2025.2

December 17, 2025

Copyright © 2005, 2025, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software" or "commercial computer software documentation" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. Project 360 Dashboard

The Project 360 Dashboard SuiteApp provides project managers with consolidated metrics, reports, and resources in one place so they can keep projects on track and within the budget.

You can see all your key metrics and data points in a 360-degree project centric dashboard that pulls together records and reports from across various features of NetSuite. Monitor all your assigned projects, including snippets of performance indicators using a portfolio page, and drill down into focus pages for detailed project insights.

Using the SuiteApp, project managers can:

- Access and review key performance indicators for one or more projects in one place.
- Filter projects by name, client, project manager, and due date.
- View various information about the primary details of a project.
- Monitor and allocate resources, and see your most important tasks and deliverables.
- Keep track spending against the budget based on your project's current progress.
- Track client invoices and monitor revenue for a project.
- Analyze, gauge, and maintain profitability throughout a project.

The Project 360 Dashboard SuiteApp is available in every language that NetSuite supports. For more information, read the help topics [Configuring Multiple Languages](#) and [Choosing a Language for Your NetSuite User Interface](#).

The Project 360 Dashboard contains the following pages and portlets:

Page	Portlet
Project Portfolio	My Project Portfolio Portlet
Project Overview	■ Key Performance Indicators Portlet ■ Primary Information Portlet ■ Team Details Portlet ■ Project Documents Portlet ■ Client Contact Portlet
Resource Planning	■ Gantt Chart Portlet ■ Resource Allocation Chart/Grid Portlet ■ Milestones Portlet ■ Timesheet Tracking Portlet ■ Actual Hours vs. Planned Hours by Resources Portlet
Budget and EAC	■ Budget Portlet ■ Budget vs. Actuals by WBS Portlet ■ Budget vs. EAC by WBS Portlet
Billing and Revenue	■ Client Invoice Details Portlet ■ Client Contact Portlet
Financial	■ Client Invoices Portlet ■ Project Profitability Portlet ■ Profitability Report Portlet

Page	Portlet
All Focus Pages	Common Portlets in Project 360 Dashboard ■ Project Information Portlet ■ Reminders Portlet ■ Take Action Portlet

To set up the SuiteApp, see [Setting Up Project 360 Dashboard SuiteApp](#).

Setting Up Project 360 Dashboard SuiteApp

You need to complete these steps before you can start managing projects:

Step	Related Help Topic
1. Enable the required features.	Prerequisites for Project 360 Dashboard SuiteApp
2. Install the SuiteApp.	Installing the Project 360 Dashboard SuiteApp
3. Configure the roles and permissions.	Roles and Permissions for Project 360 Dashboard
4. Set up the dashboard portlets.	Setting Up Project 360 Dashboard Portlets

Prerequisites for Project 360 Dashboard SuiteApp

Before you install the Project 360 Dashboard SuiteApp, make sure you enable the following features in your NetSuite account:

Tab	Field Group	Feature Name
Company	Projects	Projects
		Project Management
		Job Costing and Project Budgeting
		Advanced Project Profitability
		Activity Codes
		Advanced Project Budgets
SuiteCloud	SuiteBuilder	Custom Records

To enable features, go to Setup > Company > Enable Features.

For more information, see the help topic [Enabling Features](#).

Installing the Project 360 Dashboard SuiteApp

You need a NetSuite OneWorld and the required features enabled before you install the Project 360 Dashboard SuiteApp. See [Prerequisites for Project 360 Dashboard SuiteApp](#).

Using a standard or custom NetSuite role, you can install the SuiteApp from the SuiteApp Marketplace in two ways:

- Click the [Project 360 Dashboard](#) link to go directly to the SuiteApp Details page and click **Install**.
- Go to the SuiteApp Marketplace manually by following the steps below to install the SuiteApp.

To install the Project 360 Dashboard SuiteApp:

1. Go to SuiteApps.
2. In the **Search SuiteApps** field, enter **Project 360 Dashboard**.
3. Click the SuiteApp tile.
4. On the SuiteApp Details page, click **Install**.
5. Click **OK**.

For more information about installing SuiteApps from the SuiteApp Marketplace, see the help topic [Installing from the SuiteApp Marketplace](#).

Roles and Permissions for Project 360 Dashboard

Any standard or custom NetSuite role can use the Project 360 Dashboard SuiteApp if the Employee record has a Project 360 access level. See [Access Levels for Project 360 Dashboard](#).

However, roles without sufficient permissions cannot view accurate saved search results or access some data on records.

To set up permissions for custom roles, go to Setup > Users/Roles > Manage Roles and click **Edit** beside the custom role.

Make sure you add these permissions and access levels to the user's role:

Subtab	Permission	Access Level
Transactions	Invoice	View
	Bills	View
	Purchase Order	View
	Enter Vendor Credits	View
Reports	Project Profitability	View
List	Project	Edit
	Project Tasks	View
	Contacts	View
	Employee Record	View
	Departments	View
Setup	Bulk Time Entry Modification	Edit
	Custom List	View
	Other List	View
	Project Profitability Setup	View
Custom Record	Project 360 Dashboard Preference	View

For more information, see the help topics [Assigning Roles to an Employee](#) and [Customizing or Creating NetSuite Roles](#).

Setting Up Project 360 Dashboard Portlets

The Project 360 Dashboard portlets display data from various features of NetSuite. Some portlets on the SuiteApp need to be configured before they'll display any content.

You can also set preferences like color theme, fonts, chart theme, centers and dashboards, and other. The Project 360 Dashboard supports the Redwood Experience Theme. For more information, see the help topic [Personal Preferences for Appearance](#).

Ensure the required features are enabled before setting up the dashboard portlets, see [Prerequisites for Project 360 Dashboard SuiteApp](#).

Refer to the following setup guides for Project 360 Dashboard portlets:

- [Project Portfolio Portlets Set Up](#)
- [Project Overview Portlets Set Up](#)
- [Resource Planning Portlets Set Up](#)
- [Budget and EAC Portlets Set Up](#)
- [Billing and Revenue Portlets Set Up](#)
- [Financial Portlets Set Up](#)

Project Portfolio Portlets Set Up

The following table describes the tasks to set up the Project Portfolio portlets:

Portlet	Task
My Project Portfolio Portlet	■ Create a Project Record – Create a project record so you can track key deliverables for completion. Project records store information like customer, start date, and status. For more information, see the help topic Creating a Project Record. Ensure that project status is set. Only projects marked In progress, Awarded, or Pending display in the portlet. ■ Assign a Project Manager – Employees with full permissions to the project record need to assign a project manager so they can access the records and pages for the projects. For more information, see Assigning a Project Manager to a Project.

Project Overview Portlets Set Up

The following table describes the tasks to set up the Project Overview portlets:

Portlet	Task
Key Performance Indicators Portlet	■ Create a Project Budget – Set up a project budget to plan your spending for completing the project. The Budget vs. EAC gauge chart sources data from your project budget. To set up a project budget, see the help topic Creating a Budget from a Work Breakdown Structure. ■ For the Profitability gauge chart setup, see the requirement listed on Financial Portlets Set Up.

Portlet	Task
	The gauge chart displays the values and chart colors (green, amber, or red) when there are transactions associated to the project.
Primary Information Portlet	No prior setup is required. When you create a project record, the system automatically populates the project's primary information.
Team Details Portlet	■ Identify Project Team Resources – Identify an employee, a generic resource, or a vendor to include in your project so you can start delegating tasks. See the help topics Identifying an Employee as a Project Resource and Identifying a Vendor as a Project Resource. If you need to create a specific project resource role or a generic resource, see the help topic Working with Resources in Project Management. ■ Assign Resources to a Project – With the Resource Allocations feature enabled, you can allocate resources to individual projects or to directly assign resources to project tasks. See the help topic Assigning Resources with Allocations. For more information about enabling a feature, see the help topic Enabling Features.
Project Documents Portlet	No prior setup is required. When you create a project record, the system automatically displays the project documents attached to the project record.
Client Contact Portlet	■ Create a Contact Record – To create a new contact for individuals you do business with, read the help topic Creating a Contact. The portlet shows only a contact with a Primary Contact role. ■ Associate a Contact to the Customer Record – To associate a contact with the customer record, see the help topic Associating a Contact with a Record. Ensure to select the customer to which you associate the contact in the Customer field of the project record.

Resource Planning Portlets Set Up

The following table describes the tasks to set up the Resource Planning portlets:

Portlet	Task
Gantt Chart Portlet	■ Create a Project Schedule – Create a project plan to lay out the timeline for delivering the project. To create a project schedule, see the help topic Working with the Project Schedule. ■ Create a Project Task or Milestone Task – A Gantt chart requires at least one milestone task or project task to display the data on the portlet. To create a project task, see the help topic Creating a Project Task Record. To create a milestone task, see the help topic Creating Milestone Tasks.
Resource Allocation Chart/ Grid Portlet	■ Enable the Resource Allocations Feature – You must enable the Resource Allocations feature to install the Resource Allocation Chart/Grid SuiteApp. See the help topic Enabling Features. ■ Install the RACG SuiteApp – Install the Resource Allocation Chart/Grid SuiteApp 2.0 to access the features and display the data specific to RACG. See the help topic Installing the Resource Allocation Chart/Grid SuiteApp. ■ Grant New Custom Roles with Access to RACG – After customizing a role to access the Resource Allocation Chart/Grid, an Administrator must also add these new roles to the script deployment.

