Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

Expense Commitments and Budget Validation

Organizations need the capability to budget and report expenses by account and segment. After the budget approval, all expenses need validation with the budget to prevent overspending. The Expense Commitments and Budget Validation SuiteApp lets users:

- Create budgets for specific account, segment, and period combinations.
- Check purchase orders, purchase requests, and vendor bills against the budget.

Features of Expense Commitments and Budget Validation

The SuiteApp provides the following features:

- Lets you budget by accounting period, which is helpful for multiyear grants and similar cases.
- Lets you keep multiple versions of a budget for the same period.
- Lets you set warnings if an expense goes over budget for a specific account and segment combination.

Installing Expense Commitments and Budget Validation

This section includes the prerequisites and instructions for installing the Expense Commitments and Budget Validation SuiteApp.

Prerequisites

The SuiteApp is developed and tested for use primarily with NetSuite OneWorld. It doesn't support non-OneWorld accounts.

For more information about NetSuite OneWorld, read the help topic [Introduction to NetSuite OneWorld](#).

The following are the prerequisites for installing the SuiteApp:

- The account where you're installing the SuiteApp needs access to the Administrator and Employee Center roles.
- The SuiteApp requires the Advanced Financials module enabled in your account. To enable it, contact your NetSuite Account Manager.
- Enable the following features by going to Setup > Company > Enable Features. For more information, read the help topic [Enabling Features](#).

Subtab	Section	Feature
Company	Classification	□ Departments □ Locations

Subtab	Section	Feature
		Classes
	Projects	- Projects - Project Management – Required if you want to add project as a field for budget validation.
	International	- Multi-Language - Multiple Currencies
Accounting	Basic Features	- Accounting - A/P - Accounting Periods - Multiple Budgets
	Advanced Features	Multiple Budgets
Transactions	Basic Features	Purchase Orders
Employees	Time & Expenses	Purchase Requests
		Expense Reports
Setup	Analytics Administrator	View
	Custom Segments	View
	Manage Accounting Periods	View
Analytics	SuiteAnalytics Workbook	SuiteAnalytics Workbook
Lists	Subsidiaries	View
Transactions	Custom Budget	Edit
Custom Records	Budget Control	View
	Budget Preferences	View
	Budget Version	View
SuiteCloud	SuiteBuilder	Custom Records
	SuiteScript	- Client SuiteScript - Server SuiteScript
	SuiteGL	- Custom Transactions - Custom Segments
	SuiteCloud Development Framework	SuiteCloud Development Framework

Note: If the Multi-Book Accounting feature is enabled, you must also enable the Extended Accounting Period Close Process feature. After you enable the feature, budget validation only works in the Primary book.

Installation

Any role with access to the SuiteApp Marketplace in NetSuite can install the Expense Commitments and Budget Validation SuiteApp. For more information about the SuiteApp Marketplace, see the help topic [SuiteApp Marketplace in NetSuite](#)

To install the Expense Commitments and Budget Validation SuiteApp:

1. Go to the SuiteApps tab.

 **Note:** The SuiteApps menu isn't available for the following centers:

- Advanced Partner Center
- Employee Center
- Partner Center
- Vendor Center

2. In the **Search Apps** field, enter **Expense Commitments and Budget Validation SuiteApp**.
3. Click the Expense Commitments and Budget Validation tile.
4. In the top right area of the Labor Expense Allocation SuiteApp details page, click **Install**.

Expense Commitments and Budget Validation is a managed SuiteApp and automatically updates whenever there are enhancements or new features.

Roles and Permission for Expense Commitments and Budget Validation

You'll need the following permissions to use the Expense Commitments and Budget Validation SuiteApp.

