This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. NetSuite Ship Central

NetSuite Ship Central enables packing or shipping capabilities with shipping carrier integration within your NetSuite account. It also provides the app that lets you pack and ship orders through a tablet or kiosk device. Based on your fulfillment requirements and setup, you can pack or ship through the app or NetSuite UI. If you set up shipping for the app, you can process orders packed through the app or NetSuite UI, separately. Without packing capabilities in your account, you can process orders for shipping only.

NetSuite Ship Central, together with SCM Mobile, extends packing and shipping capabilities to enable you to:

- Pack items into cartons and transfer packed cartons onto pallets
- Identify picked items across multiple orders for a customer and pack them at the same time
- Ship through carriers that you integrate with your NetSuite ShipEngine account

If you want to enable shipping, you must create a ShipEngine account within NetSuite. Accounts created outside of NetSuite cannot be integrated with Ship Central. For more information about the NetSuite ShipEngine account, see <https://www.shipengine.com/netsuite/>.
- Use the app to ship through the regular shipping flow or to generate labels through bulk shipping, or use the NetSuite UI to ship directly from item fulfillments
- View estimated and actual shipping costs for a variety of shipping services and options
- Gain visibility into which items are packed across multiple cartons or pallets and shipped out of your location

Overview of Ship Central Packing or Shipping Options

NetSuite Ship Central provides the following packing and shipping capabilities through the mobile app, some of which depend on your carrier:

Ship Central Packing	Ship Central Shipping	Carrier-Specific Shipping Options (May not be available from some carriers)
Packing items into cartons # Does not include cartonization, which automatically selects box types for specific items and box sizes # Does not support picking and packing directly into shipping boxes	Local and international shipping Generation of labels through bulk shipping # Does not support LTL/freight, pallets	Single and multi-package shipping Carrier-provided shipping insurance Saturday delivery Package codes Two additional shipment references
Transferring packed cartons onto pallets	Third-party and recipient billing Rate shopping for shipments - Includes rate shopping for orders or order lines on the NetSuite UI - With option to get the best shipping rate Flat rates, discounts, or mark ups	Home delivery, with residential address validation Advanced shipping options Shipping to military PO boxes and US territories - Includes domestic shipping to US territories via USPS only

Ship Central Packing	Ship Central Shipping	Carrier-Specific Shipping Options (May not be available from some carriers)
	Shipping cost distribution	
Packing instructions for items or orders Packing by waves created through NetSuite WMS	Address validation options Delivery confirmation Non-delivery instructions for international shipments	Third-party billing for FedEx Ground COLLECT USPS Canada Delivered Duty Paid
* Printing of packing labels, lists, and BOL - With option to create custom templates	* Printing of shipping labels, return labels, and documents - Includes certificate of origin and commercial invoice, whether printable or electronically submitted - With option to generate multiple shipping manifests - With option to print default company logo - With option to print return labels during or after shipping	* Automatic printing of UPS Control Log for packages valued above 1000 USD
* Capturing item weights from weighing scales	Voiding of shipping and return labels Pickup request submission	
* Requires PrintNode integration for capturing of weights, but not for manual or automatic printing, as well as reprinting on the NetSuite UI - Without PrintNode integration, you can save a soft copy of labels or documents. - If available from your carrier and shipping service, shipping documents may be submitted electronically instead, during shipping label generation and printing through the app.		

For more information about integration with ShipEngine or PrintNode, see [NetSuite Ship Central FAQs](#).

Watch the following video for an overview of packing and shipping:

 [Ship Central Packing and Shipping](#)

Ship Central Availability

As NetSuite's standard shipping solution, the NetSuite Ship Central SuiteApp is available for all NetSuite accounts.

Ship Central Supported Transactions and Item Types

NetSuite Ship Central supports the following types of transactions and items:

- Sales and transfer orders in Pending Fulfillment status
 - With picking and packing capabilities, item fulfillments in Picked status for packing and in Packed status for shipping
You can ship orders packed through the NetSuite UI or WMS separately from those packed through the Ship Central app.
 - Items that belong to the following supported item types:
 - Inventory and assembly items, including, matrix, lot numbered, and serialized items
 - Kit/package items and item groups
 - Non-inventory items and, if you use Warehouse Management, service items
To pack both types, items must be fulfillable and either for sale or for resale.
The following item types cannot be assigned tariff codes, so they cannot be shipped internationally: service item for resale and service item for sale.
 - Items that ship individually, if enabled on the item record
 - HazMat or dangerous goods items, if enabled on the item record
This option applies to inventory and assembly items that you want to ship locally through USPS only.
- For more information about item settings, see [Creating Items for Ship Central](#).

For more information, see the following topics:

- [NetSuite Ship Central Setup](#)
- [NetSuite WMS Setup with Ship Central](#)
- [Ship Central Packing](#)
- [Ship Central Shipping](#)
- [Direct Packing or Shipping on Fulfillments](#)
- [International Shipping Setup for Ship Central](#)
- [Third-party or Recipient Billing Setup](#)
- [HazMat or Dangerous Goods Setup](#)

NetSuite Ship Central Setup

To set up Ship Central packing, shipping, or both, follow the procedures in these topics:

 **Note:** If you want to review requirements for integrations with ShipEngine and PrintNode before you begin your Ship Central setup, see [NetSuite Ship Central FAQs](#).

1. [Installing the SuiteApps for NetSuite Ship Central](#)
Install the required SCM Mobile SuiteApp and NetSuite Ship Central SuiteApp.
2. [Enabling Features for NetSuite Ship Central](#)
Enable required features to use the Ship Central app for packing, shipping, or both. Additionally, you can enable optional features for bar code scanning, international shipping, and bin management, among others.

Without enabling the Pick, Pack, and Ship feature, you can ship only through the app or NetSuite UI. If you enable it, you can pack, ship, or do both through the app or NetSuite UI. For more information about processing through NetSuite UI, see [Direct Packing or Shipping on Fulfillments](#).
3. [NetSuite Ship Central Roles and Permissions](#)

Assign the predefined roles or add permissions to existing roles to perform packing and shipping tasks.

4. If you enable features for shipping and international shipping, you can continue your shipping setup by completing the following tasks:
 - a. [Entering Company Information for Shipping](#) – Enter company details that you want to use to create and register your NetSuite ShipEngine account.
 - b. [Registering and Integrating Your Carrier Accounts](#) – Create a ShipEngine account within NetSuite, sync your carriers or company logo, enable the Ship Central plug-in, and manage synced carriers.
 - c. [Updating Shipping Settings](#) – Enable required settings for international shipping, hazmat shipping, showing customer names, and other optional shipping settings.
 - d. [Ship Central Preferences](#) – Depending on your business needs, you can enable return labels and settings for rates, logos, or shipment references, among others, as described in these topics:
 - [Setting Up Direct Packing and Shipping on Fulfillments](#)
 - [International Shipping Setup for Ship Central](#)
 - [Tax Setup for International Shipments](#)
 - [Third-party or Recipient Billing Setup](#)
 - [Return Label Setup for Local Shipping](#)
 - [HazMat or Dangerous Goods Setup](#)
 - [Rate Shopping Setup for the App](#)
 - [Adding Package Code Settings](#)
 - [Adding Shipping Item Settings](#)
 - [Adding Shipment References](#)
5. [Setting Up Records for NetSuite Ship Central](#)

Depending on the features you want to use, set up locations, items, packing items, shipping items, and cost distributions.

Alternatively, you can import the following records through a CSV import using the Administrator role: shipping item and other billing accounts, among others. To use the Import Assistant, see the help topic [Importing CSV Files with the Import Assistant](#). For specific guidelines, see [Third-party or Recipient Billing Setup](#) or [Importing Shipping Items for NetSuite Ship Central](#).
6. [Defining Autogenerated ID Formats](#)

Set up autogenerated IDs for cartons, pallets, shipments, BOL, or SSCC-18.

After your Ship Central setup, you can configure your kiosk or tablet devices and mobile app access.

Mobile Device Requirements

Refer to the following device hardware and software requirements or recommendations:

- For new kiosk and tablet devices –
 - Kiosks: Windows 10.0 or higher
 - Tablets: Currently, only devices that have Android 7.0 or higher versions are supported. Support for Android versions may change depending on updates from Google.

Devices that run on iOS and other operating systems are not supported.

- Recommended screen resolution – 1280 x 800 up to 1920 x 1080

- Optimized for horizontal user interfaces or the landscape display mode

If available for your device, you can set it up to automatically enter data after you perform a scan. See the help topic [Scanning Item Bar Codes in Apps](#).

For more information about mobile app requirements, see the help topic [SCM Mobile Setup](#).

Enabling Ship Central Mobile App Capabilities and Access

If you already use another SCM Mobile app, you may have enabled mobile app capabilities such as bar code scanning, weighing scale support, mobile printing, and tally scanning. When you set up Ship Central, these capabilities also apply to packing and shipping. In addition, you may enable settings and rules specific to Ship Central processes. For more information and instructions, see the following topics:

- [Bar Code Scanning for Ship Central](#)
- [Mobile Printing and Weighing Scale Setup](#)
 - Includes options to use or not use PrintNode integration
 - Set up print templates for packing or shipping labels or documents
- [Configuring Ship Central Rules](#)

To set up mobile app access, see the following SCM Mobile topics:

- [Language Preference Setup for SCM Mobile](#)
- [Setting Up the Online Form User Role](#)
- [SCM Mobile App Access](#)

Optionally, if you want to provide access to specific mobile process only, see the following topics:

- To set up access to standard mobile processes, see the help topic [Configuring Menu Icons on Independent Mobile Pages](#).
- To set up access to custom mobile process that you create, see the help topic [Customizing Mobile Processes](#).

Menu icons remain hidden from roles that don't have access to a standard or custom mobile process

Mobile Configuration and Customization for Ship Central

You can update mobile pages, page elements, and actions to suit your app requirements, as described in the following topics:

- To perform basic configurations on standard mobile processes, see the help topic [SCM Mobile App Configuration](#).
- To clone processes to perform additional updates on custom mobile processes, see the help topic [SCM Mobile App Customization](#).
- If you enable Mobile Printing and want to customize templates and printing settings, see the help topic [Mobile Printing Customization](#).

Installing the SuiteApps for NetSuite Ship Central

To begin your setup, you must first install the SCM Mobile SuiteApp, and then install the Ship Central SuiteApp. SCM Mobile provides you with Ship Central access on a kiosk or tablet device. For requirements and installation of the SCM Mobile SuiteApp, see the help topic [SCM Mobile Setup](#).

To install SuiteApps for NetSuite Ship Central:

1. Using the Administrator role, go to Customization > SuiteBundler > Search & Install Bundles.
The Search & Install Bundles page appears.
2. In the **Keywords** field, enter the name of the bundle you want to install, following the order in this list:
 - a. **SCM Mobile** – 554537
 - b. **NetSuite Ship Central** – 573803
3. Click **Search**.
4. From the search results, click the name next to the corresponding bundle ID shown in step 2.
5. On the Bundle Details page, click **Install**.
6. If a popup message appears that asks for your permission to install future bundle updates, click **OK** to confirm.
7. On the Preview Bundle Install page, click **Install Bundle**.
After you install the SCM Mobile SuiteApp, you can follow the same instructions to install the Ship Central SuiteApp.

While you wait for a bundle installation to complete, you can continue your work in your NetSuite account. To view the status of bundle installations, go to Customization > SuiteBundler > Search & Install Bundles > List.

Enabling Features for NetSuite Ship Central

After you install the SuiteApps, you must enable the required features. Verify that the required features for SCM Mobile are also enabled on your account.

You may also enable features for additional order, inventory, or shipping capabilities that suit your business requirements.

To enable features for NetSuite Ship Central:

1. Using the Administrator role, go to Setup > Company > Enable Features.
2. On the Enable Features page, check the box next to the following required features:

Subtab	Feature Name	Remarks
Company	■ Locations ■ Multiple Units of Measure	To set up locations for shipping, see Creating Locations for Ship Central .
Transactions	■ Shipping Partners	
SuiteCloud	■ Custom Records ■ Advanced PDF/HTML Templates ■ Client SuiteScript ■ Server SuiteScript	For more information about features for SCM Mobile, see the help topic SCM Mobile SuiteApp Installation .

3. (Optional) You can check the box next to additional features that you may need to support your business processes, such as the following:
 - To pack orders before you ship them out through the Ship Central app or the NetSuite UI, check the **Pick, Pack and Ship** box.

Note: If you enable this feature, verify that you have the **Default Item Fulfillment Stage** preference set to **Picked**. You cannot pack items associated with fulfillments in Packed or Shipped status. See the help topic [Pick, Pack, and Ship Overview](#).
If you do not enable this feature and you want to ship only through NetSuite UI, see [Setting Up Direct Packing and Shipping on Fulfillments](#) or [Direct Packing or Shipping on Fulfillments](#).

- To use bins, check the **Bin Management** and **Advanced Bin/Numbered Inventory Management** boxes.
- To set up bar code scanning, check the **Bar Coding and Item Labels** box.
- For Advanced Inventory Management users, to include the **Expected Ship Date** field in order transactions, check the **Supply Allocation** box. For more information about this field, see the help topic [Setting Demand Preferences for Supply Allocation](#).
- To enter different shipping routes on an order transaction, check the **Multiple Shipping Routes** box and other required features.
- To enable the following shipping capabilities, check the **Shipping Label Integration** box:
 - Direct packing and shipping on item fulfillments
 - International shipping – Additionally, you must check the **Multiple Currencies** box. See the help topic [Enabling the Multiple Currencies Feature](#).
 - HazMat/Dangerous goods shipping through USPS
 - Shipping label generation
 - Return label generation
 - Packages that you can assign to items

After you enable these additional features, you must set up the related capabilities for the app. For instructions, see [Ship Central Preferences](#).

- To display the image of your items on the app, check the **Site Builder (Website)** and **Site Builder (Web Store)** boxes.

If you do not see these features in your account, contact your NetSuite account manager.

For the complete list of NetSuite features, see the help topic [Enabling Features](#).

NetSuite Ship Central Roles and Permissions

You can assign NetSuite Ship Central roles to employees in your organization. If they already have existing roles assigned, you can update the roles with permissions that provide access to packing or shipping.

If you use Specialized User: WMS roles and want to modify access to the Ship Central app, see the help topic [Specialized User: WMS Role](#).

Assigning Ship Central Roles

The following roles enable you to perform fulfillment tasks on your kiosk device and setup procedures:

- **Packing Administrator** – This custom role provides access to Ship Central and NetSuite records that enable you to set up accounts, roles, and Ship Central capabilities.
- **Packing Operator** – This custom role enables you to process orders for packing on the mobile app.
- **Ship Central Manager** – This custom role provides access to packing and shipping records to set up and use Ship Central.

- **Ship Central Mobile Operator** – This custom role enables you to process orders for packing and shipping on the mobile app.
- **Ship Central Packing Operator** – This custom role enables you to process orders for packing on the mobile app.
- **Ship Central Shipping Operator** – This custom role enables you to process orders for shipping on the mobile app.

To assign any of the Ship Central roles, see the help topic [Assigning Roles to an Employee](#).

When you copy a Ship Central role, you carry over their predefined permissions and access levels. On your copy of the role, you can add more permissions that suit your business requirements before you assign the role. See the help topic [Customizing and Creating Roles](#) or [NetSuite Permissions Overview](#).

Updating Roles with Ship Central Permissions

NetSuite Ship Central permissions give you access to custom records and process flows for setup tasks and fulfillment processing using a kiosk device. To use roles that are not copied from a Ship Central role, you can manually assign these permissions. See [Assigning Ship Central Roles](#).

For example, you can add permissions to provide a custom WMS Warehouse Manager or Specialized User: WMS role access to packing or shipping on the app. For more information about these roles, see the help topic [Warehouse Management Roles and Permissions](#).

Permissions * (Custom Record subtab)	Access Levels for the following roles:	
	Packing Administrator	Packing or Shipping Operator Ship Central Manager or Mobile Operator
PackShip - Autogenerated ID Format	Full	Full (Packing Operator only)
PackShip - List Print Parent Record	Full	Full
PackShip - Pack Carton	Full	Full
PackShip - Packed Item	Full	Full
PackShip - Packed Item Details	Full	Full
PackShip - Packing Item		Full
PackShip - Pallet	Full	Full
PackShip - Print Carrier Information	Full	Full
PackShip - Print Carton And Items	Full	Full
PackShip - Print Customer Order Info	Full	Full
PackShip - Print Items In Cartons	Full	Full
PackShip - Shipment	Full	Full
PackShip - Shipping Cost Distribution		Full (except Packing Operator)
PackShip Auto Printing Rule data	Full	Full
PackShip Lock Record	Full	Full
PackShip - Advanced Options	Full	Full

Permissions * (Custom Record subtab)	Access Levels for the following roles:	
	Packing Administrator	Packing or Shipping Operator Ship Central Manager or Mobile Operator
Ship Central Packing	Full	Full
Ship Central Shipping	Full	Full
* Packing permissions apply to accounts that use the Pick, Pack, and Ship feature only.		

Aside from the Custom Record permissions listed in the table, verify that shipping roles have access to the following standard permissions:

- **Lists** subtab: Shipping Partner Package – **Full**
- **Setup** subtab: Set Up Company – **View**

Entering Company Information for Shipping

Ship Central uses the company name and email address from your Company Information record to register and integrate your account with ShipEngine. If you want to set up Ship Central Shipping, make sure that you provide the correct company details.

To integrate with your NetSuite sandbox account, you must provide a different email address to register a separate NetSuite ShipEngine account.

From this record, Ship Central also uses the return address, or main address alternatively, if you enable return labels for shipping. See [Return Label Setup for Local Shipping](#).

If you charge tax to the shipper for international shipments, Ship Central may use the company's tax registration number. Note that it prioritizes tax registration numbers on subsidiary records that you may have set up for different countries. For more information about tax registration numbers, see [International Shipping Setup for Ship Central](#).

To enter company information for shipping:

1. Go to Setup > Company > Company Information.
2. On the Company Information page, set values in the following fields:
 - **Company Name** – Enter the company's name that you want to use for the NetSuite ShipEngine account creation. If this name exceeds 50 characters, only the first 50 characters are used, following ShipEngine's limit.
 - **Country** – Select the name of the country.
 - **Return Email Address** – Enter the email address you want to use for the NetSuite ShipEngine account. If you are setting up a NetSuite sandbox account, be sure to use a separate email address.
3. If you charge tax for shipments to the shipper and you want to enter the company's tax registration number, you can enter it in the appropriate field. The name of one or more fields for this number may vary, depending on the country.
 United States, for example, includes fields for both an Employer Identification Number and SSN or TIN.
4. To provide addresses for shipment processing and returns, see the help topic [Enter Company Address Information](#).

5. To set other fields for your company, see the help topic [Enter Basic Company Information](#).
6. Click **Save**.

To create and register a NetSuite ShipEngine account, see [Registering and Integrating Your Carrier Accounts](#).

Registering and Integrating Your Carrier Accounts

NetSuite integrates with ShipEngine, a third-party provider of shipping solutions that include the ability to connect to services from multiple carriers. Within your NetSuite ShipEngine account, you can connect the carrier accounts that you want to use to process shipments through the app. For more information about the NetSuite ShipEngine account, see [NetSuite Ship Central FAQs](#) or [NetSuite ShipEngine Account Help Resources](#).

If you want to use the Ship Central app capabilities for shipping, you must create a NetSuite ShipEngine account within NetSuite. You cannot integrate a ShipEngine account created outside of NetSuite.

Ship Central uses the following details from your Company Information record to create and integrate a NetSuite ShipEngine account:

- **Company Name** – Make sure that your company name does not exceed 50 characters, ShipEngine's limit for company names.
- **Return Email Address** - Use an email address that is not associated with any existing ShipEngine or NetSuite ShipEngine account, whether a production or sandbox account.
- **Account ID** – Make sure that the production or sandbox account ID is not already associated with a NetSuite ShipEngine account. To change the account ID and re-register, see [Account Re-registration](#).

To view or edit your company details, see [Entering Company Information for Shipping](#).

ShipEngine Integration for NetSuite Sandbox Accounts

To set up ShipCentral shipping in a NetSuite sandbox account, you must create a separate NetSuite ShipEngine account for it. If you use a free version of Stamps.com in your sandbox account, you can view estimated shipping costs on the app. However, you cannot print labels and complete the shipping process.

You cannot use the same NetSuite ShipEngine account for your NetSuite production and sandbox accounts. Be sure to use a different email address and account ID each for a NetSuite sandbox account and a NetSuite production account. To view or edit your company details for each account, see [Entering Company Information for Shipping](#).

In case of a sandbox refresh or registration issues, you can re-register your account. See [Account Re-registration](#).

Account Re-registration

During your initial registration, if you encounter an issue or a message about an existing ShipEngine account, you can retry the registration. Similarly, after a sandbox account refresh, re-register it to create a new NetSuite ShipEngine account. If your API key gets corrupted which usually occurs when you use it outside of your NetSuite ShipEngine account, that may also require you to re-register.

Note the following guidelines before doing an account re-registration for a NetSuite production or sandbox account:

- Search for and delete all entries for the following custom records:
 - PackShip - Encryption Key
 - PackShip - Shipping API Key
- Verify that no NetSuite ShipEngine account is associated with your sandbox or production account. For instructions, see Step 6 in the procedure, [To register and integrate your shipping services](#):
- To use a new email address and account ID, you can search for the PackShip - Company Details record in which you can enter them. After a sandbox refresh, these details may have been copied from your production account. Make sure that you re-register a production or sandbox account using an email address and account ID that is not associated with any ShipEngine account.
- Repeat the same registration steps to create a new ShipEngine account within NetSuite.

To register and integrate your shipping services:

1. Using the Ship Central Manager role, go to Ship Central Setup > ShipEngine Integration > Manage Integration & Carriers.
2. On the Encryption Key Entry page, do the following:

Tip: This page does not appear if you have already entered an encryption key. You can skip this step.

- a. In the **Encryption Key** field, enter a key that you want to use to encrypt your ShipEngine API key and account ID.

Important: Do not use your API key for another carrier integration or use it outside of your NetSuite ShipEngine account. If you do so, it might get corrupted and require you to re-register your account when you cannot use Ship Central services.

An encryption key must have 16 characters. You can include a combination of letters, numbers, and symbols.

- b. Click **Save**.
3. On the Manage ShipEngine Integration page, click **Create ShipEngine Account**.
A message appears at the top of the page to confirm your newly created ShipEngine account. ShipEngine generates your shipping API key, which is automatically encrypted and saved in your NetSuite account. If you need to make changes to the encryption key or shipping API key, see [Managing Your Shipping Integration](#).
4. To add your carrier accounts to ShipEngine, do the following:
 - a. On the Manage ShipEngine Integration page, click **Add Carriers**.
You are redirected to the ShipEngine site to get started and connect your carrier accounts.
 - b. Add each carrier account that you want to use for NetSuite Ship Central. For instructions, see [NetSuite ShipEngine Account Help Resources](#).
 - c. On the Manage ShipEngine Integration page, click **Sync & Update Carriers**.
Each carrier that you add appears in the Carriers list along with the shipping services associated with it.
5. After you add and connect your carriers, follow these steps to enable the NetSuite Ship Central plug-in:
 - a. Go to Ship Central Setup > Ship Central Plug-in > Manage Plug-in.
 - b. On the Manage Plug-in Implementations page, check the **PackShip – Shipping Plugin** box.

- c. Click **Save**.
- 6. (Optional) To view your ShipEngine account ID, do the following:
 - a. Using the Administrator role, go to Setup > Custom > Carrier Integration Details.
 - b. On the Carrier Integration Details page, click **Get ShipEngine Account ID**.

Your account ID appears in the ShipEngine Account ID field. Ship Central uses this data during shipment processing only.

After you integrate your carrier accounts and enable the plug-in, you can create your shipping items. For instructions, see [Creating Shipping Items for your Shipping Services](#).

Managing Your Shipping Integration

You can perform tasks to manage your existing ShipEngine integration. You can change the API key or re-encrypt the existing one. You can also sync or resync the default logo that you upload in your ShipEngine account. For the following purposes, be sure to resync your carriers before you use their shipping services:

- To update or remove shipping services from existing carriers
 - To set up and use the shipping services of a new carrier
 - To update shipping services after you set the International Shipping or Other Party Billing preferences
- For more information, see [Setting Ship Central Preferences](#).

