2025.2

November 12, 2025

Copyright © 2005, 2025, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. NetSuite Electronic Business

To understand how to set up and use the NetSuite Electronic Business (NSEB) SuiteApp features, read the following topics:

- [NetSuite Electronic Business Quick Start](#)
- [NetSuite Electronic Business Overview](#)
- [NetSuite Guide to Integrate with OBN](#)
- [Avalara Managers Guide](#)
- [NetSuite Electronic Business Sandbox](#)
- [Limitations](#)

NetSuite Electronic Business Quick Start

This section includes the following topics:

- [Prerequisites for Installing the NetSuite Electronic Business SuiteApp](#)
- [Installing the NSEB SuiteApp](#)
- [Assigning NSEB Roles](#)
- [Integrate NetSuite with OBN](#)
- [Connecting NetSuite with Avalara](#)

Prerequisites for Installing the NetSuite Electronic Business SuiteApp

To use the NetSuite Electronic Business SuiteApp, ensure your account meets all the prerequisites listed on this page:

- Make sure the following features are enabled in your account:
 - Client SuiteScript
 - Custom Records
 - Custom Transactions
 - OAuth 2.0
 - Rest Web Services
 - Server SuiteScript
 - SuiteCloud Development Framework
 - Token-based Authentication
 - Web Services

To enable features, see [Enabling Features](#).

- Make sure the Company Information page has a return email address. For more information see, [Prerequisites for Using NSEB](#)
- Make sure the parent company and subsidiaries in the account are active. For more information see, [Prerequisites for Using NSEB](#).

Installing the NSEB SuiteApp

Install the NSEB SuiteApp from the SuiteApp Marketplace in NetSuite. For more information about installing the SuiteApp, see [Installing from the SuiteApp Marketplace](#).

Assigning NSEB Roles

After installing the NSEB SuiteApp, you can assign the OBN or Avalara Manager roles to users from your NetSuite account. For more information see, [Assigning NSEB Roles](#)

Integrate NetSuite with OBN

NSEB allows NetSuite users to communicate with third party services using OBN. The OBN manager must first register the company or its subsidiary with OBN to perform a secure document exchange.

For more information, see [Setting Up OBN Processes](#)

Connecting NetSuite with Avalara

A NetSuite user can activate access to the Avalara platform through Oracle Business Network for electronic business purposes. for more information see, [Avalara Managers Guide](#).

Read the following topics to understand more about Avalara processes:

- [Avalara Provisioning](#)
- [Avalara Company Creation](#)
- [Avalara Mandate Activation](#)

NetSuite Electronic Business Overview

NetSuite Electronic Business (NSEB) SuiteApp provides the foundation for NetSuite users to configure and participate in global business networks like Oracle Business Network (OBN) and PEPPOL. The SuiteApp provides global electronic invoicing solutions for country mandates worldwide by partnering with Avalara.

Using the NSEB SuiteApp, you're able to do the following:

- Enable NetSuite users to connect with potential customers or trading partners.
- Enable NetSuite to integrate electronically with all member companies, both Oracle and external, on the Oracle Business Network.
- Enable NetSuite accounts to issue invoices compliant with electronic invoice registration and control regulations in the supported countries.
- Enable the participating NetSuite users to be linked to the PEPPOL network by partnering with Avalara, without the need to sign up for access points in each country. For more information, see [Avalara Managers Guide](#).

NetSuite accounts and subsidiaries must register as trading partners in the Oracle Business Network. For more information, see [NetSuite Guide to Integrate with OBN](#).

NetSuite Electronic Business SuiteApp Availability and License Client

The NetSuite Electronic Business SuiteApp can be installed for free in any NetSuite account from the marketplace.

The following table provides prerequisites to use features in NetSuite Electronic Business SuiteApp.

Feature	Prerequisite
OBN Registration	No license required.
Avalara Provisioning	Install the NetSuite SuiteApps License Client. (Bundle ID: 116144)
Avalara Company Creation	- Install the NetSuite SuiteApps License Client. (Bundle ID: 116144) - Purchase the required licenses like NetSuite Electronic Business Network Extension and Avalara Processing for NetSuite Electronic Invoicing Cloud Service.
Avalara Mandate Activation	- Install the NetSuite SuiteApps License Client. (Bundle ID: 116144) - Purchase the required licenses like NetSuite Electronic Business Network Extension and Avalara Processing for NetSuite Electronic Invoicing Cloud Service.

