Copyright © 2005, 2025, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Smart Count

Overview

The Smart Count SuiteApp enables real-time inventory counts during business hours, so operations continue uninterrupted. As you count, the SuiteApp records on-hand quantities and notifies you of any changes, allowing you to set default actions for such events.

Supported item types include lot-numbered and serialized Assembly/Bill of Materials and inventory items (lot-numbered, serialized).

Smart Count works with the SCM Mobile SuiteApp, allowing you to perform both directed counts (from a task list) and spot counts (ad hoc). It supports bins, units of measure, and inventory status tracking.

After counting, you can review, approve, reject, or assign recounts for discrepancies. The Smart Count dashboard provides visibility into counts and variances across locations.

Smart Count Features

The Smart Count SuiteApp lets you:

- Perform directed inventory count using a system-generated task list based on user-defined saved searches. For more information, see [Creating and Managing Count Configurations](#) and [Performing Inventory Count on Mobile Devices](#)
- Enforce blind count to prevent displaying expected item quantity for a specific item or all items. For more information, see [Setting Up Smart Count Preferences](#).
- Define quantity, amount, quantity percentage, and amount percentage tolerances of inventory items at the item and company levels. For more information, see [Setting Up Smart Count Preferences](#).
- Automatically approve item count variance within tolerance at the item, bin, and inventory status levels. For more information, see [Setting Up Smart Count Preferences](#).
- Review item count records to approve, reject, or mark items for recount. For more information, see [Working with Smart Count Review](#).
- Perform spot counting by picking any item for count. For more information, see [Performing Inventory Count on Mobile Devices](#).
- Automatically increment the count quantity by one through tally scanning. For more information, see [Item Count Features](#).
- Perform inventory counting during business hours without having to stop business operations. For more information, see [Item Count Features](#).
- Scan GS1 bar codes to perform inventory count. For more information, see [GS1 Barcode Scanning for Inventory Counts](#).

Quick Start Guide

Following is a summary of the tasks you perform to work with Smart Count.

1. Prerequisites

- Ensure you have a NetSuite OneWorld account.
- Install the SCM Mobile and Smart Count SuiteApps.
- Assign appropriate roles and permissions to employees (such as Inventory Manager, Counter).

2. Set Up

- Configure Smart Count preferences (such as tolerances, blind count, manual entry) at company or item level.
- Create or use a default count configuration to generate a task list for inventory counting.

3. Perform Inventory Count

- Access the Smart Count app on your mobile device.
- Select location, zone, and aisle (if using bins).
- Scan or enter item/bin details and input quantities (manual or tally scan).
- Tap **Complete** to finish each count.

4. Review and Approve Counts

- Go to Transactions > Smart Count > Count Review.
- Approve, reject, or assign recounts for item counts.
- Approved counts update inventory and create adjustment records if needed.

5. Monitor Progress

- Use the Smart Count Dashboard to track counts, approvals, and variances.

In addition, watch the following video to learn about the Smart Count SuiteApp.

 [Introducing the Smart Count SuiteApp](#)

Smart Count Supported Languages

You can view the Smart Count SuiteApp pages in the following languages:

- Chinese (Simplified)
- Chinese (Traditional)
- Czech
- Danish
- Dutch
- English (AU)
- English (CA)
- English (International)
- English (UK)
- English (U.S.)
- Finnish
- French
- French (Canada)
- German
- Indonesian
- Italian
- Japanese
- Norwegian
- Portuguese (Brazilian)
- Russian
- Spanish

- Spanish (Latin America)
- Swedish
- Thai
- Turkish
- Vietnamese

For information about displaying the Smart Count SuiteApp in your preferred language, see the help topic [Setting Language Preferences](#).

Installing the Smart Count SuiteApp

To ensure a successful setup, you must complete the prerequisites and then install the Smart Count SuiteApp.

Important: The Smart Count SuiteApp doesn't support cloning or customization.

- [Prerequisites for Installing Smart Count](#)
- [Installing the Smart Count SuiteApp](#)

Prerequisites for Installing Smart Count

Complete the following prerequisites in the order specified:

1. Ensure you have a OneWorld account. For more information, see the help topic [Introduction to NetSuite OneWorld](#).
2. Enable the required features. For more information, see [Enabling Features](#).
3. Install the SCM Mobile SuiteApp. For more information, see [Installing the SCM Mobile SuiteApp](#).
4. Install the Smart Count Foundation SuiteApp. For more information, see [To install the Smart Count Foundation SuiteApp](#):

Enabling Features

You must enable the following features before installing the Smart Count SuiteApp.

To enable the features, go to Setup > Company > Enable Features.

- Advanced Inventory Management
- Advanced Item Location Configuration
- Bar Coding and Item Labels
- Bin Management
- Client SuiteScript
- Custom Records
- Inventory
- Inventory Count
- Locations
- Lot Tracking
- Multi-Location Inventory
- Serialized Inventory
- Server SuiteScript

Installing the SCM Mobile SuiteApp

To use your mobile device for inventory counting, you must install the SCM Mobile SuiteApp prior to installing the Smart Count SuiteApp. For information about the mobile device hardware and software requirements, see the help topic [Hardware and Software Requirements](#).

Installing the Smart Count SuiteApp

Important: The Smart Count SuiteApp doesn't support cloning or customization.

The Smart Count SuiteApp is a paid, managed application that automatically updates for enhancements and new features. To install the SuiteApp from the SuiteApp Marketplace, you must use the Administrator role. Before installation, contact your NetSuite account manager to provision the Smart Count Foundation SuiteApp in your account. After the Foundation SuiteApp is provisioned, follow these steps to complete the installation.

To install the Smart Count Foundation SuiteApp:

1. Go to Customization > SuiteBundler > Search & Install Bundles.
2. In the **Keywords** field, enter **Smart Count Foundation**.
3. Click the **Smart Count Foundation** link.
4. On the Bundle Details page, click **Install**.
5. On the Preview Bundle Install page, click **Install Bundle**.
6. Click **OK**.

After installing the Smart Count Foundation SuiteApp, perform the following steps to install the Smart Count SuiteApp from the SuiteApp Marketplace.

To install the Smart Count SuiteApp:

1. Go to SuiteApps.
2. In the **Search Apps** field, enter **Smart Count**.
3. Click the SuiteApp tile.
4. On the SuiteApp Details page, click **Install**.
5. Click **OK**.

To uninstall the SuiteApp, see [Uninstalling the Smart Count SuiteApp](#).

Smart Count Roles and Permissions

The Smart Count SuiteApp provides the following roles to help you manage inventory counting efficiently. This topic introduces the available roles, outlines the required permissions, and explains the steps to provide access for custom roles.

Roles included:

- **Smart Count Inventory Manager**
- **Smart Count Inventory Counter**

For details on permissions and setup, see the following sections.

- [Permissions Required for Smart Count Roles](#)
- [Providing Access for Custom Smart Count Roles](#)

Permissions Required for Smart Count Roles

Each Smart Count role comes with a set of required permissions. You can also create or customize roles as needed. You can create or customize roles as needed using the Administrator role. For more information, see the help topic [Customizing and Creating Roles](#).

Note: Some permissions require enabling features such as Bin Management, Inventory Status, Classes, and Multiple Calendars. Go to Setup > Company > Enable Features to enable these features.

The following table lists the required permissions to use the SuiteApp.

Role	Subtab	Permission	Minimum Access Level
Smart Count Inventory Manager	Transactions	Adjust Inventory	View
		Bin Transfer	View
		To use this permission, you must enable the Bin Management feature by going to Setup > Enable Features > Items & Inventory.	
		Cash Sale	View
		Find Transaction	View
		Fulfill Orders	View
		Invoice	View
		Inventory Status Change	View
		To use this permission, you must enable the Inventory Status feature by going to Setup > Enable Features > Items & Inventory.	
		Item Fulfillment	View
		Item Receipt	View
		Purchase Order	View
		Return Authorization	View
		Sales Order	View
		Transfer Inventory	View
		Transfer Order	View
	Lists	Address Lists in Search	Full
		Bins	View
		Classes	View
		To use this permission, you must enable the Classes feature by going to Setup > Enable Features > Company.	
		Custom Record Entries	Full

Role	Subtab	Permission	Minimum Access Level
		Documents and Files	View
		Employee Records	View
		Employees	View
		Fiscal Calendars	View
		To use this permission, you must enable the Multiple Calendars feature by going to Setup > Enable Features > Accounting.	
		Items	Edit
		Inventory Status	View
		To use this permission, you must enable the Inventory Status feature by going to Setup > Enable Features > Items & Inventory.	
		Locations	View
		Perform Search	Full
		Publish Search	Edit
		Subsidiaries	View
		Tasks	Full
		Units	View

		Setup Preferences	View

After assigning the required permissions, provide access to the following:

- Count Review and Dashboard pages
- Deployment records
- Mobile app (for employees with custom inventory counter roles)

For information, see [Providing Access for Custom Smart Count Roles](#).

Providing Access for Custom Smart Count Roles

To use custom roles with the Smart Count SuiteApp, you must provide access to specific pages and deployment records.

