2025.2

December 17, 2025

Copyright © 2005, 2025, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Site Management Tools Overview

i Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

i Note: Site Management Tools requires the SMT Core Content Types bundle and the Core Content Extension. For details, see [Site Management Tools Installation and Implementation](#).

Site Management Tools (SMT) provide web store managers with a comprehensive set of features for maintaining and enhancing the content and structure of a NetSuite Commerce website. If you're adding new product categories, updating promotional banners, or creating custom landing pages, SMT gives you one place to manage your site in real time. SMT comes built into your Commerce web store. If you're using the Administrator role or the Store Manager role, you can update, preview, and publish content immediately. This includes managing the look and feel of the site, arranging page layouts, and keeping content consistent using an intuitive drag-and-drop system. For more information, see [Users and Roles in Site Management Tools](#).

With SMT, you can:

- Add, edit, or move content using the drag-and-drop functionality.
- Create new pages and enhance existing pages. For details, see the help topics [Landing Pages](#) and [Enhanced Pages](#).
- Preview content changes in real-time.
- Add your own foreign language translations. Each site linked to your account can have multiple, language-specific domains. You can add translations for commerce categories, pages, and content. For details, see the help topic [Multi-Language Sites](#).
- Set when content should be visible, such as for a specific date and time. For details, see [View Site as of a Specific Date in Site Management Tools](#).
- Quickly change the appearance of your site by applying a different skin, which is a set of elements designed to compliment each other. For details, see [Theme Skin Manager](#).
- Create a hierarchical structure of product categories, subcategories, and products so you can present a well organized catalog of products to your visitors. For details, see [Commerce Categories in Site Management Tools](#).

Site Management Tools Content Options

i Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Managing your web store means organizing information and visuals so customers can easily find what they need. Site Management Tools (SMT) provide several content types you can add to your site. When you install the SMT Core Content Types bundle (Bundle ID 190323), the following core content types are available:

- **Image Content** – Use this to add images like home page banners, promotional graphics, or images that link to product categories. Each image can link to a specific URL, and you can add alternate text to use when an image doesn't load for page readers. For details, see the help topic [Site Management Tools Image Content Type](#).

- **Text Content** – Add blocks of text, headers, footers, and hyperlinked text. This is useful for section titles, descriptions, and informational paragraphs anywhere on your site. For details, see the help topic [Site Management Tools Text Content](#).
- **Merchandising Zone Content** – Show lists of products based on the merchandising rules you set in NetSuite. For example, feature certain products or best-sellers. You can choose between two merchandising zone types:

- Legacy merchandising zone
- Enhanced merchandising zone, which offers more customization, supports multiple languages, and works with SuiteCommerce Themes. With the enhanced merchandising zone you can present your products in a consistent way, but also have the choice to display products differently throughout your web site to match your brand quality.

For details, see the help topic [Merchandising Zone Content](#).

- **HTML Content** – Add custom code to display videos, social media feeds, forms, or other interactive features. For details, see the help topic [Site Management Tools HTML Content Type](#).

 **Note:** If the core content types appear grayed out when you sign in to Site Management Tools make sure that you have correctly installed the SMT Core Content Types bundle and activated the accompanying Core Content Extension. For details, see [Site Management Tools Installation and Implementation](#).

 **Note:** Template files control the structure of your website pages. Commerce web stores include page templates that already have set areas. You can use these areas as they are, edit the areas, or add new areas to the templates. For details, see the help topic [Site Management Tools Templates and Areas](#).

 **Tip:** If you need something not covered by the core content options, you can create Custom Content Types. These let you add entirely new content or features developed specifically for your store. For more information, see the help topic [Site Management Tools Custom Content Type](#).

Site Management Tools Versions

① Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

There are currently two supported versions of Site Management Tools (SMT), versions 2 and 3. Two important differences between the versions are the available features and native compatibility with different versions of SuiteCommerce and SuiteCommerce Advanced. By default, SuiteCommerce Kilimanjaro and greater use SMT version 3. Versions of SuiteCommerce prior to Kilimanjaro, use SMT version 2.

For documentation specific to Version 2 of SMT, see  [Site Management Tools Version 2](#).

Determine Your Version of SMT

You can determine which version of SMT is enabled by inspecting the admin URL. The admin URL is displayed in the browser's address bar when you are logged in to SMT. In the following URL, the number between `/cms/` and `/admin/` is **3**. This indicates SMT version 3 is enabled on the site. If SMT version 2 is enabled on the site, then this number would be 2.

`http://my.webstore/cms/3/admin/cms.jsp`

SuiteCommerce and SuiteCommerce Advanced Releases and New Features

The following headings identify each release of SuiteCommerce and SuiteCommerce Advanced. For each release, you see the SMT features introduced and a link to the corresponding help topic.

2021.1 Release

[Merchandising Zone Content](#) – This lets you display complementary, cross-sell or up-sell products. The functionality of the enhanced merchandising zone is similar to that of the legacy merchandising zone, however it includes a configurable display, support for multiple languages, and it is compatible with SuiteCommerce Themes.

[Exporting and Importing Bulk Translation Content in Site Management Tools](#) – You can export bulk content that requires translation on your web store and import the translated content back into SMT from the **Translations** subtab in overview mode.

2020.2 Release

[Enhanced Pages](#) – You can now preview and manage enhanced pages from the Overview Pages list.

[Field Type Descriptions for Custom Fields](#) – When creating a custom field type the List/Record and Multi-Select types now include the ability to add and remove items directly from the list in SMT. It also includes the ability to search the list directly in SMT. Also, longer lists are loaded in succession as the list is scrolled through.

[CMS Page Types](#) – The CMS Page Types feature now supports child records.

2020.1 Release

[Commerce Category Customer Segment Assignment](#) – This lets you assign a commerce category to a specific customer segment inside Site Management Tools.

[Multi-Language Sites](#) – This lets you assign customized translation names for your commerce categories.

2019.2 Release

[Site Management Toolbar](#) – Click the Oracle NetSuite logo to log in to your NetSuite account.

[SMT Links Portlet](#) – Use the portlet to access preview and edit modes of all your available domains.

[CMS Page Import](#) – This lets you use CSV Import for pages and tags.

[SMT Expired Content](#) – Manage expired content in new ways on the site using the URL, tags, visibility dates, and more.

[Content Tags and Filter Tools](#) – Tags are available to use with commerce categories and CSV imports.

[Pages](#) – Pagination is integrated with the sort and filter tools to make finding content easier.

[Site Management Tools Custom Content Type](#) – The ability to associate child records to parent records lets you use more complex data sets for custom content types.

[Page Types Domain Level Data](#) – This lets you assign specific page types to specific domains instead of to the NetSuite account.

[Using SMT Advanced Preview to Verify Personalized Catalog Views](#) – This lets you preview your site based on how a specific customer would see your site.

[Exclude Empty Commerce Categories](#) — This lets you conditionally hide categories based on the number of items returned.

[Site Management Tools Page Layout Selector](#) – This lets you override any page types having a default template to any other available page type.

[Theme Skin Manager](#) – You can create, save, and reuse multiple skins for your currently installed theme.

2019.1 Release

[Published Content](#) – Manage published content in new ways on your site using the URL, tags, visibility dates, and more.

[CMS Page Types](#) – Create specific, custom parameters for grouping together and identifying new pages.

2018.2 Release

[CMS Page Record](#) – Delete a page record without logging into SMT.

[Visibility Dates for Categories](#) – Control when commerce categories are visible on the site by specifying start and end dates.

[Image Manager](#) – Upload images from your computer to the file cabinet or from the file cabinet or computer to your site using the Image Manager.

[Landing Pages](#) – Create Landing Pages and edit them in either their unpublished or published states.

[Content Tags and Filter Tools](#) – Add tags to content and use the filter for bulk actions such as publishing or editing content.

[Site Management Tools Text Content](#) – Add images, perform text alignment, and view in HTML in this update to the text editor.

Aconcagua Release (2018.1)

[View Site as of a Specific Date in Site Management Tools](#) – Control when content and landing pages are visible by specifying start and end dates.

[Theme Customizer \(Aconcagua or Earlier\)](#) – Customize the look and feel of your site by changing the attributes of certain elements on your sites such as the size and color of headings and other text.

Kilimanjaro Release (2017.2)

[Site Management Tools Custom Content Type](#) – Create custom website applications and features.

[Internationalization of Site Management Tools Administration](#) – Choose your SMT admin language.

Site Management Tools Installation and Implementation

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Site Management Tools (SMT) is implemented on your Commerce web store, making the SMT user interface accessible within the application. Installation and implementation includes the following steps:

1. [Enable the Site Management Tools Feature](#)
2. [Install the Site Management Tools Core Content Types Bundle](#)
3. [Implement Site Management Tools on an Application](#)

Enable the Site Management Tools Feature

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

To get started with Site Management Tools (SMT), you must enable the feature.

To enable SMT:

1. Go to Setup > Company > Enable Features.
2. Click the **Web Presence** subtab.
3. Check the **Site Management Tools** box.
4. Click **Save**.

Install the Site Management Tools Core Content Types Bundle

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

The SMT Core Content Types bundle (Bundle ID 190323) lets you create the core content types in Site Management Tools. Core content types include image, text, merchandising zone, and HTML. These content types help in the build-out of your SuiteCommerce site. For details, see [Site Management Tools Content Options](#).

When you install the bundle, you must activate the Core Content Extension. If you don't activate the extension, the core content types are grayed out in Site Management Tools.

To install the SMT Core Content Types bundle:

1. Go to Customization > SuiteBundler > Search & Install Bundles.
2. In the **Keywords** Keywords field, enter SMT Core Content Types.

3. Click **Search**.
4. Select SMT Core Content Types from the search results.
5. Click **Install**.
6. When the bundle install is complete, go to Commerce > Extensions > Extension Manager.
7. Click **Edit** next to the website and domain where you want to install the bundle.

 **Note:** If you're creating a new activation, see the help topic [Creating a New Activation](#).

8. Select the **Extensions** tab.
9. Check the **Active** box next to Core Content Extension.
10. Click **Activate**.
11. If this is the initial activation for a domain, clear the domain's cache by triggering a cache invalidation request. For details, see the help topic [Cache Invalidation](#).

Implement Site Management Tools on an Application

 **Applies to:** SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Site Management Tools is preconfigured on the Commerce web store Shopping Application. It is available for Commerce web stores Denali R2 and later. For more information about Site Management Tools integration with Commerce web stores, see the help topic [Site Management Tools Subtab](#).

Initial Login to Site Management Tools and File Handling

 **Applies to:** SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Site Management Tools implements its own file structure in the file cabinet. When you login for the first time, this file structure's set up for you automatically. Images and content templates are stored in the file cabinet. For more information about logging in to Site Management Tools, see [Logging into Site Management Tools](#).

 **Warning:** Don't move or rename any of the Site Management Tools folders in the file cabinet.

Location of Site Management Tools Images and Templates

When you add image content, the images are stored in the file cabinet at the following location:

- Web Site Hosting Files > Live Hosting Files > SSP Applications > NetSuite Inc. - CMS > CMS > Site- [Site Number] > files

When you add templates, the templates are stored in the file cabinet at the following location:

- Web Site Hosting Files > Live Hosting Files > SSP Applications > NetSuite Inc.-CMS > CMS > [application] > Published > Templates

 **Warning:** Image and template files stored here are maintained by Site Management Tools. You should never manually add, edit or delete files from these locations.

Site Management Tools Browser Requirements

 **Applies to:** SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

 **Note:** Website visitors aren't limited by the supported browsers. They can use any browser or device to access your site without affecting how pages look or perform. Only Site Management Tools administration is subject to these browser requirements.

Site Management Tools (SMT) is compatible with the latest and previous versions of these browsers:

- Google Chrome
- Firefox
- Microsoft Edge

If your browser isn't supported, it doesn't mean SMT won't work with it. It simply hasn't been fully tested with SMT. If you log in to SMT with an unsupported browser, you might see a message stating that you're using an unsupported browser. This means that you're using a browser that's known to be incompatible with SMT. If that happens, switch to a supported browser. For more information about supported browsers, see the help topic [Supported Browsers for NetSuite](#).

A Note About Third-Party Cookies

Starting in 2024.2 you can't access SMT administration if third-party cookies are enabled in your browser. If you see a warning, disable third-party cookies. If you still receive the warning after disabling third-party cookies, try refreshing the page. If that doesn't work, close your browser and restart.

