This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Sequential Liability SuiteApp

Sequential Liability provides a unified view of accounts payable, accounts receivable, projects, and cash balances while enabling controllers to pay vendors confidently. This SuiteApp helps you effectively manage cash flow for transactions where payment to vendors is linked to receipt from customers. This is useful if you want to pay your vendors for goods or services based on payment received from customers.

You can do the following in Sequential Liability:

- View a summary of project-related payable and receivable transactions per subsidiary.
- View more details about the payable and receivable transactions for a specific project.
- View A/P – A/R details from the project record.
- View the A/P balance, A/R balance, total amounts received and paid for a project or subsidiary as KPI tiles on the dashboard.

Watch the following video for an overview of the Sequential Liability SuiteApp:

 [Sequential Liability SuiteApp Overview](#)

The target audience for this SuiteApp are financial controllers, accountants, and financial users who handle accounts payable and accounts receivable transactions.

Sequential Liability is available in all languages that NetSuite supports. For more information, read the help topics [Configuring Multiple Languages](#) and [Choosing a Language for Your NetSuite User Interface](#).

Availability

Sequential Liability is a public and managed SuiteApp. As a managed SuiteApp, it is automatically updated when enhancements or new features are added.

For instructions on installing this SuiteApp, see [Installing Sequential Liability](#).

Prerequisites for Sequential Liability

Before installing Sequential Liability, an administrator must first do the following:

- Disable the **Consolidate Projects on Sales Transactions** preference. For more information about this preference, read the help topic [Using the Project Consolidation Preference](#).
- Enable the required features. See the following table for a list of required features for this SuiteApp. For information about enabling features, read the help topic [Enabling Features](#).

Subtab	Feature
Company	Departments
	Locations
	Classes
	Projects
	Project Management
Accounting	Accounting
	A/R
	A/P
SuiteCloud	Custom Records
	Client SuiteScript
	Server SuiteScript

Installing Sequential Liability

Sequential Liability requires a NetSuite OneWorld account.

Before installing this SuiteApp, read [Prerequisites for Sequential Liability](#).

 **Note:** Your account manager must enable required feature sets to ensure this SuiteApp works in your account. Contact your account manager for more information.

You must only install Sequential Liability during off-peak hours. Installation runs scheduled scripts and modifies records and it may take some time to finish.

To install Sequential Liability:

1. Go to Customization > SuiteBundler > Search and Install Bundles.
2. On the Search & Install Bundles page, use the following information to search for the SuiteApp:
 - **Bundle Name:** Sequential Liability
 - **Bundle ID:** 301860
3. Click **Sequential Liability** to display its Bundle Details page.
For more information, see the help topic [Bundle Details](#).

4. Click **Install**.

If asked, allow NetSuite to automatically upgrade the SuiteApp when new updates become available. During the installation, click **Refresh** to get the latest status.

Sequential Liability Terms and Definitions

Term	Definition
A/P	Accounts payable. These are accounts that are payable to your vendors. Accounts payable can be entered and tracked in vendor bills and vendor credits.
A/R	Accounts receivable. These are accounts that are receivable from your customers. Accounts receivable can be entered and tracked in customer invoices and credit memos.
A/P balance	This is also known as payable balance. It is the total amount payable to your vendors for a project. The A/P balance is computed as the total of all vendor bills entered for a project minus bill payments and vendor credits.
A/R balance	This is also known as receivable balance. It is the total amount receivable from your customers for a project. The A/R balance is computed as the total invoice amount minus customer payments and credit memos.
Vendor bill	A vendor bill is a transaction that records payables as they arrive from vendors.
Vendor credit	A vendor credit is a transaction that creates credit from a vendor that can be applied to a payables account. This is also known as bill credit.
Customer invoice	A customer invoice is a transaction that creates a bill for goods and/or services sold to a customer for which payment isn't received at the time of delivery.
Credit memo	A credit memo is a transaction that can be used to reverse a charge billed to a customer.
Bill payment	A bill payment is a transaction that records payment to a vendor. Bill payments are applied to vendor bills.
Customer payment	A customer payment is a transaction that records payment from a customer. Customer payments are applied to customer invoices or cash sales.

Setting up Sequential Liability

Read the following topics to set up Sequential Liability:

- [Tips for Setting Up Sequential Liability](#)
- [Sequential Liability Roles and Permissions](#)
- [Sequential Liability Workflow](#)
- [Associating Vendor Bills and Vendor Credits to a Project](#)
- [Associating Customer Invoices and Credit Memos to a Project](#)

Tips for Setting Up Sequential Liability

Area	Recommendation
Creating custom roles and setting permissions	When creating a custom CFO role, set the Pay bills permission to View so CFOs can only view bills and not be able to pay them. This is a recommended setting for better financial control. For more information, see Sequential Liability Roles and Permissions .
Entering vendor bills and vendor credits	When entering expenses or items in a vendor bill or vendor credit, you must associate each expense line or item line to the same project. For instructions, see Associating Vendor Bills and Vendor Credits to a Project.  Note: You can only view payable and receivable balances and details when A/P and A/R transactions are tied to a project. In instances where the project isn't the same for each expense line or item line, Sequential Liability only considers the first project in the expense line. The total amount of the vendor bill or vendor credit is calculated and billed to the first project in the expense line. If there is no project association in any of the expense lines, Sequential Liability then considers the first project in the item line. The total amount of the vendor bill or vendor credit is then calculated and billed to the first project in the item line. This is a SuiteApp limitation.
Entering customer invoices and credit memos	You must associate a customer invoice or credit memo to a project. For instructions, see Associating Customer Invoices and Credit Memos to a Project.  Note: You can only view payable and receivable balances and details when A/P and A/R transactions are tied to a project.