Access to Count Review and Dashboard Pages

To provide your custom roles with the access to the Count Review and Dashboard pages, complete the following steps:

To provide access to count review and dashboard:

1. Go to Customization > Scripting > Single Page Applications.
2. Click the link to the page that you want to provide access to.
3. Click the **Configuration** subtab.
4. In the Release Audience section, click the **Set Up Audience** button.
5. Check the boxes of the roles that you want to add.
6. Click **Save**.

Access to Deployment Records

To provide your custom roles with the access to the following deployment records, complete the following steps.

- SC RL Aisle List
- SC RL Bulk Update
- SC RL Complete Paused Item Counts
- SC RL Complete Popup
- SC RL Duplicate Item List
- SC RL Duplicate Aliases
- SC RL Dashboard Count Summary
- SC_SL_EmpCountVariances
- SC RL Get ItemCountDetails and Edit
- SC RL Get Done Items List
- SC RL Item Count Creation
- SC RL Item Count Dropdown
- SC RL Item Count Edit
- SC RL Item Count From Ref
- SC SL Item Counts for Approval
- SC RL Item Display Name
- SC RL Item Description
- SC RL Item Info
- SC RL Item List
- SC RL Lot Numbers List
- SC SL Mobile App Navigation
- SC RL Paused Counts List
- SC RL Parse Barcode
- SC RL Recount Update Popup
- SC RL Review Comments
- SC RL Serial Numbers List
- SC RL User Locations
- SC RL Validate Bin
- SC RL Validate Item
- SC SL Recount Employee List
- SC SL Setup Preferences
- SC SL To Be Counted Items
- SC RL Zone List

To provide access to deployment records:

1. Go to Customization > Scripting > Script Deployments.

2. Locate the deployment record and click **Edit**.
3. Click the **Audience** subtab.
4. From the **Roles** list, select the custom role that you want to give access to the deployment record.
5. Click **Save**.

Access to Mobile App for Custom Roles

To provide access to Smart Count mobile app for your custom roles, complete the following steps.

To provide access to mobile app:

1. Go to Setup > Custom > Mobile Applications.
2. Click **View** beside Smart Count.
3. Click **Configure Independent Pages**.
4. In the Page field, select **page_TaskListIndependentPage**
5. In the Page Element section, on the **Mobile Page Element** field, select **TaskListIcon - Icon**
6. From the **Roles** list, select the custom counter role that you created.
7. Click **Save and Update App**.
8. Go to Customization > Center and Tabs > Center Tabs.
9. Click **Edit** beside Mobile Emulator center tab with Shipping Center type.
10. Click the **Audience** subtab.
11. From the **Roles** list, select the custom role to which you want to provide access.
12. Click **Save**.

Setting Up Smart Count Preferences

The Smart Count SuiteApp lets you set up the following preferences at the item level, company level, or both depending on the type of preference. Only the Smart Count Inventory Manager role can set these preferences.

- [Company Level Preferences](#)
- [Item Level Preferences](#)
- [Bin and Inventory Status Preferences](#)

Company Level Preferences

Company-level preferences apply to your entire inventory unless overridden at the item level (where allowed).

To set up company level preferences:

1. Go to Setup > Smart Count > Preferences.
2. Set the required preferences.
3. Click **Save**.

Following are the key preferences you can set:

Preference	Description
Force Blind Count	Setting this preference lets you apply blind count, which means that the expected inventory quantity is not displayed to a counter. When the preference is set at the company level, the set up applies to entire inventory in your organization. To set up force blind count only for a specific item, skip setting this preference at the company level. To set up this preference at the item level, go to the Item Location configuration record.
Allow Manual Count Entry	Setting this preference lets the counter to manually enter the quantity when counting items. When the preference is set at the company level, the set up applies to entire inventory of your organization. However, you can override this setup by setting up the Restrict Manual Count Entry preference at the item level.
Confirm Before Approving, Rejecting, or Selecting Recount	Setting this preference lets you confirm the action before you approve, reject, or mark items for recount.
Complete and Next	Setting this preference lets you display the Complete and Next button when counting an item. When you click this button, the SuiteApp displays the count page of an item in the order of count status. The SuiteApp first displays the items available for count followed by the items for recount. If there are no items for count or recount, the task list is displayed.
Default Action for On-Hand Change During Count	Setting this preference lets you select a default action for the counter to handle on-hand quantity changes during item count. The following are the default actions: ■ Allow Counter to Select an Option – This action lets the counter choose between recounting and continuing with the count. ■ Force Recount – This action forces the counter to recount an item that has on-hand quantity changes during count. ■ Continue Without Alert – This action allows counter to continue count without giving any alert about on-hand quantity changes during count.
Ignore Serial Number Until Variance	Setting this preference lets you count a serialized item without entering the serial numbers. When you set this preference, the Scan or Enter Serial Number field is unavailable at count start. If the SuiteApp detects quantity variance when you try to complete an item count, it prompts you to recount the item to validate the serial numbers. At recount, the Scan or Enter Serial Number becomes available when counting an item. If you set this preference at the company level, you cannot set the preference at the item level.
Ignore Lot Number Until Variance	Setting this preference lets you count a lot numbered item without entering the lot numbers. When you set this preference, the Scan or Enter Lot Number field is unavailable at count start. If the SuiteApp detects quantity variance when you try to complete an item count, it prompts you to recount the item to validate the lot numbers. At recount, the Scan or Enter Lot Number becomes available when counting an item.

Preference	Description
	If you set this preference at the company level, you cannot set the preference at the item level.
Enable Advanced Bar Code Scanning	Setting this preference lets you scan GS1 bar codes for inventory counting. This preference is available only for WMS users.
Set Next Inventory Count Date for Spot Count	Setting this preference lets you set the next inventory count date for spot counts. When you check this box, the SuiteApp automatically sets the next inventory count date based on the last inventory count date and count interval for an item. For more information, see Key points to remember about next inventory count date for spot count .
Select Zone and Aisle for Counting	Setting this preference lets you select a zone and aisle before starting a count. You can select a zone and aisle after you have selected a location to start inventory counting. NetSuite derives the zone and aisle values from an item's bin record. Note: You can set this preference only if you are a WMS user.
Account for Spot Count Variance	Setting this preference lets you select an account to post item count variance for spot counted items. If this account is not set, the Default Inventory Count Account on the Accounting Preferences page is automatically selected. By default, this field is set to blank.
Schedule Count Review Data Processing	Setting this preference enables you to run the SC SS Count Review Data script to process count review data. You can run the script either on demand, or on a scheduled basis. If you set this preference, you can reduce the page load time. For more information about scheduling and running the script, see Working with Smart Count Review .
Schedule Dashboard Data Processing	Setting this preference enables you to run the SC MR Compute Dashboard Data script to process dashboard data. You can run the script either on demand, or on a scheduled basis. If you set this preference, you can reduce the page load time. For more information about scheduling and running the script, see Working with Smart Count Dashboard .
Auto Approve Variance Within Tolerance	Setting this preference lets you automatically approve item count variances within tolerance.
Quantity Tolerance	Setting this preference lets you define the quantity tolerance value, which when exceeded, will require approval.
Quantity Percentage Tolerance	Setting this preference lets you define the quantity percentage tolerance value, which when exceeded, will require approval.
Amount Tolerance	Setting this preference lets you define the amount tolerance value, which when exceeded, will require approval.
Amount Percentage Tolerance	Setting this preference lets you define the amount percentage tolerance value, which when exceeded, will require approval.

Item Level Preferences

Item-level preferences allow for more granular control and can override certain company-level settings.

To set up item level preferences:

1. Go to an item record.
2. Click the **Smart Count** subtab.
3. To enforce blind count for the item, check the **Force Blind Count** box.
4. To restrict manual count entry for the item, check the **Restrict Manual Count Entry** box.
5. To validate the serial numbers of a serialized item only if quantity variance is detected during count, check the **Ignore Serial Number Until Variance** box. This preference is available for serialized items only.
6. To validate the lot numbers of a lot numbered item only if quantity variance is detected during count, check the **Ignore Lot Number Until Variance** box. This preference is available for lot numbered items only.
7. Click the **Purchasing/Inventory** subtab.
8. Click the **Locations** subtab.
9. To set preference for a location, click **Edit** beside the location.
10. On the Item Location Configuration page, click the **Inventory Count** subtab.
11. In the **Inventory Count Interval** field, enter the count interval for this item. Based on this field value, the SuiteApp automatically updates the next inventory count date after the item's previous count is approved.
12. In the **Next Inventory Count Date** field, enter the next count date for this item. Based on the inventory count interval, the SuiteApp automatically updates the next inventory count date after the item's previous count is approved.
13. To set tolerance values for the item, enter values in the following fields under the **Tolerance Preferences** section.
 - a. **Quantity Tolerance**
 - b. **Quantity Percentage Tolerance**
 - c. **Amount Tolerance**
 - d. **Amount Percentage Tolerance**
14. Click **Save**.

Note: The Smart Count SuiteApp verifies the tolerance values first at the item location level. If no tolerances are set at the item location level, the tolerance values set at the company level is automatically selected.