Many browsers improve privacy by limiting what ad-trackers can do. Previously, third-party cookies could track your activity and collect information across unrelated sites. This is called cross-site tracking. To keep your login secure without third-party cookies, SMT needs a CHIPS-compatible browser. Cookies Having Independent Partitioned State (CHIPS) makes browsers store cookies into partitioned storage with separate cookie jars per top-level site, improving user privacy and security. For more information, see [Google CHIPS Overview](#).

To turn off third-party cookies for Google Chrome:

1. Open Google Chrome.
2. Click More (denoted by three dots) in the top right corner.
3. Select **Settings**.
4. Select **Privacy and security**.
5. Select **Third-party cookies**.
6. Select **Block third-party cookies**.

To turn off third-party cookies for Firefox:

1. Open Firefox.
2. Select the Application menu (denoted by three bars) in the top right corner.
3. Select **Settings**.
4. Select **Privacy & Security**.
5. In the **Enhanced Tracking Protection** area, Select **Custom**.
6. Select **All cross-site cookies** on the **Cookies** dropdown list.

To turn off third-party cookies for Microsoft Edge:

1. Open Microsoft Edge.
2. Click Settings and more (denoted by three dots) in the top right corner.
3. Click **Settings** (denoted by the gear icon) near the bottom of the dropdown menu.
4. Click **Settings** (denoted by the three bars) in the upper left.
5. Select **Cookies and site permissions**.
6. Select **Manage and delete cookies and site data**.
7. Click **Block third-party cookies**.

Users and Roles in Site Management Tools

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

To manage content with Site Management Tools, you'll need a valid NetSuite user account with the right permissions. The two roles that provide these permissions by default are the Administrator role and the Store Manager role. There are only a few users with the Administrator role. If you manage content, you'll need the Store Manager role or a custom role with the Site Management Tools permission.

For more information, explore the following help topics:

- [Assigning Permissions to Custom Roles for Site Management Tools](#)
- [Custom Record Permissions for Custom Roles in Site Management Tools](#)
- [Logging into Site Management Tools](#)
- [Configuring Access to Site Management Tools](#)

Assigning Permissions to Custom Roles for Site Management Tools

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

You can manage access to site content by assigning specific permissions to custom roles, rather than assigning the Store Manager role or Administrator role. Custom roles allow you to grant only the needed access for tasks related to Site Management Tools. Permissions for site management include access to documents and files, website publishing, commerce categories, and website management.

Note: You can't edit a NetSuite standard role, but you can use it as the basis for a custom role. For more information and best practices, see the help topic [NetSuite Roles Overview](#).

To assign permissions to custom roles for Site Management Tools:

1. Go to Setup > Users/Roles > Manage Roles.
2. Click **Edit** next to the custom role.
3. Select the **Permissions** tab and add the following permissions for managing site content with Site Management Tools:
 - Lists subtab
 - Documents and Files
 - Website (External) Publisher
 - Setup subtab
 - □ Commerce Categories
 - Website Management
4. Click **Save**.

Note: By default, the Theme Customizer is available only to the Administrator role. Users whose roles don't have permission to use the Theme Customizer won't see the option in the menu. If your Store Manager role or custom role needs access to the Theme Customizer, you'll need to customize the role and add it to the script deployments listed below:

- customdeploy_ns_sc_ext_mech_services
- customdeploy_ext_mech_emb_endpoints

To add a custom role, go to Customization > Scripting > Script Deployments and select **Edit** next to the script. Select the **Audience** subtab and choose your custom role from the **Role** field. For more information, see the help topics [Customizing and Creating Roles](#) and [Script Deployment](#).

Custom Record Permissions for Custom Roles in Site Management Tools

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Custom employee roles need Full permission to edit custom records for Site Management Tools, while custom customer roles need View permission to see the content. Content types include text, images, HTML, and merchandising zones. For details, see the help topic [Custom Record for CMS Content](#).

To change the custom record permissions for custom roles:

1. Go to Setup > Users/Roles > Manage Roles.
2. Next to the custom employee role or the custom customer role, click **Edit**.
3. Select the **Permissions** tab.
4. Select the **Custom Record** subtab.
5. For each custom record listed below, set Full permission for custom employee roles and View permission for custom customer roles in the **Level** column.
 - CMS_HTML
 - CMS_IMAGE
 - CMS_MERCHZONE
 - CMS_MERCHZONE2
 - CMS_TEXT
6. Click **Save**.

For more information about custom records, see the help topic [Custom Record for Custom Content Type](#).

Logging into Site Management Tools

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Note: Site Management Tools (SMT) doesn't currently support SAML SSO for SMT users.

Use one of the two following options to log in to SMT:

Log into NetSuite to Access Site Management Tools

Log in to your NetSuite account using a role with the Site Management Tools permission. Go to your website and press the Esc key, if that feature is enabled, or use the SMT administrator URL. For more information about the Esc to Login feature and the SMT administrator URL, see [Configuring Access to Site Management Tools](#).

Log into Site Management Tools From Your Website

Log in to SMT from your website with your NetSuite user name and password. SMT checks which roles you're assigned. If you only have one role with SMT permissions, you're automatically signed into that role. If you have more than one role with SMT permissions, a list appears where you can choose the role you want to use. If you don't have a role with SMT permissions, you'll see a message letting you know you don't have a role with the proper permissions to manage content.

Note: To sign out of SMT, select **Sign Out** from the dropdown menu. When you sign out of SMT you're also signed out of your NetSuite account.

Configuring Access to Site Management Tools

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Note: This feature is available in Elbrus and later releases.

The Escape to Login feature that's set on the SuiteCommerce Configuration record lets you choose if you want to access Site Management Tools by pressing the Esc key or using the administrator URL. For more information, see the help topic [Configuring Escape to Log In](#).

When Disable Esc Key to Login is enabled, you can go to the home page of your site and press the Esc key to display the login screen. If you've already logged in to your NetSuite account, pressing the Esc key displays the Site Management Tools toolbar.

When Disable Esc Key to Login is disabled, the Esc key functions normally, and you access Site Management Tools for your site at the following administrator URL:

- For Kilimanjaro or later, <http://my.webstore/cms/3/admin/cms.jsp>
- For Elbrus or earlier, <http://my.webstore/cms/2/admin/cms.jsp>

If you don't know which version you're running, check your Commerce web stores configuration and make sure the CMS Adapter version matches. Go to Commerce > Websites > Configuration > [Select Site] and [Select Domain] > Integrations > Site Management Tools.

When you go to the administrator URL, you'll see the Site Management Tools login page where you can enter your NetSuite credentials.

Site Management Tools User Interface

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

**Note:** The Site Management Tools (SMT) administrator interface supports the following web browsers: Chrome, Firefox, and Microsoft Edge. Starting with release 2024.2, access to SMT administration is blocked if third-party cookies are enabled in your browser. For more information, see [Site Management Tools Browser Requirements](#).

Site Management Tools (SMT) lets you manage your web store's content and appearance. SMT provides a flexible user interface to organize, edit, preview, and publish site content efficiently. When you log into SMT, you'll see the site management toolbar, where you can manage your content.

To learn more explore the following topics:

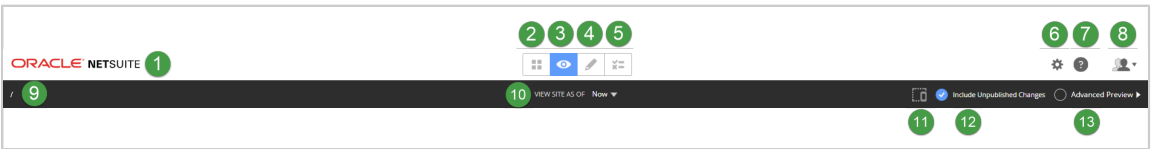

- [Site Management Toolbar](#)
- [Site Management Tools Overview Mode](#)
- [Site Management Tools Preview Mode](#)
- [Site Management Tools Edit Mode](#)
- [Enabling or Disabling Content Types in Site Management Tools](#)

Site Management Toolbar

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

**Note:** The Site Management Tools administrator interface supports the following web browsers: Chrome, Firefox, and Microsoft Edge. Starting with release 2024.2, access to SMT administration is blocked if third-party cookies are enabled in your browser. For more information, see [Site Management Tools Browser Requirements](#).

When you log in to Site Management Tools (SMT), you'll see the site management toolbar at the top of the screen. For details about logging into SMT, see [Logging into Site Management Tools](#). The following screenshot shows the options that are available from the toolbar:

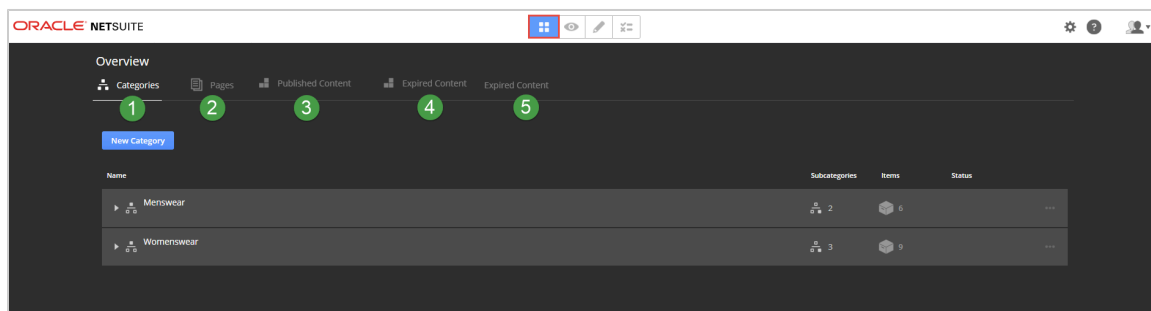

Item	Description
1	Click the Oracle NetSuite logo to open a new tab and automatically log in to your NetSuite account.
2	Click the Overview Mode icon  to manage categories, pages, published and expired, and translations. For details, see Site Management Tools Overview Mode .

Item	Description
3	Click the Preview Mode icon  to see how your site looks to visitors. In preview mode, area highlighting and the edit and remove buttons are hidden. For details, see Site Management Tools Preview Mode .
4	Click the Edit Mode icon  to change, remove, or add new content. For details, see Site Management Tools Edit Mode .
5	Click the Review & Publish Changes icon  to view all unpublished changes and any content that displays or expires in the future. For details, see Review and Publish Content in Site Management Tools and View Site as of a Specific Date in Site Management Tools .
6	Click the gear icon to access Custom Content Types and Page Layout Settings. For details, see Enabling or Disabling Content Types in Site Management Tools and Site Management Tools Page Layout Selector . If your account has an active theme, you can also access the Theme Skin Manager from here. For more information, see Theme Skin Manager .
7	Click the help icon to go to the NetSuite Help Center.
8	Click the user icon and select Sign Out to log out of SMT. When you sign out, you're also logged out of your NetSuite account.
9	This displays the URL fragment of the current page.
10	In preview and edit modes, you can select a date and time to preview or edit your site. This lets you see content with a future start date or time that's not shown yet. For details, see View Site as of a Specific Date in Site Management Tools .
11	In preview or edit modes, click the Preview Screen Sizes icon  to see how your site is looks on different devices. For details, see Previewing Screen Sizes in Site Management Tools .
12	In preview mode, click Include Unpublished Changes to see any unpublished changes on your site. For details, see Include Unpublished Changes in Site Preview .
13	In preview mode, click Advanced Preview to view your site based on different customer groups. For details, see Site Management Tools Preview Mode .