Portlet	Task
	For more information, read the help topic Granting Custom Roles Access to Resource Allocation Chart/Grid. ■ Run the Required Script – After granting access, you can proceed with running the PSA RACG SU Main script. See the help topic Running Scripts for Resource Allocation Chart/Grid.
Milestones Portlet	Create a Milestone Task – Create milestones to mark a significant progress toward the goal of the project. To create a milestone task, see the help topic Creating Milestone Tasks.
Timesheet Tracking Portlet	Enable the Required Feature – You must enable the Weekly Timesheets feature to view the data on the portlet. For more information, See the help topic Enabling Features.
Actual Hours vs. Planned Hours by Resources Portlet	■ Set Project Preferences – Check the Allow Time Entry and Create Planned Time Entries boxes on the Preferences subtab of the project record. ■ Assign a Resource to a Project Task – Assign a resource to a project task to generate the planned time. For more information, see the help topic Assigning Project Resources. The Actual Hours data on the graph are shown after the project managers approve the timesheets submitted for the project.

Budget and EAC Portlets Set Up

The following table describes the tasks to set up the Budget and EAC portlets:

Portlet	Task
Budget Portlet	■ Create a Work Breakdown Structure – Create a work breakdown structure to deconstruct and organize project deliverable into sizable parts. See the help topic Creating a Work Breakdown Structure. ■ Create a Project Budget – For more information, see the help topic Creating a Budget from a Work Breakdown Structure.
Budget vs. Actuals by WBS Portlet	
Budget vs. EAC by WBS Portlet	

Billing and Revenue Portlets Set Up

The following table describes the tasks to set up the Billing and Revenue portlets:

Portlet	Task
Client Invoice Details Portlet	No prior setup is required. Invoices and unbilled charges associated to the project appear on the portlet after creating the transaction.
Client Contact Portlet	This portlet is similar with the Client Contact portlet on the Project Overview page, which displays the information from the contact record you associate to the project. ■ Create a Contact Record – To create a new contact, read the help topic Creating a Contact. ■ Associate a Contact to the Project Record – To associate a contact with the project record, read the help topic Associating a Contact with a Record.

Financial Portlets Set Up

The following table describes the tasks required to set up the Financial portlets:

Portlet	Task
Client Invoices Portlet	No prior setup is required. The portlet displays the graph when there are invoices for the project to show.
Project Profitability Portlet	Enable the Required Feature – You must enable the Advanced Project Profitability feature to view the data on the portlet. For more information, see Prerequisites for Project 360 Dashboard SuiteApp .
Profitability Report Portlet	

Accessing Project 360 Dashboard

There are three different ways to access the Project 360 Dashboard. NetSuite displays a variable set of tabbed pages, called a center, based on the user's assigned role. Each NetSuite center provides, for users with related roles, the pages and links they need to do their jobs. See the help topic [NetSuite Standard Centers](#).

Any standard and custom NetSuite roles with sufficient permissions can access the Project 360 Dashboard using the following navigation path:

Center	Navigation
Classic Center	Lists > Relationships > Project 360 Dashboard
Project Center	Projects > Project 360 Dashboard
Executive Center	Sales/Marketing > Lists > Project 360 Dashboard

The Project 360 Dashboard supports only the NetSuite standard centers listed on the table.

To view the necessary permissions for using the Project 360 Dashboard, see [Roles and Permissions for Project 360 Dashboard](#).

Access Levels for Project 360 Dashboard

Access levels determine which information about the Project 360 Dashboard are shown depending on your role. The system filters the list of projects to show based on the access level given to you.

The **Project 360 Access Level** field is located on the **Human Resources** subtab of the Employee record.

Important: To use the access levels properly and with projects associated to proper financial segments, you must install the Project Classification SuiteApp. See the help topic [Installing the Project Classification SuiteApp](#).

The SuiteApp provides the following access levels:

Name	Description
Blank	This access level is automatically assigned to you if you install and use the Project 360 Dashboard SuiteApp for the first time.

Name	Description
	To access projects, an Administrator must change your access from Blank to other appropriate access level from the dropdown list. No projects are shown on the dashboard if your access level is set to blank.
Assigned to me	This access level is the default value of the Project 360 Access Level field on the employee record. You can select this access level to view only the projects that are assigned to you. It provides access to your projects if you have the following settings: ■ You are assigned as the project manager in the Project Manager field of your Employee record. ■ You have a project manager role shown on the Resource Details subtab of a project record.  Note: After you update or install version 1.1.0 of the SuiteApp, and the Project Manager box is checked on your employee record, your access level will be set to Assigned to me.
My Department	This access level lets you view all the projects in your department if the department name matches on both the Employee record and the Project record.
My Department Hierarchy	This access level lets you view all the projects in your Department and its subdepartments.
My Subordinates	This access level lets you view the projects of employees reporting to you. You must have a Supervisor role to view all the projects for your subordinates. To view the list of your subordinates, open your Employee record, go to Human Resources subtab then scroll down to the Subordinates subtab. An employee's supervisor is indicated on the Supervisor field of an Employee record.
All Projects	This access is intended for employees with non-project manager role who requires access to all projects of all the project managers in an organization. The employee with this access level can access all the projects with a status of In Progress, Awarded, and Pending.

Project 360 Dashboard Pages and Portlets

The Project 360 Dashboard SuiteApp lets project managers manage multiple projects in one place with readily accessible metrics, reports, and statuses. These project data related to tasks, resources, budget, and finance are organized on various focus pages.

A focus page provides a centered presentation of interrelated data contained in two or more portlets.

To access the dashboard, refer to the table listed on [Accessing Project 360 Dashboard](#).

Project managers can select a project from the [Project Portfolio](#) page, then drill down to the following focus pages:

- [Project Overview](#)
- [Resource Planning](#)
- [Budget and EAC](#)
- [Billing and Revenue](#)

■ Financial

In the Project 360 Dashboard, portlets are organized on individual focus pages according to the type of datasets they contain. Focus pages contain common portlets that provide quick access to various records and pages. See [Common Portlets in Project 360 Dashboard](#).

A portlet is a container that can be added to a user's dashboard, which requires a setup to display contents from one or more features of NetSuite.

Make sure you complete the required setup to view the data on the portlets for every focus pages. See [Setting Up Project 360 Dashboard Portlets](#).

Project 360 Dashboard Preference Page

The Project 360 Dashboard Preference page provides flexibility for Administrators to manage the type and amount of information to show on your account.

To set the preference, go to List> Relationship> Project 360 Dashboard Preference, then check or clear the boxes to select which focus pages appear on your dashboard.

Important: The system requires only one Project 360 Dashboard Preference record for each account, and the record must not be duplicated, deleted, or set to inactive.

The Project 360 Dashboard Preference page contains the following check boxes:

- Project Overview
- Resource Planning
- Budget and EAC
- Billing and Revenue
- Financial

Common Portlets in Project 360 Dashboard

The following portlets are shown on every focus page of the Project 360 Dashboard:

- [Project Information Portlet](#)
- [Reminders Portlet](#)
- [Take Action Portlet](#)

Project Information Portlet

The Project Information portlet shows the general information about the project, and sources the data from the project record and the customer record.

The following details are shown on the Project Information portlet:

- **Project ID** – By default, this field shows the value entered in the **Job ID** field of the project record. Clicking the Project ID link takes you to the project record. If the **Auto-Generated** feature is enabled, this field shows the auto-generated ID of the project. For more information, see the help topic [Setting Up Auto-Generated Numbering](#).
- **Project Name** – This field shows the project name entered in the **Project Name** field. If the **Auto-Generated** feature is disabled, the project name also appears in the **Project ID** field.
- **Project Manager** – This field shows the project manager assigned to the project. You can click the value in this field to see the corresponding employee record.

- **Client Name** – This field shows the name of the client for the project, which comes from the **Customer** field of the project record.
- **Client Primary Contact** – This field shows the name of the contact person for the client of the project. You can click the value in this field to see the corresponding contact record.
- **Due Date** – This field shows the scheduled end date of the project, which comes from the **Calculated End Date** field on the project record.

Any changes you make on the primary details of the project records reflect on this portlet.

Reminders Portlet

The Reminders portlet contains predetermined links to notify project managers of the number of tasks and deliverable to prioritize for the project.

It is designed specifically for the project managers and their assigned projects with links that are similar on all focus pages.

This portlet is shown only when the access level is set to **Assigned to me**.

Note: When you check the **Show List When Only One Result** box on the Set Preferences page, clicking reminder link takes you to the list page of each reminder except for Tasks Overdue link.

When unchecked, clicking the link with one reminder count takes you directly to a record of overdue vendor bill, purchase order, or project.

You can set the search preference by going to Home > Set Preferences Home > Set Preferences then click the **Analytics** subtab. On the Set Preferences page, check or clear the **Show List When Only One Result** box.