Sequential Liability Roles and Permissions

There are no custom roles included when you install this SuiteApp. An administrator must create custom roles for financial users and project consultants in the organization. The administrator must also set the required permissions for those roles. For more information on creating custom roles and setting permissions, see the help topic [Customizing or Creating NetSuite Roles](#).

To set up permissions for custom roles, go to Setup > Users/Roles > Manage Roles and click **Edit** beside the custom role.

The following permission levels are available:

- **View** – Users with this permission can only view records.
- **Create** – Users with this permission can create and view records.
- **Edit** – Users with this permission can create, view, and edit records.
- **Full** – Users with this permission can create, view, edit, and delete records.

Refer to the following table for a list of custom roles for Sequential Liability and their corresponding required permissions.

Custom Role	Subtab	Permission	Permission Level
CFO (chief financial officer)	Lists	Subsidiaries	View
		Currency	View
	Transactions	Pay Bills	View

Custom Role	Subtab	Permission	Permission Level
		 Note: You must set this permission so that CFOs can only view bills and not be able to pay them. This is a recommended setting for better financial control.	
Accountant	Lists	Subsidiaries	View
		Currency	View
A/P clerk	Lists	Subsidiaries	View
		Currency	View
		Projects	View
		Accounts	View
	Transactions	Credit Memo	View
		Invoice	View
A/R clerk	Lists	Subsidiaries	View
		Currency	View
		Accounts	View
		Vendor	View
	Transactions	Bills	View
		Enter Vendor Credits	View
		Credit Memo	View
Consultant	Lists	Subsidiaries	View
		Currency	View
		Vendor	View
	Transactions	Bills	View
		Enter Vendor Credits	View
		Credit Memo	View
		Invoice	View

Roles and Records

Access to Sequential Liability records differ depending on the custom role.

Refer to the following tables for a list of records available to custom roles after the permissions are set up.

Sequential Liability Reports	Custom Role	Access Level
 Project A/P – A/R Summary	CFO	Full

Sequential Liability Reports	Custom Role	Access Level
■ Project A/P – A/R Details	Accountant	Full
	A/P clerk	Edit (payable transactions) View (receivable transactions)
	A/R clerk	Edit (receivable transactions) View (payable transactions)
	Consultant	—
 Note: Consultant roles have no access to the Project A/P – A/R Summary and Project A/P – A/R Details pages.		

Sequential Liability Dashboard	Custom Role	Access Level
Sequential Liability custom portlet	CFO	Full
	Accountant	Full
	A/P clerk	Full
	A/R clerk	Full
	Consultant	—
 Note: Consultant roles have no access to the Sequential Liability custom portlet.		

Transaction Record	Custom Role	Access Level
Project	CFO	Full
	Accountant	Create
	A/P clerk	View
	A/R clerk	Create
	Consultant	View
 Note: You must also set employee restrictions so that consultants can view the A/P – A/R details from the project record. For instructions, see Setting Employee Restrictions for the Consultant Role .		
■ Vendor bill ■ Vendor credit	CFO	Full
	Accountant	Create
	A/P clerk	Create
	A/R clerk	View

Transaction Record	Custom Role	Access Level
	Consultant	View
■ Customer invoice	CFO	Full
■ Credit memo	Accountant	Create
	A/P clerk	View
	A/R clerk	Create
	Consultant	View
Bill payment	CFO	View
	Accountant	Create
	A/P clerk	Create
	A/R clerk	—
		 Note: A/R clerks cannot pay bills.
	Consultant	—
		 Note: Consultants cannot pay bills.

Setting Employee Restrictions for the Consultant Role

After setting permissions for the custom consultant role, an administrator must also set the employee restrictions for this role. This enables consultants to view the A/P – A/R Details subtab of the project record.

To set employee restrictions for the consultant role:

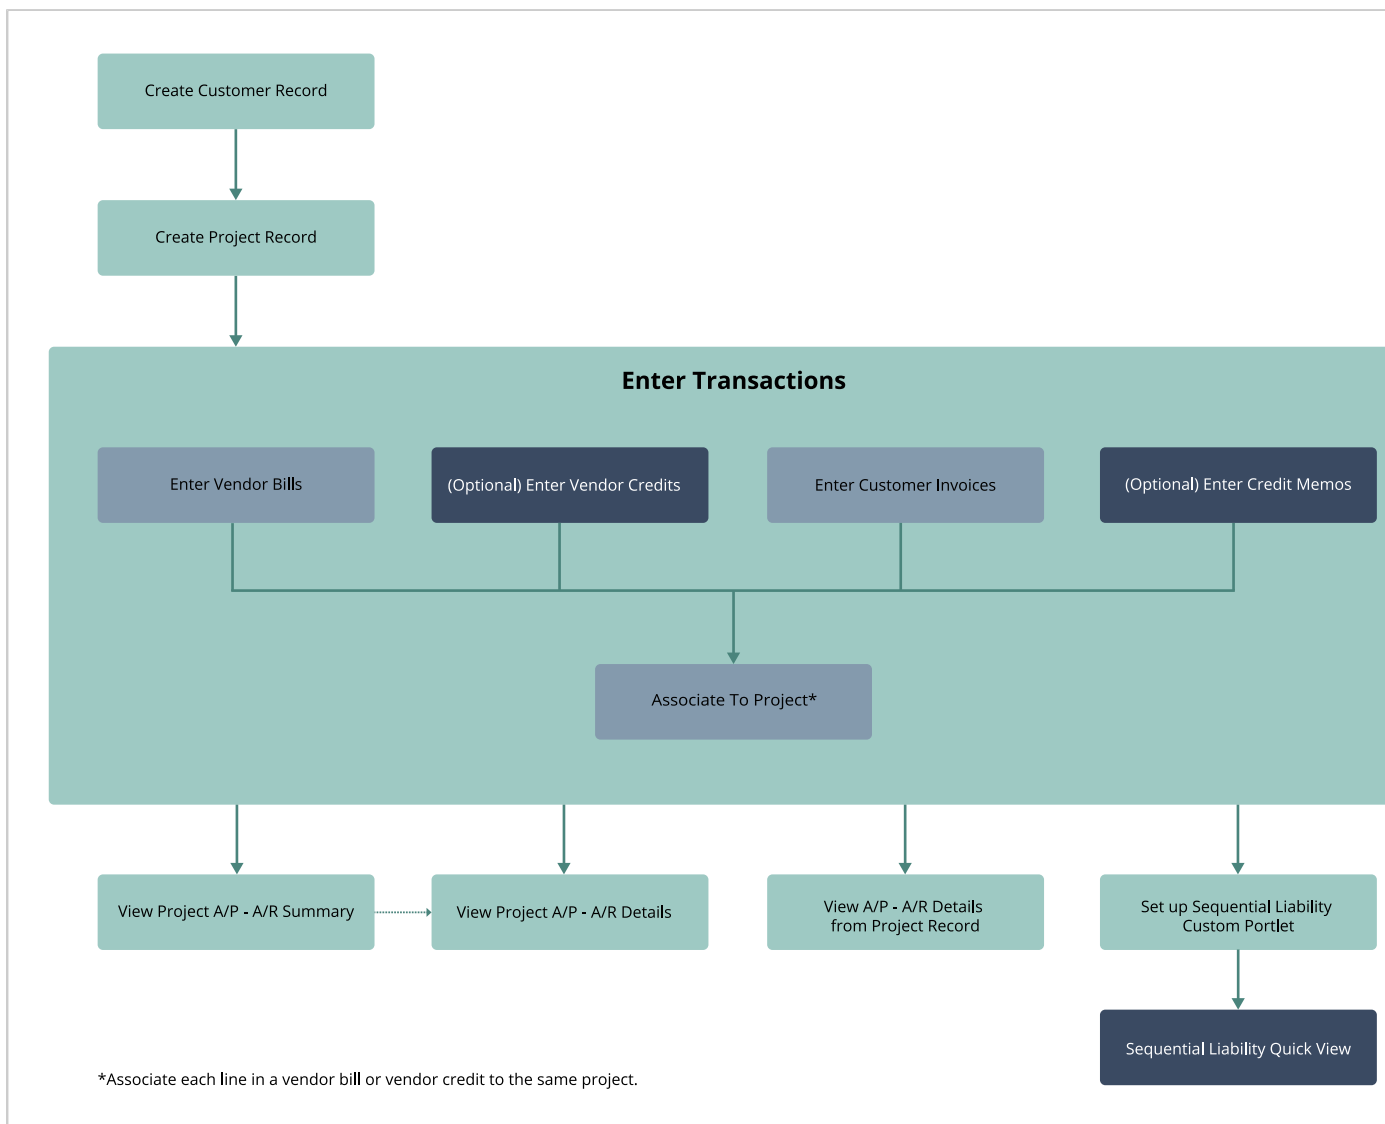

1. Go to Setup > Users/Roles > Manage Roles.
2. Click **Edit** beside the custom consultant role.
3. In the **Employee Restrictions** field, select from any of the following:
 - none - no default
 - none - default to own
 - own, subordinate, and unassigned
 - own and subordinates only

 **Note:** If you select **own and subordinates only** or **own, subordinate, and unassigned**, you must also check the **Allow Viewing** box next to the **Employee Restrictions** field.

For more information on employee restrictions, see the help topic [Setting Employee Restrictions](#).

Sequential Liability Workflow

The following diagram shows the workflow for using this SuiteApp.

Refer to the following table for more information about the workflow tasks in Sequential Liability.

Task	Details	Help Topic
Create a customer record	Create a customer record to track customer information.	Customers
Create a project record	In Sequential Liability, a project record is required.  Note: You can only view payable and receivable balances and details when A/P and A/R transactions are tied to a project. When creating a project record, you must select the customer associated with the project. Selecting a customer in the Customer field isn't required in the project record but it is required so you can enter customer invoices for a vendor bill.	Creating a Project Record
Enter vendor bills	Enter vendor bills or payable transactions for the project.	Vendor Bills

Task	Details	Help Topic
(Optional) Enter vendor credits	Enter vendor credits against the vendor bill. A vendor credit transaction shows credits from the vendor that can be applied towards your payable account.	Entering Vendor Credits
Enter customer invoices	Enter customer invoices or receivable transactions for the project.	Creating an Invoice
(Optional) Issue credit memo	Issue a credit memo against a customer invoice. You may need to issue a credit memo to reverse a charge invoiced to a customer.	Issuing a Customer Credit Memo
Associate vendor bills, vendor credits, customer invoices, and credit memos to a project.	You must associate vendor bills, vendor credits, customer invoices, and credit memos to a project. Take note of the following guidelines: ■ When you enter vendor bills, you must associate each expense line or item line in the vendor bill to the same project. ■ There are three ways to enter a vendor credit. When you manually enter a vendor credit, you must associate each expense line or item line in the vendor credit to the same project. ■ When you enter a customer invoice or issue a credit memo, you must associate the customer invoice or credit memo to a project.	Associating Vendor Bills and Vendor Credits to a Project
		Associating Customer Invoices and Credit Memos to a Project
View project A/P – A/R summary	View a summary of project-related payable and receivable transactions per subsidiary.	Viewing the Project A/P – A/R Summary
		Navigating the Project A/P – A/R Summary Page
View project A/P – A/R details	View more details about a project's payable and receivable balances.	Viewing the Project A/P – A/R Details
		Navigating the Project A/P – A/R Details Page
View A/P – A/R details from project record	View A/P – A/R details from the project record. This is only available when the project record is in View mode.	Viewing A/P – A/R Details from the Project Record
Set up the Sequential Liability custom portlet	Set up the Sequential Liability custom portlet to view the A/P balance, A/R balance, receipts, and payments for a project or subsidiary as KPI tiles on the dashboard.	Setting Up the Sequential Liability Custom Portlet