If you have active licenses, you're able to use the licensed features. However, you cannot use them if:

- NetSuite SuiteApps License Client is not installed, or
- NetSuite SuiteApps License Client is installed but your license is expired.

Information:

The NetSuite SuiteApps License Client allows your NetSuite account to access features in NetSuite Electronic Business SuiteApp. Upon installation, the SuiteApp communicates with the NetSuite SuiteApps License Server to obtain active licenses information.

Note: You must do the OBN Registration and Avalara Provisioning in the production and then perform the linking in sandbox.

Installing and Setting Up NSEB

Read the following articles to understand how to install and setup the NSEB:

- [Prerequisites for Using NSEB](#)
- [Installing the NSEB SuiteApp](#)
- [Assigning NSEB Roles](#)

Prerequisites for Using NSEB

Before you install the NSEB SuiteApp, complete these steps:

- Make sure the following features are enabled in your account:
 - Client SuiteScript

- Custom Records
- Custom Transactions
- OAuth 2.0
- Rest Web Services
- Server SuiteScript
- SuiteCloud Development Framework
- Token-based Authentication
- Web Services

To enable features, see the help topic [Enabling Features](#).

2. Make sure the Company Information page has a return email address.

Important: If the **Return Email Address** field is blank, you'll encounter script errors when accessing Electronic Invoicing features.

- a. Go to Setup > Company > Company Information.
- b. In the **Return Email Address** field, enter a valid email address for the company.
- c. Click **Save**.

Note: If you have a OneWorld account, you must set up the Return Email per subsidiary that uses the NSEB SuiteApp.

3. Make sure the parent company and subsidiaries in the account are active.

Installing the NSEB SuiteApp

Install the NSEB SuiteApp from the SuiteApp Marketplace in NetSuite. For more information about installing the SuiteApp, see the help topic [Installing from the SuiteApp Marketplace](#).

The NSEB SuiteApp is a managed SuiteApp. After you install the SuiteApp, your accounts are automatically updated whenever an update to the SuiteApp is available, so you're always up-to-date. For more information about NSEB SuiteApp, see [NetSuite Electronic Business Overview](#).

Assigning NSEB Roles

After installing the NSEB SuiteApp, you can assign the following Manager roles to users from your NetSuite account.

- **Avalara Manager** – This role is used to activate Avalara for Electronic Invoicing. The OBN Manager role cannot access Avalara Configuration pages. See more about the Avalara Manager role, [Avalara Role Management](#)
- **OBN Manager** – This role is used to authorize OBN to access specific NetSuite account resources and register subsidiaries on the OBN Registration page. The Avalara Manager role cannot access the OBN Registration page. For more information about the OBN Manager role, see [OBN Role Management](#)

To assign the NSEB manager roles:

1. Go to Lists > Employees > Employees.
2. Click **Edit** next to the name of the employee for whom you want to provide role access.

3. Click the **Access** subtab.
 4. Check the **Give Access** box.
 5. On the **Roles** subtab, assign the following roles to the employee as required:
 - **Avalara Manager**
 - **OBN Manager**
 6. Click **Add**.
 7. Check the **Send New Access Notification Email** box to let the users receive notification emails for the assigned roles.
 8. Click **Save**.
- [NetSuite Electronic Business](#)
 - [NetSuite Guide to Integrate with OBN](#)
 - [Avalara Managers Guide](#)

NetSuite Guide to Integrate with OBN

NSEB allows NetSuite users to communicate with third party services using OBN. The OBN manager must first register the company or its subsidiary with OBN to perform a secure document exchange.

Read the following articles to understand more about NetSuite and OBN integration:

- [Setting Up OBN Processes](#)
- [OBN Role Management](#)
- [Troubleshooting OBN Errors](#)
- [NSEB Limitations and Best Practices for OBN](#)

Setting Up OBN Processes

You must perform the following steps using the OBN Manager role to setup OBN to exchange documents securely:

1. [Connecting a NetSuite Account with OBN](#)
2. [Registering NetSuite Parent Company and Subsidiary with OBN](#)

Connecting a NetSuite Account with OBN

To use OBN, you must first authorize the connection between your NetSuite account and OBN.