Following are the key preferences you can set:

Preference	Description
Ignore Serial Number Until Variance	Setting this preference lets you count a serialized item without entering the serial numbers. When you set this preference, the Scan or Enter Serial Number field is unavailable at count start. If the SuiteApp detects quantity variance when you try to complete an item count, it prompts you to recount the item to validate the serial numbers. At recount, the Scan or Enter Serial Number becomes available when counting an item. You cannot set this preference at the item level if it is set at the company level.
Ignore Lot Number Until Variance	Setting this preference lets you count a lot item without entering the lot numbers. When you set this preference, the Scan or Enter Lot Number field is unavailable at count start. If the SuiteApp detects quantity variance when you try to complete an item count, it prompts you to recount the item to validate the lot numbers.

Preference	Description
	At recount, the Scan or Enter Lot Number becomes available on the count page. You cannot set this preference at the item level if it is set at the company level.
Restrict Manual Count Entry	Setting this preference for a specific item restricts a counter from manually entering the quantity of an item count.
Quantity Tolerance	Setting this preference lets you define the quantity tolerance value for a specific item, which when exceeded, will require approval.
Quantity Percentage Tolerance	Setting this preference lets you define the quantity percentage tolerance value for a specific item, which when exceeded, will require approval.
Amount Tolerance	Setting this preference lets you define the amount tolerance value for a specific item, which when exceeded, will require approval.
Amount Percentage Tolerance	Setting this preference lets you define the amount percentage tolerance value for a specific item, which when exceeded, will require approval.

Bin and Inventory Status Preferences

The Smart Count SuiteApp enables you to validate tolerances at the item, bin, and inventory status levels. Tolerances are validated against each of the inventory statuses that you have defined for your inventory. These validations help provide an overview of inventory status, which helps in inventory planning.

Example 1. Validations at Inventory Status Levels

You have an item ABC in your inventory. The inventory statuses are “good” and “damaged” for this item. Each item costs \$10 and the total number of units is 150.

The following are the tolerances defined for ABC:

- Quantity Tolerance = 5 units
- Quantity Percentage Tolerance = 2%
- Amount Tolerance = \$10
- Amount Percentage Tolerance = 2%

Out of the total 150 units of ABC, 100 units are expected to be in good condition, and 50 units are expected to be damaged condition. The expected cost is \$1000 for good units and \$500 for damaged units.

After count, 97 units with a total cost of \$970 are found to be in good condition. There is a variance of 3 units and \$30 from the expected values. Similarly, 48 units with a total cost of \$480 are found to be damaged. There is a variance of 2 units and \$20 from the expected values.

The SuiteApp will now validate the tolerances defined for ABC against the good and damaged inventory statuses. After validation, the SuiteApp will either automatically approve or send an Item Count record for approval based on the set preferences.

Working with Smart Count SuiteApp

With the Smart Count SuiteApp, you can efficiently manage your inventory counting process. This topic covers how to:

- [Creating and Managing Count Configurations](#)

- Set up and customize count configuration records for regular or one-time use.
- Link saved searches to define items for counting.
- [Creating Saved Searches for Task Lists](#)
 - Create saved searches to generate task lists of items to be counted.
 - Apply filters and criteria to target specific items or bins.
- [Performing Inventory Count on Mobile Devices](#)
 - Conduct directed and spot (nondirected) counts.
 - Scan GS1 barcodes and enter or tally item quantities.
 - Complete all counts in a task list.
 - Review, update, or recount items as needed.
- [Managing Directed and Spot Inventory Counts](#)
 - Use mass updates to adjust count intervals and next count dates.
 - Deactivate or update count configuration records as your needs change.

Creating and Managing Count Configurations

A count configuration record lets you generate and manage task lists of items to be counted. By linking a saved search to the configuration, you determine which items are included in the task list. These records can be created for regular or one-time use and are essential for structuring your inventory count process.

You can select a count configuration on various pages, such as Task List, Counted Items, and Complete All Counts, to display the relevant items.

For information, see the following topics:

- [Creating Saved Searches for Task Lists](#)
- [Creating Custom Count Configurations](#)
- [Managing Count Configuration Records](#)

Creating Saved Searches for Task Lists

Saved searches are used to specify which items appear in your count task lists.

Important: When creating custom saved searches, remember these points:

- Use the **Smart Count – Default Item Saved Search** as a template for your custom searches.
- To filter items by next count date, add the **Location Next Inventory Count Date** filter in search **Criteria** and set it to **is before tomorrow**.

To create a saved search for an item count list:

1. Go to Lists > Search > Saved Searches > New.
2. Select any of the following search types to create a saved search:
 - Inventory Balance
 - Item
 - Transaction

3. After creating a saved search, set it to **Public**.
4. To identify specific bins:
 - a. In the **Criteria** subtab, from the **Filter** list, select **Formula (Text)**.
 - b. In the Saved Item Search popup window, set the following fields:
 - i. In the **Formula** field, enter **{binonhand.binnumber}**.
 - ii. In the **Formula (Text)** field, select a criteria.
 - iii. Click **Set**.
 - iv. Click **Save**.
 - c. To identify bin-specific criteria in a saved search:
 - i. In the **Criteria** subtab, from the **Filter** list, select **Bin On Hand Fields...**
 - ii. In the **Bin On Hand Filter** field, select a criteria.
 - iii. Configure the criteria based on the results you require. For example, to exclude bins with zero quantity of an item from the task list, set **Bin On Hand** filter to **On Hand is greater than 0**.
 - iv. Click **Save**.

Creating Custom Count Configurations

The Smart Count SuiteApp includes a default **Item Due for Count** configuration record. It generates a daily task list based on the **Next Inventory Count Date** set for items in the Item Location Configuration page. You can use this default record or create custom count configuration records if you have the Administrator or Smart Count Inventory Manager role. Custom records can be created for one-time use as well.

Points to Remember Before Creating a Custom Record

- If you haven't set a default inventory count account in accounting preferences, you must select an account on the count configuration record. This is needed to post count variances for reconciliation.
- You don't need to set the next inventory count date to include items on the task list. However, if you want to list items based on the next inventory count date:
 - Set the **Next Inventory Count Date** field on the Item Location Configuration page for the item.
 - In the **Criteria** subtab of a saved search, add the **Location Next Inventory Count Date** filter and set it to **is before tomorrow**.

To create a custom count configuration record:

1. Go to Setup > Smart Count > Count Configuration.
2. Enter a name for this count configuration.
3. (Optional) In the **Account** field, select an account to post item count variance for reconciliation. This is required if you didn't set a default inventory count account at accounting preferences.
4. In the **Description** field, enter a description for this record.
5. In the **Saved Search for Item List** field, select the saved search to define items for counting.
6. Check the **One-Time Count** box if the configuration is for single use.
7. In the **Count Reason** field, enter a count reason.
8. (Optional) Check the **Count Bins with Zero Quantity** box to include bins with zero quantity of an item on the task list for counting.

9. Select one or more locations in the **Location** field. If you don't select a location, the configuration applies to all locations.
10. Click **Save**.

Managing Count Configuration Records

After you create a count configuration record, you can use it to generate a task list for inventory counting.

- The Smart Count SuiteApp lets you update the **Inventory Count Interval** and **Next Inventory Count Date** fields using the Mass Updates feature.
 - On the Mass Updates page, select a location in the **Inventory Location** field. This updates these fields for items in that location.
 - If you don't select a location, updates apply to items across all locations.
- To deactivate a count configuration record, check the **Inactive** box on the record.

Performing Inventory Count on Mobile Devices

The Smart Count SuiteApp enables you to perform both directed and spot inventory counts using your mobile device for the following item types:

- Assembly/Bill of Materials
 - Lot Numbered
 - Serialized
- Inventory Item
 - Lot Numbered
 - Serialized

The SuiteApp supports the following for inventory counting:

- You can perform spot count for items.
- You can complete counts for multiple items on the Complete All Counts page.
- You can view counted items on the Counted Items page.
- You can scan GS1 bar codes when counting inventory items, serialized items, and lot numbered items.
- You can filter a list of items to count, list of counted items, and list of items to complete count based on a count configuration.

The **Count Configuration** field appears on the Task List, Counted Items, and Complete All Counts pages on the mobile app, and includes the following values:

- **All** – If you select this value, the list includes items from active count configurations, inactive count configurations, and spot counts.
- **Inactive Count Configurations/Spot Counts** – If you select this value, the list includes items from inactive count configurations and spot counts.
- The field also lists all active count configurations.
- You can perform live counting of items while transactions are ongoing. The SuiteApp notifies the counter about on-hand quantity changes during count. For more information about the counting features, see [Item Count Features](#).
- You can enter quantity manually or perform tally scan based on the preferences set.

- You can handle various count scenarios such as recounting an item or counting an item with on-hand quantity change during count. Some of the count scenarios are listed in the [Item Count Scenarios](#).
- You need not enter item serial numbers and lot numbers during count unless items have quantity variance. For more information, see [Setting Up Smart Count Preferences](#).
- If you are a WMS user, you can select a zone and aisle before starting a count. The zone and aisle values are derived from the bin record.
- You can complete an item count with zero quantity. The SuiteApp displays a confirmation message before completing the count.

