This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. NetSuite Pay Overview

NetSuite Pay is an integrated payment processing solution designed for NetSuite users. NetSuite Pay lets you accept credit card payments online, over the phone, at the point of sale, or through another digital payment method, all with PCI-compliant data security. NetSuite provides a complete transaction record, giving you a 360-degree view of your customer transaction history and detailed audit tracking while maintaining the security of payment card data.

NetSuite Pay provides simple, transparent pricing using a streamlined application and onboarding process.

Access the NetSuite Pay dashboard for helpful information about the benefits of NetSuite Pay, a description of the underwriting process, pricing details, and how to get help with NetSuite Pay. To access the dashboard, go to NetSuite Pay > NetSuite Pay Overview.

Tip: If the dashboard is not visible, you need to setup the custom portlet:

1. Go to NetSuite Pay > NetSuite Pay Overview.
2. In the portlet, click the menu and select **Set Up**.
3. Select **Versapay PL NetSuite Pay Dashboard**.
4. Click **Save**.

NetSuite Pay clients can:

- Complete an application and onboarding process that is embedded in NetSuite (underwriting and merchant service are powered by Versapay).
- Accept credit card and ACH payments across e-commerce, point of sales, and accounts receivable channels directly in NetSuite.
- Speed up collection times with automated click-to-pay invoices as part of your native workflows to maximize efficiency and eliminate hours spent reconciling payments with NetSuite.
- Process payments securely and protect yourself and your customers by tokenizing and safely storing sensitive credit card data in compliance with PCI DSS.

NetSuite Pay works in conjunction with Payment Link to:

- Send e-invoices with a payment link or QR code to a secure payment page.
- Configure the payment link to select certain payment methods, allow partial payments, and include a company logo and information.
- Send payment notifications using customized email templates to inform customers when payment is accepted or rejected.
- Let customers view and pay their bills with a click by credit or debit card.

NetSuite Pay also works with NetSuite Customer Center, SuiteCommerce MyAccount, and SuiteCommerce Advanced My Account, letting business buyers view invoices, securely add and manage payment methods, and pay faster and more efficiently.

Key Features and Benefits

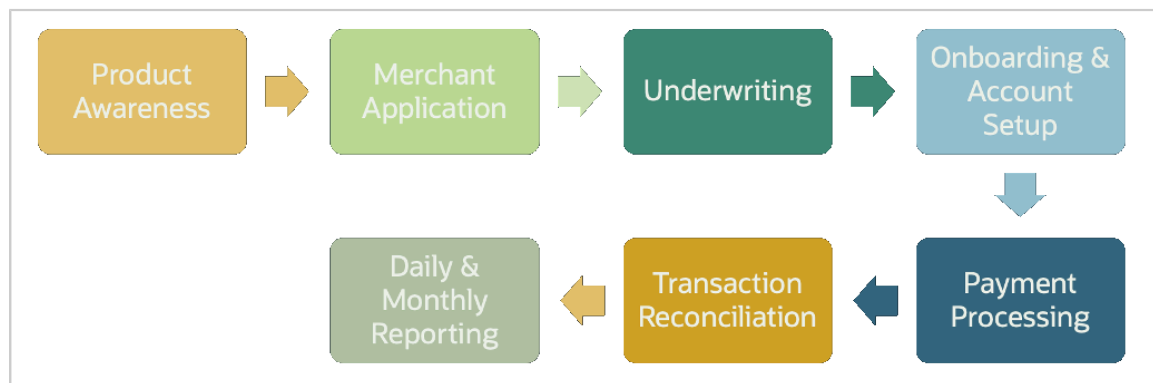

- **Online Payments** – Simplifies the process of receiving your money and helps reduce the number of manual processes.

- **Payment Methods Management** – Lets you choose the methods of payment you accept including types of credit cards and ACH.
- **Improved processing time** – Payments are processed automatically with little to no need for human interaction.
- **Payments by email** – Use [Payment Link](#) to enable your customers to remit payment by clicking the payment link in an email.
- **Enhanced Integration** – NetSuite Pay integrates with the Customer Center, SuiteCommerce MyAccount, SuiteCommerce Advanced MyAccount, and SuiteCommerce Advanced Webstore.

NetSuite Pay Workflow

To begin, install the NetSuite Pay SuiteApp. Then, complete a merchant application that is approved by Versapay underwriting. After approval, you can set up the SuiteApp. For more information, see [NetSuite Pay Setup](#).

When customers make payments using credit cards or ACH, Versapay processes these transactions, and they are reconciled. Daily and monthly settlement reports are available. You are notified of any open settlements that need resolution. For more information, see [Using NetSuite Pay](#).

NetSuite Pay Setup

To implement NetSuite Pay, follow these steps:

Install NetSuite Pay

- Sign the Terms of Service and install the NetSuite Pay SuiteApp. See [Installing NetSuite Pay](#).
- Enable all prerequisite features. See [Prerequisite Features for NetSuite Pay](#).

Apply for a Merchant Account

- Have the following information ready before starting the application:
 - Your businesses tax ID
 - Names, addresses, and individual tax IDs of any person who owns 25% or more of the business (unless your company is public)
 - Your business' payment processing volume
 - Bank routing and account number into which you want the proceeds of your sales deposited
- Complete your Versapay merchant application. See [Submitting a Merchant Account Application](#).
- Receive notice of application approval. The processing partner's underwriting team will respond within 48 hours of receiving a complete application. You may receive a phone call or email for any questions or document needs. Delays in response may result in a slower application approval time. See [Checking Merchant Account Application Status](#).

