is not available. NetSuite CRM+ users can't record billable time, invoice customers for billable time, or record time for payroll items.

9. Select a payroll item if you are tracking time for payroll.
10. Select the service that was provided if you track time spent on services.

If the **Billable** box is enabled, you must select a service item.

If you use NetSuite OneWorld, you should set up service items that are available to all subsidiaries to use in intercompany time transactions. In these transactions, users can't save lines unless they contain service items available to both the employee subsidiary and customer subsidiary. See the help topic [Enabling Intercompany Time and Expenses](#).

11. Select a department, class, or location if you track this information.

Important: If you use NetSuite OneWorld and you are entering intercompany time transactions, you must determine a strategy for using classifications on these transactions. Best practice is to omit them. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

12. If the **Override Rates on Time Records** preference has been enabled on the **Time & Expenses** subtab at Setup > Accounting > Accounting Preferences, the following fields display:
 - **Price Level** - Select a price level. You can use different price levels by going to Setup > Enable Features > Customers/Sales, and checking the **Use Multiple Prices** box.
 - **Rate** - If you selected a price in the **Price Level** field, it automatically appears here. If you don't use multiple prices or if you selected **Custom** in the **Price Level** field, enter a rate for this time transaction. If you are entering time for a payroll item like vacation time, leave this field blank.
 - **Lock this Rate** - If you are billing this time back to a customer, check this box to lock the rate you enter so it's not affected by rate changes that happen before the customer is billed. If you are entering time for a payroll item like vacation time, leave this field blank.
13. Enter a memo.

If you are billing this time back to a customer or project, this memo appears as a description for this line item on the customer invoice.

Note: Always select an activity in the **Case/Task/Event** or **Service Item** fields before entering a memo. When you select a case, task, event, or service item, the memo field is automatically populated with information from these records. Anything you entered in the memo field prior to selecting one of these records will be deleted. Changing your selection in either of these fields will update the memo field with any information from the newly selected record.

14. Enter the hours for each day in this week.
15. Click **Add**.
16. Repeat steps above for each customer or project you need to enter time against.
17. Click **Save** to save the entries. If you use Advanced Approvals, you can also click **Save & Submit** to save and submit the entries.

When a timesheet is saved, the time then appears on the Time Details subtab of the timesheet for that week.

If you billed time back to a customer or project, it appears when you click Billable Time on the corresponding invoice page.

If you tracked time for hourly wage payroll items, it appears in the Hours column for this employee on the Payroll Run page.

Weekly timesheets can be edited even if some or all of the time entries have been approved. Individual time entries with a status of approved or pending approval are locked and can't be edited. You can add new time entries to weekly timesheets that have been fully approved. Any submitted weekly timesheet that has been edited must be resubmitted for approval.

Copying a Previous Weekly Timesheet

In addition to entering new time each week, you can also copy the time entries from a previous week on to the current week.

To copy a previous weekly timesheet:

1. Go to Transactions > Employees > Weekly Timesheet.
2. Click **Copy from Week**. A window opens with the start date of the previous week's time automatically populated.
3. In the **Date** field, you can accept the date automatically entered or use the date selector to select a different date.
4. If your company enables employees to choose to copy hours and memos, clear the **Copy Hours and Memos** box if you don't want hours and memos from the selected week to be copied to the current week.
5. Click **Copy**. Time entries within the selected week are copied to the weekly timesheet currently being edited. Depending on your company's preferences, copied time entries may include hours and memos.
6. Continue to fill in required information for this time. When you're done, click **Save**.

To view a list of all the weekly timesheets you have permission to view, go to Transactions > Employees > Weekly Timesheet > List. This list displays the employee, date, hours, and approval status of each week.

Retracting Weekly Timesheets

You can update your submitted time by retracting timesheets before your supervisor approves them. You can only retract timesheets if they're pending approval. You can't retract time transactions with any other status. The **Retract** button is not available in edit mode for timesheets or time transactions. Retracting timesheets is not available when you use custom approval routing.

To retract weekly timesheets:

1. Go to Transactions > Employees > Weekly Timesheet.
2. Click **View** next to the timesheet you want to retract.

Tip: You can also [Retracting Individual Time Entries](#), instead of the whole weekly timesheet.

3. Click **Retract**.

NetSuite sends an e-mail to notify your supervisor of the retraction. NetSuite also updates the status of all pending time entries to Open, and the supervisor can't see any of the previously pending time entries.

4. Make your updates.
5. Click **Submit**.

NetSuite resubmits the individual time entries.

Retracting Individual Time Entries

You can update your submitted timesheet by retracting individual time entries before your supervisor approves them. You can only retract time entries if they're pending approval. You can't retract time transactions with any other status. The **Retract** button is not available in edit mode for timesheets or time transactions. Retracting individual time entries is not available when you use custom approval routing.

To retract individual time entries:

1. Go to Transactions > Employees > Weekly Timesheet.
2. Click **View** next to the timesheet from which you want the individual time entries to retract from.
3. Click the individual time entry.
A popup window opens.
4. Click **Retract**. This action redirects you to the edit mode.
5. Make your updates.
6. Click **Submit**.
NetSuite resubmits the weekly timesheet.

Customizing Weekly Timesheets

When you customize your weekly timesheet you must create two custom forms. First, you create a custom time bill form for your time entries. Then, you create a custom timesheet form and select the custom time entry form as the basis for the time entry grid on your timesheet.

To customize a weekly timesheet:

1. Go to Transactions > Employees > Weekly Timesheet.
2. Click **Customize Time Bill Form** in the Customize menu on the upper right corner of the page. A Custom Entry Form page opens.
3. Enter a name for your custom time bill form.
4. Make any changes you'd like to the form. For more information about customizing entry forms, see the help topic [Creating Custom Entry and Transaction Forms](#).

Note: The changes you make to the custom time bill form will change how the time entry grid appears on your weekly timesheets.

5. When you're done, click **Save**.
6. Go to Transactions > Employees > Weekly Timesheet.
7. Click **Customize Form** in the Customize menu on the upper right corner of the page. A Custom Entry Form page opens.

8. Enter a name for your custom timesheet form.
9. In the **Time Entry Custom Form** field, select the name of your custom time bill form.
10. Make any additional changes you'd like to the form.
11. When you're done, click **Save**.

Your custom form is now available for weekly timesheets.

Incomplete Weekly Timesheets

You can use hidden fields to create saved searches and add dashboard reminders to track incomplete timesheets. Missing timesheets are automatically created for the current week and the previous five weeks on the first day of the week for active employees and project resources.

The following fields are hidden on the Weekly Timesheet:

- Submitted hours – Sum of pending and approved hours.
- Rejected hours – Sum of hours with rejected status.
- Planned hours – Sum of planned hours. This field is only available when Project Management and Show Planned Time in Time Entry preference are enabled.
- Allocated hours – Sum of allocated hours. This field is only available when Resource Allocations is enabled.
- Work Calendar hours – Sum of expected hours based on the employee work calendar.

All of these fields are automatically calculated and hidden by default. You must customize your weekly timesheet entry form to show these fields in the user interface. However, the fields don't need to be showing to use reminders and searches for missing timesheets.

For more information, see [Customizing Weekly Timesheets](#), [Setting Up Reminders](#), and [Defining a Saved Search](#).

Advanced Approvals for Weekly Timesheets

If your company uses the Advanced Approvals on Time preference, after time is saved on your Weekly Timesheet page, the background of each entry reflects that entry's approval status.

- Open — white
- Approved — green
- Rejected — red
- Pending — blue

Advanced approvals enables your employees to know the status of their time entries within a single week by looking at the Weekly Timesheet page. When rejecting transactions, advanced approvals enables you to add a rejection note. For more information about Advanced Approvals, see [Approving or Rejecting a Time Transaction](#).

Timesheets

We are no longer initiating new installations of the Timesheets feature. We are currently in the process of making improvements to NetSuite's time tracking capabilities. These improvements will be available in future releases.

Existing Timesheets users may continue to use the feature. The guide below contains all the currently available help documentation on the Timesheets feature.

 [Timesheets Guide](#)

If you have any further questions, please contact your Account Manager to discuss your time tracking needs so that we may find a solution that best fits your company.

Note: The Timesheets feature is a separate feature from Time Tracking. For more information, see [Managing Time Tracking](#).

Expense Reports and Purchase Requests

Refer to the following help topics for information about expense reports and purchase requests.

- [Expense Reporting](#)
- [Giving an Employee Access to Purchase Requests](#)
- [Notifying a Supervisor or Approver About Required Approvals](#)

Expense Reporting

The Expense Reports feature enables users to enter expense reports and convert them into bills. An expense report records employees' expenditures to track information about the expense, such as the following:

- what was purchased
- how much was spent
- reason for the purchase
- whether it can be billed to a customer or project

The expense total remains in an unapproved expense account and has no accounting impact until someone with accounting authority approves it. After an expense report is approved, a bill is created and the expense amount is reflected on your books. The posting period for an expense report is determined after accounting approval occurs. If the posting period for the expense report date is closed, the expense report is posted to the first open period.

For information about expense reporting, see the following:

- [Expense Reports](#)
- [Employee Access to Expense Reporting](#)
- [Enter an Expense Report](#)
- [Approving an Expense Report](#)
- [Editing an Expense Report From the Expense Reports List](#)
- [Deleting an Expense Report From the Expense Reports List](#)
- [Rejecting an Expense Report From the Expense Reports List](#)
- [Corporate Card Expenses](#)
- [Reviewing Expense Reports](#)
- [Giving Accounting Approval for Expense Reports](#)
- [Paying Expenses on Employee Paychecks with Payroll](#)
- [Giving an Employee Access to Purchase Requests](#)
- [Notifying a Supervisor or Approver About Required Approvals](#)

Note: If you use the Multiple Currencies feature, be aware that expense line items are always in the employee's base currency. If the Use Multi Currency box is checked on an expense report, line item amounts can be entered in foreign currency. These foreign amounts are translated into base currency amounts. Exchange rates and converted amounts displayed on expense lines are provided as estimates. Actual reimbursement amounts will be based on rates at the time of reimbursement.

Expense Reports

See the following help topics to get an understanding of how expense reports work in NetSuite:

- [Expense Reports Features and Preferences](#)
- [Adding Currencies to the Employee Record](#)
- [Employee Entry of Expense Reports](#)
- [Supervisor Approval of Expense Reports](#)
- [Accounting Approval of Expense Reports](#)
- [Voided Expense Reports](#)
- [Expense Categories](#)
- [Expense Report Policies](#)

Expense Reports Features and Preferences

An administrator can enable the Expense Reports feature at Setup > Company > Enable Features, on the Employees subtab. When enabled, NetSuite automatically creates an Other Current Asset type account for advances paid and a non-posting account for unapproved expense reports.

The Approval Routing feature lets you set up an approval hierarchy required to process expense reports, time transactions, and purchase requests. After an employee enters an expense report or purchase request, additional processing of the transaction depends on the employee's expense limit or purchase limit. It also depends on the employee's designated supervisor or approver, and their approval limit.

Important: If something changes in the approval hierarchy, any expense reports that aren't approved yet are reset and have to start the approval process over. For example, if an employee gets a new supervisor, any open expense reports lose their approvals and are rerouted through the new approval chain.

If this feature isn't enabled, each expense report or purchase request is automatically routed to the employee's immediate supervisor and then to accounting. For more information, see the help topic [Approval Routing](#).

To set preferences for entering expenses, go to Setup > Accounting > Accounting Preferences, and click the Time & Expenses subtab. For more information, see the help topic [Time & Expenses Accounting Preferences](#).

Expense reports show the date entered, report number, employee, date range of all expenses included in the record, and the purpose of each expense. You'll also see expense category, date of the expense, amount for each item, any advances, and the total. There's a summary box in the top corner for totals, and both the employee and approver signature and date. You can customize expense reports to include more fields. For more information, see the help topic [Report Customization](#).

Note: If you use NetSuite OneWorld, the Intercompany Time and Expense feature and the Intercompany Expenses preference affect whether users can enter expenses for customers with subsidiaries other than their own. If the feature isn't enabled or the preference is set to Disallow, users can only select customers with the same subsidiary to which they are assigned. If it's set to Allow, users can enter intercompany expenses for any subsidiary. If it's set to Allow and Adjust, you can generate automatic adjustments for intercompany expenses. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

You can select a default payable account for expense reports at Setup > Accounting > Accounting Preferences. For OneWorld accounts, you must set a default payable account on your subsidiary records. For more information, see the help topic [Set Subsidiary Preferences](#).

Adding Currencies to the Employee Record

If you use multiple currencies, employees can create expense reports in currencies other than your default currency. You'll need the Multiple Currencies feature to create foreign currency expense reports.

You must define which currencies each employee can use for expense reports on their record. Only currencies your company supports can be added.

Note: Expenses can be paid through SuitePeople U.S. Payroll only if the reimbursement currency is set to United States Dollars.

To add currencies to the employee record:

1. Go to Lists > Employees.
2. Click **Edit** next to the employee record you want to update.
3. Click **Human Resources**.
4. Click **Expense Report Currencies**.
5. In the **Currency** field, select a currency for this employee. Click **Add**.
6. Continue to add any currencies you want this employee to be able to use for expense reports.
7. In the **Default Currency** field, select the default currency for this employee's expense reports.
8. Click **Save**.

Currency and Exchange Rate fields are added to the expense report form. An employee's default currency is automatically selected. You can select a different currency that's defined on the employee's record.

Important: If you change the currency on a new expense report after entering expense lines, the existing lines aren't automatically updated. You must update the existing lines manually.

When creating a bill payment for an expense report, in the currency field, you can select a currency from the employee's list of defined currencies.

Employee Entry of Expense Reports

For an employee to be able to enter an expense report, they need access to the Employee Center. An administrator can give Employee Center access to an employee by editing that employee's record, available at Lists > Employees > Employees. For more information, see [Employee Access to Expense Reporting](#).

Usually, employees enter expense reports when logged in with the Employee Center role. Some employees may have other assigned roles with the Expense Reports permission. These employees may be able to enter expenses when logged in with a role other than Employee Center. If approval routing is

set up, all expense reports must be entered through the Employee Center to maintain the hierarchy of approval routing. For more information, see [Enter an Expense Report](#).

Supervisor Approval of Expense Reports

If the Approval Routing feature isn't enabled, an employee's immediate supervisor must approve an expense report after it's submitted. If Approval Routing is enabled and set up, one or more supervisors or approvers can approve the report before it goes to accounting.

Important: If you change an employee's approval hierarchy, any expense reports that aren't approved yet are reset and have to start the approval process over. For example, if an employee gets a new supervisor, any open expense reports lose their approvals and are rerouted through the new approval chain.

A preference can be set so supervisors and approvers are notified automatically by email when expense reports have been submitted for their approval. For more information, see [Notifying a Supervisor or Approver About Required Approvals](#).

Supervisors or other approvers usually approve expense reports in the Employee Center. For more information, see [Approving an Expense Report](#).

Accounting Approval of Expense Reports

When an expense report gets supervisory approval, its status changes to Pending Accounting Approval. It needs this final approval for its amounts to be posted. For more information, see [Giving Accounting Approval for Expense Reports](#).

The posting period for an expense report is set after accounting approves it. If that period is already closed, the report gets posted to the next open period.

Voided Expense Reports

Administrators and employees can void expense reports during any stage of approval. Voiding an expense report after it's been approved by accounting creates an accounting impact. Expense reports have no accounting impact prior to accounting approval. When an expense report is voided, its status changes to Void and the report is removed from approval lists.

Note: Rarely, a previously voided expense report with no accounting impact may show a status of Paid in Full and still appear in approval lists. If that happens, open the report, click Edit, and save it without changes. This will update the status to Void and remove it from approval lists.

Expense Categories

Expense categories are used to group expenses. Popular categories include transportation, lodging, mileage, and entertainment, and each expense category is linked to an account. When an employee enters an expense report, they select a category for each expense, and the expense automatically posts to the associated expense account. It's not possible to create new categories while entering an expense report.

If you use NetSuite OneWorld, an expense category is available to only those subsidiaries assigned to the account linked with the expense category. To use intercompany expense transactions, set up expense categories linked to expense accounts that are available to all subsidiaries for use in these transactions. For intercompany expense transactions, users can't save expense lines unless they contain expense categories available to both the employee subsidiary and customer subsidiary.

To enter expense categories, go to Setup > Accounting > Expense Categories > New. For more information, see the help topic [Creating an Expense Category](#).

Expense Report Policies

You can define policies to limit the expenses your employees can enter. When creating an expense policy, you can set up the following:

- set a start date and end date for when the policy is valid
- define filters for how the policy applies
- determine how to apply the limit

For example, you can create an expense policy to limit the airfare expenses entered by your sales department for the month of June. You can apply the limit per expense report, per day, or per individual line.

Expense reports have to meet all the filters you set for the limit to apply. When you select multiple entries for filters, expense reports must satisfy at least one selection for each applied filter. For example, if you set a policy for airfare and meals for your parent subsidiary, the limit applies to any report from a parent company employee with airfare or meals expenses, it doesn't have to include both.

 **Note:** Expense report policies are only available when using standard approval routing.

Creating an Expense Report Policy

By default, only administrators can create expense policies but anyone can view them in the Employee Center. You can add the Expense Policies permission to any role by creating a custom role. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

To create an expense report policy:

1. Go to Setup > Accounting > Expense Report Policies > New.
2. Enter a name for your expense report policy.
3. Under Filters, in the **Start Date** field, select the date this policy goes into effect.
4. If this policy expires, in the **End Date** field, select the date you want the policy to end.
5. Select any other filters you want to narrow the expenses this policy applies to. You can choose to filter by subsidiary, department, location, or customer. You can also select multiple filters by clicking additional options in the dropdown list.

 **Tip:** You can select the **Billable** filter to apply filters for billable expenses, non-billable expenses, or both.

6. In the **Expense Category** field, select one or more expense categories for this expense report policy.
7. Under Policy, in the **Limit Type** field, select how you want this policy applied to each expense report.

You can apply the policy to individual expense reports, all expense reports on a daily basis, or per individual expense line.

8. In the **Maximum Amount** field, enter the maximum allowed amount for this expense report policy.
9. In the **Action** field, select how you want to handle policy violations.
 - **Warn but allow expenses outside limit** – This selection displays a warning to the employee but does allow the expense report to be submitted.
 - **Do not allow outside limit** – This selection displays a warning, and prevents expense report submission. The expense overage must be updated to be within the policy limit. The **Requires Memo**, **Requires Receipt** and **Do Not Warn if Required Fields** boxes are disabled.

- **Do not warn if required fields are included** – This selection allows employees to submit expenses outside the limits when they include the required fields.

Note: The Do not warn if required fields are included selection isn't available yet.

10. Check the **Requires Memo** box to require a memo for any expense affected by this policy.
11. Check the **Requires Receipt** box to require a receipt for any expense affected by this policy.
12. Under Overage Notification, in the **Employee** field, select any specific employees you want to be notified of any violation of this expense report policy.
13. When you're done, click **Save**.

In edit mode, expense lines that don't comply with the policy appear as red on a saved expense report. Click **Show Policies** to see a list of policies that apply to the current expense report.

The screenshot displays the 'Expense Report Policy' configuration interface. It includes a top navigation bar with various system tabs. The main form is divided into several sections: 'Primary Information' with 'Name' and 'Description' fields; 'Filters' with date pickers for 'Start Date' and 'End Date', a 'Department' dropdown, and search fields for 'Location' and 'Customer'; 'Policy' with a 'Limit Type' dropdown, a 'Maximum Amount' field, and an 'Action' dropdown; and 'Override Notification' with a 'Specific Recipients' section. On the right side, there are checkboxes for 'Requires Memo', 'Requires Receipt', and 'Do not warn if required fields are included'.

If you have set your policies to expire, administrators receive a notification two weeks before the expiration. A reminder is sent one week before the expiration.

Project records affected by expense report policies list the applicable policies under Related Records on the project record.

Employee Access to Expense Reporting

To let an employee access expense reports, the Expense Reports feature must be enabled. A user with the Enable Features permission can enable the Expense Reports feature at Setup > Company > Enable Features, on the Employees subtab.

Next, create an employee record for the person, and assign them the Employee Center role. For more information about adding employee records, see the following topics:

- [Adding an Employee](#)
- [Giving an Employee Access to NetSuite](#)
- [Assigning Roles to an Employee](#)

When an employee is given access to NetSuite, they can access Expense Reporting feature after it is enabled.

For expense reports, Employee Center access enables employees to:

- Enter their own expense reports

- View and edit their own unapproved expense reports
- View their own approved expense reports
- Approve expense reports of their subordinates

Employees who are designated as a supervisor or expense approver for other employees also have access to expense reports for these employees.

For more information about the Employee Center, see [About the Employee Center Role](#).

Enter an Expense Report

You can enter an expense report to record expenditures and track information about the expense. Expense reports are available only for active employees.

For step-by-step procedures for entering an expense report, see the following:

- [Entering an Expense Report in the Employee Center](#)
- [Entering an Expense Report with a Role other than Employee Center](#)

Important: If you use NetSuite OneWorld and enter intercompany expenses, note the following if you use classes, departments, or locations to classify transactions. You must determine a strategy for using classifications on intercompany expense transactions. Best practice is to omit them. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

Entering an Expense Report in the Employee Center

Usually, employees enter expense reports while logged in with the Employee Center role. Employees can enter expenses when logged in with a role other than Employee Center if they have the Create level of the Expense Reports permission. If approval routing is set up, all expense reports must be entered through the Employee Center to maintain the hierarchy of approval routing.

To enter an expense report when logged in with the Employee Center role:

1. On the Employee Center Home page, in the **Home Links** portlet, click the **Enter Expense Reports** link.
If you use NetSuite OneWorld, notice that the **Subsidiary** field is automatically populated with your subsidiary.
2. NetSuite inserts today's date as the date of this expense report. You can optionally enter another date.
The **Expenses Total and Amount** field values are calculated based on the amounts entered for expense line items.
There's a summary box in the top corner that shows real-time totals for expenses, non-reimbursable and reimbursable expenses, any advances, and the total reimbursable amount.
3. Enter an advance that should be applied to any reimbursement for these expenses.
4. Enter the purpose of these expenses.
5. If your company uses foreign currency expense reports, in the **Currency** field, select the currency in which you want your reimbursement to be paid.

Note: Currencies must first be set up on the employee record. Only currencies defined on the employee record are available for selection in this field.

6. If you use Multiple Currencies, check the **Use Multi Currency** box to show the Foreign Amount, Currency, and Exchange Rate fields for each line item. These fields let you enter expenses in

foreign currencies that are reimbursed in the base currency. This is true unless an alternate currency is selected in the **Currency** field.

This box is checked by default if you have enabled the **Use Multicurrency Expense Reports** preference on the General subtab at Home > Set Preferences. You can clear the box to hide Multi Currency fields on individual expense reports. Any expenses entered when Multi Currency fields are hidden are automatically saved in the base currency.

Important: Exchange rates and converted amounts displayed on expense lines are provided as estimates. Actual reimbursement amounts will be based on rates at the time of reimbursement.

7. If your company tracks them, review the default values entered for **Department**, **Class**, and **Location** to edit as necessary.

Note: Any department, class, or location selected in the body of the expense report doesn't automatically transfer to the line item fields for each expense. For this information to appear on the GL Impact for each line item you must select the appropriate information for each line item. You can also customize your forms with a custom script to automate this process. For more information, see the help topic [SuiteScript 2.x Scripting Records](#).

If you enter intercompany expenses, the department, class, or location must be available to the subsidiary associated with the selected customer. Otherwise, an attempt to generate intercompany adjustments for the expenses will result in errors.

8. If you use the American Express integration, on the **Expenses** subtab, click **Imported Expenses** to select your corporate card expense transactions.
9. On the **Expenses** subtab, complete line items for expenses:
 - a. The **Ref No.** field is automatically populated with 1 for the first line item on this expense report. You may update this number and each new line item will use the next successive number. Line item reference numbers are helpful when referencing receipts and individual expenses.

Note: If you use the **Combine Detail Items on Expense Reports** preference, line items are grouped by category, not by entry order. This preference is located at Setup > Accounting > Accounting Preferences > Time & Expenses. For more information, see the help topic [Expenses](#).

- b. In the **Date** column, enter the date the expense was incurred.
- c. Select an expense category.

If you use NetSuite OneWorld, an expense category is available to only those subsidiaries assigned to the account linked with the expense category. To use intercompany expense transactions, set up expense categories linked to expense accounts that are available to all subsidiaries for use in these transactions. For intercompany expense transactions, users can't save expense lines unless they contain expense categories available to both the employee subsidiary and customer subsidiary. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

- d. If you selected a category that requires a rate, you'll see quantity and rate fields. Enter the quantity for this expense.
- e. If a rate isn't automatically populated, enter the rate for this expense category. The amount is automatically calculated from the rate and quantity.

Note: If you use multi-currencies, the foreign amount field is used to calculate expense report totals.

- f. If this expense was incurred in a foreign currency, select the currency, and then enter the foreign currency amount.

If you do system-generated adjustments for intercompany expenses, the currency used for those adjustments is always the base currency of the employee's subsidiary. It may not match the currency recorded. For more information, see the help topic [Creating Intercompany Adjustments for Time and Expenses](#).

- g. If it isn't automatically calculated, enter the exchange rate applicable for this expense. (Be aware that any automatically calculated rate is provided as an estimate. The rate at the time of reimbursement is used to calculate the reimbursement amount.)
- h. In the **Amount** column, enter the amount of the expense.

If you entered a foreign currency amount for this expense, the expense is automatically converted to your base currency amount in the **Amount** column. This amount is provided as an estimate. It may not match the reimbursement amount that is calculated based on the exchange rate at the time of reimbursement.

If this expense required a rate, the amount is calculated after a quantity and rate are entered.

- i. Optionally, you can enter a memo, department, class, or location to apply only to this line item.

If you enter intercompany expenses, the department, class, or location must be available to the subsidiary associated with the selected customer. Otherwise, an attempt to generate intercompany adjustments for the expenses will result in errors.

- j. If this item is billable to a customer or project, select it from the **Customer** list, and then check the **Billable** box.

Warning: Checking the **Billable** box without selecting a customer will generate an error. You must select a customer if the **Billable** box is checked.

If you use NetSuite OneWorld, the Intercompany Time and Expense feature, and the related **Intercompany Expenses** accounting preference, note the following. The feature and the preference determine whether you can select a customer or project with a subsidiary different from yours. If the feature isn't enabled, or if the preference is set to **Disallow**, you can't enter intercompany expenses. Instead, you can select only those customers or projects with the same subsidiary to which you are assigned. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

- k. You can attach a receipt to each line item. In the **Attach File** column, select **List** to select your receipt from the **File Cabinet** or **New** to upload a new receipt. You can attach the same receipt to multiple line items.
 - l. If the receipt for this item is being provided, check the **Receipt** box.
 - m. If your company uses non-reimbursable expenses, and this item isn't reimbursable, check the **Non-reimbursable** box. For more information, see [Non-reimbursable Expenses](#).
 - n. Click **Add**.
10. Continue adding expense line items.

 **Note:** Similar line items on expense reports may be combined if your company has enabled the Combine Detail Items on Expense Reports preference. For more information, see the help topic [Projects Accounting Preferences](#).

