

SCIS 2.0 Enabling a Mobile Device

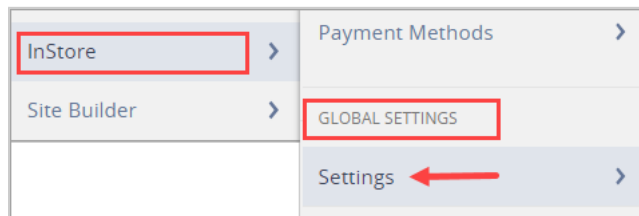

SuiteCommerce InStore (SCIS) 2023.2 and later include the components to activate SCIS 2.0. You can enable mobile devices one at a time for testing to ensure SCIS 2.0 meets your needs.

SCIS 2.0 activates by enabling SuiteScript 2.0 in your account and on each device:

1. Enable SuiteScript 2.0 in your NetSuite ERP account (one-time setup)
2. Enable SuiteScript 2.0 on a mobile device

To enable SuiteScript 2.0 in your NetSuite ERP account:

1. In NetSuite ERP, go to Commerce > InStore > (Global Settings) Settings.

2. Click **Edit** for the Settings record you use.
If you have more than one Settings record, you can ask Customer Support which record to edit.
3. Open the **Order** subtab.
4. Check the **Use SuiteScript 2.0** box.

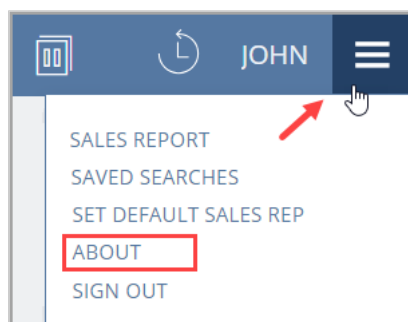

✓ **Tip:** Checking the SuiteScript 2.0 box doesn't activate SCIS 2.0, it only enables it.
This one-time setup stays active for all mobile devices that you enable for SCIS 2.0 later.

5. Click **Save**. Now you can activate any device associated with your NetSuite SCIS account to use SCIS 2.0.

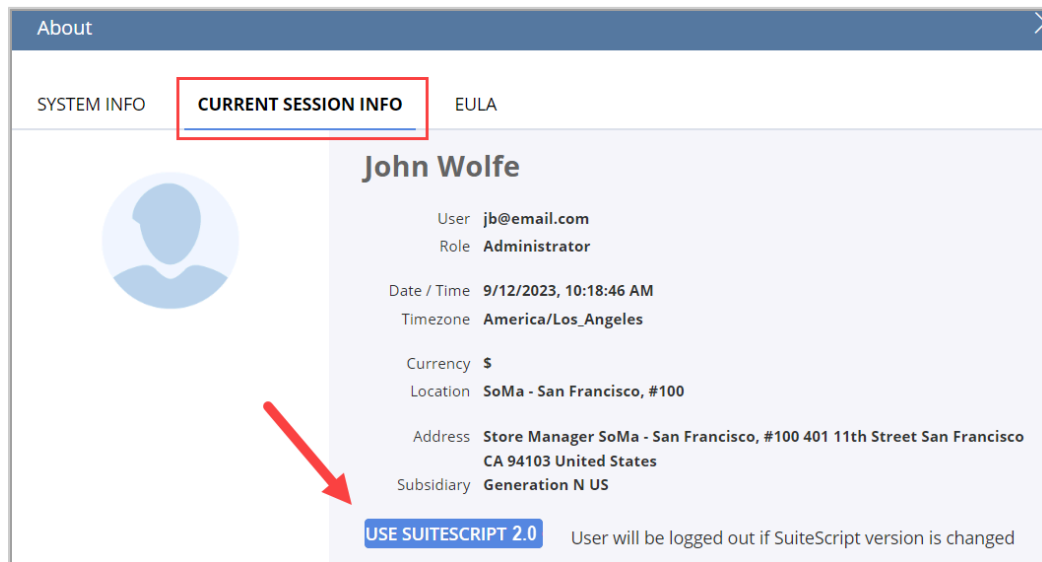

ⓘ **Note:** **Optimize EMV** is hidden after checking the SuiteScript 2.X box. The optimize option isn't required under SCIS 2.0. You don't have to wait for payment to be processed in NetSuite before printing a receipt. Instead, the entire process is "optimized."

To enable SuiteScript 2.0 on a mobile device:

1. Open SICS on the mobile device.
2. Log in as an **Administrator**.
3. Tap the SCIS menu and choose **About**.

4. Open the **Current Session Info** tab.
Tap the **Use SuiteScript 2.0** option near the bottom.

The device is now running SCIS 2.0. You can close the device menu page.

Note: After enabling SuiteScript 2.0, the option will change to **Use SuiteScript 1.0**.