Configure and Test

- Configure your payment processing profile. See [Configuring the NetSuite Pay Payment Processing Profile](#).
- Configure automated payment reconciliation. See [Automated Settlement Reconciliation for NetSuite Pay](#).
- (Optional) Set up Payment Link. This can be done in parallel to waiting for your merchant account approval. See the help topic [Payment Link](#).
- Test your first payment.
 - To test using NetSuite, create a cash sale for a \$1.00 item. See the help topic [Cash Sales](#).
 - (Optional) To test with Payment Link, see the help topic [Payment Link](#).

Review Data Requirements

NetSuite Pay is compliant with Visa's Commercial Enhanced Data Program (CEDP). This interchange program is designed to improve transaction data quality for business-to-business (B2B) purchases. NetSuite Pay includes automated scripting and logic to populate most of the required fields, but you should review and improve your data in NetSuite, where required.

Required fields:

- **Line-item data** – Item description, quantities, unit cost (rate), amount (ensure this equals quantity * unit cost)
- **Item record data** – SKU or item codes (UPC code), unit of measure
- **Required if you're taxable** – Merchant Tax ID or Supplier Tax ID
- **Required if you're using shipping** – Shipping Amount or Shipping Item, Destination Address (Ship To), Ship From Postal Code

The following fields are optional but highly recommended:

- **Financial fields** – Customer Reference Number or Purchase Order Number

Generic placeholders such as “Product” or dummy values will disqualify your transaction from verified status.

For more information about CEDP, see [Versapay's information about CEDP](#).

Tip: NetSuite Pay can also be configured in your sandbox account to test the NetSuite Pay experience prior to full implementation in production. For more information, see [Setting Up NetSuite Pay in Sandbox](#).

Prerequisite Features for NetSuite Pay

You must enable the following features to use NetSuite Pay:

- **Accounting**
To enable, go to Setup > Company > Enable Features > Accounting subtab > Accounting.
For more information, see the help topic [Accounting Features and Preferences](#).
- **Custom Records**
To enable, go to Setup > Company > Enable Features > SuiteCloud subtab > Custom Records.
For more information, see the help topic [Custom Records](#).
- **Client SuiteScript**
To enable, go to Setup > Company > Enable Features > SuiteCloud subtab > Client SuiteScript.
For more information, see the help topic [Enable Required Features for SuiteScript 1.0 SSP Applications](#).
- **Server SuiteScript**
To enable, go to Setup > Company > Enable Features SuiteCloud subtab > Server SuiteScript.
For more information, see the help topic [Enable Required Features for SuiteScript 1.0 SSP Applications](#).
- **SOAP Web Services**
To enable, go to Setup > Company > Enable Features > SuiteCloud subtab > SOAP Web Services.
For more information, see the help topic [Enabling the SOAP Web Services Feature](#).
- **Payment Instruments**
To enable, go to Setup > Company > Enable Features > Transaction subtab > Payment Instruments.
For more information, see the help topic [Enabling the Payment Instruments Feature](#).

Standard NetSuite Functions Used by NetSuite Pay

NetSuite Pay uses the following standard NetSuite features:

- [Accounting Preferences](#)
- [Customers](#)
- [Invoices](#)
- [Customer Payments](#)
- [Customer Deposits](#)
- [Customer Refunds](#)
- [Cash Sales](#)

Installing NetSuite Pay

Before installation, NetSuite Pay must be provisioned by your NetSuite account manager.

You can install the SuiteApp from the SuiteApp Marketplace in two ways:

- Option 1: Click the [NetSuite Pay](#) link to go directly to the SuiteApp Details page and click **Install**.
- Option 2: Go to the SuiteApp Marketplace and follow the procedure below to install the SuiteApp.

 **Note:** Contact your account manager if the install option is not available.

To install NetSuite Pay:

1. Go to **SuiteApps**.
2. In the **Search** field enter "NetSuite Pay."
3. Click the SuiteApp tile.
4. On the SuiteApp details page, click **Install**.
5. Click **Install**.

NetSuite Pay is a managed SuiteApp that's regularly and automatically updated with new features and improvements.

For more information about installing, updating, and deleting SuiteApps from the SuiteApp Marketplace, see the help topic [SuiteApp Installation](#).

Accounts for NetSuite Pay

The accounts used for NetSuite Pay settlement deposits and fees are entered during NetSuite Pay setup and Merchant Application. This account information is automatically populated in NetSuite Chart of Accounts. To update account information, contact your NetSuite account manager.

Submitting a Merchant Account Application

After installing the NetSuite Pay SuiteApp, submit a merchant account application to Versapay for each subsidiary.

The application process requires details about your business, its ownership structure, and your banking information. Personal information is required due to FINCEN and card brand rules.

Gather following information ready before starting the application:

- Your businesses tax ID
- Names, addresses, and individual tax IDs of any person who owns 25% or more of the business (unless your company is public)
- Your business' payment processing volume
- Bank routing and account number into which you want the proceeds of your sales deposited

You may be asked to provide various financial documents as part of the application process. This includes the previous two years of the following documents:

- Balance Sheet
- Income Statement
- Cash Flow

You may also need to provide the following documents for the current year:

- Most recent interim financial statements for the current year
- If you are currently processing, then three consecutive months of current processing statements

The application typically takes 15-20 minutes to complete if you have all the required documents. You can save and resume your application at any time.