To authorize connection between NetSuite and OBN:

1. Go to Set Up > Electronic Business > OBN Registration.
2. Click **Authorize**.
3. On the Consent page, click **Allow**.

You will be redirected to the OBN portal in a new tab.

4. You must accept the terms and conditions to proceed with OBN registration.

OBN will now be able to access the following NetSuite data:

- Access your personal information
- Access data and perform actions as OBN Manager

 **Note:** The OBN Manager must be authorized to accept the terms and conditions on behalf of the organization.

5. After the authorization is completed, the OBN Registration page opens with the parent company information and a successful authorization message. To register a parent company or subsidiary in OBN, see [Registering NetSuite Parent Company and Subsidiary with OBN](#)

Registering NetSuite Parent Company and Subsidiary with OBN

After successfully connecting your NetSuite account with OBN, you must register a parent company as the trading partner on OBN. After registering the parent company, you can also register the subsidiaries associated with the parent company. The OBN registration is a one time setup for a parent company or a subsidiary. The OBN manager can select a subsidiary for registration from the OBN Registration page. If the subsidiary is already registered, then the OBN manager can view the respective OBN ID on the OBN Registration page.

To register a parent company with OBN:

1. On the OBN Registration page, from the **OBN Manager** list, select the name of the person as primary contact for the trading partner.
2. Click **Register**.

 **Note:** After the registration is completed, a successful completion message displays on the OBN Registration page with the OBN registration ID. An email with user credentials and next steps to activate the new OBN account is sent to your registered email ID.

To register a subsidiary with OBN:

1. On the OBN Registration page, from the **Subsidiary** list, select a subsidiary.
You can use the Subsidiary Name filter to filter the required subsidiary from the Registered Subsidiaries table.
2. Click **Continue**.
3. In the Company Contact Information section, from the **OBN Manager** list, select the name of the person as primary contact for the trading partner.
4. Click **Register**.

 **Note:** After the registration is completed, a successful completion message displays on the OBN Registration page with the OBN registration ID. An email with user credentials and next steps to activate the new OBN account is sent to your registered email ID.

- [NetSuite Electronic Business](#)
- [Avalara Managers Guide](#)

OBN Role Management

Only the OBN Manager role can authorize NetSuite accounts and add subsidiaries on the OBN Registration page.

 **Important:** The OBN Manager must be authorized on behalf of the organization to accept the terms and conditions in the OBN portal. The OBN Manager can then proceed with OBN registration. For more information, see [Connecting a NetSuite Account with OBN](#).

After the registration, the OBN manager receives an email with user name and password required to access the OBN application. After accessing the OBN application with the user credentials, the manager is responsible for the document exchange process.

The following table lists the roles and permissions granted to perform the required OBN processes:

Process	Role Access	Permissions
Authorize connection between NetSuite and OBN	OBN Manager	By default, only the OBN manager has the permission to authorize NetSuite accounts.
Register parent company or subsidiary as trading partners on OBN	OBN Manager	By default, only the OBN manager has the permission to register the parent company and subsidiaries.
Login to OBN page	OBN Manager	The OBN manager receives the user name and password to access the OBN application.

 **Note:** Don't delete or deactivate the OBN Manager role. If the current OBN Manager role is deactivated, another user with access to the role should take over the responsibilities.

NSEB Limitations and Best Practices for OBN

General limitations of the NSEB SuiteApp:

- If your NetSuite account is authorized but a subsidiary is not added, then re-authorization is required when you go back to the OBN Registration page.
- On the Consent page, after you click the **Allow** button, if you click the **Go Back** button again, the authorization stops and the user is redirected back to the registration page.
- All the subsidiaries must be registered by the same OBN Manager
- The OBN Manager must not be deactivated or deleted if the manager authorizes and registers even one subsidiary successfully.
- Before deactivating or deleting an OBN manager, there should be an existing replacement for them. If there are other users with the OBN Manager, there would be no problem and the document exchange process does not break.
- After the OBN registration, you cannot modify the details from NetSuite. You must use OBN website to update the details directly.
- You cannot undo a registration of a subsidiary.
- NSEB does not support subsidiary hierarchy structure modification feature after Registration. Changing the parent subsidiary and child subsidiary hierarchy after the subsidiary registration can result in functionality breakages.
- The OBN Registration in NSEB is not available in Development accounts.
- Do not remove the OBN manager role from the employee record of anyone who has completed authorization with OBN.
- [NetSuite Electronic Business](#)
- [NetSuite Guide to Integrate with OBN](#)
- [Avalara Managers Guide](#)

Avalara Managers Guide

A NetSuite user can choose to activate its access to the Avalara platform through Oracle Business Network for electronic business purposes. The key benefits of Avalara for e-invoicing are as follows:

- Avalara global network connection – Send and receive documents through Avalara and their integrated networks.
- Avalara mandate feed – Enable NetSuite users considering operating in a new country to request information from Avalara about mandate requirements of that country.
- OBN participation – Enable NetSuite accounts to participate in the global OBN and interact commercially with all participating companies.
- Network registration – Enable NetSuite users to register their participation on the electronic networks.
- Country specific data – Lets the creation of common values used in countries, and by businesses that can be shared across all transactions. Also includes currency, tax codes, and tax categories.

For more information about Avalara, see [Avalara Overview and Countries List](#).

Read the following articles to understand more about Avalara processes:

- [Prerequisites for Using Avalara](#)
- [Avalara Role Management](#)
- [Avalara Provisioning](#)
- [Avalara Company Creation](#)
- [Avalara Mandate Activation](#)
- [Troubleshooting Avalara Errors](#)
- [Avalara Limitations and Known Issues in NSEB](#)

Prerequisites for Using Avalara

The prerequisite to activate Avalara for e-Invoicing is to complete the OBN trading partner registration. For more information about OBN registration, see [Registering NetSuite Parent Company and Subsidiary with OBN](#).

- [NetSuite Electronic Business](#)
- [NetSuite Guide to Integrate with OBN](#)

Avalara Role Management

Only users with the Avalara Manager role can activate Avalara for e-invoicing using the NSEB SuiteApp. The following table lists the roles and permissions granted to perform the required Avalara processes:

Process	Role Access	Permissions
Avalara Provisioning	Avalara Manager	Provisioning a parent company to Avalara
Avalara Company Creation	Avalara Manager	Create company in Avalara for parent and subsidiary companies
Avalara Mandate Activation	Avalara Manager	Activate mandates for parent and subsidiary companies as per the requirements

 **Note:** Don't delete or deactivate the Avalara Manager role..

Avalara Provisioning

The Avalara manager must provide a NetSuite parent company to connect with Avalara.

To provision a parent company:

1. Go to Setup > Electronic Business > Avalara Provisioning.
The company details of the parent company which is registered with OBN will be displayed.
2. On the Avalara Provisioning page, from the **Avalara Manger** list, select a user.
3. Click **Submit**.

Provisioning Completion in Avalara

The user selected in the **Avalara Manager** list is registered as a NetSuite user for the provisioned company.

A Provisioning Pending status displays on the Avalara Provisioning page.

A successful tenant account registration message displays on the Avalara Provisioning page. The message also displays following information which is added to the OBN trading partner account of the parent subsidiary:

- Tenant ID – ID of the tenant.
- Organization ID – ID of the organization
- User ID – ID of the user
- Avalara Provisioning ID – ID of Avalara provisioning
- Company ID – Blank – The company ID is updated after the Avalara provisioning is completed
- Provisioning Status – Pending provisioning status displays.

If you are registered as the Avalara Manager, you'll get an email with your Avalara account details, next steps, and a link to the Avalara ELR portal.

After accessing the Avalara portal, generate the client ID and secret. If you have access to the OBN Manager role, manually add the client ID and secret in the OBN trading partner account. After completing these steps, the system automatically updates the company ID in the parent company subsidiary record and the Avalara provisioning is completed successfully. As you complete these steps, leave the Avalara portal and go back to NetSuite, the following updated information is available on the Avalara Provisioning page:

- The generated Company ID
- The Provisioning Status is updated to Successful

If the Avalara Manager and OBN Manager are different users, then the Avalara Manager must provide the generated client ID and secret to the OBN manager. Then, the OBN manager must manually add the client ID and secret in the OBN trading partner account to generate the Company ID.

