This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Partners

- [Managing Partners](#)
- [Partner Commissions & Royalties](#)
- [Partner Reports](#)

Managing Partners

A partner is a company you have a business agreement with, but isn't a customer or vendor. You can create partner records for companies or individuals who bring business to your company.

If you do not have partner records enabled in your account, an administrator can enable them at Setup > Company > Setup Tasks > Enable Features (Administrator). Click the CRM subtab. In the Partners section, check the Partner Relationship Management box, and then save.

You can associate your promotion codes with partners. If a customer comes to your website from a partner website, that partner's code and promotion code are associated with the customer. The customer can then only use promotion codes associated with that partner.

You can also create commission plans using the Partner Commissions/Royalties feature that automatically calculates and pays commission to your partners. If the Multi-Partner Management feature is enabled, multiple partner entities can be assigned to a single customer record.

You can run reports to track partner activity and sales.

Creating a Partner Record

You can create partner records for companies and individuals that bring business to your company.

Partners are associated with sales transactions and with new leads, giving you information into your partnerships.

Important: Don't give access to email addresses or partners you don't recognize. It's also not safe to use generic email addresses like test@test.com.

To add a partner record:

1. Go to Lists > Relationships > Partners > New (Administrator).
2. Under Primary Information:
 - a. Select the custom form you want to use to create this partner record.
For information on custom forms, see the help topic [Creating Custom Entry and Transaction Forms](#).
 - b. To enter the name of this partner:
 - If this partner is a company, enter the name of the partner in the **Company Name** field.
 - If this partner is an individual, enter the name of the partner in the **Name** fields. You can also enter the partner's company in the **Company Name** field.

NetSuite uses the name to generate the partner ID in the **Partner ID** field. To enter a partner ID manually, clear the **Auto** box, and then enter the ID.
 - c. The **Partner Code** field displays the name entered in the **Partner** field. You can change this code.
When you associate customers with this partner, this code determines what customers see in your website, and what promotion codes they can use.
 - d. In the **Type** field, select either Company or Individual.
 - e. If this is an individual, enter the partner's job title.
 - f. Enter the name of this partner as it should appear on checks made to this partner.
 - g. If this partner is a subpartner, select the parent partner in the **SubPartner of** field.

- h. In the **Subsidiary** field, select the subsidiary to associate with this partner.

You cannot enter transactions for this partner until you assign a subsidiary.

This field appears only if you use NetSuite OneWorld.

When you select this partner on a transaction, NetSuite associates the transaction with this subsidiary. The partner can only see info tied to that subsidiary.

Note: When a transaction posts for this partner, you can't change the subsidiary selected on this partner record.

- i. In the **Category** field, select a category for this partner.
To create new partner categories, go to Setup > Sales > Setup Tasks > CRM Lists (Administrator).
 - j. In the **Comments** field, enter information about this partner.
3. Under Email | Phone | Address, enter the phone number, fax number and email address for this partner.
 4. Under Classification, enter the department, location, and class associated with this partner.
 5. On the **Relationship** subtab, attach a new contact to this record. Enter the contact information, and then click **Add**.

Note: If you want to attach an existing a contact, you must first save the record.

Communication

1. Use the **Phone Calls**, **Tasks**, and **Events** subtabs to quickly create and add activities associated with this customer.
See the help topic [Attaching Events, Tasks, and Calls to Records and Transactions](#).
2. On the **Files** subtab, select and add files from the File Cabinet associated with this customer.
Select **-New-** to upload a new file to the File Cabinet.
3. On the **User Notes** subtab, add any notes about this customer.

Address

1. Enter the partner's address.
For information about entering addresses on records, see the help topic [Entering an Address on a Record](#).
2. Click **Add/Edit** after each address.

Marketing

In the **Global Subscription Status** field, select the status you want to assign this partner.

If this partner has not subscribed or has unsubscribed to campaigns, set this status to **Soft Opt-In** or **Soft Opt-Out**. You cannot change a status set to **Confirmed Opt-Out**.