The initial review is estimated at 2 business days. If additional documentation is required, the decision times are extended based on when the information is received. You should also receive an email for NetSuite Pay application status. If you have not received an update to the application status in 5 business days, contact NetSuite support.

If you have questions or issues completing your application, contact NetSuite support.

To submit a merchant account application:

1. Go to NetSuite Pay > Merchant Application > New Application.
2. Select a subsidiary from the dropdown list. For OneWorld accounts, a separate application is required for each subsidiary. If an application has already been started for a subsidiary, the subsidiary will no longer appear in the subsidiary dropdown list when starting a new merchant application. For non-OneWorld accounts, a message is displayed if you try to start a new merchant application when one is already approved or pending approval.
3. Review the Welcome page and click **Next**.
4. Complete the **Company Information** section.
5. Complete the **Ownership Information** section.

If there are individuals in your company who own 25% or more of the business, select **Yes** from the list and add one or more owners. Then select an owner or someone else to be the primary contact.

If there are no individuals in your company who own 25% or more of the business, select **No** from the list and enter information about the nonbusiness owner primary contact.

The primary contact will be notified if there are questions about the merchant application.
6. Complete the **Financial Information** section. This includes information about the processing volumes and deposit account for your business.
7. Review the information and click **Submit**.

You will be notified about the decision of your application by Versapay through email. You can check the status of your application at any time. For more information, see [Checking Merchant Account Application Status](#).

To change information in your merchant application after it is submitted, contact NetSuite support.

Checking Merchant Account Application Status

You can check your merchant account application status at any time.

To check your merchant account application status:

1. Go to NetSuite Pay > Merchant Application > My Application Status.
2. The application status in NetSuite will show as one of the following:
 - **Application Started** – You started your application, but haven't completed and submitted it yet.
 - **Application Submitted** – Your application has been submitted to underwriting team for review; additional documents may still be required.
 - **Received** – Your application has been received.
 - **On Hold** – Your application is on hold, pending more information.
 - **Processing** – The underwriting team is reviewing your application. They will reach out if additional information is needed.
 - **Provisionally Approved** – Your application has been approved provided that some conditions are met, you can now set up your system features and settings. For more information, see [Configuring the NetSuite Pay Payment Processing Profile](#).
 - **Complete** – You've successfully completed onboarding. You may begin transacting with your customers.

Configuring the NetSuite Pay Payment Processing Profile

The NetSuite Pay Payment Processing Profile holds the settings for communicating with Versapay. Configure your profile to select the payment methods you want to accept and your GL accounts for deposits and expenses.

You can configure your NetSuite Pay payment processing profile when your merchant account application is provisionally approved. For more information about merchant account application statuses, see [Checking Merchant Account Application Status](#).

To configure the NetSuite Pay Payment Processing Profile:

1. Go to NetSuite Pay > Merchant Application > My Application Status.
2. In the Settings column click **Configure**.
3. Under Payment Processing Profile, select a subsidiary.
4. Under Payment Methods, select the payment methods you want to accept.
5. Under GL Accounts, select your deposit and expense accounts.
6. Click **Finish**.
7. (Optional) Set up Payment Link. Under What's Next, follow the link to go to Payment Link Setup.

You can view the NetSuite Pay payment processing profile at Setup > Accounting > Payment Processing Profiles.

Setting Up NetSuite Pay in Sandbox

You can set up NetSuite Pay in your sandbox account to test it before implementing it in production.

The following NetSuite features work with NetSuite Pay in a sandbox account:

- **Customer Payments** – Submit manual transaction through customer payments. For more information, see the help topic [Customer Payments](#).
- **Payment Link** – Send invoices and process transactions. For more information, see the help topic [Payment Link](#).
- **My Account** – Make payments on My Account. For more information, see .

Statement generation is not available in sandbox accounts.

Prerequisites

Before using NetSuite Pay in a sandbox account, ensure the following prerequisites are met:

- Request a NetSuite sandbox account. For more information, see the help topic [Requesting a Sandbox Account for the First Time](#).
- Install NetSuite Pay SuiteApp version 1.0.11 or higher. The COMP ID must contain SB, TSTDRV, or TD.
 - Install NetSuite Pay directly in your sandbox account or
 - Install NetSuite Pay in your production account and refresh your sandbox

To set up NetSuite Pay in sandbox:

1. In your sandbox account, submit a merchant account application. For more information, see [Submitting a Merchant Account Application](#).
 - A merchant account application in your sandbox account is required even if an application has already been submitted in your production account.
 - The application status will change from **Processing** to **Provisionally Approved** in approximately 15 minutes.
2. Configure the NetSuite Pay Payment Processing Profile. See [Configuring the NetSuite Pay Payment Processing Profile](#).

 **Note:** Payment processing profiles from your production account will not work in sandbox. Configure a new payment processing profile in your sandbox account.

3. Set the NetSuite Pay payment processing profile to Test Mode.
 1. Go to Setup > Accounting > Payment Processing Profiles.
 2. Click **Edit** next to your NetSuite Pay payment processing profile.
 3. In the **Primary** section, check the **Test Mode** box.
 4. Click **Save**.
4. Test credit card and ACH data.