Learn more about completing the Avalara provisioning in this SuiteAnswers article, [Adding Avalara Client Application API Credentials to OBN Accounts](#).

- [NetSuite Electronic Business](#)

- [NetSuite Guide to Integrate with OBN](#)

Avalara Company Creation

After the Avalara provisioning, you must select a subsidiary to register as a company on the Avalara Company Creation page. Only after you register a subsidiary as a company, you can activate the mandates and start using Avalara for electronic invoicing.

 **Note:** Only those subsidiaries that are registered in the OBN and do not have Avalara company record can be selected for Avalara company creation.

To register a subsidiary as a company:

1. Go to Setup > Electronic Business > Avalara Company Creation.
2. On the Avalara Company Creation page, from the **Subsidiary** list, select a subsidiary.

 **Note:** The Avalara Company Creation page displays the list of available Subsidiaries, Company Ids and the names of the Avalara managers assigned to that subsidiary. You can also filter the subsidiaries using the filter in the Subsidiaries with Company Ids table.

3. Click **Continue**.

The Avalara Company Creation subsidiary form has the following information:

- Subsidiary – Name of the subsidiary.
- Subsidiary ID – ID of the subsidiary.
- Country – Country of the subsidiary.
- Tenant ID – ID of the tenant.

4. Click **Submit**.

A success message displays after the successful creation of the company and the generated Company ID is available on the Avalara Company Creation page.

- [NetSuite Electronic Business](#)
- [NetSuite Guide to Integrate with OBN](#)

Avalara Mandate Activation

After the Avalara company creation, you must select a subsidiary and an electronic invoicing mandate to perform the mandate activation. You need to activate the e-invoicing mandate so the subsidiary can send e-documents to Avalara.

You can now select any country's E-invoicing mandate for a subsidiary, if the mandate record exists in your account (created either by Builder Kit or the Localization SuiteApp). NSEB no longer restricts you to selecting only mandates that match the subsidiary's country.

To activate electronic invoicing mandate for a subsidiary:

1. Go to Setup > Electronic Business > Avalara Mandate Activation.
2. On the Avalara Mandate Activation page, select a subsidiary from the **Subsidiary** list.
3. From the **E-invoicing Mandate** list, select the required mandate.

4. Click **Proceed**.

You'll be redirected to the Avalara website to finish activating the mandate.

5. Login into Avalara website using your user credentials, provide the required information to complete the mandate activation and click **Submit**.

Note: For more information about completing the Avalara mandate activation on the Avalara website, see link.

After you've completed the mandate activation on the Avalara website, the status will be updated automatically in NetSuite.

On the Avalara Mandate Activation page, the Subsidiary Mandate Activation Status table has the following information:

- **Subsidiary** – Name of the subsidiary
- **E-invoicing Mandate** – Name of the e-invoicing mandate
- **Avalara Manager** – Name of the Avalara manager
- **Timestamp** – Date and time of the e-invoicing mandate activation
- **Status** – Status of the e-invoicing mandate activation of the subsidiary. The following is the list of statuses that are displayed according to the mandate activation progress:
 - Completed – Avalara mandate activation is completed successfully and can be used.
 - Information Required – Mandate activation is not complete due to incomplete information. Avalara manager must provide the required information.
 - In Progress – Mandate activation is in progress. User action is not required.
 - Failed – Mandate activation failed. Avalara manager must retry the mandate activation again.

- [NetSuite Guide to Integrate with OBN](#)

Avalara Mandate Reactivation

You must reactivate the mandate by navigating to Avalara Mandate Activation to continue using the E-invoicing solution beyond 90 days. Select the relevant subsidiary and the corresponding mandate (currently, only the Israel mandate can be reactivated), and click Submit.

You should follow the same process as the initial mandate activation.

Note: The option to reactivate a mandate is available only 15 days prior to the mandate's expiration.