Subtab	Permission
Setup	Analytics Administrator
	Custom Segments
	Manage Accounting Periods
Custom Records	Budget Control
	Budget Preferences
	Budget Version
Lists	Subsidiaries
Transactions	Custom Budget

Setting Up Expense Commitments and Budget Validation

To set up Expense Commitments and Budget Validation, perform the following tasks:

1. Create a saved search for budget validation. For details, see [Creating a Budget Validation Saved Search](#).

2. Add user-defined custom segments to transaction columns and custom budgets. For details, see [Adding User-Defined Custom Segments to Custom Budgets](#).
3. Create a saved search for budget control. For details, see [Creating a Budget Control Saved Search](#).
4. Create a budget control. For details, see [Creating a Budget Control Record](#).
5. Set budget preferences. For details, see [Setting Expense Commitments and Budget Validation Preferences](#).

Warning: Custom transactions, center tabs, and center categories are unlocked. However, you must not customize the custom budget transaction, center tab, and center categories delivered with the SuiteApp.

Creating a Budget Validation Saved Search

The Expense Commitments and Budget Validation SuiteApp provides predefined saved searches for custom budget and standard budget. If you require different fields or segments for budget validation, you can create a new saved search by customizing the saved searches provided by the SuiteApp.

Creating a Custom Budget Saved Search for Budget Validation

For custom budgets, the SuiteApp provides a default saved search **Custom Budget Transaction Search**, with budget fields and segments set to **Account**.

To create a custom budget saved search for budget validation:

1. Go to Lists > Search > Saved Searches.
2. Click **Edit** next to the **Custom Budget Transaction Search** saved search.
3. In the **Search Title** field, enter a new name for the saved search.
4. Click the **Results** subtab.
5. In the **Columns** sublist, add fields and segments that you want to use for budget validation.
6. Click **Save As**.

Creating a Standard Budget Saved Search for Budget Validation:

For standard budgets, the SuiteApp provides a default saved search **BM Standard Budget Search**.

To create a standard budget saved search for budget validation:

1. Go to Lists > Search > Saved Searches.
2. Click **Edit** next to the **BM Standard Budget Search** saved search.
3. In the **Search Title** field, enter a new name for the saved search.
4. Click the **Results** subtab.
5. In the **Columns** sublist, add fields and segments that you want to use for budget validation.

Standard budgets don't work with custom segments.

For native segments such as department, class, and location, select the options with the same names from the list.

6. Click **Save As**.

Important Things to Note When Creating a Custom or Standard Budget Validation Saved Searches

- In a custom budget saved search, select the segment column when you add a custom segment. For example, for restriction segment, select **Restriction (Custom Column)**.
- Standard budget does not work with custom segments.
- For native segments such as department, class, and location, select the options with the same names from the list.
- You can't use the **Item** field for budget validation. To validate items, enter the applicable transaction fields.

Adding User-Defined Custom Segments to Custom Budgets

User-defined custom segments only work for custom budgets.

Use the following procedure to add user-defined custom segments to transaction columns and custom budgets.

Important: Don't create custom segments or install SuiteApps with custom segments that use existing internal IDs.

To add user-defined custom segments to custom budgets:

1. Go to Customization > Lists, Records, and Fields > Custom Segments.
2. In the Custom Segments list page, click **Edit** on the user-defined custom segment.
3. In the **Application & Sourcing** subtab, click the **Transaction Columns** subtab.
4. In the **Transaction Columns** subtab, make the following changes:
 - a. In the **Application** section, check the **Expense** box.
 - b. In the sublist, check the box next to the **Custom Budget** record type.
5. Click **Save**.

Creating a Budget Control Saved Search

The Expense Commitments and Budget Validation SuiteApp provides a predefined saved search for using the budget control record to calculate the consumed budget. You can create a new saved search for budget control by customizing the saved search provided by the SuiteApp.

To create a saved search for budget control:

1. Go to Lists > Search > Saved Searches.
2. Click **Edit** next to the **Budget Transaction Consumed Amount** saved search.
3. In the **Search Title** field, enter a new name for the saved search.
4. In the **Standard** sublist of the **Criteria** subtab, add and update the filters.
5. Click **Save As**.