To manage your existing shipping integration:

1. Using the Ship Central Manager role, go to Ship Central Setup > ShipEngine Integration > Manage Integration & Carriers.
2. On the Manage ShipEngine Integration page, click the button that corresponds to the task you want to perform:
 - **Add Carriers** – Enables you to connect additional carrier accounts to your NetSuite ShipEngine account.
 - **Sync & Update Carriers** – Syncs your integrated carrier accounts from ShipEngine with NetSuite.
 Updates to carriers apply to new and existing shipments that you are processing on your device.
 If shipping services are updated or removed, make sure that you perform the necessary changes to the associated shipping services. For more information, see [Creating Shipping Items for your Shipping Services](#).
 - **Sync Default Logo** – Obtains the path for your default company logo.

Note: You must choose a default logo in your ShipEngine account. To set up, you can upload a company logo in JPG or PNG format. The logo cannot exceed the maximum file size of 512 KB and maximum logo size of 500px. To view ShipEngine's guidelines on company logos, see [NetSuite ShipEngine Account Help Resources](#).

If you enable the **Print Default Logo on Shipping Labels** preference, you can print your logo on a shipping label. For more information, see [Setting Ship Central Preferences](#).

- **Replace API Key** – Automatically obtains the shipping API key from ShipEngine and associates it with your NetSuite account.

After the update, the new shipping API key is used to authenticate new shipping sessions on the app.

- **Re-encrypt API Key** – Opens the Encryption Key Entry page. Make sure you enter a 16-character string for the new encryption key.

After you change the encryption key, NetSuite uses it to automatically re-encrypt the ShipEngine API key associated with your account.

Updating Shipping Settings

Shipping settings include additional capabilities that you can enable, separately, through the following procedures:

- **To update your Shipping setup:**

If you use the Shipping Label Integration feature, you can enable the following capabilities on the Set Up Shipping page: International Shipping, HazMat/Dangerous Goods (for USPS only); and Packages. Package setup includes package types that you can assign as a default for all items or to specific items.

If you have a Commerce website, you can enable the setting to include shipping items created for Ship Central.

For more information about the Shipping Label Integration feature, see [Enabling Features for NetSuite Ship Central](#).

- **To display customer names for shipments:**

Mobile pages for packing and shipping contain tables that include the Customer column. To display customer names in this column, complete the following procedure. If you have already done this procedure for other features, you can double check your settings.

To update your Shipping setup:

1. Using the Administrator role, go to Setup > Accounting > Setup Tasks > Shipping (Administrator).
The Set Up Shipping page appears.
2. To use the app to ship orders packed through the NetSuite UI, in **Shipping Label Creation Stage** field, select **Shipped**.
3. To include shipping items in your Commerce website, check the **Charge for Shipping** box.
If you enable this setting, you must also enable the **Display in Website** setting for each shipping item that you want to use on your website. See [Creating Shipping Items for your Shipping Services](#).
4. On the Preferences subtab, check the following boxes for the shipping options that you want to set up:
 - **International Shipping**
 - **HazMat/Dangerous Goods**
5. On the **Packages** subtab, you can add package types that you want to set up on items that you ship:
For instructions, see the help topic [Packages Subtab](#).
To assign a default package to an item, see [Creating Items for Ship Central](#).
6. Click **Submit**.

To continue setting up international shipping or shipping of hazmat items, see [Ship Central Preferences](#).

To display customer names for shipments:

1. Go to Setup > Company > Auto-Generated Numbers.
2. In the Enable column, check the box for Customer.
3. If you already have existing customer records, check the **Allow Override** and **Update** boxes for Customer.
Skip this step if you have not added customer records yet.
4. Click **Save**.

Setting Up Direct Packing and Shipping on Fulfillments

If you use the Shipping Label Integration feature, you can set up shipping items to process orders for shipping within Ship Central. You can apply additional preferences to use them for packing and shipping directly on item fulfillments only, without using the app.

This capability applies to shipping items for FedEx, UPS, or USPS only. Before you set it up, be sure to connect or sync your shipping accounts for these carriers with your NetSuite ShipEngine account. For instructions, see [Registering and Integrating Your Carrier Accounts](#) or [Managing Your Shipping Integration](#).

Note: If you do not use the Pick, Pack, and Ship feature and want to ship only through the NetSuite UI, refer to the table on [Direct Packing or Shipping on Fulfillments](#). On this table, you can also review the options to pack through the NetSuite UI and ship through the app, or vice versa.

For FedEx, UPS, or USPS carriers, you can set up this capability through the following required and optional configurations:

1. **Shipping Mode** – On the standard preference record or a custom one, you can select the **Integrated Shipping Only** mode or **Integrated Shipping per Order** mode. Based on the shipping mode, you enable direct shipping on fulfillments for all or specific orders for which a preference record applies to.

Optionally, you can set the following label preferences:

- **PDF or ZPL Label Printing Format** – You can change the default PDF printing format for any of the three carriers that you use.
- **Print Return Labels** – You can set this preference to print or save return labels for local shipments.

Preferences apply to specific subsidiaries or locations that you select on a preference record. You can set other preferences that suit your shipping requirements. For more information about these preferences, see [Setting Ship Central Preferences](#).

2. On shipping items that you create for Ship Central, you can enable the following settings for labels that you can print or save directly through fulfillments:
 - **Shipping Label Integration** – For shipping labels, you must enable this setting.
On item fulfillments, Ship Central automatically checks the **Integrated Shipping Label** box to enable direct label generation.
 - **Return Service** – If you set the Print Return Labels preference, you can specify the shipping service that you want to use for return labels. For more information, see [Return Label Setup for Local Shipping](#).

To create shipping items, see [Creating Shipping Items for your Shipping Services](#).

3. **Integrated Shipping Mode** – If you select the **Integrated Shipping per Order** mode, you must check this box on an order for which the preference record applies to. To generate labels, you must also use a shipping item created for Ship Central.

If you check this box on an order, you can pack and ship the order or specific lines directly on an item fulfillment only. You cannot process it through the Ship Central app.

Ship Central Preferences

On Ship Central Preferences records, you can set up additional capabilities or default settings for the shipping services available from your carriers. These include shipment references, billing other parties, Saturday delivery, shipping item rates, and default package codes.

If you use the Shipping Label Integration feature, you can enable settings on preference records to add the following shipping options:

- Shipping labels, return labels, international shipping, and hazmat/dangerous goods shipping
- Additional preferences for shipping labels include displaying your default logo and multiple shipment references supported by certain carriers
- For FedEx, UPS, or USPS, you can choose a shipping mode for direct packing and shipping on item fulfillments.

You can choose whether to print labels in ZPL or PDF format.

You can also assign rates to shipping items that you create for these carriers.

Review the requirements and guidelines before you set preferences for the following shipping capabilities:

- [Setting Up Direct Packing and Shipping on Fulfillments](#)
- [International Shipping Setup for Ship Central](#)
- [Tax Setup for International Shipments](#)
- [Third-party or Recipient Billing Setup](#)
- [Return Label Setup for Local Shipping](#)
- [HazMat or Dangerous Goods Setup](#)
- [Rate Shopping Setup for the App](#)
- [Package Codes and Sizes](#)
- [Shipping Cost with Flat Rates, Discounts, or Mark ups](#)

To enable settings on a standard or custom preferences record, see [Setting Ship Central Preferences](#).

International Shipping Setup for Ship Central

You can set up international shipping for the Ship Central app by completing the following procedures:

1. Enable international shipping in NetSuite – You can skip this step if you already use international shipping in NetSuite.
 - Enable the required features for International Shipping. See [Enabling Features for NetSuite Ship Central](#).
 - Enable the International Shipping setting. See [Updating Shipping Settings](#).
2. Set up international shipping for the Ship Central app.
 - Set the **International Shipping** preference and settings for content type, and non-delivery instructions. See [Setting Ship Central Preferences](#).

- Configure tax settings, including tax registration numbers. See [Tax Setup for International Shipments](#).
 - Sync your carriers to connect services for international shipping. See [Managing Your Shipping Integration](#).
 - Create shipping items for international shipping services. See [Creating Shipping Items for your Shipping Services](#).
 - Update the items that you want to ship internationally with the manufacturer details and the description of goods. See [Creating Items for Ship Central](#).
3. You can enable or update Mobile Printing to print or save international shipping labels and documents manually or automatically. For instructions, see [Mobile Printing and Weighing Scale Setup](#).

Note that shipping services from your carrier may include submission of shipping documents electronically, without making them available for printing or saving. For more information, see [Details on Shipping Labels and Documents](#).

Tax Setup for International Shipments

You can configure tax settings on a preference record enabled with international shipping. Tax settings apply to a subsidiary or location if you specify either or both on a preference record.

If you set the **International Shipping** preference, be sure to complete the following tax setup procedures:

1. **Charge Tax To** – On a standard or custom preference record, be sure to set this preference. Choose the entity responsible for taxes, tariffs, and duties, or you can choose the **No Tax** option. On the app, your preference appears as the default setting, which you can change.

Tip: On the app, you can apply a different setting for a shipment or override a tax setting using the **No Tax** option. Also, if you choose the **Importer of Record** option, you can specify whether to use the ship to address or any of the addresses from the associated customer record.

2. **Tax Identifier** – Unless your **Charge Tax To** setting is set to **No Tax**, on a preference record, select the issuing country for the tax registration number.

Note: Even if you choose the **No Tax** preference option, note that you may change it on the app for each shipment. In this case, you may still set tax identifiers on preference records. Depending on your business processes, you can also provide tax registration numbers on customer records, Company Information, or subsidiary records.

3. **Tax Registration Number** – Depending on your **Charge Tax To** setting, set up tax registration numbers in the appropriate record, as follows:

- If you charge tax to recipients or importer of record, verify that you have correct tax registration numbers in customer records. See the help topic [Entering Financial Information for the Customer](#)
- If you charge tax to the shipper, make sure that you have a tax registration number for the country that you want to ship from.

Ship Central obtains the number from the subsidiary when you ship from the subsidiary's country. To view the subsidiary country and tax registration number, see the help topic [Creating Subsidiary Records](#).

If the subsidiary record has no tax registration number or when you ship from a different country, it checks the country on your Company Information record. It obtains the tax

registration number from this record, instead, when you ship from the company's country. To view the company's country and tax registration number, see the help topic [Enter Basic Company Information](#).

For some countries, you may have an Employer Identification Number (EIN) and another tax registration number on the subsidiary or Company Information record. If you provide both numbers on a record, Ship Central uses the EIN.

Ship Central also considers any tax details that you add on the **Tax Identifiers** subtab of your Ship Central Preferences record. It obtains the tax type for the country that matches the one from which you want to ship packages. Then, it determines whether to obtain the corresponding number for the tax type from the subsidiary record or Company Information record.

4. **Enable USPS Canada Delivered Duty Paid** – (Optional) You can set this preference for the supported carrier and country only.
5. **Calculate International Shipping Tax** – (Optional) You can set this preference to view estimated tariff charges before you ship a package.

Third-party or Recipient Billing Setup

You can set a preference record to bill recipients or third parties through the app and add billing account details per carrier and per customer. Depending on shipping services from your carrier, billing accounts apply to all local and international shipments for their associated customers.

 **Note:** Ship Central provides a separate **Enable 3rd Party Billing for FedEx Ground Collect** setting for this specific FedEx shipping service. If this service is available to your customers, their billing accounts are used, which they set up directly through FedEx. If you add third party or recipient billing accounts for the same customers on the preference page, Ship Central does not apply them to this shipping service.

Complete the following procedures to enable billing of other parties for the app:

1. Set the **Bill Other Parties** preference in a Ship Central Preferences record. See [Setting Ship Central Preferences](#).
2. If you have multiple billing accounts, you can associate them with preference records enabled with the Bill Other Parties preference. To add single or multiple billing accounts, you can do any of the following procedures:

 **Tip:** On customer records, make sure that the customer names match the names on the billing accounts that you associate with a preference record.

- After you set the preference, if you have multiple billing accounts to set up, you can add them to the same Ship Central Preferences record. For customers with multiple billing accounts, you can assign a default one for a carrier. Third party or recipient billing accounts apply to all locations unless you specify a location on the preference record. From the billing accounts that you add, you can choose on the app the one you want to use for a specific shipment.
- Through the CSV Import Assistant, using the Administrator role, you can use the **Other Billing Accounts** record type to add these accounts in bulk. On Step 1 of the Import Assistant, this option becomes available when you select the **Custom Records** import type. In your CSV file, include the account details. You can associate billing accounts with preference records during the import by including the following details:
 - Internal ID of the Ship Central preferences record
 - Billing Type setting
 - Set as Default setting

For instructions, see the help topic [Importing CSV Files with the Import Assistant](#).

Otherwise, you can assign each billing account to a preference record after your import.

- If you use the Shipping Label Integration feature, you can set up third party or recipient billing accounts for FedEx or UPS carriers on customer records. Instead of adding billing accounts to a preference record, you can set up one on each customer record. The app automatically uses the billing account for the customer. See the help topic [Entering Financial Information for the Customer](#).
- 3. Sync your carriers to connect services for third-party or recipient billing. See [Managing Your Shipping Integration](#).

Return Label Setup for Local Shipping

If you use the Shipping Label Integration feature, you can add the capability to print or save return labels. If you set up direct shipping on fulfillments for FedEx, UPS, or USPS, you can print or save return labels on item fulfillment records only. If you generate returns from a sales order or an invoice created from a sales order or item fulfillment, you can generate return labels from the RMA record.

Complete the following procedures to print or save return labels for local shipments:

1. **Address or Return Address** – In your Company Information record, enter your main address, which the app also uses as your return address. You can also enter a different return address, instead, in its respective field.
2. **Print Return Labels** – On a standard or custom preference record, be sure to set this preference. Your setting applies to a subsidiary or location that you may specify on a custom preference record.

Note that you can only save labels if you do not use the PrintNode integration. For more information, see the help topic [SCM Mobile Printing](#) or [Mobile Printing and Weighing Scale Setup](#).

3. **Return Service** – (Optional) If you set up direct shipping on fulfillments for FedEx, UPS, or USPS, you can configure this setting on a shipping item. For instructions, see [Creating Shipping Items for your Shipping Services](#).

For shipping through the app, the same shipping service applies to both shipping labels and return labels.

HazMat or Dangerous Goods Setup

For USPS local shipping only, you can complete the following procedures to enable shipping of hazardous materials or dangerous goods through the app.

1. Enable hazmat shipping in NetSuite by doing the following:
 - Enable the required feature for hazmat shipping. See [Enabling Features for NetSuite Ship Central](#).
 - Enable the **Hazmat/Dangerous Goods Shipping** setting. See [Updating Shipping Settings](#).
2. Enable the **Hazmat/Dangerous Goods** setting on each inventory or assembly item record for your hazardous materials or dangerous goods. For instructions, see [Creating Items for Ship Central](#).
3. On the Ship Central Preferences record, provide the name and phone number of the person responsible for the shipment of dangerous goods.

Rate Shopping Setup for the App

You can provide the following options for operators to shop for rates on the app

- **Rate Shopping** – To enable this option, activate the **Enable rate shopping** rule.
- **Get Best Rate** – To enable this option, activate the **Enable rate shopping** rule and set the **Get Best Shipping Rate** preference. On the app, it automatically searches for and applies the lowest shipping rate for your shipment. For more information, see [Shipping Orders Through the App](#).
If you enable this option, you can also set the **Default Shipping Carriers for Best Rate** preference to specify the carriers for your source of best rates.

For more information, see [Configuring Ship Central Rules](#).

These settings and preferences do not apply to the Shop for Rates options available on the NetSuite UI. For more information about these options, see [Rating Orders](#).

Setting Ship Central Preferences

If you have multiple subsidiaries and locations, you can assign preference records to a specific subsidiary. You can also assign each to a distinct location within the same subsidiary. Ship Central provides a standard preferences record, named **Ship Central Preference**, that applies to all subsidiaries and locations. For more information about shipping preferences for Ship Central, see [Ship Central Preferences](#).

Review the requirements and procedures before you set preferences for the following additional capabilities:

- [International Shipping Setup for Ship Central](#)
- [Tax Setup for International Shipments](#)
- [Third-party or Recipient Billing Setup](#)
- [Return Label Setup for Local Shipping](#)
- [HazMat or Dangerous Goods Setup](#)
- [Rate Shopping Setup for the App](#)
- [Package Codes and Sizes](#)
- [Setting Up Direct Packing and Shipping on Fulfillments](#)

To set Ship Central preferences:

1. Using the Ship Central Manager role, go to Ship Central Setup > Ship Central Preference > Ship Central Preference.
The Ship Central Preferences page appears.
2. From the Ship Central Preferences List, click **New Ship Central Preferences** to create another preference record. Alternatively, to update an existing one, click **Edit** next to its name.
3. On the Ship Central Preferences page, provide the basic details in the following fields:

 **Tip:** These fields cannot be edited on the standard Ship Central Preference record.

- **Name** – Enter a unique name for the preferences record.
 - **Subsidiary** – Select the subsidiary to which you want to assign this preference.
 - **Location** – (Optional) If you have multiple locations, you can select one within the subsidiary. You can't create multiple preference records for the same subsidiary and all without a location.
4. Depending on services provided by your carrier, you can set the following fields based on your shipping requirements:

- **Apply Saturday Delivery on App** – To enable the Saturday Delivery setting on order transactions and on the app, you can check this box.

Regardless of your Saturday Delivery setting on an order, you can enable or disable it on the app for the entire shipment. However, note that some carriers may not provide this service for local or international shipments.

On the app, you can view the adjusted shipping cost to include any Saturday delivery charges from carriers. This adjustment to the cost do not reflect when you calculate the shipping cost on the associated order transaction.

- **Enable USPS Canada Delivered Duty Paid**– If you ship to Canada through USPS and want to prepay the delivered duty, you can check this box.

This preference applies automatically to international shipments to Canada through USPS. It may also depend on the shipping service.

- **Enable 3rd Party Billing for FedEx Ground Collect** – If you use FedEx Ground shipping methods, you can check this box. It enables carriers to bill a recipient or third party who uses FedEx Ground COLLECT.

If you use this shipping method to a shipment, the app displays **(Billed to Third Party)** for the estimated shipping cost.

5. To set up international shipping for the app, check the **Enable International Shipping** box, and then set values in the following fields:

Note: These preferences become available and required only when you enable international shipping for the app. Your settings in these fields do not apply to local shipments.

On the app, you can change your default preference settings for the following fields: Content Type, Charge Tax To, Non-Delivery Instructions, and Description of Goods.

- a. **Content Type** – Select a content type to identify your international shipments. You can select one of the following types: **Gift, Merchandise, Returned Goods, Documents, or Sample**.
 - b. **Description of Goods** – Select one of the following sources for the description that you set up in item records: **Display Name/Code, International Description of Goods, or Sales Description**.
 - c. **Non-Delivery Instructions** – Select the instructions you want to apply in case of non-delivery. You can select one of the following preconfigured instructions: **Return to Sender** or **Treat as Abandoned**.
 - d. **Charge Tax To** – Select whether you want to charge taxes, duties, and other fees to the **Shipper, Recipient, or Importer of Record**. Alternatively, you can select the **No Tax** option.
Through the **Add Custom Details** option on the app, you can change your default setting for specific shipments. If you charge tax to the importer of record, you can choose the importer's address. For more information, see [NetSuite Ship Central FAQs](#).
 - e. **Calculate International Shipping Tax** – (Optional) You can check this box if you want to calculate the estimated tariff rate for international shipments.
On the app, this value appears beside the estimated shipping cost after you generate shipping labels.
6. If you choose to charge taxes to the shipper, on the **Tax Identifiers** subtab, you can add tax ID types for multiple countries that you ship from. Optionally, you can also add tax ID types if you charge the tax to recipients. Either way, you can do the following:
 - a. Click **New Tax Identifiers**.
 - b. In the **Name** field, enter a unique name for this tax identifier record.

- c. In the **ID Type** field, select one of the following supported tax ID types:

Tip: Based on the ID type, be sure to enter the corresponding tax ID or registration number on the Company Information page or the subsidiary record if you charge tax to the shipper. If you charge tax to the recipient, correct tax registration numbers must be entered on customer records. For more information, see [Tax Setup for International Shipments](#).

- **VAT** – Value-Added Tax identification or registration number
- **SSN, TIN, PAN, or EIN** – taxpayer ID numbers
- **IOSS** – Import One-Stop Shop number
- **EORI** – Economic Operators Registration and Identification number
- **VOEC** – VAT on E-Commerce number

For more information about the tax ID for a country, see the help topic [Enter Basic Company Information](#).

- d. In the **Issuing Authority** field, select the country that provides the ID.

Ship Central obtains the tax ID type, as well as its corresponding tax registration number for the country. For more information, see [International Shipping Setup for Ship Central](#).

- e. Click **Save**.

To add another tax identifier, repeat this step.

7. To choose your shipping address validation setting, in the **Address Validation** field, select one of the following options:
- **Validate** – The default setting that fully validates shipping addresses before you can print labels and ship packages. It includes validation of the Address 1 details and providing a matching shipping address on the app. On the order transaction, you can also fully validate the address when you click the calculate icon for the shipping cost.
Address validation is also enabled if you leave this field blank.
 - **Do not validate** – If you choose this option, you can obtain rates, print labels, and ship packages even if the shipping address cannot be found from the carrier's directory. It disables full shipping address validation on the app and on the NetSuite UI when you click the calculate icon for the shipping cost. It does not verify whether an address is residential. It does not disable basic validation done by the carrier to verify the country, city, and postal code.

Through the **Edit** option on the app, you can change your default setting for specific shipments.

For more information, see [Shipping Address Validation](#).

8. To set up third party or recipient billing for the app, check the **Bill Other Parties** box.
9. If you want to add billing accounts of third parties or recipients, on the **Other Party Accounts** subtab, do the following:
- a. Click **Add Other Party Billing** to open a new Other Party Billing page.
 - b. In the **Name** field, enter a unique name that does not contain either of these words, **customer** or **company**.
For third party billing, this name appears as the billing account name on the app.
 - c. In the **Customer** field, select the name of the customer you want to associate with this billing account.
For recipient billing, this name appears as the billing account name on the app.
Depending on the shipping service or carrier, the billing account applies to all local and international shipments for the customer.

- d. In the **Account Number** field, enter the account number of the third party or recipient.
- e. In the **Country** field, select the country code associated with the billing account.
- f. In the **Zip Code** field, enter the zip or postal code associated with the billing account.
- g. In the **Billing Type** field, select one of the following options: **Recipient** or **Third Party**.
- h. To assign this billing account as the default one for the customer, check the **Set as Default** box.
- i. In the **Shipping Carrier** field, select the carrier that provides third-party or recipient billing to associate with the account.
- j. Click **Save**.

Repeat this step to add another recipient or third-party billing account.

10. If you use FedEx, UPS, or USPS shipping items enabled with Shipping Label Integration, you can set the following fields:

- **Shipping Mode** – Choose one of the following shipping modes that you want to apply to this preferences record.
 1. **Ship Central App Only** – The default mode that enables packing and shipping through the Ship Central App. Even if you use shipping items enabled with Shipping Label Integration, you cannot pack or ship the orders directly on item fulfillments.
 2. **Integrated Shipping Only** – Enables packing and shipping directly on fulfillments for all orders that use the supported shipping items.
 3. **Integrated Shipping Per Order** – Enables packing and shipping directly on fulfillments for orders of your choice that use the supported shipping items.

Before you change the default shipping mode, be sure to review the requirements and guidelines in this topic [Setting Up Direct Packing and Shipping on Fulfillments](#).

- **UPS Label Printing Format, FedEx Label Printing Format, or USPS Label Printing Format** – Choose either **PDF** or **ZPL** as your default format for labels that you generate and print.

If you set the **Print Return Labels** preference, the default format also applies to return labels.

11. For the standard Ship Central Preference record only, to set default package codes, see [Adding Package Code Settings](#).
12. (Optional) To add flat, discount, or markup rates, see [Adding Shipping Item Settings](#).
13. (Optional) To add shipment references per carrier, see [Adding Shipment References](#).
14. To print your default company logo on shipping labels, check the **Print Default Logo** box.

You must sync the default logo to obtain the path from your ShipEngine account. If you update the logo or select a different default logo, you must resync it. For instructions, see [Managing Your Shipping Integration](#).