PEPPOL Mandate Activation

The SuiteApp supports bulk activation of the PEPPOL mandates. If a user selects **PEPPOL Mandate** in the **E-Invoicing Mandate** list to be activated for a subsidiary, all the PEPPOL mandates supported by Avalara will be activated automatically.

Troubleshooting Avalara Errors

This section lists the errors caused for Avalara processes and gives solutions on how to resolve the errors.

Common Errors

The following table lists the common error messages that appear when performing the Avalara processes:

Message	Error on User Interface	Description	Solution
Request Failed	Banner on the record	A red banner displays indicating the request has been failed.	Try provisioning again after some time.
Address 1 Unavailable	Banner on the record	A red banner displays indicating the Address field is empty	Add Address 1 in the corresponding subsidiary record
City Unavailable	Banner on the record	A red banner displays indicating the City field is empty	Add City in the corresponding subsidiary record.
ZIP Unavailable	Banner on the record	A red banner displays indicating the Zip field is empty	Add ZIP in the corresponding subsidiary record.
Last Name Unavailable	Banner on the record	A red banner displays indicating the Last Name field is empty	Access the employee record to give last name value
Job Title Unavailable	Banner on the record	A red banner displays indicating the Job Title field is empty	Access the employee record to give Job title details
Avalara Manager Selection Required	Banner on the record	A red banner displays indicating the Avalara Manager is not selected	Select the Avalara manager from the list before clicking submit
To proceed with the provisioning, the registration of the parent company is a prerequisite.	Banner on the record	A blue banner displays indicating the registration of parent company did not happen with OBN	To complete the registration process for parent company, please visit the OBN Registration page (Setup > Electronic Business > OBN Registration) to register the Parent company as a trading partner in Oracle Business Network.

Provisioning Errors

The following table lists the provisioning error messages that appear when performing the Avalara processes:

Message	Error on User Interface	Description	Solution
Provisioning is required only for the parent company. As the parent company is registered as a trading partner at Oracle Business Network, the parent company will be able to proceed with the provisioning process.	Information banner on record	A blue banner displays about provisioning of parent company	Add required details for Provisioning of parent company
The Tenant account already generated successfully for the parent company. Check your email for Avalara Tenant account details along with	Information banner on Record	A blue banner displays about steps to be done in provisioning	Follow the instructions

Message	Error on User Interface	Description	Solution
instructions and a link to access the Avalara ELR portal. After completing the required steps, Company ID will be updated automatically in the Parent Company Subsidiary Record.			

Company Creation Errors

The following table lists the common company creation error messages that appear when performing the Avalara processes:

Message	Error on User Interface	Description	Solution
To initiate the company creation, register the parent company in Oracle Business Network. After the parent company is registered, you can proceed with the provisioning exclusively for the parent company.	Information banner on Record	A blue banner displays about company creation is done only after provisioning	Complete provisioning for parent company
To proceed with the Avalara company creation, initially set up the OBN registration for the parent company	Information banner on Record	A blue banner displays about company creation is done only after OBN registration	Complete OBN Registration for parent company followed by parent company provisioning and then do company creation.

Mandate Activation Errors

The following table lists the mandate activation error messages that appear when performing the Avalara processes:

Message	Error on User Interface	Description	Solution
To continue with the Avalara mandate activation, you must first set up the Avalara Provisioning for the parent company.	Information banner on Record	A blue banner displays about Mandate activation	User needs to complete provisioning for parent company
To proceed with the Avalara mandate activation, initially set up the OBN registration for the parent company	Information banner on Record	A blue banner displays about Mandate activation	User needs to do OBN Registration then perform parent company provisioning and should perform mandate activation

Avalara Limitations and Known Issues in NSEB

Avalara limitations and known issues in NSEB SuiteApp:

- The Avalara manager needs to follow the following order. If you don't follow this order, the Avalara processes won't work as expected:
 1. Provisioning
 2. Company Creation
 3. Mandate Activation

- The Avalara website link received in the email after the Avalara provisioning is only valid for 6 hours. If the link expires then you must go to the Avalara website and request a new onboarding email for the username.
- NSEB does not support Subsidiary Hierarchy Structure Modification feature after Registration. Changing the parent subsidiary and child subsidiary hierarchy after Avalara company creation can result in functionality breakages.
- If the current Avalara manager is inactive, you'll need to assign a new one with the login credentials for the Avalara website.
- [NetSuite Electronic Business](#)
- [NetSuite Guide to Integrate with OBN](#)

 **Note:** You must do the OBN Registration and Avalara Provisioning in the production and then perform the linking in sandbox.