Note: Certain jurisdictions, such as the European Union (EU), have regulations about contacting entities without their explicit permission. Make sure your global subscription status follows the rules in the recipient's country or region.

Financial

1. In the **Tax ID** field, enter the partner's tax ID number.
2. If you use the **Partner Commissions/Royalties** feature, check the **Eligible for Commission** box to award commission to this partner.

When you check this box, NetSuite creates a new vendor record for this partner.

See the help topic [Partner Commissions & Royalties](#).

Preferences

1. In the **Email Preference** field, select the email format you want to use when you send email to this partner.
2. Enter the name as you want it printed on checks made to this partner.

If you use the Partner Access feature, you can give a partner access to your NetSuite account. An administrator can enable this feature at Setup > Company > Setup Tasks > Enable Features (Administrator). Click the Web Presence subtab, and under the Access section, check the Partner Access box.

Access

1. Click the **Access** subtab.
2. In the **Role** field, select the role you want to assign.
For information on partner roles, see [The Partner Center Role](#) and [The Advanced Partner Center](#).
3. Check the **Give Access** box.
4. Check the **Send New Access Notification Email** box to inform the user how to access your NetSuite account. The standard user access notification includes the email address to use for logging in to NetSuite. It also contains a URL so that the user can set up a NetSuite password.
5. If you want to let this partner give access to its sub-partners, check the **Can Give Login Access to Subpartners** box.
6. Click **Save**.

Note: After you save the record, you can preview the account. To preview the account, go to the **Access** subtab, and click the **Log in as partner** link.

You can use the preview to ensure the role given to the partner is set up correctly.

Best practice is to let users set up a NetSuite password for themselves. If you prefer to assign users' passwords, see [To manually assign a password](#):

Important: To revoke access, you should clear the **Give Access** box. If you want to inactivate all roles of the partner, and the partner is also a vendor, customer, or employee, you must revoke access and inactivate those records, too.

To manually assign a password:

1. Click the **Access** subtab.
2. Check the **Give Access** box.
3. In the **Role** field, select the role you want to assign.
For more information on partner roles, see [The Partner Center Role](#) and [The Advanced Partner Center](#).

4. Do not check the **Send New Access Notification Email** box.
5. Check the **Manually Assign or Change Password** box.
6. Enter a password for your user. As you type, NetSuite validates the characters against the password policy criteria and displays the results.

 **Note:** If you need more information, see the help topic [NetSuite Password Requirements](#).

7. Enter the password again for verification.
8. Check the **Require Password Change on Next Login** box to require the user to change the password on the next log in to NetSuite.

On the next log in, users see the Change Password page. Users cannot access other NetSuite pages until they create and save a new password.

This option protects your account from unauthorized access with generic passwords, and prepares your account for an audit.

 **Important:** The **Require Password Change on Next Login** box never displays with a check mark. When you check this box and save the record, NetSuite sets an internal flag. When the password is changed, the flag clears. If you check the box again and save, NetSuite resets the flag to require another password change.

9. If you want to let this partner to give access to its sub-partners, check the **Can Give Login Access to Subpartners** box.
10. Click **Save**.

 **Note:** After you save the record, you can preview the account. To preview the account, go to the **Access** subtab, and click the **Log in as partner** link.
You can use the preview to ensure the role given to the partner is set up correctly.

11. Tell your user the appropriate login page, email address to use for log in, and the assigned password. For security reasons, do not email the password.

The NetSuite login page for Partners is <https://system.netsuite.com/pages/customerlogin.jsp> or <https://system.netsuite.com/pages/login.jsp>. Users can enter system.netsuite.com in a browser, which resolves to the standard NetSuite login page.

System Information

1. Go to Lists > Relationships > Partners to display list of partners.
2. To see the partners you no longer do business with, check the **Show Inactives** box and then save. This record no longer appears in the Partners list.