11. When you're finished, save the expense report.

 **Warning:** If your company uses expense report policies, you may receive a warning if one or more of your expense lines are over the allowed amounts. Depending on how the expense report policies are set up, you may be able to submit your expense report without changing the entered expenses. Any expense lines that are a violation of defined policies are highlighted in red. Click **Show Policies** to see details of any policy violations.

You have the following choices:

- **Submit, Submit & New, or Submit & Print** – to save the report and identify it as complete after you have entered all information.
After an expense report is marked complete, you can no longer make changes to it.
- **Complete Later** – to save an incomplete form without submitting it. The information is saved, but the form isn't submitted for approval.

 **Important:** Only expense reports that are submitted as complete enter the queue for supervisor or accounting approval.

Entering an Expense Report with a Role other than Employee Center

Expense reports can be entered by employees when logged in with roles other than the Employee Center. This gives employees the ease of using a single role to handle all of their business tasks. It also enables employees to enter expense reports on behalf of another employee if they have the necessary permissions.

 **Note:** There is an automated internal system logic for selecting likely ideal value for your account based on the previous usage.

To enter an expense report when logged in with a role other than Employee Center:

1. Go to Transactions > Employees > Enter Expense Reports.
2. Select a form to use.
3. In the **Exp. Rept. #** field, NetSuite increases the largest expense report number by one.
You can type another number if you want to. The next expense number will revert to the standard pattern. You can enter a maximum of 45 characters in this field.
4. Select the employee who incurred these expenses.
If you use NetSuite OneWorld, notice that the **Subsidiary** field is automatically populated with the subsidiary associated with the employee.
5. Select an account for this expense. This field is only available if you have checked the **Accounting Approval** box on this form or if you're editing a previously approved expense report.
The **Expenses and Total Amount** field values are calculated based on the amounts entered for expense line items.

There's a summary box in the top corner that shows real-time totals for expenses, non-reimbursable and reimbursable expenses, any advances, and the total reimbursable amount

6. If your company uses foreign currency expense reports, in the **Currency** field, select the currency in which you want the reimbursement to be paid. The Exchange Rate field automatically shows the current exchange rate for your selected currency.

 **Note:** Currencies must first be set up on the employee record. Only currencies defined on the employee record are available for selection in this field.

7. Enter any advance that should be applied to any reimbursement for these expenses.
8. Enter the purpose of this expense.
9. NetSuite inserts today's date as the date of this expense report. You can optionally enter another date.

Note that a posting period based on the current date is displayed. This period is subject to change until accounting approval of the expense report. If approval occurs after this displayed period has closed, the expense report is posted to the first open period.

10. If available, enter the due date of the expense report.
11. Review the setting for the **Complete** box, and clear it if you intend to make changes to this expense report later.

Only complete reports are submitted for approval and processing. Be aware that after an expense report is marked complete, you can no longer make changes to it.

12. If you have the appropriate authority, check the **Supervisor Approval**, **Accounting Approval**, or both boxes.

 **Note:** If you have multiple payable accounts, after the **Account Approval** box has been checked the **Account** field automatically populates with the default payable account. You may change this account if necessary. For more information, see the help topic [Time & Expenses Accounting Preferences](#). If you use NetSuite OneWorld, see the help topic [Set Subsidiary Preferences](#).

13. Click the **Expenses** subtab.
14. If you use Multiple Currencies, check the **Use Multi Currency** box to show the **Foreign Amount**, **Currency**, and **Exchange Rate** fields for each line item. These fields let you enter expenses in foreign currencies to be reimbursed in the base currency. This is true unless an alternate currency is selected in the **Currency** field.

This box is checked by default if you use the **Use Multicurrency Expense Reports** preference on the **General** subtab at Home > Set Preferences. You can clear the box to hide Multi Currency fields on individual expense reports. Any expenses entered when Multi Currency fields are hidden are automatically saved in the base currency.

 **Important:** Exchange rates and converted amounts displayed on expense lines are provided as estimates. Actual reimbursement amounts will be based on rates at the time of reimbursement.

15. If you use the American Express integration, on the **Expenses** subtab, click **Imported Expenses** to select your corporate card expense transactions.
16. On the **Expenses** subtab, complete line items for expenses:
 - a. The **Ref No.** field is automatically populated with 1 for the first line item on this expense report. You may update this number and each new line item will use the next successive number. Line item reference numbers are helpful when referencing receipts and individual expenses.

 **Note:** If you use the **Combine Detail Items on Expense Reports** preference, line items on expense reports are grouped by category and aren't listed in the order they were entered. This preference is located at Setup > Accounting > Accounting Preferences > Time & Expenses. For more information, see the help topic [Expenses](#).

- b. In the **Date** column, enter the date the expense was incurred.
- c. Select an expense category.

If you use NetSuite OneWorld, an expense category is available to only those subsidiaries assigned to the account linked with the expense category. To use intercompany expense transactions, set up expense categories linked to expense accounts that are available to all subsidiaries for use in these transactions. For intercompany expense transactions, users can't save expense lines unless they contain expense categories available to both the employee subsidiary and customer subsidiary. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

- d. If you selected a category that requires a rate, quantity and rate fields appear. Enter the quantity for this expense.
- e. If a rate isn't automatically populated, enter the rate for this expense category. The amount is automatically calculated from the rate and quantity.

 **Note:** If you use multi-currencies, the foreign amount field is used to calculate expense report totals.

- f. If this expense was incurred in a foreign currency, select the currency, and enter the foreign currency amount.

If you do system-generated adjustments for intercompany expenses, the currency used for those adjustments is always the base currency of the employee's subsidiary. For more information, see the help topic [Creating Intercompany Adjustments for Time and Expenses](#).

- g. If it isn't automatically calculated, enter the exchange rate applicable for this expense. (Be aware that any automatically calculated rate is provided as an approximation. The rate at the time of reimbursement is used to calculate the reimbursement amount.)
- h. In the **Amount** column, enter the amount of the expense.

If you entered a foreign currency amount for this expense, the expense is automatically converted to your base currency amount in the **Amount** column. This amount is an estimate, and may not match the reimbursement amount calculated based on the exchange rate at the time of reimbursement.

If this expense required a rate, the amount is calculated a quantity and rate are entered.

- i. Optionally, you can enter a memo, department, class, or location to apply only to this line item.

If you enter intercompany expenses, the department, class, or location must be available to the subsidiary associated with the selected customer. Otherwise, an attempt to generate intercompany adjustments for the expenses will result in errors.

- j. If this item is billable to a customer or project, select it from the **Customer** list and check the **Billable** box.

 **Warning:** Checking the **Billable** box without selecting a customer will generate an error. You must select a customer if the **Billable** box is checked.

 **Note:** If you use NetSuite OneWorld and you have shared customer records with multiple subsidiaries, you can choose any customer assigned to the default subsidiary. For information about sharing customer records with multiple subsidiaries, see the help topic [Assigning Subsidiaries to a Customer](#).

If you use NetSuite OneWorld, the Intercompany Time and Expense feature, and the related **Intercompany Expenses** accounting preference, note the following. The feature and the preference determine whether you can select a customer or project with a subsidiary different from yours. If the feature isn't enabled, or if the preference is set to **Disallow**, you can't enter intercompany expenses. Instead, you can select only those customers or projects with the same subsidiary to which you are assigned. For more information, see the help topic [Enabling Intercompany Time and Expenses](#).

- k. You can attach a receipt to each line item. In the **Attach File** column, select **List** to select your receipt from the **File Cabinet** or **New** to upload a new receipt. You can attach the same receipt to multiple line items.
 - l. If the receipt for this item is being provided, check the **Receipt** box.
 - m. If your company uses non-reimbursable expenses, and this item isn't reimbursable, check the **Non-reimbursable** box. For more information, see [Non-reimbursable Expenses](#).
 - n. Click **Add**.
17. Continue adding expense line items.

 **Note:** Similar line items on expense reports may be combined if your company has enabled the Combine Detail Items on Expense Reports preference. For more information, see the help topic [Projects Accounting Preferences](#).

18. When you're done, save the expense report.

 **Warning:** If your company uses expense report policies, you may receive a warning if one or more of your expense lines are over the allowed amounts. Depending on how the expense report policies are set up, you may be able to submit your expense report without changing the entered expenses. Any expense lines that are a violation of defined policies are highlighted in red. Click **Show Policies** to see details of any policy violations.

 **Important:** Only expense reports that are submitted as complete enter the queue for supervisor or accounting approval.

Approving an Expense Report

If you use the Approval Routing feature for expenses, they must be approved before they can be processed.

Expenses are generally processed through the Employee Center. You must have the Employee Center role to access the Employee Center. An administrator can add the Employee Center role on your employee record. For more information, see [Adding an Employee](#).

Note: In OneWorld accounts, note the following when a user who is a supervisor or approver logs in to the Employee Center. Approval queues display purchase requests, expense reports, and requisitions entered by employees associated with all subsidiaries. Role-level subsidiary restrictions that apply to other records and transactions don't apply to approvals of purchase requests, expense reports and requisitions.

Approving Expenses Using the Approval Routing Feature

To approve an expense report, you must first log in to the Employee Center. You must have the Employee Center role to access the Employee Center. An administrator can add the Employee Center role on your employee record.

To approve an expense report:

1. Log in to the Employee Center.
2. Go to Transactions > Employees > Enter Expense Reports > List.
3. View the report.

If you're a supervisor and your direct reports submit an expense report, the **Approve** button is displayed.

4. Click **Approve**.

Expense reports have no accounting impact until they're approved by someone with accounting authority. When expense reports are approved by a supervisor or approver, their totals remain in an unapproved non-posting account until approved by accounting. For more information, see [Giving Accounting Approval for Expense Reports](#).

If you don't use Approval Routing, the report is automatically routed to the employee's immediate supervisor and then to accounting.

If you use Approval Routing, the supervisor or approver must have an expense approval limit greater than or equal to the amount of the report. If the amount is greater than the expense approval limit of the supervisor or approver, the report is sent to the next level of management. This continues until it is approved by an authorized supervisor or approver.

If an expense approver is specified for an employee, the supervisor isn't part of the approval hierarchy.

Supervisors can automatically be notified when they have reports to approve. Only an administrator can enable supervisor notification. To enable this feature, go to Setup > Accounting > Preferences > Accounting Preferences. Check the Automatically Notify Supervisor box.

In the Employee Center, your employees can view the status and approval history of their expense reports. Employees click View & Edit Unapproved Expense Reports, or View Approved Expense Reports.

Approving Expenses Using SuiteFlow

If you use SuiteFlow for expense approvals, the steps to approve an expense are dependent on the way the workflow is set up. For more information, see the help topics [Using Custom SuiteFlow Workflows for Approval Routing](#) and [Using Custom Workflow-Based Approvals for Expense Reports](#).

Using Custom Workflow-Based Approvals for Expense Reports

You can use SuiteFlow to create a custom workflow to process approvals for expense reports. Using SuiteFlow for expenses provides more flexible processes for approvals.

For example, using workflows to process expenses allows for using a non-sequential approval process or conditionalized routing. You can set up a workflow that requires action from specific employees. You can show buttons on forms at certain stages, sends email based on actions taken, and much more.

 **Note:** If you previously used the Approval Routing feature for purchase approvals, read [Switch From the Approval Routing Feature to Suiteflow for Expenses](#) before you proceed.

To use SuiteFlow to process expense reports:

1. To enable features, go to Setup > Company > Setup Tasks > Enable Features (Administrator).
 - a. On the **Transactions** subtab, enable the **Expense Reports** feature.
 - b. On the **SuiteCloud** subtab, check the **SuiteFlow** box.
 - c. Click **Save**
 - d. On the **Employees** subtab, check the **Approval Routing** box.
 - e. click **Save**

This feature must be enabled to use these fields on employee records:

 - Purchase Limit
 - Purchase Approver

These fields are required for use with the workflow.
2. To enable Approval Routing for expense reports, go to Setup > Accounting > Preferences > Accounting Preferences.
 - a. To use SuiteFlow for expense approvals, on the **Approval Routing** subtab, check the **Expense Reports** box.
3. Set up an approval workflow. You must use SuiteFlow to create a workflow to apply to your expense reports.

For more information, see the help topic [Creating Your First Workflow](#).

You can incorporate the following options into your expense approvals workflow:

- Hierarchical or custom routing rules
- Email notifications that include links to drill down to records for approval
- Approve and Reject buttons
- Respecting approval limits
- Updating the Approval Status and Next Approver field on records
- Preventing records that are pending approval from being edited
- Designating an alternate approver

 **Note:** If a record goes through several approval levels with different users in a routing loop, use a custom workflow field that refers specifically to the current approver's approval status. This way, you can track the current approver's approval status separately from the overall status of the record.

Approving an Expense in the Employee Center Using SuiteFlow

When you use SuiteFlow for expense approvals, the Employee Center is the primary workspace for processing expense approvals.

- The Employee Center shows the Expense Reports to Approve reminder and Approve Expense Reports queue.

- Employees are shown all expenses for which they are the next approver.
- Users aren't required to have the Full permission for the Employee Center to approve and reject expenses through the Employee Center. They can do so with only the View permission.
- Reminders that show in the Employee Center drill down to the approval queue page for expense reports. You can still click through notification email and use the buttons on the expense form (such as Approve, Reject, etc.)
- An approver associated with one subsidiary is able to see only records that are associated with the same subsidiary to make approvals.

To approve an expense using SuiteFlow:

1. Log in to the Employee Center.
2. Click **Approve Expense Requests**.
3. Select a process in the **Action** field.
 The Action field lists the available actions of all expense workflows. For example, you can select the workflow action of Approve, or alternately select the action Reject.
 Actions available in the field are shown as follows:
 Workflow name : Workflow state : Workflow action
 This is an example of a workflow action selection:
 Expense Approval Routing : Pending Approval : Approve
 The third section shows the action that will be implemented for the selected purchases. In the case above, that action is to Approve.
 The selection you make in the Action field filters the list of purchases that are displayed.
 For example, select the action "Expense Approval Routing : Pending Approval : Approve." The list of expenses that appear are only ones that meet the following conditions:
 - Uses the workflow named Expense Approval Routing
 - Has a status of Pending Approval
 You can select All in the Action field to show expenses associated with all workflows and actions.
4. After you select the workflow and action, check the **Select** box next to each expense you want to process using the action you have selected.
5. Click **Submit**.

You also have the option of manually selecting a status in the **Approval Status** field on an expense.

Switch From the Approval Routing Feature to Suiteflow for Expenses

If you already use the Approval Routing feature for expense reports, consider the following before you enable the preference to use SuiteFlow.

When the Expense Reports preference is enabled for approval routing, basic functions of the Approval Routing feature are **immediately disabled for expense reports**.

- Email notifications are no longer automatically sent when expense reports are awaiting an approval, are approved, or are rejected. To send these emails, you must incorporate these steps into the approval workflow that you create.
- Expense transactions don't automatically show Approve and Reject buttons to process forms for approval in Employee Center. To show buttons on forms, you must incorporate them into the approval workflow that you create.

- There is no longer Supervisor or Approver hierarchy-based approval routing.
- The Supervisor Approval and Accounting Approval boxes no longer show in non-Employee Center roles.
- Expense reports that are unapproved or partially approved revert to a status of Pending Approval. You must use the Initiate Workflow Mass Update to start over in approval workflow
- You can later disable the preference and go back to using the Approval Routing feature.

To replace these former functions, you must incorporate them into an approval routing workflow you create. Now, you'll use SuiteFlow to process approvals for expense reports instead of the previous method associated with the Approval Routing feature.

Before you enable the preference, first set up your approval routing workflow. Then, set the workflow to Released when you enable the preference.

For details about setting up approval workflows, see the help topic [Creating Your First Workflow](#).

After you enable the preference, the following changes take place in your account with regard to expense report approvals:

Initiate Workflow Mass Update

Expense reports existing in your account prior to using SuiteFlow that are unapproved or are partially approved will have their status set to Pending Approval. They must then be processed using workflow-based approval from the beginning.

In other words, approval steps you entered previously may need to be re-entered using SuiteFlow. You must run an Initiate Workflow mass update after you have set up your workflow.

When you run the mass update, note the following. Existing transactions that require additional approval steps are incorporated into the workflow at the appropriate stages, and are ready for remaining processing within the workflow.

For more information, see the help topic [Mass Initiating Workflow Instances](#).

Approval Status Field

When you use SuiteFlow for expense report approvals, the forms now include an Approval Status field. The Approval Status field reflects the state of the transaction in the approval process.

Expense reports may have one of the following statuses:

- Pending Approval – The expense is in the approval queue.
- Approved – The expense has been given approval for processing.
- Rejected – The expense hasn't been approved and won't be processed.

Existing expense reports show the following in the new Approval Status field based on the transaction status:

Previous Status	New Status
Pending Supervisor Approval	Pending Approval
Pending Receipt	Approved
Partially Received	Approved
Pending Bill	Approved

Previous Status	New Status
Pending Billing/Partially Received	Approved
Fully Billed	Approved
Closed	Approved
Rejected by Supervisor	Rejected

Next Approver Field

When you use SuiteFlow for expense approvals, expense reports include a Next Approver field. This field is populated based on the associated workflow.

For example, in your workflow you may create a state of Pending Approval. In that state you create a formula to set the Next Approver as the employee's supervisor.

Editing an Expense Report From the Expense Reports List

You can use the list of expense reports to edit an individual expense report record.

To edit an expense report from the list:

1. Go to Transactions > Employees > Enter Expense Reports > List.
2. Click **Edit** next to an expense report you want to edit.
3. On the Edit Expense Report page, edit the fields you want to change. To edit a line item on the **Expenses** subtab, click a field in the table, then click **Ok** in the line item row.
4. Click **Save**.

Deleting an Expense Report From the Expense Reports List

You can use the list of expense reports to delete an individual expense report record.

To delete an expense report from the list:

1. Go to Transactions > Employees > Enter Expense Reports > List.
2. Click **Edit** next to an expense report you want to delete.
3. On the Edit Expense Report page, under **Actions**, click **Delete**.
4. At the prompt to confirm the action, click **OK**.

For more information, see [Voided Expense Reports](#).

Rejecting an Expense Report From the Expense Reports List

You can use the list of expense reports to reject an individual expense report record.

To reject an expense report from the list:

1. Go to Transactions > Employees > Enter Expense Reports > List.
2. Click **Edit** next to an expense report you want to reject.
3. On the Edit Expense Report page, click **Reject**.
4. On the Expense Report Rejection Notice page, enter a reason for the rejection in the **Your Message** field, and then click **Save**.

On the Expense Report page, you can perform various actions using the **Actions** list. You can create a new expense report, show any expense activity, and view the GL impact of this expense.

After an expense report is rejected, it can be edited and resubmitted.

Corporate Card Expenses

You can designate expense lines as paid by a corporate credit card on expense reports. If you have more than one credit card account, you can select the default account in Accounting Preferences. You can also select the account on the employee record and on individual expense reports. For OneWorld accounts, you can select the default account for Corporate Card Expenses on the Human Resources subtab of the employee record. Keep the same subsidiary for an employee and the credit card account. In Accounting Preferences, you can also select a default account for personal expenses paid with a corporate card. For more information, see the help topic [Time & Expenses Accounting Preferences](#). For OneWorld accounts, see the help topic [Set Subsidiary Preferences](#).

 **Note:** If you have one credit card account, the Default Account for Corporate Card Expenses preference field doesn't appear. For OneWorld accounts, the preference field doesn't appear on the Subsidiary record if only one credit card account is associated with the particular subsidiary.

 **Important:** If you didn't use non-reimbursable expenses prior to NetSuite 18.2, they're no longer available. If you used non-reimbursable expenses prior to NetSuite 18.2, you can choose to disable the availability when entering expense reports. For more information about non-reimbursable expenses, see [Non-reimbursable Expenses](#).

To use corporate card expenses, you must first customize your expense report form to include the relevant fields. For more information about customizing forms, see the help topics [Creating Custom Entry and Transaction Forms](#) and [Configuring Sublist Fields](#).

There are two optional fields you can add to the body of your expense reports and one required field for expense line items:

- Account for Corporate Card Expense – optional field to enable the default account to be overridden at the expense report level
- Corporate Card by Default – optional field to enable all entered expenses to automatically be marked as corporate card expenses
- Corporate Card – required field to enable expenses to be marked as corporate card expenses on your expense reports

Corporate card expenses can also be marked as billable. If you use non-reimbursable expenses, when expense lines are marked as corporate card expenses they can no longer be marked as a non-reimbursable expense. You can disable non-reimbursable expenses. Go to Setup > Accounting > Accounting Preferences. On the Time & Expenses subtab, under Expenses, clear the Allow Non-reimbursable expenses box.

Expense reports including corporate card expenses debit the Expense account while crediting the selected credit card account. When reconciling a credit card statement in NetSuite, corporate card expenses show up automatically as a journal entry.

Employees whose companies pay corporate credit card bills directly can differentiate personal expenses charged to a corporate card using expense categories.

To use personal corporate card expenses, check the Personal Corporate Card Expense box on expense category records. When employees enter expense reports, they can select any personal corporate card expense category to indicate that the line item isn't a company expense. Only one personal expense category may be used on a single expense report.

Note: Corporate card expense categories can only use other asset accounts. If your company doesn't use expanded account lists, the corporate card field on expense categories is disabled. Any expense category attached to an other asset account is automatically designated a corporate card expense. To enable the expanded account list preference, go to Setup > Accounting > Preferences > Accounting Preferences > General Ledger.

For more information about expense categories, see [Expense Categories](#).

Non-reimbursable Expenses

When entering an expense report, you can mark a line item as Non-reimbursable. This function may be useful when an employee is required to enter an expense receipt but shouldn't be reimbursed for the amount. This may be necessary if employee expenses are paid using a third party or shouldn't be reimbursed by the company.

For example, an employee may be required to enter an expense report with a receipt for a meal to bill the amount to a client. Because the employee used a company credit card to pay for the meal, the expensed amount shouldn't be reimbursed to the employee. Expenses that are paid with a corporate credit card are marked as non-reimbursable if the credit card bill is paid by the company.

Important: If you didn't use non-reimbursable expenses prior to NetSuite 18.2, they're no longer available. If you used non-reimbursable expenses prior to NetSuite 18.2, you can choose to disable the availability when entering expense reports. For more information about tracking non-reimbursable expenses paid by a corporate credit card, see [Corporate Card Expenses](#).

To mark an expense as non-reimbursable, on the Expenses subtab of the expense report, check the box in the Non-reimbursable column.

Ref No.	Date	Category	Foreign Amount	Currency	Exchange Rate	Amount	Memo	Department	Class	Location	Customer	Project task	Billable	Attach File	Non-reimbursable	Receipt	Tax Reporting Category	Activity Code
1	2.8.2024		50.00	USA	1.00	50.00	Shipping								☒			

The employee can enter one line on the expense report for the meal and mark it as both Billable and Non-reimbursable. For any line marked Non-reimbursable, the employee won't be reimbursed for the amount on that line.

Expenses marked as non-reimbursable appear on expense reports and expense report receipts. However, they aren't payable to the employee and aren't included in the amount due on expense reports.

GL Impact												
GL Impact Changes												
Account	Amount (Debit)	Amount (Credit)	Posting	Memo	Name	Department	Class	Location	Custom Script	Business Area	Activity Code	GL #
63800 Travel & Ent: Travel	\$50.00		No	Travel		Marketing						
63800 Travel & Ent: Travel		\$50.00	No	Travel		Marketing						

A non-reimbursable expense has no general ledger impact. An expense marked as non-reimbursable has both a debit and credit entry for the associated account canceling out any impact to your ledger accounts.

Ref No.	Date	Category	Foreign Amount	Currency	Exchange Rate	Amount	Memo	Department	Class	Location	Customer	Project task	Billable	Attach File	Non-reimbursable	Receipt	Tax Reporting Category	Activity Code
1	2.8.2024	Travel	50.00	USA	1.00	50.00		Marketing							Yes			

When the expense report is printed, amounts are categorized as Reimbursable or Non-reimbursable and subtotaled for each.

DB96 [REDACTED] Account - 563214		Expense Report	
		Date	2.8.2024
		Emp. Dept. #	32

The Non-reimbursable box can be hidden by customizing the form. The box is set to appear on the form, by default.

Importing Corporate Card Data

Using custom plug-ins, you can import corporate card data from American Express, Visa, Mastercard, or other providers. You can create a custom SuiteScript code and import corporate card charges to an imported employee expenses record. Use a Financial Institution Parser Plug-in implementation to create and upload your own parsers for different bank and credit card statement formats. Run the parser script on your file, for example xml or csv. The parser calls createNewTransaction that creates imported employee expense record for your data.

Note: There are required fields based on your preferred form. The object should contain at least all required fields from your IEE record when the parser script calls createNewTransaction.

Then, store them in NetSuite. For more information about mapping custom expense codes from the Financial Institution Parser Plug-in file, see the help topic [Financial Institution Parser Plug-in](#).

Note: The imported employee expense record is fully exposed to SuiteScript.

Step 1 Deploying Plug-in Implementation for Custom Parser

1. Go to Main Menu > Customization > Plug-ins > Plug-in Implementations > New.
2. Click the plus sign.
3. Click **Choose file**.
4. Select your script with a custom parser.
5. Click **Save**.
6. Click **Create Plug-in Implementation**.
7. Complete the **File Name** field.

