This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software" or "commercial computer software documentation" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

Rebates and Trade Promotions

A rebate is a partial refund of the cost of products and services given by suppliers as an incentive to encourage customer loyalty and to increase sales and profits.

The Rebates and Trade Promotions SuiteApp is designed to calculate and track rebates awarded after a sale. Using the SuiteApp, you can measure the effect on profits, and you can claim or disburse rebates.

The Rebates and Trade Promotions SuiteApp enables you to:

- Create and maintain rebate agreements
- Calculate and accrue rebates on sales and purchase transactions based on item unit selection
- Calculate and accrue rebates on sales and purchase transactions created through CSV import, SOAP integration, and REST integration
- Override system-suggested rebates applied on sales and purchase transactions
- Stack multiple rebates and leverage best deal logic on non-stackable rebate agreements
- Stack standard rebates and volume rebates
- Set a minimum or maximum rebate amount as a best deal
- Track changes to rebate agreements and calculate rebates on future transactions based on the agreement changes
- Recalculate rebates for quantity or price changes on sales or purchase transactions associated with expired rebate agreements.
- Process stand-alone and linked returns
- Change item quantity on returns linked to source transactions
- Automate accruals, in which rebate items are grouped based on rebate agreement, Class, Department, Location, and custom segments, if specified
- Edit settlement details before generating a pro forma or a settlement
- Generate claim pro forma and disbursement pro forma
- Settle rebates automatically or manually, with rebate items in settlements grouped based on rebate agreement, and custom segment values specified in transaction body fields

The Rebates and Trade Promotions SuiteApp is available in every language NetSuite supports. For more information, read the help topics [Configuring Multiple Languages](#) and [Choosing a Language for Your NetSuite User Interface](#).

Read the following topics for more information about this SuiteApp:

- [Rebate Types Used in Rebates and Trade Promotions SuiteApp](#)
- [Rebates and Trade Promotions Process Flow](#)
- [Rebates and Trade Promotions Limitations and Best Practices](#)

Read the following topics to set up the Rebates and Trade Promotions SuiteApp:

- [Setting Up the Rebates and Trade Promotions SuiteApp](#)
- [Setting Up Rebate Agreement Records](#)

Rebate Types Used in Rebates and Trade Promotions SuiteApp

The following rebate types are used in the Rebates and Trade Promotions SuiteApp:

Sale	Purchase
■ Receiving Rebates on Sales Transactions – The rebates which are calculated for every eligible sales transaction are received by the customers or vendors. ■ Paying Rebates on Sales Transactions – The rebates which are calculated for every eligible sales transaction are paid to the customers or vendors.	■ Receiving Rebates on Purchase Transactions– The rebates which are calculated for every eligible purchase transaction are received by the customers or vendors. ■ Paying Rebates on Purchase Transactions– The rebates which are calculated for every eligible purchase transaction are paid to the customers or vendors.

For both rebate types, you earn rebates by reaching established target amounts or quantities on eligible volume based rebate agreements. Volume based rebates are calculated either by a percentage of the transaction amount or on a rate per unit basis. For more information about volume rebates, see [Volume Rebates](#).

To calculate both rebate types, the system uses various calculation methods, cost basis, and values from the agreement details. The rebate type determines which transactions are associated with the rebates, and directly affects accruals and settlements.

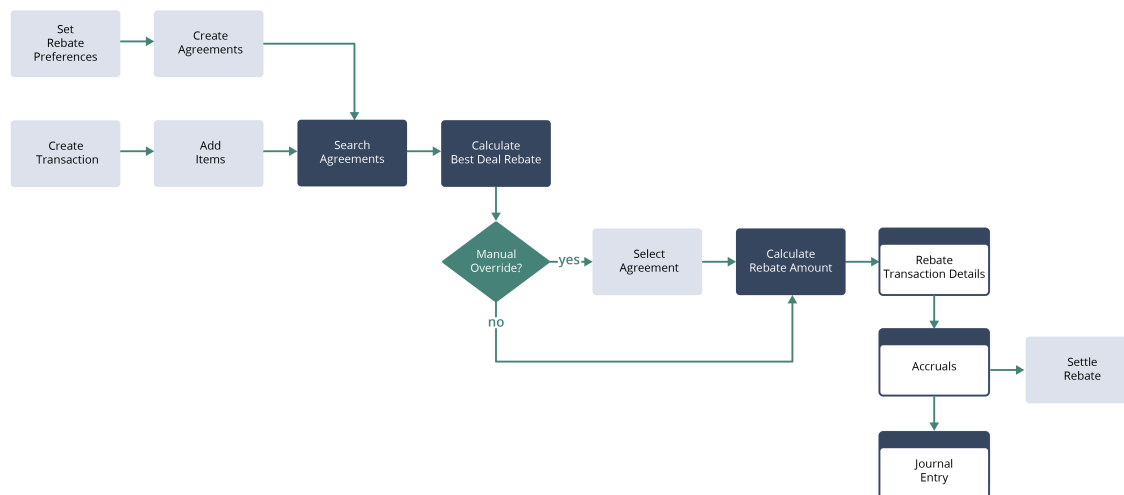

Rebates and Trade Promotions Process Flow

The following diagrams show the rebates and trade promotion processes in two separate flows.

- [Rebate Calculation Process Flow](#)
- [Rebate Settlement Process Flow](#)

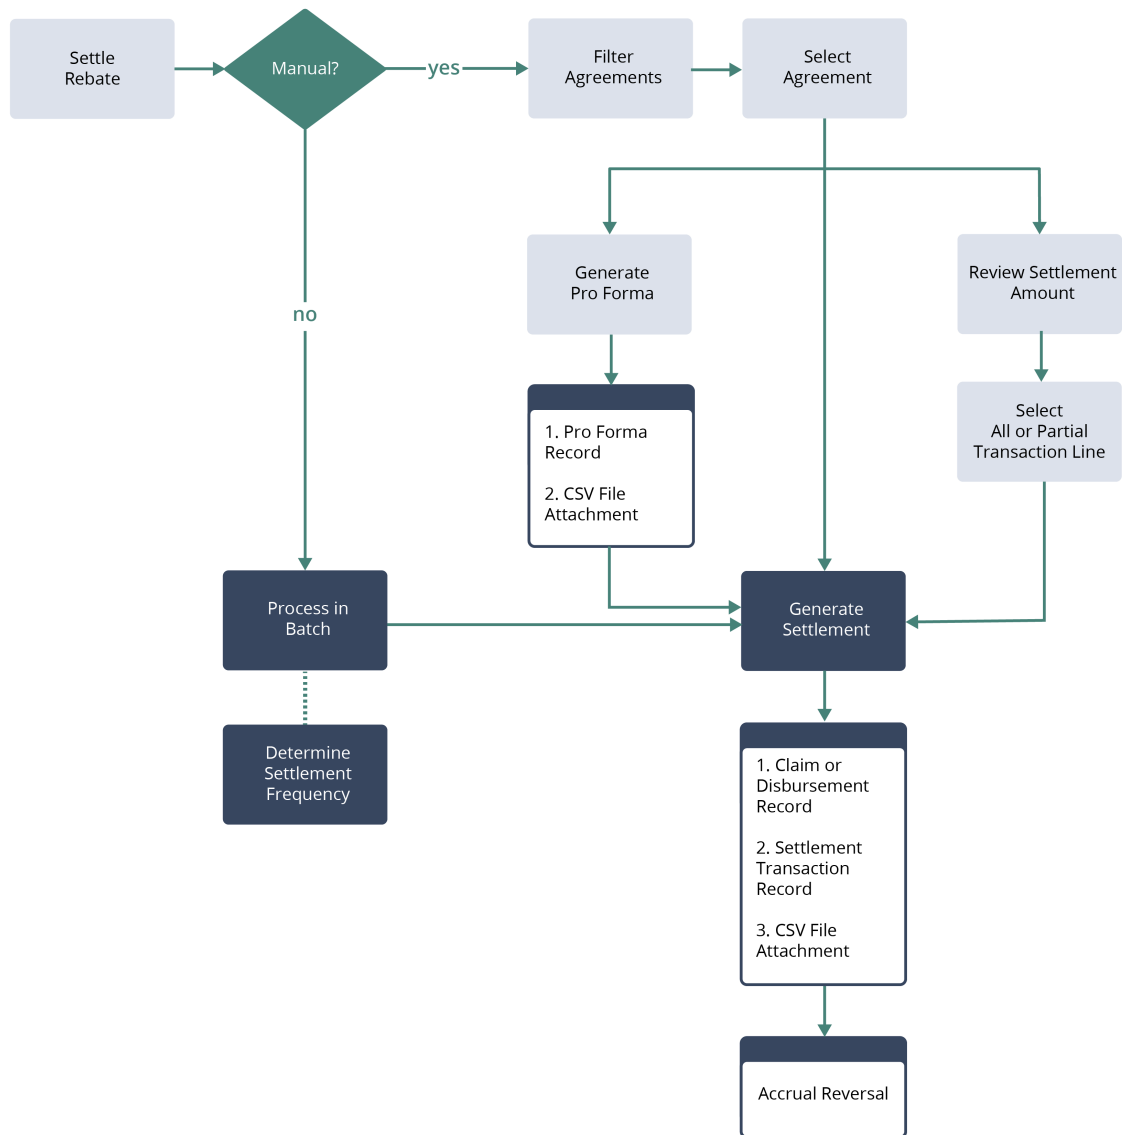

Rebate Calculation Process Flow

The following diagram shows the steps leading to the rebate calculation process.

Rebate Settlement Process Flow

The following diagram shows the steps in the rebate settlement process.

Rebates and Trade Promotions Limitations and Best Practices

Refer to the following topics to understand the limitations of and best practices for the Rebates and Trade Promotions SuiteApp:

- [Rebates and Trade Promotions SuiteApp Limitations](#)
- [Best Practices for Rebates and Trade Promotions SuiteApp](#)

Rebates and Trade Promotions SuiteApp Limitations

- You can edit preferences for Rebates and Trade Promotions, but you can't delete them.
- Rebate Management features are only available in the Classic and Accounting Centers.

- You need to select **UOM Criteria** values first followed by **UOM Calculation** values. Changes made on **UOM Calculation** field do not have impact on the selection made in the **UOM Criteria** field.
- You can't create a rebate agreement and its agreement detail at the same time. Save the agreement first, then edit it to add the agreement details.
- All custom forms for sales and purchase transactions must have a **Units** field, where an item's Units of Measure (UoM) is indicated. The system requires the UoM field on the custom form to calculate rebates.
- After you upgrade the SuiteApp, permissions to the custom records are removed from a custom role. An Administrator needs to edit the custom roles and add any missing permissions for the custom records.
- Rebates are not shown immediately for item groups that you add on the transaction line. You need to save the transaction first, then refresh the page to populate the rebates.
- If you mark an item as a sub-item of another item, the item criteria screen displays only the sub-item in the agreement details, not both.
- You can't hide **Rebate Transaction Record** column on sales and purchase orders.
- If you clear a UoM from the **UOM Calculation** field, it won't automatically clear related UoMs from the **UOM Criteria** field.
- If an item does not have a UoM, the **Adjusted Unit Cost** value is shown as blank.
- Changing the transaction date and customer or vendor on a transaction may impact the rebate recalculation. The system recalculates only after you save the transaction.
The recalculation relative to the change in the transaction date or the customer is applicable when you modify the item quantity or amount, or when you add a new line to the transaction.
- When you transform an invoice created through SOAP to a return authorization, which contains price pass through, you need to specify the values for the **Amount** and **Item Quantity**.
- When you combine multiple purchase orders with future dates into a single bill, rebates copy over to bills and the bill date serves as transaction date.
- Multi-currency conversion is not supported for the rebate amount you set in the agreement details. For more information, see the example of flat amount calculation in [Examples of Rebate Calculations](#).
- Partial fulfillment for SOAP transactions is currently not supported.
- REST support only covers transaction creation (POST) calls.
- Custom multi-select fields for item and customer are not supported.
- The system can only process a settlement with up to 75,000 transaction lines or if the CSV file size is 10 MB or less.
- Retroactive operations are not supported, which means, any changes to Rebate custom records will only affect transactions created after the change, but will not affect existing transactions or those created before the change.
- To support rebates, custom transaction forms should not hide fields associated with rebates. Hiding rebate transaction fields might result in inaccurate calculation of rebates or amount updates.
- Changes or any edit to Custom Segment records will not be reflected on the Custom Segment Preferences page; you should manually set the changes on the page.
- Custom segments of the type Multiple Select, and those that are inactive or locked, are not supported in rebate transactions and journal entries; these custom segments will not be displayed on the Custom Segment Preferences page
- In creating a Rebate Agreement, the Partner entity, even if saved as a multiple type record such as a customer or vendor, is not displayed in the Payer/Payee dropdown list. If you want to select a Partner entity in the **Payer/Payee** field, you can select it using the advanced search at the bottom of the dropdown list.

If you use CSV import to create a Rebate Agreement, you cannot enter a Partner entity (even if it is a multiple type record) as a value for the Payer/Payee field.

- Rebates are not supported for items with negative quantities. You should exclude items with negative quantities in Rebate Agreement Details or do not select them or clear them in the Applicable Rebates popup window. Negative item quantities will result in invalid rebates that may have adverse impact on accruals and settlements.

Likewise, price pass-through is not supported for transaction items with negative amounts or quantities. If price pass-through is applied to a negative amount, the rebate scripts will update the amount to zero (0).

- Rebates management features do not support custom segments of type "Internal". Internal custom segment types will not be grouped in accruals or settlements and their corresponding journal entries.

Best Practices for Rebates and Trade Promotions SuiteApp

- To avoid potential performance issues, please avoid adding more than 50 agreement detail lines per rebate agreement.
- Set the Classification preferences for **Class**, **Department**, and **Location** on the Accounting Preferences page before creating sales transactions. If the Class, Department and Location are changed to required in a system in-use with existing transactions, the accruals for those transactions will fail.
- Set the Classification Preferences by checking the **Allow Per-line Classes** and **Allow Per-line Departments** before creating transactions. If you set the preferences after creating a transaction, the rebate accruals for the existing transactions will fail.
- Ensure that the accounting period contains years, quarters, or months based on your preferred settlement frequency. The system encounters an error if it does not find the relevant period for posting transactions, creating accruals, and generating settlements.
- Don't make a rebate agreement **Inactive** from the List page to avoid issues in its related records.
- If you update agreement details for an item, remove the item from the transaction line and add it again for the changes to reflect.
- When you add a new line item on a transaction by clicking the **Copy Previous** button, make sure you edit the **Quantity**, **Unit**, **Rate**, or **Amount** fields to show the values on the rebate columns.
- Disable the **Multiple Calendars** feature to avoid Map/Reduce scripts from failing. To disable the feature, go to Set Up > Company > Enable Features and clear the **Multiple Calendars** box under the Accounting subtab.
- Click **Refresh** on the pro forma, claim, and disbursement records if the CSV file does not load immediately.
- If the **Calculate Rebates at Real-Time** preference box is cleared, you can verify rebate calculations by checking the **Applicable Rebates** popup window after saving a sales or purchase transaction.
- You must not modify the payload when you transform transactions using SOAP.
- Verify the rebates on the transactions after you save, since the system recalculates rebates after you click the **Save** button.
- Creation of Rebate Agreement, Rebate Agreement Detail, and Rebate tiers through CSV or web services is supported; however, they cannot be edited through CSV or web services.
- Rebate calculation may take some time to complete. You should wait until the rebate calculation banner is not displayed anymore. Then, refresh the page to view the rebates and then proceed to edit or transform any transaction.
- The following forms must not be used in creating transactions; and you should neither customize them nor apply workflows/scripts on them:
 - RM Vendor Credit

- RM Vendor Bill Disbursement
- RM Credit Memo Disbursement
- RM Invoice Claim

Guidelines for Transitioning to Rebates and Trades Promotions SuiteApp

Read the following guidelines before you transition from Rebate Management SuiteSolutions to Rebates and Trade Promotions SuiteApp:

Set Up

- Set the target for the transition date which can be a closing of a month, a quarter, a year, or any accounting period for when you will settle rebates.
- Ensure external IDs are unique for each of the agreement details. If there's an issue during installation, then you rename any conflicting External IDs on your agreement templates.
- Don't keep rebate agreements active in both the Rebate Management SuiteSolutions bundle and the Rebates and Trade Promotions SuiteApp.

Rebate Preferences

- Select both Item and Item Classification in the Item Inclusion criteria then select Item in the Item Exclusion criteria.
- Select both Customer and Customer Classification in the Customer Inclusion criteria then select Customer in the Customer Exclusion criteria.
- Select both Vendor and Vendor Classification in the Vendor Inclusion criteria then select Vendor in the Vendor Exclusion criteria.

Settlement

- Set the status of all rebate agreements in the SuiteSolutions as Completed or Expired so you can process the rebate settlements in the SuiteApp.
- The rebate agreements in the SuiteApp should not be active before your target transition date.

Transitioning from Rebate Management SuiteSolutions to Rebates and Trade Promotions SuiteApp

Here are the steps you need to follow to transition from using the Rebate Management SuiteSolutions bundle to Rebates and Trade Promotions SuiteApp.

Transitioning from SuiteSolutions to SuiteApp:

1. [Set up Rebates and Trade Promotions SuiteApp](#)
2. [Specify Rebate Preferences](#)
3. [Remove Rebate-related Fields on Transaction Forms](#)
4. [Undeploy Scripts from Rebate Management SuiteSolutions](#)
5. [Import Rebate Agreement Records](#)
6. [Import Rebate Agreement Details Records](#)

Set up Rebates and Trade Promotions SuiteApp

To set up the Rebates and Trade Promotions SuiteApp, you should perform these steps:

1. Enable required features in your NetSuite account. See [Prerequisites for Rebates and Trade Promotions SuiteApp](#).
2. Install the Rebates and Trade Promotions SuiteApp. See [Installing the Rebates and Trade Promotions SuiteApp](#).
3. Configure the roles and permissions for the Rebates and Trade Promotions SuiteApp. See [Rebates and Trade Promotions Roles and Permissions](#).
4. Set up accounting item records. See [Creating Accounting Item Records for Rebates and Trade Promotions](#).
5. Set up vendor and customer records. See [Creating Vendor and Customer Records for Rebates and Trade Promotions](#).

Specify Rebate Preferences

After you've installed the SuiteApp and set up the required item, customer, and vendor records, you must create a Rebate Preferences record. The system uses this record to categorize which records contain the same criteria for applying rebates when you import rebate agreements. See, [Setting Rebate Preferences](#).

Remove Rebate-related Fields on Transaction Forms

Remove any added fields from your existing customized transactions forms in the SuiteSolutions bundle to avoid inconsistencies in the records during import.

You must remove the following fields from the transaction forms:

Transaction Body Fields	Sublist/Column Fields
Calculate Rebates in Background	Est. Unit Cost
Est. Extended Cost	Est. Extended Cost
Est. Gross Profit	Est. Gross Profit
Est. Gross Profit Percent	Est. Gross Profit Percent
Est. Rebate Impact	GP Amt after Rebates
Est. Gross Profit (net of Est. Rebate)	GP % after Rebates
Est. Gross Profit Percent (net of Rebate)	Show Purchase Agreements
RM Base Currency – assign to Rebates tab	Purchase Rebate Amt
Total Customer Rebates	Total Purchase Rebate
Total Purchase Rebates	Selected Rebates(Customer Agreements)
-	Customer Rebate Amt
-	Show Customer Agreements
-	Total Customer Rebate

Undeploy Scripts from Rebate Management SuiteSolutions

Undeploy rebate-related scripts used in the SuiteSolutions bundle to ensure that you don't have unnecessary scripts running in the background. The Rebate and Trade Promotions SuiteApp contains its own scripts which do not have to run alongside the scripts in the SuiteSolutions bundle.