Setting Up the Multi-Partner Management Feature

The Multi-Partner Management feature lets you assign more than one partner to a single customer record. When assigned, you can divide revenue for the purposes of partner commission or sales by partner reports.

An administrator can enable the Multi-Partner Management feature at Setup > Company > Setup Tasks > Enable Features (Administrator). Click the CRM subtab, and then under Partners, check the Multi-Partner Management box. Click Save.

The Multi-Partner Management feature makes the following changes:

- There is a Partners subtab on sales transactions and on customer records instead of a Partner field. Existing customers or sales transactions that are associated with a partner display that partner on the Partners subtab. This partner is marked as the primary partner, and the partner's contribution percentage is set to 100%.
- NetSuite renames partner categories to partner roles.
- Customers are listed under each of their associated partners on the Customers by Partner reports.
- Sales transactions are listed under each partner they are associated with on Sales by Partner and Sales Orders by Partner reports.
- You can use the Mass Updates functionality.

If you stop using the Multi-Partner Management feature, NetSuite maintains the partner data for transactions that were entered when you used the feature. This partner data ensures that commission payments and quota calculation remain accurate.

If you change the partner record on one of these transactions, NetSuite does not maintain the historical data. Also, partner commission data updates to match the new partner record.

Associating Partners With Customers and Transactions

Associating partners with customers and transactions lets you track the revenue from your partnerships.

If you have the Multi-Partner Management feature enabled, you can associate a partner with a customer or transaction. Open the customer or transaction record and select the partner in the Partner field.

To associate a partner with a customer or transaction:

1. Edit the record or transaction you want to associate a partner with.
2. On the **Relationship** subtab, click the **Partners** subtab.
3. In the **Partner** column, select one of the partners associated with this customer.
4. In the **Partner Role** column, select the role this partner plays in dealing with this customer.
5. If this is the primary partner for the customer, check the box in the **Primary** column.
You can have only one primary partner per customer.
6. In the **Contribution** column, enter the percentage of sales transactions for this customer that are used to calculate commission for this partner.

The total contribution percentage must equal 100%.

 **Note:** You can enter up to 4 decimal places in the **Contribution** column. If you enter more than 4 decimal places, rounding errors can occur.

For information on partner contribution, see [Overassignment and Adjustment Partners](#).

7. Click **Add**.
8. Complete these steps for each partner you want to assign to this customer or transaction.

When you enter a sales transaction, the partners who are associated with the customer are selected on the transaction, by default.

The Partner Contribution permission controls whether you can change partner contribution percentages on customer records and sales transactions. This permission is available only if you use the Multi-Partner Management feature. For more information, see the help topic [NetSuite Roles Overview](#).

Overassignment and Adjustment Partners

With the Multi-Partner Management feature, you can decide how much of a sales transaction is used to calculate commission for each partner. The total contribution percentage assigned to partners on a single transaction or customer can't total more than 100%, unless you use an adjustment partner. With customers or transactions where the partner contribution exceeds 100%, add this adjustment partner and assign it the negative percentage amount that exceeds 100%.

For example, Wolfe Electronics assigns two partners to a sales order each with 100% contribution percentage. Wolfe then adds the adjustment partner and assigns it -100%. Each partner on the order receives commission based on the entire value of the order.

Before you create an adjustment partner, first create an adjustment partner role.

To create an adjustment partner role:

1. Go to Setup > Sales > Setup Tasks > CRM Lists.
2. Click **New**.
3. Click **Partner Category/Role**.
4. In the **Partner Category/Role** field, enter **Adjustment**.
5. Click **Save**.

To create an adjustment partner record:

1. Go to Lists > Relationships > Partners > New.
2. In the **Company Name** or the **Name** field, enter **Adjustment Partner**.
3. Under Primary Information, in the **Category** field, select **Adjustment**.
4. Click **Save**.

Now, you can assign this partner to customers and sales transactions.