Note: You can only customize the existing criteria from the **Budget Transaction Consumed Amount** search. New filters aren't supported currently.

Creating a Budget Control Record

The budget control record stores the following settings for use across multiple budgets:

Field	Description
Custom Form	Select the custom form to create the budget control record.
Name	Enter a unique budget control name.
Budget Control Action	Select the desired outcome when you exceed the budget: ■ Warn Only – If the transaction exceeds the budget, you get a warning message on saving the transaction. ■ Prevent Save – If the transaction exceeds the budget, you get an error message and the application prevents you from saving the transaction. Note: If you check the Enable Threshold Warning box, a warning message appears in the transaction lines when the transaction exceeds the budget threshold.
Budget Managers	Select the employees responsible for tracking and reporting the budget.
Enable Threshold Warning	Check this box to enable threshold warnings for budget control. A warning appears on the transaction line when the budget remaining meets the threshold, which you set in the % Threshold Warning field. For example, if the threshold is 10% and budget is \$100, then the budget threshold is \$10. If the remaining budget is less than \$10, a warning appears when you save the transaction. Also, if the consumed amount is \$80, adding a transaction line of \$10 will trigger the warning.
% Threshold Warning	If the Enable Threshold Warning box is checked, enter the percentage value to calculate the budget threshold. A warning appears when the remaining budget meets the threshold. For example, a warning appears when a budget of 10% remains and you enter 10 in the field.
Saved Search – Consumed Amount	Select the saved search to calculate the consumed budget. For more information, read Creating a Budget Control Saved Search .
Message (Line)	Enter the warning message that displays on the transaction lines that exceed the budget. You can enter a message with up to 1024 characters.
Message (Transaction Save)	Enter the warning message that appears when you save a transaction that exceeds the budget. You can enter a message with up to 1024 characters.
Threshold Warning Message (Line)	Enter the warning message that displays on the transaction lines when the budget exceeds the threshold. The message appears after you save the transaction. You can enter a message with up to 1024 characters.
Status Message (Within Budget)	Enter the text or attach an image that displays on the transaction header when the transaction is within budget.

Field	Description
	To add an image, store it in your file cabinet and attach the URL link of the image in this box. The following is an example of the format for entering an image: <pre>1 </pre> Note: The account ID and file path in this sample are placeholders. Before using this sample, replace all the placeholders with valid values from your NetSuite account.
Status Message (Exceeds Budget)	Enter the text or attach an image that displays on the transaction header when the transaction exceeds the budget. To add an image, store the image in your file cabinet and attach the URL link of the image in this box. The following is an example of the format for entering an image: <pre>1 </pre> Note: The account ID and file path in this sample are placeholders. Before using this sample, replace all the placeholders with valid values from your NetSuite account.

To create a budget control:

1. Go to Budgets > Setup > Budget Control > New.
The Budget Control page opens.
2. In the **Name** field, enter a unique name for the budget control.
3. From the **Budget Control Action** list, select the action when you exceed the budget.
4. (Optional) To enable threshold warning: and
 - a. Check the **Enable Threshold Warning** box.
 - b. Enter the percentage threshold value in the **% Threshold Warning** field.
5. In the **Warnings** section, update the messages in the appropriate fields.
6. Click **Save**.

All custom budgets associated with a budget control record list appear in the **Budgets** subtab of the budget control record.

Setting Expense Commitments and Budget Validation Preferences

Set the following preferences when working with the Expense Commitments and Budget Validation SuiteApp:

- [Setting Up Budget Preferences](#)
- [Setting Up a Budget Account](#)
- [Setting Up Accounting Preferences](#)
- [Setting Up Subsidiary Record Preferences](#)

In addition, you must enable the Multiple Currencies feature. For more information about how to enable the Multiple Currencies feature, see the help topic [Enabling the Multiple Currencies Feature](#).