15. To set up return labels for local shipments, check the **Print Return Labels** box.
16. Depending on system rules that you activate, you can set the following preferences:
 - **Get Best Rate Shipping** – If you activate the **Enable rate shopping** rule, you can check this box.

When you process shipping through the app, you can choose the **Get Best Rate** option. It automatically searches for and applies the lowest shipping rate for your shipment. For more information, see [Shipping Orders Through the App](#).
 - **Default Shipping Carriers for Best Rate** – If you set the **Get Best Rate Shipping** preference, you can also select a default filter for carriers from which you want to search for the best rate: **All Carriers**, **Current Carrier**, or **Multi-Package Carriers**.
17. Click **Submit**.

Adding Package Code Settings

On the standard preference record only, you can assign a default package code to a shipping service, both provided by your carrier. You can assign the same code to multiple distinct shipping services.

When you create or edit the standard preference record, you can add each default package code by doing the following:

1. On the **Package Code Settings** subtab, click **New PackShip – Package Code Settings**
2. On the Package Code Settings page, in the **Shipping Carrier** field, select the carrier that provides the package code.
3. (Optional) In the **Shipping Method** field, select the shipping method you want to associate with the package code.
4. In the **Package Type** field, select the package type associated with the package code.
5. Click **Save**.

Adding Shipping Item Settings

You can apply either a discount or markup rate to the shipping cost. Alternatively, you can specify a flat rate to replace calculated costs altogether. A rate that you set on the standard preference record applies to all locations. In this case, you can assign them to the same shipping item only for distinct locations specified on your own preference records. For more information about shipping items, see [Creating Shipping Items for your Shipping Services](#). For more information about shipping costs, see [Shipping Cost with Flat Rates, Discounts, or Mark ups](#).

When you create or edit a preference record, you can add shipping item settings by doing the following:

1. On the **Shipping Item Settings** subtab, click **New PackShip – Shipping Item Settings**.
2. On the Shipping Item Settings page, in the **Name** field, enter a unique name for this shipping item setting.
3. (Optional) In the **Customer** field, select a customer to which you ship orders.
Ship Central applies the rate on orders that you send to the customer using the shipping item. You can assign another rate to the same customer on a preference record associated with a different location.
4. In one of the following fields, you can enter a rate:

 **Tip:** If you do not want to charge shipping costs for a shipping item, you can enter zero for the flat rate.

- **Flat Rate** – Enter a positive number, with up to two decimal places.
 - **Rate Discount** – Enter a positive number, with up to one decimal place, for the discount percentage.
 - **Mark Up Rate** – Enter a positive number, with up to one decimal place, for the markup percentage.
5. **Shipping Item** – Select the shipping item to which you want to apply the rate.
 6. Click **Save**.

Adding Shipment References

You can set up shipment references per carrier that apply to all or specific locations. If you assign references to a carrier on the standard preference record or your own that has no location, they apply

to all locations. In this case, you can assign more references to the same carrier only on your preference records that have distinct locations.

Shipping labels display only the first 30 characters of the actual values obtained from these source reference fields. For more information, see [Details on Shipping Labels and Documents](#).

When you create or edit a preference record, you can add shipment references by doing the following:

1. On the **Shipment References** subtab, click **New Shipment References**.
2. On the Shipment References page, in the **Shipment Reference #1** field, select the source of the reference. Optionally, you can set additional references in the **Shipment Reference #2** and **#3** fields depending on the carrier.
3. In the **Shipping Carrier** field, select the carrier to which you want to associate the shipment references.

On the app, the actual value of each reference appears on shipping labels generated by the carrier. Only the first 30 characters per reference can be displayed.
4. In the **Ship Central Preferences** field, you can view the preference record associated with the shipment references. If you create or make a copy from another shipment references record, you can select a preference record.
5. Click **Save**.

Setting Up Records for NetSuite Ship Central

Create location, item, packing item, and shipping item records that you want to use for NetSuite Ship Central. For autogenerated IDs used for cartons, pallets, and other records, you can define the format and prefix. See the following topics:

- [Creating Locations for Ship Central](#)
- [Creating Items for Ship Central](#)
- [Creating Packing Items for Cartons and Pallets](#)
- [Creating Shipping Items for your Shipping Services](#)
- [Defining a Shipping Cost Distribution](#)
- [Defining Autogenerated ID Formats](#)

Creating Locations for Ship Central

Create locations to which you can associate items and orders. If you ship items out of a location, provide its complete address details, including the attention line, addressee, and phone number.

Before you can pack or ship orders through the app, you must choose a location. The app filters the orders that you can pack or ship by location. When you print shipping labels, Ship Central obtains the ship from address from a location's address details. If you set the preference for returns, it also obtains your return address from this record. For more information, see [Shipping Address Validation](#).

To create or update location records through the Import Assistant, see the help topic [Importing CSV Files with the Import Assistant](#) or [Location Import](#).

To create locations for Ship Central:

1. Using the Administrator role, go to Setup > Company > Classifications > Locations > New.

2. On the **Location** page, set the following fields:
 - a. In the **Name** field, enter a unique identifier for the location.
 - b. (Optional) To associate bins with this location, check the **Use Bins** box.
 Creating locations that use bins alters specific flows within the packing process. You can activate system rules that could further modify flows for locations with bins. For more information, see [Configuring Ship Central Rules](#).
3. On the **Address** subtab, do the following:
 - Next to the **Address** field, click **Edit** to open the address popup window.
 - If you want to enter a different address for returns, next to the **Return Address** field, click **Edit** to open the address popup window.

Set values in all the address fields, as well as the **Attention**, **Addressee**, and **Phone** fields.

To set other location fields, see the help topic [Creating Locations](#).

If you want to provide additional addresses to the location, see [Adding Location Addresses With Address Validation](#).
4. Click **Save**.

Adding Location Addresses With Address Validation

On a location record, you can enter a single address and return address for each of your locations. Ship Central provides the Packship – Location Address record that lets you enter multiple address and related details for a location. For information about locations, see [Creating Locations for Ship Central](#).

On the app, you can select an additional location address as your Ship From address instead of the address or return address on a location record. The address and its related details appear on shipping labels and documents.

After you save a location address, you can validate it through the paid service available for your NetSuite ShipEngine account.

To add location addresses with address validation:

1. In the global search box, enter **Packship - Location Address**, and then select **New Packship - Location Address**.
2. On the Packship - Location Address page, in the Primary Information section, set the following fields:
 - **Name** – Enter a unique name to identify this location address record.
 When you change the Ship From address on the app, you can select this address by its name.
 - **Location** – Select the location to which you want to associate this address.
 - **Inactive** – Keep this box cleared to enable this address for use on the app.
3. In the Address section, set the location address and details by doing the following:
 - If the address is for a residence, check the **Residential Address** box.
 - In the **Attention** field, enter the name of the person within an organization that should be notified of shipments from this address.
 - In the **Addressee** field, enter the name of the organization or person that should be notified of shipments from this address.

In the Ship From section of shipping labels, the addressee's name appears below the name you enter in the Attention field.

- In the following fields, enter your location address details: **Country, Address 1, Address 2, City, State, Zip.**

 **Note:** Before you request the paid address validation service, be sure to enter the complete address fields and check for spelling errors. This service does not verify whether the address is a residential one.

- In the following fields, enter the contact details: **Phone** and **Email**.
4. Click **Save**.
 5. If you want to request the paid address validation service provided by your carrier, do the following:
 - a. Review the address details in the Address section fields. See step 3.
 - b. Click **Validate Address**.
 - c. In the **Valid Address** field, verify that the box is checked to confirm that the address has been verified.
 - d. At the page header, review the message for any details regarding the status of the address validation. If you see any issues, be sure to update the necessary details, especially if you want to revalidate the address.

Creating Items for Ship Central

Create items or update existing ones that you want to use for Ship Central. For each item, you can set the fields required for additional capabilities or system rules that you want to use on the app. You can also create items that ship individually.

You can set up supported item types for packing to specify dimensions and weight. You can also enable settings to ship items individually and internationally. For local shipping through USPS, you can enable HazMat/Dangerous Goods shipping for inventory items, including inventory assembly items. For more information, see [Ship Central Supported Transactions and Item Types](#).

If you have package types, you can assign them to specific items. For more information, see [Updating Shipping Settings](#).

For international shipping, you can add details for the manufacturer tariff. You can also enter the description of goods in the **Display Name/Code, Sales Description, or International Description of Goods** fields. On the app, you can select one that you want to apply to a shipment and appear on shipping documents.

If you have existing items that you use for the Warehouse Management or other features, you can follow the instructions in this topic to update them with settings for Ship Central.

To create or update item records through the Import Assistant, see the help topic [Importing CSV Files with the Import Assistant](#) or [Items Import](#).

To create items for Ship Central:

1. Using the Administrator role, Lists > Accounting > Items > New
2. On the New Item page, select one of the supported item types:
 - Assembly/Bill of Materials (also Lot Numbered or Serialized)
 - Inventory Item (also Lot Numbered or Serialized)
 - Kit/Package or Non-inventory Item (For Sale or For Resale only)
3. On the item page, in the Primary Information section, enter or select values in the following fields:

- **Item Name/Number** – Enter a unique identifier for the item.
- **UPC** – To set up GS1 bar code scanning for this item, enter the 14-digit GTIN for the item's GS1 bar code.

For more information, see [Bar Code Scanning for Ship Central](#).

4. To add description of goods for international shipping, set values in any of these fields:

- **Display Name/Code** field in the Primary Information section
- **Sales Description** field on the **Sales/Pricing** subtab
- **International Description of Goods** field on the **Custom** subtab

When you process an international shipment on the app, select one of these fields as the source of the description of goods.

5. On the **Sales/Pricing** subtab, set the following fields depending on your fulfillment requirements:

- a. **Ships Individually** – Check this box to pack and ship this item individually.

On the app, items that ship individually display the box icon.

- b. **Item Weight** – Enter the default weight of the item.

By default, when you pack the item through the app, the item weight serves as the pack carton weight. If you activate the **Calculate default carton weight** rule, you include this weight in the calculation of the total weight of a pack carton.

Ship Central uses kilogram as the default unit. It automatically converts the value of a different unit into kilograms. If you use the Weighing Scale Support capability, you can activate the rule to change the default unit.

For more information about these rules, see [Configuring Ship Central Rules](#).

- c. **Package** – (Optional) If you add packages for shipping, you can choose a default one for this item.

For more information about default packages, see [Updating Shipping Settings](#).

6. To specify the item's tariff code for international shipping, set values in the following fields:

- **Manufacturer Country** – Select the manufacturer's country.
- **Manufacturer Tariff** – Enter the 4-15 code for the Harmonized System or Harmonized Tariff Schedule.

For more information about manufacturing settings, see the help topic [Entering Manufacturing Details](#).

7. To fulfill kit/package and non-inventory item types, on the **Preferences** subtab, check the **Can Be Fulfilled/Received** box.

8. (Optional) On the **Custom** subtab, you can enter more packing details for the item:

- For items that ship as is, you can enter the default dimensions of the pack carton in the following fields: **Pack Carton Length**, **Pack Carton Width**, or **Pack Carton Height**.

NetSuite automatically allots one pack carton for each ordered quantity of items that ship as is. It uses these dimensions, as well as the item weight you enter in step 4b, to automatically close each pack carton. If you leave any of the fields blank, you have to manually enter the dimensions on your kiosk device.

- To display packing instructions for this item, in the **Packing Instructions** field, enter the instructions.

The Multiple Shipping Routes feature provides additional support for packing instructions. If you use line item shipping for this feature, you can also enter instructions in the line item of an order. You can activate the Show Packing Instructions rule to automatically display both instructions on the app. See [Configuring Ship Central Rules](#).

9. If you use Warehouse Management and activate the Tally Scanning rule, you can enable it for items created before you activated the rule. On the **NS WMS** subtab, check the **Use Tally Scan** box.

Checking this box enables you to tally scan items within the supported WMS mobile processes. For new items and items that you want to tally scan through Ship Central packing, you do not have to check this box. See [Configuring Ship Central Rules](#).

10. If you enable shipping of hazmat items through USPS, enable it for the supported item types, by doing the following:
 - a. Click the **HazMat/Dangerous Goods** subtab.
 - b. Check the **Hazmat/Dangerous Goods** box.

Note that other settings on this subtab do not apply to Ship Central shipping. For more information, see [HazMat or Dangerous Goods Setup](#).

11. (Optional) You can enter other item details and configure settings for other features.
See the help topic [Creating Item Records](#) or [Creating Items for NetSuite WMS](#).
12. Click **Save**.

Creating Packing Items for Cartons and Pallets

You can create packing items to specify the dimensions a pack carton. If you activate the Enable pallet packing rule, you can also create packing items to specify pallet dimensions. As you pack orders through the app, you can select these predefined pack cartons or pallets. You can also select the Custom option, which enables you to specify the dimensions and weight of each carton or pallet. NetSuite does not automatically create packing item records for a custom carton or pallet that you can manually add during packing on the app.

Ship Central uses inch as the default unit for carton or pallet dimensions. If you activate the **Set Default Dimensions Unit** rule, you can choose a different default unit. See [Configuring Ship Central Rules](#).

To create packing items for cartons or pallets:

1. Using the Ship Central Manager role, go to Ship Central Setup > Packing & Shipping Records > Packing Items > New.
2. On the Packing Item page, enter or select values in the following fields:
 - **Name** – Enter a unique name to identify the pack carton or pallet.
For example, you can provide the name, **12" x 10" x 6"** or **Standard Size**, to a carton or pallet packing item. On a kiosk device, the name appears as an option in the Select Carton Size or Select Pallet Size field.
 - **Type** – Select one of the following packing item types: **Carton** or **Pallet**.
3. To specify the dimensions of the carton or pallet, enter or select values the following fields:
 - **Length** – Enter the number for the length.
 - **Width** – Enter the number for the width.
 - **Height** – Enter the number for the height.
4. Click **Save**.

Creating Shipping Items for your Shipping Services

The shipping item record provides settings that you can specify for shipping services, including the shipping plugin, labels, and tax schedule. Create shipping items for the services from carriers that you

have integrated with Ship Central. You can view the list of shipping services available to you by going to Setup > Ship Central Setup > Manage ShipEngine Integration.

Depending on the features or settings that you use, you can set up the following capabilities on each shipping item:

- You can enable the setting to display shipping items for selection on your Commerce website.
- If you use the Shipping Label Integration feature for FedEx, UPS, or USPS, you can set up packing and shipping directly on item fulfillments. For more information, see [Setting Up Direct Packing and Shipping on Fulfillments](#).

You can also assign a flat, markup, or discount rate to shipping items for these carriers. For more information, see [Setting Ship Central Preferences](#).

If you set the **Print Return Labels** preference, you can specify the shipping service you want to use for returns shipping for these carriers. For more information, see [Setting Ship Central Preferences](#).

Instead of creating one shipping item at a time, you create a CSV file that you can import into your NetSuite account. For instructions and guidelines, see the help topic [Importing Shipping Items for NetSuite Ship Central](#).

Ship Central Plugins for Shipping Items

Based on your shipping requirements, you can assign one of the following Ship Central Plugins to your shipping items:

- **PackShip - Shipping Plugin** – Lets you choose a carrier account associated with the shipping service you want to assign to the shipping item.
- **PackShip - Advanced Shipping Plugin** – Lets you choose a carrier that provides the shipping service you want to assign to the shipping item. After you set up the shipping item, you can assign specific accounts from the carrier per location. For more information, see [Assigning Carrier Accounts to Locations](#).

On orders, you can choose shipping methods associated with shipping items that use a specific plugin based on the display name you provide. Those that use the Advanced Shipping Plugin enable you to charge a specific carrier account assigned to a location.

To create shipping items for your shipping services:

1. Using the Ship Central Manager role, go to Ship Central Setup > Packing & Shipping Records > Shipping Items > New.
2. On the Shipping Item page, set the following fields:
 - a. **Ship Name** - Enter a unique name for the shipping service.
 - b. **Display Name/Code** - Enter a unique name that you want to appear in the Shipping Method or Ship Via fields on printed forms, your web store, and all centers, such as the Customer Center. Otherwise, the value in the Ship Name field is displayed.

Tip: If you use both Ship Central Plugins, provide names that enable you to distinguish between the plugins used for a shipping item.

- c. **Subsidiaries** – (Optional) You can change the default subsidiary setting for this shipping item.
- d. If you have a Commerce website, check the **Display in Website** box to use this shipping item created for Ship Central.

After you enable this setting, make sure that you also enable the **Charge for Shipping** setting on the Set Up Shipping page. See [Updating Shipping Settings](#).

3. Click the **Shipping Rate** subtab, and then set the following fields:
 - a. In the **Account (Shipping)** field, select the account you want to associate with this shipping item.
 - b. Choose **Shipping Partner Rate**.
 - c. In the Shipping Partner Rate section, select values in the following fields:
 - **Shipping Partner** – Select **PackShip – Shipping Plugin** or **PackShip – Advanced Shipping Plugin**.
For more information, see [Ship Central Plugins for Shipping Items](#).
 - **Service Group** – Based on your Shipping Partner choice, select the carrier account for PackShip – Shipping Plugin or the carrier for PackShip – Advanced Shipping Plugin.
 - **Service** – Select the shipping service you want to associate with this shipping item.
4. If you use the Shipping Label Integration feature, on the **Shipping Labels** subtab, you can set the following fields:
 - a. In the following fields, be sure to select the same field values as ones you select in step 3: **Shipping Partner, Service Group, and Service**
 - b. **Return Service** – For FedEx, UPS, or USPS only, if you can print return labels, you can select the shipping service that you want to use for returns shipping.
You can choose a different service instead of the one you use for outbound local shipments. This setting applies to direct shipping on item fulfillments only.
 - c. **Shipping Label Integration** – If you select the FedEx, UPS, or USPS carrier or carrier account, you can check this box. When checked, you can enable direct packing and shipping on item fulfillments.
5. Click the **Shipping Rules** subtab, and then in the **Charge Tax on this Shipping Portion of Item** field, select the tax schedule you want to use to calculate the tax on the shipping charge.
6. (Optional) Click the other subtabs to apply more settings to your shipping item.
For more information about the subtab fields, see the help topic [Creating Shipping Items](#).

Tip: On the **Packaging** subtab, even if you check the **Omit Packaging** box, it does not apply to orders that you process through NetSuite Ship Central.

7. Click **Save**.

To continue your setup, you can specify shipping modes and rates on preferences records. For instructions, see [Ship Central Preferences](#).

When you create orders, you can choose the shipping method associated with a shipping item for Ship Central. Orders submitted through your Commerce website include the preferred shipping method of your customer.

Assigning Carrier Accounts to Locations

Ship Central provides the PackShip – Shipping Advanced Plugin that enables you to assign carrier accounts to specific locations from which you ship orders. When you ship orders from a location, you can charge shipping costs to the assigned carrier account.

If you use NetSuite WMS, you can further specify the order type to which you want to assign the carrier account. For more information, see the help topic [Creating Order Types](#).

Before you assign carrier accounts, be sure to create your shipping items using the Shipping Advanced Plugin. You can use these shipping items for orders that you ship through the Ship Central app or directly on the item fulfillment. For instructions, see [Creating Shipping Items for your Shipping Services](#).

To assign carrier accounts to locations:

1. Using the Ship Central Manager role, go to Ship Central Setup > Preference Settings > Carrier Accounts per Location.
2. On the Carrier Account per Location page, set the following fields:
 - **Subsidiary** – Select the subsidiary of the location.
 - **Location** – (Optional) Select a single location to which you want to assign a carrier account. You can leave this field blank to set up multiple locations within the same subsidiary.
 - **Carrier** – Select a carrier connected to your NetSuite ShipEngine account.
 - **Order Type** – (Optional) If you use NetSuite WMS, you can select an order type that you set up for sales or transfer order.
3. Click **Submit** to display the available carrier accounts.
4. On the **Carrier Account Assignments** subtab, for one or more locations within the subsidiary, you can select the carrier account.
5. To save your carrier account assignments, click **Submit**.

On orders, you can choose a shipping method for a carrier associated with a shipping item that uses the PackShip - Shipping Advanced Plugin. Ship Central charges the carrier account assigned to the same location as the one on the order.

Defining a Shipping Cost Distribution

You can create shipping cost distributions for shipments that include multiple orders. You can define how you want to distribute the shipping cost across four components, which include the item quantity, item amount, item weight, and item dimension.

For example, you allocate 45% of the cost toward the item quantity and 55% for the item weight. You have a shipment for sales orders associated with the following item fulfillments:

- Fulfillment 1: Total quantity = 5 and Total weight = 15
- Fulfillment 2: Total quantity = 5 and Total weight = 10

Based on your allocation, if the total shipping cost is 75.00, Ship Central distributes and displays it across the 2 fulfillments as follows:

- Fulfillment 1: Actual shipping cost = 41.625 (45% quantity = 16.875 and 55% weight = 24.75)
- Fulfillment 2: Actual shipping cost = 33.375 (45% quantity = 16.875 and 55% weight = 16.5)

You can create a distribution for sales or transfer orders from each location and for specific customers. If you do not provide your own distribution, by default, Ship Central distributes the shipping cost among fulfillments based on the item quantity only.

If you want to import your shipping cost distributions, you can use the PackShip - Shipping Cost Distribution record type on the Import Assistant. For more information, see the help topic [Importing CSV Files with the Import Assistant](#).

To define a shipping cost distribution:

1. Using the Ship Central Manager role, go to Ship Central Setup > Shipping Cost Distribution > Shipping Cost Distributions > New.
2. On the Shipping Cost Distribution page, set values in the following fields:
 - **Name** – Enter a unique name for the shipping cost distribution.
 - **Location** – Select the location to which you want to associate this distribution.

- In the following fields, enter the percentage of the shipping cost that you want to allocate to a cost component: **Item Quantity Allocation**, **Item Amount Allocation**, **Item Weight Allocation**, or **Item Dimensions Allocation**.

 **Note:** By default, Ship Central allocates 100% for the item quantity.

- **Mobile Process** – Select one of the standard mobile process names to which you want to apply this distribution: **ShipCentral_salesOrder**, **ShipCentral_transferOrder**, **PackShip_salesOrder**, or **PackShip_transferOrder**. If you create your custom process from any of these, you can select its name to assign it your cost distribution.
3. Depending on your shipping requirements, you can also set values in the following fields:
- **Customer** – Select the customer to which you want to apply this cost distribution.
 - **Apply to Shipping Cost on Fulfillment** – Check this box to display the distributed cost in the both the Shipping Cost and Actual Shipping Cost fields on each associated item fulfillment. This setting does not update the Shipping Cost field on order transactions.
4. Click **Save**.

When you process an order through Ship Central, you can view the calculated shipping cost on the associated fulfillment record. Note that the shipping cost per line item cannot be viewed yet.

Defining Autogenerated ID Formats

Ship Central can generate unique numbers or IDs for cartons, pallets, shipments, and bill of lading documents. It can also generate SSCC-18 codes in GS1 linear bar code format. Following GS1 specifications, it generates the appropriate SSCC-18 code for a carton or pallet. See [SSCC-18 Barcodes](#).

Ship Central provides the following default formats for a label or document: BOL prefix, Carton prefix, Pallet prefix, Shipment prefix, and UCC DUNS. You can edit them if you want to define your own format. When you define a format for carton IDs, you can assign order transaction numbers as the prefix. For SSCC-18 codes, you can provide your company prefix or DUNS number.

Before you can generate IDs for cartons or pallets, you must activate the **Autogenerate carton and pallet IDs** rule. See [Configuring Ship Central Rules](#).

If you enable Mobile Printing, you can print labels or documents with these IDs or codes, as you pack an order using your kiosk device. For more information about mobile printing, see [Shipping Labels and Documents for Mobile Printing](#).

To define autogenerated ID formats:

1. Edit the default format for the ID or code by doing the following:
 - a. Using the Packing Administrator role, go to Packing > Autogenerated ID Formats > Autogenerated ID Formats.
 - b. On the PackShip - Autogenerated ID Format List page, click **Edit** next to the format.
2. On the Autogenerated ID Format page, set the following fields:
 - **Name** – Enter a unique identifier for the ID format.
 - **Label Type** – Select the type of label to which you want to assign the ID's prefix. For the UCC format type, proceed to step 4 to set additional fields for the SSCC-18.
3. To define a format for cartons, pallets, BOL numbers, or shipments, set the following fields:
 - **Prefix** – Enter a combination of letters, numbers, and symbols for the prefix of your ID.