Real-time Calculation Scripts:

- NSTS | RM - Asnc Proces Script 1
- NSTS | RM - Asnc Proces Script 2
- NSTS | RM - Asnc Proces Script 3
- NSTS | RM - Asnc Proces Script 4
- NSTS | RM - Asnc Proces Script 5

Real-time Calculation Scripts:

- NSTS | RM - ASync Process Script Sched Run
- NSTS | RM - ASync Process Script SS
- NSTS | RM - ASync Process Script Sched Run

Import Rebate Agreement Records

Complete the following steps to begin the import process of rebate agreements:

 **Note:** Review and follow the guidelines for importing rebate agreement records. See [Guidelines for Importing Rebate Agreement Records](#).

To import rebate agreements:

1. Download the rebate agreement records from the SuiteSolutions bundle using a Saved Search.
2. Download the Rebate Agreement Template from the Rebates and Trade Promotions SuiteApp. See [CSV Template Locations of Rebate Agreement Records](#).
3. Copy the information from the SuiteSolutions rebate agreement records to the Rebate Agreement Template.
4. Import agreement records from the Saved Search to Rebates and Trade Promotions SuiteApp. See [Importing Rebate Agreements Using a CSV File](#).
5. Enter the following required information:

SuiteSolutions Field	SuiteApp Field	Additional Information
Agreement Name	Agreement Name	-
Agreement Start Date	Agreement Start Date	Set the agreement start date to the planned date of transition to SuiteApp.
Subsidiary	Subsidiary	-
Agreement End Date	Agreement End Date	-
-	No End Date	No mapping available
Stackable	Stackable Rebate	-
-	Transaction Type	No mapping available
-	Payment Type	No mapping available

SuiteSolutions Field	SuiteApp Field	Additional Information
-	Status	No mapping available
-	Payer	No mapping available You can choose from a list of vendors or customers.
Claim Item	Accounting Item	-
Remittance Type	Settlement Method	-
Contract Reference	Agreement Reference #	-
-	Auto Claim/Auto Disburse	No mapping available
-	Comments	No mapping available
-	Settlement Frequency	No mapping available

Import Rebate Agreement Details Records

Complete the following steps to start importing rebate agreement details:

To import rebate agreement details:

1. Download the agreement details records from the SuiteSolutions bundle using a Saved Search.
2. Download the Rebate Agreement Detail Template from the Rebates and Trade Promotions SuiteApp. See [CSV Template Locations of Rebate Agreement Records](#).
3. Copy the information from the SuiteSolutions rebate agreement details records to the Rebate Agreement Details Template.
4. Enter the following required information:

SuiteSolutions Field	SuiteApp Field	Additional Information
Agreement	Rebate Agreement	-
-	External ID	Unique ID used to group criteria for each RAD
Eligible Customer	Customer (Inclusion)	-
Eligible Customer Classification	Customer Classification (Inclusion)	-
Eligible Item	Item Name/Number (Inclusion)	-
Eligible Item Classification	Item Classification (Inclusion)	-
-	UOM (Inclusion) Units Type	Units Type defined in UoM Master
Limiting UoM	UOM (Inclusion)	UoM within the UoM Type selected above
-	Calculation Method	No direct mapping available. Please refer to the Help Guide for description.
Rebate Percentage	Calculation Amount	-
-	Calculation Basis	The Cost basis used to calculate rebates
-	Rebate Cost	-

SuiteSolutions Field	SuiteApp Field	Additional Information
-	Price Pass-through Type	No direct mapping available. Use percentage or flat amount
Price Pass-through Value / Price Pass-through Percentage	Price Pass-through Value	Use one of the SuiteSolutions' fields depending on the Type.
-	Calculation UOM Units Type	No direct mapping available. Please refer to the Help Guide for description.
-	Calculation UOM	No direct mapping available. Please refer to the Help Guide for description.
-	Rebate Scheme	No direct mapping available. Please refer to the Help Guide for description.
-	Rebate Value Type	No direct mapping available. Please refer to the Help Guide for description.
-	Aggregate	No direct mapping available. Please refer to the Help Guide for description.
-	Tier Name	No direct mapping available. Please refer to the Help Guide for description.

5. Import rebate agreement details records from the Saved Search to Rebates and Trade Promotions SuiteApp. See [Importing Agreement Details Using a CSV File](#).

Setting Up the Rebates and Trade Promotions SuiteApp

You need to complete the following actions before setting rebate preferences or creating rebate agreement records:

Step	Related Help Topic
1. Log in as a NetSuite Administrator.	Roles and Accounts
2. Enable the required features.	Prerequisites for Rebates and Trade Promotions SuiteApp
3. Install the SuiteApp.	Installing the Rebates and Trade Promotions SuiteApp
4. Configure the roles and permissions.	Rebates and Trade Promotions Roles and Permissions
5. Create vendor and customer records.	Creating Vendor and Customer Records for Rebates and Trade Promotions
5. Create accounting item records.	Creating Accounting Item Records for Rebates and Trade Promotions

Prerequisites for Rebates and Trade Promotions SuiteApp

The Rebates and Trade Promotions SuiteApp requires a OneWorld account. If you do not have a NetSuite OneWorld account, contact your NetSuite account manager.

Before installing the SuiteApp, ensure you enable the following features in your NetSuite account:

Subtab	Sublist	Feature Name
Company	Classifications	Department

Subtab	Sublist	Feature Name
		Locations
		Classes
	ERP General	Multiple Units of Measure
	International	Multi-Language Multiple Currencies

Installing the Rebates and Trade Promotions SuiteApp

The Rebates and Trade Promotions SuiteApp is a paid and managed SuiteApp that automatically updates whenever enhancements or new features are added.

Before installing the SuiteApp, install the Rebate Management Foundation with Bundle ID 453542. If you don't have access to the bundle, contact your NetSuite account manager.

For more information about installing a bundle, see the help topic [Installing a Bundle](#).

Using the standard Administrator role, you can install the Rebates and Trade Promotions SuiteApp from the SuiteApp Marketplace in two ways:

- Click the [Rebates and Trade Promotions](#) link to go directly to the SuiteApp Details page and click **Install**.
- Go to the SuiteApp Marketplace manually by following the procedure to install the SuiteApp.

To install the Rebates and Trade Promotions SuiteApp:

1. Go to SuiteApps.
2. In the **Search** field, enter **Rebates and Trade Promotions**.
3. Click the SuiteApp tile.
4. On the SuiteApp Details page, click **Install**.
5. Click **OK**.

For more information about installing SuiteApps from the SuiteApp Marketplace, see the help topic [Installing from the SuiteApp Marketplace](#).

Rebates and Trade Promotions Roles and Permissions

Administrators can create new roles or customize roles to use in the Rebates and Trade Promotions SuiteApp. For more information, see the help topics [Assigning Roles to an Employee](#) and [Customizing or Creating NetSuite Roles](#).

Rebates and Trade Promotions Roles

There are no custom roles included when you install the SuiteApp. The following groups describe what the users can set up or create in the SuiteApp, depending on what the Administrator allows.

- **Sales Users** - These users create, select, or modify rebates on sales transactions.
- **Rebate Administrators** - These users set up the preferences and create new rebate agreements used to calculate rebates on transactions created by sales users.

Important: Before upgrading or installing a new version of the SuiteApp, set some roles to active by going to Setup> Users/Roles> Manage Roles. Then, clear the box for these roles:

- accountant
- accountant_reviewer
- bookkeeper
- ceo
- ceo_hands_of
- customrole41
- customrole42
- cusomrole43

The system requires these roles to be active to install the custom forms in the SuiteApp. After the upgrade or installation, you can set the roles to inactive again.

Rebates and Trade Promotions Permissions

The following table lists the minimum record permissions required to use Rebates and Trade Promotions:

Subtab	Permission	Minimum Permission for Sales Users	Minimum Permission for Rebate Administrators
Transactions	Sales Order	Edit	Edit
	Purchase Order	Edit	Edit
	Find Transaction	View	View
	Make Journal Entry	View	View
List	Accounts	View	Edit
	View	View	Edit

Subtab	Permission	Minimum Permission for Sales Users	Minimum Permission for Rebate Administrators
	Custom Record Entries	View	Full
	Customers	View	Edit
	Documents and Files	View	View
	Employees	View	View
	Employee Record	View	View
	Entity Subsidiary Relationship	View	View
	Items	View	Edit
	Locations	View	Edit
	Partners	View	Edit
	Perform Search	View	Full
	Subsidiaries	View	View
	Units	View	View
	Vendors	View	Edit
Setup	Accounting Lists	View	View

	Settlement History	-	Create

Subtab	Permission	Minimum Permission for Sales Users	Minimum Permission for Rebate Administrators
	Volume Rebate Tier	View	View

If you have **Create** access level to the **Rebate Agreement** record, you should add or update these minimum permission access level:

Subtab	Permission	Access Level
Custom Record	Rebate Agreement	Create
	Rebate Agreement Version	Edit
	Rebate Management System Notes	Edit
	Settlement Method	View

If you have **Edit** access level to the **Rebate Agreement** record, you should add or update these minimum permission access level:

Subtab	Permission	Access Level
Custom Record	Rebate Agreement	Edit
	Rebate Agreement Version	Edit
	Rebate Management System Notes	Edit
	Rebate Transaction	View
	Settlement Method	View

If you have **Create** or **Edit** access level to the **Rebate Agreement Details** record, you should add or update these minimum permission access level:

Subtab	Permission	Access Level
Custom Record	Rebate Agreement	Edit
	Rebate Agreement Details	Create/Edit
	Rebate Agreement Version	Edit
	Rebate Management System Notes	Edit
	Rebate Transaction	View
	Settlement Method	View
	Volume Rebate Tier	Edit

If you have **Edit** access level to the **Generate Settlement** page, you should add or update these minimum permission access level:

Subtab	Permission	Access Level
Custom Record	Rebate Transaction Details	Edit
	Settlement History	Edit

If you have **Edit** access level to posting transactions, you should add or update these minimum permission access level:

Subtab	Permission	Access Level
Custom Record	Rebate Transaction	Full
	Rebate Transaction Details	Full
	Rebate Preferences	View

Creating Vendor and Customer Records for Rebates and Trade Promotions

In NetSuite, an entity cannot operate both as a customer and a vendor. Some features provided to a customer entity are not available to a vendor entity. Similar limitations apply to a customer entity.

When dealing with vendors as payers, the Rebates and Trade Promotions SuiteApp lets you generate a bill credit (vendor credit). In NetSuite, you can only send invoices to customers, not vendors. If you want to send an invoice to a vendor, create a customer record for them. To create a customer record, see the help topic [Creating a Customer Record](#).

If a payee is a customer entity, you can generate a credit memo. Since you can send bills only to vendors, you need to create a vendor record for customers. To create a vendor record, see the help topic [Creating a Vendor Record](#).

Creating Accounting Item Records for Rebates and Trade Promotions

Create non-inventory items or other charge items so you can associate them to a settlement method. Ensure that settlements do not impact your inventory.

The accounting items you create will display in the dropdown list of the **Accounting Item** field on the rebate agreement.

You need to create the following item records:

- Other Charge Resale Item
- Other Charge Sale Item
- Other Charge Purchase Item
- Non-inventory Resale Item
- Non-inventory Sale Item
- Non-inventory Purchase Item

To create an item record, see the help topic [Creating Item Records](#).

Setting Up Rebate Agreement Records

After you finish installing, set up all the required records to define the conditions for how rebates should be calculated, applied, and settled.

You need to create the following records before you create or enter transactions:

- [Rebate Preferences](#)
- [Rebate Agreement](#)

■ Agreement Details

Rebate Preferences

When you set rebate preferences, you can specify which customers, vendors, and item attributes are eligible, and select the accounting types for the accrual process. The preferences you set are populated in the corresponding agreement details of every new rebate agreement.

To set the rebate preferences, read [Setting Rebate Preferences](#).

Rebate Agreement

Create a rebate agreement to provide instructions for calculating rebates, managing accruals, and processing rebate settlements. This record holds the general terms, including the rebate type, status, validity period, stackability, and entity from whom you can claim or to whom you can disburse rebates.

One rebate agreement is specific to one subsidiary only and cannot be a shared contract across multiple subsidiaries under one parent company.

To create a rebate agreement, read [Creating a Rebate Agreement](#).

Agreement Details

Add agreement details to the rebate agreement to specify the criteria for calculating rebates on sales and purchase transactions. These criteria include the eligible customer and item criteria, UOM criteria and calculation UOM, calculation method and amount, calculation basis, and price pass-through.

Create rebate tiers and assign rebate tier values for your selected rebate scheme.

To add agreement details, read [Adding Agreement Details](#).

Setting Rebate Preferences

You can only create one rebate preferences record per payment type.

To set the rebate preferences:

1. Go to Rebate Management > Preferences > Preferences > New.
2. Select or enter the required information in the fields described in the following table.

Field Group	Description
Payment Type	This field is required. ■ Paying- Choose Paying if you are paying rebates. ■ Receiving- Choose Receiving if you are receiving rebates.
Transaction Type	Sale- Sales transactions include sales orders, invoices, returns, and cash sales. This transaction type is selected by default. Purchase- Purchase transactions include purchase orders, vendor bills, vendor credits, and vendor returns.
Customers	The values displayed on the lists are sourced from the customer record. Customer Inclusions- Select a maximum of five customer attributes. Customer Exclusions- (Optional) Select a maximum of two customer attributes. The system sources the customer criteria shown on the agreement details based on the values you select from each Customer Inclusions and Exclusions lists.

Field Group	Description
	You can also create a List/Record type custom field to have additional options for customer criteria selection. See the help topic Creating a Custom Field. The custom field you add displays on the Agreement Details subtab of a rebate agreement.  Note: The custom field does not display if you deactivate, edit the agreement details, then reactivate the field later. Edit the Agreement Details record only after reactivating the custom field then saving the changes.
Vendors	The values displayed on the lists are sourced from the vendor record. Vendor Inclusions- Select a maximum of five vendor attributes. Vendor Exclusions- (Optional) Select a maximum of two vendor attributes. The system sources the vendor criteria shown on the agreement details based on the values you select from each Vendor Inclusions and Exclusions lists. You can also create a List/Record type custom field to have additional options for vendor criteria selection. See, Creating a Custom Field.
Items	The values displayed on the lists are sourced from the item record. Item Inclusions- Select a maximum of five item attributes. The system sources the item attributes from the inclusion criteria you select in the agreement details. Item Exclusions- (Optional) Select a maximum of two item attributes. The system sources the item attributes from the exclusion criteria you select on the agreement details. Similar to the customer custom field, you can also create a List/Record type custom field for items to have additional options for item criteria selection. See the help topic Creating a Custom Field.  Note: To include a particular subsidiary and exclude another subsidiary from the same parent company, select the Subsidiary or Primary Subsidiary in both the inclusions and exclusions list.
Apply Best Deal	Select the condition for how you want the system to select and apply the best deal rebate for an item. ■ Minimum Rebate- Select Minimum Rebate for the system to apply the lowest rebate value on the item. ■ Maximum Rebate- Select Maximum Rebate for the system to apply the highest rebate value on the item. The Maximum Rebate preference is selected by default.  Important: After you set the Apply Best Deal preference and save the record, you can't edit it later.
Accounting	This field shows the list of posting and non-posting accounts available in the system.

Field Group	Description
	- When receiving rebates, select an account for the accrual expense and the accrual receivable accounts: You must not use an A/P control account or an A/R control account when posting accruals. Accrual Expense (Credit) Account - The accrual expense account shows the expenses incurred but have not been billed to the payer. When you accrue the rebate amount, this account gets credited. When you reverse the journal entry, this account is debited. Accrual Receivable (Debit) Account - The accrual receivable account shows the amount of revenue earned that has not been received. When you accrue the rebate amount, this account gets debited. When you reverse the journal entry, this account is credited. - When paying rebates, select an account for the accrual payable and accrual expense accounts: Accrual Payable (Credit) Account - The accrual payable account shows what you still need to pay for bills and invoices that have been received. When you accrue the rebate amount, this account is credited. When you reverse the journal entry, this account is debited. Accrual Expense (Debit) Account - The accrual expense account shows the expenses incurred for which bills and invoices have not been received. When you accrue the rebate amount, this account gets debited. When you reverse the journal entry, this account is credited.
Customization	Custom Fields- This multi-select field lists all the custom transaction line fields you can use for rebate calculations. Only the custom fields for the currency are shown in this field. The custom field value can be sourced from an item record or any custom records. You can also manually enter a value on the transaction line while creating a transaction. Selected custom fields are displayed under the Calculation Basis field of the Agreement Details. You can also update the selection to add more or clear any previously selected custom fields. Any changes to the selection also reflects to the Agreement Details.

- Click **Save** to finish setting the rebate preferences.

Editing Rebate Preferences

When editing the preferences, follow the maximum allowed limit for both the inclusions and exclusions lists.

Note: Apply best deal, transaction type, and payment type selections cannot be modified when editing a rebate preferences record.

To edit a rebate preferences record:

- Go to Rebate Management > Preferences > Preferences.
- On the Rebate Preferences List, click **Edit** beside the record that you want to edit.
- On the Rebate Preferences record, you can update the following information:
 - Add or remove customer or vendor attributes
 - Add or remove item attributes

- Update accounting information

4. Click **Save**.

All changes to the rebate preferences record apply to future transactions, new rebate agreements, and existing rebate agreements with no agreement details.

Setting Up Custom Segments for Rebate Transactions

If your company is using custom segments, you can specify or apply them on rebate transactions and journal entries. Then, applied custom segments, besides rebate agreements and Classifications (Class, Department, and Locations), will be used in grouping rebate items in accruals and settlements.

If you want to apply or use custom segments in your rebate transactions and journal entries, ensure that you already set up the Rebate Agreement, preferences, and then the custom segment preferences, before creating transactions with rebates.

The Custom Segment Preferences page allows you to view and specify custom segment values for rebate transaction records. The page displays all custom segments already defined in the system that are applied to Sales, Purchases, Journal Entries, or related item entities.

A script, RM MR Update Custom Segment MR, which runs during off-hours, automatically creates preference records with the applicable custom segments. These records are then displayed on the Custom Segment Preferences page, along with any default values. If a custom segment has no a default value, its field will be blank.

You can update the default values or specify values in blank fields. Custom segment values on the page can then be used for grouping rebate items in accruals and settlements.

Note: Custom segments of the type Multiple Select, and those that are inactive or locked, are not supported in rebate transactions and journal entries; these custom segments will not be displayed on the Custom Segment Preferences page

To set up and use custom segments for rebate transactions:

1. Go to Rebate Management > Preferences > Custom Segment Preferences, and on the Custom Segment Preferences List page, click **New Custom Segment Preferences**. You can only create one Custom Segment Preferences page.

Note: If you create a custom segment preference manually, custom segments will not be displayed by default until script, RM MR Update Custom Segment, scheduled to run nightly, is triggered. The administrator can manually run the script outside its schedule to instantly populate the custom segment fields on the Custom Segment Preferences page.

2. (Optional) On the Custom Segment Preferences page, specify, select, change, or retain the values of the custom segment fields.

Note: If you change a custom segment value on the Custom Segment Preferences page, this will not change the default value of the source Custom Segment record. Conversely, if you edit a Custom Segment record, the changes will not be reflected on the corresponding custom segment on the Custom Segment Preferences page.

3. Check or leave clear the **Set Custom Segment of rebate transactions with values from source transactions** box.
 - Check the box if you want custom segment values on rebate transactions to inherit custom segment values from their source transactions.

- Leave the box clear if you want rebate transactions to use custom segment values specified on the Custom Segment Preferences page.

By default, the preference or box is clear.