 **Note:** Real account data should not be used for testing in your sandbox account. For test data, see [Testing Order Transactions](#).

Automated Settlement Reconciliation for NetSuite Pay

Automated settlement reconciliation is also known as automatic reconciliation, auto-recon, and settlement and fee reporting. It allows automated reconciliation of batch settlements, bank deposits with payments, and deposits in NetSuite. Whether you've set up automated settlement reconciliation doesn't affect gateway batch settlement or funds transfer processes upstream. It's used only for recording and reporting.

During automated settlement reconciliation setup, several reports and records are created. Some of these can be customized and updated as needed. Review the following information to ensure your NetSuite Pay automated settlement reconciliation is setup:

- **Daily Settlement Batch Scheduling** – The Daily Settlement Batch is configured to run daily at 5:00 am by default. You can modify the schedule's timing and frequency as required. For more information, see [Scheduling the Daily Settlement Batch](#).

- **Settlement Fees Setup** – Fee records are created for each relevant category. Each **Fee Type Name** includes one of the following suffixes: (fees), (interchange), (network), and (payfac). For example, Wolf Electronics Fees (fees) and Wolf Electronics Interchange (interchange).

To review the records, go to NetSuite Pay > Daily Settlement Batch > Settlement Fee Setup. If you need to include department, class, or location information for journal entries, you can edit the fee records accordingly.

Tip: To determine if department, class, and location are required on the default form, go to Transactions > Financial > Make Journal Entries.

- **GL Account Mapping** – Your Account Number and Routing Number are automatically added to your Chart of Accounts, based on information in your merchant application.
- **Deposit Field Mapping** – Map your deposit fields when your deposit form requires department, class, or location in the header. For more information, see [Mapping Deposit Fields](#).

After automated settlement reconciliation is set up, you can view deposits for reconciled payments. To view deposits, go to NetSuite Pay > Daily Settlement Batch > Settlement and Fee Report.

- To view the details of a specific deposit, select the deposit record listed in the **Deposit Transaction(s)** column. Payments are displayed on the Payments subtab.
- To view the details for the fees of a batch, select the journal record listed in the **Journal Entry Transaction(s)** column. Fees are displayed in the Lines subtab. Each type of fee appears as a separate line.

In the Settlement and Fee Report, you might encounter records that show **Retry** in the first column for the deposit record. This indicates that there is a discrepancy in the settlement because a matching payment from the bank settlement couldn't be found in NetSuite. For more information, see [Settlement Discrepancies](#).

Supported and Unsupported Payment Scenarios with Automated Settlement Reconciliation

This topic lists payment scenarios that are supported and unsupported by automated settlement reconciliation for NetSuite Pay.

Payment Scenarios Supported with Automated Settlement Reconciliation

The following payment scenarios are supported:

- ERP Payments:
 - Credit Card
 - Cash Sale
 - Customer Payment
 - Sales Order Authorization
 - Sales Order Capture
 - Customer Deposit
 - Cash Sale Refund
 - Customer Payment Refund
 - NetSuite Native Payment Link
 - SuiteCommerce MyAccount
 - SuiteCommerce Advanced
 - NetSuite Customer Center
- ERP Payments:
 - ACH
 - Cash Sales
 - Customer Payment
 - Sales Order Capture
 - Customer Deposit
 - Cash Sale Refund
 - Customer Payment Refund
 - NetSuite Native Payment Link
 - SuiteCommerce MyAccount
 - SuiteCommerce Advanced
 - NetSuite Customer Center
- Single Subsidiary Invoice paid using Bank payment
- Single Subsidiary Invoice paid using Credit Card
- Multi-subsidiary Invoices of single customer paid using Bank payment
- Multi-subsidiary Invoices of single customer paid using Credit Card
- Hierarchy Customer Invoices paid using Bank payment
- Hierarchy Customer Invoices paid using Credit Card
- Multi-Customer Invoices paid using Bank payment
- Multi-Customer Invoices paid using Credit Card
- Prepayment applied to Invoices
- Payment method + Credit Memo application on Invoices
- Invoices paid using NetSuite's Paylinks with Bank Account or Credit Card payment and Customer Payment sent to NetSuite

Payment Scenarios Not Supported with Automated Settlement Reconciliation

The following scenarios are not supported:

- When a non-sufficient funds (NSF) fee occurs, it isn't cleared from the Undeposited Funds queue
- When a payment is voided and recreated after the reconciliation, the new payment isn't cleared from the Undeposited Funds queue

Scheduling the Daily Settlement Batch

The Daily Settlement Batch is configured to run daily at 5:00 am by default. You can modify the schedule's timing and frequency as required.

To schedule the Daily Settlement Batch:

1. Go to Customization > Scripting > Script Deployments.
2. Locate the Versapay Settlement and Fee Recon script with ID **customdeploy_versapay_settlement_recon** and click **Edit**.

 **Tip:** Use the filter to search for script type of "Map/Reduce."

3. Set **Status** to **Scheduled**.
4. On the **Schedule** subtab:
 - Select **Daily Event**.
 - Set a **Start Time**.
 - Set a **Repeat** of every 6 or 12 hours.
 - Select **No End Date**.
5. Click **Save**.