The following information describes the link available on the portlet:

Page	Link	Color Criteria
Project Portfolio	■ Vendor Bills Overdue – This reminder shows the total number of Vendor Bills and Bill Credits that are overdue for one or more projects assigned to the project manager. The system considers a vendor bill as overdue if the current date is after the due date and the status is Pending Approval or Approved. Unlike vendor bills, bill credits do not have a status. A bill credit is overdue if the due date is past the current date. Note: An overdue vendor bill associated to multiple projects is only considered as one reminder. ■ Tasks Overdue – This reminder shows the total number of project tasks that are overdue for one or more projects. The system considers a project task as overdue if it meets the following criteria: □ The status is In Progress, and Not Started after the task's end date passes. □ The Percent Complete value is less than 100.	The following color criteria applies to Vendor Bills Overdue, Tasks Overdue, and Purchase Orders for Approval reminders: ■ Silver – 0 ■ Green – 1 – 3 ■ Amber – 4 – 10 ■ Red – greater than 10 The following color criteria applies to Projects Overdue reminder: ■ Silver – 0 ■ Green – 1 ■ Amber – 2 – 3 ■ Red – greater than 3

Page	Link	Color Criteria
	The Tasks Overdue reminder does not include milestone tasks in the count. ■ Purchase Orders for Approval – This reminder shows the total number of purchase orders with Pending Approval status. Clicking the link takes you to the list of all purchase orders associated to all projects assigned to you. ■ Projects Overdue – The system considers a project as overdue if the status is In Progress, Awarded, or Pending after the calculated end date passes.	
All Focus Pages	■ Vendor Bills Overdue – This reminder shows the total number of Vendor Bills and Bill Credits that are overdue for the specific project that you view. The system considers a vendor bill as overdue if the current date is after the due date and the status is Pending Approval or Approved. ■ Tasks Overdue – This reminder shows the total number of project tasks that are overdue only for a specific project. The system considers a project task as overdue if it meets the following criteria: The criteria for determining overdue project tasks is the same with the criteria used in the Tasks Overdue on the Project Portfolio page. The Tasks Overdue reminder does not include milestone tasks in the count. ■ Purchase Orders for Approval – This reminder shows the total number of purchase orders with Pending Approval status for a specific project. Clicking the link takes you to the list of all purchase orders associated to a project that you view.	All reminders on all focus pages follow this color criteria: ■ Silver – 0 ■ Green – 1 ■ Amber – 2 – 5 ■ Red – greater than 5

Take Action Portlet

The Take Action portlet provides project managers with a quick access to records and pages associated to the project, so they can make the necessary adjustments.

The following table describes the links available on the portlet depending on the focus page you view.

Focus Page	Link
Project Overview	■ Update Project Record – This link takes you to the project record where you can update the details of the project. ■ View Client Record – This link takes you to the customer record where you can update the details on the customer record. The link does not display when there is no customer record associated to the project.
Resource Planning	■ Update Project Schedule – This link takes you to the project record where you can edit the date for the tasks or milestones under the Schedule subtab. For more information, see the help topic Working with the Project Schedule. ■ Edit Resource Allocation – This link takes you to the Resource Allocations page where you can edit or create new resource allocations. For more information, see the help topic Using the Resource Allocation Chart/Grid. ■ View Gantt Chart – This link takes you to a full screen view of the Gantt chart where you can view all the related tasks for the project.

Focus Page	Link
	For more information, see the help topic Gantt Chart .
Budget and EAC	■ Manage Project Budget – This link takes you to the project record where you can manage the existing budget on the Budget and Work Breakdown Structure subtabs. For more information, see the help topic Advanced Project Budgeting. ■ Transfer Incorrect Time – This link takes you to the Update Time Entries page where you can update time entries or change how time is billed to the customers. For more information, see the help topics Updating Time Entries and Transferring Time Between Projects.
Billing and Revenue	■ Manage Project Billing – This link takes you to the project record where you can view or update the charges on the Charges subtab under the Financial subtab. For more information about project billing, see the help topic Project Billing. Note: The Charges subtab is shown when the project billing type is charged-based. To show the Charges subtab, you must have the Charge Rule permission. To view the entries under the Charges subtab, you must have the Charge permission. ■ Manage Revenue Recognition – This link takes you to the project record where you can update the value in the Rev Rec Forecast Rule field. The value in this field is used for creating a forecast revenue recognition plan for the project. See the help topic Revenue Recognition Rules. Important: You must enable the Advanced Revenue Management (Essentials) feature to view the data.
Financial	Manage Revenue Recognition – This link is similar with the Manage Revenue Recognition link available on the Billing and Revenue page.

Project Portfolio

The Project Portfolio is the main landing page of the Project 360 Dashboard. It contains the My Project Portfolio portlet, where project managers can view their assigned projects, the project's primary information, and its key metrics.

The Reminders portlet is also displayed on the Project Portfolio page. The common portlets like Project Information, Reminders, and Take Action can be seen on all focus pages on the Project 360 Dashboard.

Here's a screenshot of the Project Portfolio page and its portlets.

The screenshot shows the Project Portfolio page. On the left, there's a sidebar with a 'Reminders' portlet listing: 6 Vendor Bills Overdue, 13 Tasks Overdue, 4 Projects Overdue, and 2 Purchase Orders for Approval. The main area is titled 'My Project Portfolio' and contains a table with project data. The table has tabs for Project, Client, Project Manager, Project End Date, and Clear All Filters. The table columns include Overall Stat, Project ID, Project Name, Client, Budget vs. Budget, Percentage C., Tasks Not Re., Tasks Ove., Timeshee., Profit Perce., Unpaid Invol., Unbilled Cha., and Charges N.. The table lists three projects: Project 360 - Servi... BVA Consulting (High), Project System Up... Luluemon (High), and Project Next Eclipse Solar Powe... (Medium).

OVERALL STAT	PROJECT ID	PROJECT NAME	CLIENT	BUDGET VS. BUDGET	PERCENTAGE C.	TASKS NOT RE.	TASKS OVE.	TIMESHEE.	PROFIT PERCE.	UNPAID INVOL.	UNBILLED CHA.	CHARGES N.
High	123	Project 360 - Servi... BVA Consulting		7.3%	93.0%	2 of 10	10	7 of 11	49.6%	\$950.00	\$12,580.00	2
High	125	Project System Up... Luluemon		-12.2%	0.0%	0 of 3	3	0 of 0	-214.3%	\$880.00	—	—
Medium	124	Project Next Eclipse Solar Powe...		-4.4%	0.0%	0 of 3	0	0 of 0	-170.0%	\$50.00	—	—
Low	126	ERP Implementati... Eclipse Solar Powe...		12.4%	0.0%	0 of 3	0	0 of 0	—	\$0.00	\$0.00	0

Read the following help topics for more information about the Project Portfolio portlets:

- [My Project Portfolio Portlet](#)
- [Common Portlets in Project 360 Dashboard](#)
- [Project 360 Dashboard Preference Page](#)

My Project Portfolio Portlet

Monitor a project's health by reviewing snippets of key performance indicators in the My Project Portfolio portlet. KPIs for budget, resourcing, and financials help project managers track and measure progress of each project toward the goal.

The My Project Portfolio portlet lists all the projects with a status of **In Progress**, **Awarded**, and **Pending**. The projects you see depend on your access level.

By default, projects are sorted by overall status. High risks projects are shown at the top of the list followed by **Medium**, **Low**, and then **None**. You can change the default view into a descending or ascending order by clicking the appropriate column header.

Additionally, you can use these filters to narrow down your search results:

- Project
- Client
- Project Manager
- Project End Date

After you select a value for the first filter, the remaining dynamic filters only show options relevant to your first selected choice. These filters include **Project**, **Client**, and **Project Manager**.

The **Project End Date** lets you select a date range to show only the project within your chosen date range.

Click the **Clear All Filters** to remove any filters you applied on the projects list. Similarly, the filters are cleared if you load a new page within the dashboard.

The My Project Portfolio portlet shows 20 projects by default, and up to 50 at a time. If you have more than 50, you can move between pages by clicking the **Next** and **Previous** icons.

Click the name of the project from the table to go to the project's corresponding Overview page.

The following columns are shown on the My Project Portfolio portlet:

Column Header	Subcolumn Description
Project Information	■ Overall Status - This column shows the status of the project based on the risk meter determined by the system. For more information, see Criteria for the Overall Status of a Project. ■ Project ID - This column shows the auto-generated ID for the project. By default, auto-generated numbers are enabled for transactions record types and document types. You can modify the value by entering a different ID for the project. For more information, see the help topic Setting Up Auto-Generated Numbering. Clicking the Project ID takes you to the Project Overview page of a specific project. ■ Project Name - This column shows the project name entered in the Project Name field of the project record.

Column Header	Subcolumn Description
	■ Client – This column shows the name of the project's customer sourced from the customer record.
Budget	■ Budget vs. EAC – This column shows the calculated variance percentage between the baseline budget and the EAC budget. If there is no data to retrieve or the baseline budget is zero, the system displays an em dash (—). ■ Percentage Complete – This column shows the percent of the total planned project time that has been completed. This value is sourced from the Percent Work Complete field of the project record.
Resourcing	■ Tasks Not Resourced – This column shows the number of tasks that are not yet assigned to a resource out of the total number of tasks for the project. ■ Tasks Overdue – This column shows the total number of tasks that are overdue for one or more projects. The tasks overdue count does not include milestone tasks. ■ Timesheets Not Approved – This column shows the number of timesheets that are not yet approved out of the total number of created timesheets.
Financials	■ Profit Percentage – This column shows the percentage value of the calculated difference between the revenue and the costs for the project. ■ Unpaid Invoices – This column shows the aggregated amount of unpaid invoices for the project. ■ Unbilled Charges – This column shows the aggregated amount of unbilled charges for the project. ■ Charges Not Invoiced – This column shows the number of charges that do not have an invoice.  Note: The system can load up to 6,000 projects that include charge and invoice values. If the project's billing type isn't charged-based, an em dash is shown under Unbilled Charges and Charges Not Invoiced columns.