 **Tip:** You can use, for example, **Custom FI XML parser**.

8. Click **Save**.
- This action saves the script record.

The following code contains an example of a parser script:

```

1  /**
2   * Copyright © 2020 Oracle and/or its affiliates. All rights reserved.
3   *
4   * @NScriptType FIParserPlugin
5   * @NApiVersion 2.x
6   * @NModuleScope TargetAccount
7   */
8  define(['N/xml'], function (nXml) {
9      var module = {};
10
11     function createTransactionRecord(xmlTrans) {
12         // mandatory fields for creating new transaction
13         var mandatoryFields = Object.freeze({
14             transactionTypeCode: 'CHARGE',
15             payee: '',
16             sourceId: '',
17             transactionStatus: '',
18             customerReferenceId: '',
19             customerName: '',
20             invoiceReferenceIds: [],
21         });
22         // mapping of XML variables to the plugin ones (XML vars on the left, plugin vars on the right)
23         var fieldMap = Object.freeze({
24             default: {
25                 card_holder: 'cardHolder',
26                 employee_id: 'employeeId',
27                 date: 'date',
28                 amount: 'amount',
29                 foreign_amount: 'localChargeAmount',
30                 exchange_rate: 'currencyExchangeRate',
31                 unique_id: 'id',
32                 currency: 'currency'
33             },
34             additional: {
35                 card_currency: 'billedCurrencyISOCode'
36             }
37         });
38         var nodes = xmlTrans.childNodes;
39         var record = {
40             additionalFields: {}
41         };
42
43         for (var key in mandatoryFields) {
44             record[key] = mandatoryFields[key];
45         }
46
47         for (var i = 0; i < nodes.length; i++) {
48             if (nodes[i].nodeType === 'ELEMENT_NODE') {
49                 var elementName = nodes[i].nodeName;
50                 var elementValue = nodes[i].textContent;
51
52                 if (fieldMap.default[elementName]) {
53                     record[fieldMap.default[elementName]] = elementValue;
54                 } else {
55                     record.additionalFields[fieldMap.additional[elementName] || elementName] = elementValue;
56                 }
57             }
58         }
59
60         return record;
61     }
62
63     function getElementValue(transaction, tagName) {
64         return transaction.getElementsByTagName({tagName: tagName})[0].textContent;
65     }
66
67     module.parseData = function (context) {
68         var xml = context.inputData.getContents();
69         var xmlDoc = nXml.Parser.fromString(xml);
70         var xmlTrans = xmlDoc.getElementsByTagName("transaction");
71         var record;

```

```

72     var newAccountData;
73     var accountDataMap = {
74         getOrCreateAccountData: function (record) {
75             var uniqueId = record.employeeId + ' ' + record.cardHolder;
76             if (!this[uniqueId]) {
77                 this[uniqueId] = context.createAccountData({
78                     employeeId: record.employeeId,
79                     cardHolder: record.cardHolder
80                 });
81             }
82             return this[uniqueId];
83         }
84     };
85
86     for (var i = 0; i < xmlTrans.length; i++) {
87         record = createTransactionRecord(xmlTrans[i]);
88         newAccountData = accountDataMap.getOrCreateAccountData({
89             employeeId: getElementValue(xmlTrans[i], 'employee_id'),
90             cardHolder: getElementValue(xmlTrans[i], 'card_holder')
91         });
92         newAccountData.createNewTransaction(record);
93     }
94 };
95
96 return module;
97 });

```

The following code sample contains an example of a parser script that shows the required data format. The createNewTransaction object needs to contain cardCurrency (billedCurrencyISOCode) in the additional fields to run the script correctly:

```

1  /**
2   * Copyright © 2020 Oracle and/or its affiliates. All rights reserved.
3   *
4   * @NScriptType FIParserPlugin
5   * @NApiVersion 2.x
6   * @NModuleScope TargetAccount
7   */
8  define(['N/xml'], function (nXml) {
9      var module = {};
10
11      module.parseData = function (context) {
12          var transaction = {
13              additionalFields: {}
14          };
15
16          transaction['id'] = "471201637";
17          transaction['date'] = "2020-05-15";
18          transaction['amount'] = "750";
19          transaction['billedTaxAmount'] = 0;
20          transaction['localChargeAmount'] = "500";
21          transaction['localTaxAmount'] = 0;
22          transaction['currency'] = 'CAD';
23          transaction['currencyExchangeRate'] = "1.5";
24          transaction.additionalFields['billedCurrencyISOCode'] = 'USD';
25
26          var record = transaction;
27          var newAccountData;
28
29          newAccountData = context.createAccountData({
30              employeeId: "17",
31              cardHolder: "Indoors Kibbeh"
32          });
33          newAccountData.createNewTransaction(record);
34
35      };
36
37      return module;
38  });

```

The following table contains the fields list:

Field Name (Use in Parser)	Description	Imported Employee Expense Fields	Type	Expected Value
cardHolder		cardMemberEmbossedName	string	
employeeId		externalEmployeeId	string	
CostCenter		costCenter	string	
date		chargedate	string	
id		transactionId	string	
amount	billed amount	amount	number	
billedTaxAmount	billed tax	taxamount	number	
billedCurrencyISOCode	billed currency	cardCurrency	string	currency ISO code
currencyExchangeRate		fxrate	number	
localChargeAmount	local amount	fxamount	number	
localTaxAmount	local tax	fxtaxamount	number	
currency	local currency	currency	string	currency ISO code
expenseCategoryKey		expenseCategory	string	
memo		memo	string	

Step 2 Creating Financial Institution and Format Profile

1. Go to Main Menu > Setup > Accounting > Financial Institution > New.
2. Complete the **Financial Institution** field.

 **Tip:** You can use, for example, **Custom FI**.

3. Click **Save**.
4. On your newly created financial institution record, click **Add Button** on the **Format Profile** tab.
5. Complete the following fields:
 - a. Profile Name: Custom FP
 - b. Profile Type: Corporate Card Expenses
 - c. Connectivity method: Manual Import
 - d. Transaction parser: Custom FI XML parser
 - e. On the **Import configuration** tab:
 - i. Match employee by: Cardholder Name
 - ii. Expense type: Corporate Card
 - iii. Employee expense source type: Imported Data
6. (Optional) In the Expense Code Mapping subtab, map custom expense codes from the parser plug-in file to your own expense categories in NetSuite.

For more details on mapping custom expense codes from the Financial Institution Parser Plug-in file, see the help topics [Financial Institution Parser Plug-in](#) and [Mapping Custom Expense Codes](#)

7. (Optional) In the Parser Configuration subtab, configure your transaction parser.

For more information, see the help topic [Transaction Parser Configuration](#).

 **Note:** The Parser Configuration subtab only appears and is populated with configuration fields if your parser plug-in supports parser configuration.

8. Click **Save**.

For information on creating format profiles for expense reporting, see the help topic [Creating Format Profiles for Expense Reporting](#).

Step 3 Importing Transaction data from a file

1. Go to Main Menu > Transactions > Bank > Banking Import History > Upload File.
2. Select the input file for parser.
3. Select Financial Institution: Custom FI.
4. Select Format Profile: FP.
5. Click **Import**.

The following code contains an example of an XML for import:

```

1 <example_card_provider_xml>
2   <transaction>
3     <card_holder>Indoors Kibbeh</card_holder>
4     <employee_id>17</employee_id>
5     <date>2020-05-15</date>
6     <amount>750</amount>
7     <foreign_amount>500</foreign_amount>
8     <exchange_rate>1.5</exchange_rate>
9     <unique_id>471201637</unique_id>
10    <card_currency>USD</card_currency>
11    <currency>CAD</currency>
12    <custom_value>1776</custom_value>
13  </transaction>
14 </example_card_provider_xml>

```

American Express Integration for Expense Reporting

With the AMEX Corporate Card Integration SuiteApp, you can automatically import expenses charged by employees to their corporate American Express (AMEX) cards.

You can set up NetSuite to import expenses on a daily basis and map each expense to your existing expense categories. Employees receive an email notification when new expenses are available. A reminder also appears in the Reminder portlet on the NetSuite Home page.

Employees can click the link in the notification or reminder to see a list of their imported expenses. You can add imported expenses to a new expense report directly from the imported expenses list. You can also add imported expenses from an expense report transaction by clicking Imported Expenses and selecting the expenses you want to add.

For information about importing AMEX transactions and adding them to expense reports, watch the following help video:

 [Importing American Express Data for Expense Reporting](#)

 **Warning:** American Express only supports integration with corporate accounts. Business accounts aren't included by American Express for integration with NetSuite.

The following are required to set up AMEX integration with NetSuite:

- Expense Reporting
- AMEX Corporate Card Integration SuiteApp
- Credentials for the AMEX gateway
- A role with full permissions for the Financial Institution Records

Note: American Express is currently the only supported credit card company for automatic integration. You can set up manual integrations by creating your own plugins. For more information, see the help topic [Financial Institution Records](#).

If you manually configure integration with a credit card other than American Express, you can't import expenses from different cards to a single expense report. For example, you can't include expenses charged to both a corporate American Express and Visa on the same expense report.

Before setting up AMEX integration with NetSuite, you must download and install the AMEX Corporate Card Integration SuiteApp from the NetSuite Marketplace. For more information, see the help topic [Installing from the SuiteApp Marketplace](#).

The AMEX Corporate Card SuiteApp creates a financial institution record for American Express. It creates a format profile record, and installs two plug-ins to your account that are used to configure the connection to the AMEX server.

Note: If you want, you can uninstall the AMEX Corporate Card Integration SuiteApp even if corporate card integration is already set up. If you uninstall the SuiteApp, NetSuite does the following:

- Removes the AMEX Connectivity Plug-in and AMEX Parser Plug-in from the format profile AMEX Profile. The **Connectivity Method** field in the format profile is changed to Manual Import, and the **Transaction Parser** field is cleared.
- Inactivates the format profile AMEX Profile. To reactivate the format profile, you need to select a new parser plug-in. See the help topic [Modifying Format Profiles](#). If you no longer need a format profile, you should delete it. See the help topic [Deleting a Format Profile](#).

Important: You must contact American Express to obtain your credentials for the AMEX gateway. While filling the AMEX application for the integration service, select the following: **Request Type: GL1025, Setup Type: Pull Type, Protocols: SFTP/SSH**. NetSuite uses the credentials to access all the corporate card transactions from your employees. The transactions are downloaded and imported in a single file. Without the credentials, you can't complete configuration of AMEX integration.

You must also decide, with American Express, how your transactions are matched with employees. If they're matched by Employee ID, you must supply all NetSuite employee IDs to American Express before beginning automatic imports. This lets you avoid manually matching employee expense transactions. For more information, see the help topic [Linking Employee Accounts](#).

Configuring AMEX Integration

After you install the SuiteApp and obtain your AMEX gateway credentials, you can configure NetSuite to automatically import your corporate card transactions.

You select how you want imported transactions to be matched on the format profile record created by the AMEX Corporate Card Integration SuiteApp. Imported transactions can be matched in two ways:

- **Cardholder Name** – If you use the cardholder name, you must enter the name used on each employee's credit card on the employee record. Go to Human Resources > Corporate Cards. The names must match exactly for transactions to be mapped properly.
- **Employee ID** – If you use the employee ID, note the following. You must provide numeric employee IDs (field internalID on employee record) of all your corporate card holders to American Express to include in the transaction file.
- **Employee Expense Source Type** – If you use the employee expense source type, you must select one of the following providers:
 - American Express
 - Visa
 - Mastercard
 - imported data
 - other

If you're using the cardholder name for employee matching, before you begin importing your AMEX charges, you must enter the cardholder names on each employee record. If you're using employee IDs to match transactions, you can skip the steps below for entering cardholder names.

To enter cardholder names for employees:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the employee record you want to update.
3. Click the **Human Resources** subtab.
4. Click **Corporate Cards**.
5. In the **Name on Card** field, enter the name listed on the employee's card.
6. In the **Expiration Date** field, enter the expiration date for the card.
7. In the **Corporate Card Profile** field, select the AMEX format profile created when you installed the AMEX Corporate Card Integration SuiteApp.
8. Click **Add**.
9. Click **Save**.

When you have finished entering all of your cardholder names, you can complete the configuration of your AMEX format profile and begin importing transactions.

To configure AMEX integration:

1. Go to Setup > Accounting > Financial Statements > Financial Institution > List.
2. Click **View** next to the financial institution record for American Express.
3. Click **Format Profile: Configuration**.
4. Click **Edit** next to the AMEX format profile.
5. On the **Connectivity Configuration** subtab, enter the server URL, username, and password received from AMEX. If you don't have this information, you must contact American Express to get the connection credentials before you can proceed with configuration.
6. Click the **Import Configuration** subtab.

7. In the **Employee Matching** field, select how imported transactions are matched to employees. This selection is determined by your agreement with American Express.

Important: If you're using cardholder names, all cardholder names must be entered prior to your first import. If you're using employee IDs, you must provide all employee IDs to American Express prior to your first import. Failure to set cardholder names or provide employee IDs prior to importing transactions results in the need for manual matching of employee expense transaction. After a file has been imported, you must contact the credit card company if you want to import the file again.

8. In the **Expense Type** field, select **Corporate Card**.
9. In the **Employee Expense Source Type** field, select: **American Express**.
10. Click the **Expense Code Mapping** subtab.
11. In the **Expense Category** field, select an expense category to map to each AMEX expense code.
12. When you have finished, click **Save**.

After you've saved your format profile record, your expense transactions begin importing at the next scheduled daily time.

Important: File imports with the AMEX Credit Card Integration SuiteApp are limited to 3400 lines and 10 MB.

Troubleshooting AMEX Integration

This section provides troubleshooting for AMEX integration. It covers the errors that you may encounter when it comes to bank import (downloading, parsing) or bulk processing (imported employee expenses, employee data).

Connection and Parsing Errors

In case of downloading or parsing errors, view the Banking Import History page in Transactions > Bank > Bank Import History.. For specific error information, consult the Execution Log for the plug-in implementation used for the import. Go to Customization > Plug-ins > Plug-in Implementations (Administrator), select your implementation, and then click the Execution Log subtab. For more information about the Banking Import History, see the help topic [Banking Import History](#).

Bulk Processing Errors

In case of a bulk processing error, you'll receive an e-mail notification. Using the Administrator role, you can view the status and history of all the bulk processing jobs in your account. Based on the type of error, you can investigate a problem and solve the cause of an issue.

Severe errors preventing the creation of Imported Employee Expense

To prevent the creation of Imported Employee Expense errors

1. Go to Transactions > Bank > Match Bank Data (Administrator) > Status to open the process Status page and view a list of bulk processing jobs
2. Click the error count to see a detailed message.
Transactions with errors have not been processed.
3. Fix the root cause of the problem based on the error message.
Transaction will be processed again during the next nightly bulk processing.

 **Note:** The account administrators will receive a new error e-mail notification if the error hasn't been solved.

Errors preventing full automatic processing of the transaction

These types of errors are usually caused by incorrect employee or expense category mapping. Imported Employee Expenses for the transactions have been created, but the status remained **Pending** as it was not possible to finish automatic processing.

To prevent full automatic processing of the transaction error:

1. Check the configuration of employee mapping and expense category mapping. For more information, see [Configuring AMEX Integration](#).

To fix existing imported employee expenses in Pending state:

1. Go to Transaction > Employees > Imported Employee Expenses.
2. Filter out expenses in the **Pending** state and provide the missing information.

Tip: When the data in the record is complete, it immediately switches to the **Ready** state and you can use the transaction in the Expense Report.

Production x SandBox Accounts

AMEX Credit Card Integration if set up in Production should be switched off in any SandBox environment to ensure the proper functionality of the SuiteApp. AMEX provides production or test credentials. Having credentials for live URL doesn't automatically mean that it can connect to a test URL.

Test URL: fsgatewaytest.americanexpress.com

Live URL: fsgateway.americanexpress.com

If only prod credentials are provided, they can be used in SandBox to test the connection. When ready, inactivate them in Sandbox and then use credentials in the production account.

SandBox Refresh

The best practice for handling AMEX integration feed after SandBox refresh is to disable AMEX SuiteApp by editing the format profile setup – accounting – financial institution – list – view or edit – tab format – profile configuration – edit and set connectivity method – manual import. This action is necessary after every refresh.

Data transfer

There is a feature in AMEX servers that causes exceptions in combination with downloads from several sources. When a file is downloaded from AMEX server, it is moved to a different directory (/outbox => /sent), then it stays in the /sent folder for a limited time before the file is deleted. If the file is in a queue to be downloaded but it is moved to another directory, AMEX SuiteApp downloads data from both directories to avoid losing customer transactions.

Creating Expense Reports With Imported Transactions

Transactions are imported automatically each day. You can view an import history at Transactions > Bank > Bank Import History.. The Bank Import History page shows the status of previous imports. You can use this list to determine if your transactions are imported successfully.

After expense transactions are imported, email notifications are sent to employees with imported transactions. The email notification contains a link to a list of imported expenses. You can also access a list of imported expenses from the Reminders portlet in NetSuite.

You can create a new expense report from the Imported Employee Expenses page.

To create an expense report from the Imported Employee Expenses list:

1. Go to Transactions > Employees > Imported Employee Expenses.
2. In the **Select** column, check the box next to each expense you want to add to a new expense report. You can only add imported expenses with the status Ready to a new expense report.
3. Click **Add to New Expense Report**. A new expense report transaction opens with your imported expenses listed on the Expenses subtab. You can add additional expenses to an expense report with imported expense transactions.
4. When you have finished, click **Save**.

Note: Imported employee expenses aren't supported in the NetSuite for Mobile app.

You can also add imported expenses to new or existing expense reports by clicking Imported Expenses on the Expenses subtab of expense reports. For more information, see [Enter an Expense Report](#).

On the Imported Employee Expenses list, you can also ignore expenses. This can be useful if an expense doesn't need to be added to an expense report for some reason. Check the Select box next to any expense transaction you want to ignore, then click Ignore selected. Ignored expenses don't appear in the list of available expenses when adding expenses directly from an expense report.

Administrators can use the Imported Employee Expenses list to manually match any imported expenses without an employee match. Any expense without an employee listed in the employee column has failed to match to an employee. You can manually match the transaction by editing the imported transaction and selecting the appropriate employee in the Employee field. You can further investigate your settings to ensure the cardholder name or employee ID matches the credit card company file for this employee.

Reviewing Expense Reports

You can use the list of expense reports to review status, print, or export expense report data. You can also use the list to access individual expense report records for viewing and editing.

To review expense reports:

1. To get to the list of expense reports:
 - In the Employee Center Home Links portlet, click the **View & Edit Expense Reports** link.
 - If you're logged in with a role that has the **Expense Reports** permission, go to Transactions > Employees > Enter Expense Reports > List.
2. You can do the following from the Expense Reports list:
 - Click a **View** link to view an expense report record.
 - Click an **Edit** link to make changes to or delete an expense report record.
 - Click a **Print** link to print a single expense report record.
 - Click an **Account** link to view the account register.
 - Select from the dropdowns to filter the expense report records that are displayed in the list.

- Click **New** to create a new expense report.
- Click **Print** to print the entire list of expense reports.
- Click **Export** to export expense report list data to a CSV, Excel, or PDF file.
- Click **Customize View** to change the columns displayed in the list. See the help topic [Customizing List Views](#).

Note: If you customize the expense report list view to include a Currency column, note the following. The listed currency values correspond to base currencies for employees and may not match the currencies entered in the expense reports.

Giving Accounting Approval for Expense Reports

Expense reports have no accounting impact until they're approved by someone with accounting authority. When reports are entered, their totals remain in an unapproved non-posting account.

By default, an expense report requires approval by the employee's immediate supervisor before being sent for accounting approval. If approval routing is enabled and set up, a more complex approval hierarchy is followed. See the help topic [Approval Routing](#).

When an expense report receives accounting approval, a bill is automatically created and its amount is reflected on your books. The expense report is posted in the earliest open period, which may not be the same as the period when the expense report was entered.

The following three conditions must be met for a role to be able to give accounting approval of an expense report:

- Use one of the following centers:
 - Executive Center
 - E-Commerce Management Center
 - Marketing Center
 - Classic Center
 - Support Center
 - Shipping Center
 - Sales Center
 - Project Center
 - Accounting Center
 - Engineering Center
- Expense Report permission set to Edit or Full
- Restrict Time and Expense preference is set to False

You can customize an existing role or create a new role to give access to accounting approval permissions. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

If an expense report is rejected by accounting, the employee can edit it. The employee's immediate supervisor can then resubmit it before it's routed to accounting for approval.

Expense reports that require accounting approval can be accessed in two different places:

- Unapproved Expense Reports Register - See [Approving Expense Reports from the Register](#).

- Expense Reports List - See [Approving Expense Reports from the Expense Reports List](#).

Setting Default Payable Accounts for non-OneWorld Account

Companies with multiple payable accounts can set a company-wide default payable account for expense reports. Setting a default account enables more consistent expense reporting across your company.

To set a default payable account non-OneWorld account:

1. Go to Setup > Accounting > Accounting Preferences.
2. Click the **Time & Expenses** subtab.
3. In the **Default Payable Account for Expense Reports** field, select a payable account.

 **Note:** The Default Payable Account for Expense Reports field is only available when you have more than one payable account.

4. Click **Save**.

In OneWorld accounts, the default payable account preference is set by subsidiary.

Setting Default Payable Accounts for OneWorld Account

To set a default payable account (OneWorld account):

1. Go to Setup > Company > Subsidiaries.
2. Next to the subsidiary you want to update, click **Edit**.
3. Click the **Preferences** subtab.
4. In the **Default Payable Account for Expense Reports** field, select a payable account.
5. Click **Save**.

 **Note:** You can see the general ledger impact of an expense report before you approve it. You can also view the expense report record. Click the Actions menu, then click GL Impact.

Approving Expense Reports from the Register

To approve expense reports from the Unapproved Expense Reports Register:

1. Go to Transactions > Employees > Enter Expense Reports.
2. In the More menu, click the **Approve Expense Reports** link.
3. Click the date next to the expense report you want to approve.
4. If the report is complete, click **Approve** in the middle of the form.
If you want to reject the report, click **Reject**. When the email form appears, you can send a message to your employee about the expense report. Complete the email message, and then click **Save**.

If multiple payable accounts exist and a default account isn't selected, you can't automatically approve the expense report from the register. You must edit the expense report and manually

select a payable account. You set up a default account at Setup > Accounting > Accounting Preferences > Time & Expenses.

Approving Expense Reports from the Expense Reports List

To approve expense reports from the list:

1. Go to Transactions > Employees > Enter Expense Reports > List.
2. Click **Edit** next to an expense report with a status of **Pending Accounting Approval**.
3. On the expense report, check the **Accounting Approval** box.
4. If multiple accounts payable accounts are available and a default account hasn't been set, select a payable account in the **Account** field. (This field doesn't appear if there's only one accounts payable account.)
5. Click **Save**.

Note: If you customize the expense report list view to include a Currency column, note the following. The listed currency values correspond to base currencies for employees and may not match the currencies entered in the expense reports.

Paying Expenses on Employee Paychecks with Payroll

If you use SuitePeople U.S. Payroll, you can choose to pay employees' expenses on their regular paychecks instead of paying them through accounts payable. When you use SuitePeople U.S. Payroll to pay expenses, you pay the full amount of the expense report. You can partially pay an expense report, or pay an expense report on a date other than the regular pay date. To do this, pay expenses by accounts payable. To pay expenses by accounts payable, go to Transactions > Pay Bills.

To pay expenses on employee paychecks, complete the following tasks:

1. [Setting the Pay Expenses on Paychecks Preference](#)
2. [Creating an Earning:Expense Payroll Item](#)
3. [Adding an Expense Payroll Item to an Employee Record](#)
4. [Updating Payroll Information](#)
5. [Creating a Payroll Batch that Uses the Pay Expenses Option](#)

Note: When you pay expenses on employee paychecks, note the following. In the general ledger, the default payable account for expense reports is debited, and the payroll funding account is credited. For more information about default payable accounts, see [Setting Default Payable Accounts for non-OneWorld Account](#).

Setting the Pay Expenses on Paychecks Preference

To set the Pay Expenses On Paychecks preference:

1. Go to Setup > Payroll > Set Up Payroll.
2. Check the **Pay Expenses on Paychecks** box.

3. Click **Save**.

After you enable the preference, you need to create a new payroll item.

Creating an Earning:Expense Payroll Item

To create or edit an Earning:Expense payroll item:

1. Go to Lists > Employees > Payroll Items.
 - To create a new payroll item, click **New**.
 - To edit an existing payroll item, click **Edit** next to the payroll item you want to edit.
2. If you have a NetSuite OneWorld account, select a subsidiary from the **Subsidiary** list.
3. From the **Item Type** list, select **Earning:Expense**.
4. In the **Item Name** field, enter a name for the earning item.
5. From the **Expense Account** list, choose any expense account. The expense account that you choose here doesn't determine the expense account that is debited for the reimbursement.
6. From the **Pay Code** list, select **Nontaxable Reimbursement**.
7. If necessary, select a **Report Section**.
8. Click **Save**.

Earning:Expense items don't affect an employee's gross pay. They're added to the net pay. In addition, expense items don't appear on the employee's W-2.

Next, you need to add the expense payroll item to the employee record.

Adding an Expense Payroll Item to an Employee Record

To add an expense payroll item to an employee record:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the employee name.
3. On the employee record click the **Payroll** subtab.
4. Click the **Earnings** subtab.
5. From the **Earnings** list, select the expense payroll item.
6. Click **Add**.
7. Click **Save**.

Add the expense payroll item to all employee records. For more information, see the help topic [Including an Employee in Payroll](#).

When an employee submits an expense report and it's approved, you can now pay the expense report when you process payroll.

Updating Payroll Information

After you create the Earning:Expense payroll item and add the item to employee records, you must update payroll information. For more information, see the help topic [Updating Payroll Information](#).

Creating a Payroll Batch that Uses the Pay Expenses Option

After you complete the tasks above, you can pay the expense in a payroll batch.

To pay expenses on checks in a payroll batch:

1. Go to Transactions > Employees > Create Payroll.
2. Create the payroll batch. For more information, see the help topic [Creating a Payroll Batch](#).
3. On the Payroll Run page, verify that the **Pay Expenses** box is checked.
4. Verify that the employees you want to pay are included in the payroll.
5. Click **Calculate**.
6. When the calculation is complete, on the **Complete** subtab, click **View** next to a paycheck.
7. Click the **Expenses** subtab.
8. Verify that the expense appears on the paycheck.

After you have verified the information for the payroll batch, you can commit it. For more information, see the help topic [Committing a Payroll Batch](#).

Giving an Employee Access to Purchase Requests

Employees with access to purchase requests can enter requests to purchase items, material or services from vendors. After requests are approved, they turn into purchase orders.

To give an employee access to purchase requests, first, someone with permission to access the Enable Features page must enable the Purchase Requests feature. Next, the employee record must be set up to give the employee access to the Employee Center.

To enable the Purchase Requests feature:

1. Go to Setup > Company > Enable Features.
2. Click the **Employees** subtab.
3. Check the **Purchase Requests** box.
4. If you want purchase requests to be approved by a supervisor, also check the **Approval Routing** box.
5. Click **Save**.

Then, you must give your employees access to the Employee Center in your account. If you haven't already set up employee records, see the following topics:

- [Adding an Employee](#)
- [Giving an Employee Access to NetSuite](#)
- [Assigning Roles to an Employee](#)

After employees log in to NetSuite, they can enter purchase requests and view and edit their purchase requests and purchase orders.

If you designate a particular employee as a supervisor or purchase approver for other employees, this person can approve or reject these employees' purchase requests.

Notifying a Supervisor or Approver About Required Approvals

You can notify supervisors or approvers by email when they need to approve expense reports, time entries, or purchase requests.

To notify supervisors of required approvals:

1. Go to Setup > Accounting > Accounting Preferences and click the **Time & Expenses** subtab.
2. Check the **Automatically Notify Supervisor** box.
3. Click **Save**.

Now, whenever employees submit expense reports, time entries, or purchase requests, NetSuite notifies their supervisors or approvers by email. Supervisors also receive an email notification if any changes are made to expense reports, time entries, or purchase requests prior to approval.

If the Approval Routing feature isn't enabled, the employee's immediate supervisor approves the expense report, time entry, or purchase request.

 **Note:** If you use custom approvals for time entries, the Automatically Notify Supervisor preference doesn't apply.

Using the Approval Routing Feature

When this Approval Routing feature is enabled, you can set up an approval hierarchy with a series of designated approvers. For more information, see the help topic [Approval Routing](#).

After approval routing is set up, note the following. All expense reports, time entries, and purchase requests must be entered through the Employee Center to maintain the hierarchy of approval routing. Employees with additional assigned roles should log in with their Employee Center role to enter expense reports, time entries, or purchase requests.

Using SuiteFlow for Purchase Approvals

If you use SuiteFlow to process purchases using custom workflows, notifying supervisors or approvers must be part of the workflow that you create. For more information, see the help topic [Using Custom SuiteFlow Workflows for Approval Routing](#).

Analytics and Reporting

NetSuite provides analytics so you can measure and analyze your company's headcount, hiring, turnover trends, and other employee reports:

- [Workforce Analytics](#)
- [Employee Reports and Workbooks](#)
- [HR Dashboard Components](#)

Workforce Analytics

This chapter includes the following help topics:

- [Workforce Analytics Overview](#)
- [Working With Headcount Analysis](#)
- [Working With Turnover Analysis](#)

Workforce Analytics Overview

Warning: This feature exposes personal information about employees and should only be enabled for users who are authorized to access all employee data.