Tip: If you want to use an order number as the prefix for carton IDs, leave this field blank, and then check the **Use Order # as Prefix** box.

- **Initial Number** – Enter the initial number at which you want to begin the numbering sequence for the ID.

This number appears after the prefix. It increments by one for each subsequent autogenerated ID. The number used in the latest autogenerated ID appears in the Last Number Used field.

- **Use Order # as Prefix** – For the Carton label type, check this box if you want to set the order number as the prefix for autogenerated carton IDs.

If you check this box, NetSuite uses an order number as the prefix and overrides any value in the Prefix field. When you pack items from multiple orders at the same time, it uses only one order number for the prefix.

4. To define a format for the SSCC-18 code, set the following fields:

- a. **DUNS Number – Company Prefix** – Enter your DUNS number, with 9 digits, or your company prefix, with 7-10 digits.
- b. **Initial Number** – Enter your first number in the sequence for your serial reference number, which identifies the shipping container.

NetSuite increments this number by 1 for each subsequent serial reference number. If you do not specify your initial number, NetSuite uses **1** for your first serial reference number. The length of your serial reference number, from 6 to 9 digits, varies depending on the length of your company prefix or DUNS number.

For example, if you enter an 8-digit company prefix, your serial reference number must not exceed 8 digits. You can enter an initial number that has 8 digits or less, such as **00001000** or **100**. If you enter a number less than 8 digits, NetSuite automatically prepends the appropriate number of 0's to the serial reference number.

The Last Number Used field displays the number used for the serial reference number of the latest autogenerated SSCC-18 code.

5. Click **Save**.

When you pack or ship through the app, you can manually enter an ID or name if you want to replace the autogenerated one or if you do not define a format.

Bar Code Scanning for Ship Central

If you use the Bar Coding and Item Labels feature, you can set up scanning of the following item bar code format:

- GS1 DataMatrix (2D)

If you activate the Tally Scanning rule, you can use the same items bar codes to tally scan items. See [System Rules for Ship Central](#).

Bar Code Scanning Requirements

Before you begin the setup, review the following scanner requirements:

- For your browser, use Google Chrome. Other browsers may not be able to display FNC1 (Function Code One) characters from scanned bar codes.
- To scan GS1 item bar codes, the scanner should be able to display FNC1 characters and bar code symbols.

For more information about bar code scanning through the app, see the help topic [Bar Code Scanning for SCM Mobile](#).

Bar Code Scanning Setup Procedures

For bar code scanning setup procedures and guidelines, see the following topics:

1. [Creating Items for Ship Central](#) – Configure the item's GTIN-14 in the **UPC** field of the item record.

Note: If you use the Warehouse Management feature, you must configure the GTIN on item alias records instead. See the help topic [Bar Code Setup for NetSuite WMS](#).

2. [Scanning Item Bar Codes in Apps](#) – If available for your device, you can set it up to automatically enter and submit data after you perform a scan.
3. [Setting Up Custom Application Identifiers for GS1 Bar Code Scanning](#) – (Optional) You can configure custom application identifiers for item bar codes in the supported GS1 formats.

For the list of standard and custom application identifiers, see the help topic [Standard GS1 Application Identifiers](#).

Mobile Printing and Weighing Scale Setup

Before you enable Mobile Printing or Weighing Scale Support, you can read more information about PrintNode integration. See [NetSuite Ship Central FAQs](#).

Templates and labels for Mobile Printing do not apply to the Print option available on the item fulfillment record. For this Print option, you can choose either the PDF or ZPL printing format for shipping labels. For information about requirements and setup procedures, see [Setting Up Direct Packing and Shipping on Fulfillments](#).

To review Mobile Printing requirements, enable printing or weighing scale capabilities, or set up your devices and other preferences, see the following topics:

- [SCM Mobile Printing](#)

You can enable Mobile Printing to print or save labels and documents during packing or shipping.

After you set up Mobile Printing, printers, or printing settings, you can enable settings that add details to shipping labels or documents. See [Setting Ship Central Preferences](#) and [Configuring Ship Central Rules](#).

- [Weighing Scale Support](#)

Saving Labels and Documents Without PrintNode Integration

Without PrintNode integration, you can save soft copies of labels or documents for shipping or packing. On the app, you can choose the **Print to File** option in the **Printer** field. For more information, see the help topic [Setting Up Print to File](#).

Shipping Labels and Documents for Mobile Printing

If you enable Mobile Printing, you can print or save packing and shipping labels in these formats:

- [PDF format for regular printers](#)

For shipping labels only, you can print on a predefined letter size of 8.5 in. x 11 in. in PDF or PNG format. On a single page, you can print up to two labels of 4 in. x 6 in. size each.

- ZPL format for label printers

Standard Templates for Packing or Shipping Labels or Documents

By default, you can print or save packing and shipping labels in ZPL format. You can change the default format through print templates configured on standard print reports.

For example, on the standard print report, you can assign the template for the letter-sized shipping label as your default.

On print reports, you can also change the default printer, number of copies for printing, and other printing settings. For more information about print reports, see the help topic [Setting Up Printing Settings on Print Reports](#).

Mobile Printing provides one print template for each format of a label or document except for documents available in PDF format only. Print templates are preconfigured with XML template files for PDF formats and TXT template files for ZPL formats. These template files contain the details included in a label or document for printing.

See the following list of packing and shipping labels or documents along with their standard print template files:

Label or Document *	Template File for Sales Orders	Template File for Transfer Orders
Pack carton label Displays the carton name or number	CartonLabelPDFTemplate.xml CartonLabelZPLTemplate.txt	
Pallet label Displays the pallet name or number	PalletLabelPDFTemplate.xml PalletLabelZPLTemplate.txt	
Pack carton list Displays the carton and order details, and includes a return form	SO_Carton_List_Template.xml	TO_Carton_List_Template.xml
Pallet list Displays the pallet and carton details, and includes a return form	SO_Pallet_List_Template.xml	TO_Pallet_List_Template.xml
Bill of lading Contains the shipping, package, and order details for pack cartons	SO_BOL_Template.xml	TO_BOL_Template.xml
Contains the shipping, package, and order details for pallets	SO_BOL_Pallet_Template.xml	TO_BOL_Pallet_Template.xml
** Shipping label Displays the shipping and package details ** Return label from app Displays the return address with shipping details	ShipLabelPDFTemplate.txt ShipLabelZPLTemplate.txt	
** Return label from RMA For labels generated directly from RMAs, they display the return address with shipping details	Return Shipping Label (PDF) Return Shipping Label (ZPL)	TO Return Shipping Label (PDF) TO Return Shipping Label (ZPL)

Label or Document *	Template File for Sales Orders	Template File for Transfer Orders
** Shipping label in letter size Letter-sized labels in PDF or PNG format Not available in ZPL format	ShipLabelLetterPDFTemplate.txt ShipLabelLetterPNGTemplate.txt	
** Certificate of Origin Contains package and item details for international shipments; includes the commercial invoice	ShipLabelPDFTemplate.txt	
** Shipping Manifest Contains details of shipments within the day	ShipLabelPDFTemplate.txt ShipLabelZPLTemplate.txt	
* Based on your setup, Ship Central can generate GS1 DataMatrix (2D) bar codes for the carton ID, pallet ID, or bill of lading number for printing. It can also generate SSCC-18 bar codes that appear on the BOL and pack lists. For more information, see Bar Code Scanning for Ship Central or Defining Autogenerated ID Formats .		
** Template files and their associated print templates for shipping and return labels and documents are used only to specify whether you want to print in ZPL or PDF format. Since these are generated by carriers, you cannot customize these files and templates. For more information about templates, see the help topic Standard Report Types in Mobile Apps .		** Use of print templates and files for return labels and the Certificate of Origin depend on your shipping preferences. Some shipping preferences and rules also add details to printed shipping labels. See Details on Shipping Labels and Documents .

Accessing and Customizing Print Template Files and Printed Files

You can create your own XML and TXT files for the packing labels or documents to update the details or layout. You can copy a standard print template file, customize your copy, and assign it to a print template. For more information about print files and template customization, see the help topic [Creating Custom Print Templates and Files](#).

Without customizing templates, you can add a logo, shipment references, and other details to shipping documents. For more information, see [Details on Shipping Labels and Documents](#).

In the File Cabinet, you can access print files and soft copies of printed labels or documents. Using the Administrator role, go to Documents > Files > File Cabinet. Then, access the appropriate folder through either of the following navigation paths:

- For print files, access the Templates folder of the Ship Central Bundle folder through this path:
SuiteBundles > Bundle <Ship Central Bundle ID> > src > Templates.
- For soft copies of printed labels or documents, access the PrintDocuments folder through this path:
SuiteBundles > Bundle < Ship Central Bundle ID > > com.netsuite.packstation > src > PrintDocuments.

For information about bundle IDs, see [Installing the SuiteApps for NetSuite Ship Central](#).

Configuring Ship Central Rules

You can configure system rules to modify the packing or shipping processes and tasks you can perform through the app. You can assign rules to specific locations and custom processes that you configure.

NetSuite applies the system rules activated by default to all locations. If you configure a rule for a specific location, the default system rule settings apply only to the other locations.

System Rules for Ship Central

The following table contains the list of system rules provided by NetSuite Ship Central, including the expected behavior for the active and inactive statuses.

Rule Name	Rule Setting	Action
Add shipping insurance	Active	Displays the Add Insurance button on the app, which enables you to enter the declared value of packages in a shipment. Depending on your carrier and their services, you can add the carrier's shipping insurance. You can view the adjusted shipping cost on the app in case of extra charges from the carrier. On the app, you can also select ParcelGuard insurance provided within your NetSuite ShipEngine accounts for connected carriers.
	Inactive (default)	Does not enable you to add shipping insurance on the app.
Add shipping option to the packing page	Active	On the Packing Summary mobile page, this rule displays the shipping option that provides direct access to the Shipping process.
	Inactive (default)	The default setting that does not display the shipping option on the Packing Summary mobile page.
Allow carton or pallet staging	Optional (default)	If you use the Warehouse Management feature, you can stage packed cartons for locations with bins.
	Mandatory	When you also activate the Enable pallet packing rule, you can stage them after carton packing or after pallet packing, depending on your rule setting.
	Inactive	Does not allow staging for carton or pallet packing.
Allow package code updates	Active	Displays the Change Package Code option on the app for single package shipments. This option also appears for multi-package shipments if they contain one package only. Note that availability of package codes for different package types depend on your carrier. Some codes may not apply to a package based on its contents, weight, and other such factors. On the app, you can view the adjusted shipping cost depending on the package code you choose. For more information, see Package Codes and Sizes .
	Inactive (default)	Does not provide the Change Package Code option on the app.
Allow packing of partially picked orders	Active (default)	The default setting, which provides the option to include partially picked orders to the list of orders for packing. You can select this option on the kiosk device.
	Inactive	Does not provide the option to include partially picked orders.
Allow real-time packing updates to fulfillments	Active	Lets you set the line item limit for real-time updates to fulfillment records. You can specify a limit, from 1 to 75 fulfillment lines, to replace the default limit of 25 lines. When you submit orders for packing, real-time updates apply to fulfillments that do not exceed the limit. Ship Central automatically submits a bulk processing job for fulfillments with more than 75 lines. Updating fulfillment records also updates any custom fields on order transactions.

Rule Name	Rule Setting	Action
Allow real-time shipping updates to fulfillments	Inactive (default)	Does not enable you to change the default limit of 25 lines for real-time updates.
	Active	Lets you set the line item limit for real-time shipping updates to fulfillment records. You can specify a limit, from 1 to 75 fulfillment lines, to replace the default limit of 25 lines. When you submit orders for shipping, real-time updates apply to fulfillments that do not exceed the limit. Ship Central automatically submits a bulk processing job for fulfillments with more than 75 lines. Updating fulfillment records may also update any custom fields on order transactions.
Autogenerated carton and pallet IDs	Inactive (default)	Does not enable you to change the default limit of 25 lines for real-time updates.
	Active (default)	Enables autogeneration of carton and pallet IDs or names based on an ID format that you define. This rule does not control the autogeneration of carton names for items that ship as is. For pallets, make sure that you also activate the Enable pallet packing rule. After you activate this rule, define the format for your IDs. Otherwise, Ship Central uses the default ID formats. See Defining Autogenerated ID Formats. If you enable the Mobile Printing capability, you can also print labels or documents with these IDs. See Shipping Labels and Documents for Mobile Printing.
Calculate default carton weight	Inactive	Does not enable the autogeneration of the supported IDs.
	Active	Assigns the default weight of pack cartons based on the total weight of its items. It displays the Tare Weight field for entry and includes it in the total weight calculation. If you use pallets, you can enter a pallet's tare weight, which also adds to the total package weight. For more information, see Package Weight Entry or Calculation. After you activate this rule, enter the item weights on your item records. For instructions, see Creating Items for Ship Central.
Enable pallet packing of packed cartons	Inactive (default)	Does not enable weight calculation based on item and tare weight.
	Mandatory	Enables you to transfer packed cartons onto pallets.
Enable rate shopping	Optional	When you also activate the Allow staging rule, note that you cannot transfer staged cartons onto a pallet.
	Inactive (default)	The default setting, which does not enable pallet packing.
Enable rate shopping	Active	On the Ship Packages page, this rule displays the Shop for Rates option on the app for shipments. You can choose a different shipping method, carrier, or rate, and view the adjusted shipping cost. If you activate this rule and set the Get Best Shipping Rate preference, you can automatically apply the best rate to shipments through the app. This rule does not apply to the Shop for Rates option in the NetSuite UI, which is enabled and provided by Ship Central by default. With this option, you can view and change rates for orders or order lines. For more information, see Rerating Orders.

Rule Name	Rule Setting	Action
	Inactive (default)	Does not enable rate shopping on the Ship Packages page of the app.
Enable Tally Scan	Active (default)	The default setting that enables Tally Scanning on the mobile app. Tally Scanning automatically increments the packed quantity by 1 after you scan an item. For regular item types, if only one quantity is specified in the order line, you cannot use the Pack button on the app. Instead, in the Scan/Enter Pick Carton or Item field, you can Tally Scan the regular item's bar code, as well as enter it or the item. When you activate this rule, you must select the mobile process and set the quantity limit. If you set up GS1 item bar codes for the supported formats, you can also tally scan them. See Bar Code Scanning for Ship Central.  Note: If you use Ship Central with Warehouse Management, you can also enable tally scanning for the supported WMS processes. Make sure you enable the Use Tally Scan box for existing items. WMS automatically checks this box for new items that you create. See Creating Items for Ship Central.
	Inactive	Does not enable Tally Scanning on a kiosk device.
Print brand name	Active	Prints a brand name, which you provide, on shipping labels to replace the sender's name.
	Inactive (default)	Does not display the Brand Name field for entry and printing on shipping labels.
Reopen cartons that ship as is	Active	Enables you to reopen packed cartons for items that ship as is.
	Inactive (default)	Does not provide the option to reopen packed cartons for items that ship as is.
Set advanced options from carrier	Active	Provides additional options from carriers for local or international shipping services, which include dry ice weight, additional handling, and memos, among others. You may ask your carrier about extra charges for one or more options. For more information, see Shipping Orders Through the App. For single package carriers, the Advanced Options link appears beside each package to which you can apply it. For multi-package carriers, the Advanced Options button appears at the page footer and applies to the entire shipment. If you ship to Canada and set the Enable USPS Canada Delivered Duty Paid preference, advanced options allows you to choose whether to apply it per shipment through USPS services.
	Inactive (default)	Does not provide advanced options from single or multi-package carriers.
Set Default Dimension Unit	Inch (default) Centimeter	Enables you to change the default unit for carton or pallet dimensions from inch to another supported unit.
Set Default Weight Unit	GRAM KILOGRAM (default) OUNCE	If you use the Weighing Scale Support capability, this rule enables you to change the default weight unit, kilogram, for packing to any of the other supported units.

Rule Name	Rule Setting	Action
	POUND	On a kiosk device, weights that you capture from a weighing scale are automatically converted into the default weight unit. See the help topic Weighing Scale Support .
Set delivery confirmation of shipments	Active	Displays the Delivery Confirmation Type field on the app from which you can choose one for your shipment. Options for delivery confirmation include requiring a signature and requesting a confirmation. On shipping labels, you can view the delivery confirmation or its acronym.
	Inactive (default)	Does not let you specify delivery confirmation for shipments.
Show Add Carton popup at start of carton packing	Active	Enables you to automatically display the Add Carton popup window right after you select new orders for packing. It removes the extra step of tapping the Add Carton button to enter your first pack carton.
	Inactive (default)	Does not automatically display the Add Carton popup window.
Show Add Pallet popup at start of pallet packing	Active (default)	The default setting, which automatically displays the Add Pallet popup window at the start of a new pallet packing session. It removes the extra step of tapping the Add Pallet button to enter your first pallet.
	Inactive	Does not automatically display the Add Pallet popup window.
Show Mark as Shipped option	Active	Provides the Mark as Shipped option on the Summary page after you pack a carton or transfer cartons to pallets. This option automatically changes the Picked status of item fulfillments to Shipped.
	Inactive (default)	Does not display the Mark as Shipped option for packing.
Show Packing Instructions	Active	Adds the Packing Instructions column that you can display on the Items to Pack table. In this column, you can tap View to display packing instructions on a popup window. The rule shows the packing instructions from the item record and order line of a transaction if you add them. It shows the sales description by default or purchase description as an alternative, which you can both enter on item records. After you activate this rule, you can create or update item records with these details. See Creating Items for Ship Central .
	Inactive (default)	The default setting, which does not display packing instructions.
Use Cartons from Shipped Fulfillments	Active	Displays the Reuse Cartons option on the app, which lets you pack items into cartons associated with fulfillments already marked as Shipped.
	Inactive (default)	The default setting that does not enable pack carton reuse.
Use Pallets from Shipped Fulfillments	Active	Lets you use an existing pallet after it has been used for a shipped fulfillment.
	Inactive (default)	The default setting, which does not let you select a pallet previously used for shipping.

To configure Ship Central rules:

1. Using the Ship Central Manager role, go to Ship Central Setup > System Rule Configuration > Ship Central System Rules.
2. On the System Rules page, do one of the following:
 - To add a new rule configuration, click **New Rule Configuration**.
 - To edit an existing rule configuration, from the Rules list, click **Edit** next to the rule configuration.

Tip: To narrow down the list of rules, you can apply filters for rule name and location.

3. On the Rule Configuration page, select or enter values in the following fields:
 - In the **Rule Name** field, select the system rule you want to configure.
 - In the **Location** field, select one or more locations to which you want to apply the rule.
If you do not specify a location, you apply the rule for all locations.

After you save a new rule configuration, you cannot edit the name and location anymore.
4. In the **Rule Setting** field, select the status setting you want to apply to the rule.
The setting options vary across the rules. For example, when you activate the **Enable pallet packing of pack cartons** rule, you can select the **Mandatory**, **Optional**, or **Inactive** setting. Other rules may have the **Active** and **Inactive** setting options only.
5. For the Print brand name rule, in the **Brand Name** field, you can enter the default brand name that you want to print on shipping labels.
When you ship orders on the app, you can provide a different brand name for the specific shipment.
6. For the Enable Tally Scan rule, set the following fields:
 - In the **Process** field, select one or more standard or custom mobile processes to which you want to apply the rule.
 - In the **Quantity Limit** field, enter the maximum picked quantity for an item at which you want to enable tally scan.
You cannot tally scan an item if its picked quantity exceeds this limit.
7. For the following rules, in the **Rule Limit** field, enter a number from 1 to 75 for your fulfillment line limit:
 - Allow real-time packing updates to fulfillments
 - Allow real-time shipping updates to fulfillments

When you submit orders for packing, Ship Central completes the updates in real time to fulfillments that do not exceed this limit. Otherwise, it initiates a bulk processing job, which completes the updates.
8. (Optional) For the **Enable rate shopping** rule, in the **Role** field, select the roles to which you want to provide rate shopping access.
9. Click **Save**.

Ship Central Packing

You can pack fully picked or partially picked items on the app. Regardless of the picked quantity, you cannot partially pack these items. If you have items that ship as is, you can process them for individual packing.

As you pack items into one or more cartons, you can enter the packing details on your kiosk device. Depending on your setup, you can also transfer the packed cartons onto pallets. You can track the packing status and updates on order transactions and item fulfillments.

For information about the picking, packing, and shipping process, see the help topic [Pick, Pack, and Ship Workflow Charts](#).

Important: You shouldn't update picked order transactions, including their item fulfillments during or after packing them through the app. It may cause discrepancies between transactions and mismatched data on printed labels and lists. You may also encounter further issues as you process them for packing and shipping on the app.

When you activate Ship Central rules or enable SCM Mobile app capabilities, you modify the carton or pallet packing flow.

For example, if you enable mobile printing and set it to Automatic printing, the Print option doesn't appear on mobile pages. Ship Central automatically prints the labels or documents after you enter all the required details.

System rules and other capabilities that you can set up for packing are described in these topics:

- [Package Weight Entry or Calculation](#)
- [Packing Instructions](#)
- [Packing with NetSuite and NetSuite WMS Settings](#)
- [Setting Up Direct Packing and Shipping on Fulfillments](#)

For the complete list of Ship Central rules or capabilities, see [Configuring Ship Central Rules](#) or [Mobile Printing and Weighing Scale Setup](#).

To pack orders through the app, see the procedures in these topics:

- [Packing Items into Cartons](#)
- [Packing Items that Ship Individually](#)
- [Packing All or Unpacking All Items in Cartons](#)
- [Transferring Packed Cartons onto Pallets](#)
- [Printing Multiple Packing Labels and Documents](#)
- [Viewing Packing and Shipment Details](#)

To pack orders and print labels directly from fulfillments within the NetSuite UI, see [Direct Packing or Shipping on Fulfillments](#).

Package Weight Entry or Calculation

By default, the app automatically assigns 1 lb as the package weight for shipments. When you pack a carton through the app, you can manually enter its weight. If you use the following capabilities, note how the app obtains the package weight:

- **Weighing Scale Support** – With this capability, the app obtains the weight of each packed carton from your weighing scale. It applies the default weight unit or the one you select if you activate the **Set Default Weight Unit** rule.

On the app, you can still change the weight or unit for each packed carton. For more information, see the help topic [Weighing Scale Support](#).

- **Calculate default carton weight** rule – With this system rule, the app calculates the package weight based on item weights and the tare weight of a carton. It obtains the individual weights that you set up on item records. It adds the tare weight that you enter on the app when you add a carton. If you use pallets, it adds the pallet's tare weight that you also provide on the app.

If you enable both weighing scale and calculated weights, the app follows the weighing scale to apply the actual weight. It also displays the variance from the calculated weight.

After you pack orders, Ship Central updates their item fulfillments with the package weight. It applies the unit of the subsidiary associated with the fulfillment.

Packing Instructions

If you use the **Show Packing Instructions** rule, you can view the instructions and item descriptions on the app. When you pack an item, the app automatically shows the instructions on a popup window. It shows the instructions that you enter on both the order line and item record.

On the Items to Pack table, you can display columns for both instructions and item descriptions. It shows the sales description by default or the purchase description as an alternative, which you both provide on item records.

Packing with NetSuite and NetSuite WMS Settings

The following features and capabilities that you enable based on your fulfillment requirements may change the packing flow:

- **Multiple Shipping Routes** – To pack items from multiple orders at the same time, the orders must have the same customer, shipping carrier, method, and address. If you use item line shipping for the Multiple Shipping Routes feature, these details must be the same for the order lines you want to process at the same time.

 **Note:** If you start packing an order and continue at a later time, the order moves to the Started pack status on the app. When you access the Started orders again, you cannot add more orders even those that have the same shipping details.