Assigning a Project Manager to a Project

Employees with full permissions on the project record can assign a project manager to view and edit data in the Project 360 Dashboard.

 **Note:** An employee needs to be listed as a project resource and designated as Project Manager in their Employee record to display in the Project Manager dropdown list. See the help topic [Identifying an Employee as a Project Resource](#).

If you need to create a new employee record, see the help topic [Adding an Employee](#)

To assign a project manager to a project:

1. Go to Lists > Employees > Employees.
 - a. On the Employees list page, click **Edit** beside the corresponding employee record that you want to edit.
 - b. On the **Human Resources** subtab, on the Job Information section, check the boxes for **Project Resource** and **Project Manager**.
 - c. Click **Save**.

2. Go to Lists > Relationships > Projects.
 - a. On the Projects list page, click **Edit** next to the project name that you want to edit.
 - b. On the Primary Information section, in the **Project Manager** dropdown list, assign the project manager by selecting the name of the employee.
 - c. Click **Save**.

Criteria for the Overall Status of a Project

The system determines the overall status of a project by considering the importance of project KPIs and a project's KPI value. Each KPI has an assigned relative importance while each KPI value has a corresponding KPI score.

The overall status criteria use the following KPIs:

- Budget vs. EAC
- Tasks Overdue
- Tasks Not Resourced
- Charges Not Invoiced

Depending on a project's KPI value, it can be classified as **High**, **Medium**, or **Low**. The total score for all project KPIs determines the overall status of a project.

The following table shows how the overall status is determined for a project:

Project	Budget vs. EAC	Tasks Overdue	Tasks Not Resourced	Charges Not Invoiced	Overall Status
Project A	High	Low	Low	Low	High
Project B	Low	Medium	Low	Medium	Medium
Project C	Low	Low	Medium	Low	Low

Project Overview

The Project Overview page on the Project 360 Dashboard outlines the primary details and key performance indicators of the project.

Within the Project Overview page, you can check project details and key metrics using these portlets:

- [Key Performance Indicators Portlet](#)
- [Primary Information Portlet](#)
- [Team Details Portlet](#)
- [Project Documents Portlet](#)
- [Client Contact Portlet](#)

To view other projects assigned to you, click the dropdown button beside the project name on the page header. From the dropdown list, select any project you want to view. Every project displays on the list regardless of the status.

Each portlet and focus pages load information specific to the project you select.

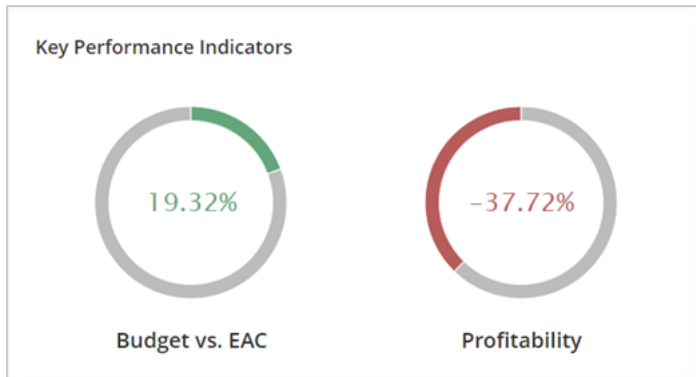

Key Performance Indicators Portlet

Key performance indicators (KPIs) help you quickly check the project status and make fast decisions to ensure the project stays within the budget and schedule.

The Key Performance Indicators portlet displays the following gauge charts:

- Budget vs. EAC KPI
- Profitability KPI

The following screenshot shows the Key Performance Indicators portlet and its KPI gauge charts:

Budget vs. EAC KPI

The Budget and Estimate at Completion (EAC) gauge chart provides a visual comparison of the baseline budget and the estimated cost of the project upon completion. The project variance in percentage is shown inside the gauge chart.

To calculate the margin or profit percentage, the system uses the following formula then converts the result into a percentage value:

$$\text{Variance} = (\text{baseline budget} - \text{EAC}) / \text{baseline budget}$$

The chart's fill color changes based on the following scenarios:

Color	Description
Gray	There is no project budget or EAC value and an em dash is shown in the gauge chart.
Green	The variance is more than 10% of the baseline budget and fills the chart in a clockwise direction. The chart retains the green fill color if the project profitability goes beyond 100%.
Amber	The variance is within 10% of the baseline budget.
Red	The variance is less than or equal to zero, or the EAC budget is greater than the baseline budget. Unlike green and amber chart colors, red fills the chart in a counterclockwise direction.

When you hover over the gauge chart, you'll see one of these tooltips:

- On the green, amber, or red section of the chart, the tooltip displays the variance in percentage value.
- On the gray or remaining section of the chart, the tooltip displays both the baseline budget and the EAC budget.

- If the entire gauge chart has one color, either gray, green, or red, the tooltip displays both the baseline and EAC budgets, and the variance.

Profitability KPI

The Profitability gauge chart visually represents your project's financial profits. Profitability is determined by comparing the costs to complete the deliverable against the revenue generated as the project progresses.

When you hover over the gauge chart, you'll see the calculated profit percentage in the tooltip. This value matches the overall project margin shown on the Project Profitability portlet.

To calculate the margin or profit percentage, the system uses the following formula:

$$\text{Margin} = (\text{Revenue} - \text{Cost}) * 100 / \text{Revenue}$$

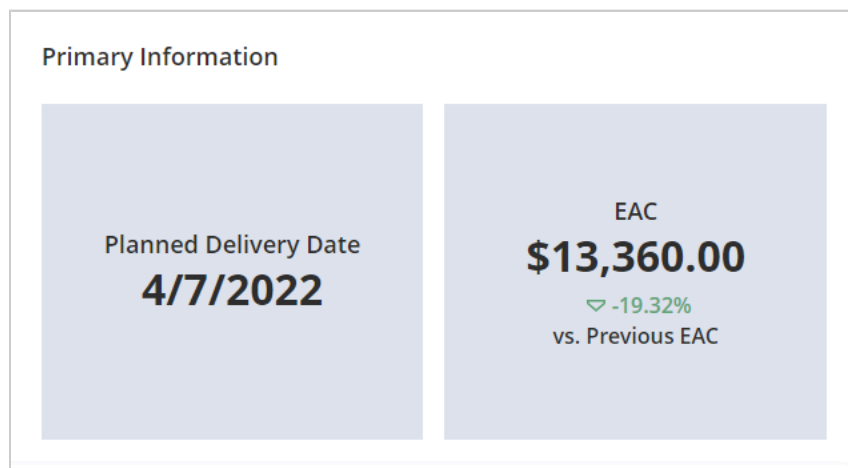

The chart fill color changes depending on the following scenarios:

Color	Description
Gray	The margin is 0%. This color also means there is no project profitability data to show and an em dash is also shown in the gauge chart.
Green	The profitability is more than 0%. The chart retains the green fill color if the profitability is more than 100%.
Red	The profitability is less than 0%.

Primary Information Portlet

The Primary Information portlet shows your project's planned delivery date and comparison of the current EAC budget to the previous EAC budget.

The following screenshot shows the Primary Information portlet and the details included in the information tile:

The planned delivery date is sourced from the **Calculated End Date** field of the project record.

The EAC budget here matches what you see in the Budget portlet on the Budget and EAC focus page. See [Budget Tiles](#).

Team Details Portlet

The Team Details portlet on the Project 360 Dashboard lets you view the project resources, roles, and contact information, which are sourced from the **Resource Details** subtab of the project record.

Employees identified as a project resource, vendors, and generic resources are shown in the Team Details portlet.

The links in the portlet let you do the following:

- Click the name of the project team resource to view their employee record.
- Click the email address to open a compose email window.
- Click the phone number to call the employee using a contact application supported by your browser.

The phone number shown in the portlet is sourced from the **Phone** field of the employee record.

Project Documents Portlet

The Project Documents portlet on the Project 360 Dashboard lets you access all your project's documents, like proposals, plans, status reports, and other related files.

You can select and add files from the File Cabinet that are associated with the customer, vendor, or any project resource.

The following screenshot shows the Project Documents portlet and the columns included in its table:

Project Documents				
FILE ID		NAME	LAST MODIFIED DATE	ACTION
2118		Business Case.txt	3/27/2022 6:22 pm	Download
2166		Materials	5/11/2022 9:21 pm	Download
2117		Project Charter.txt	3/27/2022 6:22 pm	Download
2116		Project Proposal.txt	3/27/2022 6:21 pm	Download
2165		Site Inspection	5/11/2022 9:19 pm	Download

Adding Documents to a Project Record

Project team members with sufficient permission can add documents to a project record.

To add documents to a project record:

1. Go to Lists > Relationships > Projects and click **Edit**.
2. On the **Communications** subtab, click **Files**.
3. On the **Files** subtab, click the plus icon or the **New File** button.