The Partner Center Role

NetSuite offers a standard Partner Center role for partners. The Partner Center role lets your partners view the Sales by Partner and Sales by Promotion Code reports, partner records and promotion codes. If you use the Partner Commission & Royalties feature, your partners can also view commission reports.

If you use the Advanced Partner Access feature, a Advanced Partner Center role is also available. This role gives partners access to more records, transactions, and reports. For information on the Advanced Partner Center role, see [Assigning the Advanced Partner Center Role](#).

Assign the Partner Center Role

To assign the Partner Center role to a partner, the Partner Access feature must be enabled. An administrator can enable the Partner Access feature at Setup > Company > Enable Features (Administrator). Click the Web Presence subtab. Under the Access section, check the Partner Access box, and then save.

To assign the Partner Center role:

1. Go to Lists > Relationships > Partners.

2. Click **Edit** on the required partner record.
3. Click the **Access** subtab.
4. Check the **Give Access** box.
5. In the **Role** field, select **Partner Center**.
6. Check the **Send New Access Notification Email** box to inform the user how to access your NetSuite account. The standard user access notification includes the email address to use for logging in to NetSuite. It also contains a URL so that the user can set up a NetSuite password.
7. If you want to allow this partner to give access to subpartners, check the **Can Give Login Access to Subpartners** box.
8. Click **Save**.

Now, your partner can access information in your NetSuite account. When your partner logs in, they can update their profile and see reports on sales tied to your partnership.

You can preview what your partner sees by clicking View next to the partner record from the Partners list. Click the **Access** subtab, click the **Log in as partner** link.

Best practice is to let partners set up a NetSuite password for themselves. If you prefer to assign partners' passwords, see [Manually Assign a Password to a Partner](#) instead.

Important: If you use the Log in as partner link and make changes in your partner's account, NetSuite saves the changes.

Manually Assign a Password to a Partner

You should use the procedure in [Assign the Partner Center Role](#) that lets users set up a NetSuite password for themselves. However, if you prefer to assign a user's password yourself, use the following procedure.

To manually assign a password:

1. Go to Lists > Relationships > Partners.
2. Click **Edit** next to the user that you want to assign a role to.
3. Click the **Access** subtab.
4. Check the **Give Access** box.
5. In the **Role** field, select **Partner Center**.
6. Do not check the **Send New Access Notification Email** box.
7. Check the **Manually Assign or Change Password** box.
8. Enter a password for your user. As you type, NetSuite validates the characters against the password policy criteria and displays the results.

Note: If you need more information, see the help topic [NetSuite Password Requirements](#).

9. Enter the password again for verification.
10. Check the **Require Password Change on Next Login** box to require the partner to change the password on the next log in to NetSuite.

On the next log in, the partner sees the Change Password page. Partners cannot access other NetSuite pages until they create and save a new password.

This option protects your account from unauthorized access with generic passwords, and prepares your account for an audit.

Important: The **Require Password Change on Next Login** box never displays with a check mark. When you check this box and save the record, NetSuite sets an internal flag. When the password is changed, the flag clears. If you check the box again and save, NetSuite resets the flag to require another password change.

11. Click **Save**.
12. Tell your user the appropriate login page, email address to use for log in, and the assigned password. For security reasons, do not email the password.

The NetSuite login page for Partners is <https://system.netsuite.com/pages/customerlogin.jsp> or <https://system.netsuite.com/pages/login.jsp>. Partners can enter system.netsuite.com in a browser, which resolves to the standard NetSuite login page.

The Advanced Partner Center

The Advanced Partner Center role gives your partners access to more transactions and records than the standard Partner Center role.

For example, partners can create their own promotion codes, and track the commission they've earned. They can track their customer and contact records. They can also keep track of upcoming campaigns and view reports to stay on top of sales and support cases involving your partnership.

To assign the Advanced Partner Center role, an administrator must enable both the Partner Access and the Advanced Partner Access features. An administrator should go to Setup > Company > Enable Features (Administrator) > Web Presence subtab.