- Settings for order fulfillment – The fulfillments of orders you want to pack must be set to Picked status. The following settings may cause fulfillments to be set to other statuses:
 - **Default Item Fulfillment preference** – See [Enabling Features for NetSuite Ship Central](#).
 - **Manually pack orders? rule** – Applies to users of Warehouse Management. See the help topic [System Rules for NetSuite WMS](#).
- **Use Carton rules** – If you activate a Use Carton rule for NetSuite WMS, you can also pack orders from pick cartons through the Ship Central app. You can search for orders associated with a pick carton that you enter through the NetSuite WMS app. You cannot search those from cartons that you directly enter on a fulfillment record. Also, this rule does not enable you to pack a specific carton from an order. See the help topic [System Rules for NetSuite WMS](#).
- Item record settings – On the item record, the settings that affect the packing process include the following:
 - For items that ship as is, you can define the pack carton dimensions and weight on item records. When you pack them using a kiosk device, you can skip the manual entry of these details.
 - For item bar code scanning, you can set the fields to scan GS1 item bar codes and to enable tally scanning for an item.

For more information, see [Creating Items for Ship Central](#). For information about supported transactions and items, see [Ship Central Supported Transactions and Item Types](#).

- **Pick Reversal** – If you use NetSuite WMS, you can still reverse pick tasks for items included in packed orders. In this case, the app deletes the associated pack carton and ship manifest. For other changes due to pick reversals, see the help topic [Pick Task Reversal](#).

Packing Items into Cartons

To pack orders through the mobile app, both the order transaction and fulfillment record must have the same shipping carrier and method. Otherwise, you cannot access these orders on the mobile app.

The instructions in this topic start from the Main Menu of the Ship Central app. If you use other SCM mobile apps, make sure you switch to the Ship Central app to access its Main Menu. You can also verify that the correct location is selected. See the help topic [SCM Mobile App Access](#). If you want to pack items that you have set up for individual shipping, see [Packing Items that Ship Individually](#).

You can skip the steps or options that do not apply to your app settings. For example, if you activate the **Add shipping option** rule, you can proceed to shipping right after you process an order or orders for packing. Orders that you pack at the same time are processed in a single shipment. For more information about app settings and shipping, see the following topics:

- [Ship Central Shipping](#)
- [Mobile Printing and Weighing Scale Setup](#)
- [Configuring Ship Central Rules](#)

To pack items into cartons:

1. From the Ship Central app, access packing by doing the following:
 - a. From the Main Menu, tap **Packing**.
 - b. On the Select Order page, tap one of the following order types: **Sales Order** or **Transfer Order**.

The names and labels on succeeding pages depend on the order transaction that you select.

2. If you use Warehouse Management and your location has multiple bins, on the Select Bin page, do the following:

 **Tip:** If you want to hide the bins list from this page, tap **Show Bins** to switch off the toggle. Without waiting for bins to load, you can tap **Show Orders from All Displayed Bins** to proceed.

- a. If you want to change the bin filter, tap the table icon. Then, in the **Bin Type** filter, you can select **Outbound Staging Bins**, which is the default setting. Otherwise, select **All Bins** to also display other bin types, including Inbound Staging, Picking, and None.
- b. From the Bins list, tap the bin that contains the picked items you want to pack. Alternatively, tap **Show Orders from All Displayed Bins** to display orders from all the bins displayed in the list.

Even if you select a bin, you must pack all the picked items from the same order that may be contained in other bins. Regardless of your filter, the list also includes orders for non-inventory items.

3. On the Order page, select the orders you want to pack by doing the following:

- a. If you want to change the pick status filter, tap the table icon. Then, in the **Pick Status** field, select one of the following options: **Include Partially Picked** or **Exclude Partially Picked**, which is the default setting.
- b. From the orders list, tap the box next to the order you want to select.

 **Tip:** To continue packing an order in a previous session, tap the order in Started pack status. Then, select other orders that may appear in the list. These orders have been previously selected for packing at the same time.

Alternatively, in the **Scan/Enter Order** field, scan or enter an order associated with the items you want to pack. If you use waves or pick cartons for Warehouse Management, you can scan or enter the wave number or pick carton that contains the items. If you enter the data, press **Enter Order**. The order that you scan or enter is automatically selected on the table.

To process other orders or orders within the same wave, for the same customer and shipping details, that remain on the table, do one of the following:

 **Tip:** To remove the wave filter, tap the x icon beside the wave number that appears above the table.

- You can select, scan, or enter those that you want to pack at the same time, and then press **Enter Order**.
 - To select all orders in the list, tap the box on the table header, and then press **Enter Order**.
- c. If you have other orders for the same customer and shipping details, you can select, scan, or enter those that you want to pack at the same time. To select all of these orders, tap the box on the table header. If you enter the data, press **Enter**.
 - d. After you select all the orders that you want to process at the same time, tap **Enter Order**.
 - e. For orders that have items in separate bins or pick cartons, the Order Details page appears. You can view the list of bins or cartons per order. Then, tap **Pack Order** to continue.

The Pack Items into Cartons page appears.

4. To add a carton, tap **Add Carton**, and then on the Add Carton popup window, do the following:
 - a. In the **Scan/Enter Carton** field, scan or enter the pack carton.
Alternatively, for autogenerated carton IDs, you can edit or change the ID. For more information, see [Defining Autogenerated ID Formats](#).
 - b. (Optional) To print a pack carton label, tap **Print Label**.
 - c. Tap **Add Carton**.

In the panel beside the Items Packed table, the new carton appears.

Repeat this step to add more cartons. If you want to delete a pack carton, see [Deleting a Carton](#).

5. To add an item to a pack carton, do the following:

 **Tip:** If you want to temporarily stop packing and save your task, tap **Save & Close**. When you leave a task unfinished, another operator can access and process it.

- a. From the cartons panel, tap the pack carton.
- b. From the Items to Pack table, tap **Pack** next to the item you want to add to the carton.

Alternatively, in the **Scan/Enter Pick Carton or Item** field, scan or enter the item, UPC, lot number, or serial number. You can also scan the GS1 DataMatrix bar code if configured for the item. If you use pick cartons for Warehouse Management, you can scan or enter the pick

carton. If you enter the data, press Enter to proceed. For more information, see [Bar Code Scanning for Ship Central](#) or [Picking Orders](#).

Tip: If you tally scan items, including lot or serial numbers, scan each item or number until you reach the quantity you want to add to the pack carton. Repeat from step 6.a to add items to another pack carton. After you add all the items, skip step 7 for entering the quantity.

- c. If you activate the **Show Packing Instructions** rule, you can view the instructions on the popup window, and then tap **OK**.

Item, order line, or both instructions appear on the popup window. To display packing instructions and item descriptions on this table, tap the table icon. On the popup window, from Visible Columns list, tap **Packing Instructions** or **Item Description**. To close the window, tap **Done**.

To enter the quantity for regular or lot items, see step 7. For serialized items, see step 8.

- 6. If you need to enter the quantity, on the Item popup window, do the following:
 - a. For lot items, tap the **Show All Lot Number** toggle, and then tap the lot number you want to select. Alternatively, in the **Scan/Enter Lot Number** field, scan or enter the lot number. If you enter the data, tap **Enter Lot Number**.
 - b. In the **Enter Qty** field, enter the number of items you want to add to the carton. Then, tap **Enter Quantity** or **Save**.
 - c. For serialized items, tap the **Show All Serial Numbers** toggle. From the list, tap the box next to each serial number, or next to the header to select all the numbers. This list displays only the serial numbers from the associated fulfillment record.

Alternatively, in the **Scan/Enter Serial Number** field, scan or enter the serial number. If you enter the data, press Enter after each serial number entry.
 - d. Tap **Enter Serial Number**.

To add more items to the same or another carton, repeat from step 5. To add a new carton, repeat from step 4.

- 7. To close a carton and enter the carton weight and size, do the following:

Tip: If you want to remove items or unpack an open carton, see [Removing Items from an Open Carton](#) or [Unpacking an Open Carton](#), respectively.

- a. In the panel beside the Items Packed table, tap the carton.
- b. Tap **Pack Carton**.
- c. (Optional) If you use package weight calculation, in the **Tare Weight** field, enter the tare weight of the carton.
- d. In the **Carton Weight** field, enter the numeric value of the carton's weight. If you set up calculated default weights, you can edit it.

Alternatively, if you set up your weighing scale, tap **Capture Weight**. If you change the unit after tapping this button, tap it again to display the converted weight value. If you use package weight calculation, the app displays the scale weight's variance from the calculated weight in the Weight Variance field.

For more information, see [Package Weight Entry or Calculation](#) or [Weighing Scale Support](#).

- e. In the **Carton Size** field, select a predefined size or select **Custom** to enter the length, width, and depth.

For more information about predefined pack carton sizes, see [Creating Packing Items for Cartons and Pallets](#).

- f. To manually print or save a pack carton label, lists, and other documents, tap **Print Label**.
- g. Tap **Pack Carton**.

Repeat this step to close all the open cartons. If you want to edit the carton details of a closed carton, tap **Open Carton**, before you repeat this step.

8. After you close all the open cartons, tap **Next**.
9. On the Packing Summary page, you can review the list of packed orders and cartons.

On this page, additional options may appear depending on the rules and capabilities that you use and their settings.

For example, you activate both the Enable pallet packing and Allow staging rules. With a Mandatory setting for the Enable pallet packing rule, you can perform staging only after you complete the pallet packing. In this case, the Staging button does not appear on the page.

Make sure you complete additional or optional tasks before you submit the packed cartons or proceed to another process.

- a. **Print Carton List** – Tap this button to print the carton list, including other documents, such as the bill of lading, that you have set up for mobile printing.
- b. **Go to Staging** – If you use Warehouse Management, you can tap this button, and then on the Enter Staging Bin page, do one of the following:

 **Note:** You can stage packed cartons right away or transfer them onto pallets first before you stage them. If you stage packed cartons right away, you cannot transfer them onto a pallet anymore.

- In the **Scan/Enter Staging Bin** field, scan or enter the outbound staging bin. If you enter the data, tap **Enter Staging Bin**.
- From the Staging Bins list, tap the outbound staging bin you want to select. On the Staging Summary page, you can review the staging details.

On the Staging Summary page, you can review the staging details.

- c. On the Packing Summary or Staging Summary page, do one of the following:
 - **Go to Shipping** – If you activate the Add shipping option rule, you can tap this button to process the packed orders for shipping. To continue, see step 5 of the instructions under [Shipping Orders Through the App](#).
Alternatively, you can process the orders for shipping after you transfer the packed cartons to a pallet.
 - **Mark as Shipped** – If you activate the **Show Mark as Shipped option** rule, you can tap this button to change the associated item fulfillment's status from Picked to Shipped.
 - **Add to Pallet** – Before or after you print the packing documents, you can tap this button to proceed to pallet packing. For instructions, see [Transferring Packed Cartons onto Pallets](#).
 - **Complete Packing** – Tap this button to complete the current orders and go back to the order selection page for carton packing. To pack other orders, return to step 4.

On the NetSuite user interface, you can view the updated fulfillment records and order transactions. To view the packing details, see [Viewing Packing and Shipment Details](#). You can search for orders or shipments using the carton number, transaction number, or other such details.

Removing Items from an Open Carton

You can remove items from cartons before you submit them.

 **Tip:** To remove items from a closed carton, you must open it first. In the carton panel, tap the closed carton, and then tap **Open Carton**.

To remove items from an open carton:

1. In the carton panel, tap that carton that contains the item.
2. From the Items Packed table, tap **Unpack** next to the item you want to remove.
3. If there are multiple quantities of the item, on the Item popup window, in the **Enter Qty** field, enter the number of items you want to remove from the carton.
4. If you select a lot or serialized item, do one of the following:
 - In the **Scan/Enter Lot Number** or **Scan/Enter Serial Number** field, tap the lot or serial number of the item. If you enter the data, tap **Enter** to proceed.
 - To select from the list, tap the **Show All Lot Numbers** or **Show All Serial Numbers** toggle, and then tap the number. For serialized items, tap **Enter Serial Number** to proceed.

Items that you remove from a carton return to the Items to Pack table.

Unpacking an Open Carton

You can unpack cartons that you have not yet submitted.

 **Tip:** To unpack a closed carton, you must open it first. In the carton panel, tap the closed carton, and then tap **Open Carton**.

To unpack an open carton:

1. In the carton panel, tap that carton you want to unpack.
2. Tap **Unpack Carton**.
3. On the popup window, tap **Unpack Carton** to confirm that you want to unpack all the items.

All the items from the unpacked carton return to the Items to Pack table.

Deleting a Carton

You can delete cartons that you have not yet submitted.

To delete a carton:

1. In the carton panel, tap the carton.
2. Tap **Delete Carton**.
3. On the popup window, the message informs you that any items in the carton return to the Items to Pack list. To confirm, tap **Delete Carton**.

The pack carton is deleted from the panel.

Packing Items that Ship Individually

Based on settings on item records, you can pack items that ship individually. You can pack one or more quantities of an item that ships individually, at the same time. Ship Central creates a carton for each quantity of the item. It can create pack cartons in bulk when you pack more than one quantity of an item. For more information about these items, see [Creating Items for Ship Central](#).

On your mobile device, the packing flow may vary depending on the system rules you use and your item settings. For example, if you specify the item weight and pack carton dimensions on the item record, you can skip the manual entry of these details. You can also reopen cartons to add other items to an item that ships individually. For more information, see [Ship Central Packing](#) or [Packing Items into Cartons](#).

To pack items that ship individually:

1. On the Main Menu page, tap **Packing**.
2. On the Select Order page, tap one of the following order transactions: **Sales Order** or **Transfer Order**.
The names and labels on succeeding pages depend on the order transaction that you select.
3. If you use Warehouse Management and your location has multiple bins, on the Select Bin page, do the following:

 **Tip:** If you want to hide the bins list from this page, tap **Show Bins** to switch off the toggle. Without waiting for bins to load, you can tap **Show Orders from All Displayed Bins** to proceed.

- a. If you want to change the bin filter, tap the table icon. Then, in the **Bin Type** filter, you can select **Outbound Staging Bins**, which is the default setting. Otherwise, select **All Bins** to also display other bin types, including Inbound Staging, Picking, and None.
- b. From the Bins list, tap the bin that contains the picked items you want to pack. Alternatively, tap **Show Orders from All Displayed Bins** to display orders from all the bins displayed in the list.

Based on your Bin Type filter, the list may include orders associated with outbound staging bins only or with other bin types used for staging. Regardless of your filter, the list also includes orders for non-inventory items.

4. On the Sales Order page, do the following:
 - a. If you want to change the pick status filter, tap the table icon. Then, in the **Pick Status** field, select one of the following options: **Include Partially Picked** or **Exclude Partially Picked**, which is the default setting.
 - b. From the orders list, tap the box next to the order you want to select.

 **Tip:** To continue packing an order in a previous session, tap the order in Started pack status. Then, select other orders that may appear in the list. These orders have been previously selected for packing at the same time.

Alternatively, in the **Scan/Enter Sales Order or Pick Carton** field, scan or enter an order associated with the items you want to pack. If you use pick cartons for Warehouse Management, you can scan or enter the pick carton that contains the items. If you enter the data, press **Enter**. The order that you scan or enter is automatically selected on the table.

- c. If you have other orders for the same customer and shipping details, you can select, scan, or enter those that you want to pack at the same time. To select all of these orders, tap the box on the table header. If you enter the data, press Enter.

- d. Tap **Enter Order**.
 - e. For orders that have items in separate bins or pick cartons, the Order Details page appears. You can view the list of bins or cartons per order. Then, tap **Pack Order** to continue.
Make sure that you pack the items from all pick cartons or bins associated with the orders.
5. On the Pack Items into Cartons page, to pack items that ship individually, do the following:

 **Tip:** If you want to temporarily stop packing and save your task, tap **Save & Close**. When you leave a task unfinished, another operator can access and process it.

- a. From the Items to Pack table, tap **Pack** next to an item that appears with the box icon.
Alternatively, in the **Scan/Enter Pick Carton or Item** field, scan or enter the item, UPC, lot number, or serial number. You can also scan an item's bar code in GS1 DataMatrix format if configured for the item. If you use pick cartons for Warehouse Management, you can scan or enter the pick carton. If you enter the data, press Enter to proceed. For more information, see the help topic [Bar Code Scanning for SCM Mobile](#) or [Picking Orders](#).

Items with a single quantity for packing automatically transfer to the Packed Items table, with a closed pack carton. This behavior also applies when you scan an item bar code that specifies the quantity. Skip step 6.

- b. If you are able to display instructions, a popup window appears with the packing instructions. To close the window, tap **OK**.

Item, order line, or both instructions appear on the popup window. To display packing instructions and item descriptions on this table, tap the table icon. On the popup window, from Visible Columns list, tap **Packing Instructions** or **Item Description**. To close the window, tap **Done**.

To enter the quantity for regular or lot items, see step 7. For serialized items, see step 8.

6. For items with multiple quantities for packing or lot items, on the popup window, do the following:
- a. For lot items, in the **Scan/Enter Lot Number** field, scan or enter the lot number. If you enter the data, tap **Enter Lot Number** to proceed.
Alternatively, you can tap the **Show All Lot Numbers** toggle, and then tap a lot number from a list.
 - b. In the **Enter Quantity** field, enter the number of items you want to pack.
 - c. If you want to manually print a pack carton label and other documents, tap **Print Label**.
 - d. Tap **Enter Quantity**.
7. To enter the quantity for serialized items, on the Item popup window, do the following:
- a. In the **Enter Quantity** field, enter the number of items you want to add to the carton. Then, tap **Enter Quantity**.
 - b. In the **Scan/Enter Serial Number** field, scan or enter a serial number. If you enter the data, press Enter after each serial number.

 **Note:** For bar codes of serialized items that have a unit other than the base unit, make sure that the unit of measure for a single quantity equates to 1.

Alternatively, you can tap the **Show All Serial Numbers** toggle, and then select from a list.

The quantity of serial numbers must match the quantity you enter in step 7.a.

- c. Tap **Enter Serial Number**.
8. (Optional) For manual printing, on the Print popup window, you can print or save the pack carton label.
9. To enter pack carton details, on the Pack Carton popup window, set values in the following fields:

Tip: If you set up a default item weight and predefined carton sizes, you can skip the steps for entering the weight. For more information, see [Creating Items for Ship Central](#) or [Creating Packing Items for Cartons and Pallets](#).

- a. In the **Unit** field, select a unit of measure for the weight.
 - b. (Optional) If you use package weight calculation, in the **Tare Weight** field, enter the tare weight of the carton.
 - c. In the **Carton Weight** field, enter the numeric value of the carton's weight. If you set up calculated default weights, you can edit it.
 Alternatively, if you set up your weighing scale, tap **Capture Weight**. If you change the unit after tapping this button, tap it again to display the converted weight value. If you use package weight calculation, the app displays the scale weight's variance from the calculated weight in the Weight Variance field.
 For more information, see [Package Weight Entry or Calculation](#) or [Weighing Scale Support](#).
 - d. In the **Carton Size** field, select a predefined size or select **Custom** to enter the length, width, and depth.
 To set up predefined pack carton sizes, see [Creating Packing Items for Cartons and Pallets](#).
 - e. If you want to manually print a pack carton label and other documents, tap **Print Label**.
 - f. Tap **Pack Carton**.
10. To update or remove items, see the following topics:
 - [Reopening Packed Cartons](#)
 - [Removing Items from an Open Carton](#)
 - [Unpacking an Open Carton](#)
 - [Deleting a Carton](#)
 11. After you pack all the items, tap **Next**.
 12. On the Packing Summary page, you can review the list of packed orders and cartons.
 On this page, additional options may appear depending on the rules and capabilities that you use and their settings.
 For example, you activate both the Enable pallet packing and Allow staging rules. With a Mandatory setting for the Enable pallet packing rule, you can perform staging only after you complete the pallet packing. In this case, the Staging button does not appear on the page.
 Make sure you complete additional or optional tasks before you submit the packed cartons or proceed to another process.
- a. **Print Carton List** – Tap this button to print the carton list, including other documents, such as the bill of lading, that you have set up for mobile printing.
 - b. **Go to Staging** – For Warehouse Management, tap this button, and then on the Enter Staging Bin page, do one of the following:

Note: After you stage your packed cartons, you cannot transfer them onto a pallet anymore.

- In the **Scan/Enter Staging Bin** field, scan or enter the outbound staging bin. If you enter the data, tap **Enter Staging Bin**.
- From the Staging Bins list, tap the outbound staging bin you want to select. On the Staging Summary page, you can review the staging details.

On the Staging Summary page, you can review the staging details.

- c. Do any of the following:
 - **Go to Shipping** – If you activate the Add shipping option rule, you can tap this button to process the packed orders for shipping. To continue, see step 5 of the instructions under [Shipping Orders Through the App](#).
Alternatively, you can process the orders for shipping after you transfer the packed cartons to a pallet.
 - **Mark as Shipped** – If you activate the **Show Mark as Shipped option** rule, you can tap this button to change the associated item fulfillment's status from Picked to Shipped.
 - **Add to Pallet** – Tap this button to proceed to pallet packing. For instructions, see [Transferring Packed Cartons onto Pallets](#).
 - **Complete Packing** – Tap this button to complete the current orders and go back to the order selection page for carton packing. To pack other orders, return to step 4.

Reopening Packed Cartons

If you activate the **Reopen cartons that ship as is** rule, you can open cartons for items that ship as is, which are automatically closed during packing. Then, you can add other items to the reopened carton.

To reopen packed cartons:

1. Tap **Open Carton**.
2. On the popup window, tap the boxes next to the cartons you want to reopen. Then, tap **OpenCarton**.
3. Optionally, from the Items to Pack table, you can tap **Pack** next to an item that you want to include in the carton.
Alternatively, to remove items from the carton, from the Items Packed table, you can tap **Unpack** next to an item.
4. To continue packing, you can return to step 5 of the main procedure, [To pack items that ship individually](#).

Within the NetSuite user interface, you can view the updated fulfillment records and order transactions with packing details. To view the packing details, see [Viewing Packing and Shipment Details](#).

Packing All or Unpacking All Items in Cartons

You can pack all items, all quantities of an item, or all quantities of multiple items into a single carton. For items that ship individually, Ship Central adds a pack carton for each quantity and closes it automatically.

On the app, the **Enable Multiselect** toggle displays the **Pack All** and **Unpack All** options. It also disables the **Pack** and **Unpack** options for each row. When you pack all or unpack all, you do not provide any item quantities, lot numbers, and serial numbers. After you enable the toggle, it remains enabled unless you clear your browser's cache.

To review settings and system rules that may affect packing or label printing flows, see [Ship Central Packing](#).

To pack all items into a carton:

1. On the Ship Central app, access packing by doing the following:
 - a. From the Main Menu, tap **Packing**.
 - b. On the Select Order page, tap one of the following order types: **Sales Order** or **Transfer Order**.

The names and labels on succeeding pages depend on the order transaction that you select.

2. If you use Warehouse Management and your location has multiple bins, on the Select Bin page, do the following:

If you want to hide the bins list from this page, tap **Show Bins** to switch off the toggle. Without waiting for bins to load, you can tap **Show Orders from All Displayed Bins** to proceed.

- a. If you want to change the bin filter, tap the table icon. Then, in the **Bin Type** filter, you can select **Outbound Staging Bins**, which is the default setting. Otherwise, select **All Bins** to also display other bin types, including Inbound Staging, Picking, and None.
- b. From the Bins list, tap the bin that contains the picked items you want to pack. Alternatively, tap **Show Orders from All Displayed Bins** to display orders from all the bins displayed in the list.

Even if you select a bin, you must pack all the picked items from the same order that may be contained in other bins. Regardless of your filter, the list also includes orders for non-inventory items.

3. On the Order page, select the orders you want to pack by doing the following:
 - a. If you want to change the pick status filter, tap the table icon. Then, in the **Pick Status** field, select one of the following options: **Include Partially Picked** or **Exclude Partially Picked**, which is the default setting.
 - b. From the orders list, tap the box next to the order you want to select.

Tip: To continue packing an order in a previous session, tap the order in Started pack status. Then, select other orders that may appear in the list. These orders have been previously selected for packing at the same time.

Alternatively, in the **Scan/Enter Order** field, scan or enter an order associated with the items you want to pack. If you use waves or pick cartons for Warehouse Management, you can scan or enter the wave number or pick carton that contains the items. If you enter the data, press **Enter Order**. The order that you scan or enter is automatically selected on the table.

To process other orders or orders within the same wave, for the same customer and shipping details, that remain on the table, do one of the following:

Tip: To remove the wave filter, tap the x icon beside the wave number that appears above the table.