4. Click **Save**.

Read the topic [Business Cases for Using Custom Segments in Rebates](#), to learn how custom segments in rebates work, and corresponding results in sample business cases.

Business Cases for Using Custom Segments in Rebates

To better understand how custom segment preference works, consider the following example.

If your account has 2 custom segments defined with the following default values:

- CS1 = val1
- CS2 = val2

; these custom segment values are set on the preference record.

Then, consider the following 2 transactions are created with different values for custom segments CS1 and CS2:

- transaction#1:
 - CS1 = val3
 - CS2 = val4
- transaction#2:
 - CS1 = val5
 - CS2 = val4

Case 1:

The preference or box is **not checked or cleared**.

Result:

When rebate transactions are created for the 2 transactions, the custom segment values on the rebate transactions will be taken from the Custom Segment Preferences page or preference record, not from the source transactions.

Rebate Transaction	Class	Location	Department	CS1	CS2
RT#1 (from transaction#1)	C1	L1	x	val1	val2
RT#2 (from transaction#2)	C1	L1	x	val1	val2

Number of groups when accrual is generated = 1

Number of groups when settlement is generated=1

Case 2:

The preference or box is **checked**.

Result:

When rebate transactions are created for the 2 transactions, the custom segment values on the rebate transactions will be taken from their source transactions.

Rebate Transaction	Class	Location	Department	CS1	CS2
RT#1 (from transaction#1)	C1	L1	x	val3	val4
RT#2 (from transaction#2)	C1	L1	x	val5	val4

Number of groups when accrual is generated = 2

Number of groups when settlement is generated=1

Creating a Rebate Agreement

Before creating a rebate agreement, you need to create a rebate preferences record to associate to the agreement. Read [Setting Rebate Preferences](#).

Refer to the topic [Rebate Agreement Fields](#) to know valid inputs for each field in completing step 4 of the following procedure.

To create a rebate agreement:

1. Go to Rebate Management > Rebate Transaction > Rebate Landing Page.
2. Click the **Receiving** tab if you are receiving rebates or the **Paying** tab if you are paying rebates.
3. Under the **Sale** or **Purchase** subtab, click **Rebate Agreement**.
Aside from the Rebate Landing page, you can also create a rebate agreement by going to Rebate Management > Rebate Agreements > Rebate Agreements > New.
4. Select or enter required information in Rebate Agreement fields: See [Rebate Agreement Fields](#).
5. Click **Save** then **Edit** to add rebate agreement details. See [Adding Agreement Details](#).
To view the list of all rebate agreements, go to Rebate Management > Rebate Agreements > Rebate Agreements.
The created rebate agreement record contains subtabs described in the topic [Rebate Agreement Subtabs](#).

Alternatively, you can import rebate agreements into NetSuite using CSV import. See [Importing Rebate Agreements Using a CSV File](#).

Rebate Agreement Fields

Refer to the following table listing Rebate Agreement fields and their valid inputs to be guided in completing step 4 in [Creating a Rebate Agreement](#).

Field	Description
Primary Information	
Agreement Name	Enter a unique agreement name. You cannot use the same agreement name for another rebate agreement. This field is required.

Field	Description
	 Note: The system only shows the first 100 characters of a rebate agreement record in the Applicable Rebates window and Edit Settlement page search result.
Agreement Reference #	Enter a reference number that helps you identify the agreement. This field can include an external agreement reference number.
Stackable Rebate	Check this box to combine rebates for multiple agreement details within a rebate agreement, and with other stackable rebate agreements. Only rebates from agreement details with common item inclusions are combined. For more information, see Stackable Rebates.
Agreement Start Date	By default, this field displays the current date. Select the date when the agreement starts. This field is required.
Agreement End Date	Select the date when the agreement ends.
No End Date	Check this box to make the rebate agreement effective indefinitely.
Status	Select from one of the following statuses:  Note: You can select On Hold and Expired only when you edit an existing rebate agreement. Read Editing Rebate Agreements and Agreement Details. The status switches to Complete automatically after all rebates are fully settled.  Draft- Select this status if the agreement details aren't complete yet. This is the default value. Select a start date that is either a past date, a current date, or a future date.  Planned- Select this status if the agreement details are complete, but the rebate program hasn't started yet. Select a future date for the Agreement Start Date and Agreement End Date. The status switches to Active automatically when a planned start date occurs.  Active- Select this status if the rebate program has started. Rebates are applied to eligible transactions. Select a past date or a current date for the Agreement Start Date and select a future date or a current date for the Agreement End Date.  On Hold- Select this status if rebate agreements that are Active and Planned can be placed on hold. All rebate transactions created before putting the agreement on hold are included in the accruals. The system can still process settlements for On Hold rebate agreements.  Expired- The rebate program has ended. The status switches to Expired automatically after the planned end date passes. The system can still process settlements for expired rebate agreements. You can also set the status to Expired manually and change the Agreement End Date to a current date.
Comments	Enter relevant information for future reference.
Subsidiary	Select the subsidiary for which you create the rebate agreement. This field is required. The subsidiary you select affects the list of options in the dropdown list for the Accounting Item and Payee/Payer fields.

Field	Description
Agreement #	This read-only field shows the agreement number the system generates after you save the record.
Accounting	
Transaction Type	Select between Sale or Purchase. Sale transaction type is selected by default.
Payment Type	The value in this field is sourced from the payment type you selected in the Rebate Landing page. If you create a rebate agreement from the Rebate Agreements List, or on the Rebate Agreements navigation, you can manually select a value for this required field.
Settlement Method	Select the settlement method for paying or receiving rebates. This field is required if you check the Auto Claim or Auto Disburse box. Receiving Rebates: ■ A/R Invoice - Generates an accounts receivable invoice to claim the rebate amount. ■ A/P Debit - Generates a vendor credit to apply to future purchases or existing balances. Paying Rebates: ■ Credit Memo - Generates a credit memo as a reduction of receivable balance. ■ Bill - Generates a bill (vendor bill) for disbursing rebates. When you select A/R invoice or Credit Memo , a list of customer entities is shown in the Payer/Payee field. When you select A/P Debit or Bill , a list of vendor entities is shown.
Settlement Frequency	Select how often you want the system to initiate a rebate settlement. This field is required when you check Auto Claim or Auto Disburse box. ■ Weekly - Generates claims or disbursements every week. ■ Monthly - Generates claims or disbursements every month. ■ Quarterly - Generates claims or disbursements every quarter. ■ Twice a Year - Generates claims or disbursements on the first and third quarters of the year. ■ Annually - Generates claims or disbursements every year.  Important: Ensure that the accounting period matches your preferred settlement frequency. For example, if you select a Quarterly or Twice a Year settlement, you need to setup quarters of the year in your accounting period. See the help topic Accounting Period Setup.
Payer/Payee	This field is required. Payer - Select the customer or vendor from whom you will receive rebates. Payee - Select the customer or vendor to whom you will disburse rebates. Aside from the dropdown list, you can use the List Search links included in the field to find the customer or vendor entity.

Field	Description
	 Note: The Settlement field value populates the appropriate settlement method if you initially select a value in this field.
Accounting Item	Select an accounting item to use for the settlement method. The list of accounting items are updated based on the selected payer or payee. This field is required.  Note: You should not configure Promotions for the accounting items that are valid for both vendors and customers. Valid Accounting Items for Vendors: Sale Transaction Type - Other Charge Resale Item - Non-inventory Resale Item Purchase Transaction Type - Non-inventory Purchase Item - Non-inventory Resale Item - Other Charge Purchase Item - Other Charge Resale Item Valid Accounting Items for Customers: Sale Transaction Type - Other Charge Resale Item - Other Charge Sale Item - Non-inventory Resale Item - Non-inventory Sale Item Purchase Transaction Type - Other Charge Resale Item - Non-inventory Resale Item
Settlement Day	Select which day of the week the weekly rebates will be settled.
Accrual Expense (Credit) Account Accrual Receivable (Debit) Account	These fields populate your selected account from the Preferences record after you select a value from the Subsidiary field. However, you can change the value by selecting a different account from the list of posting and non-posting accounts available in the system regardless of the payment type you select for the agreement.

Field	Description
Accrual Payable (Credit) Account Accrual Expense (Debit) Account	- When receiving rebates, select an account for the accrual expense and the accrual receivable accounts: You must not use an A/P control account or an A/R control account when posting accruals. Accrual Expense (Credit) Account - The accrual expense account shows the expenses incurred that have not been billed to the payer. When you accrue the rebate amount, this account is credited. When you reverse the journal entry, this account is debited. Accrual Receivable (Debit) Account - The accrual receivable account shows the amount of revenue earned that has not been received. When you accrue the rebate amount, this account is debited. When you reverse the journal entry, this account is credited. - When paying rebates, select an account for the accrual payable and accrual expense accounts: Accrual Payable (Credit) Account- The accrual payable account shows the amount that must be paid off for bills and invoices that have been received. When you accrue the rebate amount, this account is credited. When you reverse the journal entry, this account is debited. Accrual Expense (Debit) Account - The accrual expense account shows the expenses incurred for which bills and invoices have not been received. When you accrue the rebate amount, this account is debited. When you reverse the journal entry, this account is credited.
Auto Claim/Auto Disburse	Auto Claim – When receiving rebates, check this box to automatically initiate a claim process for transactions with applicable rebates. Auto Disburse – When paying rebates, check this box to automatically initiate a disbursement process for transactions with applicable rebates.
Settlement Method	Select the settlement method for paying or receiving rebates. This field is required if the Auto Claim or Auto Disburse box is checked. Receiving Rebates: A/R Invoice - Generates an accounts receivable invoice to claim the rebate amount. A/P Debit- Generates a vendor credit to apply to future purchases or existing balances. Paying Rebates: Credit Memo- Generates a credit memo as a reduction of receivable balance. Bill- Generates a bill (vendor bill) for disbursing rebates. When you select A/R invoice or Credit Memo, a list of customer entities is shown in the Payer/Payee field. When you select A/P Debit or Bill, a list of vendor entities is shown.

Rebate Agreement Subtabs

The rebate agreement record contains the following subtabs:

Subtab	Description
Agreement Details	Manage agreement details linked to the rebate agreement. - Add new agreement details - Remove unused agreement details

Subtab	Description
	- Edit existing agreement details - View versions of the agreement details record
Related Transactions	Review the list of all cash sales, cash refunds, returns, credit memos, and invoices with rebates created for the rebate agreement. This subtab also shows the rebate per unit, accrued rebate amount, and achieved rebate amount associated with each transaction.  Note: The value shown under the Rebate/Unit column is the calculated rebate amount divided by the item quantity. For example, item A with a quantity of 2 uses a custom field which has a value of 100 and with a calculation amount of 40. The calculated rebate for each unit is shown as 20 under the Rebate/Unit column.
Accruals	Review the list of accrual records created for the rebate transactions of the corresponding rebate agreement.
Settlements	Review rebate settlement records generated for the rebate agreement.
Update History	Track the changes made on the rebate agreement and agreement details. - Shows the date when the change was made - Shows the entity who updates the record - Specifies which record type was updated - Shows the previous and current field value on a record

Adding Agreement Details

The agreement details record lets you specify the values for each customer, vendor, and item attribute you select on the Rebate Preferences record. One rebate agreement can hold multiple agreement details and displays ten records at a time.

To add agreement details:

1. Go to Rebate Management > Rebate Agreements > Rebate Agreements.
2. On the Rebate Agreements List, click **Edit** beside the rebate agreement that you want to edit.
If you are adding agreement details on a new rebate agreement, click **Edit** after you save the record.
3. Go to the **Agreement Details** subtab and then click **Add Agreement Details**.
4. On the Agreement Details popup window, select or enter the required information in Agreement Details fields. See [Agreement Details Fields](#).
5. Click **Save**.

A corresponding agreement detail ID is populated in the **Agreement Details** subtab to indicate the sequence in which agreement details are created.

If you change the agreement details, those changes apply to future transactions only. You can also remove unused agreement details from the rebate agreement. See [Editing Rebate Agreements and Agreement Details](#).

You can also import multiple agreements details into NetSuite using CSV import. See [Importing Agreement Details Using a CSV File](#).

Agreement Details Fields

Refer to the following table listing Rebate Agreement fields and their valid inputs to be guided in completing step 4 in [Agreement Details Fields](#).

Field	Description
Customer Criteria or Vendor Criteria	
Inclusion	Select one or more customer or vendor values to include in the agreement details. The selected customer or vendor inclusions are considered in the rebate calculation. If you do not select a value, the system includes all values in the customer or vendor inclusions criteria.
Exclusion	Select one or more customer or vendor values to exclude from the rebate calculation. If you do not select a value, none of the customers or vendors from the exclusions list are excluded in the rebate calculation.
Item Criteria	
Inclusion	Select one or more item values to include in the agreement details. The selected item inclusions are considered in the rebate calculation. If you do not select a value, the system includes all values in the item inclusion criteria.  Important: When you select an Item Group, ensure to include its components. Rebates are populated only for individual components, not on the parent item.  Note: In the agreement details, the values of the parent company and its subsidiaries are sourced from the selected subsidiary or primary subsidiary of the rebate preferences record. You can include a particular subsidiary in the customer or item criteria, and exclude another subsidiary from the same parent company.
Exclusion	Select one or more item values to exclude from the rebate calculation. If you do not select a value, none of the items from the exclusion list gets excluded in the rebate calculation.
UOM (Inclusion)	This is a multi-select field. The values you select are used to identify which unit of measures are applicable for the selected item inclusions. After you select All or multiple units belonging to different unit types, you can also select a unit for each of those unit types in the Calculation UOM field. The default value in this field is All.
Accounting Information	
Calculation Method	Select a method to use for calculating rebates. Flat Amount – The amount entered is rebated for each unit purchased or sold. Flat Amount is not dependent on calculation basis. The rebate amount is calculated as follows: $\text{Calc} = \text{calc amount} * \text{item quantity}$

Field	Description
	■ % Calculation – A percentage of the cost basis is rebated, or a percentage of the rebate cost amount entered on the rebate agreement for the item is refunded. The rebate amount is calculated as follows: Calc = (calc basis * calc amount) * item quantity ■ Fixed Cost – The difference between the calculation basis and the calculation amount. The rebate amount is the difference between the amount paid on the transaction and the amount entered on the agreement. The rebate amount is calculated as follows: Calc = (calc basis – calc amount) * item quantity  Note: Guaranteed Profit % does not apply to purchase transactions. ■ Guaranteed Profit % – The purchaser is guaranteed the rebate percentage as margin or profit. The rebate amount is calculated as follows: Calc = {calc basis – [sales rate * (1 – % calc amount)]} * (item quantity) ■ Volume Amount – Rebates are calculated for sales transactions when a target monetary tier has been reached. ■ Volume Quantity – Rebates are calculated for sales transactions when a target quantity tier has been reached.
Calculation Amount	Enter the amount you want to use for calculating rebates. This value is based on the selected calculation method. If you select % Calculation or Guaranteed Profit % in the calculation method, the number you enter in this field is interpreted as a percentage value.
Calculation Basis	Select a calculation basis for calculating rebates.  Note: If you select a Flat Amount in the calculation method, you don't need a calculation basis. The system uses the flat amount value in the agreement details when calculating the rebate amount. ■ Average Cost – This type uses a calculated average cost of the units purchased. If the Multi-Location Inventory feature is enabled, NetSuite calculates the average cost per location. ■ Last Purchase Price – This type calculates the estimated cost based on the last purchase price of the item. ■ Purchase Price – This type uses the purchase price you paid for the item. If there's no price entered, it uses the most recent purchase price by default. ■ Item Defined Cost – The system uses the defined cost of the item to calculate the rebates. ■ Transaction Price – This type uses the sales amount or the selling price of an item. When you use Guaranteed Profit % with Transaction Price, the calculation uses the sales rate as the transaction price. The calculated rebate amount is shown as zero. ■ Rebate Cost – This type uses the fixed amount you entered in the Rebate Cost field of the agreement details. This cost is a user-defined value. ■ Preferred Vendor Rate – This type converts the item's purchase price for the transaction subsidiary's preferred vendor to the transaction currency using that subsidiary's exchange rates. If no rate is available, the Purchase Price estimate type is used.

Field	Description
	 Note: Derived from Member Items is only applicable to sales transactions. Derived from Member Items- This type uses the cost basis as sum of the estimated costs for each item in the kit or assembly, based on their individual Cost Estimate Types. Applicable for Kits and Assemblies Custom Field- The custom fields you select in Preferences record are shown as one of the appear as options in the Calculation Basis field. If you clear the previously selected custom field from Preferences, that custom field remains selected on the existing record but is removed as an option for new agreement details. For more information, see the help topic Cost Estimate Types in NetSuite OneWorld.
Rebate Cost	Enter the rebate cost value. This value is used to calculate rebates when Rebate Cost is selected as the calculation basis.
Price Pass-through Type	Select whether the price pass-through is calculated using a flat amount or a percentage value.  Note: Price pass through is not applicable for volume rebates and purchase transactions. Percent (%) – A percentage of the calculated rebate amount is passed on to the customer as a discount. Flat Amount – A specific amount is passed on to the customer as a discount. The amount is deducted from the calculated sales price.
Price Pass-through Value	Enter a specific amount or percentage value that is deducted from the customer's sales price.  Note: Price pass through is not applicable for purchase transactions. If you select Percent % as the price pass-through type, the number you enter in this field is interpreted as a percentage value.
Calculation UOM	The selected units of measure are used for calculating rebates on item inclusions. If you do not select a unit, the system uses the item's primary sale unit or primary purchase unit to define the cost used for calculating rebates.  Note: UoM selection is applicable only for calculation scenarios where the calculation basis is dependent on the rate or cost defined by users. This field is only applicable to following calculation methods and basis impacted by the UOM functionality: - Percentage Calculation (All Calculation Basis) - Fixed Cost (All Calculation basis) - Guaranteed Profit (All Calculation Basis) - Flat Amount - Volume Quantity - Volume Amount (Rate per Unit)
Rebate Tiers	
Rebate Scheme	Select the type of calculation for rebate tiers.

Field	Description
	■ Marginal- Calculates the rebate for each bracket individually. ■ Linear- Determines the rebate by the rate of the highest bracket.
Rebate Value Type	Select if a rebate to be given is a flat rate per unit or a percentage of the transaction price. ■ Rate per Unit- Calculates the rebate by multiplying an item quantity with the applicable rebate tier value of a transaction. ■ Percentage- Calculates the rebate as a percentage of the transaction amount or quantity.  Note: The UoM for tiers are applicable for the following calculation methods: ■ Volume Quantity- Percentage ■ Volume Quantity- Rate per Unit ■ Volume Amount- Rate per Unit If you do not select a calculation UoM, the system uses the default sale unit of an item in calculating the cumulative rebate amount.
Aggregate	Check this box to combine multiple item criteria for each customer to qualify for a given tier.
Minimum	Enter a positive quantity or value for the Minimum tier field. Tier 1 is automatically set as the default tier indicated by a Yes under the Default Tier column.
Maximum	Enter a positive quantity or value for the Maximum tier field. The Maximum tier field is the highest value or quantity applicable to any given tier.
Rebate Value	Enter a positive value for the Rebate Value field. A rebate value can be a flat amount or a percentage of the transaction amount.
Default Tier	For Linear Rebate type, select the default tier. The system uses the value on the default tier when applying estimated rebates for a transaction. For Marginal Rebate type, the lowest tier is set as the default automatically.
Comments	Enter relevant information for rebate tiers.

Editing Rebate Agreements and Agreement Details

The values in the Applicable Rebates window change if you modify any of these fields in a rebate agreement or agreement details record:

- Stackable
- Status
- Payer
- Payee
- Calculation Method
- Calculation Amount

- Price Pass-through Type
- Price Pass-through Value
- Rebate Tiers

To edit a rebate agreement, go to Rebate Management > Rebate Agreements > Rebate Agreements and click **Edit** beside the rebate agreement that you want to edit.