Workforce Analytics gives HR the tools to measure and analyze your company's headcount, hiring, and turnover trends. It compiles your data and converts it into detailed HR metrics that you can see on the Headcount Analysis and Turnover Analysis pages.

Workforce Analytics is available to roles that have the Workforce Analytics permission. By default, NetSuite automatically adds this permission to the standard Chief People Officer (CPO) and HR Generalist roles, with View access.

You can also create custom roles that include this permission. For more information, see the help topics [Customizing or Creating NetSuite Roles](#) and [Workforce Analytics Permission Requirements](#).

Watch the following help video for information about using the Workforce Analytics feature:

[Working with Workforce Analytics](#)

Workforce Analytics enables you to:

- View headcount, hire, and turnover trends in your company. For more information, see the help topic [Headcount Analysis Trends](#).
- Get a quick overview of which employees are leaving and why. For more information, see the help topic [Turnover Analysis Trends](#).
- Filter and segment data by gender, employee type, department, location, or subsidiary (with NetSuite OneWorld). You can also filter by subdepartment and sublocation.
- View custom snapshots of headcount and turnover trends for a specific quarter. For more information, see the help topics [Headcount Analysis Snapshots](#) and [Turnover Analysis Snapshots](#).

Note: Workforce Analytics supports standard fields such as hire date and termination/release date, but doesn't use custom fields.

Working With Headcount Analysis

Headcount analysis lets you track headcount, hire, and turnover trends in your company. It includes all active and inactive employees from their hire dates onward. Employees who've been terminated aren't included after their termination dates. To access the Headcount Analysis page, go to Reports > Employees/HR > Headcount Analysis.

Headcount Analysis Trends

There are two headcount analysis trends: headcount trend, and hires and turnover trend. These trends show your year-to-date headcount, hiring, and turnover for each month of the selected year. Headcount

includes all active and inactive employees with a hire date. It also includes employees whose termination or release date was before their hire date.

To access the headcount analysis trends, go to Reports > Employees/HR > Headcount Analysis. At the top of the page, click the year that you want to view.

Copy to clipboard

- Select the year that you want to view.
- Segment data by department, location, gender, or (with NetSuite OneWorld) subsidiary. You can also break down department and location by subdepartment and sublocation if needed.
- Choose how you'd like to filter the data.
- The Headcount Trend includes all non-terminated employees to the end of each month for the selected year and segments.
Hover over each bar to see the total headcount for each month.

- 5 The Hires and Turnovers Trend shows all employees hired or terminated each month in the selected year and segments. Hover over each bar to see the total hires and terminations for that month.
- 6 This table shows the data from the trends.

The left side shows the total employee headcount at the end of each month, plus the number and percentage of hires and terminations.

The right side shows the headcount data for the selected segments and filters. For example, if you select **Location (All)**, you'll see the total headcount for each location.

To copy and paste the data into other analysis tools, click **Copy to Clipboard**.

Headcount Analysis Snapshots

There are two headcount analysis snapshots: hires and turnovers, and gender. These snapshots allow you to analyze quarterly headcount trends.

To access the headcount analysis snapshots, go to Reports > Employees/HR > Headcount Analysis. At the top of the page, click the quarter that you want to view.

Note: Each quarter represents a completed quarter, and not a quarter-to-date.

- 1 Select the quarter that you want to view.
- 2 Segment data by department, location, gender, tenure, or (with NetSuite OneWorld) subsidiary. You can also break down department and location by subdepartment and sublocation if needed.

	 Note: When you segment by tenure, an employee's tenure starts on the Hire Date .
3	Choose how you want to filter the data.
4	The Hires and Turnovers Snapshot lets you compare the hiring and turnover rates across different segments in your company. The left side shows the employee headcount as of the last day in the period for the selected segments. The right side shows how many employees were hired and terminated during the period for the selected segments.
5	Switch between the different snapshots.
6	This table shows the data from the snapshots. To copy and paste the data into other analysis tools, click Copy to Clipboard .
7	The Gender Snapshot shows the numbers and percentages of each gender as of the last day in the period for selected segments. The left side shows total headcount, and the right side shows male and female headcount percentages.

Working With Turnover Analysis

Turnover analysis helps you see which employees are leaving your company and why. This can help you spot challenges, improve the employee experience, and plan better strategies. Turnover analysis includes all active and inactive employees with a termination or release date for each month of the current and previous year. Employees without a hire date on their record aren't included.

To access the Turnover Analysis page, go to Reports > Employees/HR > Turnover Analysis.

 **Note:** To use turnover analysis, make sure your account has the Termination Reasons Tracking feature enabled. For more information, see [Termination Reason Tracking](#).

Turnover Analysis Trends

There are two turnover analysis trends: turnover trend and turnover reasons trend. These trends analyze year-to-date headcount, hire, and turnover trends for employees in your company, for each month of the selected year.

To access the turnover analysis trends, go to Reports > Employees/HR > Turnover Analysis. At the top of the page, click the year that you want to view.

Copy to clipboard

- Select the year that you want to view.
- Segment data by department, location, gender, termination type, or (with NetSuite OneWorld) subsidiary. You can also break down department and location by subdepartment and sublocation if needed.
- Choose how you want to filter the data.
- The Turnover Trend shows all employees with termination or release dates each month in the selected year and segments.
Employees with a termination or release date in a month count toward that month's turnover.
Hover over each bar to the total turnover for each month.
- The Turnover Reasons Trend breaks down all termination reasons for each selected type with at least one terminated employee. The data is shown by month for the selected year and segments, with the highest turnover reason at the top.
- This table shows the data from the trends.
The left side shows total employee headcount at the end of each month, plus the number and percentage of hires and terminations.
The right side shows the headcount data for the selected segments and filters. For example, if you select **Location (All)**, you'll see the total headcount for each location.
To copy and paste the data into other analysis tools, click **Copy to Clipboard**.

Turnover Analysis Snapshots

There are three turnover analysis snapshots: hires and turnovers, gender, and turnover types (voluntary, involuntary). The turnover analysis snapshots allow you to analyze quarterly turnover trends.

To access the turnover analysis snapshots, go to Reports > Employees/HR > Turnover Analysis. At the top of the page, click the quarter that you want to view.

Note: Each quarter represents a completed quarter, not a quarter-to-date.

1	Select the quarter you want to view.
2	Segment data by department, location, gender, tenure, or (with NetSuite OneWorld) subsidiary. You can also break down department and location by subdepartment and sublocation if needed.
	 Note: When you segment by tenure, an employee's tenure starts on the Hire Date .
3	Choose how you want to filter the data.
4	The Hires and Turnovers Snapshot for turnover analysis lets you view employee changes for a specific period. The left side shows the employee headcount as of the last day in the period for the selected segments. The right side shows how many employees were hired and terminated during the period.
5	Toggle between the different snapshots.
6	This table reflects the data from the snapshots. To copy and paste the data into other analysis tools, click Copy to Clipboard.
7	The Gender Snapshot for turnover analysis shows turnover by gender. It compares your company's gender distribution to that of terminated employees, so you can spot any disproportional terminations in a gender group for the selected segments.
8	The Turnover Types Snapshot shows turnover by type, like voluntary-regretted and involuntary-unregretted. It shows employee headcount at the end of the period and compares it to turnover types from the start to end date for the selected segments.

Employee Reports and Workbooks

NetSuite provides several employee-related reports and workbooks:

- [Time and Billables Reports](#)
- [Time-Off Management Reports and Workbooks](#)
- [Recruiting Reports](#)
- [Employee Change History Report](#)
- [Employee Saved Search Reports](#)
- [Customizing Employee Reports](#)
- [Employee Bonus History and Current Compensation Workbook](#)
- [Performance Management Saved Searches and Workbooks](#)

Time and Billables Reports

The following standard time and billables reports are available in NetSuite. Some reports are available only if you use Project Management.

- [Earned Value by Project Report](#)
- [Time Entry Exceptions Report](#)
- [Time by Employee/Item/Customer Reports](#)
 - [Time by Employee Summary Report](#)
 - [Time by Employee Detail Report](#)
 - [Time by Customer Summary Report](#)
 - [Time by Customer Detail Report](#)
 - [Time by Item Summary Report](#)
 - [Time by Item Detail Report](#)
- [Current Backlog By Resource Report](#)
- [Estimated Profitability by Project Report](#)
- [Unbilled Cost by Customer Summary Report](#)
- [Unbilled Cost by Customer Detail Report](#)
- [Unbilled Time by Customer Summary Report](#)
- [Unbilled Time by Customer Detail Report](#)

Time-Off Management Reports and Workbooks

The Time-Off Management feature includes reporting capabilities you can use to retrieve, present, and analyze your time-off data.

The following reports are included with the Time-Off Management feature:

- [Available Time-Off Report](#)
- [Time-Off Balance Summary Report](#)

- [Time-Off Balance Details Report](#)
- [Time-Off Analysis Workbook](#)
- [Time-Off Tracking Reports](#)

If no standard report fits your needs, you can create an ad hoc report. For more information, see the help topic [Time-Off Management Ad Hoc Reports](#).

You can also customize these standard reports in the Report Builder by clicking **Customize** on the results page. For more information, see the help topics [Report Builder Interface](#) and [Report Customization](#).

Available Time-Off Report

The standard Available Time-Off report summarizes the total number of used and scheduled time-off, and the available time-off based on usage. It also summarizes the time-off for the entire year across all classes, departments, locations, and subsidiaries. You can use this report to quickly see an employee's available time-off balance as of today.

To view the Available Time-Off report, go to Reports > Employees/HR > Available Time-Off.

This report displays the following for each employee:

- **Time-Off Type**
- **Annual Entitlement** - The total available time-off for the current year. It includes all future accruals for the current year when the **Days Available Includes Future Accruals** box on the Time-Off Plan page is selected. For more information, see the help topic [Creating a Time-Off Plan](#).
- **Used** - The amount of time-off that's been used as of today.
- **Scheduled** - The amount of time-off that's been requested and approved but not yet taken.
- **Available Now** - The total remaining time-off for the current year.

To customize this report and display it in the Report Builder, click **Customize**. For more information, see the help topic [Report Customization](#).

The following selections are included for customization on the Available Time-Off report:

- Available Time-Off:
 - Annual Entitlement - The employee's total time-off for the current year. This is based on how many days or hours the employee is entitled to for the particular time-off type.
 - Available Now - The employee's remaining time-off for the current year.
 - Scheduled - The amount of time-off, in hours, that has been requested and approved but not yet taken.
 - Used - The amount of time-off, in hours, that's been used this year.
- Time-Off Change Type:
 - Name - The name of the time-off change type. For example, approved time-off request, manual adjustment, or automatic accrual.
- Time-Off Type:
 - Display Name - The time-off type display name.
 - Inactive - Indicates when a time-off type is inactive.
 - Increment Unit - Indicates whether the minimum increment of time-off is in days or hours.
 - Minimum Increment - The minimum increment of time-off required.

- Name - The name of the time-off type.
- Track Only - Indicates when a time-off type is track only.

Time-Off Balance Summary Report

The Time-Off Balance Summary report displays the amount of time-off employees have earned up to the current date. This is based on the rules defined in the plan assigned to them. This report is useful for accounting purposes when you need to check an employee's available time-off balance on a specific date.

To view the Time-Off Balance Summary report, go to Reports > Employees/HR > Time-Off Balance Summary.

This report displays the following for each employee:

- **Time-Off Type** - The employee's name and the time-off types available to them.
- **Carried Over** - If an employee is entitled to carry over unused time from last year, it shows up here.
- **Earned** - The number of hours that's been accrued as of today for each time-off type.
- **Used** - The amount of used time-off for each time-off type in the plan.
- **Carryover Expiry** - If any carryover has expired, it shows up here.
- **Balance** - Shows the balance as of today.

Note: If you need to search for a balance summary between specific dates, keep in mind the standard report doesn't show year-end expiry values. To get an accurate balance summary, set the start date to January 1st and the end date to whenever you want to see the balance. If needed, you can customize the report to include year-end expiry.

To customize this report and display it in the Report Builder, click **Customize**. For more information, see the help topic [Report Customization](#).

The following selections are included for customization on the Time-Off Balance Summary report:

- Time-Off Balance Adjustments:
 - Amount (Excluding year-end expiry) - Shows the balance without year-end expiry. Use this when running a report for a single year.
 - Amount (Including year-end expiry) - This includes year-end expiry. Any positive balances at year-end are set to zero. Use this for reports across multiple years, and with Expire to see the full balance expiry at the end of the plan period. It also shows the carryover credit at the start of the plan period.
 - Carried Over - If an employee can carry over unused time from last year, it shows up here.
 - Carryover Expiry - If any carryover expired, it shows up here.
 - Date Applied - The date the change was applied. Add this if you want to show each time-off change individually.
 - Earned - The number of hours that's been accrued for the selected date range.
 - Expired - The amount of time-off that's expired at year-end for the selected date range.
 - Used - The amount of time-off used for each type in the selected date range.
- Time-Off Change Type:
 - Name - The name of the time-off change type. For example, approved time-off request, manual adjustment, or automatic accrual.

- Time-Off Type:
 - Display Name - The time-off type display name.
 - Inactive - Indicates when a time-off type is inactive.
 - Increment Unit - Indicates whether the minimum increment of time-off is in days or hours.
 - Minimum Increment - The minimum increment of time-off needed for the time-off type.
 - Name - The name of the time-off type.
 - Track Only - Indicates when a time-off type is track only.

Time-Off Balance Details Report

The Time-Off Balance Details report contains a complete breakdown of each employee's time-off changes. This report's helpful when you need more information than what's on the Time-Off Balance Summary report. It includes an entry for each adjustment made to an employee's time-off. This covers the date of the change and the type of adjustment (like a manual increase or usage). It also shows the type of time-off the adjustment is for (like vacation time or sick leave).

To view the Time-Off Balance Details report, go to Reports > Employees/HR > Time-Off Balance Details.

This report displays the following for each employee:

- **Time-Off Type** - Shows the employee's name and the time-off types available to them.
- **Date** - The date the change was applied.
- **Adjustment Type** - Shows if the adjustment is from regular use or a manual increase or decrease.
- **Amount** - The amount of time-off that's debited or credited.
- **Balance** - Shows the current balance.
- **Accrual Rate** - If the time-off change is based on hours worked, shows the accrual rate.
- **Hours Worked** - If the time-off change is based on hours worked, shows the hours worked reported on the employee's approved time entry.

 **Note:** If you need to search for a balance summary between specific dates, keep in mind the standard report doesn't show year-end expiry values. To get an accurate balance summary, set the start date to January 1st and the end date to whenever you want to see the balance. If needed, you can customize the report to include year-end expiry

To customize this report and display it in the Report Builder, click **Customize**. For more information, see the help topic [Report Customization](#).

The following selections are included for customization on the Time-Off Balance Details report:

- Time-Off Balance Adjustments:
 - Amount (Including year end expiry) - This includes year-end expiry. Any positive balances are set to zero on December 31st, and carryover is credited back on January 1st.
 - Amount (Excluding year end expiry) - Shows the balance without year-end expiry. Use this for reports within a single year.
 - Amount - Shows a running total of an employee's balance.
 - Carried Over - If an employee carried over unused time-off from last year, it shows up here.
 - Carryover Expiry - If any carryover expired, it shows up here.
 - Date Applied - The date the change was applied.

- Earned - The number of hours that's been accrued as of today.
 - Expired - The amount of time-off that's expired at year end.
 - Used - The amount time-off used for each type.
- Time-Off Change Type:
 - Name - The name of the time-off change type. For example, manual adjustment or automatic accrual.
- Time-Off Type:
 - Display Name - The time-off type display name.
 - Inactive - Indicates when a time-off type is inactive.
 - Increment Unit - Indicates whether the minimum increment of time-off is in days or hours.
 - Minimum Increment - The minimum increment of time-off needed for the type.
 - Name - The name of the time-off type.
 - Track Only - Indicates when a time-off type is track only.

Time-Off Analysis Workbook

SuiteAnalytics Workbook offers many workbook and dataset templates, each with built-in source data, criteria, pivot tables, and charts.

This section contains the information for the SuiteAnalytics Actual Time Analysis workbook in NetSuite. For more information about SuiteAnalytics Workbook, see the help topic [Workbook and Dataset Templates](#).

- [Time-Off Analysis Dataset](#)
- [Time-Off Analysis Workbook](#)

Time-Off Analysis Dataset

This dataset combines fields from the Time-Off Change and Employee record types so you can assess time-off information for your organization. It forms the source data for the [Time-Off Analysis Workbook](#).

Dataset Configuration

The Time-Off Analysis dataset combines fields from two record types and multiple criteria filters. To edit the dataset, see the help topic [Defining a Dataset](#).

Root Record Type	Joined Record Type	Custom Formula Fields	Data Grid	Criteria Filters
Time-Off Change	Employee	(none)	The following fields are included in the dataset. Time-Off Change: ■ Accrual Rate ■ Amount ■ Date Applied ■ Description ■ Employee	(none)

Root Record Type	Joined Record Type	Custom Formula Fields	Data Grid	Criteria Filters
			- Time-Off Change Type - Time-Off Type Employee: - Category - Include in KPI - Name	

Time-Off Analysis Workbook

With the Time-Off Analysis workbook, you can check time-off information for your organization. The workbook works with the Time-Off Balance Details and Summary reports by pulling balance totals into two ready-to-use pivot tables. The pivot tables show time-off balances by employee and type, plus time-off activities by employee, year, and type. You can also use the workbook data to make your own charts and pivots to spot trends or issues.

The following Pivot Tables and Charts are predefined in the Time-Off Analysis workbook:

- **Time-Off Balance** - Shows employees' time-off balances by time-off type.
- **Time-Off Activity** - Summarizes employees' time-off activity by type, breaking totals down into year-end expiry, carryovers, accruals, usage, and manual adjustments.

For more information about SuiteAnalytics Workbooks, see the help topic [SuiteAnalytics Workbook Overview](#).

Time-Off Tracking Reports

The Time-Off Tracking SuiteApp comes with saved searches you can use as reports

Important: The saved searches aren't public by default. Administrators need to customize them to set who can access each one and where they show up in the Reports menu. For more information, see [Customizing Time-Off Tracking Reports](#).

You can access the following saved searches through their own menu options at Reports > Time-Off:

- [Approved Time-Off Requests Saved Search](#)
- [Employees without Time-Off Plans Saved Search](#)
- [Pending Time-Off Requests Saved Search](#)
- [Rejected Time-Off Requests](#)
- [Time-Off Plan Assignment Saved Search](#)
- [Upcoming Approved Time-Off \(1 Month\) Saved Search](#)
- [Work Calendars Saved Search](#)

You can print or export Time-Off Tracking saved search results to share them as reports. Exporting works for Excel, CSV, and PDF. Use the print and export icons at the top of the results list. You can also email saved search results to other users. To do this, see the help topic [Saved Search Email](#).

For more information about saved searches, see the help topic [Saved Searches](#).

Approved Time-Off Requests Saved Search

The Approved Time-Off Requests saved search lists active employees with approved requests. Results are sorted by employee name, then start date and time-off type.

Employees without Time-Off Plans Saved Search

The Employees without Time-Off Plans saved search lists active employees who don't have a time-off plan. Results are sorted by employee name. In the list, click **Edit** for any employee to assign them a plan.

Pending Time-Off Requests Saved Search

The Pending Time-Off Requests saved search lists active employees with requests waiting for approval. Results are sorted by employee name, then start date and time-off type.

Rejected Time-Off Requests

The Rejected Time-Off Requests saved search lists active employees with rejected requests. Results are sorted by employee name, then start date and time-off type.

Time-Off Plan Assignment Saved Search

The Time-Off Plan Assignment saved search lists the plan assigned to each active employee. Results are sorted by plan, job, and employee name. In the list, click **Edit** for any employee to update their plan.

Upcoming Approved Time-Off (1 Month) Saved Search

The Upcoming Approved (1 Month) Time-Off saved search lists active employees with approved requests starting in the next month. Results are sorted by employee name, then start date and time-off type.

Work Calendars Saved Search

The Work Calendars saved search lists work calendar assignments for active employees. Results are sorted by work calendar and employee name. In the list, click **Edit** for any employee to update their time-off plan.

Customizing Time-Off Tracking Reports

You can customize the following Time-Off Tracking Reports Templates to create unique saved searches:

- TEMPLATE Approved Time-Off Requests
- TEMPLATE Pending Time-Off Requests
- TEMPLATE Rejected Time-Off Requests
- TEMPLATE Upcoming Approved Time-Off (1 Month)
- TEMPLATE Time-Off Plan Assignment
- TEMPLATE Employees without Time-Off Plans
- TEMPLATE Work Calendars

Customizing a Time-Off Tracking Report Template

To customize a time-off tracking report template:

1. Go to Lists > Search > Saved Searches.
2. Next to the template that you want to customize, click **Edit**.
3. In the **Search Title** field, remove "TEMPLATE" from the name of the search, and add a new name if you want.
4. In the **Audience** subtab, from the **Roles** list, select the roles that should have access to the saved search.
5. If needed, update any other settings (like search criteria in the **Criteria** subtab).
6. Click **Save As**.

Creating a Center Category for the Saved Search

To let people access time-off tracking reports from the menu, you'll need to create a center category.

To create a center category for the saved search:

1. Go to Customization > Centers and Tabs > Center Categories > New.
2. Set the following values:
 - Set the **Label** field to **Time-Off**.
 - In the **Center Type** list, select **Classic Center**.
 - In the **Center Tab** list, select **Reports**.
3. In the table, depending on the report that was used to create the saved search, set the following values:

For each of the following reports:	Set the Link column to:	Set the Label column to:
Approved Time-Off Requests	Approved Time-Off Requests Results	Approved Time-Off Requests
Pending Time-Off Requests	Pending Time-Off Requests Results	Pending Time-Off Requests
Rejected Time-Off Requests	Rejected Time-Off Requests Results	Rejected Time-Off Requests
Upcoming Approved Time-Off (1 Month)	Upcoming Approved Time-Off (1 Month) Results	Upcoming Approved Time-Off (1 Month)
Time-Off Plan Assignment	Time-Off Plan Assignment Results	Time-Off Plan Assignment
Employees without Time-Off Plans	Employees without Time-Off Plans Results	Employees without Time-Off Plans
Work Calendars	Work Calendars Results	Work Calendars

4. Click **Save**.

Now you can access the reports at Reports > Time-Off.

Recruiting Reports

The Recruiting Reports SuiteApp gives you job requisition reports as NetSuite saved searches. When customized, you'll find the saved searches in their own spot in the Reports menu.

 **Note:** Right now, the Recruiting Reports SuiteApp only supports US English.

Prerequisite

Before you install the Recruiting Reports SuiteApp, go to Setup > Company > Enable Features. Click the **Employees** subtab and check the **Job Requisitions** box under HR Information System.

Installation

To install Recruiting Reports, go to Customization > SuiteBundler > Search & Install Bundles.

Use the following information to search for the SuiteApp:

- Bundle Name — **Recruiting Reports**
- Bundle ID — **167235**

Recruiting Reports is a managed bundle, so it updates automatically. You'll get new fixes and features after the SuiteApp updates in your account.

For more information about installing SuiteApps, see the help topic [Installing a Bundle](#).

Recruiting Reports Saved Searches

 **Important:** The saved searches aren't public by default. Administrators need to customize them to set who can access each and where they appear in the Reports menu. For more information, see [Customizing Recruiting Reports](#).

You can access the following saved searches through their own menu options at Reports > Recruiting:

- **Open Job Requisitions** - Lists active job requisitions with no close dates and Status set to **Open**. Results are sorted by target hire date and job.
- **Pending Job Requisitions** - Lists active job requisition records that have no close dates and with Status set to **Pending Approval**. Results are sorted by target hire date and job.
- **Closed Job Requisitions** - Lists active job requisition records that have close dates and with Status set to **Closed**. Results are sorted by close date and job.
- **Filled Job Requisitions** - Lists active job requisition records that have Status set to **Filled**. Results are sorted by target hire date and job.
- **On-Hold Job Requisitions** - Lists active job requisition records that have no close dates and with Status set to **On-Hold**. Results are sorted by target hire date and job.
- **Overdue Job Requisitions** - Lists active job requisition records that have no close dates. The Status must be **Open**, **Pending Approval**, or **On-Hold**. Results are sorted by target hire date, close date, and job.

 **Note:** In any recruiting report saved search, click **View** or Job Requisition ID to see a job requisition record.

You can print or export saved search results to share them as reports. Exporting works for Excel, CSV, and PDF. Use the print and export icons at the top of the results list. You can also email saved search results to others. To do this, see the help topic [Saved Search Email](#).

For more information about saved searches, see the help topic [Saved Searches](#).

Customizing Recruiting Reports

You can customize the following Recruiting Reports Templates to create unique saved searches:

- TEMPLATE Open Job Requisitions
- TEMPLATE Pending Job Requisitions
- TEMPLATE Closed Job Requisitions
- TEMPLATE Filled Job Requisitions
- TEMPLATE On-Hold Job Requisitions
- TEMPLATE Overdue Job Requisitions

Customizing a Recruiting Report Template

Use the following procedure to customize a recruiting report template.

To customize a recruiting report template:

1. Go to Lists > Search > Saved Searches.
2. Next the template that you want to customize, click **Edit**.
3. In the **Search Title** field, remove TEMPLATE from the name and add a new one to the search.
4. In the **Audience** subtab, from the **Roles** list, select the roles that should have access to the saved search.
5. If needed, update any other settings (like search criteria in the Criteria subtab).
6. Check the **Show in Menu** box.
7. Click **Save As**.

Creating a Center Category for the Saved Search

To grant access to the recruiting reports from menu links, you create a center category.

To create a center category for the saved search:

1. Go to Customization > Centers and Tabs > Center Categories > New.
2. Set the following values:
 - Set the **Label** field to **Recruiting**.
 - In the **Center Type** list, select **Classic Center**.
 - In the **Center Tab** list, select **Reports**.
3. In the table, depending on which report you used for the saved search, enter the following values:

For each of the following reports:	Set the Link column to:	Set the Label column to:
Open Job Requisitions	Open Job Requisitions Results	Open Job Requisitions
Pending Job Requisitions	Pending Job Requisition Results	Pending Job Requisitions
Closed Job Requisitions	Closed Job Requisition Results	Closed Job Requisitions
Filled Job Requisitions	Filled Job Requisition Results	Filled Job Requisitions
On-Hold Job Requisitions	On-Hold Job Requisition Results	On-Hold Job Requisitions

Overdue Job Requisitions	Overdue Job Requisitions Results	Overdue Job Requisitions
--------------------------	----------------------------------	--------------------------

4. Click **Save**.

You can now access the reports at Reports > Recruiting.

Employee Change History Report

The Employee Change History report makes it easy to audit changes to employee data. You can use this report to check changes across lots of employees for a certain date range or specific fields. For example, HR and Payroll teams can use this report to get the following information:

- An HR Administrator wants to see all changes to employee data to find out what was changed and when.
- A Payroll Administrator wants to see changes to payroll settings between the first and last day of the year. This helps answer questions from employees and tax agencies about payroll and tax filing.

To access the report, go to Reports > Employees/HR > Employee Change History.