- You can select, scan, or enter those that you want to pack at the same time, and then press **Enter Order**.
 - To select all orders in the list, tap the box on the table header, and then press **Enter Order**.
- c. If you have other orders for the same customer and shipping details, you can select, scan, or enter those that you want to pack at the same time. To select all of these orders, tap the box on the table header. If you enter the data, press **Enter**.
 - d. After you select all the orders that you want to process at the same time, tap **Enter Order**.
 - e. For orders that have items in separate bins or pick cartons, the Order Details page appears. You can view the list of bins or cartons per order. Then, tap **Pack Order** to continue.

The Pack Items into Cartons page appears.

4. To add a carton, except for items that ship individually, do the following:
 - a. Tap **Add Carton**.
 - b. On the popup window, in the **Scan/Enter Carton** field, scan or enter the pack carton.

 **Tip:** If you can reuse existing cartons, tap **Reuse Carton** instead. You can search for or select any pack carton associated with a Shipped fulfillment.

Alternatively, for autogenerated carton IDs, you can edit or change the ID. For more information, see [Defining Autogenerated ID Formats](#).

- c. (Optional) To print or save a pack carton label, tap **Print Label**.
- d. Tap **Add Carton**.

In the panel beside the Items Packed table, the new carton appears.

Repeat this step to add more cartons. If you want to delete a pack carton, see [Deleting a Carton](#).

5. Above the Items to Pack table, tap the **Enable Multiselect** toggle and then do the following:
 - a. Tap the box next to each item or at the header.
 - b. Tap **Pack All**.

All quantities of the items move to the Items Packed table.

If you want to add another carton, repeat from step 4.

6. To close a carton and enter the carton weight and size, do the following:

 **Tip:** If you want to remove all the quantities of an item before you close a carton, tap the box next to the item. Then, tap **Unpack All**.

For an item that ships individually, skip this step. If you want to unpack it, tap the box next to it and then tap **Delete Carton**.

- a. In the panel beside the Items Packed table, tap the carton.
- b. Tap **Pack Carton**.
- c. (Optional) If you use package weight calculation, in the **Tare Weight** field, enter the tare weight of the carton.
- d. In the **Carton Weight** field, enter the numeric value of the carton's weight. If you set up calculated default weights, you can edit it.

Alternatively, if you set up your weighing scale, tap **Capture Weight**. If you change the unit after tapping this button, tap it again to display the converted weight value. If you use package weight calculation, the app displays the scale weight's variance from the calculated weight in the **Weight Variance** field.

For more information, see [Package Weight Entry or Calculation](#) or [Weighing Scale Support](#).

- e. In the **Carton Size** field, select a predefined size or select **Custom** to enter the length, width, and depth.

For more information about predefined pack carton sizes, see [Creating Packing Items for Cartons and Pallets](#).

- f. To manually print or save a pack carton label, lists, and other documents, tap **Print Label**.
- g. Tap **Pack Carton**.

Repeat this step to close all the open cartons. If you want to edit details or unpack items, tap **Open Carton**, before you repeat this step.

7. After you close all the open cartons, tap **Next**.
8. On the Packing Summary page, tap **Print Carton List** or **Add to Pallet**.

If you want to print or save, be sure to do so before you transfer cartons to a pallet. Alternatively, to skip pallets, you can tap any of the other options: **Mark as Shipped**, **Go to Shipping**, or **Complete**

Packing. These options depend on rules that you activate for shipping on the app. If you use Warehouse Management, you can tap **Go to Staging** before you ship or complete your packing.

Printing Multiple Packing Labels and Documents

After you pack cartons, you can print or save labels, lists, and other documents for carton packing in bulk. If you have activated the Pallet rule at any time to use pallets, you can also print existing labels and related documents for multiple pallets at the same time.

If you activate rules for reuse, you can choose which carton numbers to print based on their associated order numbers or pallet numbers based on the cartons they contain. For more information about the pallet and reuse rules, see [Configuring Ship Central Rules](#).

You can print carton or pallet labels in bulk outside of their packing flows. Without PrintNode integration, you can generate and save them to your file cabinet. For information about printing settings and templates, see the following topics:

- [Mobile Printing and Weighing Scale Setup](#)
- [SCM Mobile Printing](#)

To print multiple packing labels and documents:

1. On the Ship Central app, from the Options menu, tap **Print Packing Labels & Docs**.
2. On the Select page, in the **Label or List Type** field, select either **Carton** or **Pallet**.
3. To enter or select the cartons or pallets, do one of the following:

 **Tip:** If you scan or enter a number associated with an order outside of the date filter, the **Scan/Enter** field clears automatically. To change the date filter, tap the table icon. On the popup window, in the **Filter by Date** field, select **All** or a different number of months. Then, tap **Done**. For more information, see the help topic [Filtering Table Data by Date](#).

- In the **Scan/Enter** field, scan or enter each carton or pallet number. After you enter each number, press Enter to automatically select it from the list.
 - From the Select list, check the box next to each carton or pallet number.
4. Tap the appropriate **Print** button for the carton or pallet.
 5. On the Print popup window, set the printer, template, and number of copies. Then, tap **Print**.

 **Tip:** Without PrintNode integration, be sure to select **Print to File** in the **Printer** field. If you do not want to print a carton list, you can tap **Skip**. By default, the next report type and template, for the bill of lading, appear in their corresponding fields.

After you print or save a list, you can repeat this step for other related documents. Otherwise, you can tap **Skip** to discontinue printing. For more information about printing settings, see the help topic [Manually Printing Labels from Your Mobile Device](#).

If you want to reprint labels or other related documents, see the help topic [Reprinting Labels](#).

Transferring Packed Cartons onto Pallets

If you activate the **Enable pallet packing** rule, you can transfer packed cartons on to one or more pallets. You can transfer packed cartons onto a new pallet or one that already contains other packed orders. Until

you ship a pallet, you can use it for orders processed through a different packing session, but have the same shipping method and carrier.

If you enable weighing scales for the app, you can capture the pallet weight instead of entering it. In case you enter tare and pallet weights when you add a pallet, the captured weight replaces i

If you want to transfer to an existing pallet that has been used in a shipped fulfillment, you can activate the **Use Pallets from Shipped Fulfillments** rule. Other rules or capabilities that you use may modify the pallet packing flow.

For example, if you enable mobile printing and configure it to Automatic printing, the Print option does not appear on mobile pages. NetSuite automatically prints or saves the labels or documents in the backend.

For more information, see the following topics:

- [Ship Central Packing](#)
- [Configuring Ship Central Rules](#)
- [Mobile Printing and Weighing Scale Setup](#)

To transfer packed cartons onto pallets:

1. To add a pallet, tap **Add Pallet**, and then do the following:
 - a. On the Add Pallet popup window, do one of the following:
 - In the **Scan/Enter Pallet** field, scan or enter the pallet name.
 - For autogenerated carton IDs, you can edit or change the ID.
For more information, see [Defining Autogenerated ID Formats](#).
 - To select an existing pallet, tap **Reuse Pallet**. On the Reuse Pallet popup window, you can scan, enter, or select a pallet from a list.
 - b. (Optional) If you use package weight calculation, in the **Tare Weight** field, enter the tare weight of the pallet.
 - c. In the **Pallet Size** field, select a pallet size.
If you select the Custom option, you can enter the length, width, and height of the pallet. To set up predefined pallet sizes, see [Creating Packing Items for Cartons and Pallets](#).
 - d. In the **Pallet Tracking #** field, enter the tracking number for the pallet.
 - e. (Optional) To print a pallet label, tap **Print Label**.
 - f. Tap **Add Pallet**.

On the Pack Cartons on Pallets page, the new pallet appears in the panel located to the right of the Packed Cartons table. Repeat this step to add more pallets.

2. On the Cartons to Pack table, tap **Pack** next to each carton that you want to transfer.

Tip: To temporarily stop packing and save your task, tap **Save & Close**. When you leave a task unfinished, another operator can access and process it.

Each selected carton moves to the Packed Cartons table. To transfer cartons to a different pallet, repeat from step 1.

3. (Optional) To capture weights or update pallet details, do the following:
 - a. Tap **Update Pallet Details**.
 - b. In the **Pallet Tracking #** field, enter the tracking number for the pallet.

- c. On the popup window, tap **Capture Weight**.
If you change the unit after tapping this button, tap it again to display the converted weight value. If you use package weight calculation, the app displays the scale weight's variance from the calculated weight in the Weight Variance field. For more information, see [Package Weight Entry or Calculation](#) or [Weighing Scale Support](#).
 - d. In any of the following fields, you can enter the dimensions: **Length**, **Width**, or **Height**.
 - e. If you want to print or save pallet labels and other documents, tap **Print Label**.
 - f. Tap **Update Pallet Details** to close the popup window.
4. (Optional) You can do the following tasks to delete or unpack a pallet.

 **Note:** If you delete or unpack an existing pallet that you are reusing, you remove the pallet or its cartons from your packing session only.

■ Delete a Pallet

1. In the pallet panel, tap the pallet you want to delete.
2. Tap **Delete Pallet**.
3. On the popup window, the message informs you that any cartons on the pallet are moved back to the Cartons to Pack list. To confirm, tap **Delete Pallet**.

The pallet is deleted from the panel.

■ Unpack a Pallet

1. In the pallet panel, tap the pallet you want to unpack.
2. Do one of the following:
 - To remove a specific carton from the pallet, tap **Unpack** next to the carton.
 - To remove all cartons from the pallet, tap **Unpack Pallet**.

On the popup window, the message informs you that cartons on the pallet are moved back to the Cartons to Pack list. To confirm, tap **Unpack Pallet** to close the popup window.

■ Update a Pack Carton

1. To update one or more pack cartons, tap **Update Carton**.
 2. On the Pack Items Into Cartons page, you can do the necessary updates.
For instructions, see [Packing Items into Cartons](#).
 3. Tap **Next**, and then tap **Add to Pallet**.
5. After you transfer all the cartons onto pallets, tap **Next**.
6. On the Summary page, you can review the list of packed orders and pallets.
- The options on this page appear depending on the rules and capabilities you use and their mandatory or optional settings. You can skip any optional tasks, but follow the order if you want to perform additional tasks before you submit the packed items.
- a. **Print Pallet List** – Tap this button to print or save the pallet list, including other documents, such as the bill of lading, that you have set up for mobile printing.
 - b. **Go to Staging** – For Warehouse Management, tap this button, and then on the Enter Staging Bin page, do one of the following:
 - In the **Scan/Enter Staging Bin** field, scan or enter the outbound staging bin. If you enter the data, tap **Enter Staging Bin**.
 - From the Staging Bins list, tap the outbound staging bin you want to select.

On the Staging Summary page, you can review the staging details.

- c. **Complete Packing** – Tap this button to submit the packed orders and return to the order selection page for carton packing. For instructions on carton packing, see [Packing Items into Cartons](#).

To view the fulfillment details, see [Viewing Packing and Shipment Details](#). You can search for orders or shipments using the pallet number, pallet tracking number, or other such details.

Ship Central Shipping

You can ship orders that you pack directly through the NetSuite UI or through the app, separately. If you don't use the Pick, Pack, and Ship feature, you can ship available items immediately after you create the orders.

Before you start shipment processing on the app, you can shop for rates and choose one to rerate an order or order line. If enabled for the app, you can also rerate during shipment processing. See [Rerating Orders](#) or [Rate Shopping Setup for the App](#).

Ship Central provides these shipping options using the app or NetSuite UI depending on the features and settings enabled for your account:

- [Shipping Orders Through the App](#)
- [Generating Labels Through Bulk Shipping](#)
- [Direct Packing or Shipping on Fulfillments](#)

Order transactions must use the shipping methods associated with shipping items that you create for Ship Central. For more information about these shipping methods, see [Creating Shipping Items for your Shipping Services](#).

Using shipping services or methods available from your carriers, you can ship orders locally. Based on preferences enabled for the app, you can use those for shipping orders internationally and for billing other parties. Other preferences enable you to print return labels, add shipment references, set up rates, and use additional shipping options. For more information, see [Ship Central Preferences](#).

If you set the preference for hazmat or dangerous goods, be sure to select a local shipping method from USPS that supports these items. Otherwise, you may encounter an issue when you try to print a label. For more information, see [HazMat or Dangerous Goods Setup](#).

Aside from preferences, system rules provide these shipping capabilities for the app: shipping insurance, package codes, advanced options, brand names, and delivery confirmation, among others. To view and activate shipping rules, see [Configuring Ship Central Rules](#).

For more information about tasks included in shipment processing, see the following topics:

- [Shipping Address Validation](#)
- [Weight Calculation for Shipments](#)
- [Details on Shipping Labels and Documents](#)

Shipping Address Validation

The app obtains the shipping or ship to address from a sales or transfer order. It goes through ShipEngine's automatic validation before it's sent to the carrier for shipping label generation. See the following address validation options:

- After you select a shipping method on an order, you can click the calculate icon beside the Shipping Cost field to view the shipping cost estimate. It serves as an initial address validation to provide a cost estimate on the order based on the shipping address and method.
- For orders that you ship through the app, full address validation includes searching for matching addresses that have already been used successfully for shipping. You can choose whether to use this address for a specific shipment, without changing the one on the order. It also includes automatic identification of residential addresses.
- Paid address validation service on the NetSuite UI. For information, see [Validating Shipping Addresses on Orders](#).

Before you process orders on the Ship Central app, note the following guidelines for address details:

- On the **Shipping** subtab of an order, make sure that you provide the complete address details of the recipient. These details also include the attention line, addressee, and phone number.
- For carriers that require an email address to generate shipping labels and documents, make sure that you provide a valid one on the associated customer record. For instructions, see the help topic [Creating a Customer Record](#).
- When you choose a residential address on the order transaction, the app displays a message about additional charges that may apply. It displays the same message on the app. When you shop for rates, you can view shipping methods available for residential addresses.

Even if you don't enable the **Residential Address** setting of a customer's address, the app determines separately whether an address is residential. Note that Ship Central doesn't consider the same setting on item fulfillments. During address validation, it indicates whether the original and suggested addresses are residential. They may not always match the Residential Address setting of the customer's address on the order transaction.

- You can disable ShipEngine's full shipping address validation by the setting the **Address Validation** preference through one of the following ways
 - On a Ship Central preferences record, you can set your preference for all or a specific location.
 - On the app, you can set your preference for a specific shipment or order.

Without full address validation, you must double-check the Address 1 details on the order and shipping labels before you ship the packages. Also, verify that the order has the correct Residential Address setting. For instructions, see [Setting Ship Central Preferences](#).

- The app obtains the ship from address from a location record. On location records, provide the complete address details that you want to use for the sender. On the **Address** subtab, in the **Address** field, enter the address along with the attention line, addressee, and phone number. For instructions, see [Creating Locations for Ship Central](#).

For more information, see the following topics:

- [Adding Location Addresses With Address Validation](#)
- [NetSuite Ship Central FAQs](#)

Weight Calculation for Shipments

To obtain the total weight, Ship Central uses the item weight that you specify on item records. If you use the Shipping Label Integration feature and set up a default package for an item, it adds the package

weight to the item weight. After you ship an order, item fulfillments display the total weight per package on the **Packages** subtab.

Note the following if you do not set weights:

- If you do not set any item weight, Ship Central uses the default 1 lb weight and adds it to the package weight.
- If you do not select a package type on the item record and do not set a default package type on the Set Up Shipping page, the total weight reflects only the item weight.

The package type on item records reflects the corresponding weight on the Set Up Shipping page. If you do not specify the weight of a package type on this page, the total weight does not include any package weight.

- If you do not set both item and package weights, the total weight defaults to 1 lb.

Refer to the following table for examples of total weight calculation based on a package weight and varying item weight settings:

	Case 1	Case 2	Case 3	Case 4	Case 5	Case 6
Item weight	Item record: 2		Set Up Shipping page: 2.5 (not set on item record)		Default weight: 1 (not set on item record & Set Up Shipping page)	
Package weight	Item record: 2.5	Set Up Shipping page: 3.5	Item record: 2.5	Set Up Shipping page: 3.5	Item record: 2.5	Set Up Shipping page: 3.5
Total weight	4.5	5.5	5	6	5.5	4.5

If you enter or capture the carton weight during packing, the app uses it as the total weight regardless of your item or package settings. For more information, see [Package Weight Entry or Calculation](#).

When you ship through the app, changing the package code may also update the total weight.

Package Codes and Sizes

If you pack through the app, you carry over the size of the carton during shipment processing. If you use the Shipping Label Integration feature, you can set up package types and specify the dimensions for each of them. You can choose a default package type for all your items or assign one to each item. You can use them for orders that you pack directly through item fulfillments. If you ship through the app, you also carry over the size of the package type.

For single shipments or a multi-package shipment for a single order, you can use package codes if available from your carrier. During shipping through the app, you can choose a package code to replace your predefined carton sizes or package types. To enable package codes, see [Configuring Ship Central Rules](#). To assign default package codes, see [Setting Ship Central Preferences](#).

Details on Shipping Labels and Documents

Labels display shipping, order, and address details along with other information based on your shipping preferences and rules.

For domestic shipments of hazmat or dangerous goods, the USPS shipping label displays the “H” tag at the upper left corner.

For domestic shipments through UPS, when the declared value of a package exceeds 1000 USD, UPS generates the High Value or Control Log form. When you print the shipping label, this form is automatically printed along with other documents.

Note: You cannot customize label templates to add details, since shipping labels are generated by carriers. You can use the standard label templates to set the default format, whether PDF, ZPL, or letter size (PDF or PNG) on print reports. For more information, see [Shipping Labels and Documents for Mobile Printing](#) or [Standard Report Types in Mobile Apps](#).

If you enable international shipping, you can print the Certificate of Origin and Commercial Invoice if you do not use the electronic or paperless submission services that your carrier may provide. If you use shipping services that include electronic submission of these forms, you may see any of these codes on shipping labels generated by the carrier: **EDI** for UPS, **PLT** for DHL Express, or **ETD** for FedEx. To set up, see [International Shipping Setup for Ship Central](#).

Ship Central provides the following preferences and rules that you can enable to add details to shipping labels or documents:

- You can enable preferences for adding a company logo or shipment references to shipping labels. By default, shipping labels display the carton ID or number as the first shipment reference. Depending on the services provided by your carrier, you may display up to two more references on labels. You can choose the fields that you want to set up as the source of your second and third references. Ship Central automatically obtains the values from these fields. You can manually enter reference values on the app for each shipment. However, make sure that they correspond to the reference fields that you set up. Also, note that shipping labels display only the first 30 characters of the actual reference values.
- You can activate the **Print brand name** rule to print a brand name on shipping labels. You can provide a default brand name or enter a different one on each shipment. It replaces the sender's name on the printed label.
- You can activate the **Set delivery confirmation of shipments** rule to choose a delivery confirmation on the app. The shipping label displays the delivery confirmation or its acronym.
- You can activate the **Set advanced options from carriers** rule to include additional services that may be available from your carrier. Details of some advanced options appear on shipping labels.
- On the app, you can choose the home delivery or Saturday delivery options that display on shipping labels.

For international shipments, you can add customs details that appear on shipping documents. These include the declaration statement and non-delivery instructions, among others.

To set up these additional capabilities, see the following topics:

- To activate rules, see [Configuring Ship Central Rules](#).
- To set preferences, see [Setting Ship Central Preferences](#).

Note: Some of these capabilities and settings do not apply to labels that you print directly on item fulfillments for FedEx, UPS, or USPS. If you want to set up shipping directly on item fulfillments for these carriers, see [Setting Up Direct Packing and Shipping on Fulfillments](#).

Based on your Mobile Printing setup, to print or save labels and documents for shipping, see the following topics:

- If you do not enable Automatic printing for a print report, see the help topic [Manually Printing Labels from Your Mobile Device](#).
- For FedEx, UPS, or USPS only, to ship and generate labels on fulfillments instead of the app, see [Direct Packing or Shipping on Fulfillments](#).

- To reprint labels, see the help topic [Reprinting Labels](#).
- If you enable return labels, see [Generating and Printing Return Labels](#) or [Generating Return Labels from an RMA](#).
- [Generating and Printing Shipping Manifests](#)

Calculated Shipping Costs Within Ship Central

You can view calculated shipping costs on order transactions, on the app, and on fulfillment records. Shipping cost calculations may depend on the shipping method, address, package dimension, item weight, and other related charges or fees.

Before you print shipping labels, make sure that you provide the correct shipping address on order transactions. Also, verify that the shipping method is associated with an active shipping item that you have created for Ship Central.

Important: After you pack orders, you should not update details on orders and item fulfillments that may affect shipping cost calculations. You may encounter errors if there are discrepancies between these details and those on shipping labels. You can activate and use Shop for Rates to change shipping details through the app. See [Configuring Ship Central Rules](#).

If you use the Multiple Currencies feature, shipping costs on the app, including those listed when you use Shop for Rates, follow your currency settings. On fulfillment records, the currency of the associated subsidiary is applied to the cost. For more information, see the help topic [Currency on Customer Transactions](#).

Shipping Cost with Flat Rates, Discounts, or Mark ups

If you set up flat rates, discounts, or mark ups on a preference record, you can view the applied or adjusted rates on the order transaction. From the shipping items you create for Ship Central, NetSuite applies the rate that matches the location on the preference record and order transaction. It may also choose a rate that you assign to a customer through the same preference record. To set up, see [Adding Shipping Item Settings](#).

For example, you assign a zero flat rate to a shipping item, when you select it on the order, you can view this rate. On the app, you can also view the same rate in both the estimated and actual shipping costs. Item fulfillments reflect the same cost in their corresponding fields after you process the items for shipping.

Note: When you create order transactions, be sure to apply the latest rate settings in the **Shipping Cost** field. In case a rate is edited or changed on a preference record, reapply it if you want to reflect the update on a specific order before you ship it. To apply or reapply rates, click the calculate icon beside the **Shipping Cost** field or click **Calculate Shipping**.

Updates to a flat rate, discount, or mark up on a preference record don't apply automatically to associated sales or transfer orders. You cannot apply new or updated rates to shipped orders unless you void the shipping labels. Even if you choose a package code on the app, your rate settings apply too. Flat rates replace package code rates.

Shipping Cost on Order Transactions

Initially, when you create a sales or transfer order, you can view the estimated shipping cost on the **Shipping** subtab. After you select a shipping method, you can click the calculate icon beside the **Shipping**

Cost field or the **Calculate Shipping** button. You can view the estimated cost, which considers the shipping method and address on the order transaction or line. Note that it does not include any Saturday delivery charges from your carrier.

When you choose a residential address on the order, the calculated cost may include any additional charges from your carrier. A message also appears to inform you that charges may apply to home delivery.

If you make any changes to item lines on the order or shop for rates, be sure to recalculate the shipping cost. If you want to apply updates to a flat rate, discount, or mark up assigned to a shipping method used on an unfulfilled order, you must also recalculate.

The estimated cost on orders may not reflect rate adjustments based on shipping options that you apply on the app. These shipping options include package codes and insurance, among others.

Shipping Cost on Item Fulfillments

Fulfillment records display shipping costs before and after you ship orders in the following fields:

- **Shipping Cost** – Displays the estimated cost from the order transaction by default
- **Actual Shipping Cost** – Displays the cost from the app after you ship an order or the Third-Party Billing text, **(Billed to third party)**.

If you create a cost distribution that applies to the fulfillment's location, the Actual Shipping Cost field displays the distributed shipping cost. If you choose the Apply to Fulfillment Shipping Cost setting on the distribution, the Shipping Cost field also displays the distributed cost. For more information, see [Defining a Shipping Cost Distribution](#).

Shipping Cost on the App

On the app, you can view the estimated shipping cost, which considers updates to package details and your shipping preferences. If you change the shipping details through the **Shop for Rates** or **Change Package Code** options, you can view the updated cost. Additional charges may apply to shipping services that include shipping insurance, home delivery, or Saturday delivery. These updates to the estimated shipping cost do not affect the value displayed on associated orders and fulfillments.

 **Note:** To view estimated shipping costs that include any charges for home delivery, you must enable the Residential Address setting on the customer's address. Otherwise, you can view the adjusted value only in the actual shipping cost after you complete the shipment processing.

During address validation, you might select an address that shows a Residential Address value of **Unknown**. Make sure that you choose the appropriate shipping method to obtain an accurate shipping cost.

After you print a shipping label, the value may get updated to include additional charges. If you set the Third-Party Billing preference, including the one for FedEx Ground Collect, the app displays the following text for applicable customers: **(Billed to third party)**.