Task	Details	Help Topic
	 Note: The Sequential Liability custom portlet is only available for Accounting Center roles, such as financial users in the organization. Roles that do not belong in the Accounting Center, such as consultants, cannot set up the Sequential Liability custom portlet.	Navigating the Sequential Liability Quick View

Associating Vendor Bills and Vendor Credits to a Project

In Sequential Liability, when you create a vendor bill or vendor credit, you must associate each expense line or item line to a project. The project must be the same for each expense line or item line in the vendor bill or vendor credit.

In instances where the project isn't the same for each expense line or item line, Sequential Liability only considers the first project in the expense line. The total amount of the vendor bill or vendor credit is calculated and billed to the first project in the expense line. If there is no project association in any of the expense lines, Sequential Liability then considers the first project in the item line. The total amount of the vendor bill or vendor credit is then calculated and billed to the first project in the item line. This is a SuiteApp limitation.

If there is no project associated with an expense or item, the vendor bill or vendor credit isn't reflected when you use this SuiteApp.

To associate vendor bills and vendor credits to a project:

1. Enter a vendor bill or vendor credit.
For instructions on entering vendor bills, see the help topic [Vendor Bills](#).
For instructions on entering vendor credits, see the help topic [Entering Vendor Credits](#).
2. If you are entering a vendor bill, click the **Expenses and Items** subtab. If you are entering a vendor credit, click the **Items** subtab.
3. If you are entering an expense, perform the following steps:
 1. Click the **Expenses** subtab.
 2. (Optional) In the **Category** column, select a category.
This field is only available for vendor bills.
 3. In the **Account** column, select an expense account.
 4. In the **Amount** column, enter the expense amount.
 5. (Optional) In the **Memo** column, enter a memo.
 6. (Optional) In the **Department**, **Class**, and **Location** columns, select a department, class, or location to track the expense.
 7. In the **Customer** column, associate the expense to a project.
You can do this by selecting a customer that has the project name appended to it. For example: Customer: Project Name.
 8. Click **Add**.
Repeat the steps for each expense in the vendor bill or vendor credit.

Note: You must associate each expense in the vendor bill or vendor credit to the same project. In instances where the project isn't the same for each expense line or item line, Sequential Liability only considers the first project in the expense line. The total amount of the vendor bill or vendor credit is calculated and billed to the first project in the expense line. If there is no project association in any of the expense lines, Sequential Liability then considers the first project in the item line. The total amount of the vendor bill or vendor credit is then calculated and billed to the first project in the item line. This is a SuiteApp limitation.

4. If you are entering an item, perform the following steps:

1. Click the **Items** subtab.
2. In the **Item** column, select an item.
3. In the **Quantity** column, enter a quantity.
4. In the **Description** column, enter a description.
5. In the **Rate** column, enter a rate.
6. In the **Amount** column, enter the item amount.
7. In the **Department**, **Class**, and **Location** columns, select a department, class, or location to track the item.
8. In the **Customer** column, associate the item to a project.
You can do this by selecting a customer that has the project name appended to it. For example: Customer: Project Name.
9. Click **Add**.

Repeat the steps for each item in the vendor bill or vendor credit.

Note: You must associate each item in the vendor bill or vendor credit to the same project. In instances where the project isn't the same for each expense line or item line, Sequential Liability only considers the first project in the expense line. The total amount of the vendor bill or vendor credit is calculated and billed to the first project in the expense line. If there is no project association in any of the expense lines, Sequential Liability then considers the first project in the item line. The total amount of the vendor bill or vendor credit is then calculated and billed to the first project in the item line. This is a SuiteApp limitation.

5. Save the vendor bill or vendor credit.

Associating Customer Invoices and Credit Memos to a Project

In Sequential Liability, when you create a customer invoice or issue a credit memo, you must associate it with its corresponding project. Customer invoices and credit memos that are not associated to a project are not reflected when you use the SuiteApp.

To associate customer invoices and credit memos to a project:

1. Enter a customer invoice or issue a credit memo.

For instructions on entering customer invoices, see the help topic [Creating an Invoice](#).

For instructions on issuing credit memos, see the help topic [Issuing a Customer Credit Memo](#).

2. In the **Project** field of the customer invoice or credit memo, select a project.
Selecting a project in the **Project** field isn't required in the customer invoice or credit memo but it is required for this SuiteApp.
3. Save the customer invoice or credit memo.

Using Sequential Liability

You can do the following in Sequential Liability:

1. View a summary of project-related payable and receivable transactions per subsidiary. For more information, read the following topics:
 - [Viewing the Project A/P – A/R Summary](#)
 - [Navigating the Project A/P – A/R Summary Page](#)
2. View more details about the payable and receivable transactions for a specific project. For more information, read the following topics:
 - [Viewing the Project A/P – A/R Details](#)
 - [Navigating the Project A/P – A/R Details Page](#)
3. View A/P – A/R details from the project record. For more information, read the following topics:
 - [Viewing A/P – A/R Details from the Project Record](#)
 - [Navigating the A/P – A/R Details Subtab of the Project Record](#)
4. View the A/P balance, A/R balance, total amounts received and paid for a project or subsidiary as KPI tiles on the dashboard. For more information, read the following topics:
 - [Setting Up the Sequential Liability Custom Portlet](#)
 - [Navigating the Sequential Liability Quick View](#)

Viewing the Project A/P – A/R Summary

You can view a project's payable and receivable balances from the Project A/P – A/R Summary page. From this page, you can also navigate to the Bill Payment page where you can pay bills associated with a vendor.