The map script runs at the selected intervals. If you have verified that these steps have been completed and you're still not receiving the Settlement and Fee Report, contact NetSuite support.

Mapping Deposit Fields

Map your deposit fields when your deposit form requires department, class, or location in the header. To determine if these field mappings are required, go to Transactions > Bank > Make Deposits. Check if these fields appear on the form.

To map your deposit fields:

1. Go to NetSuite Pay > Daily Settlement Batch > Deposit Field Mappings.
2. Click **New Versapay Deposit Field Mapping**.
3. Select a subsidiary, department, class, and location from the lists.

Using NetSuite Pay

When using NetSuite Pay, there are several common tasks you may need to do, such as refunds or resolving settlement discrepancies.

Read the following topics for more information about how to use NetSuite Pay:

- [Settlement Discrepancies](#)
- [Scheduling the Daily Settlement Batch](#)
- [Performing a Referenced Refund](#)

Settlement Discrepancies

In the Settlement and Fee Report, you might encounter records that show **Retry** in the first column for the deposit record. This indicates that there is a discrepancy in the settlement because a matching payment from the bank settlement couldn't be found in NetSuite.

To view and resolve settlement discrepancies, go to NetSuite Pay > Daily Settlement Batch > Settlement and Fee Report. Select **Retry** to start the automated settlement reconciliation process. This looks for a matching payment in NetSuite again. When no matching payment is found, it is noted and no further action on that discrepancy will be taken. You must manually resolve the discrepancy or contact NetSuite support if this is a recurring scenario. When a matching payment is found, a deposit is created in NetSuite.

 **Tip:** A settlement discrepancy can occur if the failed transaction has already been moved from Undeposited Funds to another GL account. Transactions that aren't in Undeposited Funds can't be reconciled. To resolve this, move the relevant transactions out of the other GL account and back into Undeposited Funds then select **Retry**.

Performing a Referenced Refund

A referenced refund is a refund transaction with an associated sale transaction. Unreferenced refunds are not supported with NetSuite Pay.

You can refund an open balance by issuing a customer refund. For more information, see the help topic [Refunding an Open Balance](#).

You can also refund a cash sale with the following steps.

To perform a referenced refund on a cash sale:

1. Go to Transactions > Sales > Enter Cash Sales > Lists.
2. Click **View** next to the sale you want to refund.
3. Click **Refund**.
4. On the **Billing** subtab, review the original payment information.
5. Click **Save**.

Frequently Asked Questions about NetSuite Pay

These sections contain frequently asked questions related to setting up and using NetSuite Pay:

Account Management

How do I update my business information?

Contact your NetSuite account manager.

How do I add, update, or remove a bank account for deposits or fees?

See [Accounts for NetSuite Pay](#). If you still have questions, contact your NetSuite account manager. Only verified signers are able to request these types of changes.

How do I add legal signers to my merchant account?

Contact your NetSuite account manager. New signers can only be added by legal signers or controllers on the merchant account.

How do I update contact information for legal signers and users on the merchant account?

Contact your NetSuite account manager. Updating the information can only be done by legal signers on the merchant account.

How do I update the business ownership information about my merchant account?

Contact your NetSuite account manager. Business owner information can only be updated by legal signers or controllers on the merchant account.

Can I use a credit card or debit card for billing or fees due for my NetSuite Pay transaction processing?

No. Billing must be automatically taken from a business checking account. Credit cards and debit cards aren't an option for billing or fees.

What are the various charges on my billing statement?

Refer to the following for information about pricing, <https://www.versapay.com/lp/netsuitepay-pricing>.

What are my options for delivering billing statements?

Billing statements are available from within NetSuite under the NetSuite Pay menu. If you're required to board through an alternate merchant account processor, their statements will be available directly from the processor.

Merchant Application

How do I start a NetSuite Pay merchant application?

See [Submitting a Merchant Account Application](#).

I'm a current NetSuite customer, and I'm interested in learning more about NetSuite Pay.

Contact your NetSuite account manager.

I'm a current NetSuite customer. How can I get an update on my NetSuite Pay Merchant Account application status?

See [Checking Merchant Account Application Status](#).

How do I find or apply for AMEX ESA number?

Contact NetSuite support for more information.

Do I need to be incorporated for approval?

Being incorporated isn't necessary for approval.

Is my business qualified to apply?

Most businesses are qualified to apply. Contact your NetSuite account manager and they can provide you with more information if you have questions or concerns.

How do I calculate high ticket prices and processing volumes?

High Ticket – This is the largest dollar amount a customer might pay for goods or services from your business in a single credit card transaction.

Processing Volume – This is how NetSuite Pay refers to the total of all credit card transactions within a fiscal year.

How do I change the information on my merchant application after I submit it?

Contact NetSuite support for help with your application.

Merchant Fees

Are there any setup fees?

There are no setup fees for NetSuite Pay. Depending on your agreement, other professional services or software fees may apply.

Offboarding

Can I temporarily suspend my NetSuite Pay account?

No. When your merchant account is active, monthly fees apply even if integration is incomplete or if your merchant account isn't being actively used for processing payments.

Will my account be closed if I don't use it?

Yes. Accounts with no processing for six months are subject to closure. Versapay will reach out to you before closure to understand why no transactions are occurring.