You can select and add files from the File Cabinet that are associated with the customer. For example, you can attach a contract as a file associated with the project.

4. On the New File window, enter or select the required details:
 - In the **Attach From** field, select whether you are adding a file from a computer or a web.
 - In the **File Name** field, enter a name for the file.

- In the **Folder** field, select the folder where you want to store the file. You can also create a new folder by clicking the plus icon beside the field.
- In the **Character Encoding** field, select the necessary encoding. The default value is Unicode (UTF-8)

5. When you have finished, click **Save**.

For more information, see the help topic [Attaching Events, Tasks, and Calls to Records and Transactions](#).

To remove an unused document, follow steps 1 and 2. On the **Files** subtab, then click **Remove** next to the file that you want to remove.

Client Contact Portlet

The Client Contact portlet shows the name, email address, and phone number of the designated contact person by the client. The system sources this information from the contact record when populating the details on the portlet.

The phone number shown on the portlet sources the value from the **Main Phone** field of the Contact record.

A contact represents people or companies that you deal with in the daily activity of your business. To create a contact record, see the help topic [Creating a Contact](#).

You can associate contacts to a vendor, or customer records on the **Contacts** subtab to view their contact information. See the help topic [Associating a Contact with a Record](#).

Resource Planning

Use the Resource Planning page to efficiently maximize the skill sets and capacity of the project resources.

To set up the Resource Planning portlets, see [Resource Planning Portlets Set Up](#).

- [Gantt Chart Portlet](#)
- [Resource Allocation Chart/Grid Portlet](#)
- [Milestones Portlet](#)
- [Timesheet Tracking Portlet](#)
- [Actual Hours vs. Planned Hours by Resources Portlet](#)

Gantt Chart Portlet

A Gantt chart is a bar chart that visually represents your project schedule and clearly illustrates the start, end, milestones, and progress of individual tasks.

To populate the data on the portlet, you need to complete the set up described in [Resource Planning Portlets Set Up](#).

To view the entire Gantt Chart, you can click the **View Full Screen** from the Gantt Chart portlet, or click **View Gantt Chart** from the Take Action portlet. For more information, see the help topic [Gantt Chart](#).

Resource Allocation Chart/Grid Portlet

The Resource Allocation Chart/Grid (RACG) portlet in Project 360 Dashboard offers a visual tool for viewing, creating, and editing resource allocations. You can choose to view your allocations in either a chart or a grid. See the help topic [Resource Allocation Chart/Grid](#).

Resource Allocations help resource managers to allocate and to assign the right resources to projects based on availability, skill sets, and other criteria. After allocating or reserving a resource to a project, a project manager may then decide to assign that resource to a specific task.

You can also allocate resources directly to project tasks eliminating the requirement for resources to be assigned separately. This can be useful when the same person both allocates resources and assigns project tasks. For more information, see the help topic [Resource Allocations](#).

Read the following help topics to learn more about using Resource Allocation Chart/Grid:

- [Creating a New Allocation from the Resource Allocation Chart or Grid.](#)
- [Setting Up and Navigating the Resource Allocation Grid](#)
- [Setting Up and Navigating the Resource Allocation Chart](#)

Milestones Portlet

The Milestones portlet on the Project 360 Dashboard supports the display of collapsible parent tasks and subordinate tasks.

Project milestones are used to mark key points in your project, usually the completion of a set of tasks or as a project health check to determine if you're on schedule.

A parent task is a record that only tracks cumulative information about subtasks that are required to complete a project. For more information about organizing project tasks, read the help topic [Organizing Tasks](#).

By default, milestones are sorted by end date. You can also sort the milestones by names alphabetically by clicking the **Name** column header.

The milestones portlet displays the following information:

- **Risk** – This column indicates the risk associated with the milestone status.

Risk	Color	Milestone Status	
		Not Started/In Progress	Completed
High	Red	The end date of the milestone is at least two days before today.	Not Applicable
Medium	Amber	The end date of the milestone falls between yesterday and tomorrow, inclusive.	Not Applicable
Low	Green	The end date of the milestone is at least two days after today.	Not Applicable
None	Gray	Not Applicable	Not Applicable

- **Name** – This column shows the name of each milestone task.
- **Status** – This column shows the progress of each milestone task related to its end date.
- **End Date** – This column shows the target end date of the milestone task as specified in the project record.

Timesheet Tracking Portlet

The Timesheet Tracking portlet lets you track weekly timesheets of your project resources and determine the resource capacity. The portlet also helps identify what action is required related to the status of timesheets.

The following screenshot shows the Timesheet portlet with the columns included in the table:

Timesheet Tracking

RISK	NAME	ROLE	NOT FILLED	NOT APPROVED
Medium	Trisha Williams	Staff	0	2
Low	Anton Mendez	Staff	0	1
Low	S Mohapatra	Project Manager	0	1
None	Annie Smith	Staff	0	0
None	Kate Aquino	Staff	0	0
None	Tanya Rodriguez	Staff	0	0

The system includes all timesheets associated to the project, and with dates that fall on or after the project's start date.

The Timesheet Tracking portlet displays the following information:

- **Risk** – This field shows the risk status related to the number of timesheets that are not submitted and with pending approval.

Risk	Color	Timesheet Not Filled	Timesheet Not Approved
High	Red	3 or more	3 or more
Medium	Amber	2	2
Low	Green	1	1
None	Gray	0	0

- **Name** – This field shows the name of each project resource. Clicking the resource name takes you to the corresponding employee or vendor record.
- **Role** – This field shows the designation of each project resource.
- **Not Filled** – This field shows the number of weekly timesheets that the resource has not submitted, and timesheets with approval status of **Open** and **Rejected**.
- **Not Approved** – This field shows the number of weekly timesheets with a status of **Pending Approval**

There are two types of approval settings for time records:

- If you check the **Require Approvals on Time Records** box on the Accounting Preferences page, the employees' time transactions require approval from supervisors. If you don't check this, time transactions can be billed to customers or included in the payroll run without the approval of a supervisor.
- If you also check the **Advanced Approvals on Time Records** box, the **Supervisor Approval** field on time entries and the weekly time sheet is replaced by an **Approval Status** field. This field enables you to set the status of time entries to Open, Pending Approval, Approved, or Rejected, which supervisors, administrators, and time approvers can edit.

Set your preferences at Setup > Accounting > Preferences > Accounting Preferences. For more information about Time Tracking preferences, see the help topic [Time & Expenses Accounting Preferences](#).

The following table shows how the approval settings affect the timesheet status:

Require Approvals on Time Records	Advanced Approvals on Time Records	Timesheet Status
Disabled	Disabled	The timesheet status is automatically set to Approved .
Enabled	Disabled	The timesheet status is set to either Pending Approval or Approved .
Enabled	Enabled	The timesheet status can be set to one of the following approval statuses: - Open - Pending Approval - Approved - Rejected

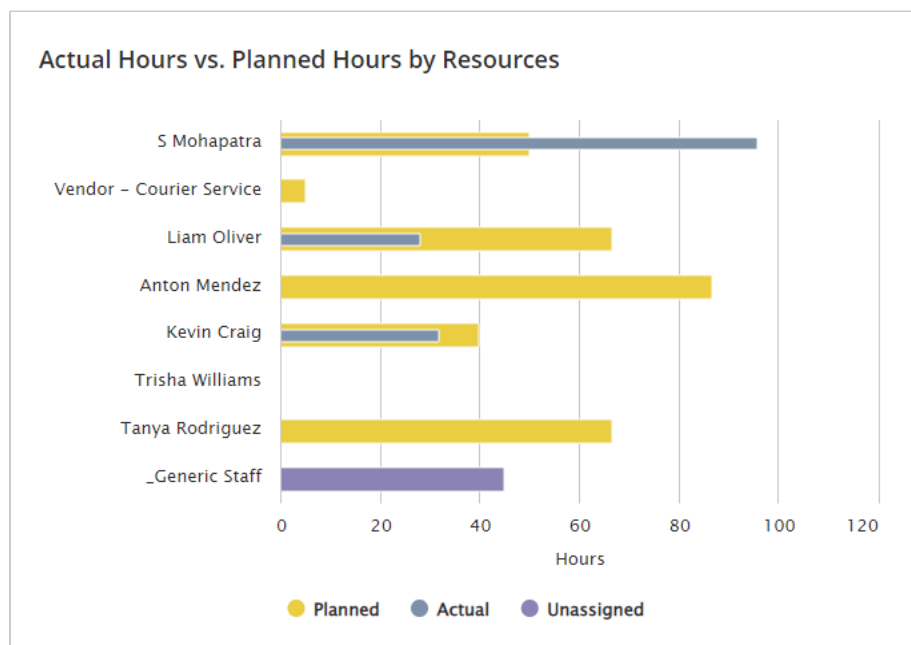

Read the following help topics to learn more about time tracking:

- [Understanding Time Tracking](#)
- [Giving an Employee Access to Time Tracking](#)
- [Entering a Time Transaction](#)
- [Approving or Rejecting a Time Transaction](#)

Actual Hours vs. Planned Hours by Resources Portlet

The Actual Hours vs. Planned Hours by Resources portlet is a graph representation of the hours assigned to and logged by each project resource. It tracks their progress in finishing tasks within the planned hours.