Check the following guidelines when editing a rebate agreement:

Agreement Start Date:

You can change the agreement start date if there aren't any transactions linked to the rebate agreement.

Agreement End Date:

You can move the agreement end date to a current or a future date with or without transactions linked to the rebate agreement.

Settlement Method:

- You need to specify a settlement method before generating a settlement.
- When creating rebate agreements with auto claim and auto disburse settlement, you need to select a value for the settlement method and settlement frequency.

Agreement Details:

- You can edit an unexpired agreement details record that is linked to transactions if the rebates are not yet claimed or disbursed.
- You can remove the agreement details record if there are no transactions linked to the record.
- The Agreement Details subtab always shows the latest version of an agreement detail. When you edit any field of that record, a new version of an agreement detail is created. The new version contains the updated values of the edited fields while the previous version contains the old values.
On the transaction line, the Agreement Detail ID column shows the hyper-linked version number of the record. When you click the Agreement Detail ID, the **Version History** popup window appears showing versions of the agreement when the record was edited.
- To add a new rebate agreement details record, see [Adding Agreement Details](#).
- You can't change agreement details for transactional or standard rebates to volume rebates. Similarly, after you set the agreement details to use volume rebates, you cannot change it to standard rebates.

Rebate Tiers:

- If you change the minimum and maximum tier values while creating a transaction, the best deal selections in the Applicable Rebates window also change. For more information about best deals, see [Best Deal on Rebates](#).
- After you create and save a volume agreement details, you can no longer edit the customer and item criteria, and the accounting information. When you edit a volume agreement details, you can only update the values under the rebate tiers section.

Status:

The **RM Rebate Agreement Status Update** script runs daily at 12:00 AM to check and update the agreement status according to the scheduled start date and end date of the rebate agreement. The status changes either from Planned to Active, Active to Expired, or Expired to Complete.

From	To	Guidelines
Draft	Planned	■ The Agreement Start Date and End Date must be set to a future date.

From	To	Guidelines
		The Agreement End Date cannot be earlier than the Agreement Start Date.
Draft	Active	- The Agreement Start Date must occur on or before the current date. - The Agreement End Date cannot be earlier than the Agreement Start Date. - The Agreement End Date can be the same as the Agreement Start Date if the start date is a current date.
Planned	Active	- The Agreement Start Date must occur on or before the current date. - The Agreement End Date cannot be earlier than the Agreement Start Date.
Planned	On Hold	The Agreement Start Date and End Date are not editable after switching the status to On Hold.
Active	Planned	- The Agreement Start Date and End Date must be set to a future date. - The Agreement Start Date cannot be moved to a future date if transactions are linked to the rebate agreement. - The Agreement End Date cannot be earlier than the Agreement Start Date.
Active	On Hold	Changing the status from Active to On Hold disables the date fields.
Active	Expired	- Editing the Agreement Start Date is not allowed. - The Agreement End Date must be set to a current date.
On Hold	Planned	- The Agreement Start Date and End Date must be set to a future date. - The Agreement End Date cannot be earlier than the Agreement Start Date. - The start date can be moved to a future date if there are no rebate transactions linked to the rebate agreement.
On Hold	Active	- The Agreement Start Date must occur on or before the current date. - The Agreement End Date cannot be earlier than the Agreement Start Date. - The Agreement End Date can be the same as the Agreement Start Date if the start date is a current date.
On Hold	Expired	- Editing the Agreement Start Date is not allowed. - The Agreement End Date must be set to a current date.
Expired	—	- Rebate agreements expire after the Agreement End Date passes. - You can't edit expired rebate agreements.
Expired	Complete	- The rebate agreement status switches to Complete automatically after all rebates are settled. - You can't edit rebate agreements with Complete status. - To renew a rebate program, create a new rebate agreement record and set a new validity period.

Adding Rebate Agreement Records Using CSV Import

You can import multiple rebate agreements, agreement details, or rebate tiers into NetSuite through CSV import for each group of records. The SuiteApp gives you a CSV template for each record type with all the same fields which are in NetSuite.

Before you import any CSV file, ensure that you set the preferences for your chosen rebate type.

Read the topic [Guidelines for Importing Rebate Agreement Records](#) to learn the prerequisites and considerations in importing rebate agreement records.

You can import your data in this order:

Record	Help Topic
1. Rebate Agreements	Importing Rebate Agreements Using a CSV File
2. Agreement Details	Importing Agreement Details Using a CSV File  Important: For volume rebates, make sure you import the Rebate Volume Tiers record first before you import agreement details. For transactional rebates, you can import agreement details after you import rebate agreements.
3. Rebate Volume Tiers	Importing Rebate Tiers Using a CSV File

Read the following topics to understand how to add data on the CSV template:

- [CSV Template Locations of Rebate Agreement Records](#)
- [Sample CSV Agreement Detail Template](#)
- [Sample CSV Volume Rebate Tier Template](#)

Guidelines for Importing Rebate Agreement Records

Read these guidelines before you import rebate agreements, agreement details, and rebate volume tiers:

- Ensure that you enter the supported field values provided in the template.
- The **uom_unitstype/uom_calc_unitstype** fields define the UOM name. These fields are case-sensitive.
- The **custrecord_rm_uom/custrecord_rm_uom** fields define the unit type abbreviation.
- You must remove imported entries from the CSV file when retrying a partially successful import process.
- Include only 50 line details per agreement details record.
- You need to include a value for Agreement End Date or No End Date fields for a rebate agreement before importing a CSV file.
- You must not enter values for any volume-related fields if you are importing agreement details for transactional rebates.

CSV Template Locations of Rebate Agreement Records

The following table shows the records and the locations where you can download the templates:

Template	Path/Location
Rebate Agreement	Go to Rebate Management > Rebate Agreements > Download Agreement Template

Template	Path/Location
Agreement Details	1. Go to Rebate Management > Rebate Agreements > Rebate Agreements 2. Select the imported record for which you want to add an agreement detail. 3. On the Rebate Agreement record, click Rebate Agreement Detail Template.
Rebate Volume Tiers	Go to Rebate Management > Rebate Agreements > Download Rebate Tier Template

Sample CSV Agreement Detail Template

The following example shows how you can enter multiple agreement details in a CSV file.

For each group of agreement details, you can assign a unique External ID. An External ID provides a means to reference an object by its foreign key in an external database. See, [External IDs Overview](#).

The first group with 5 rows are assigned to External ID 101. Then, for the remaining 4 rows of agreement details has an external ID of 102.

Note: Each rebate agreement detail can only have one value for Calculation Method and Calculation Basis.

Name	Line	custrecord_custinc_ companyname	custrecord_ite miteminc_itemid	uom_unitype_ name	custrecord_r m_uom	custrecord_agreement detail_cal_method	custrecord_aggr_ detail_cal_amount
Rebate Agreement	External ID	Company Name (Inclusion)	Item Name (Inclusion)	UOM Units Type Name	UOM (Inclusion)	Calculation Method	Calculation Amount
Christmas Promotion	101		Item 1			% Calculation	10
Christmas Promotion	101		Item 2			% Calculation	
Christmas Promotion	101		Item 3			% Calculation	
Christmas Promotion	101		Item 4			% Calculation	
Christmas Promotion	101		Item 5			% Calculation	
Christmas Promotion	102		Item 1			Rate Per Unit	10
Christmas Promotion	102		Item 2			Rate Per Unit	
Christmas Promotion	102		Item 3			Rate Per Unit	
Christmas Promotion	102		Item 4			Rate Per Unit	

Sample CSV Volume Rebate Tier Template

The following example shows how you can enter rebate tiers in a CSV file.

There are three set of tiers in the table: Under 100, Year End Sale, and 2024 Sale. Then, a range of minimum and maximum values and rebate values are set for each tier group.

In linear rebate schemes, you can set any tier level as a default tier. If the fields are empty under the **Default** column, the system considers the first tier as the default tier.

Tier Name	Minimum	Maximum	Rebate Value	Default	Comments
Under 100	1	100	15	True	Default Tier
Under 100	101	200	30	False	Under 200 Tier
Year End Sale	1	200	10.99	False	Default Tier
Year End Sale	201	300	20.99	True	Non Default Tier
2024 Sale	1	100	15	True	Rebate 15
2024 Sale	101	200	30	False	Rebate 30
2024 Sale	201	300	45	False	Rebate 45

Importing Rebate Agreements Using a CSV File

NetSuite lets you add multiple rebate agreements through CSV import. You need to use a unique name for the agreement name that is not yet present in the system.

To import a rebate agreement using a CSV file:

1. Go to Rebate Management > Rebate Agreements > Import Agreement

Alternatively, you can go to Setup > Import/Export > Saved CSV Imports. Then, on the Saved CSV Imports page, click the file **Rebate Agreement Import (DO NOT DELETE)**.

Both pathways take you to the Import Assistant page with pre-populated field values for the rebate agreement import steps.

2. On the Scan & Upload CSV File step, verify that the following fields contain the required values:
 - a. **Import Type:** Custom Record
 - b. **Record Type:** Rebate Agreement
 - c. **Character Encoding:** Western (Windows 1252)
 - d. **CSV Column Delimiter:** Comma
 - e. **CSV File(s):** One File to Upload
3. Click **Select** to add a CSV file with the data which you want to import.

Note: Consider the following:

- You must use the CSV template provided by the SuiteApp when importing rebate agreement records. To know where you can download the template, see [CSV Template Locations of Rebate Agreement Records](#).
- In creating a Rebate Agreement through CSV import, you cannot enter a multiple type record (such as a customer that is also be a vendor) with a Partner as primary entity.
- The Rebate Agreement name should be unique to avoid any conflicts.

4. Click **Next**.
5. On the Import Options step, the following fields contain the required values:

- a. Under Data Handling, the **Add** is preselected.
- b. Under Advanced Options, verify that the following boxes are checked and the fields contain the required values:

Field/Checkbox	Value
Validate Mandatory Custom Fields	Checked
Ignore Read-only Fields	Checked
Run Trigger SuiteScript and Trigger Workflows	Checked
CSV Decimal Delimiter	Period
Custom Form	CSV Rebate Agreement Form

- c. Click **Next**.
The File Mapping step also completes and proceeds to Step 4.
- d. On the Save mapping & Start step, verify the CSV file name in the **Import Map Name** field.
- e. Click **Save & Run**.

A confirmation message with a link to view the **Import Job Status** appears above the Import Assistant header.

If the data imports successfully, you can verify the imported records by going to Rebate Management > Rebate Agreements > Rebate Agreements.

If the data import fails, click the corresponding **CSV Response** link of the CSV file to view the errors you need to fix.

Importing Agreement Details Using a CSV File

You can import multiple agreement details into NetSuite for one or multiple rebate agreements using a single CSV file. Agreement Details records follow the applicable rebate preferences you set for the rebate agreement.

Important: Ensure that the agreement names in the CSV file are unique and accurate to associate the agreement details to the correct rebate agreement that is already in NetSuite. In the CSV file, agreement details belonging to one rebate agreement should have similar rebate agreement name and external ID.

To import rebate agreement detail records:

1. Go to Rebate Management > Rebate Agreements > CSV Rebate Data Imports > New
2. On the CSV Rebate Data Imports page, in the **Import Type** field, select Rebate Agreement Detail.
3. In the **CSV File** field, locate and select the CSV file with the data which you want to import.

Note: You need to use the CSV template provided by the SuiteApp when importing rebate agreement records. To know where you can download the template, see [CSV Template Locations of Rebate Agreement Records](#).

If you add a file using the File explorer, click **Save** after you attach a file.

4. On the CSV Rebate Data Import page, verify that the file is attached.
5. Click **Save**. The following import details appear:

Field	Description
ID	This field shows the import ID.
Import Type	This field shows whether you imported an agreement detail or a volume rebate tier.
CSV File	This field shows the CSV file name.
Status	This field shows import status of the rebate agreement details.
Message	This field shows the number of records imported successfully.
CSV Response	This field shows the system response for the CSV import process.

If the data imports successfully, you can verify the imported records by going to Rebate Management > Rebate Agreements > Rebate Agreements. Then, select the record for which the you associate the agreement details.

If the data import fails, click the corresponding **CSV Response** link of the CSV file to view the errors you need to fix.

Importing Rebate Tiers Using a CSV File

Similar with importing agreement details, you can import rebate tiers using CSV Rebate Data Imports.

A tier data must include a range or structure of values for sales targets and the corresponding rebates.

Important: Tier names are case-sensitive. Create a unique tier name that is not yet present in the system. NetSuite associates a rebate tier to an agreement detail if the tier names match in the agreement details and volume rebate tiers CSV files.

To import volume rebate tiers:

1. Go to Rebate Management > Rebate Agreements > CSV Rebate Data Imports > New
2. On the CSV Rebate Data Imports page, in the **Import Type** field, select Rebate Volume Tier.
3. In the **CSV File** field, locate and select the CSV file with the data which you want to import.

Note: You must use the CSV template provided by the SuiteApp when importing rebate volume tier records. To know where you can download the template, see [CSV Template Locations of Rebate Agreement Records](#).

4. If you add a file using the File Explorer, click **Save** after you attach a file.
5. On the CSV Rebate Data Import page, verify that the file is attached.
6. Click **Save**.

If the data imports successfully, you can verify the imported records by going to Rebate Management > Rebate Agreements > Rebate Volume Tiers.

If the data import fails, click the corresponding **CSV Response** link of the CSV file to view the errors you need to fix.

Creating Transactions with Rebates

To receive or pay rebates, you can do any of the following to create or enter transactions with rebates:

- To manually enter transactions, see [Creating a Sales or Purchase Transaction with Rebates](#).
- To import CSV data, see [Adding Transactions Using CSV Import](#).

Additionally, you can also apply rebates on sales orders created through SOAP integration. See, [Integration Record Overview](#).

Types of Transactions to Use

You can create or enter these transactions for Receiving or Paying rebate types:

Sale	Purchase
■ Creating Sales Orders ■ Creating an Invoice ■ Entering a Cash Sale ■ Entering a Linked Return Authorization ■ Entering a Standalone Return Authorization ■ Refunding a Cash Sale ■ Issuing a Customer Credit Memo	■ Entering a Purchase Order ■ Creating a Vendor Return Authorization ■ Entering a Vendor Bill ■ Entering a Vendor Credit Manually

Rebates are handled differently when processing returns linked to a source transaction. The item quantity and status of rebate agreements affect how the system applies rebates. See [Rebates on Returns](#).

Supported Item Types

The SuiteApp supports the following item types when you create transactions with rebates:

 **Note:** Kits are not supported for purchase transactions with rebates.

- [Inventory Items](#)
- [Non-Inventory Items](#)
- [Item Groups](#)
- [Kit/Package Items](#)
- [Assembly Items](#)
- [Service Items](#)
- [Drop Ship Items](#)
- [Special Order Items](#)
- [Advanced Bill of Materials](#)

Custom Rebate Fields and Columns on Transactions

The following custom fields and columns appear on the sales and return transactions:

- Custom Rebate Columns on the Items Subtab
- Custom Rebate Fields on the Accounting Subtab

Custom Rebate Columns on the Items Subtab

The following columns are added to the **Items** subtab of a sales and return transactions:

Column Name	Description
Estimated Rebate Amount	This column shows the rebate amount based on the agreement details criteria, calculation method and amount, and cost basis.
Accrued Rebate Amount	The Estimated Rebate Amount column displays on sales orders and return authorizations, while the Accrued Rebate Amount column displays on cash sales, cash refunds, credit memos, and invoices. To view the descriptions and formulas for calculating rebates, see the Calculation Method and Calculation Basis section in Adding Agreement Details.
Adjusted Unit Cost	This column shows the adjusted unit cost for each line item on a transaction. The amount shown on this column is calculated as follows: Adjusted Unit Cost = per unit cost- per unit rebate amount
Estimated Gross Profit Amount after Rebate	This column shows the gross profit amount after adding the estimated rebate amount to the gross profit amount. The values for Estimated Gross Profit Amount after Rebate and Gross Profit Amount after Rebate columns are reduced when paying rebates, and is increased when receiving rebates. The system populates this value after saving the transaction. The Estimated Gross Profit Amount after Rebate column displays on sales orders and return authorizations, while the Gross Profit Amount after Rebate column displays on cash sales, cash refunds, credit memos, and invoices. The Estimated Gross Profit Amount after Rebate and Gross Profit Amount after Rebate are calculated as follows: Calc = sum of rebate amount + est. gross profit for an items
Gross Profit Amount after Rebate	
Estimated Gross Profit % after Rebate	 Note: Gross Profit after Rebate and Gross Profit % columns exclude discount items and promotional items in the calculation. This column shows the gross profit percentage after adding the estimated rebate amount to the gross profit amount. The values for Estimated Gross Profit % after Rebate and Gross Profit % after Rebate columns are reduced when paying rebates, and is increased when receiving rebates. The system populates this value after saving the transaction. The Estimated Gross Profit % after Rebate column appears on sales orders and return authorizations, while the Gross Profit % after Rebate column appears on cash sales, cash refunds, credit memos, and invoices. The Estimated Gross Profit % after Rebate and Gross Profit % after Rebate are calculated as follows: Calc = (gross profit amount after rebate/adjusted sale amount) * (100)
Gross Profit % after Rebate	
Actual Gross Amount	This field shows the actual gross amount indicated on the line item.
Adjusted Sale Amount	This field shows the amount after the price pass-through value is deducted from the actual gross amount.

Column Name	Description
Price Pass-through	This column shows the amount of the sales price to be passed on to the customer as a discount.
View Applicable Rebates	When you click the box in this column, a popup window shows all rebate agreements with conditions that match the line item. You can override the system-suggested rebate by selecting a different rebate. For more information, see Manually Selecting a Rebate.
Rebate Transaction Record	This column shows the rebate transaction record ID after invoices, cash sales, credit memos, and cash refunds are created. This record contains information from the source transaction, which the system refers to and updates during the accrual process. When you edit the transactions, the system replaces this ID.

Custom Rebate Fields on the Accounting Subtab

The following custom fields are added to the **Accounting** subtab of sales and return transactions:

Column Name	Description
Estimated Gross Profit Amount after Rebate	 Note: Gross Profit after Rebate and Gross Profit % After Rebate columns exclude discount items and promotional items in the calculation.
Gross Profit Amount after Rebate	This column shows the gross profit amount after adding the estimated rebate amount to the gross profit amount. The values for Estimated Gross Profit Amount after Rebate and Gross Profit Amount after Rebate columns are reduced when paying rebates, and is increased when receiving rebates. The system populates this value after you save the transaction. The Estimated Gross Profit Amount after Rebate column displays on sales orders and return authorizations, while the Gross Profit Amount after Rebate column displays on cash sales, cash refunds, credit memos, and invoices. The Estimated Gross Profit Amount after Rebate and Gross Profit Amount after Rebate are calculated as follows: Calc = rebate amount + est. gross profit
Estimated Gross Profit % after Rebate	 Note: Gross Profit after Rebate and Gross Profit % After Rebate columns exclude discount items and promotional items in the calculation.
Gross Profit % after Rebate	This column shows the gross profit percentage after adding the estimated rebate amount to the gross profit amount. The values for Estimated Gross Profit % after Rebate and Gross Profit % after Rebate columns are reduced when paying rebates, and is increased when receiving rebates. The system populates this value after you save the transaction. The Estimated Gross Profit % after Rebate column displays on sales orders and return authorizations, while the Gross Profit % after Rebate column displays on cash sales, cash refunds, credit memos, and invoices. The estimated gross profit % after rebate and gross profit % after rebate are calculated as follows: Calc = (gross profit amount after rebate/adjusted sale amount) * (100)

Column Name	Description
Estimated Rebate Amount	This column shows the rebate amount based on the agreement details criteria, calculation method and amount, and cost basis.
Accrued Rebate Amount	The Estimated Rebate Amount column displays on sales orders and return authorizations, while the Accrued Rebate Amount column displays on cash sales, cash refunds, credit memos, and invoices. To view the descriptions and formulas for calculating rebates, read the Calculation method and Calculation Basis section in Adding Agreement Details.