You can customize this report in the Report Builder by clicking Customize on the results page. For more information, see the help topics [Filtering Data on Reports](#) and [Adding, Removing, or Reordering Report Columns](#).

Note: This report doesn't support reporting by period even when the Report by Period preference is set to All Reports. The Report by Period preference can be configured at Home > Set Preferences, the Analytics subtab.

Employee Saved Search Reports

The Employee Reports SuiteApp needs SuitePeople HR and gives you access to employee reports as NetSuite saved searches. For more information, see [SuitePeople Overview](#)

Note: Right now, the Employee Reports SuiteApp only supports US and UK English.

Prerequisites

Ensure the required features are enabled to install the Employee Reports SuiteApp (bundle ID 167330). Go to Setup > Company > Setup Tasks > Enable Features.

- On the **Employees** subtab, under HR Information System, check the boxes for **Compensation Tracking**, **Job Management**, and **Termination Reason Tracking**.
- On the **SuiteCloud** subtab, under SuiteScript, check the **Server SuiteScript** box.

Installation

To install Employee Reports, go to Customization > SuiteBundler > Search & Install Bundles.

Use the following information to search for the SuiteApp:

- Bundle Name — **Employee Reports**

■ Bundle ID — **167330**

Employee Reports is a managed bundle and is automatically updated. See the help topic [Installing a Bundle](#) for more information.

Accessing Employee Saved Search Reports

Important: The saved searches installed with the SuiteApp are private. An Administrator must customize the saved searches to define the roles that can access saved searches and their location in the Reports menu. For more information, see [Customizing Employee Reports](#).

Access the following saved searches through their own menu options at Reports > Employees/HR:

Saved Search	Required Feature
Average Salary by Ethnicity Saved Search	Compensation Tracking
Average Salary by Gender Saved Search	Compensation Tracking
Average Salary by Job Saved Search	Job Management Compensation Tracking
Employee Birthday Report Saved Search	–
Employee Birthdays by Month Saved Search	–
Employee Roster Saved Search	–
Employees by Age Range Saved Search	–
Employees by Base Wage Type Saved Search	Compensation Tracking
Employees by Ethnicity Saved Search	–
Employees by Gender Saved Search	–
Employees by Hire Date Saved Search	–
Employees by Job Saved Search	Job Management
Employees With Incomplete Compensation Data Saved Search	Compensation Tracking
Employees Without Supervisors Saved Search	–
New Hires (Last 90 Days) Saved Search	–
New Hires by Ethnicity (last 12 months) Saved Search	–
New Hires by Gender (last 12 months) Saved Search	–
Termination Reasons (Trends) Saved Search	Termination Reason Tracking
Upcoming New Hires Saved Search	–
Upcoming Terminations Saved Search	–

You can print or export saved search results. Exporting works for Excel, CSV, and PDF. Use the print and export buttons at the top of the results list. For more information, see the help topic [Exporting Search Results](#).

You can also email saved search results to other users. See the help topics [Saved Search Email](#) and [Saved Searches](#).

Note: When any of the Employee Reports saved search returns a single result, NetSuite opens the record if the user has permission to view it. To return search results as a list with only one record in the results, go to Set Preferences > Analytics > Search. Check the **Show List When Only One Result** box, and then save.

Average Salary by Ethnicity Saved Search

This search lists the average annual base wages of active employees by ethnic group. Results are sorted by ethnic group, average base wage, and employee count. In the results list, click any ethnicity name to see more details.

Average Salary by Gender Saved Search

This search lists the average annual base wages of active employees by gender group. Results are sorted by gender group, average base wage, and employee count. In the results list, click any gender name to see more details.

Average Salary by Job Saved Search

This search lists the average annual base wages of active employees by job group. Results are sorted by job group, average base wage, and employee count. In the results list, click any job name to view more details.

Employee Birthday Report Saved Search

This search lists all active employees with their birth date, age, and other employee details. Results are sorted by birth date and by employee name.

Employee Birthdays by Month Saved Search

This search lists the number of active employees born in each calendar month. In the results list, click the name of each month to see more details.

Employee Roster Saved Search

This search lists all active employees in ascending alphabetical order by last name. Results includes job, supervisor, class, department, location, subsidiary, and country details for each employee. The employee name is linked to the employee record.

Employees by Age Range Saved Search

This search lists the number of active employees by age range. In the results list, click the name of each age range group to view more details.

Employees by Base Wage Type Saved Search

This search lists the number of active employees by base wage type. In the results list, click the name of each base wage type to see more details.

Employees by Ethnicity Saved Search

This search lists the number of active employees by ethnic group. In the results list, click any ethnic group to view more details.

Employees by Gender Saved Search

This search lists all active employees sorted by gender and hire date.

Employees by Hire Date Saved Search

This search lists all active employees by hire date, from most recent to least recent.

Employees by Job Saved Search

This search lists the number of active employees by job. In the results list, click any job to see more details.

Employees With Incomplete Compensation Data Saved Search

This search lists active employees who are missing at least one of the following information in their employee record:

- base wage
- base wage type
- compensation currency

In the results list, the employee name is linked to the employee record.

Employees Without Supervisors Saved Search

This search lists active employees without a supervisor on record. In the results list, the employee name is linked to the employee record.

New Hires (Last 90 Days) Saved Search

This search lists active employees hired within the last 90 days. Results are sorted by hire date, from most recent to least recent. Results are sorted by hire date, from most recent to least recent.

New Hires by Ethnicity (last 12 months) Saved Search

This search lists the number of active employees from each ethnic group who have been hired within the last 12 months. In the results list, click any ethnic group to view more details. In the detailed report, results are sorted by hire date, from most recent to least recent.

New Hires by Gender (last 12 months) Saved Search

This search lists the number of active employees from each gender group who have been hired within the last 12 months. In the results list, click any gender group to see more details. In the detailed report, results are sorted by hire date, from most recent to least recent.

Termination Reasons (Trends) Saved Search

This search lists reasons cited by inactive employees for terminating their employment, and the number of times each reason is cited. In the results list, click any termination reason to view more details.

Upcoming New Hires Saved Search

This search lists employees with hire dates that after the current date. Results are sorted by hire date, job, and location.

Upcoming Terminations Saved Search

This search lists active employees with termination or release dates that are after the current date. Results are sorted by termination date, job, and location.

Customizing Employee Reports

You can customize the following Employee Reports Templates to create unique saved searches:

- TEMPLATE Average Salary by Ethnicity
- TEMPLATE Average Salary by Gender
- TEMPLATE Average Salary by Job
- TEMPLATE Employee Birthday Report
- TEMPLATE Employee Birthdays by Month
- TEMPLATE Employee Roster
- TEMPLATE Employees by Age Range
- TEMPLATE Employees by Base Wage Type
- TEMPLATE Employees by Ethnicity
- TEMPLATE Employees by Gender
- TEMPLATE Employees by Hire Date

- TEMPLATE Employees by Job
- TEMPLATE Employees with Incomplete Compensation Data
- TEMPLATE Employees without Supervisors
- TEMPLATE New Hires (Last 90 Days)
- TEMPLATE New Hires by Ethnicity (Last 12 months)
- TEMPLATE New Hires by Gender (Last 12 months)
- TEMPLATE Termination Reasons (Trends)
- TEMPLATE Upcoming New Hires
- TEMPLATE Upcoming Terminations

Customizing an Employee Report Template

Use the following procedure to customize an employee report template.

To customize an employee report template:

1. Go to Lists > Search > Saved Searches.
2. Next to the template that you want to customize, click **Edit**.
3. In the **Search Title** field, remove TEMPLATE from the name of the search and add a new one.
4. In the **Audience** subtab, from the **Roles** list, select the roles that should have access to the saved search.
5. If needed, update any other settings (like search criteria in the Criteria subtab).
6. Click **Save As**.

Tip: After you create your new saved search, copy its ID from the ID column on the Saved Searches page.

Adding a Menu Link for a Saved Search

After you customize a template and create a new saved search, you can add a menu link to access the saved search.

To add a menu link for a saved search:

1. Go to Customization > Scripting > Scripts.
2. Next to **ER Redirect Su**, click **View**.
3. Click the **Deployments** subtab. For each deployment that matches the employee report templates you customized, do the following:
 - a. Click the deployment. For example, if you created a customized saved search based off of the Employee Birthday Report, click the **Employee Birthday** deployment.
 - b. Click **Edit**.
 - c. Click the **Parameters** subtab. In the **View** field, enter the ID for the corresponding saved search that you customized earlier. For example, the ID for the customized Employee Birthday Report might be customsearch_er_employee_bday_2.

Note: To find the ID for the saved search, go to Lists > Search > Saved Searches. The ID appears beside the saved search in the ID column.

- d. In the **Audience** subtab, from the **Roles** list, select the roles that should have access to the saved search.
4. Check the **Deployed** box.
5. Click **Save**.

You can now find the customized saved search by going to Reports > Employees/HR.

Employee Bonus History and Current Compensation Workbook

SuiteAnalytics Workbook offers many workbook and dataset templates, each with predefined source data, criteria, pivot tables, and charts.

This section contains the information for the SuiteAnalytics Employee Bonus History and Current Compensation workbook in NetSuite. For more information about SuiteAnalytics Workbook, see the help topic [Workbook and Dataset Templates](#).

Employee Bonus History and Current Compensation Dataset

This dataset pulls fields from the Employee and Bonus records. It lets you see a summary of employee's current base pay and their bonus history. It's the source data for the [Employee Bonus History and Current Compensation Workbook](#).

Dataset Configuration

As you use this workbook template, keep in mind that Advanced Employee Permissions can affect which employee fields you can see. Advanced Employee Permissions don't affect bonus fields, but employee and subsidiary restrictions on your role can limit your access to bonus information.

Root Record Type	Joined Record Type	Custom Formula Field	Data Grid	Criteria Filters
Employee	Bonus	(none)	The following fields are included in the dataset. Employee: ■ Base Wage ■ Base Wage Type ■ Compensation Currency ■ Entity ID Bonus: ■ Amount ■ Award Date	(none)

Root Record Type	Joined Record Type	Custom Formula Field	Data Grid	Criteria Filters
			- Bonus Type - Currency	

Performance Management Saved Searches and Workbooks

The Performance Management feature includes saved searches and a workbook you can use to retrieve, present, and analyze your performance management data. The following saved searches and workbook are included with the Performance Management feature:

- [Performance Management Saved Searches](#)
- [Performance Management Workbook](#)

Compliance

NetSuite offers these features and SuiteApps to help you meet government and industry requirements:

- [Workplace Incident Tracking](#)
- [Affordable Care Act \(ACA\) Reporting](#)
- [Government-Issued ID Tracking](#)
- [Benefits Tracking](#)
- [Workforce Case Interaction](#)

Workplace Incident Tracking

 **Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

The Health and Safety SuiteApp enables you to record and report on health and safety incidents in the workplace. With this SuiteApp's reporting features, you can create any reports you need to document your compliance with regulatory requirements in your jurisdiction. This SuiteApp provides three versions of the workplace incident form:

- Occupational Safety and Health Administration (OSHA) 301 form for companies in the United States
- Reporting of Injuries, Diseases and Dangerous Occurrences Regulations (RIDDOR) form for companies in the United Kingdom
- General incident reporting form for other jurisdictions

For more information about this SuiteApp, see the following topics:

- [Set up the Health and Safety SuiteApp](#)
- [Working With Workplace Incidents](#)
- [Adding a Workplace Incident](#)
- [Generating OSHA Workplace Incident Logs and Summaries](#)

Set up the Health and Safety SuiteApp

 **Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

To set up the Health and Safety SuiteApp, see the following topics:

- [Prerequisites for the Health and Safety SuiteApp](#)
- [Install the Health and Safety SuiteApp](#)
- [Health and Safety SuiteApp Permissions](#)
- [Enabling the Workplace Incident Forms](#)
- [Setting the Default Folder for Attachments](#)
- [Configure Your Company Settings for Incident Tracking](#)

 **Note:** Currently, the Health and Safety SuiteApp supports only the US English language.

Prerequisites for the Health and Safety SuiteApp

Before you install the Health and Safety SuiteApp, complete the following prerequisites:

- Upgrade to NetSuite 2016.2 or later versions that support SuiteScript 2.0.
- Enable the features in the following table:

Subtab	Feature	Description
SuiteCloud	Custom Records	Lets you access custom records provided by the SuiteApp

Subtab	Feature	Description
	Server SuiteScript	Lets you run the scripts provided by the SuiteApp

Install the Health and Safety SuiteApp

Install the Health and Safety SuiteApp:

- Bundle Name: **Health and Safety**
- Bundle ID: 109485

This is a managed bundle, so it's updated automatically. You'll get the latest fixes and improvements as soon as the SuiteApp is updated in your account.

For more information about installing SuiteApps, see the help topic [Installing a Bundle](#).

Health and Safety SuiteApp Permissions

Assign the permissions in the table to custom roles that will use the SuiteApp.

Subtab	Permission	Permission Access Level
Permissions > Lists	Documents and Files	Full
	Employee Record	Full
	Locations	Full
	Notes Tab	Full
	Perform Search	Full
	Subsidiaries	Full
Permissions > Setup	Custom Lists	Full
Permissions > Custom Record	Health and Safety Preferences	Full
	Incident Report Definition	Full
	Incident Report History	Full
	Workplace Incident	Full

Add the standard fields in the table to custom Advanced Employee Permissions that you want to be able to use the SuiteApp. For more information, see [Adding Standard Fields to Custom Advanced Employee Permissions](#).

Record Type	Field
Employee	Address
	Birth Date
	Email
	Employee Type

Record Type	Field
	First Name
	Gender
	Hire Date
	Is Inactive
	Job Title
	Last Name
	Middle Name
	Phone
	Termination/Release Date

Enabling the Workplace Incident Forms

The Healthy and Safety SuiteApp comes with three workplace incident reporting forms:

- Accident Record: For Reporting of Injuries, Diseases and Dangerous Occurrences Regulations (RIDDOR) compliance. Use this form for workplaces in the United Kingdom.
- OSHA 301: For Occupational Safety and Health Administration (OSHA) compliance. Use this form for workplaces in the United States.
- General: For all other jurisdictions.

You can choose to enable one or more of these forms.

To enable workplace incident forms:

1. Go to Setup > Health and Safety > Preferences.
2. On the Health and Safety Preferences page, click **Edit**.
3. Click the form you want to enable. To select more than one form, press and hold the Ctrl button and then click the forms.
4. Click **Save**.

Setting the Default Folder for Attachments

With the Health and Safety SuiteApp, you can attach files with supporting information when you complete workplace incident forms. You can select the default folder where these attachments are saved.

To set the default folder for attachments:

1. Go to Setup > Health and Safety > Preferences.
2. On the Health and Safety Preferences page, click **Edit**.
3. From the Default Folder list, select the folder where you want to save the attachments.
4. Click **Save**.

Configure Your Company Settings for Incident Tracking

Before you can use the Health and Safety SuiteApp in NetSuite, ensure that your industry information is included in your company settings.

If you use NetSuite OneWorld, NetSuite uses the industry information from the Company Information page for your top-level or root subsidiary. If your company has subsidiaries, this information must be accurate for each subsidiary. When you first set up industry information for your subsidiaries, the company-level information shows up by default for the subsidiaries. You can change it if you need to.

To add industry information for your company:

1. Go to Setup > Company > Company Information.
2. In the **Industry Description** field, enter a description of your industry. This can be any text, but should be as informative as possible for incident report logging compliance.
3. Select a type from the **Industry Classification Type** list: **SIC – Standard Industrial Classification** or **NAICS – North American Industry Classification System**. Based upon your industry standards, you should know which type your company should use.
4. Enter the appropriate number in the **Industry Classification Number** field. Based upon your industry standards, you should know which classification number your company should use.
5. Click **Save**.

To add industry information for your subsidiaries (OneWorld only):

1. Go to Setup > Company > Subsidiaries.
2. Click Edit next to the subsidiary you want to update. If you've already set these fields in your company settings, they'll show up by default. You can keep them or change them as needed.
3. If you want to change this information, in the **Industry Description** field, enter a description of your industry. This can be any text, but should be as informative as possible for incident report logging compliance.
4. Select a type from the **Industry Classification Type** list: **SIC – Standard Industrial Classification** or **NAICS – North American Industry Classification System**. Based upon your industry standards, you should know which type your company should use.
5. Enter the appropriate number in the **Industry Classification Number** field. Based upon your industry standards, you should know which classification number your company should use.
6. Click **Save**.
7. Add industry information for any other subsidiaries.

Working With Workplace Incidents

 **Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

To view the list of incidents:

1. Using the Classic Center, go to Lists > Workplace Incidents > Workplace Incident List. The Workplace Incident List page shows all of the incidents that your company has logged.
If you are using the Accounting Center, go to Payroll and HR > Lists > Workplace Incidents > Workplace Incident List.

2. To see all inactive incident records, check the **Show Inactives** box.
3. To view an individual incident record, click **View** beside it.

Deleting a Workplace Incident

As an account administrator, you can delete an incident record. However, in most cases, you should make the record inactive instead. Only account administrators can delete an incident.

Only delete an incident if you're sure you don't need it. For example, if you made a duplicate or if the incident doesn't meet reporting requirements, you can delete it.

To delete an incident:

1. Go to Lists > Employees > Workplace Incidents.
2. Click **Edit** beside the incident you want to delete.
3. Select **Delete** from the **Actions** menu.
4. When prompted to confirm the deletion, click **OK**.

Adding a Workplace Incident

Important: This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

Add a workplace incident when something happens that meets your regulatory requirements. You can add an incident from the Workplace Incident List page, from the employee's record, or by copying information from an existing incident.

To add an incident:

1. From the Classic Center, go to Lists > Workplace Incidents.
From the Accounting Center, go to Payroll and HR > Lists > Workplace Incidents.
Click **New Workplace Incident**. On the Select a form type page, click one of the form types: **Accident Report** (RIDDOR), **OSHA 301**, or **General**.
Or, go to Lists > Employees > Employees. Click **Edit** or **View** next to the employee involved in the incident. On the **Human Resources** subtab, on the **Workplace Incidents** subtab, click **New Workplace Incident**.
2. To modify the details of an existing incident record, go to Lists > Workplace Incidents > Workplace Incident List. Click **Edit** next to the name of the incident.

To add an incident from an existing incident:

1. From the Classic Center, go to Lists > Workplace Incidents.
From the Accounting Center, go to Payroll and HR > Lists > Workplace Incidents.
2. Click **View** beside the incident whose details you want to copy.
3. On the **Actions** menu, click **Make Copy**.

For more information about adding a workplace incident, see the following topics:

- [Adding a General Workplace Incident](#)
- [Adding OSHA 301 Workplace Incidents](#)
- [Adding a RIDDOR Workplace Incident](#)

Adding a General Workplace Incident

Use the following procedures to add a general workplace incident.

To add a general workplace incident:

1. From the Classic Center, go to Lists > Workplace Incidents.
From the Accounting Center, go to Payroll and HR > Lists > Workplace Incidents.
Click **New Workplace Incident**. On the Select a form type page, click **General**.
Or, go to Lists > Employees > Employees. Click **Edit** or **View** next to the employee involved in the incident. On the **Human Resources** subtab, on the **Workplace Incidents** subtab, click **New Workplace Incident**. From the **Form Type** list, select **General**.
2. Enter a **Case Number**. Note that the **Workplace Incident ID** is a unique number generated by NetSuite when you create the incident.
3. Select a location from the **Location** list. This is the list of locations defined in your company information.
4. If you want this incident to be inactive, select the **Workplace Incident is Inactive** box. This affects how the incident appears on the Incidents list.
5. Enter the date you're completing the form in the **Date of Form Completion** field. It defaults to today, but you can change it. For example, if you're entering info from a paper form that was filled out earlier.
6. Enter the date when this incident was first reported in the **Date Incident Was First Reported** field.

To add follow-up contact information and witnesses:

1. Select the employee filling out this form in the **Form Completed By** list. It defaults to your name, but you can select another employee.
2. Enter the name of the person first reporting the incident in the **Incident Was First Reported By** field. Enter that person's email address and phone number.
3. Select the person the **Incident Was First Reported To** from the list. This person must be an employee. The person's email address and phone number are sourced from the employee record, but you can edit them.
4. Select a contact person from the **Contact This Person For More Information On The Incident** list. This person must be an employee. The person's email address and phone number are sourced from the employee record, but you can edit them.
5. Enter **Name**, **Email** address, and **Phone** number for up to two witnesses to the incident.

To add incident details:

1. Enter the **Date of Workplace Incident**.
2. Enter the **Time of Workplace Incident** or check the **Time Cannot Be Determined** box.
3. Enter the **Time Employee Began Work on Day Incident Occurred**.
4. Select the **Severity** of the incident from the list.

5. Select the **Impact to Property** of the incident from the list.
6. Describe as many aspects of the incident as you can, using the categories shown:
 - **Describe in Detail What Happened**
 - **Describe the Events Leading Up to the Injury**
 - **Describe the Injury**
 - **Describe Where the Incident Occurred**
 - **Address Where Incident Occurred**
 - **Additional Comments**

To add employee information:

1. Select the employee from the **Full Name** list. Most of the fields in this section are automatically sourced from the employee record.
2. If values in those sourced fields are not correct, edit them as needed.
3. Enter the employee's **Medical Insurance Number**.

To enter work impact:

1. If the employee missed work because of the incident, check the **Incident Resulted in Days Away From Work** box.
2. If you checked this box, enter the **Number of Days** away from work and the **Date Returned to Work**.

To add medical care:

1. Enter the **Name of Physician or Other Health Care Professional**.
2. If the employee received treatment at a hospital or any location other than the worksite, check the **Treatment Was Given Away From Worksite** box. Enter information in the **Date of First Visit to Facility**, **Name of Facility**, and **Facility Address**.
3. If the **Employee Was Treated in an Emergency Room**, check the box.
4. If the **Employee Was Hospitalized Overnight as an In-Patient**, check the box.

 **Note:** When you are finished filling out all of the information about the incident, click **Save**.

Adding OSHA 301 Workplace Incidents

OSHA 301 forms are used to report workplace incidents and injuries for companies in the United States. A workplace incident is added any time an incident occurs that meets your regulatory requirements. You can add an incident from the Workplace Incident List page or directly from the employee record.

To add an OSHA 301 workplace incident:

1. Go to Lists > Workplace Incidents > New.
2. On the Select a form type page, click **OSHA 301**.
3. Note that the **Workplace Incident ID** is a unique number generated when the incident is created.
4. Select a location from the **Location** list.

5. Enter the date in the **Date of Form Completion** field. It defaults to today, but you can change it. For example, you are entering information from a paper form that has already been filled out. You might specify the date shown on the form.

To add primary information:

1. Select the name of the employee filling out this incident form from the **Completed By** list.
2. Enter the phone number and job title of the employee completing this form in the **Phone** and **Title** fields.

To add employee information:

1. Select the employee's name from the **Full Name** list. The fields in this section are automatically sourced from the employee record, but you can edit them.
2. To hide the name of the employee in the OSHA 301 log, check the **This is a Private Case** box. When this box is checked, the words "Privacy Case" appear in the log instead of the employee's name. After reading the notification popup, click **OK**.

To add physician or other health care professional information:

1. Enter the appropriate name in the **Name of Physician or Other Health Care Professional** field.
2. If the employee was treated at a facility away from the workplace, check the **Treatment was Given Away from Worksite** box. Then, enter the name and address of the facility.
3. If required, check the appropriate box if the employee was treated in an emergency room or if they were hospitalized as an in-patient.

To add case information:

1. In the **Case Number** field, enter any other tracking number that your organization has assigned to this incident.
2. Enter the time the employee started work on the day the incident occurred in the **Time Employee Began Work on Day Incident Occurred** field.
3. Select the **Date of the Injury or Illness**. The current date is selected by default, but you can select a different date.
4. In the **Time of Incident** field, enter the time when the incident occurred. If this is not known, check the **Time Cannot Be Determined** box.
5. Select the type of injury caused by the incident from the **Injury or Illness Type** list.
6. Select the classification from the **Case Classification** list.
7. If required, enter the number of days that the employee was away from work in the **Number of Days** field.

Note: If this workplace incident caused an employee death, read and follow the instructions in the information box that appears.

8. Describe as many aspects of the incident as you can, using the following categories:
 - What was the injury or illness?
 - What occurred?
 - What was the employee doing in the moments before the incident occurred?
 - What object or substance directly harmed the employee?

- Where did the event occur?

To add attachments:

1. If you have any files with supporting information, such as pictures, click the **Attachments** subtab.
2. Select a file from the **Attach File** list. To upload a file to attach, click **New**.
3. Click **Add**.

To add notes:

1. To add a note to the incident form, click the **Notes** subtab.
2. Enter the note information.

 **Note:** When you are finished filling out all of the information about the incident, click **Save**.

Adding a RIDDOR Workplace Incident

Add a workplace incident when something happens to an employee that meets your regulatory requirements. If you're in the UK, you follow the Reporting of Injuries, Diseases and Dangerous Occurrences Regulations (RIDDOR) rules. You can add an incident from the Workplace Incident List page, from the employee's record, or by copying info from an existing incident.

When you are finished filling the information about the incident, click **Save**. This will save all information currently entered. If you are uncertain about some of the information, you can save an incomplete incident record and edit it later.

To add a RIDDOR workplace incident:

1. From the Classic Center, go to Lists > Workplace Incidents.
From the Accounting Center, go to Payroll and HR > Lists > Workplace Incidents.
Click **New Workplace Incident**. On the Select a form type page, click **Accident Record**.
Alternatively, go to Lists > Employees > Employees. Click **Edit** or **View** beside the employee involved in the incident. On the **Human Resources** subtab, on the **Workplace Incidents** subtab, click **New Workplace Incident**. From the **Form Type** list, select **Accident Record**. The Workplace Incident page displays the form fields for a RIDDOR Accident Report.
2. Enter the **Accident Book Number** and the Accident Record Report Number. You can find these numbers in the hard-copy Accident Book you would have used to first record the incident. Note that the **Workplace Incident ID** is a unique number generated by NetSuite when you create the incident.
3. Select a location from the **Location** list. This is the list of locations defined in your company information.
4. Enter the date when this form is being completed in the **Date of Accident Record Completion** field. It defaults to today's date, but should be set to the date when the incident was recorded in the hard-copy Accident Book.
5. Enter the date when this incident was first reported in the **Date When Incident Was First Reported to the Organisation** field.
6. If you want this incident to be inactive, select the **Workplace Incident is Inactive** box. This affects how the incident appears on the Incidents list.

To add RIDDOR reporting details:

1. If the type of incident fits the criteria set by RIDDOR, check the **Incident is Reportable Under RIDDOR** box.
2. If you checked this box, enter the **Person Who Reported** the incident and the **Date Reported to HSE**. Select the **Method of Reporting** from the list.

To add incident details:

1. Enter the date on which the incident occurred in the **Date of Incident** field. This is not necessarily the date on which you are entering this incident in the Accident Book or NetSuite.
2. Enter the time at which the incident occurred in the **Time of Incident** field.
3. Select the type of incident from the **Incident Type** list. Note that an incident does not necessarily have resulted in an injury to be reportable.
4. Enter the immediate cause in the **Cause of the Incident** field.
5. Enter where in your workplace (such as the physical area, department, or room) the incident occurred in the **Location of the Incident** field.
6. If the incident resulted in an injury, enter information in the **If An Injury Occurred, Describe the Injury** field.