Site Management Tools Overview Mode

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Click the Overview Mode icon  on the site management toolbar to manage categories, pages, published and expired content, and translations. The following screenshot shows the options you have when working in overview mode:

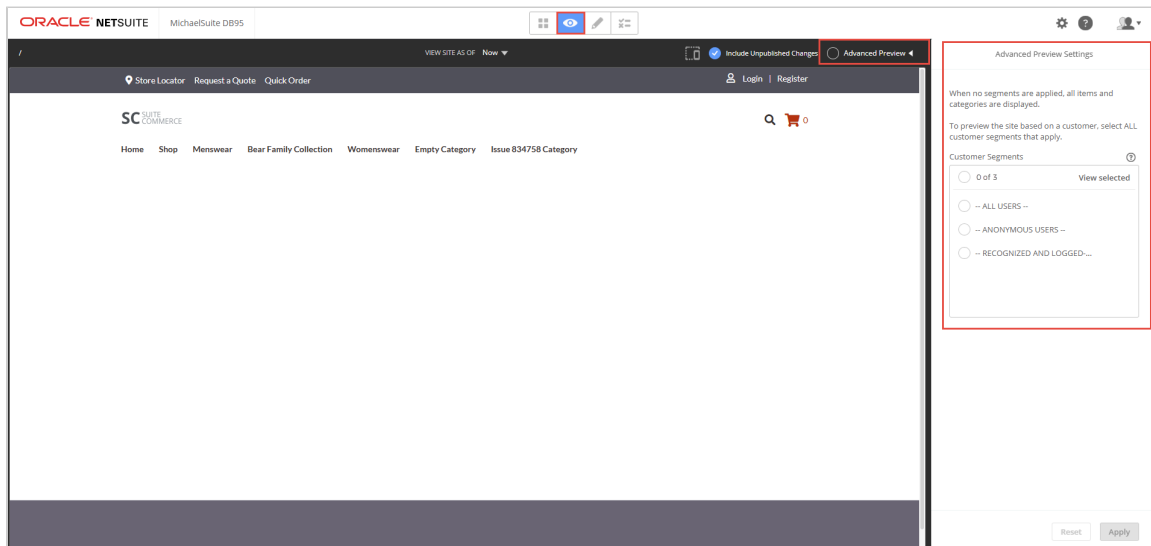

Item	Description
1	Click Categories to manage commerce categories, which are used to create a hierarchical structure of product categories, subcategories, and products. For details, see Commerce Categories in Site Management Tools .
2	Click Pages to manage landing pages and custom pages, or edit existing enhanced pages. For details, see the help topic Pages .
3	Click Published Content to view all current published content. For details, see Published Content in Site Management Tools .
4	Click Expired Content to view all expired content. For details, see Reuse Expired (Discarded) or Deleted Content .
5	Click Translations to view all content for translations, including both published and unpublished content. For details, see the help topic Managing Your Translation Content .

Site Management Tools Preview Mode

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Click the Preview Mode icon  on the site management toolbar to see how your site looks. If you use SuiteCommerce or the 2019.2 release of SuiteCommerce Advanced or later, preview mode lets you view your website as individual customer groups view it. Select **Advanced Preview** and then select the customer segment from the side panel. For details, see the help topic [Personalized Catalog Views](#). The following screenshot shows the advanced preview settings:

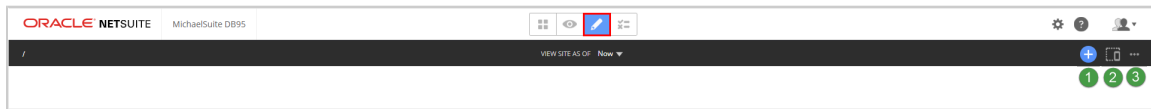

Site Management Tools Edit Mode

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Click the Edit Mode icon  on the site management toolbar to change, remove, or add content to your site. In edit mode, the option to add content and edit page settings is displayed in the toolbar. The option

to include unpublished changes only appears in preview mode. The following screenshot shows the toolbar options when working in edit mode:

Item	Description
1	Click the Add icon  on the toolbar to add content. This will open a side panel where you can select the type of content, like a blog post or image text overlay. For information about the different types of content you can add, see the help topic Website Content .
2	Click the Preview Screen sizes icon  to simulate and preview how your site is displayed on different devices and screen sizes. For details, see Previewing Screen Sizes in Site Management Tools .
3	Click the Edit Page Settings icon, denoted by an ellipsis, to edit or remove enhancements from a page. For details, see the help topic Enhanced Pages .

Enabling or Disabling Content Types in Site Management Tools

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

With Site Management Tools (SMT), you can enable and disable core content types and custom content types. For a list of the different types of content that area available, see the help topic [Content Type Table](#).

To enable content types in Site Management Tools:

1. Click the Edit Page Settings icon, denoted by the gear icon.
2. Select **Custom Content Types** to open the Custom Content Type Settings.
3. From Inactive Content Types, click and drag the content type you want to enable to Active Content Types. This content type will now appear in edit mode when you click the Add icon  from the site management toolbar.
4. To exit, select a different mode from the toolbar.

To disable content types in Site Management Tools:

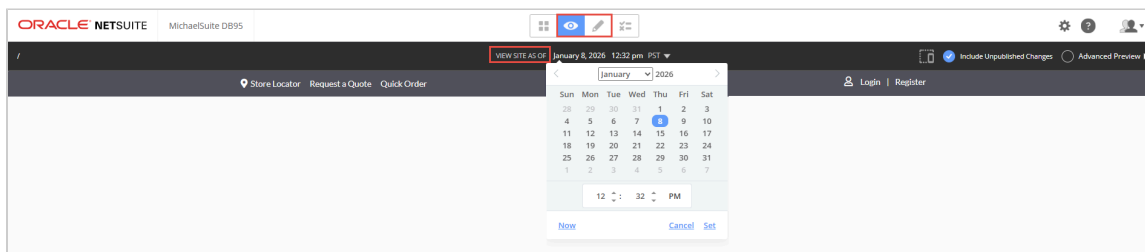

1. Click the Edit Page Settings icon, denoted by the gear icon.
2. Select **Custom Content Types** to open the Custom Content Type Settings.
3. From Active Content Types, click and drag the content type you want to disable to Inactive Content Types.
When you disable a content type, you can't add new content of that type, but existing content of that type still appears on your site.
4. To exit, select a different mode from the toolbar.

View Site as of a Specific Date in Site Management Tools

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Note: This information applies to SuiteCommerce or the 2018.2 release of SuiteCommerce Advanced and later.

Because some content might be visible only during a specific time frame, you can preview your site as it would appear to a visitor on a selected date and time. Use the **View Site As Of** date picker on the site management toolbar to choose a date and time to see how your site displays. For details, see [Setting Content Visibility in Site Management Tools](#). The following screenshot shows the View Site As Of option on the toolbar:

To view your site as of a specific date in Site Management Tools:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Select the Preview Mode icon  or the Edit Mode icon  from the site management toolbar.
3. Click **View Site As Of**.
4. In the date picker, choose the date and time you want to view your webstore, and click **Set**.

Note: To see or edit upcoming published changes, click the Review & Publish Changes icon  on the site management toolbar and select **Visibility Timeline**. For details, see [View Upcoming Content Using Visibility Timeline](#).

View Upcoming Content Using Visibility Timeline

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

The Visibility Timeline in Site Management Tools shows you upcoming content and landing page changes. Use the timeline to view changes for any given day or time. The timeline displays the following content information:

- Content type
- Page
- Event

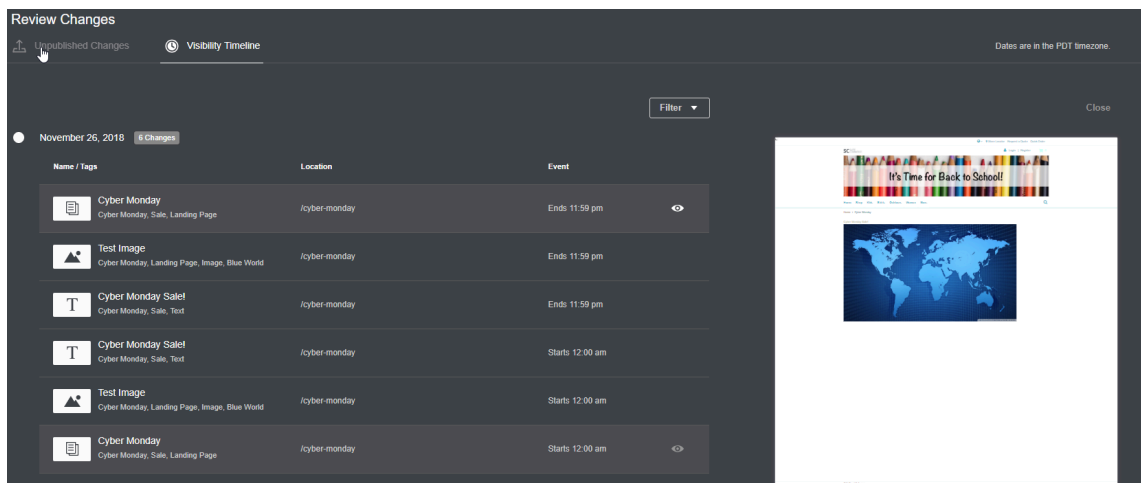

- Start date and time
- End date and time, if it exists

The events reported in the timeline include:

- New content to display
- Content that is going to expire

To view upcoming content visibility using the visibility timeline:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Click the Review & Publish Changes icon  on the site management toolbar.
3. Select the **Visibility Timeline** subtab.

Setting Content Visibility in Site Management Tools

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

You can set visibility dates for specific pieces of content when you create or edit the content. You can apply visibility dates to the following:

- Website content (image content, text content, merchandising zone content, enhanced merchandising zone content, and HTML content)
- Landing pages
- Commerce categories

You can make content always visible or set it to appear only on a specific date and time. You can edit these dates anytime. Content that's past its end date expires and is available in the Expired Content tab in overview mode. For details, see [Site Management Tools Overview Mode](#). Expired content isn't visible anymore, but it isn't deleted. For details, see [SMT Expired Content](#).

To set content visibility in Site Management Tools:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Choose the type of content to add or edit.
3. From the side panel, choose from the following:
 - **Always Visible** – Select this option for content you want to remain on your website. Content is visible on your website immediately after you publish it and remains visible until you remove it.
 - **Visible on Specific Dates** – Select this option to show content only for specific dates and times. dates. Use the date selector to set a start date, end date, and time. Click **Set** after each selection. You can also click **Now** to use the current date and time.
4. Define other attributes as desired.
5. Click **Save**.

For information about viewing your website as of a specific date, see [View Site as of a Specific Date in Site Management Tools](#).

Review and Publish Content in Site Management Tools

📌 Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

You can review your unpublished changes before publishing them to your site. Select what content you want to publish and decide when you want to publish it. You can publish content right away, schedule it for a specific date and time with no end date, or choose a set date range. When the content's published or falls within your selected date range, it's visible on the site.

To learn more, explore these topics:

- [Published and Unpublished Content in Site Management Tools](#)
- [Review Unpublished Changes in Site Management Tools](#)
- [Create and Publish Content in Site Management Tools](#)
- [Remove Published Content in Site Management Tools](#)
- [Discard or Expire Content in Site Management Tools](#)
- [Include Unpublished Changes in Site Preview](#)

Published and Unpublished Content in Site Management Tools

📌 Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

You can manage your published and unpublished content in Site Management Tools (SMT). Published content is visible to your website's visitors. Unpublished content is only accessible to SMT administrators who are logged in to SMT. Content refers to all the data elements you can add and manage on your website. You can download most types of content with bundles.

The SMT Core Content Type bundle installs these types of content:

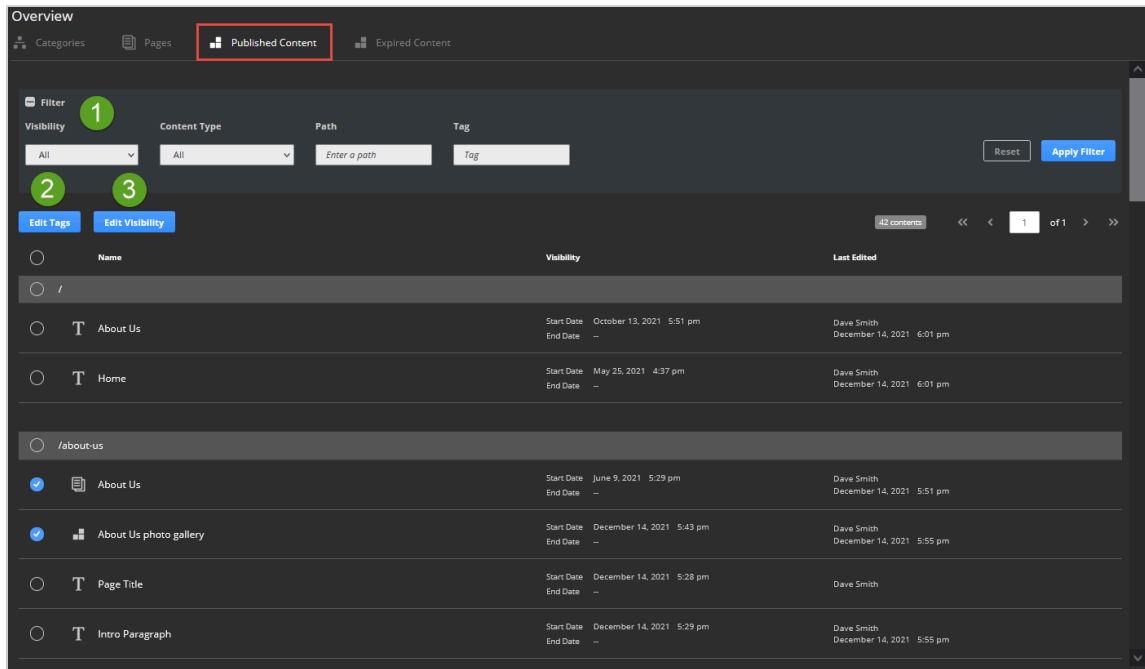

- [Site Management Tools Image Content Type](#)
- [Site Management Tools Text Content](#)
- [Merchandising Zone Content](#)
- [HTML Content](#)

Published Content in Site Management Tools

Published content appears according to the visibility options you set for each piece of content. This includes images, text, and merchandising zones. You can perform bulk management of content on the

Published Content subtab in overview mode. You can manage published landing pages and published content on any page. When you edit or remove published content, it's saved as unpublished content. For details, see [Unpublished Content in Site Management Tools](#).