To view the project A/P – A/R summary:

1. Go to Reports > Sequential Liability > Project A/P – A/R Summary.
2. In the **Subsidiary** field, select a subsidiary.
The subsidiary associated with your account is selected by default.
3. In the **Bank Account** field, select a bank account.
You can only select from bank accounts associated with the chosen subsidiary.
Selecting a bank account displays the available balance in that account.

Note: The available balance in the bank account is always displayed in the subsidiary's currency, regardless of the bank account currency.

4. (Optional) In the Filters section, select a filter to narrow down the search results.
You can filter the results by project, project status, or both. The results are filtered by all projects and all project statuses by default.

5. Click **Refresh**.

To know more about how to navigate the Project A/P – A/R Summary page, read [Navigating the Project A/P – A/R Summary Page](#).

Navigating the Project A/P – A/R Summary Page

You can view a summary project-related payable and receivable transactions per subsidiary from the Project A/P – A/R Summary page. From this page, you can also navigate to the Bill Payment page where you can pay bills associated with a vendor.

Refer to the following image and table to know more about the Project A/P – A/R Summary page.

Field/Section	Description
1 Subsidiary	This field lets you select a subsidiary so you can view projects that have A/P and A/R balances in that subsidiary. The subsidiary associated with your account is selected by default.
2 Currency	This field shows the subsidiary's currency. This field is only available if the Multiple Currencies feature is enabled. For more information about the Multiple Currencies feature, see the help topic Multiple Currencies.
3 Bank Information	This section lets you display the available balance in the selected bank account. You can only select from bank accounts available in the selected subsidiary. Note: The available balance in the bank account is always displayed in the subsidiary's currency, regardless of the bank account currency.
4 Filters	This section lets you filter the search results by project, project status, or both. The results are filtered by all projects and all project statuses by default.
5 Results	This section shows the A/P and A/R balances of projects that have outstanding payables and receivables.

Field/Section	Description
	 Note: Fully paid transactions are not included in the results. This section has the following columns: ■ View – This column contains a link for you to view information about the project in detail. Click the View link to open the Project A/P – A/R Details page. For more information, see Navigating the Project A/P – A/R Details Page. ■ Customer – This column shows the customer of projects that have outstanding A/P or A/R balances. Click the customer name to open the customer record in a new tab. ■ Project & Vendor – This column shows the projects in the subsidiary that have outstanding A/P or A/R balances. You can do the following from this column: □ Click the expand icon beside the project name to show vendors under the project that have outstanding payable balances. □ Click the project name to open the project record in a new tab. □ Click the vendor name to open the vendor record in a new tab. ■ Cur. – This column shows the subsidiary's currency.  Note: Transaction amounts in other currencies are automatically converted and are shown in the subsidiary's currency. This column is only available if the Multiple Currencies feature is enabled. For more information about the Multiple Currencies feature, see the help topic Multiple Currencies. ■ A/P Balance – This column shows the payable balance for a project and the payable balance for each of the vendors in the project. The amount shown in bold font at the project level in the A/P Balance column is the total payable balance for the project. Applied bill credit amounts are included in the A/P balance calculation. You can do the following from the A/P Balance column: □ Click the expand icon beside the project name to show the vendors under the project. This shows the payable balances of each vendor under the project in the A/P Balance column.  Note: The results include only vendor bills that have a status of Open. □ Click the A/P balance amount next to the vendor name to open the Bill Payment page in a new tab. You can pay the bills associated with the vendor from the Bill Payment page. ■ A/R Balance – This column shows the total receivable balance for a project. Credit memos are included in the receivable balance calculation. ■ A/P - A/R Nett – This column shows the amount remaining after the A/P balance is deducted from the A/R balance. □ When the receivable amount is greater than the payable amount, the text is green. □ When the payable amount is greater than the receivable amount, the text is red and enclosed in parenthesis. □ When the payable amount is equal to the receivable amount, the text is black. ■ Proj. Status – This column shows the status and progress of projects. Project statuses can be set up by creating accounting lists. For more information, see the help topic Setting Up Accounting Lists.

Field/Section	Description
	 Note: The number of collapsed rows shown on the search results table is dependent on the Number Of Rows In List Segments user preference. For more information on setting the preference, see the help topic General Personal Preferences . You can display a maximum of 25 collapsed rows per page.

Viewing the Project A/P – A/R Details

You can track and view more details about a project's payable and receivable balances from the Project A/P – A/R Details page. From this page, you can also navigate to the Bill Payment page where you can pay all bills associated with a vendor or pay each vendor bill.