For information about assigning access to the Advanced Partner Center, see [Assigning the Advanced Partner Center Role](#).

By default, the Advanced Partner Center role combines many of the benefits of the Sales center and the Support center.

The table below illustrates the default permissions and levels for the Advanced Partner Center role.

Permission	View	Create	Edit	Full	None

Assigning the Advanced Partner Center Role

On partner records, you can assign partners the Standard Partner Center role or the Advanced Partner Center role. Or you can create a role by customizing the Advanced Partner Center role. For information about the Advanced Partner Center, see [The Advanced Partner Center](#).

When you assign partners the Advanced Partner Center role, they have access to the default records, transactions, and reports available in the Advanced Partner Center.

Assign the Advanced Partner Center Role

To assign the Partner Center role to a partner, the Partner Access feature must be enabled. An administrator can enable the Partner Access feature at Setup > Company > Enable Features (Administrator) > Web Presence subtab. Under the Access section, check both the Partner Access and the Advanced Partner Access boxes.

To assign the Advanced Partner Center role:

1. Go to Lists > Relationships > Partners.
2. Click **Edit** on the required partner record.
3. Click the **Access** subtab.
4. Check the **Give Access** box.
In the **Role** field, **Advanced Partner Center** is selected, by default. If you have customized the Advanced Partner Center role for this partner, select the name of that custom role here.
5. Check the **Send New Access Notification Email** box to inform the user how to access your NetSuite account. The standard user access notification includes the email address to use for logging in to NetSuite. It also contains a URL so that the user can set up a NetSuite password.
6. If you want to allow this partner to give access to subpartners, check the **Can Give Login Access to Subpartners** box.
7. Click **Save**.

Now, your partner can access information in your NetSuite account. When your partner logs in, the partner can update the profile and view reports based on sales related to your partnership.

You can preview what your partner sees by clicking **View** next to the partner record from the Partners list. Click the **Access** subtab, click the **Log in as partner** link.

It's best to let partners set up a NetSuite password for themselves. But if you prefer to assign user passwords yourself, see [Manually Assign a Password to an Advanced Partner Center Role](#) instead.

Important: If you use the Log in as partner link and make changes in your partner's account, NetSuite saves the changes.

Manually Assign a Password to an Advanced Partner Center Role

You should use the procedure in [Assign the Advanced Partner Center Role](#) that lets users set up a NetSuite password for themselves. However, if you prefer to assign a user's password yourself, use the following procedure.

To manually assign a password:

1. Go to Lists > Relationships > Partners.

2. Click **Edit** next to the user that you want to assign a role to.
3. Click the **Access** subtab.
4. Check the **Give Access** box.

In the **Role** field, **Advanced Partner Center** is selected by default. If you have customized the Advanced Partner Center role for this partner, select the name of that custom role here.

5. Do not check the **Send New Access Notification Email** box.
6. Check the **Manually Assign or Change Password** box.
7. Enter a password for your user. As you type, NetSuite validates the characters against the password policy criteria and displays the results.

 **Note:** If you need more information, see the help topic [NetSuite Password Requirements](#).

8. Enter the password again for verification.
9. Check the **Require Password Change on Next Login** box to require the user to change the password on the next log in to NetSuite.

On the next log in, users see the Change Password page. Users cannot access other NetSuite pages until they create and save a new password.

This option protects your account from unauthorized access with generic passwords, and prepares your account for an audit.

 **Important:** The **Require Password Change on Next Login** box never displays with a check mark. When you check this box and save the record, NetSuite sets an internal flag. When the password is changed, the flag clears. If you check the box again and save, NetSuite resets the flag to require another password change.

10. If you want to allow this partner to give access to subpartners, check the **Can Give Login Access to Subpartners** box.
11. When you have finished entering information, click **Save**.
12. Tell your user the appropriate login page, email address to use for log in, and the assigned password. For security reasons, do not email the password.