To add work impact:

1. If the affected person missed days of work because of the incident, check the **Incident Resulted in Days Away from Work** box. If you selected Death as the Type of Incident, this setting is not available.
2. If you checked this box, enter the **Number of Days** the person missed from work and the **Date Returned to Work**.

To add attachments:

1. If you have any files with supporting information, such as pictures, click the **Attachments** subtab.
2. Select a file from the **Attach File** list. To upload a file to attach, click **New**.
3. Click **Add**.

To add affected person information:

1. To give your organization's safety representative access to the affected person's personal information, do the following. Check the **Affected Person Has Given Consent to Disclose Their Personal Information to Safety Representative** box. Only check this box if the affected person has given consent.
2. Enter the name of the affected person in one of the following ways:
 - If the affected person is an employee, select their name from the **Full Name** list. The person's **Occupation, Email, Phone, Address, and Postcode** are sourced from the employee record.
 - If the person is not an employee, check the **Affected Person is not an Employee** box. Enter their name in the **Full Name** field and complete the rest of the fields in this section.

To add follow-up contact information:

1. In the **Accident Report Completed By** field, enter the name of the person completing this form.
2. Enter the **Occupation, Address, Email, Phone,** and **Postcode** for this person.
3. Select a contact person from the **Contact This Person For More Information on the Incident** list. This person must be an employee of your organization.
4. The **Email** and **Phone** fields for this contact person are sourced from the employee record.

To add medical care information:

1. If the affected person had to be treated in a hospital, check the **Affected Person Was Treated in Hospital** box.
2. If you checked this box, enter:
 - **Name of Physician or Other Health Care Professional**
 - **Date of First Visit to Facility**
 - **Name of Facility**
 - **Facility Address**

To add witnesses:

1. Enter the **Name** of up to two witnesses to the incident.
2. Enter the **Email** and **Phone** number of the witnesses.

To add notes:

1. To add a note to the incident form, click the **Notes** subtab.
2. Click **New Note**. Enter the note information.

 **Note:** When you are finished filling out all of the information about the incident, click **Save**.

Generating OSHA Workplace Incident Logs and Summaries

 **Important:** This feature requires SuitePeople. For more information, see [SuitePeople Overview](#).

If your workplace is located in the United States, you must periodically generate logs and summaries for Occupational Safety and Health Administration (OSHA) compliance. An OSHA 300 log is a list of all of your incidents that match your filter criteria. An OSHA 300 summary is a compilation of statistics and information about your incident history. If you are located in the United Kingdom or another non-U.S. jurisdiction, these reports are not available.

To generate an OSHA 300 log:

1. Go to Reports > Workplace Incidents > OSHA 300 Log. The OSHA's Form 300 Log of Work-Related Injuries and Illnesses page appears.
2. From the **Location** list, select a location.
3. From the **Generate Report For** list, select the year to include in the report.

4. From the **Generate As** list, select the output format you want to generate: **PDF** or **XML Spreadsheet**.
5. Enter the information you want to appear on the log:
 - **Establishment Name**
 - **City**
 - **State**
6. Click **Generate**.
NetSuite generates the log and saves it to the specified file format.

To generate an OSHA 300A summary:

1. Go to Reports > Workplace Incidents > OSHA 300A Summary. The OSHA's Form 300A Summary of Work-Related Injuries and Illnesses page appears.
2. From the **Location** list, select a location. The establishment name, address, and industry fields are sourced from your company and subsidiary information, but you can edit these fields.
3. From the **Generate Report For** list, select the year to include in the report.
4. From the **Generate As** list, select the output format you want to generate: **PDF** or **XML Spreadsheet**.
5. In the **Annual Average Number of Employees** field, enter the annual average number of employees at your company. This number is for the calendar year you have selected, rounded to the nearest whole number. To calculate this value, add the total number of employees your establishment paid in all pay periods during the relevant year. This number includes full-time, part-time, temporary, seasonal, salaried and hourly. Then, divide that by the number of pay periods during that year. For more information about calculating this value, refer to your OSHA documentation.
6. In the Annual Hours Worked by All Employees field, enter the total sum of hours worked by everyone at your company for the year, rounded to the nearest whole number. This includes all full-time, part-time, temporary, seasonal salaried, and hourly employees. For more details, check your OSHA documentation.
7. Click **Generate**.

Affordable Care Act (ACA) Reporting

If you are an Applicable Large Employer (ALE) in the United States, you must comply with Affordable Care Act (ACA) reporting requirements. The ACA Reporting SuiteApp lets you set up and track the health coverage offered to full-time employees. Then, you can electronically file the required health care coverage forms (1094-C and 1095-C) with the IRS.

ACA reporting is required for ALEs, or employers with 50 or more full-time or full-time-equivalent employees. Employees count as full-time if they work at least 30 hours a week or 130 hours a month on average.

The SuiteApp lets you record and track employee health care information all year as employees are hired, finish probation, and get offered coverage. At year end, you review and adjust the information as needed, before printing and distributing forms to employees and filing forms electronically with the IRS.

For more information about ACA reporting requirements, go to <https://www.irs.gov/instructions/i109495c>.

The 2021 version of the ACA SuiteApp adds two more offer of coverage plans: 1T and 1U. For more information, see [Assigning an ACA Offer of Coverage Plan to an Employee](#). For more information about coverage codes, visit <https://www.irs.gov/instructions/i109495c>.

Important: Important: For the 2024 reporting year, the filing deadline is January 2, 2024.

ACA Reporting SuiteApp Features

The ACA Reporting SuiteApp enables you to do the following:

- View employees' average hours during specific measurement periods to help determine full-time equivalent status.
- Specify health coverage plans for groups of full-time employees at once, or for individuals as they become eligible.
- Review the information you'll submit to the IRS on the 1094-C and 1095-C forms. Preview each form individually and see a detailed report.
- Send the ACA information for electronic IRS filing, and print and distribute the forms to employees.

The following topics provide details about the ACA filing process:

- [Setting up the ACA Reporting SuiteApp](#)
- [ACA Pre-Filing](#)
- [ACA Filing](#)
- [Updating Employee Records for ACA](#)
- [Assigning an ACA Offer of Coverage Plan to an Employee](#)
- [Adding Covered Individuals to an Employee](#)
- [Adding Safe Harbor Codes to an Employee](#)
- [Excluding an Employee from ACA Reporting](#)
- [State-Specific ACA Reporting \(DC, NJ, CA, RI\)](#)
- [Viewing ACA Filing History](#)

Setting up the ACA Reporting SuiteApp

This section includes the requirements and procedures for installing the ACA Reporting SuiteApp.

- [Prerequisites for Installing the ACA Reporting SuiteApp](#)
- [Applicable Large Employer \(ALE\) Member Information](#)
- [Install the ACA Reporting SuiteApp](#)
- [After the ACA Reporting SuiteApp Is Installed](#)
- [Roles and Permissions](#)
- [Setting up a Default Recipient for ACA Notifications](#)
- [View the ACA Landing Page](#)

Watch the following help video for information about setting up the ACA Reporting SuiteApp.

 [Setting Up the Affordable Care Act \(ACA\) Reporting SuiteApp](#)

Prerequisites for Installing the ACA Reporting SuiteApp

Important: Important: To use the ACA Reporting SuiteApp, you need to have SuitePeople U.S. Payroll active during the filing year.

Before installing the ACA Reporting SuiteApp, go to Setup > Company > Setup Tasks > Enable Features (Administrator) and enable the following features:

Subtab	Feature
Employees	Payroll
SuiteCloud	Custom Records
	Client SuiteScript
	Server SuiteScript

Applicable Large Employer (ALE) Member Information

To use the ACA Reporting SuiteApp, you'll need to enter the legal name as it should appear on tax forms. You must also enter an employer identification number (EIN) for at least one subsidiary. For more information, see the help topic [Creating Subsidiary Records](#). If you have employees you're setting to part-time, their subsidiaries should have at least one payroll earning item type. For more information, see the help topic [Creating Payroll Items](#).

Note: If you use NetSuite OneWorld and subsidiaries share the same EIN, they use the same ALE record. Employees from those subsidiaries are included in one ACA file when filing. Subsidiaries with different EINs have different ALE records and need to file ACA information separately.

Install the ACA Reporting SuiteApp

Only users with the Administrator role can install the ACA Reporting SuiteApp. This is a managed bundle and updates automatically whenever there are changes.

After you install the SuiteApp, the Affordable Care Act (ACA) subtab appears on employee records, and you can access the ACA landing page. For more information, see [Updating Employee Records for ACA](#) and [View the ACA Landing Page](#).

You can disable the ACA Reporting SuiteApp at any time. When you do, billing stops and information for the current year is deleted. All filing data from previous years is kept for at least 7 years.

To install the ACA Reporting SuiteApp, go to Customization > SuiteBundler > Search & Install Bundles, then click **Advanced**.

Use the following information to search for the SuiteApp:

- **Bundle Name** – Affordable Care Act (ACA) Reporting
- **Bundle ID** – 147355

For more information about installing SuiteApps, see the help topic [Installing a Bundle](#).

 **Note:** If you don't see the Install button or can't find this SuiteApp, it might not be shared with your account. Contact Customer Support to get access.

After the ACA Reporting SuiteApp Is Installed

Before you use the ACA Reporting SuiteApp, you'll need to do the following:

- Choose the day of the month you'll use to determine the monthly employee count for the 1094-C form. For more information, see [Setting Up Employer Information](#).
- Set a default recipient for ACA-related email. For more information, see [Setting up a Default Recipient for ACA Notifications](#).
- Set up roles and permissions. For more information, see [Roles and Permissions](#).
- Make sure each employee covered by ACA reporting has a birth date entered on the Human Resources tab of their record. For more information, see [Entering Human Resources Information for an Employee](#).

Roles and Permissions

Each role that needs access to the ACA Reporting SuiteApp must be listed on the ACA Grant Permissions page. To assign roles, go to Setup > Customization > ACA Grant Permission (Administrator).

Roles assigned to this permission can perform the following tasks:

- [Assigning an ACA Offer of Coverage Plan to an Employee](#)
- [Adding Covered Individuals to an Employee](#)
- [Adding Safe Harbor Codes to an Employee](#)
- [Excluding an Employee from ACA Reporting](#)
- [Identifying Part-Time Employees](#)
- [Creating an ACA Offer of Coverage Plan](#)
- [Assigning an ACA Offer of Coverage Plan to Multiple Employees](#)
- [Setting Up Employer Information](#)

- [ACA Filing](#)
- [Viewing ACA Filing History](#)

Granting Additional Permissions to Custom Roles

Starting version 1.11.4, custom roles used by the SuiteApp require an additional permission.

To add the required permission to custom roles:

1. Go to Setup > Users/Roles > User Management > Manage Roles.
2. On the Manage Roles page, click **Edit** beside the name of the custom role.
3. On the Role page, click the **Permissions** subtab.
4. On the **Custom Record** subtab:
 - a. Select **ACA CRUD Get Select List**.
 - b. Set the level to **Full**.
 - c. Click **Add**.
5. Click **Save**.
6. Repeat steps 1 – 5 for all custom roles used with the ACA Reporting SuiteApp.

Important: If the Advanced Employee Permission feature is enabled in your account, only users with the Administrator, Payroll Manager, or Human Resource Generalist roles can perform tasks or access features within the ACA Reporting SuiteApp. Using custom roles with Advance Employee Permission enabled may result in limited access or permission errors when using ACA Reporting SuiteApp features.

If you use the Advanced Employee Permission feature, users with custom roles require additional permissions to update ACA-related fields in employee records. To grant access, add the ACA-related fields to the permission records assigned to your custom role.

To add the required ACA-related fields to custom roles:

1. Go to Setup > Users/Roles > Manage Permissions.
2. Click **Edit** or **Customize** next to the employee permission record assigned to your custom role.
To know which permission is assigned to your custom role, see [Setting Employee Access for Advanced Employee Permissions](#).
3. On the **Fields** subtab, click a line in the list.
4. From the **Records Type** list, select **Employee**.
5. From the **Fields** list, select each of the following ACA-related fields, clicking **Add** after each one:
 - ACA Curr Employee Info
 - Limited Non-Assessment Period End Date
 - Employee's Age as of January 1 of Filing Year
 - Override Limited Non-Assessment Date
 - Void 1095-C Form
6. Click **Save**.

Setting up a Default Recipient for ACA Notifications

You'll want to set up a default recipient for ACA notifications. The default recipient gets an email whenever changes for multiple employees in ACA reporting are finished. This includes when an ACA offer of coverage plan is assigned to multiple employees or when several employees are marked as part-time.

To set up a default recipient for ACA notifications:

1. Go to Setup > Company > Preferences > General Preferences (Administrator).
2. Click the **Custom Preferences** subtab.
3. From the **Email Notification Recipient** list, select the default recipient. The recipient must be an employee.
4. Click **Save**.

View the ACA Landing Page

To access the ACA landing page, go to Transactions > Employees > Affordable Care Act (Administrator). You can also go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager). Here, you'll find the steps you need to complete for pre-filing and filing.

 **Note:** If the ACA SuiteApp was recently updated, you might see an error message saying the ACA landing page isn't available because of a data migration failure. If this happens, you can't use the ACA SuiteApp. Please contact support.

For more details, see the following help topics:

- [ACA Pre-Filing](#)
- [ACA Filing](#)

ACA Pre-Filing

Before filing, there are several pre-filing tasks you'll need to do. Pre-filing means identifying part-time employees, setting up and assigning an offer of coverage, and entering employer ACA information. The information you enter during pre-filing is used to file the 1094-C and 1095-C forms required for ACA reporting at year-end.

The ACA landing page guides you through each required pre-filing step. To make year-end filing easier, you can track and update this information each month.

For details about the 1094-C and 1095-C forms, go to <https://www.irs.gov/instructions/i109495c>. For filing information, see [ACA Filing](#).

ACA pre-filing includes the following:

- [Setting Up Employer Information](#)
- [Identifying Part-Time Employees](#)
- [Creating an ACA Offer of Coverage Plan](#)
- [Assigning an ACA Offer of Coverage Plan to Multiple Employees](#)

Watch the following help video for information about setting up employer information and identifying part-time employees.

 [Affordable Care Act \(ACA\) Pre-Filing \(Part 1\)](#)

Watch the following help video for information about creating and assigning offers of coverage.

 [Affordable Care Act \(ACA\) Pre-Filing \(Part 2\)](#)

Setting Up Employer Information

You'll use the Employer Information page to enter details about the ALE member, which are used to file the 1094-C form at year end. ACA employer setup also means entering information for all ALE members in an aggregated group.

For example, if company A is the parent of company B and C, together they have 100 full-time employees. Each employer in an ALE aggregated group is subject to the employer shared responsibility rules and reporting requirements. Each one must file its own 1094-C form using its own Employer Identification Number (EIN).

To set up employer information:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. If you have a NetSuite OneWorld account, select the subsidiary you need from the **View** list.
3. Click **Set Up Employer**.
4. NetSuite automatically fills in information from the company or subsidiary record. If you need to make changes, you can edit the information here.
5. Enter the name and contact number of the person responsible for answering IRS questions about the filing.
6. If there is a parent company, each employer is subject to the shared responsibility rules.
 - a. Click the **Other ALE Members** subtab.
 - b. Select the months the company was part of the same ALE group.
 - c. Enter the company names and unique EINs for each affiliated ALE member.
7. Click **Add**.
8. If your employer is eligible for transition relief, select the certifications that apply from the **Certifications of Eligibility** subtab:
 - **Qualifying Offer Method** – A qualifying offer was made to full-time employees for every month they were considered full-time during the year.
 - **98% Offer Method** – Offer of affordable health coverage that provides minimum value to at least 98% of your employees and minimum essential coverage to their dependents.
9. Click the **Preferences** subtab. From the **Employee Count Based On** list, select the day of the month you will use to determine the monthly employee count on the 1094-C form.
For example, if you select **First Day of Each Month** and an employee leaves mid-month, they are still included in the monthly count.
10. In the **Plan Start Month** list, select the month when the health plan coverage begins. This Plan Start Month is shown for the affected employees.
11. In the **Limited Non-Assessment Period Override** field, enter the number of days (0–90) to override the Limited Non-Assessment Period. This number is added to the employee's hire date or exclusion date from ACA to determine the Limited Non-Assessment Period End Date, unless you set this date manually.

If you want to apply this new override value to all existing employees, then click **OK** in the confirmation popup. To apply it only to future employees, click **Cancel**.

12. Click **Save**.

Identifying Part-Time Employees

The next step for ACA pre-filing is to identify part-time employees. These are employees who do not meet the minimum number of hours to be considered full-time for a specific period.

To identify part-time employees:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. If applicable, select the subsidiary from the **View** list.
3. Select the payroll items considered eligible hours of service. These are used to determine an employee's full-time status under Section 4980H. ACA-eligible payroll items include:
 - Earning: Wage
 - Earning: Salary
 - Earning: Vacation
 - Earning: Sick

The payroll items are automatically selected, but you can change the list if needed.

 **Note:** If the ALE member has multiple subsidiaries, at least one must have payroll items set up. If a subsidiary does not have payroll items defined, a warning message appears showing which ones are missing payroll items. If there are multiple subsidiaries, you can choose payroll items for those that have them defined.

For more information about payroll items, see the help topic [Payroll Items Setup](#). For more information about eligible hours of service, go to <https://www.irs.gov/instructions/i109495c>.

4. Click **Done** to save the changes and return to the ACA landing page.
5. To identify employees who do not meet the minimum number of hours to be considered full-time, click **Set Part-Time**.
6. To filter the list of employees, enter a **Start Date** and **End Date** for the employees' paychecks. These two dates must be at least three months apart.
7. By default, the **Show Employees Who Worked Less Than 130 hours per month** and **30 hours per week** boxes are checked. To see employees outside of these parameters, clear the boxes.
8. By default, the **Show inactive and terminated employees in the current filing year** box is not checked. To include these employees, check this box.
9. Select one or more employees, then click **Set to Part-Time**.
10. Enter the date range when the employee will be considered part-time.
For example, if an employee averaged less than 30 hours per week from January 1 to December 31, 2021, you may set them to part-time from January 1 to December 31, 2022 for ACA purposes. For more information, see <https://www.irs.gov/instructions/i109495c>.
11. Click **OK**.
12. Check that the date range for the employees set to part-time status is correct in the 2020 Part Time Status column.
13. Click **OK**.

The contact set as the default recipient for ACA notifications gets an email after the changes are applied. For more information, see [Setting up a Default Recipient for ACA Notifications](#).

To make changes, click **Edit Hours** on the ACA landing page.

Creating an ACA Offer of Coverage Plan

An offer of coverage plan has information about health coverage for employees. You can assign them to employees from the employee record, or to multiple employees from the pre-filing section of the ACA landing page. For more details, see [Assigning an ACA Offer of Coverage Plan to an Employee](#) and [Assigning an ACA Offer of Coverage Plan to Multiple Employees](#).

To create an ACA offer of coverage plan:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. If you have a NetSuite OneWorld account, select the subsidiary you need from the **View** list.
3. Click **Add Coverage**.
4. In the **Name** field, enter the name of the plan.
5. If a carrier provides coverage, enter its name in the **Carrier** field.
6. If the plan is self-insured, check the **Self Insured** box. If you check this box, enter the covered individuals for the plan. For instructions, see [Adding Covered Individuals to an Employee](#).

 **Note:** If this offer of coverage plan is assigned to an employee, you cannot change the self-insured status of the plan.

7. Select the offer of coverage code from the **Code** list. Codes show the type of coverage available to the employee, their spouse, and dependents. For more details about coverage codes, visit <https://www.irs.gov/instructions/i109495c>.

The list of coverage codes includes:

- 1A - Qualifying Offer – Minimum essential coverage providing minimum value. It is offered to full-time employee with employee contribution for self-only coverage equal to or less than 9.5% mainland single federal poverty line. It is at least minimum essential coverage offered to spouse and dependent(s).
- 1B – Minimum essential coverage providing minimum value offered to employee only.
- 1C – Minimum essential coverage providing minimum value offered to employee and at least minimum essential coverage offered to dependent(s) (not spouse).
- 1D – Minimum essential coverage providing minimum value offered to employee and at least minimum essential coverage offered to spouse [not dependent(s)].
- 1E – Minimum essential coverage providing minimum value offered to employee and at least minimum essential coverage offered to dependent(s) and spouse.
- 1F – Minimum essential coverage **not** providing minimum value. It is offered to the employee, employee and spouse or dependents, or employee, spouse and dependents.
- 1G – Offer of coverage to employee who was not a full-time employee for any month of the calendar year. This may include one or more months in which the individual was not an employee. It may also include an employee who enrolled in self-insured coverage for one or more months of the calendar year.
- 1H – No offer of coverage. The employee was not offered any health coverage, or the employee was offered coverage that is not minimum essential coverage. This may include one or more months in which the individual was not an employee.

- 1J – Minimum essential coverage providing minimum value offered to the employee. It provides at least minimum essential coverage conditionally offered to spouse. It does not provide minimum essential coverage to dependents.
 - 1K – Minimum essential coverage providing minimum value offered to the employee. It provides at least minimum essential coverage offered to dependents, and at least minimum essential coverage conditionally offered to the spouse.
 - 1L – Individual coverage health reimbursement arrangement (HRA) offered to you only with affordability determined by using employee's primary residence location ZIP code.
 - 1M – Individual coverage HRA offered to you and dependents (not spouse) with affordability determined by using employee's primary residence location ZIP code.
 - 1N – Individual coverage HRA offered to you, spouse and dependents with affordability determined by using employee's primary residence location ZIP code.
 - 1O – Individual coverage HRA offered to you only using the employee's primary employment site ZIP code affordability safe harbor.
 - 1P – Individual coverage HRA offered to you and dependents (not spouse) using the employee's primary employment site ZIP code affordability safe harbor.
 - 1Q – Individual coverage HRA offered to you, spouse and dependents using the employee's primary employment site ZIP code affordability safe harbor.
 - 1R – Individual coverage HRA that is NOT affordable offered to you, employee and spouse or dependents, or employee, spouse, and dependents.
 - 1S – Individual coverage HRA offered to an individual who was not a full-time employee.
 - 1T – Individual coverage HRA offered to an employee and spouse (no dependents) with affordability determined using the employee's primary residence ZIP code.
 - 1U – Individual coverage HRA offered to an employee and spouse (no dependents) using employee's primary employment site ZIP code affordability safe harbor.
8. If you select any coverage code in the 1B–1U range:
 - a. Enter the employee's lowest monthly premium for self-only minimum essential coverage in the **Lowest Cost of Employee Coverage** field.
 - b. Enter a **Start Month** and a **Start Year**.
 9. If you select coverage codes 1O, 1P, 1Q, or 1U, you can enter a **Default ZIP Code** for the employee's primary employment site.
 10. Click **Add**.
 11. If the premium changed throughout the reporting year, add more lines. The dates cannot overlap.
 12. Click **Save**.

Making an ACA Offer of Coverage Plan Inactive

Make plans inactive so they don't appear in lists. A plan stays assigned to an employee even when it's inactive.

To make an ACA offer of coverage inactive:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. Click the **Coverages** link beside **Set Up & Assign Coverage**.
3. Click **Edit** next to the plan you want to inactivate.
4. Check the **Offer of Coverage Inactive** box.

5. Click **Save**.

Deleting an ACA Offer of Coverage Plan

Delete a plan when it's unassigned and not needed.

To delete an ACA offer of coverage plan:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. Click the **Coverages** link beside **Set Up & Assign Coverage**.
3. Click **Edit** next to the plan you want to delete.
4. Select **Delete** from the **Actions** menu.
5. Click **OK**.

Assigning an ACA Offer of Coverage Plan to Multiple Employees

After you set up an offer of coverage plan, you can assign it to a group of employees from the ACA landing page. The information you enter on this page is used to generate the 1095-C forms for each employee. For more information, go to <https://www.irs.gov/instructions/i109495c>.

To assign an ACA offer of coverage plan to multiple employees:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. If you have a NetSuite OneWorld account, select the subsidiary you need from the **View** list.
3. Click **Assign Coverage**.
4. By default, employees who were not full-time or not employed for the entire reporting year are excluded. Employees who were inactive or terminated in the current filing year are also excluded. You can use the filters to control which employees are shown in the list.
5. By default, the **Show inactive and terminated employees in the current filing year** box is not checked. To include these employees, check this box.
6. From the list, select the employees you want to assign this coverage to.
7. Click **Assign Coverage**.
8. Select the offer of coverage plan from the **Plan** list.
9. Enter the start date when the coverage plan is offered to the selected employees.
10. To record that coverage was offered after the employee's limited non-assessment period, check the **Override start date with employees eligibility date** box. This only applies if the eligibility date is later than the start date.
11. Check the **Auto-assign Safe Harbor Code 2C** box if every employee who was offered health coverage was enrolled in the coverage.
12. Click **Assign**.
13. Confirm the information in the Plan and Coverage columns is correct.
14. If you have multiple plans assigned to different groups of employees, repeat these steps.
15. Click **Save**.

The contact set as the default recipient for ACA notifications gets an email after the changes are applied. For more information, see [Setting up a Default Recipient for ACA Notifications](#).

ACA Filing

When the reporting year is complete, the required health coverage forms (1094-C and 1095-C) can be electronically filed to the IRS. When you file your company's ACA files, Dayforce, your payroll partner, reviews the data. If it passes validation, Dayforce then sends your files to the IRS.

Watch the following help video for information about filing for ACA.

 [Affordable Care Act \(ACA\) Filing](#)

To file for ACA:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. Click **Generate** from the Ready to File section of the ACA landing page.
3. To preview the 1094-C and 1095-C forms, click **Preview**. Alternatively, click the **View Audit Log** link to open a file that can be viewed in Microsoft Excel.
4. Review the details and included employees in the preview or the audit log. You can also see error details in the audit log. You'll need to fix any errors before you can transmit your ACA file.

Note: Employees who are both inactive and terminated, with termination dates in this filing year and with reportable coverages assigned, will be included for reporting.

5. When you're ready to transmit, click **File**. The File section shows the filings you've sent, along with a filing number and the date and time.

To check for ACA filing errors and refile:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. On the ACA landing page, the Ready to File section shows your filing status, filing number, and date and time of your transmission. If your filing doesn't pass Dayforce validation, an **Errors** button appears next to it. Click **Errors** to see the issues Dayforce found. A popup window appears showing the errors that occurred.
3. Correct the errors as indicated in the popup window. For assistance resolving these errors, contact NetSuite Customer Support.
4. For any employees who had errors in the filing, edit the employee record and clear the errors.
5. When you have corrected the errors, return to the ACA landing page and click **Re-Generate**.
6. Click **Preview** and **View Audit Log** to make sure your data is ready to send.
7. Click **Refile**.

Removing Ineligible Employees from ACA Reporting

After sending your ACA filing to the IRS, you can still remove employees from ACA reporting. For example, you'd remove an employee if they become ineligible or if you add them by mistake. To do this, you must void the 1095-C form on their employee record and then refile. If you haven't filed your ACA information with the IRS and need to remove an employee before filing, you can exclude them. For more information, see [Excluding an Employee from ACA Reporting](#).

To remove ineligible employees from ACA reporting:

1. Go to Payroll and HR > Lists > Employees (Payroll Manager).
2. In the Employees list, click **Edit** next to the employee you want to remove from reporting.
3. Click the **Affordable Care Act (ACA)** subtab.
4. Check the **Void 1095-C Form** box.
5. Click **Save**.
6. Refile your ACA data using the steps in **To check for ACA filing errors and refile** section.