To view the project A/P – A/R details:

- Go to Reports > Sequential Liability > Project A/P – A/R Details.
Alternatively, you can click the **View** link next to a project in the Project A/P – A/R Summary page to go to the Project A/P – A/R Details page.
- In the **Subsidiary** field, select a subsidiary.
The subsidiary associated with your account is selected by default. If you arrived at this page from the Project A/P – A/R Summary page, this field is populated with the subsidiary of the project from the Project A/P – A/R Summary page.
- In the **Project** field, select a project.
You can only select from projects associated with the chosen subsidiary. If you arrived at this page from the Project A/P – A/R Summary page, this field is populated with the project from the Project A/P – A/R Summary page.
When you select a project, the **Customer** field then displays the customer associated with the project.
- (Optional) In the **Department** field, select a department.
This search criteria is only applicable for A/R transactions. You can only select from departments associated with the chosen subsidiary. The default selection is all departments.
- (Optional) In the **Location** field, select a location.
This search criteria is only applicable for A/R transactions. You can only select from locations associated with the chosen subsidiary. The default selection is all locations.
- (Optional) In the **Class** field, select a class.
This search criteria is only applicable for A/R transactions. You can only select from classes associated with the chosen subsidiary. The default selection is all classes.
- In the **Bank Account** field, select a bank account.
You can only select from bank accounts associated with the chosen subsidiary.
Selecting a bank account displays the available balance in that account.

 **Note:** The available balance in the bank account is always displayed in the subsidiary's currency, regardless of the bank account currency.

- Click **Search**.

Note: The search results are only displayed after clicking **Search**. When you modify any of the search criteria, you must also click **Search** to refresh the page.

9. Click the **A/R Transactions** subtab to display receivable transactions associated with the project.
10. Click the **A/P Transactions** subtab to display payable transactions associated with the project.
 - a. (Optional) In the **Vendor** field under the **A/P Transactions** subtab, select a vendor to filter the A/P transactions by vendor.

Filtering the results by vendor optimizes the results table display.

To know more about how to navigate the Project A/P – A/R Details page, see [Navigating the Project A/P – A/R Details Page](#).

Navigating the Project A/P – A/R Details Page

You can view more details about the payable and receivable transactions for each project from the Project A/P – A/R Details page. From this page, you can also navigate to the Bill Payment page where you can pay all bills associated with a vendor or pay each vendor bill.

Refer to the following image and table to know more about the Project A/P – A/R Details page.

	Field/Section/Tab	Description
1	Subsidiary	This field lets you select a subsidiary. If you arrived at this page from the Project A/P – A/R Summary page, this field is populated with the subsidiary of the project from the Project A/P – A/R Summary page.
2	Project	This field lets you select a project in the subsidiary. If you arrived at this page from the Project A/P – A/R Summary page, this field is populated with the project from the Project A/P – A/R Summary page.

	Field/Section/Tab	Description
3	Customer	This field displays the customer associated with the project.
4	Currency	This field displays the subsidiary's currency. This field is only available if the Multiple Currencies feature is enabled. For more information about the Multiple Currencies feature, see the help topic Multiple Currencies.
5	Department	This field lets you select a department associated with the chosen subsidiary. The default selection is all departments.  Note: This search criteria is only applicable for A/R transactions.
6	Location	This field lets you select a location associated with the chosen subsidiary. The default selection is all locations.  Note: This search criteria is only applicable for A/R transactions.
7	Class	This field lets you select a class associated with the chosen subsidiary. The default selection is all classes.  Note: This search criteria is only applicable for A/R transactions.
8	Summary	This section summarizes the total A/P balance, A/R balance, total received amounts, and total payments for the project. All transaction for the project are included in the calculation, including closed transactions. All amounts are in the subsidiary's currency. This section has the following fields: ■ A/P Balance – This field displays the total payable balance for the project. ■ A/R Balance – This field displays the total receivable balance for the project. ■ Receipts – This field displays the total amount received for the project to date. The amount isn't tied to any fiscal year and is computed at the start of the project until the present. All received amounts are included in the calculation, including those from closed transactions. ■ Payments – This field displays the total amount paid for the project to date. The amount isn't tied to any fiscal year and is computed at the start of the project until the present. All paid amounts are included in the calculation, including those from closed transactions.
9	Bank Information	This section lets you display the available balance in the selected bank account. You can only select from bank accounts available in the selected subsidiary.  Note: The available balance in the bank account is always displayed in the subsidiary's currency, regardless of the bank account currency.
10	A/P Transactions	This subtab shows all open A/P transactions for the project and displays the total amount on the subtab. You can select a vendor from the Vendor list to filter the search results by vendor. Filtering the results by vendor optimizes the results table display.

	Field/Section/Tab	Description
		 Note: The results include only vendor bills that have a status of Open as well as unapplied vendor credits. This subtab contains a results table that has the following columns: ■ Vendor & Bill – This column shows all the vendors associated with the project that have payable balances. You can do the following from this column: □ Click the expand icon beside the vendor name to show vendor bills and bill credits created for the project. □ Click the vendor name to open the vendor record in a new tab. □ Click the vendor bill to open the vendor bill record in a new tab. □ Click the bill credit to open the bill credit record in a new tab. ■ Cur. – This column shows the subsidiary's currency.  Note: Transaction amounts in other currencies are automatically converted and are shown in the subsidiary's currency. This column is only available if the Multiple Currencies feature is enabled. For more information about the Multiple Currencies feature, see the help topic Multiple Currencies. ■ A/P Balance – This column shows the A/P balance per vendor. The A/P balance can be narrowed down per vendor bill or bill credit. You can do the following from this column: □ Click the expand icon beside the vendor name to show the vendor bills and bill credits under it. This also shows the A/P balances for each vendor bill or bill credit in the A/P Balance column. The amount shown in bold font at the vendor level in the A/P Balance column is the total A/P balance of all vendor bills and bill credits for that vendor. □ Click the A/P balance amount next to the vendor name to open the Bill Payment page in a new tab. You can pay all bills associated with the vendor from the Bill Payment page. □ Click the A/P balance amount next to the vendor bill or bill credit record to open the Bill Payment page in a new tab. You can pay that particular vendor bill or bill credit from the Bill Payment page. ■ Trans. Amount – This column shows the transaction amount of each vendor bill or bill credit. You must click the expand icon beside the vendor name to view the transaction amount of each vendor bill or bill credit. Bill credits are always shown as negative amounts in this column and are deducted from the total payable balance. ■ Type – This column shows the A/P transaction type. Supported transaction types are vendor bill and bill credit. ■ Trans. Date – This column shows the transaction date.  Note: The number of collapsed rows shown on the search results table is dependent on the Number Of Rows In List Segments user preference. For more information on setting the preference, see the help topic General Personal Preferences. You can display a maximum of 25 collapsed rows per page.
11	A/R Transactions	This subtab shows all open A/R transactions for the project and displays the total amount on the subtab. A/R transactions for the project include customer invoices and credit memos.