If you encounter errors during count, read [Smart Count Error Messages](#) to understand the errors.

To perform count using your mobile device, install the SCM Mobile SuiteApp. For information about the mobile device hardware and software requirements, see the help topic [Hardware and Software Requirements](#)

Watch the following video to see how to use the Smart Count SuiteApp to count lot and serialized items.

 [Counting Serialized and Lot Numbered Inventory Items](#)

Performing Directed Inventory Counts

The Smart Count SuiteApp enables you to perform directed inventory counts using a task list generated from count configuration records.

Tip: Here are some helpful tips on counting items and reviewing serial or lot numbers.

- To count items using bins, enable the Bin Management feature and select the Use Bins box on the item record.
- To review scanned serial or lot numbers, click the View Serial Numbers or View Lot Numbers link.

Note: Here are some points to note when counting items:

- If you select an incorrect zone or aisle, the SuiteApp shows an error but still lets you complete the count. The original zone and aisle values appear in the count record and Count Review page. If you change these values during the count, the SuiteApp updates them accordingly.
- If a zone includes bins without aisle values, select **No Aisle** to view those bins. This option is unavailable if all bins in the zone have aisle values.
- When counting matrix child items, enter items in the following format **Parent Item Name : Child Item Name**.

To perform directed count using a mobile device:

1. Log in to NetSuite using your mobile device.
2. Based on the role you are using, do any of the following:

- Go to Setup > Custom > Mobile – App.
- Go to Mobile Emulator > Mobile Emulator > Mobile Screen.
- 3. Tap **Smart Count**.
- 4. Tap a location. Administrators can view task list of all subsidiaries.
- 5. (WMS users only) If the item uses bins, select the zone and aisle.
- 6. (Optional) In the **Count Configuration** field, select a count configuration. The default value is **All**.
- 7. On the task list, under the Action column, tap **Count** beside the item you want to count. The task list displays all items that are due for count on the current day.
- 8. In the **Scan or Enter Bin** field, scan or enter the bin number if applicable.
- 9. In the **Scan or Enter Item** field, scan or enter the item's number or UPC code.
- 10. In the **Inventory Status** field, select the inventory status if the feature is enabled.
- 11. In the **UOM** field, select the unit of measure lot numbered and inventory items.
- 12. (Optional) Do these steps when counting serial or lot items if:
 - You didn't set the Ignore Serial Number Until Variance or Ignore Lot Number Until Variance preferences.
 - You selected Recount for items with quantity variance.
 - a. For serial items, enter serial numbers in the in the **Scan or Enter Serial Number** field.
 - b. For lot items, enter lot number in the **Scan or Enter Lot Number** field, or select one from the **Available Lot Numbers** list.
- 13. Choose your entry method:
 - **Manual Entry** – Press **Tab** to enter the count for lot-numbered items or to increment serial item quantity. Manual entry requires the Allow Manual Count Entry preference.
 - **Tally Scanning** – Press **Enter** for tally scanning to increment the quantity by 1 for each scan.
- 14. In the **Current Quantity** field, enter the quantity. The **Total Quantity Counted** field updates with the cumulative total and can be edited if needed. For more information, see examples in [Managing Directed and Spot Inventory Counts](#).
- 15. Repeat Step 8 through Step 12 to count items with different inventory statuses and units of measure.
- 16. Tap **Complete** to finish the count.

After completing an item count, the count status is set to **Done**. The Counted Items page lists all items with status **Done**. Items that are in **Approved** state are removed from the task list.

To access the Counted Items page, tap **Counted Items** from the Smart Count menu on a mobile device.

Performing Spot (Nondirected) Inventory Counts

The Smart Count SuiteApp enables you to perform spot or nondirected count for any item outside the task list as needed.

To perform spot count using a mobile device:

1. Log in to NetSuite using your mobile device.
2. Based on the role you are using, do any of the following:
 - Go to Setup > Custom > Mobile – App.
 - Go to Mobile Emulator > Mobile Emulator > Mobile Screen.

3. Tap **Smart Count**.
4. Tap a location. Administrators can view task list of all subsidiaries.
5. (WMS users only) If the item uses bins, select the zone and aisle.
6. Tap **Spot Count** from the Smart Count menu.
7. In the **Scan or Enter Bin** field, scan or enter the bin number if applicable.
8. In the **Scan or Enter Item** field, scan or enter the item number or UPC code of the item.
9. In the **Inventory Status** field, select the inventory status if the feature is enabled.
10. In the **UOM** field, select the unit of measure lot numbered and inventory items.
11. (Optional) Do these steps when counting serial or lot items if:
 - You didn't set the Ignore Serial Number Until Variance and Ignore Lot Number Until Variance preferences.
 - You selected **Recount** for items with quantity variance.
 - a. For serial items, enter serial numbers in the in the **Scan or Enter Serial Number** field.
 - b. For lot items, enter lot number in the **Scan or Enter Lot Number** field, or select one from the **Available Lot Numbers** list.
12. Choose your entry method:
 - a. **Manual Entry** – Press **Tab** to enter the count for lot-numbered items or to increment serial item quantity. Manual entry requires the Allow Manual Count Entry preference.
 - b. **Tally Scanning** – Press **Enter** for tally scanning to increment the quantity by 1 for each scan.
13. In the Current Quantity field, enter the quantity. The Total Quantity Counted field updates with the cumulative total and can be edited if needed. For more information, see examples in [Managing Directed and Spot Inventory Counts](#).
14. Repeat Step 8 through Step 12 to count items with different inventory statuses and units of measure.
15. Tap **Complete** to finish the count.

Completing Count for All Items

The Smart Count SuiteApp lets you complete count for all items that are in paused state or due for count. To complete count for all items, perform the following steps.

To complete all counts:

1. Log in to NetSuite using your mobile device.
2. Based on the role you are using, do any of the following:
 - Go to Setup > Custom > Mobile – App.
 - Go to Mobile Emulator > Mobile Emulator > Mobile Screen.
3. Tap **Smart Count**.
4. Tap a location.
5. From the Smart Count Menu icon, tap **Complete All Counts**.
6. (Optional) In the **Count Configuration** field, select a value to display items based on the selected count configuration.
7. To complete count for all items, check the box beside the Bin column on the table header.
8. Tap **Complete All Counts**.

Managing Directed and Spot Inventory Counts

The Smart Count SuiteApp enables you to efficiently perform and manage both directed and spot (nondirected) inventory counts using task lists generated from count configuration records. The following outlines how the process works and what to expect:

- Task List Management
 - **Count configurations** – Each item can be linked to multiple count configurations, but only the most recently activated configuration is shown in the task list.
 - **Capacity** – Task lists can display up to 1,000 items per location. Administrators can view task lists across all subsidiaries.
- Performing and Managing Counts
 - **Pause and resume** – Pause a count at any time and resume it later from the task list.
 - **Complete all counts** – Use the **Complete All Counts** option to finish all items currently in progress or paused. If an item's on-hand quantity changes during the count, the SuiteApp will prompt you with the appropriate action.
 - **Review counted items** – Access the **Counted Items** section to view all completed counts.
 - **Recount or update** – Use the **Spot Count** feature to rescan or update an item already counted (status **Done**),

Example 2. How current quantity and total quantity counted fields work

When you begin counting an item, both the **Current Quantity** and **Total Quantity Counted** fields are blank.

- If you manually enter a quantity (for example, 100) in **Current Quantity** and press **Enter**, that value is added to **Total Quantity Counted**, and **Current Quantity** is cleared.
- If you pause the count and then resume, **Current Quantity** will be blank, but **Total Quantity Counted** will still show the total counted so far.
- If you use tally scanning, each scan increases both fields by 1. For example, if you scan 10 items, pause, resume, and then scan 5 more, **Total Quantity Counted** will show 15, while **Current Quantity** resets to blank after each pause.

This helps you keep an accurate running total, even if you pause and resume your count.

- Spot Counts and Inventory Count Dates
 - **Bin coverage** – All bins must be counted—either through directed or spot counts—for the SuiteApp to update the **Last Inventory Count Date** and **Next Inventory Count Date** at the item location level.
 - **Count status and task list updates** –
 - If a spot count is **Pending Approval**, **Tolerance Error**, or **Paused**, a new count configuration is created in the following scenarios:
 - If the count is rejected or set for recount, the item appears as a new count in the Task List based on the new configuration.
 - If the count is approved, the item's on-hand quantity and count dates are updated, and the item appears in the Task List with the new expected quantity.

Item 1 has an on-hand quantity of 10 at the Florida location.

- ◆ After Spot Count:
 - ◇ The counted quantity is 12.
 - ◇ The count status is **Tolerance Error**, **Pending Approval**, or **Paused**.

- ◇ A new count configuration is created that includes Item 1.
- ◆ If the count is rejected or set for recount, item 1 will appear as a new count in the task list for the new configuration.
- ◆ If the count is approved, the task list will show Item 1 with the new expected quantity of 12, reflecting the approved count.

- **Updating count dates** – If the item location configuration doesn't specify a **Last Inventory Count Date**, the relevant fields are updated when:
 - Any bin is counted (if the item has no on-hand quantity), or
 - All bins with on-hand quantity are counted.