The following screenshot shows the options on the Published Content subtab when you select the Overview Mode icon  from the site management toolbar:

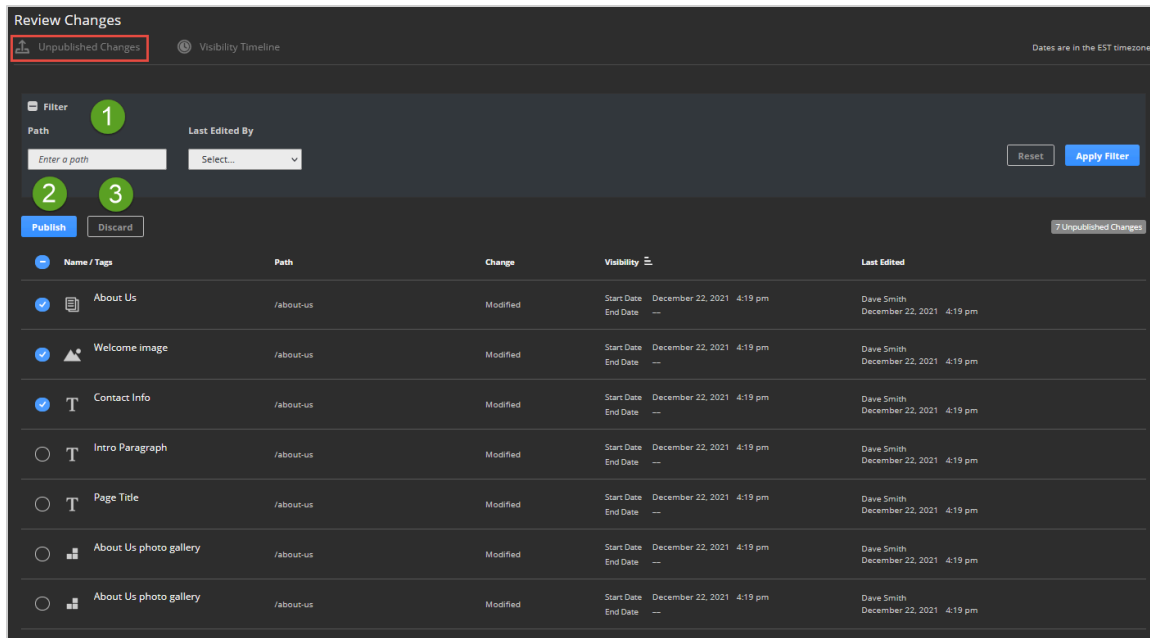

Item	Description
1	Filter published content by visibility, content type, the path (URL) of the content, or associated tags.
2	Select Edit Tags to edit the tags on one or more pieces of content. You can add new tags or overwrite existing tags.
3	Select Edit Visibility to change the visibility dates for content. You can update the start or end date, or remove the dates. For details, see Setting Content Visibility in Site Management Tools .

Unpublished Content in Site Management Tools

When you first add content to your site, it's considered unpublished and isn't visible on your site. Any edits, additions, or removal of content are saved as unpublished content. This lets you make changes in advance and publish them immediately or on a set date and time.

Note: When you're viewing unpublished content, you can use Preview Mode or Edit Mode. Change modes by clicking the button on the site management toolbar. For details, see [Site Management Tools User Interface](#).

To show unpublished content on your site, you need to publish it. You can view all unpublished changes by selecting the Review & Publish Changes icon  on the site management toolbar. Here, you can publish or discard content, manage visibility dates, preview content before publishing, and make changes. The following screenshot shows the options on the Unpublished Changes subtab:

Item	Description
1	Filter unpublished content by the path (URL) of the content or by who last edited it.
2	Select Publish to make the selected content visible on your website.
3	Select Discard to remove the selected content.

Review Unpublished Changes in Site Management Tools

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

When you edit, add, or remove content, those changes are saved as unpublished content. This enables you to make changes in advance and then publish those changes immediately or at a date and time. You can review, sort, filter, and publish all content or individual pieces of content.

Click the Review & Publish Changes icon  on the site management toolbar to review your unpublished changes. You can also see content scheduled to display or expire in the future. For more information, see [View Site as of a Specific Date in Site Management Tools](#).

Each unpublished change includes the following information:

- Content type
- Type of change, for example, add or modify
- Affected page
- Visibility start and end dates
- User who made the change
- Date and time of the change

To review unpublished changes in Site Management Tools:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Click the Review & Publish Changes icon  on the site management toolbar.
3. Point to the item and click **Preview** to see the unpublished changes.
4. Click **Edit** to open the change in edit mode and make any changes.
5. Click **Close**.

If you have saved changes in the Unpublished Changes list that you don't want to publish, you can discard them. For details, see [Discard or Expire Content in Site Management Tools](#).

Note: When you're viewing the unpublished content on your site, you can view the site in Preview Mode or Edit Mode. Change the mode by clicking the button on the site management toolbar.

Create and Publish Content in Site Management Tools

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Note: Publishing content clears certain Site Management Tools related caches. For more information, see the help topic [Clearing Cached Site Management Tools Content](#).

When you create or edit content, those changes begin as unpublished content. Publishing content makes it visible to your site visitors. You publish your content from the Unpublished Changes subtab. Click the Review & Publish Changes icon  on the site management toolbar to review your unpublished changes. You can select multiple pieces of content and publish them right away. You can also schedule content to publish at a specific date and time. For details, see [View Site as of a Specific Date in Site Management Tools](#).

Note: If you publish content with a future start date, it'll automatically be visible when that date occurs. If you didn't set a start date, or it's in the past, the content is visible immediately.

To create and publish content in Site Management Tools:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Click the Review & Publish Changes icon  on the site management toolbar.
3. From the unpublished changes list, select the content you want to publish.
4. Click **Publish**.

Remove Published Content in Site Management Tools

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Your content stops displaying at its specified end date and time. Content with a past end date and time is referred to as expired content. To expire content without an end date, set its end date and time to now. Or, you can go to the page with the content and click **X** to expire it right away.

If content has a future start date, expiring it sets its end date and time to the current date and time. To remove content from your site, click the Review & Publish Changes icon  on the site management toolbar. From the Unpublished Changes list, select the content and publish the change to remove it.

Discard or Expire Content in Site Management Tools

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

If you have unpublished content and decide to remove it instead of publishing it, you have two options:

- Discard the Content
- Expire the Content

Discarding content is the best way to remove unpublished content you don't want.

To discard content in Site Management Tools:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Click the Review & Publish Changes icon  on the site management toolbar.
3. From the Unpublished Changes list, select the content you want to discard.
4. Click **Discard**.

To expire content in Site Management Tools:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Go to the page with the content you want to expire.
3. Hover over the content and click **X**.

When you do this for unpublished content, its visibility end date is set to now, so it won't show on the site, but stays in the **Unpublished Changes** subtab. To remove it completely, either publish it or select and discard it.

Reuse Expired (Discarded) or Deleted Content

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

When content reaches its end date or you remove it, it becomes expired content and appears in the Expired Content subtab in overview mode. You can edit or restore expired content to your website.

To reuse expired (discarded) or deleted content:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Click the Overview Mode icon  on the site management toolbar.
3. Select the **Expired Content** subtab.

4. Select the content you want to reuse. You can restore one or multiple pieces of content. Select the URL row to select all content on that URL fragment.
 5. Click **Edit Visibility**.
 6. Edit the start and end dates, or remove visibility dates by selecting **Always Visible**. To reuse content, set the end date in the future or remove it. You can also change the start date if you want the content visible at a future date.
 7. Click **Save**.
- The content is now unpublished and you can view it on the **Unpublished Changes** subtab. For details, see [Review Unpublished Changes in Site Management Tools](#).

Include Unpublished Changes in Site Preview

i Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

New or changed content always starts out as unpublished. This keeps content from displaying until it's published, even if the visibility start date has already passed. When you preview your site, you can choose to include or exclude unpublished changes by selecting **Include Unpublished Changes** on the site management toolbar. This option is on by default. You can clear this option to hide unpublished changes in the preview.

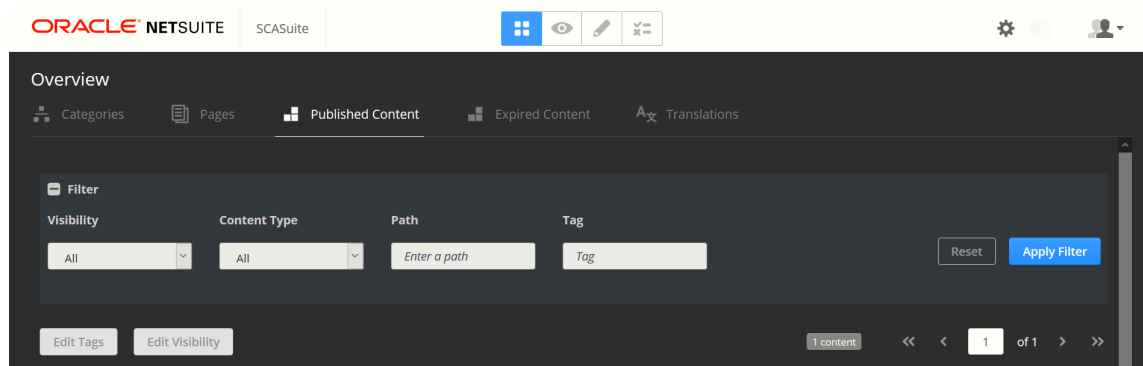

When you preview your site, you can quickly spot unpublished changes in edit mode. Look for a blue circle in the upper left corner of the content, which indicates it's unpublished. For details, see [Site Management Tools Edit Mode](#).

Published Content

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

You can perform bulk management of content on the **Published Content** tab in Overview Mode. This includes managing published landing pages and content on any page. You can manage different tasks, including editing tags and changing content visibility.

The Published Content tab is an additional way to manage published content. Content includes HTML, image, text, landing page, or other types of content.

This list shows you currently published content and pages. You'll see currently visible content and pages with a future start date. You'll see content and pages currently visible and those with a future start date. Content is grouped by URL. Each URL corresponds to a landing page, category page, content page, or other enhanced page. Each grouping can contain a landing page row and contents row.

You can filter published content in different ways to review or edit it. This menu offers four options for filtering content:

- **Visibility** — Filter by content that's currently visible or has a future start date.
- **Content Type** — Filter by type, such as HTML, Image, Text, Page, or other types of content.
- **Path** — Filter by content location or URL.
- **Tag** — Filter by tags associated with your content.

Click **Apply Filter** when you have decided what content you want to review or edit. Click **Reset** to reset the filters and start again.

The published content view lets you locate, group, and edit multiple items simultaneously. You can edit tags and visibility dates for content and pages. These tasks are performed separately.

Click **Edit Tags** to edit the tags and save them. Click **Edit Visibility** to edit the visibility dates and save them. Similar to most other content, you must publish the changes before the edits are applied.

There are some situations where the group may not contain a page row because the content is associated with:

- Expired Landing Page
- Deleted Landing Page
- Category Page
- Enhanced Page

For related information, see [SMT Expired Content](#).

SMT Expired Content

i Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

This information refers to SuiteCommerce or the 2019.2 release of SuiteCommerce Advanced or later.