Tracking Minimum Essential Coverage

Before you make your ACA filing, you can check if you're following ACA rules for minimum essential coverage. If you're not compliant, you may be subject to an employer shared responsibility payment. You can view the Minimum Essential Coverage Offer Indicator in two ways:

- From the ACA landing page, click **Preview**. The Preview 1094C page appears, showing the Minimum Essential Coverage Offer Indicator for the whole filing year and for each month. If you're compliant for a given period, then Yes is checked for that time.
- From the ACA landing page, click **View Audit Log**. Open the downloaded XML file in Microsoft Excel, then click the **1095-C Part III** tab. Under **Part III: ALE Member Information — Monthly**, you'll see a Minimum Essential Coverage Indicator row for the entire year and for each month, with a Yes or No in the Data column.

The ACA SuiteApp determines the minimum essential coverage offer indicator value in the following way:

- The value is Yes (you're compliant) if you have not offered coverage to five employees, and five is less than five percent of your total full-time employees. For example, if you have 120 employees and 115 have offers, you're compliant because 95 percent have coverage and five employees is less than five percent.
- The value is No (you're not compliant) if the number of employees without coverage is five or more, and five is more than five percent of your total employees. For example, if you have 50 employees and 48 have coverage, you're not compliant because five employees is 10 percent of your total.

 **Note:** If an employee has a coverage code of 1H and a safe harbor code of 2E, they're considered covered no matter what the calculation shows.

For more information, go to <https://www.irs.gov/affordable-care-act/employers/types-of-employer-payments-and-how-they-are-calculated>.

Updating Employee Records for ACA

The ACA Reporting SuiteApp displays the Affordable Care Act (ACA) subtab on the employee record. You can assign an offer of coverage plan, add covered individuals who are included in the plan, and apply a safe harbor code.

The following topics detail the ACA setup tasks you can complete on the employee record:

- [Assigning an ACA Offer of Coverage Plan to an Employee](#)
- [Adding Covered Individuals to an Employee](#)
- [Adding Safe Harbor Codes to an Employee](#)

■ Excluding an Employee from ACA Reporting

Assigning an ACA Offer of Coverage Plan to an Employee

Before an ACA offer of coverage plan can be assigned, you must create one first.

To assign a plan to several employees at the same time, go to the ACA landing page. For more information, see [Assigning an ACA Offer of Coverage Plan to Multiple Employees](#).

The **Limited Non-Assessment Period End Date** is the end of the employee's third full calendar month of full-time work. This date is based on the employee's hire date or when their ACA exclusion ends. It's used to show when the employee is considered full-time for ACA reporting. You should use the calculated end date, but you can override it if needed. For example, if your employees are eligible for benefits after 30 days, you can set this date manually to 30 days after each hire date.

To assign an ACA Offer of Coverage Plan to an employee:

1. Go to Payroll and HR > Lists > Employees (Payroll Manager).
2. In the Employees list, click **Edit** next to the employee who was offered coverage.
3. Click the **Affordable Care Act (ACA)** subtab.
4. Click the **Offer of Coverage** subtab.
5. From the **Plan** list, select the offer of coverage plan. If you don't see a plan, make sure one was created. For more information, see [Creating an ACA Offer of Coverage Plan](#).
6. Enter the **Start Month** and **Start Year** for this offer of coverage plan. Only enter an **End Month** and **End Year** if the employee left the company or switched to another offer of coverage plan.
7. If you have selected coverage codes 1L, 1M, 1N, or 1T:
 - a. Enter the employee's residential ZIP code in the **ZIP Code** field.
 - b. Enter the **Employee Required Contribution**.
8. If you have selected coverage codes 1O, 1P, 1Q, or 1U:
 - a. Enter the employee's employment ZIP code in the **ZIP Code** field.
 - b. Enter the **Employee Required Contribution**.
9. Click **Add**.
10. Add more lines if the employee was offered more than one coverage plan during the reporting year.
11. To set a different Limited Non-Assessment Period End Date, check the **Override Limited Non-Assessment Date** box and enter a new date.
12. Click **Save**.

Adding Covered Individuals to an Employee

On the **Covered Individuals** subtab, add the employee after you assign them an offer of coverage plan. The employee's name and date of birth (if included on the employee record) are sourced from the employee record automatically. You can also add the employee's spouse, dependents, or both if they're covered under the plan. You only need to add covered individuals if the offer of coverage plan is self-insured. When a coverage plan is self-insured, it indicates that the employer assumes the financial risk

of providing health care benefits to its employees. The individuals entered on the Covered Individuals subtab should meet the coverage criteria set up for the plan.

For example, the coverage plan code is 1C. Only add dependents to the list, not the employee's spouse. For more information about the types of coverage, see [Creating an ACA Offer of Coverage Plan](#).

To add covered individuals to an employee:

1. Go to Payroll and HR > Lists > Employees (Payroll Manager).
2. In the Employees list, click **Edit** next to the employee to add covered individuals to.
3. Click the **Affordable Care Act (ACA)** subtab.
4. Click the **Covered Individuals** subtab.

 **Note:** List the employee first, then add the spouse, dependents, or both as needed

5. If you have not added the employee to the covered individuals list, then click **Add Employee**.
6. The employee's name and date of birth (if included on the employee record) fill in automatically. Confirm or enter the employee's **Date of Birth** and the **Start Month** and **Start Year** for the coverage.
7. (Optional) Enter the **End Month** and **End Year**.
8. Click **Add**.
9. For each of the employee's spouse, dependents, or both, do the following actions:
 - a. Complete the following fields:
 - First Name
 - Last Name
 - Date of Birth
 - Start Month
 - Start Year
 - b. (Optional) Enter the **End Month** and **End Year**.
 - c. Click **Add**.
10. Add a line for each person covered under the plan.
11. Click **Save**.

Adding Safe Harbor Codes to an Employee

Safe harbor codes apply when an employee qualifies for an exemption from the assessable payment. You don't need to enter anything manually for employees who are not full-time, terminated, excluded from ACA, or in a limited non-assessment period. The system automatically adds the right safe harbor code when you generate the ACA filing. You need to enter a code manually if safe harbor codes 2E, 2F, 2G, or 2H apply, or if you need to override an existing code.

For more information about safe harbor codes, see <https://www.irs.gov/instructions/i109495c> and [Automatically Applied Safe Harbor Codes](#).

Automatically Applied Safe Harbor Codes

The following are automatically applied safe harbor codes:

- 2A – The system automatically adds this code for any month when an employee is not employed. This includes employees who are not hired yet, are excluded from ACA, or are terminated before the first day of the reporting month.
- 2B – The system automatically adds this code for any month when an employee is not considered full-time. This includes employees who are excluded from ACA or terminated during the reporting month.
- 2C – The system can automatically apply this code when you assign an ACA offer of coverage plan to multiple employees. For more information, see [Assigning an ACA Offer of Coverage Plan to Multiple Employees](#).
- 2D – The system automatically adds this code for any month when an employee is in a limited non-assessment period.

To add safe harbor codes to an employee:

1. Go to Payroll and HR > Lists > Employees (Payroll Manager).
2. On the Employees list, click **Edit** next to the employee you want to add a safe harbor code to.
3. Click the **Affordable Care Act (ACA)** subtab.
4. Click the **Safe Harbor Codes** subtab.
5. From the **Code** list, select the safe harbor code.

The safe harbor codes include:

- 2A. Employee not employed during the month. This safe harbor code is automatically applied during filing.
- 2B. Employee not full-time. This safe harbor code is automatically applied during filing.
- 2C. Employee enrolled in coverage offered. Use this code for any month the employee enrolled for each day of the month in health coverage offered by the ALE member. This is true regardless of whether any other code in Code Series 2 might also apply.

Do not use this code:

- For any month in which the multi-employer interim rule relief applies. Instead, enter code 2E.
- If code 1G is entered in the **Code** list on the ACA offer of coverage plan. For more information, see [Creating an ACA Offer of Coverage Plan](#).
- For any month that an employee is enrolled in COBRA continuation coverage or other post-employment coverage. Instead, enter code 2A.
- For any month that the employee enrolled in coverage that was not minimum essential coverage.
- 2D. Employee in a Section 4980H (b) limited non-assessment period. This safe harbor code is automatically applied during filing.
- 2E. Multi-employer interim rule relief. Use this code for any month for which the multi-employer arrangement interim guidance applies for that employee. This is true regardless of whether any other code in Code Series 2 (including code 2C) might also apply.
- 2F. Section 4980H affordability from W-2 safe harbor. Use this code if the ALE member used Section 4980H Form W-2 safe harbor to determine affordability. This is for purposes of Section 4980H(b) for this employee for the year. If the member uses this safe harbor, it must be used for each month of the calendar year the employee is offered health coverage.
- 2G. Section 4980H affordability federal poverty line safe harbor. Use this code if the ALE member used Section 4980H federal poverty line safe harbor to determine affordability. This is for purposes of section 4980H(b) for this employee for any months.
- 2H. Section 4980H affordability rate of pay safe harbor. Use this code if the ALE member used Section 4980H rate of pay safe harbor to determine affordability. This is for purposes of Section 4980H(b) for this employee for any months.

6. Enter the **Start Month** and **Start Year** of the period when the exemption applied for the employee.
7. Enter the **End Month** and **End Year** if this code applied for a short period of time. The date cannot be before the employee's hire date.
8. Click **Add**.
9. Click **Save**.

Excluding an Employee from ACA Reporting

Unless otherwise specified, all employees are included in ACA reporting. You can exclude them for all or part of the reporting year if they're not considered full-time under Section 4980H. Alternatively, they're not considered an employee for ACA reporting purposes. For example, a contractor, a sole proprietor, or a partner is not considered an employee for ACA reporting.

To exclude an employee from ACA reporting:

1. Go to Payroll and HR > Lists > Employees (Payroll Manager).
2. On the Employees list, click **Edit** next to the employee you want to exclude from ACA reporting.
3. Click the **Affordable Care Act (ACA)** subtab.
4. Click the **Exclude from ACA** subtab.
5. From the **Reason** list, select why you're excluding the employee from ACA reporting.
6. Enter the **Start Month** and **Start Year** when the exclusion starts.
7. (Optional) Enter the **End Month** and **End Year** for the exclusion.
8. Click **Add**.
9. Click **Save**.

State-Specific ACA Reporting (DC, NJ, CA, RI)

If you have employees who live in District of Columbia (DC), New Jersey (NJ), California (CA), or Rhode Island (RI), there are additional state-specific reporting requirements under the Affordable Care Act (ACA). You must report any employees who live in these states during the reporting year. You must also report the exact months those employees lived in these states.

Before you file your ACA report with state-specific information, make sure you've done the following:

- Set up your workplaces for every state or jurisdiction where you have a tax ID and paid employees. For more information, see the help topic [Entering Workplace Records for Payroll](#).
- Check your tax information for each state or jurisdiction, specifically the State ID for each of the four mandated states. For more information, see the help topic [Setting Preferences for Jurisdictions](#).
- Confirm your state IDs. If you try to generate the ACA file without valid state IDs, a warning message appears. To avoid this message, follow the procedure in [Confirming Your State IDs](#).

Confirming Your State IDs

When you file state-specific reports, the relevant state IDs are required. By default, the state IDs are defined in the jurisdiction settings.

To confirm your State IDs:

1. Go to Setup > Payroll > Setup Tasks > Set Up Payroll.
2. If you use a NetSuite OneWorld account, select the subsidiary from the **Subsidiary** list.
3. Click the **Jurisdictions** subtab.
4. Click the subtab for the four mandated states:
 - a. For the District of Columbia, the State ID is sourced from the OTR Account Number.
 - b. For New Jersey, the State ID is sourced from the Taxpayer Identification Number.
 - c. For California, the State ID is sourced from the ALE Member's FEIN.
 - d. For Rhode Island, the State ID is sourced from the ALE Member's FEIN.

 **Note:** If an employee earns income in DC in any month, they're considered a DC resident for that month for ACA reporting, even if they live in another state.

If you do not configure the states in the jurisdiction settings, NetSuite uses the Employer Identification Number (EIN) from the Company and Subsidiary settings.

Viewing and Editing an Employee's State History

The state history shows where an employee lived in the four mandated states (DC, NJ, CA, and RI). If an employee moves into or out of a mandated state during a month, they're considered a resident of that state for that month.

When you install or update the ACA SuiteApp, the system creates employees' state histories from the system notes on their records. If you edit an employee's address, their state history updates automatically.

To view or edit an employee's state history:

1. Go to Payroll and HR > Lists > Employees (Payroll Manager).
2. On the Employees list, click **Edit** next to the employee whose state history you want to view.
3. Click the **Affordable Care Act (ACA)** subtab.
4. Click the **State History** subtab.
5. If you need to correct information in the state history, click the row you want to edit.
6. For each period when the employee lived in a mandated state, enter the **State**, **Start Month**, **Start Year**, **End Month**, and **End Year**. If you edit the state history manually, check the **Is Manually Added** box.
7. Click **Save**.

Verifying Employee State History Information

When you're ready to file your ACA compliance, you can view the state history information in the audit log to confirm accuracy.

To verify employee state history:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. Click **Generate** in the Ready to File section of the ACA landing page.

3. Click the **View Audit Log** link to open a file you can view in Microsoft Excel.
4. Click the state-specific tabs to see the months of the year, full-time employee count, overall employee count, and the State ID for employees in those states.

Viewing ACA Filing History

If you used the ACA Reporting SuiteApp to report compliance for the previous year, you can view your filing history on the ACA landing page.

To view ACA filing history:

1. Go to Payroll and HR > Payroll > Affordable Care Act (Payroll Manager).
2. On the ACA landing page, go to the Filing History section and click **View** to view the previous year's filing.

Government-Issued ID Tracking

The Government-Issued ID Tracking feature lets you track a variety of government-issued identification information about your employees. By tracking this information, you'll have accurate documentation for your employees' travel, driving qualifications, and tax compliance.

For more information about this feature, see the following help topics:

- [Government-Issued ID Tracking Overview](#)
- [Managing Government-Issued ID Types](#)
- [Managing Basic Government-Issued ID for Employees](#)
- [Managing Advanced Government-Issued ID for Employees](#)

Government-Issued ID Tracking Overview

The Government-Issued ID Tracking feature lets you track a variety of government-issued identification information about your employees. By tracking this information, you'll have accurate documentation for your employees' travel, driving qualifications, and tax compliance.

For each employee, you can enter information about their passport(s), driver's license(s), and several other government-issued IDs, such as tax identification numbers.

Certain government-issued IDs are only relevant in particular jurisdictions. You can make some ID types inactive if you aren't going to use them. When you make them inactive, they won't appear in the list of available types when you're adding IDs to an employee's record.

Before using Government-Issued ID Tracking, enable one of the two features: Basic or Advanced.

 **Note:** If you enable one of these features and then try to enable the other one, NetSuite displays a warning. Any custom scripting you've created will no longer function and must be changed.

Basic Government-Issued ID Tracking

The Basic Government-Issued ID Tracking feature enables you to track:

- Passport Number
- Driver's License Number

Advanced Government-Issued ID Tracking

The Advanced Government-Issued ID feature provides several ID types by default. You can also use it to create, edit, and delete your own custom types of ID to match your company's employee identification policies. By default, the feature includes:

- Passport Number
- Driver's License Number
- Individual Taxpayer Identification Number (ITIN)
- Inland Revenue Department Number (IRD)
- National Insurance Number (NINO)

- Social Insurance Number (SIN)
- Social Security Number (SSN)
- Tax File Number (TFN)

You can't delete the standard government-issued ID types that are included in NetSuite by default. However, you can make them inactive (except for passport and driver's license). Inactive ID types won't appear in the list of available types when you add IDs to an employee's record.

Roles and Permissions

For details about the permission requirements for Government-Issued ID Tracking, see [Advanced and Basic Government-Issued ID Tracking Permission Requirements](#).

Managing Government-Issued ID Types

If you use the Advanced Government-Issued ID Tracking feature, NetSuite has several ID types included by default. For example, driver's license, passport, and tax identification numbers. If you need additional government-issued ID types, you can create custom ones to match your company's employee identification policies.

You can't delete the standard government-issued ID types that are included in NetSuite by default. However, you can make them inactive (except for passport and driver's license). Inactive ID types won't appear in the list of available types when you add IDs to an employee's record.

 **Note:** This is only available if you use Advanced Government-Issued ID Tracking.

Adding a Custom ID Type

Use the following procedure to add a custom ID type.

To add a custom ID type:

1. Go to Setup > HR Information System > Government-Issued ID Types > New or click **New Government-Issued ID Type** on the Government-Issued ID Types page.
To modify an existing custom type, go to Setup > HR Information System > Government-Issued ID Types. Then, click **Edit** next to the name of the type.
2. In the **Name** field, enter a name for the type.
3. In the **Description** field, enter a short unique description for the type.
4. If you want to record more than one instance of this type for a particular employee, check the **Multiple Instances Allowed** box.
5. If you want this type to be inactive, check the **Inactive** box. This affects how the type appears on the Government-Issued ID Types list.
6. Click **Save**.

Viewing the List of Government-Issued ID Types

Use the following procedure to view the list of government-issued ID types.

To view the list of government-issued ID types:

1. Go to Setup > HR Information System > Government-Issued ID Types.
2. To see all inactive types, check the **Show Inactives** box.
3. To view an individual type, click **View** next to the name of the type.

Deleting a Custom ID Type

Use the following procedure to delete a custom ID type.

To delete a custom ID type:

1. Go to Setup > HR Information System > Government-Issued ID Types.
2. Click **Edit** beside the custom type you want to delete.
3. On the **Actions** menu, select **Delete**. You can't delete any standard ID types included by default.
4. When prompted to confirm the deletion, click **OK**.

Managing Basic Government-Issued ID for Employees

If you use the Basic Government-Issued ID Tracking feature, you can enter information for employees about these types of ID:

- Passport Number
- Driver's License Number

You can only enter the numbers for these two types of ID. To enter more detailed information, you must enable the Advanced Government-Issued ID Tracking feature. You enter this information in two ways: from the employee record, or from list page for the type of ID you're entering.

Ensure that you enter information exactly as it appears on the original documents.

Adding or Editing Passport Information

Use the following procedure to add or edit passport information.

To add or edit passport information:

1. Go to Lists > Employees > Employees and then click **Edit** beside the employee whose information you want to add or edit.
2. On the **Human Resources** subtab, enter the employee's passport number in the **Passport Number** field.
3. Click **Save**.

Adding or Editing Driver's License Information

Use the following procedure to add or edit driver's license information.

To add or edit driver's license information:

1. Go to Lists > Employees > Employees and then click **Edit** beside the employee whose information you want to add or edit.
2. On the **Government-Issued ID** subtab, enter the employee's driver's license number in the **Driver's License Number** field.
3. Click **Save**.

Managing Advanced Government-Issued ID for Employees

If you use the Advanced Government-Issued ID Tracking feature, you can enter information for employees about these types of ID:

- Passport Number
- Driver's License Number
- Individual Taxpayer Identification Number (ITIN)
- Inland Revenue Department Number (IRD)
- National Insurance Number (NINO)
- Social Insurance Number (SIN)
- Social Security Number (SSN)
- Tax File Number (TFN)

With the Advanced feature, you can also add information for custom types that you've created. Ensure that you enter information exactly as it appears on the original documents.

You can enter this information in two ways: from the employee record, or from list page for the type of ID you're entering.

Adding or Editing Passport Information

Use the following procedure to add or edit passport information.

To add or edit passport information:

1. Go to Lists > Employees > Employees and then click **Edit** beside the employee whose information you want to add or edit.
2. On the **Government-Issued ID** subtab, under Passport, click **New Passport**.
3. In the Passport window, enter the **Nationality**.
4. Enter the **Date of Issue**.
5. Optionally, enter a **Description**, especially if you're entering more than one passport for this employee.
6. Enter the employee's **Name As It Appears On Document**.
7. Enter the **Date of Expiration**.
8. Enter the **Issuing Authority/Region**.
9. Enter the **Passport Number**.

10. Click **Save**.

Adding or Editing Driver's License Information

Use the following procedure to add or edit driver's license information.

To add or edit driver's license information:

1. Go to Lists > Employees > Employees and then click **Edit** beside the employee whose information you want to add or edit.
2. On the **Government-Issued ID** subtab, under Driver's License, click **New Driver's License**.
3. In the Driver's License window, enter the **Date of Issue**.
4. Optionally, enter a **Description**, especially if you're entering more than one driver's license for this employee.
5. Enter the employee's **Name As It Appears On Document**.
6. Enter the **Date of Expiration**.
7. Enter the **Class/Level** of the license.
8. Enter the **Issuing Authority/Region**.
9. Enter the **Driver's License Number**.
10. Click **Save**.

Adding or Editing Other ID Information

Use the following procedure to add or edit other ID information.

To add or edit other ID information:

1. Go to Lists > Employees > Employees and then click **Edit** beside the employee whose information you want to add or edit.
2. On the **Government-Issued ID** subtab, under Other Government-Issued IDs, click **New Government-Issued ID**.
3. In the Other Government-Issued ID window, select an ID type from the **Government-Issued ID Type** list. If the ID type you want to add doesn't appear in the list, you can add custom ID types. For more information, see [Managing Government-Issued ID Types](#).
4. Click the **Number** field and then enter the ID number.
5. Click the **Name As It Appears On Document** field and then enter the employee's name. Ensure that you enter the name exactly as it appears on the document.
6. Optionally, click the **Description** field and then enter a description for this ID.
7. Optionally, enter the **Date of Expiration**.
8. Add any more IDs for this employee.
9. Click **Save**.

Benefits Tracking

The Benefits Tracking SuiteApp lets you to track your company's benefits plans so that both Human Resources and employees can access the details of plans within NetSuite instead of using the benefits carriers' websites. This SuiteApp also lets you to track and report on the costs paid by your company and your employees. This SuiteApp provides the following features:

- HR administrators can view the benefit plans of individual employees.
- HR administrators can view the costs of benefits plans so they can track the financial impact.
- Employees can view their own benefits plans through a Benefits Tracking portlet that they add to their dashboard.
- HR administrators can import benefit plan information directly from carriers into NetSuite instead of entering it manually.

For more information about Benefits Tracking, see the following topics:

- [Setting Up the Benefits Tracking SuiteApp](#)
- [Configuring Benefits Tracking](#)
 - [Assigning the Benefits Administrator Role](#)
 - [Creating a Custom Benefits Administrator Role](#)
 - [Confirming that Benefits Tracking Scripts Are Running](#)
 - [Adding Custom Roles as Audiences in Benefits Tracking Searches](#)
 - [Creating Benefit Carriers](#)
 - [Creating Benefit Types](#)
 - [Creating Benefits](#)
 - [Assigning Benefits to an Employee](#)
- [Benefits Tracking Reports](#)
- [Importing Benefits Information from Carriers](#)
 - [Benefits Tracking Import Fields](#)
 - [Benefits Tracking CSV Examples](#)

Setting Up the Benefits Tracking SuiteApp

This section describes how to set up the Benefits Tracking SuiteApp. It includes these sections:

- [Prerequisites for the Benefits Tracking SuiteApp](#)
- [Installing the Benefits Tracking SuiteApp](#)

 **Note:** Currently, the Benefits Tracking SuiteApp supports only US and UK English languages.

Prerequisites for the Benefits Tracking SuiteApp

To install the Benefits Tracking SuiteApp, you must have the following features enabled:

- Custom Records

- Server SuiteScript
- Client SuiteScript

Installing the Benefits Tracking SuiteApp

Install the Benefits Tracking SuiteApp:

- Bundle Name: **Benefits Tracking**
- Bundle ID: 181105

This is a managed bundle and is automatically updated whenever there are updates. These issue fixes and enhancements are available after the SuiteApp is updated in your account.

For more information about installing SuiteApps, see the help topic [Installing a Bundle](#).

Configuring Benefits Tracking

After you install the Benefits Tracking SuiteApp, you must follow a series of steps to configure benefits tracking:

- [Assigning the Benefits Administrator Role](#)
- [Creating a Custom Benefits Administrator Role](#)
- [Confirming that Benefits Tracking Scripts Are Running](#)
- [Adding Custom Roles as Audiences in Benefits Tracking Searches](#)
- [Creating Benefit Carriers](#)
- [Creating Benefit Types](#)
- [Creating Benefits](#)
- [Assigning Benefits to an Employee](#)

Assigning the Benefits Administrator Role

When you install the Benefits Tracking SuiteApp, a Benefits Administrator role is created in your account. You should assign the Benefits Administrator role to employees who oversee your benefits programs. For more information, see [Assigning Roles to an Employee](#).

Note: The Benefits Administrator role doesn't have full Benefits – Employee Benefit permissions by default. This is because the role isn't intended to have full permissions to employee records. To import and assign employee benefits using this role, you can either use [Staging](#) import or create a custom role.

Creating a Custom Benefits Administrator Role

If you need to create a custom benefits administrator role to better suit your needs, make sure you assign the correct set and level of permissions. For more information, see the help topic [Customizing or Creating NetSuite Roles](#).

The minimum set of permissions for a custom role to access and update benefits on the employee record are listed below.

Permission Type	Permission	Level
Lists	Payroll Items	View
Custom Record	Benefits - Benefit Deduction	View
	Benefits - Benefit Employer Contribution	View
	Benefits - Employee Benefit	Full
	Benefits - Translation	View

Custom benefits administrator roles that require edit access to your company's benefit records including benefit types, plans and carriers need a larger set of permissions with higher levels. These permissions are listed in the table below.

Permission Type	Permission	Level
Lists	Payroll Items	View
	Perform Search	View
	Subsidiaries	View
Setup	Control SuiteScript and Workflow Triggers per CSV Import	Full
	Custom Record Types	View
	Import CSV File	Full
Custom Record	Benefits - Benefit	Full
	Benefits - Benefit Carrier	Full
	Benefits - Benefit Coverage	Full
	Benefits - Benefit Deduction	Full
	Benefits - Benefit Employer Contribution	Full
	Benefits - Benefit Type	Full
	Benefits - Employee Benefit	Full
	Benefits - Staging	Full
	Benefits - System Propagate Cost	Full
	Benefits - Translation	View

Confirming that Benefits Tracking Scripts Are Running

To confirm that scripts are running:

1. Go to Customization > Scripting > Scripted Records.
2. On the Scripted Records page, click **Edit** beside Employee.

3. On the User Event Scripts tab, make sure that the **Deployed** box beside the **Benefits - Employee UE** script is checked.
4. On the Client Scripts tab, make sure that the **Deployed** box beside the **Benefits - Employee Client** script is checked.
5. Click **Save**.

Adding Custom Roles as Audiences in Benefits Tracking Searches

Benefits Tracking saved searches, which are used for Benefits Tracking SuiteApp features, are shared only to users with the Administrator and Human Resource Generalist roles.

For custom roles to use the Benefits Tracking SuiteApp features, you must add them as audiences in Benefits Tracking saved searches.