Example 3. How bin counting updates inventory count dates

Suppose you have an item stored at the San Francisco location with two bins (Bin1 and Bin2), and there is no existing last inventory count date. Here's how different counting scenarios affect the count dates:

- **Case 1:**
 - Bin1: On-hand quantity = 0
 - Bin2: On-hand quantity = 0
 - Action: You count any bin on 05/13/2025
 - Result:
 - Last Inventory Count Date: 05/13/2025
 - Count Reason: Spot Count
 - Next Inventory Count Date: 05/14/2025 (if interval = 1)
- **Case 2:**
 - Bin1: On-hand quantity = 10
 - Bin2: On-hand quantity = 0
 - Action: You count Bin1 on 05/13/2025
 - Result:
 - Last Inventory Count Date: 05/13/2025
 - Count Reason: Spot Count
 - Next Inventory Count Date: 05/14/2025 (if interval = 1)
- **Case 3:**
 - Bin1: On-hand quantity = 10
 - Bin2: On-hand quantity = 10
 - Action: You count both bins on 05/13/2025
 - Result:
 - Last Inventory Count Date: 05/13/2025
 - Count Reason: Spot Count
 - Next Inventory Count Date: 05/14/2025 (if interval = 1)

This example shows how counting bins—whether empty or with stock—updates the inventory count dates for the location.

- If an item is counted using spot count and is in **Pending Approval** or **Tolerance Error** status, and then moves to **Recount Suggested** or **Rejected** on the same day, it remains visible in the task list for that day only.
- If the status changes to **Recount Suggested** or **Rejected** on a later day, the item will not appear in the task list.
- If the item is in **Paused** status after spot count, it will not be visible in the task list from the next day onward.

GS1 Barcode Scanning for Inventory Counts

The Smart Count SuiteApp lets you scan GS1 bar codes when counting inventory items, serialized, and lot numbered inventory items.

Prerequisites of Using the GS1 Bar Code Feature

To use the GS1 bar code feature that the Smart Count SuiteApp provides, perform the following steps in the order specified.

1. Install the NetSuite WMS SuiteApps (required for this feature). For more information, see the help topic [NetSuite WMS Setup](#).
2. Set the Enable Advanced Bar Code Scanning preference Setup > Smart Count Preferences.
3. Create item alias records to map GTIN-14 codes to items. Item aliases provide an alternate name for an item that is used in the warehouse. For more information, see the help topic [Creating Item Aliases](#).
4. Set up item bar codes for scanning. For more information, see the help topic [Bar Code Setup for NetSuite WMS](#).
5. Configure custom application identifiers for GS1 bar code scanning. For more information, see the help topic [Setting Up Custom Application Identifiers for GS1 Bar Code Scanning](#).

After completing the steps, you can count inventory by scanning GS1 bar codes.

Watch the following help video for information about using the Smart Count SuiteApp to scan GS1 bar codes for inventory counting.

[Using Smart Count to Scan GS1 Bar Codes](#)

To scan GS1 bar codes for inventory counting:

1. Log in to NetSuite using your mobile device.
2. Based on the role you are using, do any of the following:
 - Go to Setup > Custom > Mobile – App.
 - Go to Mobile Emulator > Mobile Emulator > Mobile Screen.
3. Tap **Smart Count**.
4. Tap a location. Administrators can view task list of all subsidiaries.
5. (WMS users only) If the item uses bins, select the zone and aisle.
6. In the **Count Configuration** field, select a count configuration to display items due for count based on the selected value.
7. Do one of the following:
 - a. For directed count, tap **Count** beside an item on the task list.
 - b. For spot count, tap **Spot Count** from the Smart Count menu.
8. In the **Scan or Enter Bin** field, scan or enter the bin number if applicable.

9. In the **Scan or Enter Item** field, scan or enter the item's GTIN.

The SuiteApp will automatically fill in item details (like name, number, unit, quantity, lot, or serial number) from the Item Alias page. If the GTIN matches more than one item, you'll be asked to choose which item to count.

 **Note:** For serial items, select the base unit in the **Alias Unit** field on the Item Alias page.

10. In the **Inventory Status** field, select the inventory status if the feature is enabled.
11. In the **UOM** field, select the unit of measure lot numbered and inventory items.
12. In the **Current Quantity** field, enter the quantity. The **Total Quantity Counted** field updates with the cumulative total and can be edited if needed. For more information, see examples in [Managing Directed and Spot Inventory Counts](#).
13. Tap **Complete** to finish the count.

Viewing Counted Items

The Counted Items page displays only items with the status **Done** for the current day. This includes item counts that are pending approval or have tolerance errors.

To view all counted items:

1. Log in to NetSuite using your mobile device.
2. Based on the role you are using, do any of the following:
 - Go to Setup > Custom > Mobile – App.
 - Go to Mobile Emulator > Mobile Emulator > Mobile Screen.
3. Tap **Smart Count**.
4. Tap a location.
5. From the Smart Count Menu icon, tap **Counted Items**.
6. (Optional) To view the counted items associated with a count configuration, select a value in the **Count Configuration** field.

Viewing Item Count Records

You can view, but not manually create or edit, item count records in the Smart Count SuiteApp. To view an item count record, go to Transactions > Smart Count > Item Count.

When a count starts, the SuiteApp creates an item count record.

The record status is set to **In Progress**.

When the count is completed, the SuiteApp updates the **Last Count Date** and **Last Count Reason** fields in the Item Location configuration.

Important: Item count records can only be created through the mobile application, not through the user interface.

Each item count record includes the following fields:

Field	Description
Item	Displays the item being counted.

Field	Description
Location	Shows where the item is stored.
Bin	Indicates the bin associated with the item.
Status	Displays the current status of the count. For more information, see the help topic Item Count Statuses .
Count Type	Shows if the count is directed or a spot count.
Configuration Reference	Links to the related count configuration record.
Inventory Adjustment	Links to the inventory adjustment record. This is created automatically when a count is approved. If not approved, this field is blank.
ID	Shows the unique identifier for the item count record.
Owner	Displays the name of the employee who performed the count.
Date Created	Shows when the record was created.
Last Modified	Displays the date and time of the last modification.
By	Shows the name of the employee who last modified the record.
Remarks	Displays comments entered by the counter during the count.
System Remarks	Shows system-generated comments. For more information, see System-Generated Comments .
Count Reason	Displays the reason for the count.
Reviewed By	Shows the name of the employee who reviewed the count.
Reviewer Comments	Displays comments from the reviewer.
Inventory Status Change	Links to any related inventory status change record.
Bin Transfer	Links to any related bin transfer record.
Inventory Transfer	Links to any related inventory location transfer record.
Recount Assigned To Employee	Shows the name of the employee assigned to perform a recount.
Zone	Displays the zone assigned to the item in its bin record.
Aisle	Shows the aisle assigned to the item in its bin record.
Item Count Details (subtab)	Displays a detailed breakdown of the item's count.
Notes (subtab)	Lists changes made to the record.
Workflow (subtab)	Shows active workflows and workflow history for the item.

Item Count Statuses

- **In Progress** – The count is currently underway.
- **Pending Approval** – The count is waiting for approval.
- **Tolerance Error** – The counted quantity exceeds the allowed tolerance.
- **Approved** – The count has been approved.

- **Rejected** – The count has been rejected.
- **Recount Suggested** – A recount is required for the item.
- **Canceled** – The record was canceled by the user or system.
- **Paused** – The count is temporarily paused.
- **Count Superseded** – A new count was performed before the previous day's count was approved or resolved. The earlier record is marked as **Superseded**.

System-Generated Comments

The SuiteApp automatically adds details about count activity to the **System Remarks** field. These system-generated comments appear for the following count scenarios.

Important: In scenarios having tolerance errors, the Smart Count SuiteApp will generate remarks only if the Inventory Status feature is enabled. To enable the Inventory Status feature, go to Setup > Company > Enable Features. Click the **Items & Inventory** subtab and check the **Inventory Status** box.

Scenario	Message on Old Record	Message on New Record
The system automatically approves an item count based on preferences.	Autoapproved	—
An item count is within tolerance levels, but not approved because automatic approval is not enabled in preferences.	Pending approval.	—
An employee updates the count for an item while the previous count record is still in Pending Approval or Tolerance Error status.	Resumed after submit.	—
An employee updates an item count that was automatically approved.	New count <item count record ID> created by <user> after autoapproval.	Created after approved count posted. Original count <item count record ID>.
An employee chooses to recount an item while the previous count record is still in Pending Approval or Tolerance Error status.	Replaced by new count <item count record ID> created by <user>.	Replaces count <item count record ID>.
Force Recount is set in preferences for on-hand quantity changes during a count.	Count replaced due to on-hand change. Count <item count record ID> by <user>.	Replaces count <item count record ID> due to on-hand change.
Continue is set in preferences for on-hand quantity changes during a count.	On-hand quantity changed during count.	—
An employee chooses to recount when there is a change in on-hand quantity during the count.	Replaced by <item count record ID> due to on-hand change during count.	Replaces<item count record ID>.
An employee chooses to submit or continue the count when there is a change in on-hand quantity during the count.	On-hand quantity changed during count.	—
An employee counts an item with zero on-hand quantity.	Zero quantity on hand.	—

Working with Smart Count Review

This topic is intended for Administrators and Smart Count Inventory Managers who can review, approve, reject, or assign items for recount.