The Expired Content tab lets you manage content that's past its visibility end date. Expired Content refers to content or landing pages that have passed their visibility end date. This tab lets you restore or delete expired content.

When managing Expired Content you can:

- Update the visibility dates for content and landing pages
- Permanently delete content and landing pages you don't want to reuse

Like the Published Content tab, content is grouped by URL. The pages in the content group are listed first, followed by the other types of content. You can select the entire content group by the selecting the header, or you can choose individual pieces of content.

Filter and Sort Expired Content

You can filter content in several ways:

- **Content Type** — Filter content by type, such as HTML, Image, Text, Page, or other types of content.
- **Path** — Filter by the location or URL.
- **Tags** — Filter content by the information you used in the tags field.

Click **Apply** to apply your filters. Click **Reset** to clear the filters and start again.

Change Visibility of Expired Content

Expired content is not visible to customers. You can easily restore expired content to make it visible again. When you're updating expired content, you can set the visibility dates to make the content available immediately or in the future.

For example, lets say you created a new landing page for a 30-day sale. When the sale ends, perhaps you haven't reached your sales goals or have leftover inventory you still want to sell at the promotional price. You can now use SMT to quickly make the landing page and it's content available to your customers.

To update visibility dates of expired content:

1. Click **Overview** on the site management toolbar.
2. Click **Expired Content**.
3. Choose the content you want to update, set the new visibility dates, click **Save**.
 - Click **Yes** to save the changes.
 - Click **No** to discard the changes. You are returned to the list with all of the previously selected content.

4. As with most content, you must publish changes before they are applied to the content.
5. Click **Review & Publish Changes**.
6. Select the changes you want to publish. Click **Publish**.

See [View Site as of a Specific Date in Site Management Tools](#).

Delete Expired Content

Content is no longer visible to customers after its end date. If you have content that's not expired on an expired landing page, that content is no longer visible to your customers.

Lets follow up on the example from changing the visibility dates for deleting expired content. You created a landing page and content for a special sale and now the sale is over. You have no use for the expired content and want to delete from the website.

Important: This permanently deletes the content record from NetSuite. Deleted content is not recoverable.

To delete expired content:

1. Click **Overview** on the site management toolbar.
2. Click **Expired Content**.
3. Choose the content you want to permanently delete and click **Delete**.
 - Click **Yes** to permanently delete the changes.
 - Click **No** to discard the changes. You are returned to the list with all of the previously selected content.
4. If the content is successfully deleted, you will receive a confirmation message.
5. The content is now deleted.

Theme Skin Manager

i Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

This applies to SuiteCommerce and the 2019.2 release of SuiteCommerce Advanced or later. If you are using Aconcagua or earlier, see [Theme Customizer \(Aconcagua or Earlier\)](#).

The Theme Skin Manager lets you access theme skins, a group of complimentary elements that work together in a theme. Themes can contain multiple skins. Simply pick a different skin anytime you want to quickly change how your site looks. Not that you can't change the default themes, but you can copy the default skins and make any changes you want.

To learn more, explore these topics:

- [Theme Skin Manager Prerequisites](#)
- [Theme Skin Manager Properties](#)
- [Working with the Theme Skin Manager](#)

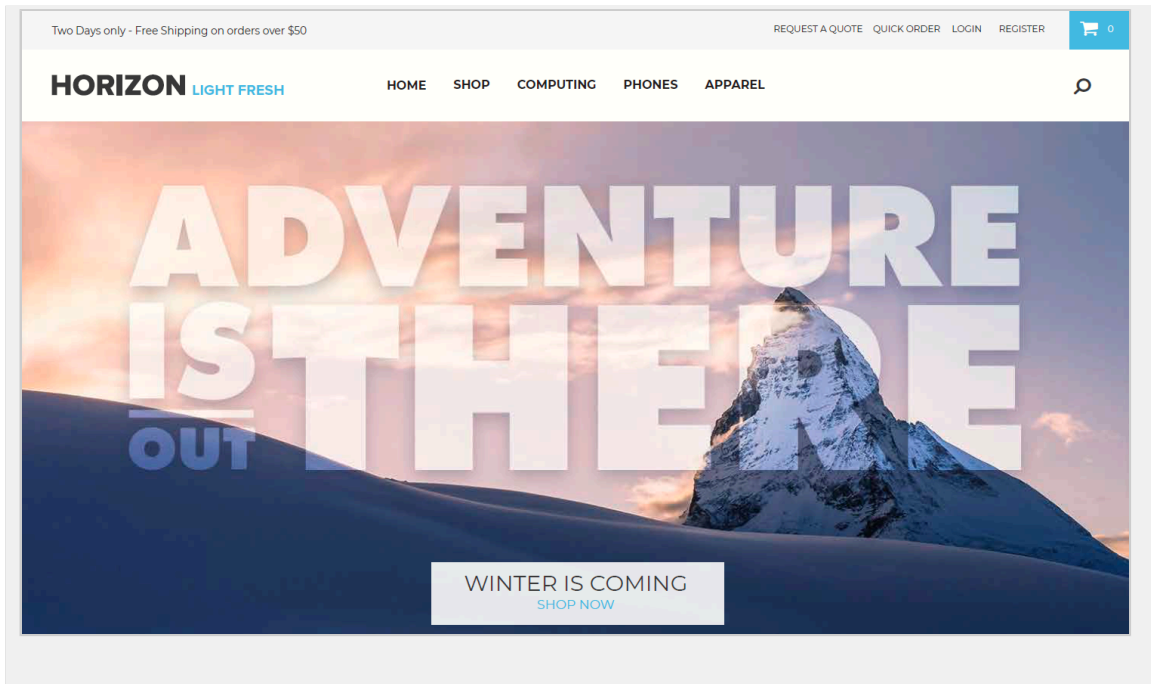

Example: Commerce Horizon Theme

The Horizon Theme comes with the following six skins:

- Light Fresh
- Dark Fresh
- Amazon-Esque
- Pastel
- Firehouse
- Young

You can use any of these skins and easily switch to a different one using the Theme Skin Manager. You might want to use the Light Fresh skin for your spring campaign and the Dark Fresh skin for your fall campaign. You can change specific elements of a skin, such as font size and background color. For details, see [Editing a Theme Skin](#).

The following image shows the Light Fresh skin on the Horizon Theme. For more information, see the help topic [Commerce Themes](#).

For information about installing and activating the available NetSuite themes, see the help topics [Installing Theme and Extension SuiteApps](#) and [Activating a Theme](#).

Theme Skin Manager Prerequisites

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

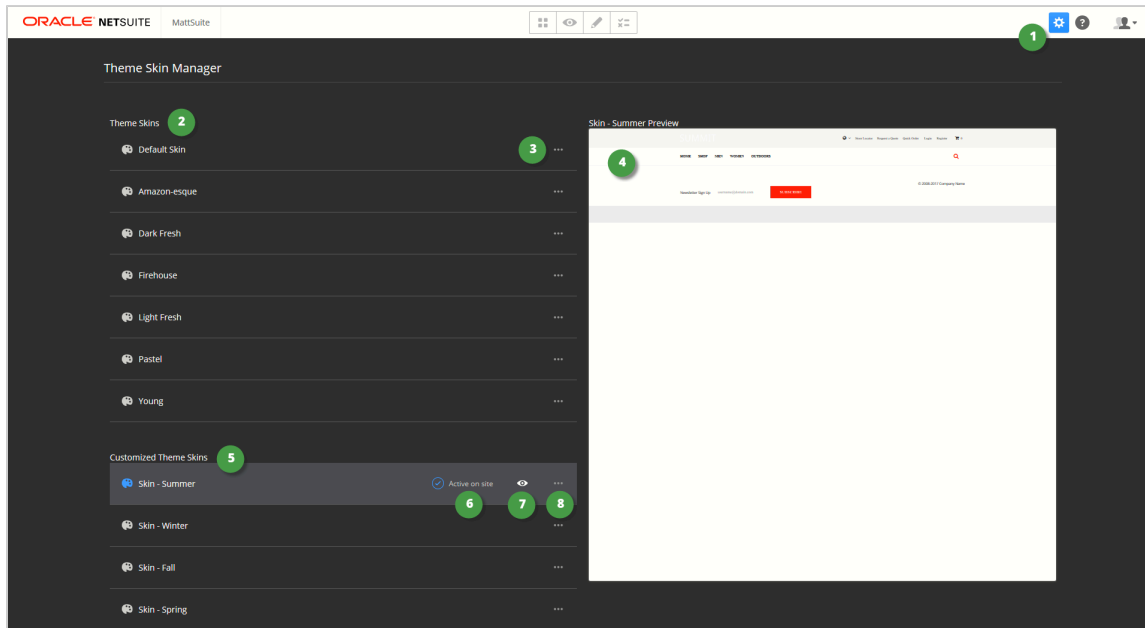

To use the Theme Skin Manager in Site Management Tools (SMT), your domain and theme must meet the following requirements:

- Your account must be using SMT version 3. To check your version of SMT, see [Site Management Tools Versions](#).
- Your web store must use SuiteCommerce and the 2019.2 release of SuiteCommerce Advanced or later.
- The theme must have skins.

Theme Skin Manager Properties

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

The following image shows the Theme Skin Manager and its related properties.

Item	Description
1	Click Settings and then Themes to open the Theme Skin Manager.  Tip: The Settings icon may not load immediately. If you don't see the icon, refresh the page and try again.
2	Each of the skins included with the theme are listed here.
3	Click the Ellipsis beside any of the skins and select from the following actions: - Copy - Preview
4	The preview pane lets you view the elements of the currently selected skin.
5	All custom skins appear here.
6	The currently active skin has a blue check mark and the words Active on site .
7	The Preview icon is highlighted beside the skin you are currently previewing.
8	Click the Ellipsis beside the skin you want to manage. Select from the following actions: - Set to Active - Preview - Copy - Edit - Delete

Working with the Theme Skin Manager

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

The Theme Skin Manager lets you preview and manage the skins associated with the active theme on your domain. A skin is a set of complimentary elements in a theme. You can preview any of the skins included with the theme, copy any of the default skins, and customize the copies however you like. This lets you keep the overall look and feel of the theme, while applying skins when needed.

 [Working with the Theme Skin Manager](#)

To find out more, explore these topics:

- [Previewing a Theme Skin](#)
- [Copying a Theme Skin](#)
- [Editing a Theme Skin](#)
- [Deleting a Theme Skin](#)
- [Activating a Theme Skin](#)

Previewing a Theme Skin

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

The Theme Skin Manager shows the default skins that are included with the active theme on your domain. Preview the skins to view the style elements, such as fonts and colors.

To preview a theme skin:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Click **Settings** and then **Themes**.
3. Select the **Ellipsis** beside the skin you want to copy and click **Preview**.

Copying a Theme Skin

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

You can copy any of the default skins and customized skins from the Theme Skin Manager.

Note: To make edits to a default skin, you first need to make a copy of it and then you can make any desired changes. For details, see [Editing a Theme Skin](#).

To copy a theme skin:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Click **Settings** and then **Themes**.
3. Select the **Ellipsis** beside the skin you want to copy and click **Copy**.
4. The skin now appears in the **Customized Theme Skins** list.

After copying a skin, you can edit it and activate it when you are ready. For details, see [Editing a Theme Skin](#) and [Activating a Theme Skin](#).

Editing a Theme Skin

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

The Theme Skin Manager lets you edit certain elements of a custom skin, such as the color palette and font types. You can preview your edits before saving.

Default skins can't be modified. Instead, make copies of the default skins and then make your edits. For details, see [Copying a Theme Skin](#).

To edit a theme skin:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Click **Settings** and then **Themes**.
3. From the **Customized Theme Skins** list, click the **Ellipsis** beside the skin you want to change.
4. Click **Edit** to open the Theme Settings panel.
5. Make any required changes to the theme settings. Use the following image and table as a reference.

The screenshot displays the 'Theme Settings' interface, which is organized into two main columns. The left column contains settings for 'THEME COMPONENTS', 'PALETTE', and 'TYPOGRAPHY'. The right column contains settings for 'BUTTONS' and 'ELEMENT LAYOUT'. Each section is represented by a list of expandable items, indicated by a right-pointing triangle icon. The items are numbered 1 through 5 in green circles.