When you submit the packages for shipping, the Summary page appears with the actual shipping cost. If Third-Party Billing applies to the customer, the actual cost displays a zero value.

Validating Shipping Addresses on Orders

On sales or transfer orders, you can validate shipping addresses using the paid service available for NetSuite ShipEngine accounts. When you calculate the shipping cost on the order or through the app,

you might encounter an issue due to the address. To avoid these issues, you can validate the address before you process orders for shipping. If you use the Multiple Shipping Routes feature, you can validate the address for each order line. Additional charges apply for each address that you validate.

Important: This paid validation service does not determine whether you have validated the same address on a different order

The same paid service enables you to validate location addresses that you add for your company or organization. For more information and instructions, see [Adding Location Addresses With Address Validation](#).

For information about standard address validation on the NetSuite UI or app, see [Shipping Address Validation](#).

To validate shipping addresses on orders:

1. Open a sales or transfer order in edit mode.
2. Verify that the order has a shipping method associated with a shipping item created for Ship Central by doing either of the following:
 - If the order has a single shipping method, click the **Shipping** subtab to view the **Shipping Method** field.
 - If you set the **Enable Line Item Shipping** box, click the **Items** subtab to view the **Ship Via** column.

On the same subtabs, you can also review or edit the shipping addresses.

3. On the **Shipping** subtab, do one of the following:

Tip: A disabled button or check box indicates that the address has been validated successfully for this order. You can view the validation status for the order or order line.

- For order validation, click **Validate Address**.
- For order line validation, check the box next to each shipping address, and then click **Validate Address**.

4. From the message at the header, you can review the results, and then do either of the following:

Tip: Before you save the order, you can also view other available shipping rates and rerate the order. For information and guidelines, see [Rerating Orders](#).

- If you see a confirmation message, you can save the order.
- If you see a failure message, review or edit the address before you save the order.

Failure statuses remain on the order, unless you revalidate the address. If you change a successfully validated address, you can perform another validation. For more information about these messages, see [NetSuite Ship Central FAQs](#).

5. If you edit or update the address for an order, be sure to apply the same changes to any associated fulfillment records.

Rerating Orders

Instead of using the Shop for Rates option on the app, you can rerate a sales or transfer order, or any of its order lines through the NetSuite UI. Ship Central displays a list of shipping methods and rates

available from your carriers. You can choose one that may belong to the same carrier or a different one. Either way, any updates to the shipping method and cost reflect on the corresponding fields in the order transaction. If you set the Calculate Tax preference for international shipments, you can also see updates to the estimated tax in the order.

When you rerate an order, you can choose a rate associated with shipping items that you set up for Ship Central. Available rates are provided by any of the carriers connected to your NetSuite ShipEngine account. For more information, see [Managing Your Shipping Integration](#).

Note the following settings or preferences that may affect estimated shipping cost calculation when you rerate:

- Ship Central follows rate preferences that apply to the shipping method associated with a new rate that you select. These include flat, discount, or markup rates that you set on preference records for shipping items. For more information, see [Adding Shipping Item Settings](#).
- If you set the Calculate Tax preference for international shipments, you can also see updates to the estimated tariff on the order.

For other settings that affect shipping costs, see [Calculated Shipping Costs Within Ship Central](#).

 **Note:** This capability does not include any options to reset or reapply a rate that you may have set prior to performing a rerate.

You can either search for orders that you want to rerate or rerate directly on the order transaction. If you use the Multiple Shipping Routes features, you can select rates for specific order lines. For instructions, refer to the following procedures:

■ **To search for and rerate orders:**

This option does not enable you to rerate an order already associated with item fulfillments. In this case, you can activate the rerate rule for the app. When you ship the order through the app, you can choose a different rate for the order or for the associated shipment. For more information, see [Shipping Orders Through the App](#).

■ **To rerate directly on the order transaction:**

To search for and rerate orders:

1. Using the Ship Central Manager role, you can go to Ship Central Outbound > Shipping Details > Shop for Rates.
2. On the Shop for Rates page, specify the details in the following fields:
 - a. **Location** – Select the location associated with the order.
 - b. **Transaction Type** – Select either **Sales Order** (default) or **Transfer Order**.
 - c. **Order #** – Enter the order number.
3. If the order has the **Enable Item Line Shipping** box checked, you can rerate an order line, by doing the following:
 - a. Check the **Item Line Shipping Enabled** box.
 - b. Optionally, to specify lines that you want to rerate, select values in any of the following fields: **Ship To Per Line** or **Ship Via Per Line**.
4. Click **Shop for Rates**.
The Shipping Options list appears with details of the available shipping methods and carriers.
5. Click **Submit**.

You can view any updates on the **Shipping** subtab of the order transaction.

To rerate directly on the order transaction:

1. Open a sales or transfer order in edit mode.
2. On a sales or transfer order, verify that the selected shipping method is associated with a shipping item created for Ship Central. You can also review the address in the **Ship To** field. Based on your order set up, do either of the following:
 - If the order has a single shipping method, click the **Shipping** subtab to view the **Shipping Method** and **Ship To** fields.
 - If you set the **Enable Line Item Shipping** box on the **Items** subtab, view the **Ship Via** and **Ship To** columns for each item line.
3. On the **Shipping** subtab, do one of the following to view available shipping rates and select one:

Tip: Before you rerate an order or order line, you can validate the shipping address first if you need to. For more information, see [Validating Shipping Addresses on Orders](#).

- For the order shipping, click **Get Carrier Rates** and wait for the request to be completely processed. Then, in the **Select Carrier Rate** field, select a new rate.
 - For item line shipping, in the **Carrier Rates** column, click the calculate icon and wait for the request to be completely processed. Then, in the **Select Carrier Rate** field, select a new rate. You can repeat this step for another order line.
4. For item line shipping only, after you select rates for all the order lines you want to rerate, apply the new rates by clicking **Calculate Shipping**.

You can view related updates to shipping fields on the Shipment table and on the **Items** subtab.

After you apply new rates, note that other services from your carrier that you add to the order or through the app may further adjust the shipping cost. After you ship the order, you can view the actual shipping cost on item fulfillments.

Shipping Orders Through the App

After you pack orders through Ship Central, WMS, or the NetSuite UI, you can process them for shipping. On the app, you cannot combine orders packed through Ship Central with those packed through the other options. Regardless of how orders are packed, verify that they have valid shipping methods. You must select a shipping method associated with an active shipping item that you create for Ship Central. Otherwise, these orders do not appear on the app for shipment processing.

Without the packing option, if you ship orders only, you can access the order in Pending Fulfillment status. After you ship the order on the app, it generates the item fulfillment in Shipped status.

Depending on your carrier, you can include multiple packages in a shipment. Your shipping preferences add capabilities that enable printing of return labels for local shipments, documents for international shipments, and a company logo. Other preferences enable billing to other parties and best shipping rates. Item settings set default values for the description of goods, tariff code, package type, and item weight, among others. Through system rules that you activate, you can apply package codes from carriers, insurance, rerates, and delivery confirmation, among others.

The shipping flow may vary if you enable Mobile Printing to print or save shipping and return labels on the app manually or automatically. Before you can print or save a shipping label, the address goes through automatic validation unless you change the default preference.

For more details about shipping and label options available on the app, see the following topics:

- [NetSuite Ship Central](#)
- [Ship Central Shipping](#)

If you want to generate labels and process orders through bulk shipping instead, see [Generating Labels Through Bulk Shipping](#).

To ship orders through the app:

1. Access the shipping by doing one of the following:
 - From the Ship Central app, tap the menu icon, and then tap **Shipping**. Then, on the Select Order page, tap one of the following order types: **Sales Order** or **Transfer Order**.
 - If you are continuing from the Packing process, proceed to step 5.
2. On the Shipments page, you can change the default filter that displays shipments of orders packed through the Packing flow. To process orders packed through the NetSuite UI or WMS, tap the table icon. From the popup window, in the **Packed Through** field, select **WMS & NetSuite UI**.

 **Tip:** If you ship only, this filter does not appear and you can select orders in Pending Fulfillment status. Skip this step and proceed to step 3.

Using this filter, you can switch between orders packed through the NetSuite UI and WMS or packed through the Ship Central app.

3. To select an order or shipment, do one of the following:
 - In the **Scan/Enter Shipment** field, scan or enter the shipment number, order number, carton, pallet, or UCC. If you enter the data, tap **Enter Shipment** to proceed.

 **Tip:** Shipment IDs are generated during order packing on the app. If you want to define a custom format for this ID, see [Defining Autogenerated ID Formats](#). For more information, see [Packing Items into Cartons](#).

- From the list, tap the box next to the order or shipment.

After you select an order or shipment, the list displays other ones that have the same shipping address and ship method.

4. If you want to include other orders or shipments in a single shipment, tap their boxes. Then, to submit all your selections, tap **Enter Shipment**.
5. On the Ship Packages page, you can review the shipping details, including the estimated shipping cost.

If the app does not display a cost estimate, check the order transactions for missing or incorrect shipping address details and method. Verify that you can use the shipping method for the shipment and its packages. For information about shipping costs, see [Calculated Shipping Costs Within Ship Central](#).

Alternatively, if you want to continue processing the shipment at a later time, do one of the following:

- If you are redirected from the Packing process and want to postpone shipping, you can tap **Ship Later**.

The fulfillment record remains in Packed status. When you access the same orders again, you can add more that you want to include in the same shipment. However, if the Ship Status on the Shipments page is Started, you cannot add more shipments.

- On the Ship Packages page, if you want to temporarily leave the session before you complete your shipment processing, tap **Save & Close**.

To access the shipment again by you or another operator, repeat from step 1.

6. (Optional) To update shipping details, you can tap any of the following options, some of which depend on Ship Central preferences that apply to your location:

 **Note:** Be sure to edit the shipping address, customs details, or third party billing before you print the shipping label. Similarly, if you rerate or void a shipping label, update them before you generate a new label. You cannot change these details after you generate a shipping label. To void a shipping label to update shipping details, see step 9 or [Voiding Shipping and Return Labels](#).

- **Edit** – Tap this button to change or enter shipping address details and other party billing settings. On the Shipping Details popup window, you can edit the following details:
 - Shipping address phone number or contact person
 - Shipment reference 2 and 3
 - Saturday Delivery setting
 - Billing type and account name for Other Party Billing – If you select the **Sender** billing type, you disable other party billing for this shipment.

After you update the details on the Shipping Address popup window, tap **Submit**.

- **Add Customs Details** – For international shipments only, tap this button to include details that appear on labels or documents. You can add the following details: **Content, Description of Goods, Non-delivery Instructions, Terms of Trade Code, Declaration Statement**, and **Address of Importer**.

You can also specify the **Charge Tax To** and **Address of Importer** for this shipment. If you choose the **Importer of Record** option, in the **Address of Importer** field, you can select the ship to address or any of the addresses from the associated customer record.

- **Size link** – On the Packages per Shipment table, you can tap the size for each package to enter or update it. Otherwise, if you want to select a package code, see step 7.

7. Depending on the system rules you use, you can choose or set the following:

- **Shop for Rates** – Tap this button to look for rates that may be available from other carriers or for different shipping methods. On the popup window, do the following:
 - To obtain rates from all or certain carriers, you can apply a filter by tapping the table icon. Then, in the **Carrier** field, select one of these options: **All Carriers, Multi-package Carriers**, or **Current Carrier**. To save your filter, tap **Done**.
 - From the Rates list, you can tap the row that shows the rate you want to select. Then, to confirm the new rate, including any updates to the shipping details, tap **Rerate**.

Note that updates to the rate and other shipping details apply to the entire shipment.

When you rerate a shipment that already has a shipping label, you also void this label. You can proceed to step 7 to generate and print a new label.

- **Get Best Rate** – Tap the more icon at the page footer, and then tap **Get Best Rate**. On the popup window, you can specify the number of days in the **Expected Delivery** field. In the **Carrier** field, you can choose one of the following filters for the carriers from which you want to search and apply the best rate: **All Carriers, Current Carrier**, or **Multi-package Carriers**. Then, tap **Get Best Rate**.

For example, you want to apply the lowest rate from the current carrier for a shipping method that can deliver the package in three days. The app searches from the carrier on the order transaction, unless updated through a rerate.

- **Advanced Options** – For multi-package carriers, tap the more icon at the page footer, and then tap **Set Advanced Options**. For single package carriers, tap the **Advanced Options** link for

the specific row on the Packages table. Then, on the Advanced Options popup window, you can apply any of the following shipping options that may be available from your carrier:

- For shipments that include dry ice, set the following fields: **Includes Dry Ice**, **Dry Ice Weight**, and **Dry Ice Weight Unit**.
- For Collect on Delivery payments, set the following fields: **Collect on Delivery Payment Type**, **Amount**, and **Currency**.
- If you set the **Enable USPS Canada Delivered Duty Paid** preference, you can choose whether to apply this option to the shipment.
- For delivery, you can enter details in the following fields: **Return Pickup Attempts** and **SMS** or **Email Tracking Notification**.
- Other advanced options that you can add include the following: **Contains Alcohol**, **Non-Machinable** through FedEx scanning machines, **Additional Handling**, **Shipper Load and Count**, **Freight Class**, **Ancillary Service Endorsement**, **Booking Confirmation Number**, and 3 additional **Memos**.

On the Ship Packages page, you can view any updates to the estimated shipping rate, carrier, or shipping method. For more information, see [Configuring Ship Central Rules](#).

- **Delivery Confirmation Type** – Select one of the following delivery confirmation types for this shipment: **None**, **Delivery**, **Signature**, **Adult Signature**, **Direct Signature**, **Delivery Mailed**, or **Verbal Confirmation**.

Note that carriers may not support all of these delivery confirmation types.

- **Change Package Code** – For single package shipments and multi-package shipments with one package, you can tap this button to view available package codes from your carrier.

From the table of packages, you can view the selected package code for each package or carton.

If you neither choose a package code nor choose the default **Package** option, you can specify the size of the package instead. To select or specify a size, see step 6.

- **Add Insurance** – Tap this button to open the Add Insurance popup window. You can enter the declared value of a package. For the insurance provider, you can change the default **None** setting to either **Carrier** or **ParcelGuard**. Then, select the package to which you want to apply the insurance. Tap **Add Insurance** to enter the insurance details for the package. Repeat these steps to add insurance to another package.

If you want to remove insurance, you can tap the same button to display the popup window. Enter **0** for the declared value, select the package, and then tap **Remove Insurance**. If you want to remove insurance for the entire shipment or order, leave the declared value blank, and then tap **Remove Insurance**.

- **Print Lists** – If you are redirected from the Packing flow and you have not printed packing lists, you can tap this option.

8. Depending on your Mobile Printing and other settings, do the following:

- a. If you print shipping labels automatically or have previously printed a label, tap **Ship** to submit the shipment. Otherwise, to manually print a shipping label, tap **Print Label** or **Ship**.
- b. Optionally, if you can provide brand names, in the **Brand Name** field, enter the brand name that you want to appear on the shipping label. Then, tap **Confirm & Print**.
- c. If you validate addresses fully, you can view the Confirm Shipping Address popup window. From the address list, you can select the one on the order transaction or the matching validated address. Then, tap **Print & Ship** or **Confirm & Print**.
- d. On the Print popup window, you can enter your printing preferences.

For detailed printing instructions, see the help topic [Label Printing and Reprinting](#).

If you tap **Ship** and complete the shipment processing, you can skip step 9.

9. After you generate and print the shipping label, you can do the following if you have not submitted the shipment or orders:
 - View the shipping label ID and estimated shipping cost that includes additional adjustments based on shipping details.
 - If you want to void the shipping label, tap **Void Label**.

Tip: You can also access the Void Label option from the Ship Central menu, which you can open by tapping the menu icon. See [Voiding Shipping and Return Labels](#).

When you void a label, you disassociate all pack cartons and tracking numbers included in the shipment. It may include items or lines from different orders. The shipping label ID is deleted. The fulfillment record is also updated accordingly.

After you void a label, repeat from step 7 to generate and print a new one.

- To submit the shipment, tap **Ship**.
10. On the Shipping Summary page, you can view the actual shipping cost, label IDs, and tracking numbers.

If third-party or recipient billing applies to this shipment, the Actual Shipping Cost field displays a zero value.

11. Tap the button for the next task you want to perform:

Tip: Before you process another shipment, make sure that you complete the other tasks first. Completed shipments cannot be accessed through the app anymore, except for the printed labels and documents.

- a. To print, do either of the following:
 - For local shipments, if you can print or save a return label, tap **Print Return**.
After you print the label, the Return Label Id field appears with the ID of the generated return label. For information about return label settings and details, see [Return Label Setup for Local Shipping](#).
 - For international shipments, to print a Certificate of Origin along with a commercial invoice, tap **Print Certificate**.
Note that this option may not apply if your carrier submits these documents electronically during shipping label creation.
- b. To void labels, do one of the following:
 - To void a return label, tap **Void Return**.
 - To void both a shipping and return label, tap **Void Shipment**.
You cannot print a return label without a shipping label.
For more information about voiding labels, see [Voiding Shipping and Return Labels](#).
- c. To process another shipment, tap **Next Shipment**.

To view the fulfillment details, both packing and shipping, see [Viewing Packing and Shipment Details](#).

To print shipping manifests, see [Generating and Printing Shipping Manifests](#).

To send pickup requests, see [Scheduling Pickups with Carriers](#).

To view the delivery status of each shipped package, see [Tracking Delivery of Shipped Packages](#).

Generating Labels Through Bulk Shipping

You can generate shipping labels in bulk at the same time for shipments or orders with complete shipping addresses and other such details. You can process domestic and international shipments in a batch, regardless of the carriers, shipping addresses, and shipping methods. The app updates the associated item fulfillments with the tracking number and shipping cost. It also sets them to Shipped status. For information about preparing your sales orders for shipping, see [Ship Central Shipping](#).

You can include up to 10 shipments in a batch for bulk shipping at a time. As with the regular shipping flow, you cannot combine orders packed through the app and NetSuite UI in the same batch. After you start processing orders through bulk shipping, you can't access them through the regular shipping flow anymore.

If you want to include international shipments, be sure to set the correct tax and billing details. For more information, see [International Shipping Setup for Ship Central](#).

Bulk shipping doesn't include additional shipping options that you may have enabled for the regular shipping flow. For more information, see [NetSuite Ship Central FAQs](#).

To generate labels through bulk shipping:

1. From the Options menu, tap **Bulk Shipping**.
2. On the Menu page, tap either **Sales Order** or **Transfer Order**.
3. To include up to 10 shipments to a batch, do one of the following:
 - In the **Scan/Enter Shipment** field, scan or enter each shipment number, order number, or UCC. If you packed the sales orders through the app, you can also provide the pack carton or pallet ID.
 - From the Shipments table, tap the box next to one or more shipments that you want to process.

Before you include shipments in Started status, make sure that the associated orders have no issues. You can view issues in the **Error** column as described in step 5.

Tip: To process orders packed through the NetSuite UI, you can tap the table icon to open the popup window. In the **Packed Through** field, select **NetSuite UI**. Then, tap **Done** to close the popup window.

4. Tap **Submit**.
5. On the Print popup window, do the following:
 - a. Select the printer, template, and number of copies.
 - b. To print or save, tap **Print**.

For international shipments, the app prints the related documents automatically.

The app updates Item fulfillments associated with the successfully processed shipments or orders to Shipped status.

6. In case an issue occurs for one or more shipments, you can do the following:
 - a. From the Shipments table, you can search for the shipment number with a Started status.

Tip: To sort shipments with issues in Started status, tap the **Ship Status** column.

- b. In the **Error** column, tap the error link.
 - c. On the NetSuite UI page that appears, you can view the error details.

If you want to access item fulfillments or orders associated with the shipments, see [Viewing Packing and Shipment Details](#).

- d. After you update incorrect or missing shipping details, you can repeat from step 2 to retry processing the shipments again.

When you select the updated shipments, you can include other ones to process in the new batch.

To send pickup requests, see [Scheduling Pickups with Carriers](#).

Direct Packing or Shipping on Fulfillments

On item fulfillments, you can directly record packing or shipping details, as well as print labels. Options for fulfilling orders directly through the NetSuite UI depend on the following features and settings:

Pick, Pack, and Ship feature = Enabled		Shipping Integration Label feature = Enabled *	Shipping Mode Preference
Pack and ship within NetSuite UI	Pack through app and ship within NetSuite UI	Print or save labels using shipping items for Ship Central (FedEx, UPS, or USPS only)	Integrated Shipping Only or Integrated Shipping Per Order (FedEx, UPS, or USPS only)
Pack and ship through the app			
Pack within NetSuite UI and ship through app		Print or save labels using shipping items for Ship Central	Ship Central Only
* If disabled, you can pack or ship through the NetSuite UI using any carrier without generating labels.			
Pick, Pack, and Ship feature = Disabled			
Ship through the app		Print or save labels using shipping items for Ship Central	Ship Central Only
Ship within NetSuite UI		Print or save labels using shipping items for Ship Central (FedEx, UPS, or USPS only)	Integrated Shipping Only or Integrated Shipping Per Order (FedEx, UPS, or USPS only)
* If disabled, you can ship through the NetSuite UI using any carrier without generating labels.			

- **Pick, Pack, and Ship** – If disabled, you can track orders for shipping only.

Regardless of your setting for this feature, the bulk fulfillment option does not apply to direct fulfillments with Ship Central.

- **Shipping Label Integration** – If disabled, you cannot print or save shipping labels regardless of the shipping item.

If enabled, you can generate shipping and return labels on item fulfillments for orders that use shipping items that you create for Ship Central. In case you do not use these shipping items, you can ship the orders, but without generating labels through Ship Central. These capabilities apply to FedEx, UPS, or USPS only. For more information about shipping items, see [Creating Shipping Items for your Shipping Services](#). To choose between PDF and ZPL label format for printing, see [Setting Ship Central Preferences](#).

 **Note:** For other carriers, you can ship and generate labels through the app using shipping items created for Ship Central only.

This feature enables other shipping options, including international shipping and third-party billing, among others. For more information, see [Enabling Features for NetSuite Ship Central](#).

- **PrintNode integration** – Without PrintNode integration, you can view a soft copy of generated shipping labels and save it to your file cabinet. Whether you ship through the NetSuite UI or app, you must use shipping items for Ship Central. For more information about printing or saving labels, see the help topic [SCM Mobile Printing](#).
- **Shipping Mode** – To set this preference, see [Setting Up Direct Packing and Shipping on Fulfillments](#) or [Setting Ship Central Preferences](#).

To pack or ship directly through the NetSuite UI:

1. Before you pack or ship, you can review the order to verify that it has the following settings on the **Shipping** subtab:
 - The shipping address must be correct, including the attention, phone number, and addressee details.
 - The shipping method and cost from FedEx, UPS, or USPS must be set. The method must be associated with a shipping item created for Ship Central if you want to print or save labels.
 - The **Integrated Shipping Mode** box must be checked.
2. To pack orders, do one of the following:

 **Tip:** To ship directly through the NetSuite UI, begin from step 5 instead. You may do so if you do not have the packing option or if you want to ship orders packed through the app.

- To open an existing fulfillment, go to Transactions > Order Management > Fulfill Orders > List. On the Item Fulfillments page, click **Edit** next to the fulfillment.
 - To create a fulfillment from a single order, access the sales or transfer order, and then click **Fulfill**.
3. On a fulfillment record in edit mode, in the **Set Shipment Status To** or **Status** field, select **Packed**.
 4. On the **Items** subtab, you can check the **Fulfill** box for each item and enter the inventory details.
 5. On the **Packages** subtab, do the following:
 - a. In the **LBS** or **KG** column, enter the weight in pounds or kilograms, respectively.
 - b. To add package details, click the package details icon.
Then, on the popup window, in the appropriate fields, you may enter the following details: insurance amount, shipment references, delivery confirmation, and dry ice weight, among others.
 - c. Click **OK**.
 6. Click **Submit** or **Save**.
 7. To print, click the printer icon at the header. Then from the list, select **Print** for packing lists or **Print item labels**.
 8. When you are ready to ship the orders, do one of the following:
 - To ship packed orders, open the existing fulfillment in edit mode. Then, in the **Status** field, select **Shipped**.
 - To ship only, open the sales or transfer order in edit mode, and then click **Fulfill**.