The Smart Count Review page is your central workspace for managing inventory counts within Smart Count SuiteApp.

You'll find up to 5,000 item count records listed for review at a time. If you're an administrator, you can also view records across all subsidiaries.

To access the Smart Count Review page, go to **Transactions > Smart Count > Count Review**.

This topic explains:

- Optimizing performance of the Smart Count Review page.
- Filtering and analyzing count data.
- Understanding KPIs and reports.
- Approving, rejecting, or recounting items (including serialized/lot-numbered items).

If you encounter errors during review, read [Smart Count Error Messages](#) to understand the errors.

Optimizing Performance of the Smart Count Review Page

When you're working with thousands of records, the Smart Count Review page may load slowly.

To keep the page responsive, schedule the **SC SS Count Review Data** script.

This script processes count data in the background and updates the page with a banner message.

 **Tip:** To view real-time data, click **Refresh** on the banner message after the script runs.

Prerequisites:

- Set the **Schedule Dashboard Data Processing** preference on the Smart Count Preferences page.
- Use the Smart Count Inventory Manager or Administrator role.

To schedule and run the SC SS Count Review Data script:

1. Go to Customization > Scripting > Scripts.
2. Beside the SC SS Count Review Data script, click **View**.
3. Click the **Deployments** subtab.
4. Click **SC SS Count Review Data**.
5. Click **Edit**.
6. Under the **Schedule** subtab, set the schedule when you want to run the script.
7. From the Save menu, select **Save and Execute**.

With your data up-to-date and the page loading quickly, you're ready to filter and analyze your inventory counts.

Filtering Data Using Primary and Advanced Filters

The Primary Filters section on the Smart Count Review page lets you customize the data shown in KPIs and reports.

You can add, remove, or reset filters to tailor the information to your needs.

To add or remove filters:

1. In the Primary Filters section, click the icon beside **Reset Filters**.
2. In the Filters popup window, check the boxes beside the filters that you want to add. To remove a filter, clear the box beside a filter.
3. (Optional) Check the **View Selected** box to view only selected filters.
4. (Optional) To revert to default settings, click **Revert to Default**.
5. Click **Save**.

Filter Type	Filter/Portlet	Description
Primary Filters	Location	Lists all locations accessible to your role.
	Date	Select a date range (within 18 months) for data.
	To Be Approved	Check this box displays only the unapproved count records with Tolerance Error , Pending Approval , or Paused statuses in the Report section. The list shows recent 5000 records with the above statuses. When the To Be Approved box is cleared, the report displays the recent 5000 records irrespective of their statuses in the selected date range.
Advanced Filters	Class	Lists active classes. Note: The filter is available only if you enable the Classes feature and add the Classes permission to a role.
	Counted By	Names of inventory counters for different locations.
	Count Reason	Reason for count (such as item due, spot count).
	Count Status	All item count statuses.
	Inventory Classification	Inventory classifications used during counts.
	Variance	Count variance scenarios (zero, within tolerance, over tolerance).
	Vendor	Active vendors. Note: The filter is available only if you enable the Classes feature and add the Classes permission to a role.

Resetting Filters

When you click **Reset Filters**, the Smart Count SuiteApp performs the following actions:

- Reset filter values to default.
- Update the filter values in the field dropdown lists. For example, if you deactivated a particular location, the SuiteApp removes the location from the **Location** dropdown list when you reset the filters.

After your filters are set, your KPIs and reports will show only the data you want.

Analyzing Data with KPIs and Reports

KPIs give you a quick overview of your inventory count status, based on your filter selections.

Clicking a KPI updates the Report section with more details.

KPI	Description
Total Counts with Zero Variance	Items counted with no difference from expected quantity.
Total Counts Pending	Counts in Paused or In Progress state.
Total Items/Locations Count	Total counts performed in selected/all locations (such as 10/5 for 10 counts in 5 locations).
Total Unapproved Counts	Counts awaiting approval.
Unapproved Counts with Variance Over Tolerance	Unapproved counts where the quantity variance exceeds the set tolerance limit.
Unapproved Counts with On-hand Change	Unapproved counts where on-hand quantity changed.
Unapproved Counts with Variance Within Tolerance	Unapproved counts where the quantity variance is within the set tolerance limit.

KPIs help you spot issues quickly, so you can drill down into the details in the next step.

The Report Section

The Report section displays detailed information about item counts, filtered by your selections.

The Report section displays detailed information about item counts, filtered by your selections.

You can search, customize columns, and view legends for quick insights.

Note: Canceled item counts older than 30 days are automatically removed.

Features:

- **Over Threshold** – Highlights variance quantity/amount over the threshold.
- **Search** – Find specific item counts.
- **Show Comments Popup on Action** – Prompts for comments when approving, rejecting, or recounting.

Field/Portlet	Description
Aisle	Aisle assigned to item (if Select Zone and Aisle for Counting preferences are set).
Actual Count/Approved Count	Actual or approved count quantity.
Bin	Bin containing the item (if applicable).
Counted By	Employee who counted the item.
Count Reason	Reason for item count.
Count Status	Statuses such as Pending Approval, Tolerance Error and others. The Smart Count SuiteApp removes the canceled item counts that are 30 days old from the Smart Count Review page.
Item Description	Description of the item.
Item Number	Item's number.
Location	Location where count is performed (based on filter selection).
On-hand Change During Count	On-hand quantity change during count.

Field/Portlet	Description
Picked/Packed	Quantity in picked or packed status for item,bin, and location.
System Remarks	System-generated remarks for the count.
User Comments	Counter's remarks entered during count.
Variance Amount	Variance in amount for the item.
Variance Quantity	Variance in quantity for the item.
Variance Quantity in Stock Units	Variance in stock units.
Zone	Zone assigned to item (if Select Zone and Aisle for Counting preferences are set).

Now that you've analyzed the data, you're ready to approve, reject, or assign items for recount.

Approving, Rejecting, or Recounting Item Counts

After you've reviewed your data, you can approve, reject, or assign items for recount—all from the Report section on the Smart Count Review page.

These actions are available for item count records with **Pending Approval**, **Paused**, or **Tolerance Error** statuses.

Before you start approving count, ensure to read [Considerations Before Approving Item Counts](#).

To approve or reject an item count record.

1. Go to Transactions > Smart Count > Count Review.
2. Check the box beside the item count record that you want to approve or reject.
3. Click **Approve** or **Reject**.
4. If you have set the Confirm Before Approving, Rejecting, or Selecting Recount preference, a confirmation message appears. Click **OK**.

Bulk Approve or Reject Item Counts

Use the arrow next to **Approve** or **Reject** for **Approve All** or **Reject All**.

Assigning Items for Recount

On the Smart Count Review page, you can mark item count records for recount and assign these recount tasks to specific employees.

To enable employee assignment, first set the **Confirm Before Approving, Rejecting, or Selecting Recount** preference on the Smart Count Preferences page.

After this preference is enabled, the SuiteApp prompts you to select an employee whenever you choose items for recount.

To select an item for recount and assigning the task to an employee:

1. Go to Transactions > Smart Count > Count Review.
2. Check the boxes beside the item count records that you want to recount.
3. Check the box beside the item count record that you want to select for recount.
4. Click **Recount**.
5. If you have set the Confirm Before Approving, Rejecting, or Selecting Recount preference:

- a. A confirmation message appears. Click **OK**.
 - b. In the Assign Recount popup window, select an employee's name for assignment. If no employee is selected, the task will be assigned to all employees.
 - c. Click **OK**.
6. Click **OK**.

Bulk Assign Items for Recount

To select all item count records for recount in one go, click the arrow next to the **Recount** button and choose **Recount All**.

When you mark items for recount on the Smart Count Review page, the **Recount** option will appear for those items in the task list.

Serialized and Lot Numbered Items

For serialized and lot-numbered items, you can review scanned and unscanned serial/lot numbers before approving, rejecting, or recounting.

To review and act:

1. Go to Transactions > Smart Count > Count Review.
2. In the Report section, click the **Pending Approval** or **Tolerance Error** link in the **Count Status** column.
3. Review the scanned or unscanned serial and lot numbers in the popup.
4. Click **Approve**, **Reject**, or **Recount**.
5. If you have set the Confirm Before Approving, Rejecting, or Selecting Recount preference.
 - a. A confirmation message appears. Click **OK**.
 - b. For items marked for recount, select an employee in the Assign Recount popup window to assign the task. If you don't select anyone, the task will be assigned to all employees.
 - c. Click **OK**.