To add custom roles as audiences in Benefits Tracking searches:

1. Go to the saved search list. For more information, see the help topic [Accessing a Saved Search](#).
2. On the Saved Searches list, beside one of the following Benefits Tracking saved searches, click **Edit**:
 - Benefit Tracking – Employee Benefit Costs
 - Benefit Tracking – Employee Benefit Coverages
 - Benefit Tracking – Employees without Benefits
3. On the saved search form, in the **Search Title** field, enter a name for the copied search.
4. Click the **Audience** subtab.
5. From the **Role** list, select the custom roles that require access to benefits tracking information.
6. Click **Save As**.
7. Repeat Steps 2 to 6 for the rest of the Benefits Tracking saved searches.

Creating Benefit Carriers

A benefit carrier is a third-party company that provides benefits to your employees, for which your company or your employees, or both, pay premiums. For each benefit that you create using the Benefits Tracking SuiteApp, you can specify a carrier to track these benefit providers.

To create a benefit carrier:

1. Go to Setup > Benefits > Benefit Carriers > New.
2. On the Benefits Tracking — Carrier page, in the **Name** field, enter a unique name for the carrier.
3. Optionally, enter the following additional information for the carrier:
 - Address
 - Contact Email
 - Contact Phone
 - Website
4. Click **Save**.

Creating Benefit Types

A benefit type is a category of benefit provided to an employee by a carrier, such as medical, dental, disability, or life insurance. When you install the Benefits Tracking SuiteApp, several default benefit types are populated for you:

- Life Insurance
- Accidental Death & Dismemberment (AD&D)
- Medical
- Dental
- Vision
- Long-Term Disability (LTD)
- Short-Term Disability (STD)
- Health Spending Account (HSA)

You can edit or delete these types or create your own to match your organization's situation.

To create a benefit type:

1. Go to Setup > Benefits > Benefit Types > New.
2. In the **Name** field, enter a unique name for the type.
3. Click **Save**.

Creating Benefits

A benefit is a specific, non-wage compensation item provided to an employee. When you create a benefit, you associate it with a benefit type, carrier, and coverage. You also specify the monthly employer and employee costs for the benefit so that you can track these figures for your company.

If you're using SuitePeople US Payroll, you can also associate the benefit with a payroll deduction and employer contribution so that the appropriate deductions and contributions are reflected on employees' paychecks. In this case, before you create benefits, you should create the deduction payroll items and the employer contribution payroll items that you plan to associate with those benefits. For more information, see the help topic [Creating Payroll Items](#).

Important: When creating payroll items for benefits:

- You should create new payroll items for use with benefits only, and not use those payroll items for other uses.
- If you add a benefits-related payroll item to an employee from the Payroll tab for another reason, the payroll item will be added to the employee's benefits. This could lead to inaccurate results.
- You shouldn't associate a benefit with a payroll item which is derived from another payroll item.

To create a benefit:

1. Go to Setup > Benefits > Benefits > New.
2. In the **Name** field, enter a unique name for the benefit.
3. Optionally, enter a description in the **Description** field to help distinguish this benefit from others.
4. Select a type from the **Type** dropdown list. To add a new type here, click the **Add** button. For more information about adding a benefit type, see [Creating Benefit Types](#).
5. Optionally, select a carrier from the **Carrier** dropdown list. To add a new carrier here, click the **Add** button. For more information about adding a carrier, see [Creating Benefit Carriers](#).
6. On the Coverage tab, add a coverage with the following steps:
 - a. Enter a name for the coverage in the **Benefit Coverage Name** field.
 - b. In the **Monthly Employer Cost** field, enter the amount that your company will pay for the benefit per employee every month.
 - c. In the **Monthly Employee Cost** field, enter the amount that the employee will pay for the benefit every month.

Note that the **Monthly Total Cost** field is updated with the sum of the two monthly cost fields.

 **Note:** If you change either of the monthly cost fields after you have assigned this benefit to an employee, you'll be asked to choose whether to apply this change to the affected employees.

7. If you use SuitePeople US Payroll, on the **Deduction** tab, select the payroll item to associate with this benefit. This represents the deduction that will be applied to employees' paychecks. You can add multiple payroll deduction items to a benefit if they're from different subsidiaries and they haven't been used in other benefits. Before setting up benefits, you should create the required deduction payroll items. For more information, see the help topic [Creating Payroll Items](#).
8. If you use SuitePeople US Payroll, on the **Employer Contribution** tab, select the payroll item to associate with this benefit. This represents the employer contribution that will be applied to employees' paychecks. You can add multiple employer contribution items to a benefit if they're from different subsidiaries and they haven't been used in other benefits. Before setting up benefits, you should create the required employer contribution payroll items. For more information, see [Creating Payroll Items](#).
9. Click **Save**.

Assigning Benefits to an Employee

A benefit is a specific, non-wage compensation item provided to an employee. When you create a benefit, you associate it with a benefit type, carrier, and coverage. You also specify the monthly employer and employee costs for the benefit so that you can track these figures for your company. After you've defined the benefits that employees in your organization can have, you assign them to employees.

To assign a benefit to an employee:

1. Go to Lists > Employees > Employees.
2. Beside to the employee you want to assign the benefit to, click **Edit**.
3. Click the **Benefits** tab.
4. Select a benefit from the **Benefit** dropdown list.
5. Select a type of coverage from the **Coverage** dropdown list. The items here are the ones associated with the selected benefit.

6. When you select a coverage, the **Monthly Employer Cost** and **Monthly Employee Cost** fields are automatically populated with the values from the selected coverage. To override those values, click one or both of the fields and enter new values. When you change those fields, the **Monthly Total Cost** field is updated automatically.
7. Click **Add**.
8. Click **Save**.

Benefits Tracking Reports

The Benefit Tracking SuiteApp includes three reports that you can use to retrieve, present, and analyze your benefits data:

- [Employee Benefit Coverage Report](#)
- [Employee Benefit Cost Report](#)
- [Employees Without Benefits Report](#)

You can also customize these standard reports in the Report Builder by clicking **Customize** on the results page. For more information, see the help topics [Report Builder Interface](#) and [Report Customization](#).

Employee Benefit Coverage Report

The standard Employee Benefit Coverage report shows the benefit type, benefit, carrier, and coverage for each employee across all classes, departments, locations, and subsidiaries. You can use this report to quickly see an employee's benefits coverage.

To view the Employee Benefit Coverage report, go to Reports > Saved Searches > Employee Benefit Coverage.

The standard Employee Benefit Coverage report shows the following columns:

- Name (sorted ascending by default)
- Job (if you're using the Job Management feature)
- Supervisor
- Class
- Department
- Location
- Subsidiary
- Country
- Benefit Type
- Benefit
- Carrier
- Coverage

To customize this report and display it in the Report Builder, click **Customize**. For more information, see the help topic [Report Customization](#).

Employee Benefit Cost Report

The standard Employee Benefit Cost report shows the benefit type, benefit, carrier, employee cost, employer cost, and total cost for each employee across all classes, departments, locations, and subsidiaries. You can use this report to quickly see how much an employee's benefits are costing both the company and the employee.

To view the Employee Benefit Cost report, go to Reports > Saved Searches > Employee Benefit Cost.

The standard Employee Benefit Cost report shows the following columns:

- Name (sorted ascending by default)
- Job (if you're using the Job Management feature)
- Supervisor
- Class
- Department
- Location
- Subsidiary
- Country
- Benefit Type
- Benefit
- Carrier
- Employee Cost
- Employer Cost
- Total Cost

To customize this report and display it in the Report Builder, click **Customize**. For more information, see the help topic [Report Customization](#).

Employees Without Benefits Report

The standard Employees Without Benefits report shows the employees who don't have benefits assigned to them. To appear in this report, employees must:

- Be Active
- Have a Termination/Release Date in the future or blank
- Have no benefits assigned

To view the Employees Without Benefits report, go to Reports > Saved Searches > Employees Without Benefits.

The standard Employee Benefit Cost report shows the following columns:

- Name (sorted ascending by default)
- Job Title
- Supervisor
- Class
- Department

- Location
- Subsidiary
- Country (from Subsidiary)

To customize this report and display it in the Report Builder, click **Customize**. For more information, see the help topic [Report Customization](#).

Importing Benefits Information from Carriers

You can quickly import benefits information for multiple benefit types, coverage, and carriers using the CSV Import feature. For more information, see the help topic [Importing CSV Files with the Import Assistant](#).

To import benefits information from a carrier:

1. Go to Setup > Import/Export > Import CSV Records.
2. On the Import Assistant page, select **Custom Records** from the **Import Type** dropdown list.
3. From the **Record Type** dropdown list, select one of the following benefits-related record you want to import.
 - Benefit
 - Benefit Carrier
 - Benefit Coverage
 - Benefit Deduction
 - Benefit Employer Contribution
 - Benefit Type
 - Employee Benefit
 - Staging
4. Under **CSV File(s)**, choose **One File to Upload** and click **Select** then locate the file you want to upload.
To see some CSV file examples, read [Benefits Tracking CSV Examples](#).
5. Click **Next**.
6. On the Import Options page, select **Add or Update**.
7. Click the expand icon next to **Advanced Options**.
8. Check the **Run Server SuiteScript and Trigger Workflows** box then click **Next**.
9. On the Field Mapping page, confirm that the fields in your CSV file are mapped to the correct fields in the custom record. Click **Next**.
For more information about supported fields, see [Benefits Tracking Import Fields](#).
10. On the Save mapping & Start Import page, you can enter one or more of the following:
 - a map name
 - a description
 - a script ID

To save the mapping, enter at least a map name and click **Save & Run**.

To run the import without saving, click **Run**.

11. To view the results of the CSV Import, including any errors, click **CSV Response** on the Job Status page.

Benefits Tracking Import Fields

Below is a description of the fields available for mapping for each Benefit record type using the CSV Import Assistant.

- [Benefit](#)
- [Benefit Carrier](#)
- [Benefit Coverage](#)
- [Benefit Deduction](#)
- [Benefit Employer Contribution](#)
- [Benefit Type](#)
- [Employee Benefit](#)
- [Staging](#)

Benefit

The Benefit import record type lets you quickly enter information for multiple benefits. For more information, see [Creating Benefits](#).

Field	Description	Field is required
External ID	Used as a unique identifier for the record. You can specify any value that hasn't been used as the External ID in previous CSV imports.	No
Type	The benefit type. This field can be any benefit type you created or any type installed with the SuiteApp by default: ■ Life Insurance ■ Accidental Death & Dismemberment (AD&D) ■ Medical ■ Dental ■ Vision ■ Long-Term Disability (LTD) ■ Short-Term Disability (STD) ■ Health Spending Account (HSA)	Yes
Name	The unique benefit name.	Yes
Carrier	The carrier providing the benefit to your employees.	No
Description	A description to help distinguish the benefit from others.	No

Benefit Carrier

The Benefit Carrier import record type lets you quickly enter information for multiple benefit carriers. For more information, see [Creating Benefit Carriers](#).

Field	Description	Field is required
External ID	Used as a unique identifier for the record. You can specify any value that hasn't been used as the External ID in previous CSV imports.	No
Name	The benefit carrier name.	Yes
Address	The benefit carrier's address	No
Contact Email	The benefit carrier's email address.	No
Contact Phone	The benefit carrier's phone number.	No
Website	The benefit carrier's website.	No

Benefit Coverage

The Benefit Coverage import record type lets you quickly add coverage and cost information for each benefit. For more information, see [Creating Benefits](#).

Field	Description	Field is required
External ID	Used as a unique identifier for the record. You can specify any value that hasn't been used as the External ID in previous CSV imports.	No
Benefit	The benefit plan name.	Yes
Name	The benefit coverage name. This corresponds to the value in the Benefits Coverage Name field of the Coverage subtab when setting up benefits.	No
Monthly Employer Cost	The amount the company pays per employee per month for the given benefit. The system uses an amount of 0 if mapped to an empty cell.	No
Monthly Employee Cost	The amount the employee pays per month for the given benefit. The system uses an amount of 0 if mapped to an empty cell.	No
Inactive	If set to Yes, the benefit is hidden in lists on records and fields. This corresponds to the Inactive box when creating benefits.	No, but if you don't include a mapping for this field, the system uses the default value, which is No.

Benefit Deduction

The Benefit Deduction import record type lets you quickly associate benefits to their corresponding employee deduction payroll items. For more information, see [Creating Benefits](#).

Field	Description	Field is required
External ID	Used as a unique identifier for the record. You can specify any value that hasn't been used as the External ID in previous CSV imports.	No
Benefit Plan	The benefit plan name.	Yes
Payroll Item	The payroll item name associated with the employee's monthly deduction for the given benefit plan. This field must be an active payroll item on the Payroll Items page at Lists > Employees > Payroll Items.	Yes

Benefit Employer Contribution

The Benefit Employer Contribution import record type lets you quickly associate benefits to their corresponding company contribution payroll items. For more information, see [Creating Benefits](#).

Field	Description	Field is required
External ID	Used as a unique identifier for the record. You can specify any value that hasn't been used as the External ID in previous CSV imports.	No
Benefit Plan	The benefit plan name.	Yes
Payroll Item	The payroll item name associated with the company's monthly contribution for the given benefit plan. This field must be an active payroll item on the Payroll Items page at Lists > Employees > Payroll Items.	Yes

Benefit Type

The Benefit Type import record type lets you quickly enter information for multiple benefit types. For more information, see [Creating Benefit Types](#).

Field	Description	Field is required
External ID	Used as a unique identifier for the record. You can specify any value that hasn't been used as the External ID in previous CSV imports.	No
Name	The unique benefit type name. This name must be different from existing benefit types you already created or any type installed with the SuiteApp by default: ■ Life Insurance ■ Accidental Death & Dismemberment (AD&D) ■ Medical ■ Dental ■ Vision ■ Long-Term Disability (LTD) ■ Short-Term Disability (STD) ■ Health Spending Account (HSA)	Yes

Employee Benefit

The Employee Benefit import record type lets you quickly enter benefit information for multiple employees. For more information, see [Assigning Benefits to an Employee](#).

Field	Description	Field is required
External ID	Used as a unique identifier for the record. You can specify any value that hasn't been used as the External ID in previous CSV imports.	No
Benefit	The unique benefit name.	Yes
Employee	The employee name. This field must be associated with an active employee on the Employees page at Lists > Employees > Employees.	Yes
Coverage	The benefit coverage name.	No

Field	Description	Field is required
Monthly Employer Cost	The amount the company pays per employee per month for the given benefit. The system uses an amount of 0 if mapped to an empty cell.	No
Monthly Employee Cost	The amount the employee pays per month for the given benefit. The system uses an amount of 0 if mapped to an empty cell.	No

Staging

The Staging import record type lets you quickly enter complete benefit information for multiple employees. Users assigned with the Benefits Administrator role can use staging import to assign benefits to employees even without having employee access. For more information, see [Assigning Benefits to an Employee](#).

Field	Description	Field is required
Carrier - External ID	Used as a unique identifier for the carrier record. You can specify any value that hasn't been used as the External ID in previous CSV imports.	Yes
Carrier - Name	The benefit carrier name.	Yes
Carrier - Address	The benefit carrier's address	No
Carrier - Contact Email	The benefit carrier's email address.	No
Carrier - Contact Phone	The benefit carrier's phone number.	No
Carrier - Website	The benefit carrier's website.	No
Type - External ID	Used as a unique identifier for the benefit type record. You can specify any value that hasn't been used as the External ID in previous CSV imports.	Yes
Type - Name	The unique benefit type name.	No
Benefit - External ID	Used as a unique identifier for the benefit record. You can specify any value that hasn't been used as the External ID in previous CSV imports.	Yes
Benefit - Name	The benefit plan name.	Yes
Benefit - Description	A description to help distinguish the benefit from others.	No
Benefit - Deduction Payroll Item External IDs	The payroll item which corresponds to the amount the employee pays per month for the given benefit. The value here must be the value defined in the Benefits Tracking External ID field on the payroll item page. This is an optional field and is useful if you want to link the benefit to the employee deduction payroll item.  Tip: Use the pipe () character as a delimiter if you want to include multiple payroll items such as from different subsidiaries. For example, you may enter multiple IDs as id_01 id_02 id_03.	No
Benefit - Company Payroll Item External IDs	The payroll item which corresponds to the amount the company pays per employee per month for the given benefit. The value here must be the value defined in the Benefits Tracking External ID field on the payroll item page. This	No

Field	Description	Field is required
	is an optional field and is useful if you want to link the benefit to the company contribution payroll item.  Tip: Use the pipe () character as a delimiter if you want to include multiple payroll items such as from different subsidiaries. For example, you may enter multiple IDs as id_01 id_02 id_03.	
Coverage - External ID	Used as a unique identifier for the benefit coverage record. You can specify any value that hasn't been used as the External ID in previous CSV imports.	Yes
Coverage - Name	The benefit coverage name.	Yes
Coverage - Employer Cost	The amount the company pays per employee per month for the given benefit. The system uses an amount of 0 if mapped to an empty cell.	No
Coverage - Employee Cost	The amount the employee pays per month for the given benefit. The system uses an amount of 0 if mapped to an empty cell.	No
Employee Coverage- External ID	Used as a unique identifier for the employee coverage record. You can specify any value that hasn't been used as the External ID in previous CSV imports.	Yes
Employee Coverage- Employee External ID	Used as a unique identifier for the employee. You can specify any value that hasn't been used as the External ID in previous CSV imports.	Yes
Employee Coverage- Employee Name	The employee name. This field must be associated with an active employee on the Employees page at Lists > Employees > Employees.	No
Employee Coverage- Employer Cost	The amount the company pays per employee per month for the given benefit.	Yes
Employee Coverage- Employee Cost	The amount the employee pays per month for the given benefit.	Yes

Benefits Tracking CSV Examples

The following examples show how you can structure files for importing benefits tracking information using the CSV Import Assistant.

- [Benefit](#)
- [Benefit Carrier](#)
- [Benefit Coverage](#)
- [Benefit Deduction](#)
- [Benefit Employer Contribution](#)
- [Benefit Type](#)
- [Employee Benefit](#)
- [Staging](#)

Workforce Case Interaction

Important: As of June 30, 2024, the Workforce Case Interaction SuiteApp (Bundle ID: 330007) is no longer supported and is not available for new installations. You may continue to use the SuiteApp, but it will no longer receive updates or issue fixes.

The Workforce Case Interaction SuiteApp lets your company trace an ill employee's interactions with others. Interaction with employees, customers, and vendors is tracked during times where highly contagious infections or viruses pose a threat to workforce health and safety.

When an employee self-reports an illness to an HR professional, the HR professional or other authorized user can log an employee case. Using the reporting employee's data stored in NetSuite, you can then generate a list of possible interactions that employee may have had. The list shows the employees who have been identified as potentially having some in-person contact with the employee in question, which could include the following:

- A common location
- A time entry in a common location
- A relationship in the organization, such as supervisor, direct report, or reporting to the same supervisor
- A project-based relationship
- A common calendar event

If you are aware of interactions that were not represented by the data in your account, you can add them manually.

You can export this list to a comma-separated values (CSV) file or other format.

Note: The Workforce Case Interaction SuiteApp does not support the SuitePeople Effective Dating feature. The current day version of the employee record is used to determine potential contacts.

For more information about the Workforce Case Interaction SuiteApp, see the following topics:

- [Setting up the Workforce Case Interaction SuiteApp](#)
- [Creating an Employee Case](#)
- [Adding Interactions for an Existing Employee Case](#)
- [Viewing and Exporting Interactions for an Employee Case](#)
- [Generating an Email Distribution List for an Employee Case](#)

Setting up the Workforce Case Interaction SuiteApp

This section describes how to set up the Workforce Case Interaction SuiteApp. It includes these sections:

- [Prerequisites for the Workforce Case Interaction SuiteApp](#)
- [Installing the Workforce Case Interaction SuiteApp](#)
- [Allowing Roles to Access the Workforce Case Interaction SuiteApp](#)

 **Note:** Currently, the Workforce Case Interaction SuiteApp supports only the US English language.

Prerequisites for the Workforce Case Interaction SuiteApp

Before you install the Workforce Case Interaction SuiteApp, ensure that the following features are enabled in your NetSuite account. If you do not see these features on the Enable Features page, contact your NetSuite account manager:

- Custom Records
- Server SuiteScript
- Client SuiteScript

Installing the Workforce Case Interaction SuiteApp

As an administrator, install the SuiteApp using the following details:

- Bundle Name: Workforce Case Interaction Bundle
- ID: 330007

For more information about installing SuiteApps, see the help topic [Installing a Bundle](#). The Workforce Case Interaction SuiteApp is a managed bundle and is automatically updated whenever fixes and enhancements are available.

Allowing Roles to Access the Workforce Case Interaction SuiteApp

The Workforce Case Interaction SuiteApp allows the capture of potentially sensitive information. Therefore, the installation process gives access to the SuiteApp to the Administrator role only, by default. After installation, you grant access to other roles in your company that you want to be able to use the SuiteApp. For example, you might give access to your Chief People Officer (CPO) and Human Resources Generalist roles.

If there are several people in your organization with the same role, you can limit SuiteApp access to only some of them. You can do this by creating a custom role specifically for this SuiteApp, and then assign it to those people. For information about creating a custom role, see the help topic [Customizing or Creating NetSuite Roles](#).

You should review all of the topics for this SuiteApp before allowing access to the SuiteApp to any roles.

 **Note:** This SuiteApp uses full NetSuite administrator permissions to generate the list of potential contacts. This is true regardless of the restrictions on the role that you are using to access the SuiteApp. If you use NetSuite OneWorld and your current role can view only some of your subsidiaries, note the following. The generated list still has all interactions in your company, but you can only manually add interactions from the subsidiaries you can access. Also, you can only create employee cases for subsidiaries you have access to. If the SuiteApp user must create cases for all employees, regardless of subsidiary, you must create a custom role. Check the **Do Not Restrict Employee Fields** box for the role, and then assign that role to the user.

To allow roles to use the Workforce Case Interaction SuiteApp:

1. Go to Customization > Lists, Records, & Fields > Record Types.
2. Locate the **Contact Tracing Permitted Role** custom record and click **List**.
3. On the Contact Tracing Permitted Role List page, click **New Contact Tracing Permitted Role**.
4. Select the role you want to give access to from the **Role With Access To Contact Tracing App** list.
5. Enter any notes you would like to include in the **Title** and **Memo** fields.
6. Click **Save**.

You can allow access to the Employee Case Logging page for a role that does not have access to the Classic Center or Accounting Center. To allow access, add a center link and associate it with the URL for the page.

To find the URL for the Employee Case list page:

1. Go to Customization > Lists, Records, & Fields > Record Types.
2. Locate the **Employee Case** custom record and click the **List** link.
3. Copy the URL of the page that appears.

For information about adding center links, see the help topic [Creating Center Links](#).

Creating an Employee Case

When you receive a self-report of illness from an employee, you can use the Workforce Case Interaction SuiteApp to create an employee case. Then you can determine what contact that employee has had with others. You specify a start and end date that represent the period of the case, or the range of dates you want to track.

When or after you create a case, you can have the SuiteApp generate a list of possible interactions for the self-reporting employee. After this generation step, you can remove, exclude, or edit those interactions if you know that they are not relevant.

The contact list is determined by the employee's:

- Location
- Time entries
- Direct team members
- Project team members
- Participation in calendar events

 **Note:** If an employee's record is active but they are terminated, they will be included in any contact tracing list.

To create an employee case:

1. Depending on the role you are using, go to one of the following:
 - Lists > Employees > Employee Case
 - Payroll and HR > Lists > Employee Case
2. On the Employee Case List page, click **New Employee Case**.

3. On the Employee Case entry page, select the employee's name from the **Name** list. The Employee Information section is populated with data from the employee record so that you can confirm that you have selected the correct employee.
4. If you have updated values than those populated from the employee record, you can edit the **Email**, **Phone**, and **Mobile Phone** fields. Note that these edits are on the employee case only. They do not change the employee record.
5. Enter a **Start Date** and **End Date** that represent the period of the case or the range of dates you want to track.
6. Enter a **Reported Date**. This is the date when the employee self-reported, not the date when you are creating this case. This field defaults to today.
7. Select a status for this case from the **Status** list: Identifying Contacts, Monitoring, or Resolved. The status defaults to Identifying Contacts.
8. Optionally, to add any notes to this case, click the **Notes** subtab, enter information in the Title and Memo fields, and click **Add**.
9. Optionally, to attach any supporting files to the case, click the **Files** subtab, click **New** to select a file, and then click **Add**.
10. To generate a list of possible interactions based on data in NetSuite, click **Generate Possible Interactions**. In the warning popup that appears, click **OK**. If any interactions were found, they appear at the bottom of the case entry page. The employee case is saved as part of this action. Note:

 **Note:** This is a one-time action. After you click **Generate Possible Interactions**, it no longer appears on the Employee Case page.
11. To generate a list of emails for notifications, click **Edit** on the employee case page and then click **Generate Email Distribution List**.
12. Click **Save**.

Adding Interactions for an Existing Employee Case

The Workforce Case Interaction SuiteApp lets you manually add additional interactions between the employee in question and other employees. You can manually add interactions with other NetSuite entities, such as vendors, customers, contacts, and partners. You can also add interactions between the employee and people who are not in your company or account. You add interactions when you create or edit an existing case.

To add interactions to an employee case:

1. Go to Lists > Employees > Employee Case.
2. Click **Edit** beside the case that you want to add interactions to.
3. On the **Interactions** subtab, click a new row. Then, select an entity that might have interacted with the employee case from the **NetSuite Entity** list.
4. The **Name**, **Type**, **Email**, **Phone**, and **Mobile Phone** fields are populated from the entity record. However, you can edit these fields if you have updated information.
5. To add an interaction with a person who is not in your NetSuite account, click **New Interaction**. Enter a **Name** and other relevant information (including Notes and Attachments), and then click **Save**.
6. To include this interaction in any reporting, check the **Include** box. Then, select a **Location**, if relevant.

7. Select the boxes of the possible interactions with the employee case.
8. Click **Add**.

You can also add interactions when viewing a case, or from the Interaction List page by clicking **New Interaction**.

Viewing and Exporting Interactions for an Employee Case

The Workforce Case Interaction SuiteApp lets generate and add to a list of interactions between the employee in question and other employees. You can also generate and add to a list interactions with NetSuite entities, such as vendors, customers, contacts, and partners.

You can view the interactions list on a List page, and then export it to other formats for use in other applications.

To view and export the interaction list for an employee case:

1. Go to Lists > Employees > Employee Case.
2. Click **View** or **Edit** beside an existing case.
3. In the Interactions subtab, click the **Click here** link. The Interactions list for that case appears.
4. On the Interaction List page, you can edit or view an interaction to confirm any of the information in it for accuracy.
5. If you use inline editing on the List page, you can edit the Include box and the Remarks field. You can also edit any of the possible interaction boxes for a particular interaction.
6. To export the list to a comma-separated values (CSV), Microsoft Excel, or PDF file, click the appropriate button.

Generating an Email Distribution List for an Employee Case

The Workforce Case Interaction SuiteApp lets you generate a list of possible interactions between an employee in question and other employees or entities. You can also generate a list of relevant email addresses for notification purposes.

To create an email distribution list for an employee case:

1. Go to Lists > Employees > Employee Case.
2. Click **Edit** beside the employee case you want to generate a distribution list for.
3. On the Interactions subtab, click **Generate Email Distribution List**. The relevant email addresses for all interactions that have been marked as included appear in the Distribution List area.
4. Select the text in the **Distribution List** box and then copy and paste it into your email application.

Note: This distribution list is not saved when you close the subtab or browser, even if you save the employee case.