Setting Up Budget Preferences

To set budget preferences:

1. Go to Budgets > Setup > Budget Preferences.
2. In the Budget Preferences List page, click **Edit**.
3. In the Budget Preferences page, set the following preferences:

Preference	Description
Enable Budget Validation	Check this box to enable budget validation.
Budget Validation Source	Select the source of budget validation. Following are the options: ■ Standard Budget – Budgets from the standard budgets functionality. ■ Custom Budget – Custom budget created using the Budget Management SuiteApp.  Note: Don't select any value other than Standard Budget or Custom Budget, or the budgets won't get validated.
Budget Category	When you enable the Multiple Budget feature and select Standard Budget in the Budget Validation Source field, select the budget category from this field. When you have a budget category selected, only budgets with the same category are validated.  Note: The budget category in the subsidiary record overrides the one you select in this preference.
Budget Control for Validation	Select the budget control record. The SuiteApp only considers the budgets created using this budget control record for validation.
Saved Search for Budget Validation	Select the saved search for budget validation. Depending on your selection in the Budget Validation Source field, select the saved search for a standard budget or custom budget. For more information, read Creating a Budget Validation Saved Search.
Fields and Segments for Budget Validation	Enter the IDs of the fields or segments to which you want to compare transactions for budget validation. Select fields or segments that are available from the saved search selected in the Saved Search for Budget Validation field. For example, your transaction has seven segments but you want to validate the budget only using three segments. Enter the IDs of those three segments in this field. For custom budget custom segments, the format for entering ID is: <pre>{Line.Id} {Label}</pre> For standard budget custom budgets other fields, the format for entering ID is: <pre>{Id} {Label},{Id} {Label}</pre> Following is an example of a field and a custom budget custom segment: <pre>department department,line.cseg1 customsegment</pre> If you're using custom budgets and wants to limit the consumed amount by a specific account, you must add the account to Fields and Segments for Budget Validation. Following is an example of a field and a custom budget custom segment to include the account:

Preference	Description
	account account,class class  Note: The field must only contain the columns available in the custom budget lines except for amount and budget periods. (E.g: Apr 2024, Q1 2024, FY 2024, etc.)
Budget Not Found Message	Enter the message that appears when a matching budget isn't found for the transaction line.
Save Transaction On No Budget	Check this box to save the transaction even if the budget doesn't exist for it.

Click **Save**.

Setting Up a Budget Account

Set up a chart of account as the budget account. This account acts as a credit account for custom budget transactions. The amount in this account isn't considered as budget amount.

To set up a budget account:

1. Go to Setup > Accounting > Chart of Accounts > New.
2. Check the **Budget Account** box.
3. Enter general accounting information.
For more information, read the help topic [Creating Accounts](#).
4. Click **Save**.

Setting Up Accounting Preferences

Set up the accounting preferences for using the SuiteApp.

To set up accounting preferences:

1. Go to Setup > Accounting > Accounting Preferences.
2. Set the following in the Accounting Preferences page:

Subtab	Section	Preference	Description
Items/Transactions	Accounts	Custom Budget Account	Select a custom budget account. If you want to use the SuiteApp for multiple subsidiaries, don't select a single subsidiary account from this list.
Order Management	Purchasing	Allow Expenses on Purchase	Check this box to allow expenses on transactions.

3. Click **Save**.

Setting Up Subsidiary Record Preferences

Set up the preferences in each subsidiary record.

To set up subsidiary record preferences:

1. Go to Setup > Company > Subsidiaries.
2. Click **Edit** next to each subsidiary record and set the following preferences:

Preference	Description
Allow Saving When Budget Does Not Exist	Check this box to save the transaction even if a budget doesn't exist for the transaction of the subsidiary.
Enable Budget Validation	Check this box to enable budget validation of the subsidiary.
Budget Category	When you enable the Multiple Budget feature and select Standard Budget in the Budget Validation Source field, select the budget category from this field. For this subsidiary, only budgets with the same category are validated.  Note: The budget category you select in this field overrides the one from budget preferences.

For more information, read the help topic [Editing Subsidiary Records](#).