Here's a screenshot of the Actual Hours vs. Planned Hours by Resources portlet and the details it can show:

Project resource names are on the y-axis, and the range of hours is on the x-axis.

 **Note:** The bar graph displays on the portlet only if the project resource has an assigned task and has logged time entries.

The following information describes the legends of the graph, which you can also see in the tooltip when you hover over each bar:

- **Planned** – This bar indicates the number of planned work hours by a project resource, which the portlet sources from the **Assignees** subtab of the Project Task record. Assigning a resource to a project task generates a planned time. For more information, see the help topic [Assigning Project Resources](#).
- **Actual** – This bar indicates the number of hours logged by the project resource in their submitted time entries. The actual hours logged can be at the project level, a task level, or a combination of both.
- **Unassigned** – This bar is shown for generic resources. Generic resources are used when a specific resource has not been identified yet. They are resources not added to the resource allocation but are included as resources in the project record under the **Resource Details** subtab of **Resources** subtab.
- **Remaining** – This information displays on the tooltip when you hover over the bars on the graph. The value shown for this category indicates the difference in hours after deducting the Actual hours from the Planned hours of the resource.

Budget and EAC

The Budget and Estimate at Completion (EAC) page helps project managers monitor the estimated cost for completing each project task, and ensures that the spending does not exceed the budget.

To set up the Budget and EAC portlets, see [Budget and EAC Portlets Set Up](#).

The system sources the data from the **Budget** subtab of the project record and various transactions for the project to populate the content of the following portlets:

- [Budget Portlet](#)
- [Budget vs. Actuals by WBS Portlet](#)
- [Budget vs. EAC by WBS Portlet](#)

The Budget and Budget vs. Actuals by WBS portlets also use the project profitability standard configuration. If you modify the standard configuration, the values in the Profitability Report may vary from the values shown in the Budget and Budget vs. Actuals by WBS portlets. [Project Profitability Standard Configuration](#).

 **Note:** When the Default Project Cost Variance Account is not set, unposted time will not be retrieved as Actuals.

For more information about project budgeting, see the help topic [Advanced Project Budgeting](#).

Budget Portlet

The Budget portlet in Project 360 Dashboard shows the Baseline and EAC budget KPIs and their graph representation.

The following screenshot shows the Budget portlet and its budget tiles and graphs:

Budget Tiles

- Baseline vs. Initial Baseline** – This KPI tile displays a current baseline budget and the difference in percentage value against the first baseline budget. A difference in percentage value is shown when you rebaseline a budget.
 If you start with a zero baseline budget and then adjust it to a different amount later, the zero baseline budget remains the initial baseline budget.
- EAC vs. Previous EAC** – This KPI tile displays a current EAC budget and the difference in percentage value against the previous EAC budget. When you create a new EAC budget version, a difference in percentage value is shown on the tile.
 If you set a new baseline budget, the new baseline budget also becomes the new EAC budget.

Budget Graphs

The budget portlet can display two types of graphs:

- Bar Graphs** – If both baseline and EAC budgets use global timeline type, bar graphs are shown in the portlet. Bar graphs are also shown when one of the budgets is set to global timeline type.
- Line Graphs** – If both baseline and EAC budgets use monthly timeline type, line graphs are shown in the portlet. The monthly timeline type breaks down your budget into months so you can track Actuals against monthly estimations.

For more information, see the help topic [Project Work Breakdown Structure \(WBS\)](#).

The bar or line graphs on the portlet shows the data for the following KPIs:

- Baseline** – A baseline captures a snapshot of your original estimates for the project plan before any work begins.

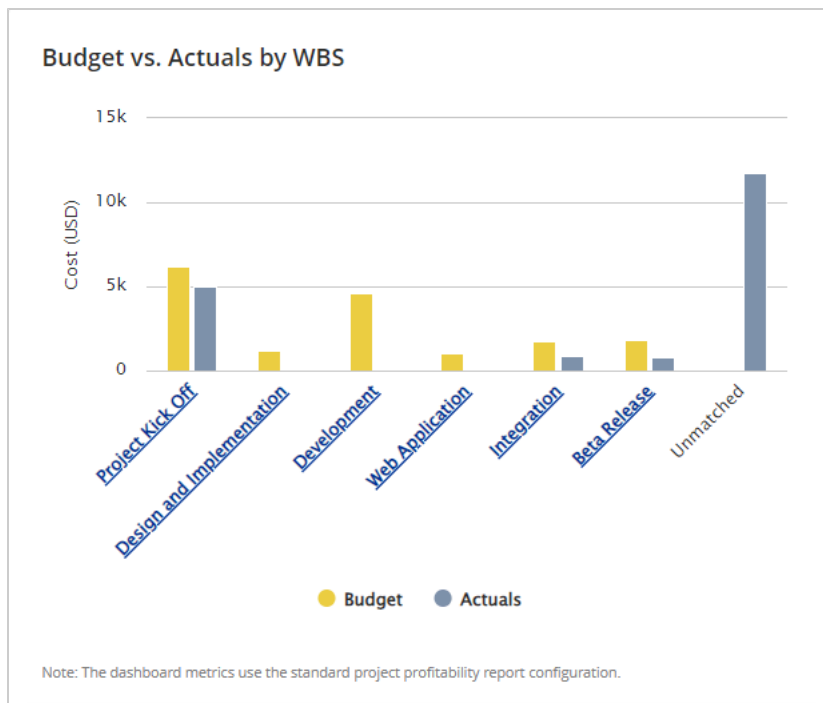

- **Actuals** – The Actuals represent the financial transactions recorded for the duration of the project. These transactions include both the actual costs and the committed costs related to the budget lines.
- **EAC** – The Estimate at Completion shows the forecasted overall cost of the project at completion.

Budget vs. Actuals by WBS Portlet

The Budget vs. Actuals by WBS in Project 360 Dashboard shows a visual comparison of the estimated costs of the project to the expenditures of completing the project.

The data comparison lets you analyze if your costs and billings are within the budget or will exceed the projected costs as the project progresses.

The following screenshot shows the Budget vs. Actuals by WBS portlet with a graph of the budget lines and the corresponding cost:

The portlet sources the budget data from the baseline budget of the WBS while the costs for Actuals are sourced from the transactions included in the profitability report.

Budget lines are shown on the x-axis while the range of costs are on the y-axis. When you hover over the individual graphs, the corresponding value for Budget or Actuals is shown.

The graphs for Actuals are shown only if transactions are associated to the budget line. An unmatched Actuals can also appear on the graph if the project task or activity code is missing from the transaction record. See the help topic [Mapping Actuals to the Work Breakdown Structure](#).

If you create a hierarchy for a budget line by adding sublines, you can see each subline's value by clicking the budget line name from the x-axis.

Note: If you add sublines when there are existing Actuals data on the graph, you must recalculate the values on the Profitability Report page to view the link on the main budget line. Clicking the main budget line link lets you view the cost that corresponds to the subline.

You can also zoom in on the graph by doing a click and drag using your cursor. To return to the previous view, click the **Reset zoom** button on the upper right side of the graph.

Budget vs. EAC by WBS Portlet

The Budget vs. EAC by WBS in Project 360 Dashboard shows a comparison of the estimated cost of the project to the forecasted overall cost of the project at completion.

The data comparison helps you determine if the project can generate the anticipated profit after the project ends.

The following screenshot shows the Budget vs. EAC by WBS portlet with the budget lines and the corresponding budget, EAC, and variance values:

Budget vs. EAC by WBS			
BUDGET LINE	BASILINE BUDGET	EAC	VARIANCE
Project Kick Off	\$6,200.00	\$3,000.00	51.61%
Design and Implementation	\$1,200.00	\$1,200.00	0.0%
Development	\$4,600.00	\$4,600.00	0.0%
Web Application	\$1,000.00	\$1,000.00	0.0%
Integration	\$1,760.00	\$1,760.00	0.0%
Beta Release	\$1,800.00	\$1,800.00	0.0%
Total	\$16,560.00	\$13,360.00	19.32%

The following information describes the columns shown in the portlet:

- **Budget Line** – This column shows the name of the main budget lines you create using the work breakdown structure. Sublines are not shown on the portlet.
- **Baseline Budget** – This column shows the budget amount for the corresponding budget line.
- **EAC** – This column shows the estimated cost at completion for the corresponding budget line.
- **Variance** – This column shows the difference between the budgeted cost and the EAC cost for the corresponding budget line.

Negative variance values are shown in red text color and follows the negative format display settings in your Set Preferences page.

Billing and Revenue

The Billing and Revenue page helps project managers monitor the cash flow and revenue for the project.

By accessing the Billing and Revenue page on the Project 360 Dashboard, you can keep track of the information from the following portlets:

- [Client Invoice Details Portlet](#)
- [Client Contact Portlet](#)

NetSuite provides flexible billing options for project billing. You can bill projects based on completing project work, achieving project milestones, or according to a schedule of dates. The project billing type determines which method of billing to use. The project billing schedule provides the details for when and how to bill the customer over a range of time. For information about the three types of project billing schedules, see the help topic [Project Billing Schedule Types](#).

The steps in setting up the portlets are described in [Billing and Revenue Portlets Set Up](#).