Theme Settings

Name: Website Skin

1 THEME COMPONENTS

- Components

2 PALETTE

- Theme palette
- Neutral palette
- Text
- Containers

3 TYPOGRAPHY

- Normal
- Heading 1
- Heading 2
- Heading 3
- Heading 4
- Heading 5
- Heading 6
- Featured Title
- Blockquote
- Paragraph
- Secondary Font

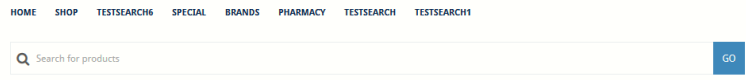

4 BUTTONS

- Primary
- Secondary
- Tertiary
- Small
- Medium
- Large

5 ELEMENT LAYOUT

- Header

- Footer

Item	Description	Applies To
1	From Theme Components, select how you want to display the search bar on your site in desktop view. From the Search (Desktop) list, choose from the following: Search Default — Select this option to display only the search icon.  Search in Navigation — Select this option to display the search bar in an open state, inline with the navigation bar. 	Summit Theme

Item	Description	Applies To
	■ Search Open — Select this option to display the search bar in an open state, below the navigation bar. 	
2	From the Palette subtab, you can change the color palette of the overall theme, as well as the color palette used for fonts, containers, and neutral shades.	All themes
3	From the Typography subtab, you can change the font family, font color, line height, and font size for the different font types.	All themes
4	From the Buttons subtab, you can change the appearance of the buttons. This includes changing the background color and the font.	All themes
5	From the Element Layout subtab, you can change the appearance of the header, the footer, the navigation bar, the site breadcrumbs, and the home page.	All themes

6. If you're editing the active skin, click **Apply Changes** to save and make your edits live.
7. If you're editing a skin that is not active, click **Save**.

Deleting a Theme Skin

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

You can only delete inactive custom skins.

To delete a theme skin:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Click **Settings** and then **Themes**.
3. From the **Customized Theme Skins** list, click the **Ellipsis** beside the skin you want to delete.
4. Click **Delete**.
5. In the confirmation popup, click **Yes**.

Activating a Theme Skin

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

An active skin displays a blue checkmark with the words **Active on site** next to the **Ellipsis**. When you activate a skin, it goes live immediately. You can quickly change the appearance of your domain simply by activating a different skin.

You can't activate any of the default skins included with the theme. Instead, make a copy and then activate it from the Customized Theme Skin list. For details, see [Copying a Theme Skin](#).

To activate a theme skin:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Click **Settings** and then **Themes**.
3. From the **Customized Theme Skins** list, click the **Ellipsis** beside the skin you want to make active.
4. Select **Set to Active**.
5. In the confirmation popup, click **Yes**.

Theme Customizer (Aconcagua or Earlier)

Applies to: SuiteCommerce Advanced | Site Management Tools

If your account is using Aconcagua or earlier, use the Theme Customizer to manage themes and skins. If you are using the 2019.2 release of SuiteCommerce and SuiteCommerce Advanced or later, see [Theme Skin Manager](#).

The Theme Customizer lets you edit the appearance of your website. You can make subtle changes like font color, or something more dramatic like a dark background. There are various controls for customizing website attributes. The elements you can customize can vary from theme to theme, and even between different skins in the same theme. You'll see these elements listed in the side panel when you select the Theme Customizer from the SMT Settings menu. As you make edits, you'll see the changes in the preview pane.

Note: Only Store Manager or Administrator roles can use the Theme Customizer. If one of these roles creates a custom role, and gives that custom role access to the SMT, that role is unable to access the Theme Customizer.

Theme Customizer Prerequisites

To use the Theme Customizer in Site Management Tools (SMT), your domain and theme must meet the following requirements:

- You must implement version 3 of SMT.
- Your web store must use a release of SuiteCommerce or SuiteCommerce Advanced prior to 2019.2.
- The theme deployed to the domain must include elements that can be edited, such as heading fonts and background color.

Selecting a Skin in Theme Customizer

A theme can include one or more skins. A skin is a group of elements that are designed to compliment each other. You can quickly change the appearance of your domain, simply by choosing a different skin. To choose a skin, you select it from the **Skin** dropdown menu at the top of the Theme Customizer. When you select a skin two things happen:

1. The site preview updates to reflect the attributes of the skin. The variables are reset to their defaults for each new skin selected.
2. The Theme Customizer displays the attributes that can be customized for the selected skin.

Some themes have no skins. In this case, the **Skin** dropdown menu is not displayed, and the Theme Customizer shows the attributes that can be customized for the current theme.

Restoring a Theme in Theme Customizer

If you made changes and later decide you prefer the original theme, click Restore Defaults at the bottom of the Theme Customizer in the side panel.

Commerce Categories in Site Management Tools

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

This information refers to SuiteCommerce or the Vinson release of SuiteCommerce Advanced or later.

Before you can manage categories with Site Management Tools (SMT), first enable the Commerce Categories feature in NetSuite. For more information, see the help topic [Enable Commerce Categories Feature](#).

Commerce Categories let you create a hierarchical structure of product categories, subcategories, and products so you can present a well organized catalog of products to your visitors. You can create Commerce Categories in NetSuite or in SMT. Any category management you perform in NetSuite is available in SMT, and any categories management you perform in SMT is also reflected on the commerce category record in NetSuite. Categories are presented to visitors on category and subcategory pages. When creating a category, you'll set key properties such as search engine optimization (SEO) settings for the category and subcategory page.

Note: When managing categories through SMT, best practice is to limit the total number of categories to 1,000 or less. Categories in excess of 1,000 can impact performance.

Watch the following video for details about Commerce Categories in SMT.

 [Commerce Categories in Site Management Tools](#)

For more information about commerce categories, see the following help topics:

- [Commerce Categories](#) – Details how to manage Commerce Categories in NetSuite.
- [Commerce Category Import](#) – Find out how to create categories, subcategories, and item assignments by CSV import.

Create a Commerce Catalog

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

A catalog is the top level of organization for your categories. Before adding categories to your website, you'll need to set up a catalog. Each website can have only one catalog. To access Commerce catalogs, go to Commerce > Content Management > Catalog & Categories > Commerce Catalogs. For more information, see the help topic [Set Up Commerce Catalog](#).

Note: If you create a category before a catalog, a default catalog is automatically created for you.

Manage Categories and Subcategories

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

You can manage categories and subcategories when editing published content or adding new content.

To learn more, explore the following help topics:

- [Visibility Dates for Categories](#)
- [Adding a Commerce Category](#)
- [Adding a Subcategory](#)
- [Editing a Category or Subcategory](#)
- [Moving a Category or Subcategory](#)
- [Copying a Category or Subcategory](#)
- [Hiding a Category or Subcategory](#)
- [Removing a Subcategory from a Parent Category](#)
- [Deleting a Category or Subcategory](#)
- [Manage Categories and Subcategories with Overrides](#)

Visibility Dates for Categories

📘 Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

This information refers to SuiteCommerce or the 2018.2 release of SuiteCommerce Advanced or later.

You can decide exactly when a category and the items assigned to it show up on your site.

Example:

Say you're running a spring sale in March. You want the "Spring Sale" category and its items to show up only for that month. Set the visibility to start March 1 at 12:00 am and end March 31 at 11:59 pm.

After creating the category, add your sale items. When you're done, publish the category, and everything will show up only during the dates you set. For details, see [Adding a Commerce Category](#) and [Create and Publish Content in Site Management Tools](#).

Other factors can impact how items display outside of this category:

- If an item is in a category with a future start date, it won't show up until that date
- If an item is assigned to a category that has passed its end date, the item won't display.
- If an item is in a category that has a future start date and a past end date, but is also assigned to a different category that is visible, the item is accessible through that category and also through search.

For more information, see the help topic [Item Availability](#).

Adding a Commerce Category

📘 Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

When you add categories using Site Management Tools (SMT), a category page is created. This page lists the products and subcategories assigned to the category. Similar to landing and enhanced pages, you can set the category page's name, heading, path, title, meta description, URL fragments, <head> content.

To add a category:

1. Log in to SMT. For details, see [Logging into Site Management Tools](#).
2. Click the Overview Mode icon  on the site management toolbar.
3. Click **New Category**. This displays the Category Settings in the side panel.
4. Select the **General** subtab.
5. Set the visibility dates for the category. Choose from **Always Visible** or **Visible on Specific Dates**. For details, see [Visibility Dates for Categories](#).

Important: Unlike content and pages, Commerce Categories are always in a published state and are displayed to visitors based on the visibility options you specify for the category.

6. In the **Name** field, enter a name for the category. The name identifies the category in NetSuite and can also be used in category navigation.
7. The **Heading** field is automatically populated based on what is entered in the **Name** field, but you can change it. The heading is displayed at the top of the category page (if the page template file supports it).
8. The **URL Fragment** is the part of the web address that points to the category page. The full URL is your domain, any parent fragments, and the one you set here.
9. Select the **Metadata** subtab.
10. In the **Title** field, enter what you want to appear as the page title in the browser tab.
11. In the **Meta Description** field, enter a short summary of the page. This is important for your store and usually shows up in search results. The description is set as the value for the **content** attribute for the meta description element for this category page.
12. In the **Meta Keywords** field, add keywords (separated by commas) for this category page.
13. Select the **Advanced** subtab.
14. In the **Add to <head>** field, you can include HTML, CSS, or JavaScript to include between the <head> tags on the category page.
15. Click **Save**.

Adding a Subcategory

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

You can add a subcategory to a parent category to better organize your items. Subcategories can have their own subcategories, and you can link the same subcategory to more than one parent category. For example, you might add Backpacks as a subcategory under both Kids and Back to School. To have the same subcategory under multiple parent categories, add the subcategory to the first parent category and then associate it with the additional parent categories. For more information, see xxxxxxxx

To add a subcategory:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Click the Overview Mode icon  on the site management toolbar.
3. In the category list, go to a category or subcategory row and click **Add Subcategory**, denoted by the +.

You can also click the ellipsis and select **New Subcategory** from the More Actions menu.

4. Select the **General** subtab.
5. Set the visibility dates for the category. Choose from **Always Visible** or **Visible on Specific Dates**. For details, see [Visibility Dates for Categories](#).
6. In the **Name** field, enter a name for the category. The name identifies the category in NetSuite and can also be used in category navigation.
7. The **Heading** field is automatically populated based on what is entered in the **Name** field, but you can change it. The heading is displayed at the top of the subcategory page (if the page template file supports it).
8. The **URL Fragment** is the part of the web address that points to the subcategory page. The full URL is your domain, any parent fragments, and the one you set here.
9. Select the **Metadata** subtab.
10. In the **Title** field, enter what you want to appear as the page title in the browser tab.
11. In the **Meta Description** field, enter a short summary of the page. This is important for your store and usually shows up in search results. The description is set as the value for the **content** attribute for the meta description element for this subcategory page.
12. In the **Meta Keywords** field, add keywords (separated by commas) for the subcategory page.
13. Select the **Advanced** subtab.
14. In the **Add to <head>** field, you can include HTML, CSS, or JavaScript to go between the <head> tags on the subcategory page.
15. Click **Save**.

 **Note:** You can also create a subcategory by moving a root level category to a subcategory position in the hierarchy tree. For more information, see [Moving a Category or Subcategory](#).

Editing a Category or Subcategory

 **Applies to:** SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

With Site Management Tools (SMT), you can edit a category or subcategory's settings. Any changes you make in SMT show up on the commerce category record in NetSuite.

 **Warning:** Changing the URL fragment also changes the URL used to access the page. This can cause broken links and page not found errors, so be sure to set up redirects and update any links that go to the page. For more information, see the help topic [SEO and Redirects](#).

To edit a category or subcategory:

1. Log in to SMT. For details, see [Logging into Site Management Tools](#).
2. Click the Overview Mode icon  on the site management toolbar.
3. In the category list, go to the category or subcategory and click **Edit**. You can also click the ellipsis and select **Edit Settings** from the More Actions menu.
4. Edit the settings.
5. Click **Save**.

Moving a Category or Subcategory

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

With Site Management Tools (SMT), you can move and reorder categories and subcategories directly from the category list. This includes:

- Moving a root level category to a subcategory position under a different root level category
- Moving a subcategory to a root level category position
- Reordering categories and subcategories

 **Warning:** Moving a category or subcategory changes the page's URL, as well as the URLs for any subpages (like item detail pages). This can cause broken links and page not found errors, so be sure to set up redirects and update any links. For more information, see the help topic [SEO and Redirects](#).