How do I cancel my NetSuite Pay merchant account?

To cancel your NetSuite Pay merchant account, contact your NetSuite account manager.

When will my charges be processed after closing my NetSuite Pay account?

Versapay will verify all charges have been posted before closing the account. After everything is settled, they can formally close your account. Contact your NetSuite account manager for more information.

Are there any fees for canceling my NetSuite Pay merchant account?

There are no fees for canceling your account. Prior to cancellation, any outstanding fees or charges on your account must be paid in full.

Onboarding and Account Setup

How do I handle problems with establishing my merchant account?

Contact NetSuite support with any problems establishing your merchant account.

How do I setup an account with a Payment Gateway?

For NetSuite Pay, the Gateway will be automatically configured upon setup. If you're still experiencing issues with accepting credit card payments, contact NetSuite support.

How do I configure the Payment Processing Profile?

For NetSuite Pay, the Payment Processing Profile is automatically configured during setup. If you're experiencing issues with processing, contact NetSuite support to ensure the profile is correctly configured.

Is there a limit to how much I can do in transactions?

Yes, your processing limits are determined at the time of approval based on your business' current performance. Process limits requests can only be completed by legal signers or controllers on the account. If you're interested in increasing your limits, contact NetSuite support.

Payment Disputes and Chargebacks

Where can I view or download my chargebacks?

You will be provided with credentials to the Versapay portal where chargebacks are managed.

If you don't have your credentials:

- Contact NetSuite support so they can confirm you're a legal signer for the account.
- NetSuite will submit the case information to Versapay support.
- Versapay will contact the legal signer and give them the credentials to log in to the Versapay portal.

What documentation do I need to dispute a chargeback?

The documentation needed will depend on the chargeback reason code.

Typically you will need to provide the proof of invoice, proof of delivery or services, your return policy, and any signed terms and conditions. If a refund is owed and the chargeback has been submitted, the merchant should never refund after and submit proof of refund through the portal.

Contact NetSuite support for more information.

How long does it take to resolve a chargeback?

Submit all chargeback documentation and explanation through the Versapay portal. The resolution is dependent on several factors, including:

- Which network was used, for example Visa, MasterCard, or American Express
- Type of chargeback
- How quickly supporting documentation is submitted

The resolution can take up to 120 days. After the documentation is submitted to the network for review, Versapay no longer has visibility into the timing of the resolution.

If my chargeback is denied, is there anything else I can do?

No. If the chargeback has been denied by the network and issuing bank, it can no longer be disputed. You may submit a police report based on your state's guidelines.

Payment Processing

Will my company name appear on my customers credit card statement?

Yes. Your retail descriptor is your DBA name on file with the processor.

What payment types can I accept?

All major debit cards, credit cards, and checking accounts for ACH or eCheck.

Are transactions approved in real time?

Debit cards and credit cards are approved in real time. ACH payments take 3-5 business days.

A NetSuite error, gateway error, or processor error is causing the payment to fail. What do I do next?

If an error is causing the payment to fail:

1. Ensure all required fields are entered on the sale payment.
2. Ensure all credit card or ACH fields are entered on the billing or payment tab.
3. Check the payment event details for specific error reasons on the transaction and follow up on the error.
4. If it remains unresolved, contact NetSuite support.

The payment was successful but the payment record was not created in NetSuite. What do I do next?

Contact NetSuite support.

What if a payment was rejected or hasn't been settled?

ACH payments are similar to a check and take approximately 3-5 business days to settle. Contact NetSuite support for more information.

How do I amend an entry when an ACH payment is rejected or doesn't settle?

If an ACH payment fails to go through, it's likely NetSuite won't be notified. If the payment didn't hit the gateway or the payment failed to settle due to insufficient funds, edit and delete the NetSuite payment record.

See the help topic [ACH Payments on Commerce Web Stores](#).

How do I refund a customer?

The NetSuite Pay SuiteApp supports a Referenced Refund workflow. A Referenced Refund refers to performing a Refund that is linked to an original Sale transaction, using the original form of payment. Unreferenced refunds aren't supported. An unreferenced refund is a refund transaction with no associated sale transaction.

For more information, see [Performing a Referenced Refund](#).

What do I do if my refund fails?

Certain error messages may be outside the realm of NetSuite and require escalation to Versapay for investigation. Failed transaction messages can be seen in NetSuite under the Payment Events screen.

To view failed transaction messages, Go to Transactions > Management > View Payment Events. Contact NetSuite support if you have more questions.

Do I need to have Payment Instruments enabled to use NetSuite Pay? If so, why?

Yes, Payment Instruments must be enabled to use NetSuite Pay. Payment Instruments is responsible for securing tokenization of debit and credit card and ACH data in NetSuite. It's also used for future payment transactions without having to enter the card or ACH information again.

See the help topic [Payment Instruments](#).

Can I authorize a transaction for one amount and then capture it for a different amount?

Yes. NetSuite Pay lets you authorize for one amount and then capture the authorization for a different amount.

Do I need to include the CVV value each time that I process a transaction in NetSuite?

No. The benefit of Payment Instruments is you only need to enter a CVV for the first transaction with a particular card. Future transactions using the same card won't require a CVV.

I'm receiving the error, 'You must create an account or sign in to continue' when processing payment transactions. What do I do?