Client Invoice Details Portlet

The Client Invoice Details portlet lets you view the invoices associated to the project.

The system groups the invoices into the following categories:

- **Pending** – This section shows the accumulated amount of the **Amount Due** field value for all unpaid and partially paid invoices.
- **Paid** – This section shows the total amount of payment received for fully paid and partially paid invoices.

Invoices with partial payments are split into **Paid** and **Pending** sections with their corresponding amount.

- **Unbilled Charges** – This section shows all charges that are yet to be billed to a customer. The **Unbilled Charges** subtab is shown on the portlet only when the **Charge-Based Billing** feature is enabled and when the project billing type is charge-based.

The following screenshot shows the Client Invoice Details portlet with various sections of invoices related to a project:

Client Invoice Details				
▼ Pending				
INVOICE #	INVOICE DATE	DUE DATE	OVERDUE	INVOICE AMOUNT
INVC103	3/7/2022	3/7/2022	+205	\$400.00
INVC110	5/1/2022	5/1/2022	+150	\$400.00
INVC111	7/21/2022	7/21/2022	+69	\$150.00
Total Pending				\$950.00
▼ Paid				
INVOICE #	INVOICE DATE	DUE DATE	INVOICE AMOUNT	
INVC104	4/13/2022	4/13/2022	\$1,200.00	
INVC105	5/2/2022	5/2/2022	\$250.00	
Total Paid				\$1,450.00
Unbilled Charges				
Total Unbilled Charges				\$12,580.00

The **Total Pending**, **Total Paid**, and **Total Unbilled Charges** sections display the sum of the pending invoices, paid invoices, and unbilled charges respectively.

By default, invoices are sorted by due date with the oldest date displaying at the top. The following columns are shown for every invoice sections:

- **Invoice #** – This column shows the invoice number with the link that takes you to the invoice record.
- **Invoice Date** – This column shows when the invoice was created.
- **Due Date** – This column shows when the invoice is due to be paid.

- **Overdue** – This column in the **Pending** section shows two types of calculated number of days:
 - When the value is green and negative, it shows the remaining days before the invoice becomes overdue.
 - When the value is red and positive, it shows the number of days the invoice is overdue.
- **Invoice Amount** – This column shows the amount that is due to be paid.

Client Contact Portlet

The Client Contact portlet on the Billing and Revenue page shows the same information as the Client Contact portlet on the Project Overview page.

For more information about the portlet, see [Client Contact Portlet](#) on the Project Overview page.

Financial

The Financial page lets project managers view the financial information for the projects to which they are assigned to.

To set up the Financial portlets, see [Financial Portlets Set Up](#).

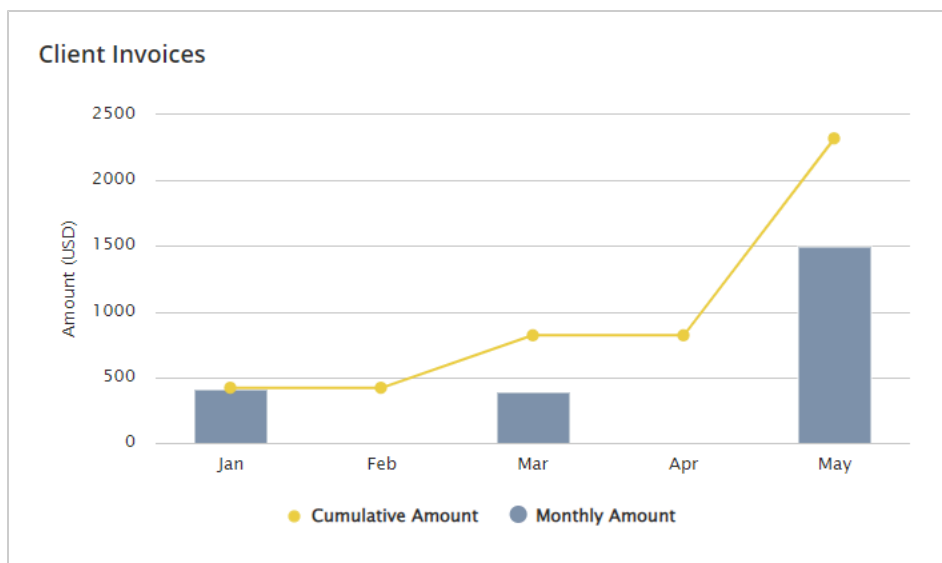

By accessing the Financial page, you can keep track of the information from the following portlets:

- [Client Invoices Portlet](#)
- [Project Profitability Portlet](#)
- [Profitability Report Portlet](#)

Client Invoices Portlet

The Client Invoices portlet shows the graph representation of the monthly client invoices generated for the project.

The following screenshot shows the Client Invoices portlet with the bar and line graphs for cumulative and monthly amounts:

The calendar months are shown in the x-axis and the invoice amount range is shown in the y-axis.

The portlet uses two graph types to represent two datasets:

- **Cumulative Amount** – The line graph represents the cumulative amount of invoices.
- **Monthly Amount** – The bar graph represents invoice amounts generated monthly.

You can hover to each bar graph or line graph to see the corresponding invoice amount.

Project Profitability Portlet

The Project Profitability portlet provides a visual representation of the project's financial profit and lets you measure the level of operational efficiencies so you can take corrective actions.

This portlet sources the data from the Profitability Report page. The Project Profitability gauge chart is also shown on the Key Performance Indicators portlet of the Project Overview page.

To view the descriptions for the gauge chart including how to calculate the margin, see [Key Performance Indicators Portlet](#).

Profitability Report Portlet

The Project Profitability Report portlet the Project 360 Dashboard shows the comparison of project revenue and cost to show each project's total profitability.

Note: This portlet matches with the data from the Profit and Loss or **P&L** subtab of a project record, which supports modifications on the standard project profitability configuration in your account.

A **P&L** subtab displays real-time information about the profitability of your project. The revenue, cost, profit, and margin are listed for project labor, expenses, and supplies. See, [Profit and Loss Subtab](#).

The following screenshot shows a sample information included in the Profitability Report portlet:

Profitability Report									
ITEM GROUP	COST	ACTUAL COST	COMMITTED COST	REVENUE	ACTUAL REVENUE	COMMITTED REVENUE	UNBILLED RECEIVABLE	PROFIT	MARGIN
Expense	\$2,109.00	\$1,210.00	\$899.00	\$0.00	\$0.00	\$0.00	\$0.00	\$(2,109.00)	0.0%
Other	\$0.00	\$0.00	\$0.00	\$2,300.00	\$1,300.00	\$1,000.00	\$1,200.00	\$2,300.00	100.0%
Service	\$5,516.00	\$1,040.00	\$4,476.00	\$12,830.00	\$250.00	\$12,580.00	\$0.00	\$7,314.00	57.0%
Total	\$7,625.00	\$2,250.00	\$5,375.00	\$15,130.00	\$1,550.00	\$13,580.00	\$1,200.00	\$7,505.00	49.6%

Aside from **Item Group**, **Profit**, and **Margin** columns, the other information shown on this portlet depends on the configuration you set on the project profitability setup.

To view the configuration for the project profitability, go to Setup > Accounting > Project Profitability. Alternatively, you can go to Reports > Projects > Project Profitability Reports. Select a report from the Project Profitability Reports. From the report page, click **Profitability Setup**. The configurations for your account is shown on the **P&L Default** field.

The Profitability Report portlet always displays the following information, including other data you set on the project profitability setup:

- **Item Group** – This column shows the name of the item group lines.

- **Total** – This row shows the sum of item group line values for the corresponding column.
- **Margin** – This column shows the profit percentage of the project revenue. The values under this column is the same with the values shown under the following portlets and column:
 - **Profit Percentage** column in the My Project Profitability portlet
 - **Profitability** gauge chart in the Key Performance Indicators portlet.
 - **Profitability** gauge chart in the Project Profitability portlet
- **Profit** – This column shows the profit gain after deducting the project cost from the project revenue.

For more information about Profitability Report, see the help topic [Project Profitability Report](#).

Project Profitability Standard Configuration

A standard configuration determines the transaction types and corresponding account types included in the profitability report.

The following table and lists from Profitability Configuration page are used by the dashboard metrics in the Project 360 Dashboard.

Name	Filter	Subfilter
Cost	Account Type is Cost of Goods Sold, Expense, Other Expense	Actual + Committed
Actual Cost	Account Type is Cost of Goods Sold, Expense, Other Expense	Actual
Committed Cost	Account Type is Cost of Goods Sold, Expense, Other Expense	Committed
Unbilled Receivable	Account Type is Unbilled Receivable	Actual + Committed

The standard configuration settings include some of the following transactions in the profitability calculation:

- Actual Time
- Charges
- Expense Reports Pending Approval
- Vendor Bills Pending Approval
- Invoices Pending Approval
- Journal Entries Pending Approval
- Treat Tracked & Approved Time as Actual Cost

There are other transactions listed in the settings which are not selected by default. The unselected transactions are excluded from the profitability report:

- Planned Time
- Purchase Orders
- Sales Orders

Error Messages in Project 360 Dashboard SuiteApp

The error messages in the SuiteApp are caused by missing permissions for the role, or features that you must enable to view or access the data.

- To enable features, see the help topic [Enabling Features](#).
- To assign permissions, see the help topics [Assigning Roles to an Employee](#) and [Customizing or Creating NetSuite Roles](#).