A few important things to remember when moving categories or subcategories:

- You can't move a subcategory to the root level in the category hierarchy if a copy of the subcategory already exists somewhere else in the hierarchy tree.
- You also can't make a subcategory its own subcategory.

To move a category or subcategory:

1. Log in to SMT. For details, see [Logging into Site Management Tools](#).
2. Click the Overview Mode icon  on the site management toolbar.
3. In the category list, point to the category or subcategory you want to move and click the ellipsis to display the **More Actions** menu.
4. Click **Move**.
5. In the category list, point to the location where you want to move the category or subcategory. A drop indicator marks the location where you can place the category or subcategory. Click the indicator to move the category or subcategory to the new location.

 **Note:** If you want to move a category to a subcategory location, expand the parent level category and then click the subcategory position where you want to drop the category.

6. Click **Save**.

Copying a Category or Subcategory

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Copying a subcategory lets you associate the subcategory with other parent categories. Copying a category doesn't create a new commerce category record, instead it creates a new association between the subcategory and another parent category.

To copy a category or subcategory:

1. Log in to Site Management Tools (SMT). For details, see [Logging into Site Management Tools](#).
2. Click the Overview Mode icon  on the site management toolbar.
3. In the category list, go to the category or subcategory you want to copy. Click the ellipsis to display the **More Actions** menu.
4. Click **Copy**.
5. Expand the parent level category where you want to copy the category or subcategory and click the location where you want to place the copy.
6. Click **Save**.

Hiding a Category or Subcategory

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Hiding a category makes it inaccessible to visitors. When hidden, the category doesn't show up in your store's navigation or through direct links. You can't hide a category if it exists in multiple locations in the category hierarchy.

To hide a category or subcategory:

1. Log in to Site Management Tools (SMT). For details, see [Logging into Site Management Tools](#).
2. Click the Overview Mode icon  on the site management toolbar.
3. In the category list, go to the category or subcategory you want to hide and click the ellipsis to display the **More Actions** menu.
4. Click **Hide in Site**.

When you hide a category or subcategory, you'll see a **hidden** icon in the Status column.

To display a hidden category or subcategory:

1. Log in to SMT. For details, see [Logging into Site Management Tools](#).
2. Click the Overview Mode icon  on the site management toolbar.
3. In the category list, go to the hidden category or subcategory you want to display, and click the ellipsis to display the More Actions menu.
4. Click **Display in Site**.

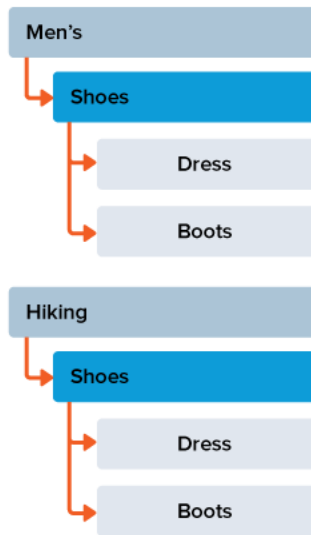

Removing a Subcategory from a Parent Category

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

If a subcategory is linked to more than one parent category, you can use the Remove From Parent option to break the link between the subcategory and parent category.

When removing a category from a parent, there are some situations to be aware of, specifically when the subcategory is nested several levels below the root category and the same subcategory structure exists for multiple root level categories.

Consider the following category hierarchy:

In this example the root level categories are **Men's** and **Hiking**. The category structure beneath the root level categories are the same:

- /shoes/dress
- /shoes/boots

If you remove the **Dress** subcategory from the **Hiking** category branch, it is also removed from the **Men's** category branch. This occurs because the subcategory **Dress** has the same parent category of **Shoes** assigned to it.

To keep the category in the **Men's** branch, create a new category called **Men's Shoes**, then move **Dress** and **Boots** under it. Now you can safely remove **Dress** from **Hiking** without affecting **Men's**.

Note: The **Remove From Parent** option is only available if the subcategory has more than one parent. If the subcategory has only one parent, use the **Move** option to move the category to a root level category or to a subcategory position under a different parent category. If the category is no longer needed, then you can delete it or you can use the **Hide in Site** option to leave the subcategory assignment unchanged but make the subcategory unavailable on the website.

To remove a subcategory from a parent:

1. Log in to Site Management Tools (SMT). For details, see [Logging into Site Management Tools](#).
2. Click the Overview Mode icon  on the site management toolbar.
3. In the category list, go to the subcategory you want to remove from the parent and click the ellipsis to display the **More Actions** menu.
4. Click **Remove from Parent**.
5. In the pop up that appears, click **OK**.

Deleting a Category or Subcategory

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Deleting a category removes it, and it can no longer be used. Delete a category only when you are certain that you no longer need it. You can't delete a category that has subcategories. To delete the category you

must first delete or move its subcategories. You can delete a category if it has items assigned to it. If you delete a category with items, only the category is deleted and not the items.

 **Warning:** If you delete a subcategory, it's removed from all parent categories it's linked to. If you want to remove the subcategory from only one parent, then use the **Remove From Parent** option instead. For details, see [Removing a Subcategory from a Parent Category](#).

If you want to hide a category but not delete it, you can either hide it in the site or make it inactive by selecting the **Inactive** box on the Commerce Categories page (Commerce > Content Management > Commerce Categories). For more information, see [Hiding a Category or Subcategory](#) and [Commerce Categories](#).

To delete a category or subcategory:

1. Log in to Site Management Tools (SMT). For details, see [Logging into Site Management Tools](#).
2. Click the Overview Mode icon  on the site management toolbar.
3. In the category list, go to the category or subcategory you want to delete and click the ellipsis to display the **More Actions** menu.
4. Click **Delete**.
5. In the pop up that appears, click **OK**.

Manage Categories and Subcategories with Overrides

 **Applies to:** SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

You can set up subcategories to override the default category record values. For example, if a subcategory is under two different parents, you might want one page title when viewed through one parent category and a different title through the other.

When you edit a subcategory that appears in more than one place in the category hierarchy, you'll see an Edit Category Overrides option in the More Actions menu. Click this option to override the default subcategory settings for that specific spot in the hierarchy.

Any overrides you set are saved in the category record in NetSuite. For more information, see the help topic [Create Subcategories for a Commerce Category](#).

Manage Item Category Assignment and Order

 **Applies to:** SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

With Site Management Tools (SMT), you can assign items to categories and subcategories and manage them easily. This includes:

- Adding new items to the category
- Changing the order of items
- Removing the items from a category

Any changes you make to item assignments in SMT show up on the **Items** subtab in the NetSuite commerce category record. Likewise, any item management you perform in NetSuite is reflected in SMT.

To learn more, explore the following help topics:

- [Assigning Items to a Category or Subcategory](#)
- [Editing Items Assigned to a Category or Subcategory](#)

Assigning Items to a Category or Subcategory

i Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

When you assign an item to a category, you link that item to the category. Visitors browsing a category are presented with the items assigned to that category. Items can be added to more than one category. For example, a child's backpack can be assigned to **/kids/backpacks** and also to **/backtoschool/bargains**. This helps increase visibility of items and makes it easier for visitors to find what they're looking for.

Item category assignments that you create with SMT are reflected on the Items subtab of the commerce category record in NetSuite. Likewise, any item category assignments you make on the Items subtab of the commerce category record are reflected in SMT.

i Note: When you assign items to a category and save the record, it may take several minutes for the items to be displayed in the SMT category preview and also in the category item list on the site. This delay is normal because the search index rebuilds every time you add or change an item category assignment.

To assign items to a category or subcategory:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Click the Overview Mode icon  on the site management toolbar.
3. In the category list, locate the category or subcategory you want to assign items to and click the icon in the Items column . This displays the Category Items list in the side panel.
4. Click the + icon to add items.
5. Enter keywords in the search field to find the items you want to add. Leave it blank and press Enter to see all your web store items. Matching items will show up below the search field.

i Note: To filter the list to only those items not already assigned to the category, click **Hide items already in the category**.

6. Select the items to assign to the category or subcategory:
 - To add only one item, click and drag the item from the item search list to the category items section.
 - To add several items, click each one you want to add (a check mark will appear), then drag the selected items over to the category items section.

✓ Tip: When you drag an item from the search list to the category items section, you can specify its placement in the assigned items list by dropping it at the location where you want it. A drop indicator lets you know where the item will be placed.

7. Click **Save**.

Editing Items Assigned to a Category or Subcategory

i Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

You can reorder, remove, or add items in a category or subcategory, either one at a time or for a group of items. Any changes you make are updated on the Items subtab of the commerce category record in NetSuite.

i Note: When you assign items to a category and save the record, it might take up to 5 minutes for the items to be displayed in the SMT category preview and also in the category item list on the site. This delay is expected behavior and occurs because the search index is rebuilt when you add or change an item category assignment.

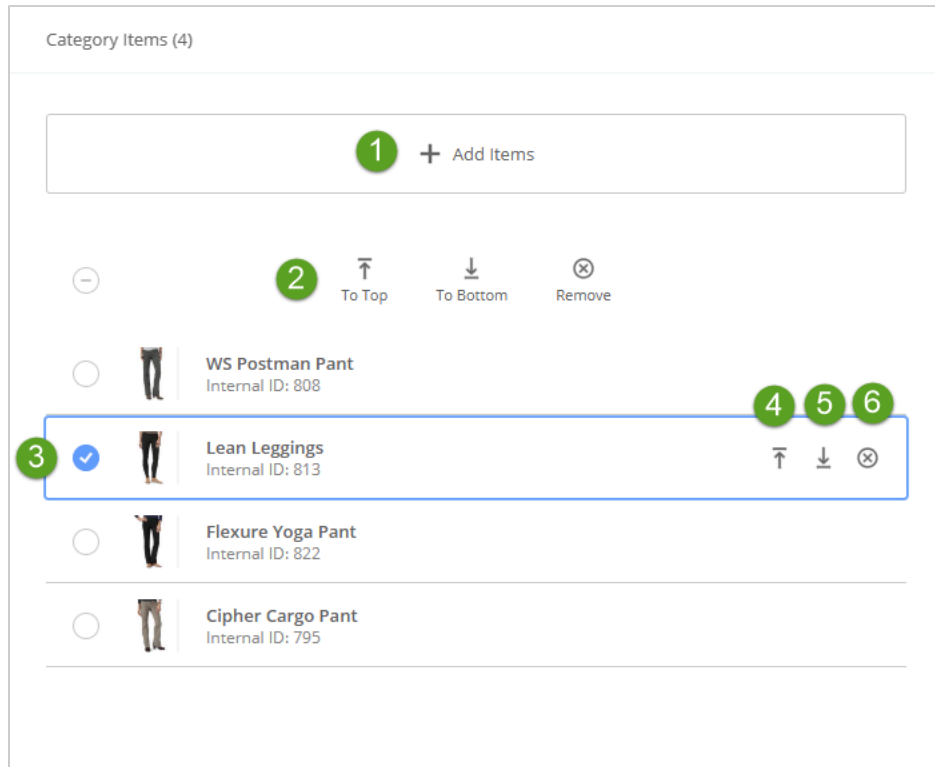

After you save, it might take up to 5 minutes for the new or updated item list to show up in SMT or on your site. This is expected, since the search index rebuilds every time you add or change an item category assignment.

After you save, it might take up to 5 minutes for the new or updated item list to show up in SMT or on your site. This is expected, since the search index needs to rebuild after any changes.

To manage items in a category or subcategory:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Click the Overview Mode icon  on the site management toolbar.
3. In the category list, locate the category or subcategory you want to manage items for and click the icon in the Items column . This displays the Category Items list in the side panel.
4. Click **Edit**.

The following screenshot displays the options in the Category Items panel when edit is selected.

Item	Description
1	Click Add Items to add new items to the category.
2	Use these three options to move the selected item to the top or bottom of the list, or to remove it.
3	Click an item to select it. When an item is selected a checkmark is displayed. To clear an item, click it again.
4	Click this button to move the item up one position in the list.
5	Click this button to move the item down one position in the list.
6	Click the button to remove the item from the category.

✓ **Tip:** In addition to using the move item buttons in the item list, you can also drag and drop items to order them. To move an item, click the item and drag it to the order where you want to place it. The list displays a drop indicator to let you know where the item will be placed.