NetSuite Electronic Business Sandbox

Read the following to understand about NetSuite Electronic Business Sandbox:

- [What is NetSuite Sandbox](#)
- [Using NetSuite Electronic Business in NetSuite Sandbox](#)
- [NSEB Sandbox Quick Start](#)
- [Limitations](#)

What is NetSuite Sandbox

NetSuite Sandbox is a safe and isolated test account in which you can develop and test new applications and customizations without affecting your production account. You can have one or more sandboxes set up for each production account. Each sandbox account is a copy of your production account, with the same settings and data. For more information, see the help topic [NetSuite Sandbox](#).

Using NetSuite Electronic Business in NetSuite Sandbox

You can use NSEB in NetSuite Sandbox to test exchanging documents with tax authorities. Your NetSuite Sandbox account connects to the test environments of OBN, Avalara, and tax authorities. To connect your NetSuite Sandbox account with the test-environment of OBN, Avalara & Tax authorities you should perform the following steps:

1. **OBN Registration:** You must register your NetSuite sandbox subsidiary with the OBN trading partner account. For more information see, [Register with Oracle Business Network in your NetSuite Sandbox](#). Additionally, to use Avalara for e-invoicing, you will need to provision your NetSuite sandbox to the corresponding Avalara (sandbox) company.
2. **Avalara Provisioning in Sandbox:** To provision Avalara in the sandbox account, you must first complete Avalara provisioning in the production account. If you have completed Avalara provisioning in production account and linked it to the sandbox account, the Avalara details (such as Company ID, Provisioning ID, Tenant ID, and Organization ID) will automatically appear on the Avalara provisioning screens in sandbox. In this case, you don't need to take any further action.

If you have only partially completed or not started Avalara Provisioning in production account, only some or none of the Avalara details will appear on the sandbox screen. In this case, you must first complete Avalara Provisioning in production account. When complete, you can click

Provision in the sandbox account, and the system will update all details accordingly. If you have not yet created a company in sandbox, you can select the subsidiary and proceed to create the company.

3. **Avalara Company Creation in Sandbox:** The Avalara manager can view the details of the companies created in the Avalara Company Creation screen. You can create an Avalara company if it is not created already. You generate these companies when you link OBN and Avalara in the sandbox with their corresponding production accounts.
4. **Mandate Activation:** Mandate activation of your company in Avalara's sandbox account enables NetSuite Sandbox to send or receive documents in test environment of the tax authorities.
5. **Daily Usage:** This step validates the generated e-document and further builds/ customizes solutions against the tax authority APIs. It sends e-documents to tax authority's test environment using [Avalara for E-Invoicing](#) through Avalara sandbox. To use [SuiteProcurement](#) for test document exchange with Oracle Business Network trading partners like Staples etc.

In an event of sandbox refresh, you must create new transactions to validate generation or certification instead of using transactions which got copied from the production account.

Note: After using NSEB in NetSuite Sandbox for testing, you can proceed to perform the company creation, mandate activation and daily usage in your NetSuite production account. The company creation and mandate activation in sandbox does not affect your production account.

NSEB Sandbox Quick Start

To get started with the usage of NSEB in sandbox, you must understand the following steps:

1. [Prerequisites](#)
2. [Register with Oracle Business Network in your NetSuite Sandbox](#)
3. [Provision Avalara with your NetSuite Sandbox](#)
4. [Mandate Activation of Avalara Sandbox company](#)
5. [Daily Usage in Sandbox](#)
6. [Sandbox Refresh Process in NSEB](#)

Prerequisites

- You need to register your subsidiary as a Trading Partner on Oracle Business Network. You must perform this step in production NetSuite account and not in sandbox. For more details, see, [Setting Up OBN Processes](#).
- You need to complete Avalara provisioning in your production NetSuite account. For more details, see [Avalara Provisioning](#). You must perform this step in production NetSuite account and not in sandbox. You can perform this step in production whenever you need it, and then proceed with provisioning in the sandbox.