Location	Error Message	Cause	Resolution
Project 360 Dashboard Preference page	A Project 360 Dashboard Preference record is required in this account.	This is a message shown in the SuiteApp when the user tries to delete a Project 360 Dashboard Preference record.	You must keep one Project 360 Dashboard Preference record in your account.
	There must be only one Project 360 Dashboard Preference record in this account.	This is a message shown in the SuiteApp when the user attempts to create a new Project 360 Dashboard Preference record instance.	You should not create a new Project 360 Dashboard Preference record. Each account requires only one copy of that record for the SuiteApp to work.
	The Project 360 Dashboard Preference record cannot be set to inactive.	This is a message shown in the SuiteApp when the user attempts to set the Project 360 Dashboard Preference record instance to inactive.	You should always keep the Project 360 Dashboard Preference record active. The system will not let you set the record to inactive as the SuiteApp requires one active Project 360 Dashboard Preference record for an account.
My Project Portfolio	A required permission to view this page is missing. Contact your Administrator or refer to the help topic Error Messages in Project 360 Dashboard SuiteApp.	This error message can mean one of the following: ■ Both Project Resource and Project Manager boxes in your employee record are cleared. ■ The Project Classification SuiteApp is not installed. The Departments feature is not enabled.	Ensure that the following requirements are met: ■ Check the Project Resource and Project Manager boxes. Install the Project Classification SuiteApp ■ Enable the Departments feature.
	The Project Manager box in your employee record must be checked.	This is a message shown in the SuiteApp when the user tries to access a project. The Project Manager box in the user's employee record is cleared.	Update the employee record and check the Project Manager box. See Assigning a Project Manager to a Project .
	A Project 360 access level must be assigned on your employee record to access this page.	This is a message shown in the SuiteApp when you try to access Project 360 Portfolio Dashboard but the Project 360 access level in your employee record is blank.	An Administrator must assign a different access level to your employee record. See Access Levels for Project 360 Dashboard .
Take Action	You need the Project Budget permission to access the Budget subtab. Please contact your account administrator.	This is a banner message shown on the page when the user does not have enough Budget permission and clicks the Manage Budget link in the Take Action portlet.	Add the Budget permission to the role.
Project Record	You need the Charge Rule permission to access the Charges subtab. Please contact your account administrator.	This is a banner message shown when the user does not have enough permission and clicks the Manage Project Billing link in the Take Action portlet.	Add the Charge Rule permission to the role.

Location	Error Message	Cause	Resolution
Gantt Chart	A Gantt chart requires one or more tasks.	This is a message displayed in the Gantt Chart portlet when the project has no task to associate to a Gantt chart.	Create a milestone task or a project task. See the help topics Creating a Project Task Record and Creating Milestone Tasks .
Timesheet Tracking	You must enable the Weekly Timesheet feature to view the data.	This is a message displayed in the Timesheet Tracking portlet when the user tries to view the data on the portlet but the Weekly Timesheet feature is not enabled.	Enable the Weekly Timesheet feature. See the help topic Enabling Features .
Resource Allocation Chart/Grid	You must install the Resource Allocation Chart/Grid SuiteApp in your account to display the data on the portlet.	This is a message displayed in the Resource Allocation Chart/Grid (RACG) portlet when the Resource Allocation Chart/Grid SuiteApp 2.0 is not installed.	Install the Resource Allocation Chart/Grid SuiteApp. See the help topic Installing the Resource Allocation Chart/Grid SuiteApp .
	You must enable the Resource Allocations feature and install the Resource Allocation Chart/Grid SuiteApp to access the data.	This is a message displayed in the RACG portlet when the Resource Allocations feature is not enabled.	Enable the Resource Allocations feature. See the help topic Enabling Features .
	You do not have privileges to view this page.	This is a message displayed in the RACG portlet when your user role does not have enough privileges to view the Resource Allocation Chart/ Grid.	Only administrators and resource managers can access the Resource Allocation Chart/Grid by default. For other roles, you must grant additional permissions. For more information, see the help topic Roles and Permissions for Resource Allocation Chart/Grid .
Budget vs. Actuals by WBS	A project budget does not exist. Please use the work breakdown structure to create a budget.	This is a message shown in the Budget vs. Actuals by WBS portlet when there are no data to display for the project. No data can mean a project budget is not created, or there are no Actuals transactions associated to the project.	Create a project budget using the work breakdown structure. See the help topic Creating a Budget from a Work Breakdown Structure .
Budget and Budget vs. EAC by WBS	A project budget does not exist. Please use the work breakdown structure to create a budget.	This is a message shown in the Budget portlet when there are no data to display for the project. No data can mean there's no project budget associated to the project, or there are no Actuals transactions associated to the project.	Create a project budget using the work breakdown structure. See the help topic Creating a Budget from a Work Breakdown Structure .
Profitability Report	You do not have enough permissions to view this portlet. Please contact your account administrator.	This is a message shown when the user does not have permission to view the project record due to subsidiary restrictions or other access restrictions.	Contact your account administrator to check if you have sufficient permissions for your role.
	You do not have the Projects permission to view this portlet. Please	This is an error message displayed in the Profitability Report portlet when the user does not have the Projects permission.	Contact your account administrator to check if you have sufficient permissions for your role.

Location	Error Message	Cause	Resolution
	contact your account administrator.		
	You do not have the Project Profitability permission to view this portlet. Please contact your account administrator.	This is an error message displayed in the Profitability Report portlet when the user does not have the Project Profitability permission.	Contact your account administrator to check if you have sufficient permissions for your role.
Web page	Invalid URL. Enter the correct URL and try again.	This is a message shown on the web page when the URL has one of the following issues: ■ The project internal ID is not provided ■ The project internal ID is not in the proper format ■ The project internal ID is zero  Note: Project internal ID is different from the Project ID shown in the Project Information portlet.	Go to the Projects list page and click the project record you want to open. When you copy paste then modify the project record URL to a different address bar, make sure the project internal ID follows the correct format.
Project 360 Dashboard portlets	Internal error occurred. If the problem persists, contact NetSuite Technical Support.	This is a message shown on a portlet when there is an internal error in the system.	Contact the NetSuite Technical Support for assistance.

Project 360 Dashboard Limitations and Best Practices

Read this section to view the best practices and known limitations when you use the Project 360 Dashboard.

Project 360 Dashboard Limitations

- The portlets available on every focus page are fixed and can't be customized currently.
- The SuiteApp does not support Expense Report transactions and Time Record entries with a subsidiary that is different from the project subsidiary. When the subsidiaries do not match, the transaction or time entry you create uses the transaction subsidiary which does not align to the Project currency. Additionally, a mismatched subsidiary on the Expense Report transactions or Time Record entries, and on the project causes incorrect values shown on the following portlets:
 - Budget vs. Actuals by WBS
 - Budget
- A project status uses the internal ID's assigned value on the Accounting List page. If you modify the values for the internal IDs, the projects to retrieve based on the project status may not be included. The SuiteApp uses the following project internal IDs to populate the list of projects in the Project Portfolio page and the count of Projects Overdue on the Reminders portlet:

Internal ID	Description
5	Awarded
2	In progress
4	Pending

- The SuiteApp can load a maximum of 6000 projects only with a status of **Pending**, **In Progress**, and **Awarded**. Adding and maintaining more than 6000 projects in the SuiteApp may cause performance instability of the SuiteApp.
- The SuiteApp only supports Planned Time entries. Resources assigned using the **Assignee** subtab of the Project Task record generates planned time while resources assigned using the Resource Assignment generates allocated time.
- The SuiteApp only supports Percent Work Complete, not Percent Work Complete by Allocated Work when populating the **Percentage Complete** values in the My Project Portfolio portlet.
- The Client Invoices and Client Invoices Details portlets do not associate the amounts from a transaction with line items associated to multiple projects.

When you enable the **Consolidate Projects on Sales Transactions** preference, the Project field becomes available on the transaction line. See the help topic [Using the Project Consolidation Preference](#)

- The Project 360 Dashboard SuiteApp uses the standard project profitability settings in your account. If you modify the settings, the Actuals values may differ for the following portlets:
 - Budget portlet
 - Budget vs. Actuals by WBS portlet
 - Profitability Report portlet
 - Project Profitability portlet

Best Practices for Project 360 Dashboard

- Make sure you select a project task or activity code for each line item on a transaction associated to a project. Selecting a project task or activity code ensures the correct mapping of Actuals to the WBS line.
- When creating or entering transactions associated to a project, always recalculate the values from the Profitability Report page to view the updated values on the following portlets:
 - Budget portlet
 - Budget vs. Actuals by WBS portlet
 - Profitability Report portlet
 - Project Profitability portlet

You can manually recalculate or set a periodic recalculation of financial data in the profitability report.

To manually recalculate, go to Reports > Projects > Project Profitability Reports Reports > Projects > Project Profitability Reports. Under the **Report** column, click Project Profitability. On the Project Profitability page, click **Recalculate**.

Periodic recalculation happens daily. NetSuite sets the default frequency to every 24 hours, which you can view on the Project Profitability Setup page.

- After recalculating the financial data on the Profitability Report, make sure you refresh the Portfolio or focus page you use to view the updated values on the graph or report.