Field/Section/Tab	Description
	 Note: The results include only customer invoices that have a status of Open as well as applied, partially applied, and partially refunded credit memos. This subtab contains a results table that has the following columns: ■ Trans. ID – This column shows the ID of the transaction. Click the transaction ID to open the customer invoice or credit memo in a new tab. ■ Cur. – This column shows the subsidiary's currency.  Note: Transaction amounts in other currencies are automatically converted and are shown in the subsidiary's currency. This column is only available if the Multiple Currencies feature is enabled. For more information about the Multiple Currencies feature, see the help topic Multiple Currencies. ■ A/R Balance – This column shows the receivable balance for each customer invoice or credit memo. ■ Trans. Amount – This column shows the transaction amount of each customer invoice or credit memo. Credit memos are always shown as negative amounts in this column and are deducted from the total receivable balance. ■ Type – This column shows the transaction type. Supported transaction types are invoice and credit memo. ■ Trans. Date – This column shows the transaction date.  Note: The number of collapsed rows shown on the search results table is dependent on the Number Of Rows In List Segments user preference. For more information on setting the preference, see the help topic General Personal Preferences. You can display a maximum of 25 collapsed rows per page.

Viewing A/P – A/R Details from the Project Record

You can view payable and receivable transactions from the A/P – A/R Details subtab of the project record. The A/P – A/R Details subtab is only available when viewing a project record. The information on A/P – A/R Details subtab is the same as what is displayed on the Project A/P – A/R Details page. You cannot pay bills from A/P – A/R Details subtab. For more information, see [Navigating the A/P – A/R Details Subtab of the Project Record](#).

For consultant roles, an administrator must set employee restrictions so consultants can view the A/P – A/R Details subtab of the project record. For instructions, see [Setting Employee Restrictions for the Consultant Role](#).

To view A/P – A/R details from the project record:

1. Go to Lists > Relationships > Projects.
2. Click the **View** link next to the project that you want to view.
3. On the project record, click the **A/P – A/R Details** subtab.

Navigating the A/P – A/R Details Subtab of the Project Record

The A/P – A/R Details subtab displays the payable and receivable transactions for a project. The subtab is only available when viewing a project record.

Subtab	Description
A/P Transactions	This subtab shows all open A/P transactions for the project and displays the total amount on the subtab. You can select a vendor from the Vendor list to filter the search results by vendor. Filtering the results by vendor optimizes the results table display.  Note: The results include only vendor bills that have a status of Open as well as unapplied vendor credits. This subtab contains a results table that has the following columns: Vendor & Bill – This column shows all the vendors associated with the project that have payable balances. You can do the following from this column: - Click the expand icon beside the vendor name to show vendor bills and bill credits created for the project. - Click the vendor name to open the vendor record in a new tab. - Click the vendor bill to open the vendor bill record in a new tab. - Click the bill credit to open the bill credit record in a new tab. Cur. – This column shows the subsidiary's currency.  Note: Transaction amounts in other currencies are automatically converted and are shown in the subsidiary's currency. This column is only available if the Multiple Currencies feature is enabled. For more information about the Multiple Currencies feature, see the help topic Multiple Currencies. A/P Balance – This column shows the A/P balance per vendor. The A/P balance can be narrowed down per vendor bill or bill credit. You can do the following from this column: - Click the expand icon beside the vendor name to show the vendor bills and bill credits under it. This also shows the A/P balances for each vendor bill or bill credit in the A/P Balance column. The amount shown at the vendor level in the A/P Balance column is the total A/P balance of all vendor bills and bill credits for that vendor. Trans. Amount – This column shows the transaction amount of each vendor bill or bill credit. You must click the expand icon beside the vendor name to view the transaction amount of each vendor bill or bill credit. Bill credits are always shown as negative amounts in this column and are deducted from the total payable balance. Type – This column shows the A/P transaction type. Supported transaction types are vendor bill and bill credit. Trans. Date – This column shows the transaction date.  Note: The number of collapsed rows shown on the search results table is dependent on the Number Of Rows In List Segments user preference. For more information on setting the preference, see the help topic General Personal Preferences. You can display a maximum of 25 collapsed rows per page.
A/R Transactions	This subtab shows all open A/R transactions for the project and displays the total amount on the subtab. A/R transactions for the project include customer invoices and credit memos.