The NetSuite login page for Partners is <https://system.netsuite.com/pages/customerlogin.jsp> or <https://system.netsuite.com/pages/login.jsp>. Users can enter system.netsuite.com in a browser, which resolves to the standard NetSuite login page.

Your partner now has access to everything they need without gaining access to anything you don't want them to see. You can use the Partner Activity Summary and Partner Activity Detail reports to view what communication each partner has with customers.

 **Note:** With the Advanced Partner Center, you can give partners access to specific item records. On each item record, check the **Available in Partner Center** box. This option makes the item available to partners with permission to view, edit or create items. This box is clear by default.

You can customize the Advanced Partner Center role to allow access to any other transactions, records, and reports in NetSuite. Each time you customize the Advanced Partner Center role, you create a new role that you can assign to a partner. Customized Advanced Partner Center roles let you decide which partners can view, edit, or create specific records, transactions, and reports. To learn how to customize a role, see the help topic [Customizing or Creating NetSuite Roles](#).

You can preview what your partner sees by clicking **View** next to the partner record from the Partners list. Click the **Access** subtab, and then the **Log in as partner** link.

Important: If you use the Log in as partner link and make changes in your partner's account, NetSuite saves the changes.

Note: The Customize Role page for the Advanced Partner Center has a Partner Restriction field. This field lets you set the general level of access to give to partners. The field is set to **own and subordinates only** by default. If you use classifications, you can also set restrictions for departments, locations, and classes.

You can publish a specialized dashboard to the Advanced Partner Center. This dashboard would be available to all partners with the Advanced Partner Center role, and to all of their contacts. See the help topic [Publishing Dashboards](#).

Mass Updating Partners

When you enable the Multi-Partner Management feature, NetSuite makes the mass updates functionality available for partner information.

The following updates are useful when you want to add new and modify existing partner information:

- **Add Partner** – This update adds multiple partners to customers. Partners are added with 0% contribution percentage, but you can manually change the percentage as needed.
- **Remove Partner** – This update removes a partner from a customer or sales transaction.
The partner contribution percentage must be set to 0% to perform this update.
- **Replace Partner** – This update replaces an existing partner with another partner. NetSuite gives the partner the same contribution percentage as the partner being replaced.
When you perform this update, first select the partner you are replacing from the Replace Partner list. This filters the search results to show only those customers who include the partner being replaced.

Note: Only an administrator or user role with the following permissions can perform a mass update: Customers (Edit), Mass Update (Edit), and Perform Search (View).

To mass update a partner:

1. Ensure that the Multi-Partner Management feature is enabled (see [Setting Up the Multi-Partner Management Feature](#)).
2. Go to Lists > Mass Update > Mass Updates.
3. Expand **Sales Force Automation**.
4. Select the required partner mass update option.
5. Complete the mass update fields and criteria.

Partner Reports

The following partner reports are available in NetSuite. You can find partner reports under the Marketing heading on the Reports page.

Click a link below for more information:

- [Partner Activity Summary Report](#)
- [Partner Activity Detail Report](#)
- [Sales by Partner Summary Report](#)
- [Sales by Partner Detail Report](#)
- [Customers by Partner Summary Report](#)
- [Customers by Partner Summary Report](#)

For information on partner commission reports, see the help topic [Partner Commission Reports](#).

Partner Activity Summary Report

The Partner Activity Summary report gives an overview of each partner's activity with each customer. If you are a partner with access to the Advanced Partner Center, you only see activity related to the customers you do business with.

Activities are defined as tasks, events, notes, campaigns or messages involving the customer and partner. To see a break down of the activities included in this report, see the Partner Activity Detail Report.

A subtotal for each partner appears below the list of customers associated with the partner. This subtotal provides how much you or your partner has been working with your customers.

To view the Partner Activity Summary report:

Go to Reports > Marketing > Partner Activity.

You'll see a message that your report is loading. The status bar at the bottom shows the progress as your report loads. You can click Cancel Report next to the status bar if you want to stop the report from loading.