To enable the budget validation fields on purchase order, purchase request, and vendor bill transactions for a subsidiary and perform budget validations, you must:

- Check the **Enable Budget Validation** box in the Budget Preferences page.
- Check the **Enable Budget Validation** box in the subsidiary record.

To save a transaction even if budget isn't found on a transaction line for a subsidiary, you must:

- Check the **Save On No Budget** in the Budget Preferences page.
- Check the **Allow Saving When Budget Does Not Exist** box in the subsidiary record.

Creating a Custom Budget in Expense Commitments and Budget Validation

Create a custom budget for a combination of budgeting year, segments, and account.

To create a custom budget:

1. Go to Budgets > Enter Custom Budgets > New.

The **Custom Budget** page opens.

Important: Don't create a custom budget by clicking **New Transaction** on the Custom Transaction Types page (Customization > Lists, Records, & Fields > Transaction Types).

2. From the **Budget Method** field, select the budget method.
3. From the **Financial Year** list, select the financial year.
If the Multiple Calendars feature is enabled, the SuiteApp appends the financial year with the fiscal calendar name. For more information, read the help topic [Enabling Multiple Calendars](#).
4. In the **Budget Name** field, enter a unique budget name.
5. From the **Subsidiary** list, select the subsidiary you want to link to the budget.
If the Multiple Calendars feature is enabled, the SuiteApp filters the subsidiary list based on the fiscal calendar. For more information, see the help topic [Assigning a Tax Fiscal Calendar to a Subsidiary](#).

6. (Optional) To roll over the unused budget from the previous budget period to the new one, check the **Roll Over Budget** box.
7. In the **Lines** sublist, select the following:
 - a. From the **Account** list, select the **Account** for which you want to create the budget. The selected account must be associated with the selected subsidiary.
If you do not select account classification in the **Fields and Segments for Validation** budget preferences, the SuiteApp doesn't consider this account selection for validation.
 - b. In the appropriate classification columns such as **Department**, **Class**, and **Location**, select the values that are associated with the selected subsidiary.
 - c. Perform one of the following:
 - If you select **Yearly**, **Quarterly**, or **Monthly** as the budget method, enter the amount in the appropriate **Year**, **Quarter**, or **Month** columns.
 - If you select **Custom** as the budget method, enter the start and end dates in the **Start Date** and **End Date** columns and the amount in the **Custom** column.
 - d. Click **Add**.
 - e. (Optional) To add more accounts and budgets, repeat Steps a through d.

Important: If you change the subsidiary, all the transaction lines are cleared.

8. Click **Submit**.

Note: Either keep the **Budget Control** list blank or select the same budget control that is selected in the **Budget Control** list in the Budget Preferences page. When you select this budget control, all validations and warnings set in the budget control apply to the budget.

Guidelines for Importing Custom Budgets Using CSV Files

You can import custom budgets using CSV files. When importing, consider the following:

- In the Scan & Upload CSV File page:
 - Select **Transactions** from the **Import Type** list.
 - Select **Custom Budget** from the **Record Type** list.
- In the **Advanced Options** section of the Import Options page, check the **Run Server SuiteScript and Trigger Workflows** box. For more information, read the help topic [Importing CSV Files with the Import Assistant](#).
- In the CSV file, for custom budgets with multiple lines, add the budget header data to only the first row of the transaction. For example, in the CSV file image below, the yellow cells contain budget header data and the green cells contain budget line data:

Subsidiary	Currency	Exchange Rate	Date	Status	Budget Method	Account	Amount	Department	Grant	Budget Period
Parent Company	US Dollar	1	1/27/2021	Approved	Monthly	1000 Checking	190	Department A	Grant B	FY 2021 : Q3 2021 : Jan 2021
						1004 Payroll	30		Grant B	FY 2021 : Q3 2021 : Feb 2021
Parent Company	US Dollar	1	1/27/2021	Pending Approval	Monthly	1000 Checking	60	Department B	Grant B	FY 2021 : Q3 2021 : Jan 2021
						1004 Payroll	120		Grant A	FY 2021 : Q3 2021 : Feb 2021
						1004 Payroll	170	Department C	Grant A	FY 2021 : Q3 2021 : Feb 2021
						1000 Checking	250			FY 2021 : Q3 2021 : Feb 2021
						1100 Accounts Receivable	200			FY 2021 : Q3 2021 : Feb 2021