Creating a Sales or Purchase Transaction with Rebates

Before you add an item to a sales transaction, make sure you create a rebate agreement. For more information, see [Creating a Rebate Agreement](#).

To create a transaction with rebates:

1. Select the type of sale or purchase transaction to use. See [Types of Transactions to Use](#) for more information about how to fill out the transaction form.
2. In the **Customer** field or **Vendor** field of a sales or purchase order, select the name of the customer or vendor that matches the customer or vendor criteria of the agreement details.
3. Under the **Items** subtab, add an item from the item criteria in the agreement details. See [Supported Item Types](#).
 - a. After adding an item, the system verifies the following conditions:
 - The rebate agreement status is active.
 - The transaction date falls within the agreement's validity period.
 - The subsidiary on the rebate agreement matches the subsidiary on the transaction.
 - The customer and item match the inclusion or exclusion criteria in the agreement details.
 - If applicable, the UoM of the item matches the UoM in the agreement details.
 - b. If these conditions are met, the system performs these actions for all eligible rebate agreements:
 - Calculates rebates based on the selected calculation method, calculation amount, and calculation basis.
 - If applicable, calculates the price pass-through value.
 - Compares rebate amounts from stackable agreements against non-stackable agreements.
 - Compares the best deal on the payee or payer level.
 - Populates the best deal with the highest amount on the **Estimated Rebate Amount** column or **Accrued Rebate Amount** column. See [Best Deal on Rebates](#).

When paying rebates, a negative value is shown in the rebate amount columns.

 - If price pass-through is applicable, the **Adjusted Sale Amount** and **Actual Gross Amount** columns are populated with values after you add an item.
 - Multiplies the rebate amount by the unit or quantity of the item.

If the customer, item, and UoM criteria are met for both Receiving and Paying rebate agreements, all eligible agreements display on the list of applicable rebates.

You can override the best deal while creating a transaction. See [Manually Selecting a Rebate](#).

Note: The system recalculates the rebate if you change the transaction date to either a future or a previous date. It also recalculates when you edit the **Quantity**, **Unit**, **Amount**, or **Rate** field for an item line.

4. Click **Save**.

The following columns show the calculated values:

- Estimated Gross Profit Amount after Rebate or Gross Profit Amount after Rebate
- Estimated Gross Profit % after Rebate or Gross Profit % after Rebate

For more information about these custom rebate columns, see [Custom Rebate Fields and Columns on Transactions](#).

Adding Transactions Using CSV Import

You can use CSV Import to add transactions in bulk and apply rebates. For more information, see the help topic [Importing CSV Files with the Import Assistant](#).

To import a CSV file:

1. Go to Setup > Import/Export > Import CSV Records. The Import Assistant page loads and walks you through five steps.
2. On the Scan & Upload CSV File step, do the following:
 - a. Select **Transactions** as the import type.
 - b. On the **Record Type** dropdown list, select the applicable record to upload. See the help topic [Supported Record Types for CSV Import](#).
 - c. On the **Character Encoding** dropdown list, select Western (Windows 1252).
 - d. On the **CSV Column Delimiter** dropdown list, select Comma.
 - e. Under the CSV File(s) section, choose from one or multiple files to upload.
3. On the Import Options step, do the following:
 - a. Under the Data Handling section, choose **Add**.
 - b. Click **Advance Options** to expand the settings then check the box for **Run Server SuiteScript and Trigger Workflows**. This triggers the rebate calculation for the imported data.
4. On the Field Mapping step, review the data from the CSV file being imported to specific NetSuite fields.
5. On the Save Mapping & Start Import step, do the following:
 - a. On the **Import Map Name** field, enter a unique name for your import map.
 - b. Click **Save & Run**.
 - c. The confirmation screen shows the following quick links for accessing, sharing, running another import:
 - View Saved Imports
 - Share Import
 - Start Another Import

Rebates on the data from the CSV file are calculated and applied similar to transactions you enter manually. To view how the system applies rebates, see steps 3.a onwards on [Creating a Sales or Purchase Transaction with Rebates](#).

For more information about best deal on rebates, see [Best Deal on Rebates](#).

Rebates Applied to Transactions

The Rebates and Trade Promotions SuiteApp offers complete flexibility in managing which rebate deal gets applied to an item on a sales or purchase transaction.

NetSuite lets you apply rebates in two ways:

- [Best Deal on Rebates](#) – By default, the system selects automatically the rebate agreement with the highest rebate amount and applies it to the line items.
- [Manually Selecting a Rebate](#) – You can override the system-suggested best deal and manually select which rebate to apply using the Applicable Rebates popup window from the transaction record.

Additionally, you can choose to use rebates from the latest version of an agreement or from the version that is applicable for the transaction date.

The system selects a new best deal if the previous best deal is no longer the highest or lowest applicable rebate amount for an item. This action follows your setting in the Apply Best Deal field of the Rebate Preferences record.

For more information, see [Rebates on Edited Transactions](#).

Best Deal on Rebates

The system identifies a rebate as the best deal if the amount is the highest among a group of applicable rebates for an item.

The **Payee/Payer Best Deal** column on the **Applicable Rebates** popup window shows which agreement for each group of payee or payers offers the highest rebate amount.

If the best deals include agreements for both the **Receiving** and **Paying** payment types, the system calculates the difference and applies the rebate to an item.

Read the following topics for more information about best deal rebate:

- [Best Deal Rebate Amount Display](#)
- [Rebate Agreements with Similar Rebate Amounts](#)

The steps in determining the best deal are described in the procedure for [Creating a Sales or Purchase Transaction with Rebates](#).

Best Deal Rebate Amount Display

The rebate amount shown on the transaction line is the difference between the rebate amount of each payment type. When you update the item quantity on the transaction line, the rebate amount updates automatically.

- When paying rebates, the best deal lets payers give the highest rebate amount to the payee.
- When receiving rebates, the best deal lets the payee receive the highest rebate amount from the payer.

In this example, best deals include three rebate agreements:

- Two rebate agreements for paying rebates are stackable with a combined rebate amount of –\$150.
- One rebate agreement for receiving rebates has a rebate amount of \$500.

The rebate amount on the line item is \$350.

Rebate Agreement	Agreement Detail ID	Stackable	Applicable Rebates		Payer/Payee	Payer/Payee Best Deal	Payment Type
			Rebate Amount	Price Pass-through Value			
Agreement #1	20	Yes	-\$50	0	Customer A	Yes	Paying
Agreement #2	21	Yes	-\$100	0	Customer A	Yes	Paying
Agreement #3	22	No	\$350	0	Vendor A	No	Receiving
Agreement #4	23	No	\$500	0	Vendor A	Yes	Receiving

To view how the system calculates the rebates and selects the best deal, see [Rebate Calculations](#).

Rebate Agreements with Similar Rebate Amounts

If multiple rebate agreements have the same highest amount, the system uses the following process to select the best deal:

- The system selects the rebate agreement with the earliest start date.
- If the start dates are the same, then the rebate agreement with the earliest end date is selected.
- If the validity periods are similar, then the rebate agreement or agreement details record that was first created is selected. The order in which the agreement details are created is identified through the agreement detail ID.

Manually Selecting a Rebate

You can override the system-suggested best deal to select a different rebate deal.

To select a rebate manually:

1. From the transaction line, scroll to the right side of the page to locate the **View Applicable Rebates** column.
2. Under the **View Applicable Rebates** column, click the box to open the Applicable Rebates popup window.
3. (Optional) Filter the applicable rebates by payment type. The options include **All**, **Paying**, and **Receiving**. **All** is selected by default.
4. Review and compare the details in the **Stackable**, **Amount** and **Price Pass-through Value** columns.
5. Review the values in the rebate information section:
 - **Actual Gross Amount** – This field shows the actual gross amount indicated on the line item.
 - **Price Pass-through Value** – This field shows the price pass-through amount based on the selected rebate agreement.
 - **Adjusted Sale Amount** – This field shows the amount after deducting the price pass-through value from the actual gross amount.
 - **Item** – This field shows the line item the selected rebate applies to.
6. Check the box under the **Apply** column to select the rebate deal.
7. Click **Submit**.

Stackable Rebates

NetSuite lets you stack rebates from multiple agreement details within one rebate agreement, and with other stackable rebate agreements with the same payment type. The system does not combine stackable rebates for agreements with different payees or payers.

To stack rebates, check the **Stackable Rebate** box on the rebate agreement.

Note: The system only stacks rebates from rebate agreements and agreement details with a common item inclusion and the same payee or payer.

These examples of applicable rebates show how the best deal is selected when rebates for multiple agreement details and rebate agreements are stackable:

Example #1 – The list of applicable rebates includes non-stackable rebate agreements for different payers.

The **Payer/Payee Best Deal** column shows agreement details #1, #2, and #3 are all best deals. The total rebate amount which applies to the transaction line item is \$300 from vendors A, B, and C.

Although the agreements are non-stackable, the system eventually combines all the calculated best deals for each payer. For more information, see [Best Deal on Rebates](#).

Applicable Rebates							
Rebate Agreement	Agreement Detail ID	Stackable	Rebate Amount	Price Pass-through Value	Payer/Payee	Payer/Payee Best Deal	Payment Type
Agreement #1	1	No	\$50	0	Vendor A	Yes	Receiving
Agreement #2	2	No	\$100	0	Vendor B	Yes	Receiving
Agreement #3	3	No	\$150	0	Vendor C	Yes	Receiving

Example #2 – The list of applicable rebates includes two rebate agreements with the same payment type for two different payers. Three agreement details for rebate agreement #4 are stackable while one agreement details for rebate agreement #5 is non-stackable.

The best deals from the following payers are the following:

- **Payer:** Vendor C
Agreement Details: #4 and #5
Rebate Amount:\$150
- **Payer:** Vendor D
Agreement Details:#7
Rebate Amount:\$200

The total rebate amount of \$350 from vendor C and vendor D applies to the transaction line item.

Applicable Rebates							
Rebate Agreement	Agreement Detail ID	Stackable	Rebate Amount	Price Pass-through Value	Payer/Payee	Payer/Payee Best Deal	Payment Type
Agreement #4	4	Yes	\$50	2	Vendor C	Yes	Receiving
Agreement #4	5	Yes	\$100	2	Vendor C	Yes	Receiving

Applicable Rebates							
Rebate Agreement	Agreement Detail ID	Stackable	Rebate Amount	Price Pass-through Value	Payer/ Payee	Payer/ Payee Best Deal	Payment Type
Agreement #5	6	Yes	\$150	4	Vendor D	No	Receiving
Agreement #6	7	No	\$200	5	Vendor D	Yes	Receiving

Example #3 – The list of applicable rebates includes rebate agreements for two payment types with stackable rebates and with different vendors:

- The best deals for receiving rebates are agreement details #8 and #9 with a combined rebate amount of \$25.
- The best deals for paying rebates are agreement details #11, #12, #13 with a rebate amount of –\$35.

The rebate amount populated on the line item is –\$10.

Applicable Rebates							
Rebate Agreement	Agreement Detail ID	Stackable	Rebate Amount	Price Pass-through Value	Payer/ Payee	Payer/ Payee Best Deal	Payment Type
Agreement #6	8	Yes	\$10	2	Vendor F	Yes	Receiving
Agreement #7	9	Yes	\$15	2	Vendor F	Yes	Receiving
Agreement #8	10	No	\$20	3	Vendor F	No	Receiving
Agreement #9	11	Yes	–\$5	0	Vendor G	Yes	Paying
Agreement #10	12	Yes	–\$10	0	Vendor H	Yes	Paying
Agreement #11	13	No	–\$20	0	Vendor I	Yes	Paying

Example #4 – The list of applicable rebates includes volume rebates and standard rebates:

In volume rebates calculation, the recalculation process which uses the **MR Daily Rebates Reconciliation Script** refers to the process of the system evaluating the achieved tier for a given volume rebate agreement detail. The recalculation process includes:

- Selecting the correct rate or amount based on the achieved tier
- Recalculating the correct rebate based on the achieved tier, and
- Replacing the estimated rebate amount based on the default tier with the updated achieved tier if achieved tier is greater than the default tier.

The best deal for receiving rebates are agreement details #132, #133 and #135 with a combined rebate amount of \$292.

Applicable Rebates							
Rebate Agreement	Agreement Detail ID	Stackable	Rebate Amount	Price Pass-through Value	Payer/ Payee	Payer/ Payee Best Deal	Payment Type
Agreement #1- Volume	132	Yes	\$40	0	Vendor F	Yes	Receiving

Rebate Agreement	Agreement Detail ID	Stackable	Applicable Rebates				
			Rebate Amount	Price Pass-through Value	Payer/ Payee	Payer/ Payee Best Deal	Payment Type
Agreement #2- Standard	133	Yes	\$120	8	Vendor F	Yes	Receiving
Agreement #3- Volume	135	No	\$132	0	Vendor A	Yes	Receiving

Rebates on Returns

Rebates on returns can change based on the item quantity, unit, and the status of the rebate agreement associated to the item. Supported item types belonging to rebate agreements that are Active, On Hold, and Expired are evaluated.

When a rebate agreement completes before the items are returned, rebates are not populated for those items regardless of item quantity changes. For returns associated with stacked rebate agreements, see [Returns Associated with Stackable Rebate Agreements](#)

Refer to these topics to learn the two types of return and refund transactions.

- [Stand-alone Returns](#)
- [Linked Returns](#)

Returns Associated with Stackable Rebate Agreements

A source transaction can contain multiple items linked to one or more rebate agreements. If no rebates are applied to the source transaction, the system does not add rebates on the return authorization, cash refund, and credit memo.

The following table illustrates how rebates are handled for returned items linked to stackable rebate agreements:

Line Number	Item	Quantity	Rebate Agreement #1	Rebate Amount	Rebate Agreement #2	Rebate Amount	Rebate on Returns
1	Item A	2	Active	\$75	Active	\$75	$\$150 \times 2 = \300
2	Item B	2	Active	\$75	Expired or On Hold	\$75	$\$150 \times 2 = \300
3	Item C	2	Active	\$75	Completed	\$75	$\$75 \times 2 = \150
4	Item D	2	Completed	\$75	Completed	\$75	0

Stand-alone Returns

Rebates for stand-alone returns are calculated similar to sales orders, invoices, or cash sales. When you add an item on the transaction line, the best deal is selected and multiplied per item quantity. See [Best Deal on Rebates](#).

Stand-alone returns include the following transactions:

- Standard Return Authorization – Credit
- Standard Return Authorization – Cash
- Stand-alone Cash Refund
- Stand-alone Credit Memo
- Stand-alone Vendor Return Authorization

Linked Returns

Returns linked to a source transaction include:

- Return Authorization from an Invoice
- Return Authorization from a Cash Sale
- Cash Refund from a Cash Sale
- Vendor Return Authorization from a Purchase Order
- Vendor Return Authorization for Drop-ship Orders

NetSuite permits changing quantities on returns. You can increase or decrease the quantity, and change the units as needed.

- **Returning fewer items** – When you return fewer items, the rebate amount per unit reflected on the source transaction is multiplied by the number of returned items.
- **Returning more items** – If you increase the quantity on the same transaction line upon return, the rebate amount per unit is multiplied by the total number of returned items. Additional items entered using a new transaction line are not eligible for rebates.
- **Returning the same number of items** – If you return items with the same quantity as the original transaction, the applied rebates do not change.

For example, the Case to Each conversion is 1:4, there are four Each in one Case. The first table shows an invoice data with items associated to three different rebate agreements, and the accrual amount:

Line #	Item	Quantity on Invoice	Unit	Rebate Amount	Total Rebate Amount	Rebate Agreement	Accrual Amount
1	Item A	5	Case	\$100	\$500	Agreement #1	\$500
2	Item B	5	Case	\$200	\$1000	Agreement #2	\$1000
3	Item C	5	Case	\$250	\$1250	Agreement #3	\$1250
4	Item D	5	Case	\$400	\$2000	Agreement #4	\$2000

In the return authorization, the item quantities are changed, so the total rebate amounts and settlement amounts are adjusted accordingly.

Line #	Item	Quantity on Invoice	Unit	Rebate Amount	Total Rebate Amount	Rebate Agreement	Accrual Amount
1	Item A	2	Case	\$100	\$200	Agreement #1	\$300
2	Item B	7	Case	\$200	\$1400	Agreement #2	-\$400
3	Item C	5	Case	\$250	\$1250	Agreement #3	\$0

Line #	Item	Quantity on Invoice	Unit	Rebate Amount	Total Rebate Amount	Rebate Agreement	Accrual Amount
4	Item D	10	Case	\$100	\$1000	Agreement #4	\$1000

A reversal journal entry is posted to the accrual record after the post-settlement transactions are created. You get the net amount of the settlement value when reversal entries are combined with other accrued rebates. For more information, see [Rebate Accruals](#).

If the settlement amount is a positive value, the settlement method specified on the rebate agreement is used. But if the amount turned negative, NetSuite generates an alternative settlement transaction. For more information, see [Settlement Methods](#).

Rebates on Edited Transactions

NetSuite lets you edit transactions before and after rebates are accrued. Depending on the transaction type and the changes applied to the line item, rebates are retained or recalculated.

Line items included in the past rebate settlements are no longer editable.

Read the following topics for more information:

- [Considerations for Editing a Sales Transactions with Rebates](#)
- [Transaction Edit Preference](#)
- [Guidelines for Editing Sales Orders and Stand-alone Return Authorizations](#)
- [Guidelines for Editing Invoices and Other Transactions](#)

Considerations for Editing a Sales Transactions with Rebates

Consider the following when editing a sales transaction:

- Choose whether to use rebates from the latest version of an agreement detail, or from the versions that are applicable for the transaction date. The transaction date is the value on the **Date** field of a transaction record. See [Rebates Applied to Transactions](#).
- Rebate recalculation for edited items uses the same cost basis amount which is considered for rebate calculations during transaction creation.
- Rebate recalculation may show incorrect value when you change the quantity on the item line. Recalculation of accurate rebates happen after you click **Save**.
- Consider the following conditions when the **Always Use the Latest Version of Agreement Details for Rebate Recalculation** box is cleared:
 - For transactions with a future transaction date, the system only calculates rebates based on Active rebate agreements. Rebates from agreements with a Planned status are not considered for recalculation.
 - When a sales order is transformed into an invoice, the rebates are recalculated using Active rebate agreements at the time the sales order is transformed. Adding a new line item or editing the existing line triggers the best offer calculation, and considers the source transaction date when checking applicable rebates. If you override the best deal, the rebate from the manual selection is applied.
 - A stand-alone return transaction also uses Active rebate agreements based on the transaction date.
 - A sales order with a past or current date retains the applied rebates when transformed to an invoice.

- Rebates are recalculated when you edit the item, customer, UoM, or transaction date. Recalculation starts after you save the changes.

Previously applied rebates are removed and new rebates are applied based on the applicable version of the agreement detail. The best deal is calculated using only the Active rebate agreements that exist for that transaction date.

If you manually select a rebate deal, recalculation uses the criteria from the selected agreement detail.

- Recalculation does not use rebates from a completed rebate agreement, even for transactions with a date prior to the current date.
- When your transaction date matches an **On Hold** rebate agreement, rebates are not applied to the transaction.

If the **On Hold** agreement was previously set to **Active**, the system changes it back to **Active** and uses the prior rebate values for recalculation.

Note: The system updates the status of On Hold agreements only if there is a previous Active version of the agreement before it was set to On Hold.