Note: The above step is not required for SuiteProcurement users.

Register with Oracle Business Network in your NetSuite Sandbox

To connect to OBN from your NetSuite Sandbox, you must perform OBN Trading partner registration in NetSuite Sandbox:

1. Go to Setup>NetSuite Electronic Business > OBN Registration
2. Authorize OBN to connect to your NetSuite account.
3. Register the parent subsidiary by providing your OBN username and password and also provide the OBN unique identifier for that subsidiary.

 **Note:** To get the OBN unique identifier value for the subsidiary, login into your NetSuite production account through the OBN manager role. Go to the OBN Registration page, refer to the list of subsidiaries and their OBN unique identifier from the table.

4. You can now proceed to register other subsidiaries to your Oracle Business Network trading partner account.

Provision Avalara with your NetSuite Sandbox

If you complete the OBN Registration in sandbox account after finishing Avalara Provisioning in the production account, the system will automatically complete Avalara Provisioning in sandbox. You can then view the details on the Provisioning and Company screens in sandbox.

If you have not completed Avalara Provisioning in the production account but have already performed OBN Registration in the sandbox account, you must first complete Avalara Provisioning in production account. Then, return to sandbox and click the **Provision** button to complete the provisioning.

 **Note:** You can complete Avalara Provisioning in Sandbox only after you have first completed it in the NetSuite Production account.

After you complete provisioning in sandbox, you can proceed with the next steps, such as company creation and mandate activation.

Mandate Activation of Avalara Sandbox company

After a sandbox subsidiary is linked to Avalara, the corresponding Avalara sandbox company can be activated to work with the required mandates. This process is similar to activating an Avalara company in production. The difference is that the company that is activated in NetSuite Sandbox is activated in Avalara sandbox and will be used to test sending and receiving of documents through Avalara sandbox.

Daily Usage in Sandbox

If you are using SuiteProcurement or Electronic Invoicing ([Avalara for E-Invoicing](#)) in NetSuite Sandbox after performing the above steps, it will result in sending documents to OBN test mode and Avalara sandbox which will eventually reach the test mode of Trading Partner and tax authority test environment.

 **Note:** If you are using the Electronic Invoicing SuiteApp, after a sandbox refresh, you must create new transactions to validate generation or certification instead of using transactions which got copied from the production account.

Sandbox Refresh Process in NSEB

- [Overview](#)
- [Sandbox Refresh](#)
- [Frequently Asked Questions](#)

Overview

After you perform a sandbox refresh in NSEB, you must properly prepare your sandbox environment before proceeding with additional configurations. This preparation ensures smooth functioning and helps you avoid issues caused by outdated or unnecessary production data in the sandbox instance.

Sandbox Refresh

You can refresh each of your sandbox account from your production account whenever you need to. Refreshing a sandbox account copies all configurations, data, user passwords, and customizations from the source account into the target sandbox account. Any changes you have made to the target sandbox account are overwritten. For more information see, [Refreshing Sandbox Accounts](#).

You must complete OBN Registration as a prerequisite before you can proceed with:

- Avalara Provisioning
- Avalara Company Creation
- Avalara Mandate Activation

By performing OBN registration after the sandbox refresh, the system automatically removes any unnecessary data that may have been copied from your production account, ensuring that your sandbox environment is properly prepared. The system leaves only the essential configuration and test data, ensuring your sandbox is ready for new configurations and testing.

Frequently Asked Questions

[Why do you need to complete OBN Registration first?](#)

You complete OBN Registration first because it sets up your sandbox environment by performing a cleanup, which is necessary for subsequent features to function correctly.

[What does data cleanup involve?](#)

During data cleanup, you remove unnecessary or outdated data copied from production to create a streamlined environment for testing and development.

Limitations

- You can use NSEB with only one NetSuite Sandbox instance. After you start using NSEB in a specific sandbox account (SB1), you cannot switch to another sandbox account instance (SB2).
- Uninstalling and reinstalling the NSEB SuiteApp in sandbox is not supported after the linking is done in sandbox account.