Considerations Before Approving Item Counts

When approving item count record, note the following points:

- If you approve an item count record that contains unscanned items, an inventory adjustment transaction is created to remove the unscanned items from the inventory.
- The SuiteApp creates a negative inventory adjustment in the following scenarios. You will get an error for these scenarios when you try to complete an item count on the task list, try to complete all counts, or approve an item count on the Smart Count Review page.
 - Available quantity is less than the quantity on hand.
 - Available quantity and on-hand quantity are equal but is less than the snapshot quantity at count end.
- The SuiteApp considers the location at the line item level when creating an inventory adjustment record even if you have marked the **Adjustment Location** field as required.
- If you mark the **Department** and **Class** fields as required but the values are missing at the line item level, the SuiteApp throws an error message when creating an inventory adjustment record in the following scenarios:
 - Approving the count from the Smart Count Review page.
 - Completing the count within the tolerance levels from the Smart Count mobile app.

Working with Smart Count Dashboard

The Smart Count Dashboard is a central location for managing inventory count activities at a location. It provides a summary of all inventory counts, reminders, and visual reports to analyze and effectively manage inventory.

To keep your dashboard data current, see [Optimizing Performance of Smart Count Dashboard](#).

To learn about the Smart Count dashboard's features, see [Smart Count Dashboard Portlets Overview](#).

Users with the Administrator or Smart Count Inventory Manager roles and administrators can view data across all subsidiaries.

Optimizing Performance of Smart Count Dashboard

Running the **SC MR Compute Dashboard Data** script keeps your Smart Count dashboard data current and reduces page load times for key portlets, including:

- **Approval Summary**
- **Reminders**
- **Smart Count Summary**

For more information about the portlets, see [Smart Count Dashboard Portlets Overview](#).

You can schedule this script to process dashboard data at specific times. Set the schedule directly on the script record. The script will then run automatically as scheduled, update the dashboard data, and display a banner message when complete.

To view current data, click **Refresh** on the banner message.

Only users with the Administrators can view dashboard data for all subsidiaries.

Prerequisites

The prerequisites include:

- You must have the Administrator or Smart Count Inventory Manager roles to access the Smart Count Dashboard and run this script.
- Enable the **Schedule Dashboard Data Processing** preference on the Smart Count Preferences page.

Note: The script uses your company's time zone settings when it runs.

To schedule and run the SC MR Compute Dashboard Data script:

1. Go to Customization > Scripting > Scripts.
2. Beside the SC SS Count Review Data script, click **View**.
3. Click the **Deployments** subtab.
4. Click **SC MR Compute Dashboard Data**.
5. Click **Edit**.
6. Under the **Schedule** subtab, set the schedule when you want to run the script.
7. From the **Save** menu, select **Save and Execute**.

Smart Count Dashboard Portlets Overview

The Smart Count Dashboard contains several portlets, each providing specific inventory insights. Understanding these portlets helps you manage inventory counts effectively.

For information about how the dashboard stays current, see [Optimizing Performance of Smart Count Dashboard](#).

The following table lists the portlets available on the Smart Count dashboard.

Portlets	Description	Examples
Filters	This portlet contains the Location field that lists all the locations accessible to a role. All other portlets display data based on the selected location.	—
Reminders	This portlet displays item counts pending approval and items due for count in the current day and last 30 days.	—
Approval Summary	This portlet displays a summary of approved, pending, rejected, and recounted items. ■ Approved – Indicates the number of approved item counts in the current day. ■ Pending – Indicates the number of item counts that are in tolerance error or pending approval in the current day. ■ Rejected – Indicates the number of rejected item counts in the current day. ■ Recount – Indicates the number of item counts for which recount is suggested in the current day.	—
Smart Count Summary	This portlet provides the following information related to inventory counting: ■ Counted – Indicates the number of counted items in the current day. ■ Approved – Indicates the number of approved item counts in the current day. ■ Rejected – Indicates the number of rejected item counts in the current day. ■ Recount – Indicates the number of items selected for recount in the current day. ■ Due – Indicates the number of items due for count in the current day. ■ Delayed – Indicates the number of items due for count for past seven days, excluding current day. ■ Scheduled – Indicates the number of items scheduled for count in the next seven days, excluding current day. ■ Value Change – Indicates the total amount variance in the counted items in the current day. ■ Quantity Change – Indicates the total quantity variance in the counted items in the current day.	—
Average Count Variances by User	This portlet contains graphs showing average count variance and inventory record accuracy per user. Formulas used: Inventory Record Accuracy = Number of Approved Records / (Number of Approved + Recount Suggested+ Rejected Records) × 100 Cycle Count Difference % = [Sum of (Actual Count – Count End Quantity on Hand)] ÷ [Sum of (Count End Quantity on Hand)] × 100	Examples showing calculation of cycle count variances. ■ Case 1: Actual count = 0, Quantity on hand = 50 Cycle Count Difference = (0 – 50) / 50 × 100 = – 100%

Portlets	Description	Examples
	 Note: To calculate cycle count difference, all count records are considered except records with the following statuses: ■ Paused ■ Canceled ■ Count Superseded	■ Case 2: Actual count = 100, Quantity on hand = 50 Cycle Count Difference = $(100 - 50) / 50 \times 100 = 100\%$ ■ Case 3: Actual count = 50, Quantity on hand = 100 Cycle Count Difference = $(50 - 100) / 100 \times 100 = -50\%$ ■ Case 4: Item A: Actual = 190, On hand = 100; Item B: Actual = 50, On hand = 100 Cycle Count Difference = $[(190-100) + (50-100)] / (100+100) \times 100 = 20\%$
Count Variance Analysis	This portlet contains graphs showing percentage of item counts over tolerance, within tolerance, and with zero variance for every counter.	Examples showing calculation of count variances.

Portlets	Description	Examples
	 Note: To calculate the percentage of item counts, all item counts are considered, except the counts with the following statuses: ■ In-progress ■ Count Superseded ■ Canceled	Case 1: When item count is over the tolerance limit, the parameters are as follows. ■ Tolerance limit (not defined) = 0 ■ On-hand quantity = 10 ■ Counted quantity = >< 10 ■ Variance is >< 0 Case 2: When item count is within tolerance limit, the parameters are as follows. ■ Tolerance limit (defined) = 10 ■ On-hand quantity = 10 ■ Counted quantity = 0 to 20 ■ Variance is >< 0 Case 3: When item count has zero variance, the parameters are as follows. ■ On-hand quantity = 10 ■ Counted quantity = 10
Count Variance by Location	This portlet displays variance quantity or variance amount for Today, This Week, This Month, and This Quarter based on location and variance type. You can select the variance type from the Variance field at the top right corner of the portlet. To calculate variance, the sum of quantities or amounts in the inventory adjustment records of approved item count records is considered. The portlet includes the following columns: ■ Location ■ Today ■ This Week – It is based on the setting in the First Day of Week field on the Set Preferences page. ■ This Month – It is based on calendar setting. ■ This Quarter – It is based on the current fiscal year following the quarter setup in the accounting periods.	—

Item Count Features

The Smart Count SuiteApp includes the following count features:

- **Tally Scanning** – This feature lets you automatically increment the count quantity by one every time an item is scanned.
- **Live Counting** – This feature lets you perform inventory count in real time during business hours. At the start of the count, the SuiteApp records the inventory quantity for each item.

If there are on-hand quantity changes for an item due to transactions taking place during count, the SuiteApp automatically notifies the counter of the change. In addition, the SuiteApp provides options to take an appropriate action for on-hand quantity changes based on the preferences set by the administrator. This helps to continue the inventory count process without pause.

- **Inventory Counting for Different Items in a Bin** – This feature lets you count different items from the same bin and allows you to complete count for all items or for only the item currently selected on the count page.

The SuiteApp lets you choose between **Complete All** and **Complete Selected** options when you try to complete count.

If you choose **Complete All**, count is completed for all counted items in the bin.

If you choose **Complete Selected**, count is completed only for the item currently selected on the count page. The count is paused for all other items counted from the bin.

Item Count Scenarios

The following table the scenarios, action taken by the user, and their impact. The Smart Count SuiteApp lets you count inventory items, serialized items, and lot numbered items.

Scenarios	User Action	Impact
Change in quantity on hand for an item during count.	On the Smart Count Preference page you have set the Default Action for On-Hand Change During Count preference.	If you choose to continue count, the SuiteApp updates the existing item count record.
	If this preference is set, the SuiteApp provides options based on the preferences set. For more information, see Setting Up Smart Count Preferences .	If you choose to recount, the SuiteApp creates a new item count record and cancels the existing record.
Recounting an item with Pending Approval or Tolerance Error statuses.	You performed spot count to recount the item.	The SuiteApp creates a new item count record and cancels the existing item count record upon recount.
	You performed spot count to update the item's count quantity.	The SuiteApp updates the existing item count record.
Recounting an item with the status Approved .	You performed spot count to recount the item.	The SuiteApp creates a new item count record with the count type as Nondirected Count .
Rescanning an item whose count is already complete. If you want to rescan an item whose count is complete, the SuiteApp provides you options to either	You performed spot count to recount the item.	The SuiteApp creates a new item count record and cancels the existing record.
	You performed spot count to update the item's count quantity.	The SuiteApp updates the existing item count record.