- Consider the following conditions when you check the **Always Use the Latest Version of Agreement Details for Rebate Recalculation** box:
 - When you click the View Applicable Rebates popup window on edited transactions, the latest best deal is always selected unless you have previously selected a rebate manually.
 - If you override the best deal and update the item quantity, the calculation considers the current version of the rebate agreement that you select manually.
 - Regardless of the current version of the agreement in the system, the rebates are retained for the following transactions:
 - Sales Order to Invoice
 - Return Authorization to Cash Sale
 - Return Authorization to Cash Refund
 - If you change the transaction date or customer, then rebates are reset and recalculated on save using the criteria from the latest version of a rebate agreement.
- If you change the preference for **Always Use the Latest Version of Agreement Details for Rebate Recalculation** box before you edit a transaction, the system does the following:
 - Recalculates the rebates based on the current preference when you edit the item line, then selects the best deal as shown in the **Applicable Rebates** popup window.
 - Shows the best deal but does not select it if there are no changes on the item line. You can still apply the best deal by selecting it in the **Applicable Rebates** window and clicking **Submit**.

Important: You must not select the Rebates and Trade Promotions custom forms as preferred forms to avoid calculation errors.

Transaction Edit Preference

NetSuite provides a preference so you can choose whether to use the details from the latest version of agreement details or from the applicable agreement details relative to the transaction date.

To use this preference, go to Setup > Company > General Preferences. Under the Custom Preferences subtab, check or clear the box for **Always Use the Latest Version of Agreement Details for Rebate Recalculation**. This box is cleared by default.

If you check the box, the system applies the latest version of the agreement details to the sales transactions. If you clear the box, the system uses the rebate from the applicable agreement details that are created on or before the transaction date.

Important: When you check or clear the **Always Use the Latest Version of Agreement Details for Rebate Recalculation** box during transaction creation, then change the setting again before editing transactions, rebates are recalculated based on the current setting.

The following timelines show examples of how this preference works:

Example #1:

Date	Activity
3/1/2023	A rebate agreement with a 10% rebate was created.
	This is version #1 of the agreement details record.
3/6/2023	A sales transaction was created with the following details: Quantity: 1, Price: \$100
	The item on the transaction will have \$10 rebate according to the existing rebate agreement.
3/10/2023	The rebate on the agreement was changed from 10% to 15%.
	This change triggers the creation of a version #2 of the agreement details record.
3/11/2023	The sales transaction was modified to increase the item quantity from 1 to 3 bringing the total amount to \$300.
	If the Always Use the Latest Version of Agreement Details for Rebate Recalculation box is checked, the system uses version #2 of the agreement details with a 15% rebate and applies it to the line item.
	If the box is cleared, the system uses version #1 of the agreement details with a 10% rebate.
	Additionally, if you modify the item units in the transaction, the system recalculates the rebate and applies the best deal according to your preference.

Example #2

Date	Activity
3/1/2023	A rebate agreement with a 10% rebate was created.
	This is version #1 of the agreement details record.
3/6/2023	A sales transaction was created with the following details: Quantity: 1, Price: \$100
	The item on the transaction will have a \$10 rebate according to the existing rebate agreement.
3/10/2023	The rebate on the agreement was marked as Expired .
	This change triggers the creation of a version #2 of the agreement details record.
3/11/2023	The sales transaction was modified to increase the item quantity to 3.
	If the Always Use the Latest Version of Agreement Details for Rebate Recalculation box is checked, the expired rebate agreement is no longer applicable, and rebates applied to the items are removed.
	If the box is cleared, version #1 of the agreement details will be used and a \$30 rebate will be applied to the item.

Guidelines for Editing Sales Orders and Stand-alone Return Authorizations

You can edit a sales order after it is invoiced and a stand-alone return authorization after a credit memo or a cash refund is generated. You can only make these changes:

- Increase the item quantity on the line item
- Add a line item
- Select a different rebate for the new line item

You cannot remove a line item or decrease the item quantity on the sales order or stand-alone return authorization.

When you increase the item quantity on the sales order and generate another invoice, the new invoice reflects the rebates for the additional items only. Rebates on the previous invoice are not recalculated when you edit the sales order associated with it.

Rebates on additional items for a stand-alone return authorization are only applied to the next credit memo or cash refund.

Guidelines for Editing Invoices and Other Transactions

You can edit an invoice, a cash sale, a credit memo, and a cash refund to do the following:

- Increase or decrease the quantity on the line item
- Add a new line item
- Select a different rebate for the new line item
- Change the price, cost, and applied rebates
- Remove a line item from the transaction

When you edit a transaction, a new rebate transaction record is generated. It replaces the rebate transaction records for the line items which are generated prior to editing.

When you edit a transaction after the rebates are accrued, the system deletes the accrual record for that transaction. See [Accrual Reversal](#).

Rebate Calculations

Read the following topics for more information about rebate calculation:

- [Real-Time Rebate Calculation](#)
- [Rebate Recalculation on Amount and Custom Field Change](#)
- [Negative Rebate Amount](#)
- [Calculation Basis Value](#)
- [UOM in Rebate Calculation](#)
- [Rebate Calculation on Item Types](#)

To better understand rebate calculations, see [Examples of Rebate Calculations](#).

To review the calculation methods and calculation basis descriptions, see the accounting information section of [Adding Agreement Details](#).

To review the custom rebate fields and columns on the sales transactions, see [Custom Rebate Fields and Columns on Transactions](#).

Real-Time Rebate Calculation

The SuiteApp lets you calculate rebates in real time as you enter transactions line by line or after you complete and save an order entry.

 **Note:** Calculate Rebates at Real-time box does not apply to purchase-related transactions and linked returns.

To calculate rebates in real time, go to Setup > Company > General Preferences. On the **Custom Preferences** subtab, go to **General** field group. Then, check the **Calculate Rebates at Real-time** box. This preference is checked by default.

The **Calculate Rebates at Real-time** box is also available on the sales or purchase transaction page. If there are existing line items on a transaction page before you check the box, the rebates are shown only for the newly added line. You need to edit the previous line items to display their calculated rebates.

If you clear the box only on the sales or purchase transaction page, the box remains checked on the General Preferences page. Since this preference inherits the setting from General Preference, the box remains checked in View Mode of a sales or purchase transaction.

This preference does not apply to rebate calculations that use custom fields for calculation basis.

Rebate Recalculation on Amount and Custom Field Change

The **Rebate Recalculation on Amount and Custom Field Change** preference lets you specify whether you want to recalculate the rebates after updating values in the **Amount** field and **Custom Fields** through backend scripts. This box is checked by default.

The system does not recalculate rebates when the amount update is done through REST integration and when a price pass-through is applied.

Clear the box only if you don't want to recalculate rebates every time the transaction amount or custom field is updated in the backend.

To edit this preference, go to Setup > Company > General Preferences. On the **Custom Preferences** subtab, go to **General** field group, then check or clear the **Rebate Recalculation on Amount and Custom Field Change** box as required. Changes apply to future transactions only.

Negative Rebate Amount

The calculated rebate amount may be a negative value depending on the calculation method, calculation basis, rebate value, and rebate stackability.

The **Allow Negative Rebate Calculation** preference enables the system to show a negative rebate value on the transaction and calculates rebates on returns.

If the preference is not enabled, the negative amount for receiving rebates and positive amount for paying rebates are shown as zero.

 **Note:** A negative price pass-through amount is added to the item's rate, which increases the amount due on an invoice or other similar transactions.

A positive price pass-through amount is deducted from the item's rate.

To edit this preference, go to Setup > Company > General Preferences. On the **Custom Preferences** subtab, go to **General** field group, then check or clear the **Allow Negative Rebate Calculation** box as required. Changes apply to future transactions only.

If the settlement value is negative, NetSuite generates an alternative settlement transaction. For more information, see [Settlement Methods](#).

Calculation Basis Value

The rebate calculation references the item record for the calculation basis value. These values are either user-defined costs or calculated by the system. The unit cost of an item is multiplied by item quantity to populate the **Est. Extended Cost** value. See the help topic [Cost Estimate Types in NetSuite OneWorld](#).

Unit costs are on the item records, not on the agreement details. But if you select **Rebate Cost** as the calculation basis, the system uses the value from the agreement details. If there's no corresponding value on the item record for the selected calculation basis on the agreement details, the corresponding calculation basis amount of the item is considered as zero.

Some for receiving rebates use the estimated extended cost value and divide it by the item quantity to get the unit cost or the calculation basis value.

UOM in Rebate Calculation

Units of measure or UOMs are used to quantify inventory items.

With the Multiple Units of Measure feature, you set up a Units Type and define each unit for that type. You can set up a Units Type called Quantity. Then, set up Quantity units of Each, Case, and Pallet. Assign a base unit and define each unit in terms of the base. The base unit is the smallest quantity you can buy. See the help topic [Multiple Units of Measure](#).

In the **UOM Inclusion** field of an agreement details record, you can specify which units of measure for item inclusions are eligible for rebate. If you select multiple unit types for UOM inclusion, you should select a unit for each Unit Type in the **Calculation UOM** field.

The **Calculation UOM** field lets you specify a unit to determine the conversion factor for calculating rebates.

A **Conversion Rate** is a number used to convert one unit into a different unit. If you do not select a value in the **Calculation UOM** field, the system uses the **Primary Sale Unit** or **Primary Purchase Unit** of an inventory item as the conversion factor.

Using the following UOM table, transaction, and agreement details, see how the rebate is calculated for an item on a transaction line:

Units of Measure (UOM):

Units Type	Units	Conversion Rate	Base Unit
Pallet	Each	1	Yes
	Box	10	—
	Pallet	1000	—

Agreement Details:

Calculation Amount: 8	Price Pass-through Type: Flat Amount	UOM Inclusion: Each, Box, Pallet
Calculation Basis: Not Applicable	Price Pass-through Value: 2	Calculation UOM: Box

After you enter an item on a transaction, the system compares agreement details, calculates applicable rebates, and applies the best rebate deal.

Transaction Details:**Item:** Item A**Quantity:** 100**Unit:** Box

In this example, an invoice with **Box** in the Units column matches the selected conversion factor in the agreement details.

Example Calculation #1:**Calculation Method:** Flat Amount
$$\text{Calc} = (\text{calc amount} * \text{conversion factor}) * (\text{item quantity})$$

$$\text{Calc} = (8 * 1) * 100$$
Rebate Amount: 800

If an invoice has **Pallet** in the Units column, the system multiplies the calculation amount with the conversion rate Pallet. Then, divides it with the selected conversion factor which is 10 for the unit Box.

Example Calculation #2:**Calculation Method:** Flat Amount
$$\text{Calc} = (\text{calc amount} * \text{unit conversion rate}) / \text{conversion factor} * (\text{item quantity})$$

$$\text{Calc} = (8 * 1000) / 10 * 100$$
Rebate Amount: 80,000

Similarly, if the unit has a smaller conversation rate than the selected conversion factor, the system divides the conversation rate with the conversion factor. In this example, the unit **Each** is used.

Example Calculation #3:**Calculation Method:** Flat Amount
$$\text{Calc} = (\text{calc amount} * \text{unit conversion rate}) / \text{conversion factor} * (\text{item quantity})$$

$$\text{Calc} = (8 * 1) / 10 * 100$$
Rebate Amount: 80

Rebate Calculation on Item Types

You can use any of the supported item types when entering a sales transaction. The system calculates the rebates for every item type specified on the item inclusion of a Rebate Agreement record. See [Supported Item Types](#).

For kits and assemblies, rebates are calculated similar to an inventory item. Kits do not support units, so the conversion rate is always considered as 1. Retailers can set a price for the entire kit which does not have to match the total price of the individual components.

For example, the kit is composed of the parent Home Theater and its components cost \$1,274. The kit sells for \$1,200. If a rebate agreement with a 10% rebate contains Home Theater in its Item Inclusion, the kit item gets a \$120 rebate.

Example Rebate Calculation for Kits and Assemblies:

Home Theater	\$1,200
Receiver	\$198
Blu-ray player	\$88
Speakers	\$359
55" Television	\$629

Note: The **Derived from Member Items** is a cost estimate type that only applies to kits and sums the estimated costs of each item in the kit, based on each of their individual Cost Estimate Types.

You need to disable the **Advanced Bill of Materials** feature to use this calculation basis for assemblies.

For Item Groups, rebates are calculated for each item within that group. If you update a component of an item group by changing the **UOM**, **Rate**, or **Quantity**, the system recalculates rebates immediately.

For example, the item group Luggage Travel Set is composed of four individual items priced separately. Two out of four items—the 26" Spinner suitcase and 20" Carry-on spinner luggage—are part of item inclusions for a rebate agreement with a 10% rebate.

Example Rebate Calculation for Item Groups:

Luggage Travel Set	-
26" Spinner suitcase	\$90
20" Carry-on spinner luggage	\$60
Boarding tote	\$25
Travel kit toiletry bag case	\$10

On the transaction line, only the 26" Spinner suitcase and 20" Carry-on spinner luggage get a \$9 and a \$6 rebates respectively. The rest of the items from the item group will show zero (0) on the **Estimated Rebate Amount** or **Rebate Amount** column.

Note: All calculation methods applicable to an inventory item are applicable to kits and assemblies. For calculation basis on kits, you can only use **Item Defined Cost**, **Rebate Cost**, **Derived from Member Items**, and **Transaction Price**.

Examples of Rebate Calculations

The following tables contain examples of rebate calculations using different calculation methods, calculation basis, and price pass-through:

- Flat Amount
- Percent (%) Calculation
- Fixed Cost
- Guaranteed Profit %

Note: The calculation examples shown below, except for Guaranteed Profit %, are applicable to the item types the SuiteApp supports for both sale and purchase agreements. However, the following columns do not apply to purchase agreements:

- Gross Profit Amount after Rebate
- Gross Profit % after Rebate
- Actual Gross Amount
- Adjusted Sale Amount
- Price Pass-through

Flat Amount

The amount entered is rebated for each unit purchased or sold. Flat Amount is not dependent on a calculation basis.

Agreement Details:

Calculation Amount: 8 Price Pass-through Type: Flat Amount
 Calculation Basis: Not Applicable Price Pass-through Value: 2

Transaction Details:

Item	Quantity	Rate	Amount	Cost Estimate Type	Est. Extended Cost	Est. Gross Profit	Est. Gross Profit %
Item A	100	10	1,000	Average Cost	500	300	37.5
Item B	10	50	500	Item Defined Cost	350	130	27.08

Rebate Amount Calc = (calc amount) * (item quantity)	Gross Profit Amount after Rebate Calc = rebate amount + est. gross profit	Gross Profit % after Rebate Calc = (gross profit amount after rebate/adj. sale amount) * (100)	Actual Gross Amount Calc = (item quantity) * (rate)	Adjusted Sale Amount Calc = actual gross amount - price pass-through	Price Pass-Through Calc = (price pass-through value) * (item quantity)
8 * 100 = 800	800 + 300 = 1,100	137.5	1,000	800	200
8 * 10 = 80	80 + 130 = 210	43.75	500	480	20

When you create multiple transactions and use different currencies for each transaction, the rebate value or calculation amount remains the same.

The SuiteApp does not support multi-currency conversion for the calculation amount set on the agreement details. To set a rebate amount relative to the currency and customer on your transaction, you need to create a new agreement details record.

The following table shows two transactions with rebates created with different currencies, one for US dollar and the other for euro:

Agreement Details:

Calculation Amount: 10

Calculation Method: Flat Amount

Conversion factor: \$1- €0.8

Transaction #1	Item	Quantity	Rate	Amount	Rebate
Currency: US Dollar	Item A	10	100	1000	\$100

Transaction #2	Item	Quantity	Rate	Amount	Rebate
Currency: Euro	Item A	10	100	1000	€100

Percent (%) Calculation

A percentage of the cost basis is rebated, or a percentage of the rebate cost amount entered on the rebate agreement for the item is refunded.

The following examples include three types of calculation basis, which include Average Cost, Rebate Cost and Transaction Cost.

Agreement Details #1:

Calculation Amount: 6%

Price Pass-through Type: Flat Amount

Calculation Basis: Average Cost

Price Pass-through Value: 5

Transaction Details #1:

Item	Quantity	Rate	Amount	Cost Estimate Type	Est. Extended Cost	Est. Gross Profit	Est. Gross Profit %
Item A	100	10	1,000	Average Cost	400	100	20
Item B	10	50	500	Average Cost	300	150	33.33

Rebate Amount Calc = (calc basis * calc amount) * (item quantity)	Gross Profit Amount after Rebate Calc = rebate amount + est. gross profit	Gross Profit % after Rebate Calc = (gross profit amount after rebate/adj. sale amount) * (100)	Actual Gross Amount Calc = (item quantity) * (rate)	Adjusted Sale Amount Calc = actual gross amount - price pass-through	Price Pass-Through Calc = (price pass-through value) * (item quantity)
$(4 * 0.06) * (100) = 24$	$24 + 100 = 124$	24.8	1,000	500	500
$(30 * 0.06) * (10) = 18$	$18 + 150 = 168$	37.33	500	450	50

Agreement Details #2:

Calculation Amount: 10%

Rebate Cost Value: 20

Price Pass-through Value: 5

Calculation Basis: Rebate Cost

Price Pass-through Type: Flat Amount

Transaction Details #2:

Item	Quantity	Rate	Amount	Cost Estimate Type	Est. Extended Cost	Est. Gross Profit	Est. Gross Profit %
Item A	100	10	1,000	Average Cost	400	100	20

Rebate Amount Calc =(calc basis * calc amount) * (item quantity)	Gross Profit Amount after Rebate Calc = rebate amount + est. gross profit	Gross Profit % after Rebate Calc = (gross profit amount after rebate/adj. sale amount) * (100)	Actual Gross Amount Calc = (item quantity) * (rate)	Adjusted Sale Amount Calc = actual gross amount - price pass-through	Price Pass-Through Calc = (price pass-through value) * (item quantity)
$(20 * 0.10) * (100) = 200$	$200 + 100 = 300$	60	1,000	500	500

Agreement Details #3:

Calculation Amount: 10% Transaction Price Value: 10 Price Pass-through Value: 5
Calculation Basis: Transaction Price Price Pass-through Type: Flat Amount

Transaction Details #3:

Item	Quantity	Rate	Amount	Cost Estimate Type	Est. Extended Cost	Est. Gross Profit	Est. Gross Profit %
Item A	100	10	1,000	Average Cost	400	100	20

Rebate Amount Calc =(calc basis * calc amount) * (item quantity)	Gross Profit Amount after Rebate Calc = rebate amount + est. gross profit	Gross Profit % after Rebate Calc = (gross profit amount after rebate/adj. sale amount) * (100)	Actual Gross Amount Calc = (item quantity) * (rate)	Adjusted Sale Amount Calc = actual gross amount - price pass-through	Price Pass-Through Calc = (price pass-through value) * (item quantity)
$(10 * 0.10) * (100) = 100$	$100 + 100 = 200$	40	1,000	500	500

Fixed Cost

The difference between the calculation basis and the calculation amount. The rebate amount is the difference between the amount paid for the item on the transaction and the amount entered on the agreement.

Agreement Details:

Calculation Amount: 4 Price Pass-through Type: Percentage
Calculation Basis: Average Cost Price Pass-through Value: 10%

Transaction Details:

Item	Quantity	Rate	Amount	Cost Estimate Type	Est. Extended Cost	Est. Gross Profit	Est. Gross Profit %
Item A	100	10	1,000	Average Cost	800	160	16.67
Item B	10	50	500	Average Cost	100	394	79.76

Rebate Amount Calc = (calc basis - calc amount) * (item quantity)	Gross Profit Amount after Rebate Calc = rebate amount + est. gross profit	Gross Profit % after Rebate Calc = (gross profit amount after rebate/adj. sale amount) * (100)	Actual Gross Amount Calc = (item quantity) * (rate)	Adjusted Sale Amount Calc = actual gross amount - price pass-through	Price Pass-Through Calc = (price pass-through value) * (item quantity)
$(8 - 4) * (100) = 400$	$400 + 160 = 560$	58.33	1,000	960	40
$(10 - 4) * (10) = 60$	$60 + 394 = 454$	91.90	500	494	6

Guaranteed Profit %

The purchaser is guaranteed the rebate percentage as margin or profit.