- When creating a custom budget using import, you must enter an external ID for the custom budget. This ID must be unique across all versions of all custom budgets.
- You can update a custom budget using CSV import only if the budget status is **Pending Approval**. Also, you must provide the same external id of the existing custom budget during import. The version of the custom budget remains the same.

- Make sure the budget period is within the period range for the custom budget.
- You can't delete a custom budget or a version of the custom budget using the CSV Import feature.

Managing Custom Budget Versions

You can update an approved custom budget only after creating a new version of the approved budget.

Warning: Don't delete an approved custom budget record.

To create a new version of a custom budget:

1. Go to Budgets > Enter Custom Budgets > List.
2. On an approved budget line, click **View**.
3. From the **Actions** list, select **Make Copy**.
4. Make appropriate changes to the custom budget.

Note: Don't make any changes in the **Budget Method** and **Period Range** fields.

5. (Optional) To approve the changes, from the **Status** list, select **Approved**.
6. Click **Save**.

For the latest version of a budget, the **Active Version** box is automatically checked.

For the first version of a budget, the **First Version** box is automatically checked.

The **Budget Group ID** field shows the ID for the custom budget. The ID remains the same across different versions of a custom budget.

Using Budget Validation in Transactions

Budget validation works with the following transactions:

- Purchase orders
- Vendor bills
- Purchase requests (for the Employee Center role)

The following budget validation fields appear in the following transaction pages:

- **Budget Date** – Shows the start date of the budget period.
- **Budget Period** – Shows the budget period when the transaction is accounted. The SuiteApp works only with the budget method calendar months budget method.
- **Budget Status Message** – Shows the message indicating whether the transaction is within or over budget.
- **Last Budget Check** – Shows when the budget was last updated or validated.

When a custom budget matches the combination of budgeting year, segments, and account, values appear in the following columns of the **Expenses** and **Items** subtabs:

- **Budget Amount** – Shows the budget amount set in the custom budget.
- **Budget Warning** – Shows the budget warning set in the budget control record that's selected in the custom budget.

- **Budget Control Link** – In View mode, this column provides a link to the budget control record.
- **Consumed Amount** – Shows the amount of budget consumed, including all amounts from all posting transactions that meet budget criteria. (To exclude a transaction, you must customize "Budget Transaction Consumed Amount" search "status" filter criteria.)

Note: If your transaction has over 50 lines, saving could take longer and you may see a page unresponsive message.

Click **Wait** and let the process finish. For large number of transactions, use CSV file import. For more information, read [Guidelines for Importing Transactions Using CSV Files](#)

Budget vs. Actual Calculations

The Expense Commitments and Budget Validation SuiteApp considers the following when validating budgets in transactions:

- Amount in purchase order transaction lines is considered as committed amount
- Amount in vendor bill transaction lines is considered as actual amount
- Amount in purchase request transaction lines is considered as committed amount

The following table gives an example of different transactions and their calculation in budget validation:

Serial Number	Transaction	Fields and Segments		Amount	Amount Type	Budget Amount (From Saved Search for Budget Validation)	Consumed Amount (From Saved Search for Budget Consumed)	Budget Validation
		Account	Department					
1.	Budget	A1	D1	100		100		
2.	Purchase order	A1	D1	50	Committed	100	50	Within budget
3.	Vendor bill created from PO	A1	D1	50	Actual	100	50	Within budget
4.	Vendor bill created without PO	A1	D1	60	Actual	100	110	Exceeds budget
5.	Purchase request from Employee Center	A1	D1	30	Committed	100	140	Exceeds budget