 **Note:** This report does not support reporting by period even when the Report by Period preference is set to All Reports. You can set the Report by Period preference at Home > Set Preferences > the Analytics subtab.

Partner Activity Detail Report

The Partner Activity Detail report lists each partner's activity with each customer. If you are a partner with access to the Advanced Partner Center, you only see activity related to the customers you do business with.

Activities are defined as tasks, events, notes, campaigns or messages involving the customer and partner. The Partner Activity Detail Report provides the type of activity in the Type column, and the title or details of the activity in the Note column. This report also lists the date of each action.

To view the Partner Activity Detail report:

Go to Reports > Marketing > Partner Activity > Detail.

You'll see a message that your report is loading. The status bar at the bottom shows the progress as your report loads. You can click Cancel Report next to the status bar if you want to stop the report from loading.

Note: This report does not support reporting by period even when the Report by Period preference is set to All Reports. You can set the Report by Period preference at Home > Set Preferences > the Analytics subtab.

Sales by Partner Summary Report

The Sales by Partner Summary report lists the sales total for each partner.

Sales are attributed to a partner when a partner is on the record of the customer who is making the purchase.

If you use the Multi-Partner Management feature, sales transactions are included under each partner that is associated with the sale. For more information, see [Setting Up the Multi-Partner Management Feature](#).

This report shows you which partners are bringing in the most revenue for your business.

To view the Sales by Partner Summary report:

Go to Reports > Sales > Sales by Partner.

You'll see a message that your report is loading. The status bar at the bottom shows the progress as your report loads. You can click Cancel Report next to the status bar if you want to stop the report from loading.

Sales by Partner Detail Report

The Sales by Partner Detail report lists each transaction according to the partner associated with the transaction. Partners are associated with transactions when a partner is selected on the customer's record.

If you use the Multi-Partner Management feature, a sales transaction is listed under each partner that is associated with the sale. For more information, see [Setting Up the Multi-Partner Management Feature](#).

This report shows you which partners are bringing in the most revenue, most transactions, or both for your business.

To view the Sales by Partner Detail report:

Go to Reports > Sales > Sales by Partner > Detail.

You'll see a message that your report is loading. The status bar at the bottom shows the progress as your report loads. You can click Cancel Report next to the status bar if you want to stop the report from loading.

Customers by Partner Summary Report

The Customers by Partner Summary Report shows you how many customers are associated with each partner. A customer is associated with a partner if the partner is selected in the Partner field on the customer record.

If you use the Multi-Partner Management feature, customers are included under each partner that is associated with the customer. For more information, see [Associating Partners With Customers and Transactions](#).

To see the Customers by Partner Summary report:

Go to Reports > Customer/Receivables > Customers by Partner.

You'll see a message that your report is loading. The status bar at the bottom shows the progress as your report loads. You can click Cancel Report next to the status bar if you want to stop the report from loading.

 **Note:** This report does not support reporting by period even when the Report by Period preference is set to All Reports. You can set the Report by Period preference at Home > Set Preferences > the Analytics subtab.

Customers by Partner Detail Report

The Customers by Partner Detail Report shows you which customers are associated with each partner and the status of the customers. It also shows the sales reps assigned to those customers. A customer is associated with a partner if the partner is selected in the Partner field on the customer record.

If you use the Multi-Partner Management feature, customers are listed under each partner that is associated with the customer. For more information, see [Associating Partners With Customers and Transactions](#).

To see the Customers by Partner Detail report:

Go to Reports > Customer/Receivables > Customers by Partner > Detail.

You'll see a message that your report is loading. The status bar at the bottom shows the progress as your report loads. You can click Cancel Report next to the status bar if you want to stop the report from loading.

 **Note:** This report does not support reporting by period even when the Report by Period preference is set to All Reports. You can set the Report by Period preference at Home > Set Preferences > the Analytics subtab.