Agreement Details:

Calculation Amount: 12% Price Pass-through Type: Percentage
Calculation Basis: Average Cost Price Pass-through Value: 5%

Transaction Details:

Item	Quantity	Rate	Amount	Cost Estimate Type	Est. Extended Cost	Est. Gross Profit	Est. Gross Profit %
Item A	100	10	1,000	Average Cost	900	99	9.91
Item B	8	45	360	Average Cost	320	39.84	11.07

Rebate Amount Calc = {calc basis - [sales rate * (1 - calc amount)]} * (item quantity)	Gross Profit Amount after Rebate Calc = rebate amount + est. gross profit	Gross Profit % after Rebate Calc = (gross profit amount after rebate/adj. sale amount) * (100)	Actual Gross Amount Calc = (item quantity) * (rate)	Adjusted Sale Amount Calc = actual gross amount - price pass-through	Price Pass-Through Calc = (price pass-through value) * (item quantity)
$\{9 - [10 (1 - 0.12)]\} * (100) = 20$	$20 + 99 = 119$	11.91	1,000	999	1
$\{40 - [45 (1 - 0.12)]\} * (8) = 3.2$	$3.2 + 39.84 = 43.04$	11.96	360	359.84	0.16

Volume Rebates

Volume rebate enables you to offer incentives based on the volume or quantity of products sold.

The SuiteApp provides two options for how you want to calculate volume rebates and lets you identify the applicable rebate value type for the incentive.

Read the following topics for more information about volume rebates:

- [Tier Achievement with Volume Rebates](#)
- [Adding Volume Rebate Tiers](#)
- [Calculation Methods for Volume Rebates](#)
- [Recalculation of Volume Rebates](#)
- [Returns Associated with Volume Rebates](#)

Tier Achievement with Volume Rebates

Rebate amounts update on your sales and purchase transactions based on the conditions you set for calculating volume or tiered rebates on the agreement details.

Volume rebates include the following tier achievements:

- [Tier Achievement in Marginal Rebate Scheme](#)
- [Tier Achievement in Linear Rebate Scheme](#)

For more information about the calculation parameters, see Rebate Tiers section on [Adding Agreement Details](#).

Tier Achievement in Marginal Rebate Scheme

The following tables show when rebates for one item and customer are updated after a tier achievement. The sales transaction table uses the **Marginal** rebate scheme.

Rebate Tier Information:

Minimum Tier	Maximum Tier	Rate	Dates Applicable
0	1000	10	7/1/2023- 12/31/2023
1001	5000	12	7/1/2023- 12/31/2023
5001	10000	15	7/1/2023- 12/31/2023

Sales Transaction Information:

Rebate Rate Type: Percentage **Customer:** Bestbuy

Transaction	Item	Rebate Rate	Rate	Quantity	Date	Cumulative Quantity	Rebate Amount	Recalculated Rebate Rate	Recalculated Rebate
1	Item A	10	100	80	8/1/2023	80	800	10	800
2	Item A	10	150	20	8/1/2023	100	300	10	300
3	Item A	10	400	20	8/15/2023	120	800	10	800
4	Item A	10	100	30	8/15/2023	150	300	10	300
5	Item A	10	100	40	8/17/2023	150	400	10	400
...	...	...	...	...	...	...	...	...	...
70	Item A	10	100	30	9/22/2023	960	300	10	300
71	Item A	10	100	40	9/24/2023	1000	400	10	400
72	Item A	10	100	20	9/24/2023	1020	200	12	240
...	...	...	...	...	...	...	...	...	...
201	Item A	10	100	10	10/1/2023	5000	100	12	120
202	Item A	10	400	20	10/1/2023	5020	800	15	1200
203	Item A	10	200	30	10/1/2023	5050	600	15	900

From August 1 until September 24 of 2023, Item A gets a default rebate rate of 10. When the item quantity for Item A breaches the maximum value of 1000 for Tier 1, the succeeding transactions get a recalculated rebate rate of 12 for Tier 2.

After the reconciliation scripts run on September 25, 2023, transaction #72 reflects the recalculated rebate amount which is 240.

Then, after reaching a threshold of 5000 for Tier 2 from September 24 to October 1, the new recalculated rebate rate for Item A shows 15. Transaction #202 has a recalculated rebate of 1200.

Tier Achievement in Linear Rebate Scheme

In the following example, the sales transaction table uses **Linear** rebate scheme.

Rebate Tier Information:

Minimum Tier	Maximum Tier	Rate	Dates Applicable
0	1000	10	7/1/2023- 12/31/2023
1001	5000	12	7/1/2023- 12/31/2023
5001	10000	15	7/1/2023- 12/31/2023

Rebate Rate Type: Percentage **Customer:** Bestbuy

Transaction	Item	Rebate Rate	Rate	Quantity	Date	Cumulative Quantity	Rebate Amount	Recalculated Rebate Rate	Recalculated Rebate
1	Item A	10	100	80	8/1/2023	80	800	15	1200
2	Item A	10	150	20	8/1/2023	100	300	15	450
3	Item A	10	400	20	8/15/2023	120	800	15	1200
4	Item A	10	100	30	8/15/2023	150	300	15	300
5	Item A	10	100	40	8/17/2023	150	400	15	400
...	...	...	...	...	...	...	...	...	...
70	Item A	10	100	30	9/22/2023	960	300	15	450
71	Item A	10	100	40	9/24/2023	1000	400	15	600
72	Item A	10	100	20	9/24/2023	1020	200	15	300
...	...	...	...	...	...	...	...	...	...
201	Item A	10	100	10	10/1/2023	5000	100	15	150
202	Item A	10	400	20	10/1/2023	5020	800	15	1200
203	Item A	10	200	30	10/1/2023	5050	600	15	900

From August 1 until October 1 of 2023, Item A gets a default rebate rate of 10. When the reconciliation script runs on October 2, 2023 and cumulative quantity reaches the highest tier, the rebate rate from the highest tier achieved is applied to all the transactions.

In the sales transaction table above, the rebate rate of 15 from Tier 3 is applied to all the transactions for Item A. The rebate amounts prior to the recalculation reflect the updated rebate on the Recalculated Rebate Amount column.

Adding Volume Rebate Tiers

Rebate tier lets you define sales or purchase targets and the corresponding incentives for reaching those targets. You can choose to give rebates based on the percentage of the total invoice amount or by a designated rebate amount multiplied by an item quantity.

The Rebate Tier information is part of the Agreement Details record. If you didn't set up the tiers when you created the agreement details, you can still edit the record and follow these steps:

To add a volume rebate tier:

1. Go to Rebate Management > Rebate Agreements> Rebate Agreements.

2. On the Rebate Agreements List, click **Edit** beside the rebate agreement that you want to edit.
3. Go to the **Agreement Details** subtab then click **Edit** next to the record you want to update.
4. Under the Rebate Tiers section, select or enter the required information:
 - a. In the **Rebate Scheme** field, select the type of calculation.
 - b. In the **Rebate Value Type** field, select if a rebate to be given is a flat rate per unit or a percentage of the transaction price.
 - c. Check the **Aggregate** box if you want to combine multiple item criteria for each customer to qualify for a given tier.
 - d. Define your rebate tiers. Enter a positive quantity or value for the **Minimum** and **Maximum** fields.
 - e. The system automatically assigns the lowest tier as the default tier. You can assign a new default tier by selecting a different tier for linear rebate schemes.
You can change the default tier anytime for an active rebate agreement.
 - f. Enter a positive value for the **Rebate Value** field. This is the rebate given after you reach a sales target.
 - g. Enter relevant information in the **Comments** field.
 - h. Click **Save**.

Calculation Methods for Volume Rebates

The SuiteApp provides you two ways to calculate volume rebates on sales transactions. You can select [Volume Amount](#) or [Volume Quantity](#).

Volume Amount

In volume amount, rebates are calculated on transactions based on the monetary tier you reach.

In a **Marginal** rebate scheme, the calculated volume rebate is based on the currently achieved tier.

Example #1

This uses **Marginal** rebate scheme then **Rate per Unit** as the rebate rate type.

Tier	Minimum Tier	Maximum Tier	Rebate Value
Tier 1	\$1	\$100	\$5
Tier 2	\$101	\$350	\$10
Tier 3	\$351	\$500	\$15

Items A and B are both given a \$5 default tier value multiplied by the item quantity. After the reconciliation process, the rebate values update to \$10 and \$7.5 respectively.

The \$200 for Item B qualifies for both Tier 1 and Tier 2. The first \$100 on that amount qualifies for Tier 1 with \$5 rebate, then the remaining amount is for Tier 2 with \$10 rebate.

After recalculation, the rebates are calculated this way:

$$(\text{maximum tier 1}/\text{amount}) * \text{tier 1 rebate value} + ((\text{amount}-\text{maximum tier 1})/\text{amount}) * \text{tier 1 rebate value}$$

$$(100/200) * 5 + (100/200) * 10 = 7.5$$

Item	Quantity	Rate	Amount	Rebate (Before Reconciliation)	Tier	Rebate (After Reconciliation)
Item A	2	\$30	\$60	\$10	Tier 1	\$10
Item B	1	\$200	\$200	\$5	Tier 1, Tier 2	\$7.5

Example #2

This transaction uses **Marginal** rebate scheme then **Percentage** as the rebate rate type.

Similar to the Rate per Unit calculation, a line item is given a default tier rebate. After evaluating tier achievement, rebates are recalculated as follows:

rebate tier value * amount

Item A: $0.05 * 60 = \$3$

Item B: $0.05 * 100 + 0.1 * 100 = \15

Tier	Minimum Tier	Maximum Tier	Rebate Value
Tier 1	\$1	\$100	5%
Tier 2	\$101	\$350	10%
Tier 3	\$351	\$500	15%

Item	Quantity	Rate	Amount	Rebate (Before Reconciliation)	Tier	Rebate (After Reconciliation)
Item A	2	\$30	\$60	\$3	Tier 1	\$3
Item B	1	\$200	\$200	\$10	Tier 1, Tier 2	\$15

Volume Quantity

In volume quantity, rebates are calculated on transactions when you achieve target quantity tiers.

Unlike the **Marginal** rebate scheme where the total calculated rebates includes the sum of the rebates calculated at individual tiers, the **Linear** rebate scheme only looks at the highest tier you achieve and calculates rebates based on that tier. As you achieve higher tiers, all related rebates are recalculated at the highest achieved tier.

Example #1

This transaction uses **Linear** rebate scheme and **Rate per Unit** as the rebate rate type.

The **Aggregate** box is checked in the rebate agreements of Items A, B, and C.

Tier	Minimum Tier	Maximum Tier	Rebate Value
Tier 1	1	10	\$2
Tier 2	11	20	\$4
Tier 3	21	30	\$6

Three units of Assembly Item A earn a \$30 rebate, that is a \$10 default tier rebate value multiplied by the item quantity.

Item	Quantity	Rate	Amount	Rebate (Before Reconciliation)	Tier	Rebate (After Reconciliation)
Item A	15	\$100	\$1,500	\$30	Tier 3	\$90
Item B	10	\$120	\$1,200	\$20	Tier 3	\$60
Item C	5	\$150	\$750	\$10	Tier 3	\$30

After the transaction is evaluated for tier achievement, the total quantity for the transaction is 30, which qualifies for Tier 3. The calculated rebates for all items that qualified for tier 3 rebate value is \$6.

The \$6 rebate value replaces the default tier value of \$2, and is applied to each item after the recalculation process.

Example #2

This transaction uses **Linear** rebate scheme and **Percentage** rebate rate type. The agreement is also set to aggregate the item inclusion when calculating for rebates.

The default tier value is multiplied to the item rate, then multiplied to item quantity.

The rebates for the following example are calculated this way:

rebate tier value * rate * quantity

$0.10 * \$600 = \60

After the transaction is evaluated for tier achievement, the accumulated quantity for the transaction is equals to 6, which qualifies for Tier 2. The calculated rebates for the item using tier 2 rebate value is \$180.

$0.20 * \$600 = \120

Tier	Minimum Tier	Maximum Tier	Rebate Value
Tier 1	1	5	10%
Tier 2	6	10	20%

Item	Quantity	Rate	Amount	Rebate (Before Reconciliation)	Tier	Rebate (After Reconciliation)
Kit Item A	3	\$300	\$900	\$60	Tier 2	\$120
Item A	3	\$300	\$330	\$64	Tier 2	\$128

When you edit a line item in a transaction after the daily recalculation process, the rebate is calculated based on the default tier. After another recalculation process and tier re-assignment, the updated rebate tier values are reflected the next day.

Recalculation of Volume Rebates

When you add an item, NetSuite initially calculates the rebate based on the default tier. Then, a process runs regularly to evaluate the current tier achieved, assign the appropriate tier, and recalculate the rebate based on the rate or value associated with the tier.

The tier achievement for volume rebates reflects after the daily reconciliation scripts run. See, [Reconciliation Scripts for Recalculating Volume Rebates](#).

These actions affect how volume rebates are recalculated:

- Change in the Rebate Tier Range
- Change in the Rebate Tier Value

When you change the selected default tier, the new rebate tier value only applies to future transactions. Any transactions you create before the rebate tier change and before the recalculation shows the previous rebate tier value.

Then, after the recalculation, the achieved rebate amount for the transaction reflects the rebate value based on the updated rebate tier information. If the achieved rebate amount is greater than the estimated rebate amount, that amount replaces the estimated value.

After you update the rebate tier information, the system does not recalculate the best deal for the reconciled transactions. The applied default tier value multiplied by item quantity which is shown in the Applicable Rebates window also reflects in the accrual record. The applied rebate from the default tier value is called **Estimated Rebates**.

Note: If you edit transactions, the estimated rebate amount reflects the latest changes to the rebate tier information. Any previously recalculated rebates are updated after the reconciliation scripts run.

After recalculation, the Rebate Transaction Detail (RTD) record and accrual record store the **Achieved Rebate Amount** which the system refers to for the settlement process. See, [Rebate Settlements](#).

Reconciliation Scripts for Recalculating Volume Rebates

Reconciliation scripts run daily but only update a rebate amount applied to an item if a total sales transaction activity reaches a target tier.

The reconciliation scripts for the SuiteApp include the following:

Note: Reconciliations scripts run after the first map/reduce script **RM Rebate Agreement Status Update** completes. The first MR script is set to run at 12:01 a.m. daily.

During the reconciliation process, the scripts only pick up new and edited transactions from the day before.

- **RM MR Volume Txn Level Reconciliation-** This script checks existing sales and purchase transactions for volume rebate tier achievement. Then, it recalculates the volume rebates from the default tier to the tier achieved based on the script's run date.
- **RM MR Volume RAD Level Reconciliation-** This script runs after the RM MR Volume Txn Level Reconciliation script completes. It picks up the changes on the agreement details and updates the previously applied rebates.

Note: Reconciliation of rebates based on tiers is not applied to nonposting transactions like Purchase or Sale orders. For nonposting transactions, rebates are always calculated with the default tier. Posting transaction rebates are reconciled based on tiers and updates when the daily reconciliation script runs.

After these scripts complete, the following map/reduce scripts run one after the other:

- Accruals

■ Auto-Settlement

Returns Associated with Volume Rebates

Any volume rebates on returns reflect the tier achieved when the transaction took place.

The example below uses Marginal, Volume Quantity, and Rate per Unit configuration on a sales transaction. Based on the **Rebate Value** column, the total item quantity of 6 has a total rebate amount of \$60 before recalculation.

Minimum Tier	Maximum Tier	Rebate Value
1	2	\$10
3	4	\$20
5	8	\$30

Transaction	Item Quantity	Rebate Amount (Before Reconciliation)	Rebate Amount (After Reconciliation)
Cash Sale #1	2	\$20	\$20
Cash Sale #2	2	\$20	\$40
Cash Sale #3	2	\$20	\$60

A return authorization for Cash Sale #1 uses the rebate amount for the highest tier the transaction qualified for. So, a credit memo for this return has \$60.

If you do a partial return for 3 items after recalculation, the rebate in credit memo would show \$80. Two items multiplied by tier 3 rebate of \$30 plus one item multiplied by tier 2 rebate of \$20.

Rebate Accruals

Rebate accruals give you a snapshot of estimated rebates earned and expenses during the agreement's validity period.

Read the following topics for more information:

- [Accrual Records](#)
- [Accrual Reversal](#)

To view the list of accrual records, go to Rebate Management > Transaction > Accruals.

Accrual Records

Accrual records are created for each rebate agreement using rebate transaction records generated after a sales transaction. You can't edit these records. After rebate transaction records are generated, they are grouped according to rebate agreement, Classification (Class, Department, and Location), and custom segment, of an item. When the accrual process runs, it creates one accrual record for each unique grouping of these classifications.

For more information about accrual records, read these topics:

- [Contents of an Accrual Record](#)
- [Accrual Record Subtab](#)

In the following example, the items in four invoices satisfy the criteria of two rebate agreements with classifications and custom segments specified for each item. This assumes that custom segment values are taken from the source transactions, which means the box, **Set Custom Segment of rebate transactions with values from source transactions**, is checked, on the Custom Segment Preferences page.

Invoice	Item	Agreement	Rebate Amount	Rebate Transaction Record	Class	Department	Location	Custom Segment
Invoice #1	Item A	Agreement #1	\$10	RT1	C1	D1	L1	value1
	Item B	Agreement #1	\$5	RT2	C1	D1	L1	value1
Invoice #2	Item C	Agreement #1	\$20	RT3	C1	D1	L1	value1
	Item D	Agreement #2	\$5	RT4	C2	D1	L2	value2
Invoice #3	Item E	Agreement #1	\$15	RT5	C1	D1	L1	value1
	Item F	Agreement #2	\$40	RT6	C2	D1	L2	value2
Invoice #4	Item G	Agreement #1	\$25	RT7	C1	D2	L2	value2

Since there are four combinations available for Class, Department, Location, and Custom Segment on the invoices, the accruals for each rebate agreement are created like this:

Rebate Agreement #1

The first accrual record with an accrual amount of \$50 is created for Class C1, Department D1, Location L1, and custom segment value1.

Invoice	Item	Agreement	Rebate Amount	Rebate Transaction Record	Class	Department	Location	Custom Segment
Invoice #1	Item A	Agreement #1	\$10	RT1	C1	D1	L1	value1
Invoice #1	Item B	Agreement #1	\$5	RT2	C1	D1	L1	value1
Invoice #2	Item C	Agreement #1	\$20	RT3	C1	D1	L1	value1
Invoice #3	Item E	Agreement #1	\$15	RT5	C1	D1	L1	value1

The second accrual record with an accrual amount of \$25 is created for Class C1, Department D2, Location L2, and custom segment value2.

Invoice	Item	Agreement	Rebate Amount	Rebate Transaction Record	Class	Department	Location	Custom Segment
Invoice #4	Item G	Agreement #1	\$25	RT7	C1	D1	L2	value2

Rebate Agreement #2

The third accrual record with an accrual amount of \$45 is created for Class C2, Department D1, Location L2, and custom segment value2.

Invoice	Item	Agreement	Rebate Amount	Rebate Transaction Record	Class	Department	Location	Custom Segment
Invoice #2	Item D	Agreement #2	\$5	RT4	C2	D1	L2	value2
Invoice #3	Item F	Agreement #2	\$40	RT6	C2	D1	L2	value2

Contents of an Accrual Record

An accrual record shows the accrual amount with other information related to the rebate transaction.