5. Click **Save**.

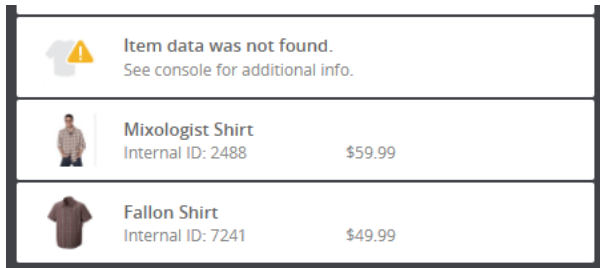

Troubleshooting Category Item Errors

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

When working with categories and item assignments in Site Management Tools (SMT), you might run into errors or warnings about unavailable items. Here are some common reasons for these errors, plus tips on how to troubleshoot and fix them.

Commerce Categories Item Data Was Not Found Warning

Sometimes, when working with category items in Site Management Tools, you'll see a placeholder that says Item Data was not found.

This usually happens if something about the item changed after it was first added to the category. Two common examples are:

- [Item Set to Not Display in Web Store](#)
- [Item Record in a State that Cannot be Displayed](#)

You can view the browser console for additional information about the missing item. For details, see [Resolve an Unavailable Category Item](#).

Item Set to Not Display in Web Store

The website setup record controls whether an item shows up in the web store. If you clear the Display in Web Store box after adding an item to a category, you'll get the Item data was not found warning in that category. You have two options for correcting this:

- If the item is still valid and should be displayed in the web store, edit the item record and select the **Display in Web Store** box on the **Web Store** subtab. For details, see [Resolve an Unavailable Category Item](#).
- If the item shouldn't be displayed in the web store, delete the item from the category.

Item Record in a State that Cannot be Displayed

If the item record is set to display in the web store but you're still seeing Item data was not found, something else might have changed. Try these steps:

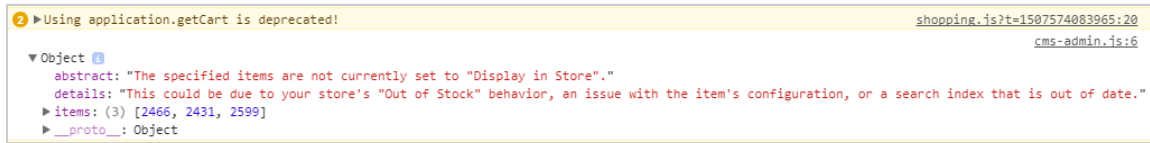

- Review the item record to see if you can find and correct an issue with the record. For details, see [Resolve an Unavailable Category Item](#).
- Try removing the item from the category and then adding it again.

 **Note:** You can see a history of changes made to an Item Record on the record's **System Information** subtab.

Resolve an Unavailable Category Item

If you receive the Item data was not found warning, you can find more information about the item and the warning in the browser console. In the following example from a console log, you see the message

that **The specified items are not currently set to Display in Store**. The items array in this message lists the internal ID of three items that cannot be displayed in the store.

▼ Object
  abstract: "The specified items are not currently set to "Display in Store"."
  details: "This could be due to your store's "Out of Stock" behavior, an issue with the item's configuration, or a search index that is out of date."
  items: (3) [2466, 2431, 2599]
  __proto__: Object
  
```

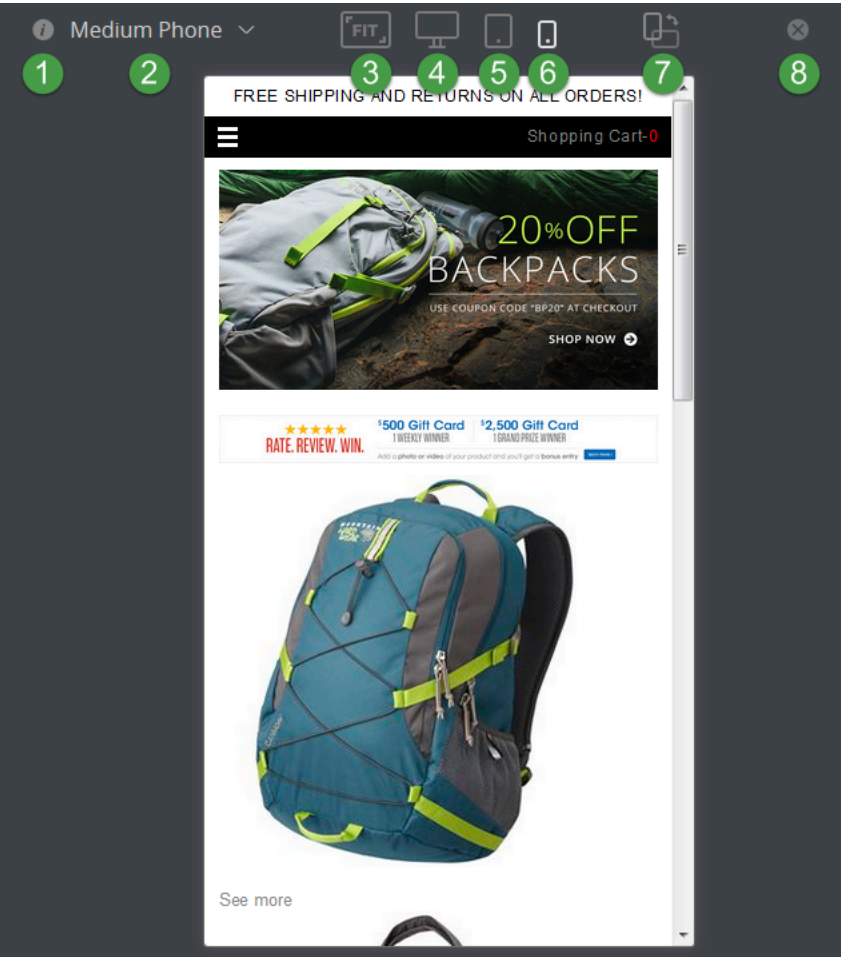

In this example, the Internal IDs are 2466, 2431, and 2599. After you know the item's Internal ID, you can do an advanced search against the item records and filter for the internal IDs. You can then inspect the item record to determine the problem and take corrective action.

Previewing Screen Sizes in Site Management Tools

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Your site's visitors can view your site on different devices, like smartphones, tablets, laptops, or desktop computers. Use the Preview Screen Sizes feature to quickly see how your site looks on different devices and screen sizes. This lets you view the site like your customers do on their devices. The following screenshot illustrates preview mode for a medium phone.

Note: You can use site navigation as usual while previewing screen sizes. However, if you try to follow a link outside your domain, you'll be redirected back to your site with a message saying you can't navigate away while editing.

Item	Description
1	Hover over the information icon to see details for the selected display option. You'll see the orientation, width, and height for that display. This information isn't shown for the fit preview option.
2	The Preview Size dropdown lets you pick the preview size for the selected device type.

Item	Description
3	Click this icon to fit the preview to your browser window.
4	Click the desktop icon to preview your site on standard desktop sizes. Standard desktop display sizes include: - Small: 1366 x 768 - Medium: 1280 x 1024 - Large: 1920 x 1080
5	Click the tablet icon to preview your site on standard tablet sizes. Standard tablet display sizes include: - Small: 768 x 1024 - Medium: 800 x 1280 - Large: 1024 x 1366
6	Click the mobile icon to preview your site on standard smartphone sizes. Standard mobile display sizes include: - Small: 320 x 480 - Medium: 375 x 667 - Large: 540 x 960
7	Click the orientation icon to switch between landscape and portrait modes for tablet and mobile preview.
8	Click exit to close the device preview mode.

To preview screen sizes in Site Management Tools:

1. Log in to Site Management Tools. For details, see [Logging into Site Management Tools](#).
2. Click the Preview Screen Sizes icon  from the site management toolbar.

Note: You can preview screen sizes only when you're editing or previewing the site.

3. Choose from the following device preview options:
 - **Fit** – Preview the site based on the current browser window size.
 - **Desktop** – Preview the site on common desktop display dimensions.
 - **Tablet** – Preview the site on common tablet screen dimensions.
 - **Mobile** – Preview the site on common smart phone screen dimensions.

If you want to preview a device size that's not listed, you can set up custom preview sizes. For details, see the help topic [Site Management Tools Custom Preview Screen Sizes](#).

4. When you preview the site for tablet or mobile, you can also change the orientation. Use the rotate button  on the toolbar to switch between portrait and landscape.

Tip: The rotate option isn't available for desktop previews. If you need to see desktop in portrait, you can define a portrait desktop option in the adapter file. The following sample code illustrates this type of custom display option:

```
desktop: [{ name: 'Portrait', width: 768, height: 1024 }]
```

5. Click exit to close the device preview mode.

Optimizing Site Management Content for SEO

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Content you add with Site Management Tools (SMT) can affect your site's search engine ranking. This section provides guidelines to help you optimize your content for search engines, ensuring your content is structured to achieve higher rankings. Key SEO considerations addressed in this section include:

- [Image Content SEO](#)
- [Merchandising Zone SEO](#)
- [Enhanced and Landing Page SEO](#)
- [Text Content SEO](#)

Image Content SEO

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

When you create image content, give your images descriptive file names so search engines can determine the nature of the image. For example, a file named `image0012.png` doesn't describe the image, but `hockey_helmet.png` acts as both the filename and a description. A descriptive file name gives search engines more information about your site.

When you add an image with Site Management Tools (SMT), always include alternate text that describes the image. It's used by screen readers and displayed when the image can't be shown. Enter the alternate text in the Alternate Text field in the Image Settings side panel. These settings display when you add or edit image content.

The default image template file uses the following code to add alternate text and set the image filename on the page. That's how descriptive file names and alternate text give search engines valuable information.

```
1 | "<% if (data.fields.string_alt) { %> alt="<%- data.fields.string_alt %">"<% } %> data-  
  loader="false" />
```

To view the full default image template, see the help topic [image_default.txt](#). If you customize the image template file, make sure you include the alternate text attribute.

Don't use images that are too large, as they can slow down your page. Size your images to fit the areas where you place them. If you want to use an image in both a large area and as a small thumbnail, use two images sized for each area. Don't use a large image in a small area and let it resize automatically.

Merchandising Zone SEO

Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

The default merchandising zone template uses URL components for item links. Set the URL component on the item record in NetSuite. Using descriptive URL components helps improve SEO for pages with

merchandising zones. The template also includes the alternate text attribute for the item record's image. Adding alternate text for each image on the item record also helps with SEO.

Similar to Site Management Tools (SMT) images, using descriptive file names for item images attached to the item record boosts your page's SEO.

In the sample below from the default merchandising zone template, you can see how the item URL, image file name, and alternate text work together to build each item in the merchandising zone.

```

1 | <% var item_url = '/' + item.urlcomponent; %>
2 | <div class="item-cell item-cell-grid">
3 |   <a class="thumbnail" href="<%= item_url %>">
4 |     ">
5 |   </a>
6 |   <h5><a href="<%= item_url %>"><%= item.name%></a></h5>

```

To view the full default merchandising zone template, see the help topic [merchzone_default.txt](#).

Enhanced and Landing Page SEO

📘 Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

Landing pages and enhanced pages offer valuable opportunities to increase your site's visibility in search engine results by allowing you to control and optimize key page attributes. These attributes include the landing page URL, page title, meta description, and meta keywords. Landing pages are custom pages with unique URLs, used for content not specific to an existing page type (such as "About Us" or "Seasonal Sale"). Enhanced pages allow you to update the SEO attributes of your existing pages (like the Home, Search, or Item Detail pages) without changing the codebase.

For more information, see the help topics [Landing Pages](#) and [Enhanced Pages](#).

Text Content SEO

📘 Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

There are many SEO general best practices for your website page text. These include where your text appears on the page, the keywords you use, how you format headings, and links to other important pages. General best practices are widely available and aren't covered here.

NetSuite Records and Site Management Tools

① Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount | Site Management Tools

NetSuite records provide the ability to view and manage records in the NetSuite interface. Adding, editing, and deleting these records with Site Management Tools (SMT) changes the content records in NetSuite.

When you add new content and publish it using SMT, the content is saved as a NetSuite record. These custom records contain specific details about how and where the information is displayed on the site. This information includes visibility date and times, area scope, area name and several other elements regarding the content. For details, see the help topic [CMS Records for Site Management Tools](#).

SMT Custom Content Type gives developers the ability to create custom website applications or features. These are enabled and managed using SMT. Creating custom content type involves several steps, which you can then implement in your Commerce web store. There are many activities needed to create custom content types and then you implement these in your Commerce web store using best practices. For details, see the help topic [Site Management Tools Custom Content Type](#).