In this example, the outcome of budget versus actual amount is as shown below:

Budget vs Actual			
Budgeted Amount	Consumed Amount	Actual Amount	Total Amount
100	30	110	140

When you edit a transaction line, the consumed amount is calculated from the last saved consumed amount. So, in this example, assume that you change the amount in Vendor bill created without PO from 60 to 40. The consumed amount for the changed transaction is recalculated as 120 (140 – 20), as shown below:

Serial Number	Transaction	Fields and Segments		Amount	Amount Type	Budget Amount (From Saved Search for Budget Validation)	Consumed Amount (From Saved Search for Budget Consumed)	Budget Validation
		Account	Department					
1.	Budget	A1	D1	100		100		
2.	Purchase order	A1	D1	50	Committed	100	50	Within budget

Serial Number	Transaction	Fields and Segments		Amount	Amount Type	Budget Amount (From Saved Search for Budget Validation)	Consumed Amount (From Saved Search for Budget Consumed)	Budget Validation
		Account	Department					
3.	Vendor bill created from PO	A1	D1	50	Actual	100	50	Within budget
4.	Vendor bill created without PO	A1	D1	60	Actual	100	120	Exceeds budget
5.	Purchase request from Employee Center	A1	D1	30	Committed	100	140	Exceeds budget

The SuiteApp also works with the Multiple Currencies feature in the following manner:

- For custom budgets, if the currency is different from the transaction currency, the SuiteApp converts the budget and consumed amounts on the transaction lines to the transaction currency.
- For standard budgets, the currency is derived from the budget category selected. If the budget category is global, currency is same as the currency of the parent company. If the budget category is local, the currency is same as the currency of the subsidiary. The SuiteApp converts the budget and consumed amounts on the transaction lines to the transaction currency.
- The SuiteApp derives the exchange rate for conversion from the value in the **Exchange Rate** field.

Guidelines for Importing Transactions Using CSV Files

You can import purchase order and vendor bill transactions using CSV files. When importing, consider the following:

- You must check the Run Server SuiteScript and Trigger Workflows box in Advanced Options section of the Import Options page. For more information, read the help topic [Importing CSV Files with the Import Assistant](#).
- When importing new transactions, ensure that each transaction has an external ID.
- When updating an existing transaction using import:
 - Add the external ID of the existing transaction.
 - Add the line number of the transaction line you want to update. If you don't add the line number, the SuiteApp creates a new transaction line.

The CSV import feature works with the Multiple Currencies feature.

Budget Dashboard

The Budgets dashboard on the Budgets center tab displays the following configurable portlets of Budget versus Actual expenses for:

- Fields and segments for budget validation set in the budget preferences
- Each account

Budget vs. Actual Workbook

The SuiteApp provides a workbook for budget versus actual reporting. The workbook name is **Budget vs Actual [Expenses] [Multi-Currency]**, and the dataset name is **Budget Formulas [Expenses] [Multi-Currency]**. You can access the workbook from the **Analytics** tab.

Note: This workbook provides reporting only for custom budgets.

The dataset results are based on the following:

- Transactions that satisfy the following filtering criteria:
 - Account
 - Status
 - Type
- Custom budgets that satisfy the following filtering criteria:
 - Active and approved custom budgets
 - Budget control is not blank in the custom budget
 - Transaction lines that have amount of type debit

The workbook includes the following reports:

- Budget versus Actual table
- Budget versus Actual pivot by department
- Budget versus Actual chart by department
- Budget versus Actual pivot by account
- Budget versus Actual chart by account
- Budget versus Actual pivot by transaction period
- Budget versus Actual chart by transaction period

The following are screenshots of some charts and tables:

- Budget versus Actual table

ACCOUNT	BUDGET	ACTUALS	COMMITTED (PO-BILL)	CONSUMED (ACTUALS + COMMITTED)	AVAILABLE (BUDGET - CONSUMED)