This error indicates the Versapay CDS account configured in NetSuite Pay is configured with incorrect credentials. Contact NetSuite support for more information.

How do I perform a referenced refund?

See [Performing a Referenced Refund](#).

How do I add a new debit card, credit card, or ACH payment information for future use?

See the help topic [Payment Instruments](#).

How do I remove a payment method?

See the help topic [Payment Instruments](#).

How do I update the expiration date or address of payment information?

See the help topic [Payment Instruments](#).

Can I choose to reject transactions when the AVS or CCV returns a no-match?

Yes. Acceptance criteria based on AVS and CCV responses are configured in the NetSuite Pay Payment Processing Profile. Go to AVS Filters and CVV Filters sections. You can set the filters to reject transactions based on certain AVS or CCV responses.

See the help topic [Creating Payment Processing Profiles](#).

Product Awareness

Are there any other options available for processors? Can I choose?

NetSuite Pay only supports processor options fulfilled through Versapay.

What's a merchant account?

A merchant account is a type of bank account required for businesses to accept payments in multiple ways, typically debit or credit cards.

What's involved in submitting an application?

See [Submitting a Merchant Account Application](#).

Can international merchants get a NetSuite Pay account?

No. NetSuite Pay is available only for US-based merchants.

Can I accept both credit card and ACH payments?

Yes. NetSuite Pay supports debit cards, credit cards, and ACH payments. If you have additional questions, contact NetSuite support or your account manager.

How often are deposits made into my bank account?

NetSuite Pay funding operates on a T+1 schedule. This means deposits are made to your account one day after a batch is closed. Batches on Friday aren't deposited during the weekend and will generally be in your account on Tuesday.

What currencies can I receive payments in?

You can accept debit and credit cards from any currency, but settlement must be in USD.

Is a security deposit or rolling reserve required for approval of my application?

There is no security deposit. Rolling reserves may be required based on a financial review as a stipulation for approval. For additional questions, contact NetSuite support.

Will NetSuite Pay work with my regular business bank account?

Yes. You can use any personal or business US-based checking account. Savings accounts can't be used.

Is the payment gateway included?

Yes. A payment gateway is software included with NetSuite Pay. It collects customer card information and encrypts it for later processing. A payment processor uses that information to charge the customers' bank or credit card provider.

Can I use an existing merchant account for NetSuite Pay?

No. NetSuite Pay only supports merchant accounts provided through Versapay.

Can I accept credit card payments on my website?

Yes. NetSuite Pay is compatible with NetSuite for e-commerce payment.

What are the required NetSuite features to use NetSuite Pay?

See [Prerequisite Features for NetSuite Pay](#).

SuiteApp

How do I install the NetSuite Pay SuiteApp?

See [Installing NetSuite Pay](#).

How do I uninstall the NetSuite Pay SuiteApp?

Go to Customization > SuiteCloud Development > Installed SuiteApp List. Find the NetSuite Pay SuiteApp on the list and click Uninstall. Your merchant account will remain active unless you contact support to request the account be closed.

Do I need separate instances of the NetSuite Pay SuiteApp for each of my subsidiaries?

No. Only a single instance of the NetSuite Pay SuiteApp is required when using multiple subsidiaries. A separate merchant account application is required for each subsidiary.

How do I install the NetSuite Pay SuiteApp in my sandbox account?

See [Setting Up NetSuite Pay in Sandbox](#).

Can I copy the configuration of the NetSuite Pay SuiteApp from my sandbox to production?

This is not supported.

How do I upgrade my SuiteApp to the newest release?

The NetSuite Pay SuiteApp is a managed SuiteApp. New versions are automatically pushed to your account.

Transaction Reconciliation

What do I do if I'm not receiving deposits to my checking account?

If the account is in provisionally approved status on the Merchant Account, there are cases where funds are withheld until full approval. If your Merchant Account is already approved, contact NetSuite support.

What do I do if my deposits aren't reflecting in NetSuite?

If deposits aren't reflecting in NetSuite, that typically means there is an exception that needs to be resolved under NetSuite Pay > Daily Settlement Batch > Daily Settlement Exception List. After the exception is resolved, the M/R script will run again and create a deposit automatically if no exception.

Contact NetSuite Support, if retriggering the process does not work.

How long is money from transactions held back?

NetSuite Pay funding operates on a T+1 schedule. This means deposits are made to your account one business day after a batch is closed. NetSuite Pay does not support weekend funding. Batches closed on Friday will generally be deposited to your account on Tuesdays.

What's an Open Settlement Report?

The Open Settlement Report in NetSuite Pay reflects transactions that don't match. This means they are present in NetSuite and not present at the processor, or present at the processor and not present in NetSuite. This report also allows you to manually reconcile these types of transactions. You will receive an email outlining the discrepancies.

Go to NetSuite Pay > Daily Settlement Batch > Settlement and Fee Report.

What's Fees Reconciliation?

Versapay charges transaction fees, and NetSuite Pay includes a Settlement and Fee reconciliation feature which automatically reconciles transaction fees and associates them with the proper bank accounts in NetSuite Pay.

Why do I need settlement batches?

Settlement batches are part of the process of moving money from customers accounts to your account. It's an industry standard for accepting card payments.

What's the difference between native NetSuite Bank Reconciliation and NetSuite Pay Settlement and Fee Reconciliation?