Subtab	Description
	 Note: The results include only customer invoices that have a status of Open as well as unapplied, partially applied, and partially refunded credit memos. This subtab contains a results table that has the following columns: ■ Trans. ID – This column shows the ID of the transaction. Click the transaction ID to open the customer invoice or credit memo in a new tab. ■ Cur. – This column shows the subsidiary's currency.  Note: Transaction amounts in other currencies are automatically converted and are shown in the subsidiary's currency. This column is only available if the Multiple Currencies feature is enabled. For more information about the Multiple Currencies feature, see the help topic Multiple Currencies. ■ A/R Balance – This column shows the receivable balance for each customer invoice or credit memo. ■ Trans. Amount – This column shows the transaction amount of each customer invoice or credit memo. Credit memos are always shown as negative amounts in this column and are deducted from the total receivable balance. ■ Type – This column shows the transaction type. Supported transaction types are invoice and credit memo. ■ Trans. Date – This column shows the transaction date.  Note: The number of collapsed rows shown on the search results table is dependent on the Number Of Rows In List Segments user preference. For more information on setting the preference, see the help topic General Personal Preferences. You can display a maximum of 25 collapsed rows per page.

Setting Up the Sequential Liability Custom Portlet

Set up the Sequential Liability custom portlet to display the Sequential Liability Quick View. The Sequential Liability Quick View shows the A/P balance, A/R balance, total amount received, and total amount paid for a project or subsidiary as KPI tiles on the dashboard. For more information, see [Navigating the Sequential Liability Quick View](#).

 **Note:** The Sequential Liability custom portlet is only available to Accounting Center roles, such as financial users in the organization. Roles that do not belong in the Accounting Center, such as consultants, cannot set up the Sequential Liability custom portlet.

To set up the Sequential Liability custom portlet:

1. Click **Personalize** on the upper right corner of your dashboard.
2. On the **Standard Content** tab of the Personalize Dashboard palette, click the **Custom Portlet** icon.
3. Click **Set Up** on the portlet.
4. In the **Source** field of the Custom Content dialog, select **SEQL PL APAR Dashboard Tile**, and click **Save**.

Navigating the Sequential Liability Quick View

The Sequential Liability Quick View shows the A/P balance, A/R balance, total amount received, and total amount paid for a project or subsidiary as KPI tiles on the dashboard. To set up the Sequential Liability Quick View, see [Setting Up the Sequential Liability Custom Portlet](#).

 **Note:** Click **Refresh** on the portlet to include all recent transactions.

See the following tables for a list of fields and tiles available in the Sequential Liability Quick View and their corresponding descriptions.

Field	Description
Subsidiary	This field lets you select a subsidiary. You can only select from subsidiaries that have outstanding payable and/or receivable balances. The subsidiary associated with your account is selected by default. For administrators, all subsidiaries are displayed. When you select a subsidiary, the total A/P balance, A/R balance, receipts, and payments to date for that subsidiary are displayed in the custom portlet as tiles. All amounts are in the currency of the selected subsidiary.
Project	This field lets you select a project or all projects in the subsidiary. You can only select from projects that have outstanding payable and/or receivable balances. All projects within the subsidiary is selected by default. When you select a project, the total A/P balance, A/R balance, receipts, and payments to date for that project are displayed in the custom portlet as tiles. All amounts are in the currency of the subsidiary where the project belongs.

Tile	Description
A/P Balance	This tile shows the payable balance amount for a project or subsidiary. The amount is in the subsidiary's currency.
A/R Balance	This tile shows the receivable balance for a project or subsidiary. The amount is in the subsidiary's currency.
Receipts	This tile shows the total amount received for a project or subsidiary to date. The amount is in the subsidiary's currency.
Payments	This tile shows the total amount paid for a project or subsidiary to date. The amount is in the subsidiary's currency.

Sequential Liability Best Practices and Limitations

Best Practices

- You must only install Sequential Liability during off-peak hours. Installation runs scheduled scripts and modifies records. It may take a while to finish.
- The results table in the Project A/P – A/R Summary and Project A/P – A/R Details pages is at optimum performance with a maximum of 50 vendors, having a maximum of 10 transactions each.

- When using CSV Import, make sure to set the **Run Server SuiteScript and Trigger Workflows** preference in two places so existing records are shown when you use Sequential Liability.
 1. Go to Setup > Import/Export > CSV Import Preferences and check the **Run Server SuiteScript and Trigger Workflows** box.
 2. Go to Setup > Import/Export > Import CSV Records. In the Import Options of the Import Assistant, check the **Run Server SuiteScript and Trigger Workflows** box.

 **Note:** You must set the preference in both the CSV Import Preferences and Import Options pages.

- Click **Refresh** on the Sequential Liability custom portlet to include recent transactions and to update the A/P Balance, A/R Balance, Receipts, and Payments KPI tiles on the dashboard.
- When the Approval Routing feature is enabled, you must approve posting transactions so they are included in the Sequential Liability computations.

Limitations

- When entering vendor bills and vendor credits, you must associate each expense line or item line in a vendor bill or vendor credit to the same project. For instructions on associating a vendor bill or vendor credit to a project, see [Associating Vendor Bills and Vendor Credits to a Project](#).

In instances where the project isn't the same for each expense line or item line, Sequential Liability only considers the first project in the expense line. The total amount of the vendor bill or vendor credit is calculated and billed to the first project in the expense line. If there is no project association in any of the expense lines, Sequential Liability then considers the first project in the item line. The total amount of the vendor bill or vendor credit is then calculated and billed to the first project in the item line.

- The bank balance amount displayed when using this SuiteApp is always shown in the subsidiary's currency.
- You can display a maximum of 25 collapsed rows in the results table of the Project A/P – A/R Summary page, Project A/P – A/R Details page, and in the A/P – A/R Details subtab of the project record.
- The Sequential Liability custom portlet is only available for Accounting Center roles, such as financial users in the organization. Roles that do not belong in the Accounting Center, such as consultants, cannot set up the Sequential Liability custom portlet.
- Sequential Liability reports can handle a maximum of 20,000 of the following related records combined:
 - Customers
 - Projects
 - Vendors
 - Bills mapped to a customer or project record
 - Invoices mapped to a customer or project record