The link under the **Document Number** column lets you view the accrual journal entry for the transaction.

The table below describes the fields in the accrual record:

Field	Description
Primary Information	
Agreement Name	This field shows the rebate agreement used to create the accrual journal entries.
Accrual Amount	This field shows the total rebate amount accrued based on transactions.
Accrual ID	This field shows the auto-generated ID of this record.
Payment Type: Transaction Type	This field indicates whether the accruals is for receiving or paying rebates.
Subsidiary	This field shows the subsidiary associated to this accrual. The subsidiary comes from the rebate agreement.
Accrual Generation Criteria	
Accrual Date	This field shows the date used for the accrual journal entry. By default, it uses the current date.
Accrual Period	Accounting period that covers the accrual date.
Accrual Receivable (Debit) Account	When you receive rebates, this account is debited when you accrue the rebate amount. When you reverse the journal entry, this account is credited. This field comes from the Rebate Preferences record.
Accrual Expense (Credit) Account	When you receive rebates, this account is credited when you accrue the rebate amount. When you reverse the journal entry, this account is debited. This field comes from the Rebate Preferences record.
Accrual Payable (Credit) Account	When you pay rebates, this account is credited when you accrue the rebate amount. When you reverse the journal entry, this account is debited. This field comes from the Rebate Preferences record.
Accrual Expense (Debit) Account	When you pay rebates, this account is debited when you accrue the rebate amount. When you reverse the journal entry, this account is credited. This field comes from the Rebate Preferences record.

Accrual Record Subtab

The rebate agreement record has the following subtabs:

Subtab	Description
Related Transactions	Review the list of all posting transactions with rebates created for the rebate agreement. Use these filters to display specific transactions: ■ Transaction Date ■ From ■ To ■ Transaction #

Subtab	Description
	- Entity - Item
Journal	View all posting transactions related to the accrual record of a rebate agreement. The following columns show up on the journal subtab: - Date - Document Number - Amount - Amount (Foreign Currency) - Currency - Status

Accrual Reversal

The following actions trigger reversal of accruals:

- Generating a rebate settlement
- Modifying an invoice, cash sale, or item receipts
- Modifying stand-alone returns and refund transactions, which include return authorizations, cash refunds, and credit memos

An accrual record for a sales transaction shows a reversal journal entry with a negative value. The reversal entry is added after a rebate settlement is generated.

In contrast, accrual records for stand-alone return and refund transactions show a negative amount in the accrual journal entry, then a positive amount for the reversal journal entry.

Accrual reversals are shown in the **Accruals** subtab of the rebate agreement along with the related accrual journal entries and accrual details.

Rebate Settlements

Rebate settlement is when you settle the accrued rebates with the payee or payer on the rebate agreement by generating a claim or disbursement.

You can settle rebates automatically or manually. For more information, see [Automatic Rebate Settlements](#) and [Manual Rebate Settlements](#).

- Rebate Claim** – When you receive rebates, you can generate a claim for your payer to receive payments for the rebates that you earned.
 The rebate claim process creates a vendor credit or invoice. Vendor credits are created if the payer is a vendor entity, while invoices are created if the payer is a customer entity. You can select these settlement methods when you setup the rebate agreement.
- Rebate Disbursement** – When you pay rebates, you can send payments to your payee or rebate recipient for the rebates you incurred.
 The rebate disbursement process generates a credit memo or vendor bill. Credit memos are used if the payee is a customer entity, while vendor bills are used if the payee is a vendor entity. You can select these settlement methods while creating a rebate agreement.

Except for agreements without an end date, a final rebate settlement occurs after the rebate agreement's validity period ends. Only accrued rebate amounts for Active, On Hold, and Expired rebate agreements are available for settlement.

Before settling a rebate, you can generate a pro forma to view all the transactions and check if the settlement details match what you expect to earn or pay. For more information, see [Pro Forma Generation](#).

Note: Grouping of rebate items in settlements is based on rebate agreement, and custom segment values specified in transaction body fields.

Settlement Methods

NetSuite uses the settlement method you specified on the rebate agreement if the settlement amount is a positive value.

If the settlement amount is negative, the system generates an alternative settlement transaction. The settlement amount results in a negative value when all accrued payables or expenses are deducted from the receivables or revenues.

The following table lists which settlement transaction is generated if the settlement amount is a positive or a negative value:

Settlement Method on the Rebate Agreement	Settlement Transaction	Settlement Transaction
	(Positive or Zero Settlement Value)	(Negative Settlement Value)
A/R Invoice	Invoice	Credit Memo
A/P Debit (Bill Credit)	A/P Debit (Bill Credit)	Bill
Credit Memo	Credit Memo	Invoice
Bill	Bill	Bill Credit

Pro Forma Generation

Use the pro forma to review the details of the upcoming settlement before you approve a claim or generate a disbursement. You can edit the settlement details to apply needed adjustments, then proceed to generating a settlement.

A pro forma includes the agreement's primary information, total settlement amount, settlement details, and a list of supporting transactions.

- **Claim Pro Forma** – You can generate a claim pro forma for rebate agreements when receiving rebates.
- **Disbursement Pro Forma** – You can generate a disbursement pro forma for rebate agreements when paying rebates.

You can click **Generate Claim** or **Generate Disbursement** from the pro forma record to directly process a settlement.

Pro forma records are generated on the Settlement page, and the process uses the same filters as generating a rebate settlement. To generate a pro forma, read [Generating Settlements Manually](#).

Multiple Pro Forma for One Rebate Agreement

You can generate multiple pro forma records for one rebate agreement when processing partial settlements. You cannot reuse the transactions you included in the previous pro forma.

If a pro forma exists for the total unsettled amount, you can't generate another pro forma or settlement for the same agreement. You can rerun the search to process additional rebate agreements or generate a claim or disbursement within the pro forma record.

Alternatively, you can delete the existing pro forma record to create a new one, then generate a settlement on the Settlement page.

Automatic Rebate Settlements

The automatic settlement covers both auto claims and auto disbursements. To process a claim or disbursement automatically, ensure to check the **Auto Claim** or **Auto Disburse** box on the rebate agreement.

Settlement Frequency

The Auto Settlement script runs daily and checks for available rebates to settle for Active, On Hold, and Expired rebate agreements. The script generates a settlement if the day falls on the scheduled settlement day.

The processing takes few minutes to a few hours, depending on the amount of data, and the settlement is reflected the next day.

The following settlement frequencies describe the scope for accruing rebates and the timing of the rebate settlement:

Weekly	The auto-settlement script runs on the selected day of the week and processes rebate transactions accrued within a week's period. For example, the settlement day is Wednesday. All transactions are accrued from 00:59 on Wednesday this week to 00:59 on Wednesday next week.
Monthly	The auto settlement script runs on the first day of the current month and processes rebate transactions accrued after 00:59 of the first day of the previous month until 00:59 of the first day of the current month.
Quarterly	The auto-settlement script runs on the first day of the current quarter and processes transactions accrued after 00:59 of first day of the previous quarter until 00:59 of the first day of the current quarter.
Twice a Year	The auto settlement script runs on the first day of the first quarter and the first day of the third quarter. The script processes rebate transactions accrued during the following period: - From the beginning of the first quarter until the first day of the third quarter - From the start date of an active agreement until the first day of the third quarter - From the beginning of the third quarter of the current year until the first day of the first quarter next year
Annually	The auto settlement script runs on the first day of the next accounting year and processes rebate transactions accrued within the following period: From the beginning of the previous fiscal year until the first day of the next fiscal year

- From the start date of an active agreement until the first day of the next fiscal year

Settlements don't generate automatically if the accounting period calendar is not defined. The system generates an error if it can't find the proper month or quarter in the accounting period to post transactions, accruals, or settlements.

Manual Rebate Settlements

Manual settlement covers both manual claims and manual disbursements.

You can manually generate a settlement for any rebate agreement, whether the **Auto Claim** or **Auto Disburse** box is checked. Before you generate a claim or disbursement, ensure you specify the settlement method on the rebate agreement.

To process a manual settlement, read [Generating Settlements Manually](#).

Partial Rebate Settlements

You can settle a partial amount even for rebate agreements with auto settlement. The **Auto Settlement** script only processes the remaining unsettled amount after it runs.

For rebate agreements with an outstanding pro forma and a remaining unsettled amount, you can use these settlement processes:

- Partial settlement
- Pro forma with a partial unsettled amount
- Full settlement

Generating Settlements Manually

You can use the same set of filters to generate a settlement (claim and disbursement) and a pro forma. You can search for all Active, On Hold, and Expired rebate agreements until rebates for those agreements are fully settled.

Before you generate a settlement, ensure you specify a settlement method on the rebate agreement.

To generate a settlement manually:

1. Go to Rebate Management > Settlement > Generate Settlements.
2. On the Settlement page, set the filters from the table below to narrow down the list of rebate agreements.

All fields are multi-select except for the date filters and settlement mode.

Filter	Description
No End Date	Check this box to show all rebate agreements that do not have an end date.
Agreement Start Date	Select the start date of a rebate agreement.
Agreement End Date	Select the end date of a rebate agreement.
Payment Type: Transaction Type	Select which payment and transaction type combination to show.

Filter	Description
	■ Receiving: Sale – Shows all the rebate agreements with a Receiving: Sale rebate type. ■ Paying: Sale – Shows all the rebate agreements with a Paying: Sale rebate type. ■ Receiving: Purchase – Shows all the rebate agreements with a Receiving: Purchase rebate type. ■ Paying: Purchase – Shows all the rebate agreements with a Paying: Purchase rebate type.
Agreement Name	Select the name of a rebate agreement for the settlement.
Settlement Frequency	Select the settlement frequency of a rebate agreement. ■ Weekly – Shows all applicable rebate agreements that are set to settle rebates weekly. ■ Monthly – Shows all applicable rebate agreements that are set to settle rebates monthly. ■ Quarterly – Shows all applicable rebate agreements that are set to settle rebates quarterly. ■ Twice a Year – Shows all applicable rebate agreements that are set to settle rebates twice a year. ■ Annually – Shows all applicable rebate agreements that are set to settle rebates annually.
Payee/Payer	Select the applicable payee or payer. The dropdown list shows only the entities with open settlements.
Status	Select the status of a rebate agreement. The dropdown list shows only the Active, On Hold, and Expired rebate agreements.
Agreement Reference #	Select the agreement reference number for the settlement.
Settlement Mode	Select the settlement mode of rebate agreements. By default, the Manual settlement mode is selected. ■ Auto – Shows all Active, On Hold, and Expired rebate agreements that are set to auto claim or auto disburse. ■ Manual – Shows all Active, On Hold, and Expired rebate agreements that are not set to auto claim or auto disburse. ■ Auto and Manual – Shows all Active, On Hold, and Expired rebate agreements for both auto and manual settlement mode.

3. Click **Search**.
4. Select the rebate agreement you want to generate a pro forma, claim, or disbursement for.
5. Choose your next step:
 - To generate a pro forma, click **Generate Pro Forma**.
 - To generate a claim or disbursement, click **Generate Settlements**.
 - To edit the details before generating a pro forma or settlements, go to step 6.
6. Click **Edit** next to the rebate agreement that you want to edit.
 - a. On the Edit Settlement Details page, use the settlement filters to sort various transactions linked to the rebate agreement:
 - **Transaction Type** – Select the transaction type for this rebate settlement.
 - **Item** – Select the eligible Items for this rebate settlement.
 - **Customer** – Select the eligible Customers for this rebate settlement.

- **Transaction Date From** – Select or enter the start date of a date range when the transactions are created.
- **Transaction Date To** – Select or enter the end date of a date range when the transactions are created.
- b. Click **Apply Filters**.
- c. From the results list, you can modify the following fields:

Note: Changes to rebates in these fields are not considered for recalculation process.

- **Rebate/Unit** – Increase or decrease the rebate amount per unit as needed. Changes in this field also reflect in the **Total Rebate Amount** field.
 - **Total Rebate Amount** – Changes here also reflect in the **Rebate/Unit** field.
 - d. Click **Save**.
7. Generate a pro forma or settlement by selecting the transactions you want to include.
- The **Total Settlement Value** field shows the total settlement amount for the transactions you selected.
- Click **Mark All** to include all transactions in the settlement.
 - Select one or more transactions if you want to settle or generate a pro forma for a partial amount. See [Partial Rebate Settlements](#).
8. Click **Generate Pro Forma** or **Generate Settlement**.
9. After generating a pro forma or a settlement, a PDF and a CSV file attached to a notification email is sent to the primary email or rebate notification email of the payer or payee.
- On the Pro Forma record, you can also click the **Email Proforma** button to send another email with the same PDF and CSV attachments.

The system takes you to the Settlement History List page after you generate a pro forma or a settlement. To view the Settlement History list anytime, go to Rebate Management > Settlement > Settlement History.

Rebate Settlement Records

A settlement transaction record, which is a claim transaction or a disbursement transaction, is listed in the settlement record. Settlement transaction records include invoice, credit memo, bill, and bill credit. You can't edit settlement records for claims, disbursements, or pro formas.

Read the following topics for more information about rebate settlement records:

- [Contents of a Pro Forma or a Settlement Record](#)
- [CSV and PDF Files Attachment on the Pro Forma or Settlement Records](#)
- [Accessing the CSV Files in the File Cabinet](#)
- [Printing a Settlement Transaction Record](#)
- [Editing a Rebate Management Custom Form](#)

Important: Avoid editing invoices or transaction records after you generate a settlement.

An entry in the Settlement History list can contain one of the these statuses:

- Claim- Pro Forma

- Disbursement- Pro Forma
- Claim- Completed
- Claim- Error
- Disbursement- Completed
- Disbursement- Error

To print a settlement transaction record, see [Printing a Settlement Transaction Record](#).

Contents of a Pro Forma or a Settlement Record

The table below describes the fields in the pro forma and settlement records:

Field	Description
Primary Information	
ID	This field shows the auto-generated ID of this rebate claim or disbursement.
Agreement Reference #	This field shows the agreement reference number entered on the rebate agreement.
Accounting Item	This field shows the accounting item for the claim or disbursement. The accounting item is sourced from the rebate agreement.
Claim Status/ Disbursement Status	This field shows the status of the rebate settlement.
Total Claim Amount/ Total Disbursement Amount	This field shows the total amount to be claimed or disbursed for the rebate settlement.
Settlement Method	This field shows the settlement method for this claim or disbursement. This field is sourced from the rebate agreement.
Payment Type: Transaction Type	This field shows the payment type and transaction type you selected for the rebate agreement.
Payer/Payee	This field shows the entity linked to this claim or disbursement. This field is sourced from the rebate agreement.
Subsidiary	This field shows the subsidiary that is associated to this claim or disbursement. This field is sourced from the rebate agreement.
Settlement Mode	This field shows if the rebate claim or disbursement is settled automatically or manually.
Settlement Frequency	This field shows how often the system generates a claim or disbursement for the rebate agreement. This field is sourced from the rebate agreement.
Agreement Name	This field shows the rebate agreement for which the amount is being claimed or disbursed. The field is sourced from the rebate agreement.
Claim Criteria/Disbursement Criteria	
Claim Period/ Disbursement Period	This field shows the accounting period of the claim or disbursement date.
Transaction Start Date	This field shows the minimum date from the list of transactions for manual settlements, and shows a blank field for auto settlements.

Field	Description
Transaction End Date	This field shows the maximum date from the list of transactions. The date shown is on or before the settlement process date.
Claim Details/Disbursement Details	
Claim Date/Disbursement Date	This field shows the date when the rebate claim or disbursement is generated.
Claim Transaction #/Disbursement Transaction #	This field shows the transaction number generated during the claim or disbursement process. The settlement transaction depends on the settlement method you set on the rebate agreement.
Claim Generation Error Code/Disbursement Generation Error Code	This field stores any errors that are generated during the claim or disbursement process.
Generated By	This field shows the name of the user who created the claim, disbursement, or pro forma.
Related Transactions	This field shows the link to the CSV file with all the transactions related to the settlement.

CSV and PDF Files Attachment on the Pro Forma or Settlement Records

After you generate a pro forma or settlement, the system generates and attaches a CSV and PDF files to the settlement record. You can use the CSV file to review the list of related transactions included in the pro forma or rebate settlement of a rebate agreement.

To set a default user for receiving the email notification with the CSV and PDF file attachments, go to List > Employees > Default User

The spreadsheet displays the following information:

- Transaction #
- Transaction Date
- Transaction Type
- Subsidiary
- Line #
- Vendor Name/Customer Name
- Item
- Quantity
- Units
- Rate
- Amount
- Department
- Class
- Location
- Rebate Amount
- Payment-Transaction Type
- Rebate Agreement

Accessing the CSV Files in the File Cabinet

You can access or download the CSV files later if you didn't download them right after generating a pro forma or settlement.

To access the CSV files in the file cabinet:

1. Go to Documents > Files > File Cabinet.

2. Click the **Rebate Settlement History** folder.
3. Use the search bar on the left pane to enter one of these search queries:
 - Name of the payee or payer
 - Name of the payee or payer, underscore, and settlement type
Example: PayerName_Claim or PayeeName_Disbursement
 - To narrow the results, you can add a few digits for the claim or disbursement transaction # after the settlement type
Example: PayerName_Claim_101 or PayeeName_Disbursement_201
4. Do one of the following as needed:
 - On the first column, click **Edit** next to the file you want to edit
 - On the last column, click **Download** on the corresponding file
 - Under the Name column, click the file name to download the file

Printing a Settlement Transaction Record

To print settlement transactions in PDF format, you need a PDF viewer such as Adobe® Acrobat® Reader. You can download the latest version for free from the Adobe website.

To print the vendor credit and vendor bill records, you need to enable the Advanced PDF/HTML feature. See the help topic [Enabling the Advanced PDF/HTML Templates Feature](#).

To print a settlement transaction record:

1. Go to Rebate Management > Settlement > Settlement History.
2. On the Settlement History List page, under the **Settlement Transaction #** column, click the link of the record that you want to open.
3. On the settlement transaction record, hover over the print icon, and select **Print** from the list.

 **Note:** If you get an error message for an invalid PDF layout, follow the steps in [Editing a Rebate Management Custom Form](#).

- If your preferences are set to print to PDF, a preview of the settlement transaction record opens in Adobe Reader.
 - If your preferences are set to print to HTML, a preview of the settlement transaction record opens in your web browser.
 - If the **Download PDF Files** preference is enabled on the Set Preferences page, you need to save the file to your computer, open it from there, and print it. If this preference is not enabled, NetSuite opens the settlement transaction PDF in your web browser.
4. To print the record:
 - When printing from PDF, click the Print button in Adobe Reader.
 - When printing from HTML, print the page from your web browser.

Editing a Rebate Management Custom Form

You can edit the following rebate management custom forms:

- RM Invoice Claim

- RM Vendor Credit
- RM Credit Memo Disbursement
- RM Vendor Bill

To edit the RM custom form:

1. Go to Customization > Forms > Transaction Forms.
2. On the Custom Transaction Forms page, click **Edit** next to the custom form you want to edit.
 - a. For RM Invoice Claim and RM Credit Memo Disbursement:
 - In the **PDF Layout** field, select **Standard Transaction Layout**.
 - In the **HTML Layout** field, select **Standard HTML Transaction Layout**.
 - In the **Email Message Template** field, select **Default Email Template**.
 - b. For RM Vendor Credit:
 - In the **Print Template** and **Email Template** fields, select **Standard Vendor Credit PDF/HTML Template**.
 - c. For RM Vendor Bill Disbursement:
 - In the **Print Template** and **Email Template** fields, select **Standard Vendor Bill PDF/HTML Template**.
3. Click **Save**.