9. For orders that you ship only, see step 4 to view or add packages to the generated item fulfillment.
10. Optionally, you can click the Shipment Details icons to view or add shipping options that may be available from your carrier. Some options depend on rules or preferences that you set up.
11. Click **Save**.
12. To print shipping labels, click the printer icon. Then, from the list, select **Print Label**.

Generating and Printing Return Labels

You can generate and print a return label during local shipment processing for each package through the app. You can also print multiple labels at a time after you have shipped the packages. The time frame for return label generation may vary depending on your carrier.

Before you print or save a label, you can choose the shipping method you want to use for returns. Otherwise, the shipping method remains the same as the one used for the shipping label.

To set up return label generation and return addresses, see [Return Label Setup for Local Shipping](#).

To print return labels directly from fulfillment records for UPS, USPS, or FedEx, see [Direct Packing or Shipping on Fulfillments](#).

If you want to create and send return labels from generated RMAs, see [Generating Return Labels from an RMA](#).

To generate return labels for one shipment or package at a time, see [Shipping Orders Through the App](#).

To generate and print return labels:

1. From the Options menu, tap **Generate Return Label**.
2. On the Print Return Label page, do one of the following:
 - In the **Scan/Enter Label** field, scan or enter the shipping label, order number, tracking number, or pack carton. If you enter the data, tap **Print Return Label** to proceed.
 - From the Labels list, tap the shipping label for which you want to generate and print return labels.

The app displays a popup window to confirm additional charges that may apply to return labels.

3. On the popup window, you can do the following:
 - a. Tap the box next to each package that you want to select.
 - b. If you want to choose a different method for the return shipping, tap **Change Shipping Method**. After you select a method, the Print window appears. Skip step 3.c.
 - c. Tap **Confirm & Generate**.
 - d. On the Print popup window, you can change the default settings for the printer, template, and number of copies.

Tip: Without PrintNode integration, be sure to select **Print to File** in the **Printer** field.

- e. Tap **Print**.

After the return labels have been generated and printed or saved, a Success message appears with the printing details.

In case you want to void return labels, see [Voiding Shipping and Return Labels](#).

Generating Return Labels from an RMA

Within the NetSuite UI, you can generate labels for sales orders that have shipping methods associated with shipping items created for Ship Central. Customer RMAs may be generated from orders fulfilled through the app or NetSuite UI and must be in Pending Receipt status. This capability doesn't support standalone return authorizations even if you assign them a Ship Central shipping method.

To enable return labels for Ship Central, see [Return Label Setup for Local Shipping](#).

After you generate a return authorization through one of the following ways, you can generate the return shipping label:

- From a sales order in Pending Billing status
- From an open invoice created from a sales order or associated item fulfillment

If you want to change the shipping method on the generated RMA, make sure that you select one created for Ship Central. To generate RMAs from fulfilled sales orders, see the help topic [Entering a Linked Return Authorization](#).

When you enter your customer's email address on the generated RMA, Ship Central uses it to send the return label. It also sends notifications in case you void the label or delete the RMA. For information about voiding labels, see [Voiding Shipping and Return Labels](#).

To set up return addresses, see [Entering Company Information for Shipping](#).

To generate return labels from an RMA:

1. To access your generated RMA, go to Transactions > Customers > Issue Return Authorization > List.
2. From Return Authorizations list, click **View** or **Edit** next to the RMA you want to open.
3. On the Return Authorization page, make sure that the **Created From** field displays the correct order transaction that you want to process.
4. (Optional) To change the shipping method, do the following:
 - a. Click the **Shipping** subtab.
 - b. In the **Return Shipping Method** field, you can select a different shipping method that must also be associated with a Ship Central shipping item.
5. (Optional) To include a return reason, do the following:
 - a. Click the **Custom** subtab.
 - b. In the **Reason for Return** field, enter a reason for returning the order.

The reason appears on the email notification you send to your customer, as described in step 6.

6. (Optional) To send a copy of the return label to your customer, do the following:
 - a. Click the **Communication** subtab.
 - b. (Optional) Check the **To Be Emailed** box.
 - c. In the field beside this box, enter the customer's email address or multiple addresses separated by a comma.
7. After you update any RMA details, click **Save**.
8. Click **Generate Return Labels**.
9. On the confirmation message at the header, you can view the return shipping label number.
On the **Communication** subtab, you can view the email sent to your customer.

If you send return labels to customers, they can access it through the return label number that appears as both the link and password. They can print or save the return label from their end.

Within the NetSuite UI, you can access generated return labels from your file cabinet.

Voiding Shipping and Return Labels

Aside from using the Void option within the shipping process flow, you can void shipping and return labels through the Void Shipping Label facility.

For local shipments for which you can enable the return label preference, you can void shipping and return labels separately. Note the following for orders or shipments that have both a shipping and return label:

- If you void a shipping label, remember to void its associated return label.
- If you do not use the label ID to search for labels and the order has both a shipping and return label, the app voids the return label first. You can use the same criteria, a different one, or the label ID to search for and void the associated shipping label.

To void shipping and return labels:

1. On the app, tap the menu icon, and then tap **Void Shipping Labels**.
2. On the Void Shipping Label page, do one of the following:
 - In **the Scan/Enter Label ID** field, scan or enter the label ID, order number, tracking number, or carton number. If you enter the data, tap **Void Shipping Label** to proceed.
 - From the list of labels, tap the row of the shipping or return label that you want to void.

The app displays a reminder to check with your carrier if any fees apply when you void labels.
3. On the Warning popup window, review the reminders and voiding details, and then tap **Confirm**.
4. If you want to view the list of voided labels on the NetSuite UI, do the following:
 - a. Using the Ship Central Manager role, go to Ship Central Reports > Shipping Labels > Voided Labels Search.
 - b. On the Voided Labels List: Results page, you can apply filters to narrow down the list of voided labels.

On the app, you can process the shipment or order again for shipping with a new shipping and return label. For more information, see [Shipping Orders Through the App](#).

Generating and Printing Shipping Manifests

After you process shipments or orders through the app, you can generate shipping manifests. On the app, you can send a request to generate shipping manifests from carriers for one or more shipments. In one manifest, you can combine shipments or orders that have the same shipping method, carrier, and date. You can include up to 1200 labels to process at a time.

The app validates the shipping date to make sure that you can generate manifests only for current or future dates. If you use Mobile Printing, you can also print the shipping manifest.

By default, you can print shipping manifests in PDF format. To use the ZPL print template or specify a default printer, you can update the Shipmanifest Report type. For instructions, see the help topic [Setting Up Printing Settings on Print Reports](#).

In your file cabinet, you can view generated shipping manifests in the PrintDocuments folder within the Ship Central bundle. You can access this folder through the following path: SuiteBundles > Bundle <Ship Central bundle ID>> com.netsuite.packship > src > shipping > PrintDocuments. The app assigns the following name to shipping manifests in PDF format: **ShipManifest** <shipping label ID>.

After you generate a manifest, you can no longer void the associated shipping labels.

To generate and print shipping manifests:

1. On the app, tap the menu icon, and then tap **Generate Manifest**.
2. On the Generate Shipping Manifest page, do either of the following:
 - To generate for a single label, in the **Scan/Enter Label ID** field, scan or enter the label ID, order number, tracking number, or carton. Alternatively, from the Select Label list, you can tap the box next to a label.
 - To generate for multiple labels at the same time, from the Select Label list, tap the box next to the labels you want to select.
3. Tap **Generate Shipping Manifest**.
4. If you use Mobile Printing, on the Print popup window, you can enter your printing preferences, and then tap **Print**.

Scheduling Pickups with Carriers

After you ship orders through the app, you can also send a pickup request. Your carrier sends a confirmation notice to the email address of the contact person that you specify on the request.

Orders shipped through the NetSuite UI can't be accessed and included in pickup requests available through the app only.

To schedule pickups with carriers:

1. From the Options menu, tap **Schedule Pickups** to open its mobile page.
2. To include one or more shipping labels in a pickup request, do either of the following:

 **Tip:** If you can't find a label or order, you can change the date filter to **All** or select another number of months. Tap the table icon to open the popup window with the **Filter By Date** setting. For more information, see the help topic [Filtering Table Data by Date](#).

If you can't find a shipping label, you can also verify that it hasn't been voided. For information about voiding labels, see [Voiding Shipping and Return Labels](#).

- In the **Scan/Enter Label** field, scan or enter each label ID or order number. If you packed the orders through the app, you can also provide each pack carton ID.
 - From the Label list, tap the box next to each shipping label ID.
3. Tap **Schedule Pickup**.
 4. On the Pickup Schedule popup window, enter the pickup request details in the following fields:
 - **Contact Name** – Enter the name of the contact in charge of the packages for pick up.
 - **Contact Number** – Enter the phone number of the contact person.
 - **Email** – Enter the email address to which you want the carrier to send pickup notifications.
 - **Earliest Pickup Date and Time** – Enter the earliest possible date and time that your pickup can be scheduled.
 - **Latest Pickup Date and Time** – Enter the latest possible date and time that your pickup can be scheduled.
 5. Tap **Submit**.

If you exceed any carrier limits, you may update your pickup details, such as the number of shipments or schedule, and retry.

A confirmation popup window appears with a pickup request number generated by your carrier. In the notification email from your carrier, you can view the confirmed date and time of your pickup schedule.

Ship Central doesn't track whether a pickup has occurred. On associated item fulfillments, you can view and track delivery details. If you want to cancel a pickup, see [Viewing or Canceling Scheduled Pickups](#).

Viewing or Canceling Scheduled Pickups

You can view submitted pickup requests to look for any upcoming ones. Before the earliest pickup time of a scheduled pickup, you can submit a cancellation request.

The app automatically cancels a pickup request when all associated shipping labels have been voided. For more information about voiding labels, see [Voiding Shipping and Return Labels](#).

You may ask your carrier for any guidelines or limitations regarding pickup cancellations. After you submit a pickup request, you can't add or remove shipments but you can cancel it. If you try to create a new request, the original scheduled date and time may not be available anymore, depending on your carrier.

To view or cancel scheduled pickups:

1. From the Options menu, tap **Manage Pickups**.
2. On the Manage Pickups page, tap **View Pickup Details** or **Cancel Pickup**.
3. On the next page, do one of the following:

 **Tip:** If you can't find a request or to find earlier requests, change the date filter to **All** or to another number of months. Tap the table icon to open the popup window with the **Filter By Date** setting. For more information, see the help topic [Filtering Table Data by Date](#).

- From the Pickup list, tap the pickup request number.
Note that Date columns appear in UTC format and follow your Time Zone general preference.
 - For pickup cancellations only, in the **Scan/Enter Label** field, scan or enter a shipping label, order number, or pickup request number. For orders packed through the app, you can also provide the pack carton ID. If you enter the data, tap **Cancel Pickup** to proceed.
4. On the popup window, you can view the details, and then tap **OK** to confirm and close it.

Shipments removed from a canceled pickup can be included in a new pickup request. For instructions, see [Scheduling Pickups with Carriers](#).

Viewing Packing and Shipment Details

After you fulfill orders through the Ship Central app, you can review the details on order transactions and fulfillment records. Ship Central provides a separate fulfillment details record from which you can search for and view fulfillment details of multiple orders at the same time. You can view this record after you pack cartons or transfer cartons onto pallets on the app. After you ship orders on the app, you can view which orders are included in shipments and their shipping details.

Note that large amounts of order updates from the app may be processed through a job and not in real time. Wait for the job to complete before you can view updates to fulfillment details and status on the NetSuite UI. You can activate either or both of these rules to specify your transaction limit for real-time

updates: **Allow real-time packing updates to fulfillments** and **Allow real-time shipping updates to fulfillments**. For instructions, see [Configuring Ship Central Rules](#).

To view packing and shipment details:

1. Using the Ship Central Manager role, go to Ship Central Outbound > Fulfillment Details > Fulfillment Details List.
2. On the Fulfillment Details page, you can define the following filters:
 - **Location** – Select the location associated with the packed orders or shipment.
 - **Packed Through** – To view and filter shipped orders, select the app or tool used to pack them: **Ship Central Only** or **WMS & NetSuite UI**.
 - **Fulfillment Status** – Select one of the following item fulfillment statuses: **Packed** or **Shipped**.
 - **Carton #, Pallet #, Shipment #, Master Tracking #, Tracking #, Pallet Tracking #, or Transaction #** – In any of these fields, you can provide the number. For the transaction, you can enter the sales or transfer order number.
 - **Include Lot/Serial #** – Check this box if you want to display the lot or serial number associated with the item. If you check this box, you must enter one of the following: a carton, pallet, or transaction number.
 - Enter or select a date in both of the following fields:
 - **Fulfillment Creation Date From** – The start date of a date range based on the fulfillment creation date.
 - **Fulfillment Creation Date To** – The end date of a date range based on the fulfillment creation date. Be sure that it does not exceed 180 days from the start date.
3. Click **Refresh** each time you change one or more filters.
4. On the **Ship Details** subtab, you can view the list of pack cartons and their corresponding packing and shipping details.
5. Optionally, to generate and save a soft copy of the results, click **Export - CSV**.

Tracking Delivery of Shipped Packages

On item fulfillments, you can track the delivery details of packages that you ship through app. For each package, you can view the delivery status and history provided by your carrier.

This capability does not extend to tracking of returns.

To track delivery of shipped packages:

1. Go to Transactions > Order Management > Fulfill Orders > List.
2. On the Item Fulfillments list, click **View** next to the Shipped fulfillment associated with the package.
3. On the Item Fulfillment page, click the **Packages** subtab.
4. Next to the package, click the Package Details icon.
5. On the Package Details popup window, in the **Delivery Details** field, click **View**.

NetSuite Ship Central FAQs

See the questions and answers below for information about NetSuite Ship Central:

What third-party applications can I use with the Ship Central app?

Depending on the app capabilities that you want to use, you can set up the following additional requirements:

- For shipping of packed orders on the app, NetSuite integrates with ShipEngine to connect with shipping services from your carriers.
- For printing of labels, lists, and related documents, NetSuite integrates with PrintNode to connect with printers in your network. Without PrintNode integration, you can only save a soft copy of labels and documents.

The same PrintNode integration is also used for weighing scale support.

The printers, bar code scanners, or weighing scales that you use may include their own software requirements.

For more information, see [NetSuite Ship Central Setup](#), [Bar Code Scanning for Ship Central](#), or [Mobile Printing and Weighing Scale Setup](#).

How do I know if my devices are supported by PrintNode?

PrintNode supports several ZPL printers for labels and regular printers for lists and documents in PDF format. It also supports a variety of weighing scales. To make sure that you get the latest guidelines, refer to the following PrintNode articles.

- [Is My Printer Supported?](#)
- [Supported Scales](#)

What are the setup requirements for PrintNode integration?

Before you set up PrintNode, you can prepare your devices first, including computers, printers, and weighing scales. Verify that the drivers are up to date. For printers, you may also specify your printing preferences, such as the page size and orientation. For more information, see the help topic [Mobile Printing Requirements for PrintNode Integration](#) or [Weighing Scale Support Requirements](#).

To use NetSuite Ship Central with PrintNode, start your setup by creating a PrintNode account. Then, download and install the PrintNode client on all local computers associated with your printers and weighing scales. Verify that your active devices appear in your PrintNode client. For instructions, see [Installing the PrintNode Client](#).

After setting up your PrintNode client and devices, enable Mobile Printing and Weighing Scale Support in your NetSuite account. To integrate the client with your NetSuite account, provide your active PrintNode API key. To connect your computers, safelist the IP addresses in your NetSuite account. Then, add and set up your printers in NetSuite. For instructions, see the help topic [Mobile Printing Setup Procedures](#).

If you encounter setup errors, see the help topic [Troubleshooting Mobile Printing](#).

I use NetSuite WMS with Mobile Printing, are there additional PrintNode requirements for NetSuite Ship Central?

If you enable Mobile Printing for NetSuite WMS, you do not have to enable it separately for NetSuite Ship Central. If you want to enable Weighing Scale Support, you can set up your weighing scales through the same PrintNode client. For more information, see the help topic [Weighing Scale Support](#).

For Mobile Printing, if you want to use different printers, printing settings, or custom templates, you can complete the required setup tasks in NetSuite. For more information, see the help topic [SCM Mobile Printing](#) or [Shipping Labels and Documents for Mobile Printing](#).

How do I know if ShipEngine supports my carriers and carrier services?

NetSuite Ship Central supports shipping services for local and international shipments. Currently, Ship Central does not support carrier services for LTL shipping. For an overview of available shipping services, see [NetSuite Ship Central](#).

ShipEngine enables you to connect with multiple carriers and their shipping services, which may change at any time. To make sure that you get the latest guidelines from ShipEngine, see [Connect ShipEngine and Get All These Integrations](#).

What are the setup requirements for ShipEngine integration?

To use NetSuite Ship Central with ShipEngine, note the following requirements and tasks:

1. Create a ShipEngine account within NetSuite.
2. Within your NetSuite ShipEngine account, provide your billing details and connect to your carrier accounts.
3. Sync your NetSuite account.
4. Enable the NetSuite Ship Central plug-in.
5. If you want to enable additional shipping capabilities, do the following:
 - a. Enable the capability or preference you want to use: International shipping, Third-party billing, or default company logo for printing.
 - b. Re-sync your NetSuite account.
6. Create shipping items for your shipping services.

To start your ShipEngine integration, see [Registering and Integrating Your Carrier Accounts](#) and [NetSuite ShipEngine Account Help Resources](#).

For more information about additional shipping capabilities, see [Ship Central Preferences](#).

I created a ShipEngine account through NetSuite Ship Central. Can I use my existing API key for a different integration instead of Ship Central?

No, the API key cannot be accessed and used outside of Ship Central. API keys generated through Ship Central are assigned to NetSuite ShipEngine accounts to integrate exclusively with Ship Central.

If your API key gets corrupted, especially due to using it outside of your NetSuite ShipEngine account, see [Account Re-registration](#) or [Managing Your Shipping Integration](#).

Can I use the app to pack items only, then ship items outside of the app or through a different shipping provider?

Yes, but you should check with your NetSuite account manager. You can use Ship Central Packing only and use another provider to ship items outside of the app. Setting up the ShipEngine integration capability for shipping is not required to pack items through the app.

For example, if you use NetSuite WMS, you can use the WMS Shipping Integration or Quick Ship instead, for shipping. For more information, see the help topic [Shipping Orders](#).

Can I process international shipments without tax?

Yes, you can choose the **No Tax** option for the **Charge Tax To** setting for international shipments. With this option, you can skip entry of tax identifier details. You can configure this setting for locations on a preference record or for specific shipments on the app. For instructions, see [Setting Ship Central Preferences](#).

You can check with your carriers if they can process international shipments without tax. This setting is not available for direct shipments through the NetSuite UI.

Can I specify the importer's address for international shipments?

Yes, you can specify the importer's address for international shipments if you set the **Charge Tax To** preference to **Importer of Record**. On customer records of your recipients, you can enter multiple addresses on the **Address** subtab and select a default shipping address.

When you ship through the app, you can tap the **Add Customs Details** to select any of these addresses for the importer. By default, this **Address of Importer** field shows the ship to address on the order. The address you select in this field doesn't go through address validation during shipment processing. It appears on commercial invoices and doesn't replace the order or ship to address.

For instructions, see the following topics:

- [Tax Setup for International Shipments](#)
- [Creating a Customer Record](#)
- [Shipping Orders Through the App](#)

Through the app, can I ship to a P.O. box address?

Yes, using USPS shipping services, you can ship items to a P.O. box address through the mobile app. You can also ship through FedEx if you use their Ground Economy (formerly called FedEx SmartPost) service or UPS if you use their SurePost service. Contact your carrier for information, such as package limits, delivery times, and rates, about these services.

For existing NetSuite ShipEngine accounts, if you have newly added SmartPost or SurePost to your carrier account, you can sync your carriers and create shipping items within NetSuite. For instructions, see [Managing Your Shipping Integration](#).

You can also ship military and diplomatic mail to Army Post Office (APO), Fleet Post Office (FPO), or Diplomatic Post Office (DPO) addresses.

How is the paid address validation service different from the standard one available within Ship Central?

The paid address validation available from ShipEngine provides the following capabilities that are not included in the standard validation:

- Ability to validate order or order line shipping addresses before you process orders for shipping
- Detailed status and failure messages

To view the list of messages, see [Address Validation Messages](#).

Unlike in the standard address validation, it does not suggest addresses that match the shipping address you provide. For more information about the paid service, see [Validating Shipping Addresses on Orders](#). For information about the standard service, see [Shipping Address Validation](#).

How does Bulk Shipping differ from the regular shipping flow?

On the app, Bulk Shipping for sales orders lets you generate shipping labels and related documents for multiple shipments at the same time. A batch of shipments for bulk shipping may include local and international shipments from different carriers. In your file cabinet, you can find the soft copies with filenames that have the – **Batch** suffix.

Bulk Shipping doesn't support other system rules and preferences that you can enable for the regular shipping flow. These include insurance, package codes, shipment references, additional shipping options,

and best rates, among others. You cannot rerate, unless you use the rate shopping facility within the NetSuite UI.

For international shipments, you can't change details required by customs, billing information, and tax charging. The app follows your settings from applicable preference records.

The app applies the Started shipping status to orders that you partially process through one shipping option. You can't access these orders and try to process them through the other shipping option.

As with the regular shipping flow, bulk shipping updates item fulfillments to Shipped status, along with the tracking number and actual shipping cost.

For more information, see [Generating Labels Through Bulk Shipping](#).

NetSuite ShipEngine Account Help Resources

How can I get assistance when setting up or when I encounter issues within my NetSuite ShipEngine account?

On [ShipEngine's Help Center](#), you can find the following topics related to requirements or capabilities supported within NetSuite Ship Central:

1. To set your billing details, see [ShipEngine Carriers US](#).
If you choose to add funds, make sure that you always have a sufficient amount to cover all shipping costs and charges.
2. To connect your carriers, see [Connect Your Carriers](#).
3. For supported carriers, to add a company logo and assign it as the default logo, see [Create Custom Shipping Labels With Images/Branding](#)
4. For international shipping documents, if your carrier requires a letterhead and signature, you can upload them accordingly. See [FedEx Integration Requirements](#).
5. For information about ParcelGuard for your NetSuite ShipEngine account, see [ParcelGuard](#).

For further assistance or inquiries, contact NetSuite Support.

For troubleshooting guidelines on common issues during packing or shipping, see [Handling Common Packing and Shipping Issues](#)

Handling Common Packing and Shipping Issues

If you encounter issues when packing or shipping on the app, you can review the troubleshooting guidelines and instructions in this section.

Example 1. Issue

Unable to process shipments without a cost estimate due to the following errors

<list of issues>

You can check for missing or incorrect details. Verify that you can use the shipping method for your order.

Action: Verify that the order has the following details: valid shipping address, phone number, and addressee. On the order transaction, you can select the Calculate Rates icon to get an estimated shipping cost. For more information, see [Shipping Address Validation](#).

If the order contains all the required shipping details, review the carrier's guidelines for the shipping service or method. Make sure that you can use it for the shipment, its packages, and the destination.

For more information about shipping costs, see [Calculated Shipping Costs Within Ship Central](#).

Example 2. Issue

Issue: Shipping Partner (CUSTOMSCRIPT_PACKSHIP_SHIPPING_PLUGIN): GENERAL_ERROR An unexpected error occurred: Error: Unable to calculate rates.

On order transactions, this message may appear after you try to calculate the shipping cost on the Shipping subtab. It may be due to the shipping service or method set up on the shipping item or the shipping address details. You may also encounter this issue if the NetSuite account has an outdated NetSuite Ship Central SuiteApp.

Action: Check the version of the NetSuite Ship Central SuiteApp on your NetSuite account and whether it displays an Update Available reminder. To update SuiteApps, see the help topic [Installed Bundle Updates](#).

Review or update the shipping address details, including the addressee's name and phone number. For more information about shipping costs, see [Calculated Shipping Costs Within Ship Central](#).

You may also review the shipping item associated with the shipping method or service selected on the order transaction. For more information, see [Creating Shipping Items for your Shipping Services](#).

Example 3. Issue

A shipping carrier error occurred: Email entered is invalid

Update the record of the customer associated with the shipment to enter a valid email address. Some carriers, such as Australia Post and Direct Freight Express, require an email address to generate shipping labels and documents. For more information, see [Shipping Address Validation](#).