Native NetSuite Bank Reconciliation does not take into account transaction fee reconciliation, which is included in NetSuite Pay Settlement and Fee Reconciliation.

Where can I find the transaction fees that are assessed by Versapay?

You can find the transaction fees billed by Versapay, in the NetSuite Pay menu. Go to Settlement > Deposits. Select the deposit you want to view by clicking View. On the Items tab, you see all payments included in that deposit. On the Cash Back tab, you see the fees and fee types associated with that deposit.

To check Transaction fees that are billed by Versapay can be found under the following menu in NetSuite Pay:

Go to Transactions > Bank > Make Deposits > List

Click View on the deposit you want to view.

Click the Cash Back tab to see the fees and fee types associated with the deposit.

Can I use Settlement and Fee Reconciliation if I'm not using Versapay?

No. This is only supported in NetSuite Pay.

What's automated by the Settlement and Fee Reconciliation process? Are there any manual steps I need to take?

Settlement and Fee Reconciliation automates the process of reconciling matching payments between NetSuite and the payment processor. It automatically creates deposits in NetSuite Pay. The only manual steps required occur when there are payments that don't match between NetSuite and the payment processor. To view the Open Settlement Report, go to NetSuite Pay > Daily Settlement Batch > Settlement and Fee Report.

Are transactions that process through my SuiteCommerce site included in the Settlement and Fee Reconciliation?

Yes. SuiteCommerce transactions are included as they follow the same processing work as NetSuite payments.

Why am I missing today's Settlement and Fee Reconciliation report?

If you're missing a report for today, check your script configuration. See [Scheduling the Daily Settlement Batch](#).

Why do I have settlement batch discrepancies?

Settlement batch discrepancies can occur when a transaction is present in the settlement batch that is sent to the processor, but does not exist in NetSuite.

An example of this would be: The transaction was processed external to NetSuite, possibly through a 3rd party shopping cart, yet flows through same merchant account that is configured in NetSuite. To resolve the discrepancy, you will need to create the transaction in NetSuite and allow the reconciliation to run again at its next interval. This will solve the discrepancy.

If this does not solve the discrepancy, contact NetSuite Support.

What's the difference between a settlement discrepancy and a credit card exception or chargeback?

A Settlement Discrepancy is a transaction that exists in the settlement batch, but does not exist in NetSuite, which creates a mismatch.

A credit card exception or chargeback, is when a customer files a dispute or chargeback to their card issuer regarding a specific transaction. This will appear as an exception in NetSuite.

Check any of these discrepancies by viewing the Open Settlement Report. Go to NetSuite Pay > Daily Settlement Batch > Settlement and Fee Report. Click **Edit** on the batch in question to open the Resolve Settlement screen.

How often does the settlement and fee reporting process take place?

The settlement and fee reporting process is configured to occur every 6 or 12 hours in NetSuite Pay. You can choose which interval you prefer. If reporting is not displaying new transactions within 48 business hours, contact NetSuite support. The exception is Friday transactions may not display until Tuesday of the following week. For more information, see [Scheduling the Daily Settlement Batch](#).

What does 'transaction not found in ERP' error message mean for an open settlement discrepancy?

This means a payment transaction took place outside of NetSuite Pay and isn't recorded in NetSuite, but is reflected on the settlement data provided by the payment processor. If the payment record is not in NetSuite, the settlement will fail to match the gateway transaction against the non-recorded payments. If you manually edited a payment record in NetSuite, the auto-settlement will fail since the amounts don't match.

This means there is a discrepancy between NetSuite Pay and the settlement batch which can be manually reconciled in the Open Settlement Report. Go to NetSuite Pay > Daily Settlement Batch > Settlement and Fee Report. Click **Edit** on the batch in question to open the Resolve Settlement screen.

Can I update which GL Account in NetSuite to use for transaction fees?

Yes. To update the GL account associated with transaction fees, go to NetSuite Pay > Daily Settlement Batch > Settlement Fee Setup. Configure which fee type is associated with each GL account in NetSuite.

Where does the Batch Token and Payment Identifier originate from?

The batch token is a unique value assigned by our partner Versapay to each settlement batch. The payment identifier is a unique token that is assigned by Versapay to each payment transaction.

How do I resolve a settlement discrepancy?

See [Settlement Discrepancies](#).

Where can I set up deposit accounts in NetSuite for Settlement and Fee Reconciliation?

See [Automated Settlement Reconciliation for NetSuite Pay](#).

How can I view deposits that have taken place in NetSuite for reconciled settlement and fees?

See the help topic [Viewing the Deposits List](#).

Underwriting

Why is my personal information required to submit an application?

Personal information is required due to FINCEN and card brand rules.

Which credit reports are used? Hard or soft pull?

We don't use traditional credit bureaus. Our Underwriting team leverages LexisNexis to validate PII. There is no hard or soft pull to the applicants credit.

What format does my documentation need to be in to submit to underwriting?

You will receive an email with a hyperlink to upload documents requested from Versapay underwriting. PDF is preferred, but other formats are acceptable. Ensure the documentation is not password protected. PNG and JPEG files are also acceptable.

If my application is denied, do I have any other options?

Depending on the reason for denial, there may be additional processing options available.

Who do I contact if I have questions or concerns while my application is in underwriting?

Contact NetSuite support for any questions regarding the status of the application during underwriting.