Scenarios	User Action	Impact
recount or update the existing count.		when the item is rescanned the same day and the status of the item count record is still Pending Approval or Tolerance Error . However, if the item is rescanned the following day,
Recounting an item with Pending Approval or Tolerance Error statuses on the same day.	—	The SuiteApp updates the existing item count record
Recounting an item with Pending Approval or Tolerance Error statuses on the following day.	—	The SuiteApp creates a new item count record for the item. The status of the existing item count record is changed to Count Superseded when you complete count.

GS1 Bar Code Scan Scenarios

The SuiteApp lets you scan GS1 bar codes to count inventory items, serialized items, and lot numbered items. The following table lists

Scenarios	User Action	Impact
Tally Scan for an inventory item	—	On the item count page, you will notice: - Count quantity is automatically populated when you scan a GS1 bar code with quantity details. - After scanning, the Scan/Enter Item field no longer displays the GS1 bar code.
Manual count entry for an inventory item	On the Smart Count Preferences page, you have set the Allow Manual Count Entry preference.	On the item count page, you will notice: - Count quantity is not populated when you scan a GS1 bar code with quantity details. You need to enter the count quantity manually. - After scanning, the Scan/Enter Item field continues to display the GS1 bar code.
Tally scan for lot and serial items	On the Smart Count Preferences page, you have set either of the following preferences: - Ignore Lot Number Until Variance - Ignore Serial Number Until Variance	On the item count page, you will notice: - The SuiteApp does not display the Scan or Enter Lot Number or Scan or Enter Serial Number fields. - When you scan a GS1 bar code with quantity, quantity is automatically populated. - After scanning, the Scan/Enter Item field no longer displays the GS1 bar code.

Scenarios	User Action	Impact
Manual count entry for lot and serial items	On the Smart Count Preferences page, you have set the following preferences: - Allow Manual Count Entry - Ignore Lot Number Until Variance or Ignore Serial Number Until Variance	On the item count page, you will notice: - The SuiteApp does not display the Scan or Enter Lot Number or Scan or Enter Serial Number fields. - When you scan a GS1 bar code with quantity, quantity is not populated. You need to enter the count quantity manually. - After scanning, the Scan/Enter Item field continues to display the GS1 bar code.
Tally scan for lot items	You have performed any of the following actions: - On the Smart Count Preferences page, you did not set the ignore Lot Number Until Variance preference. - On the Smart Count Preferences page, you have set the Ignore Lot Number Until Variance preference. In addition, you selected the Recount option for an item with quantity variance.	On the item count page, you will notice: - The SuiteApp displays the Scan or Enter Lot Number field. - When you scan a GS1 bar code with quantity and lot number, quantity and lot number are automatically populated. - After scanning, the Scan/Enter Item field no longer displays the GS1 bar code.
Manual count entry for lot items	On the Smart Count Preferences page, you have set the Allow Manual Count Entry. You performed either of the following actions: - You did not set the Ignore Lot Number Until Variance preference. - On the Smart Count page, you have set the Ignore Lot Number Until Variance preference. In addition, you chose the Recount option for an item with quantity variance.	On the item count page, you will notice: - The SuiteApp displays the Scan or Enter Lot Number field. - When you scan a GS1 bar code with quantity and lot number, only lot number is populated. You need to enter the count quantity manually. - After scanning, the Scan/Enter Item field continues to display the GS1 bar code.
Tally scan for serial items	You have performed any of the following actions: - On the Smart Count Preferences page, you did not set the Ignore Serial Number Until Variance preference. - On the Smart Count Preferences page, you have set the Ignore Serial Number Until Variance preference. In addition, you selected the Recount option for an item with quantity variance.	On the item count page, you will notice: - The SuiteApp displays the Scan or Enter Serial Number field. - When you scan a GS1 bar code with quantity and serial number, serial number is populated. Quantity is set as 1. - After scanning, the Scan/Enter Item field no longer displays the GS1 bar code.
Manual count entry for serial items	On the Smart Count Preferences page, you have set the Allow Manual Count Entry. You performed either of the following actions: You did not set the Ignore Serial Number Until Variance preference.	On the item count page, you will notice: The SuiteApp displays the Scan or Enter Serial Number field.

Scenarios	User Action	Impact
	On the Smart Count page, you have set the Ignore Serial Number Until Variance preference. In addition, you chose the Recount option for an item with quantity variance.	- When you scan a GS1 bar code with quantity and serial number, only serial number is populated. You need to enter the count quantity manually. - After scanning, the Scan/Enter Item field continues to display the GS1 bar code.

Smart Count Scripts

The Smart Count SuiteApp includes the following scripts:

- **SC MR Bulk Update** – This MR script triggers when multiple Item Count records are selected to approve, reject, or perform recount.
- **SC MR Deactivate Count Configuration** – This MR script deactivates Count configuration records that are marked for one time use, provided that counting of all items in the count configuration record are complete.
- **SC MR Item Count CleanUp** – This MR script cancels Item Count records with **Pending Approval** or **Tolerance Error** statuses after a specific number of days. In addition, the script cancels the counts with **In Progress** or **Paused** statuses after a day.

You can specify the number of days you want to keep records before cancellation. To do that, go to the **SC MR Item Count CleanUp** script deployment page. Click the **Parameters** subtab, and then enter the number of days in the **Count Pending for Approval** field.

- SC SL

Smart Count Saved Searches

The Smart Count SuiteApp includes the following saved searches:

- **Last Count Date vs. Next Count Date by Item** – This saved search returns the last versus next count dates by item.
- **Smart Count – Variance Tolerance Report** – This saved search returns the quantity, amount, quantity percentage, and amount percentage tolerance values for items in the selected date range. To see the tolerance values of items whose next inventory count date is not set, select **All** in the **Date** field and leave the **From** and **To** fields blank.
- **Total Items Counted vs. Variance by Employee** – This saved search displays the total items counted versus the variance amount and quantity by inventory counters in a location. When you click a location, it displays the list of employees who performed item counts in that location. When you click an inventory counter's name, it displays the multiple locations where that counter has performed count.
- **Item Count Variance Detail Report** – This saved search displays all Item Count records with variances per location.
- **Smart Count – Default Item Saved Search** – This default saved search is used to generate a list of items to count included in the Items Due for Count configuration record.

Smart Count Error Messages

When using Smart Count, you may encounter error messages on the Item Count, Complete All Counts, or Smart Count Review pages.

These messages help you identify issues and guide you toward corrective actions.

The following tables helps you find the error, understand the scenario, and apply the suggested solution.

Error Message	Scenario	Page	Solution
The count cannot be completed due to negative inventory adjustment. Contact your administrator.	A negative inventory adjustment is created when: - Available quantity is less than the on-hand quantity. - Available and on-hand quantities are equal but less than the snapshot quantity at count end.	Item Count, Complete All Counts (mobile app, single item)	Contact your administrator.
The count cannot be completed because the required fields are empty on the inventory adjustment record. Contact your administrator.	Required fields (such as department or class) on the item record are left blank.	Item Count, Complete All Counts (mobile app, single item)	Contact your administrator.
The count cannot be completed because the accounting period is not set for the current financial year. Contact your administrator.	No accounting period is set for the current financial year.	Item Count, Complete All Counts (mobile app, single item)	Contact your administrator.
The count cannot be completed because the inventory adjustment account is not set. Contact your administrator.	No inventory adjustment account is set for directed or spot counts.	Item Count, Complete All Counts (mobile app, single item)	Contact your administrator.
The count cannot be completed because the subsidiary associated with the location is not shared with the item. Contact your administrator.	The item and location of child subsidiary are not associated.	Item Count, Complete All Counts (mobile app, single item)	Contact your administrator.
The count cannot be completed due to quantity variance.	Completion of count for lot or serial items is attempted while in paused state, with Ignore Serial Number Until Variance or Ignore Lot Number Until Variance preferences enabled.	Complete All Counts (mobile app, single item)	Count the items from the task list.
Item count was canceled. Recount the item.	An item is recounted after an on-hand quantity change.	Complete All Counts (mobile app, single item)	Recount the item.
Count completed for A* out of B* items. For errors related to count, see the Help Center topic Smart Count Error Messages .	Following issues are encountered during count completion: - Creation of negative inventory adjustment - Empty required fields on an item record. - Missing accounting period or inventory adjustment account. - Item and child subsidiary location are not associated. - Quantity variance	Complete All Counts (mobile app, multiple items)	Review the Help Center topic for details.

Error Message	Scenario	Page	Solution
Count completed for A* out of B* items. Count canceled for C* items due to change in on-hand quantity. For errors related to count, see the Help Center topic Smart Count Error Messages .	An item with on-hand quantity change is recounted.	Complete All Counts (mobile app, multiple items)	Review the Help Center topic for details.
The count cannot be approved due to negative inventory adjustment. Reject the count record or mark the item for a recount.	A negative inventory adjustment is created.	Smart Count Review (web, single item)	Review available and on-hand quantities. Reject or mark for recount.
Enter values in the required fields on the inventory adjustment record.	Required fields (such as department or class) are left blank on the item record.	Smart Count Review (web, single item)	Enter values in required fields on the item record.
Set the accounting period for the current financial year.	No accounting period is set for the current financial year.	Smart Count Review (web, single item)	Set the accounting period for the current year.
Set the inventory adjustment account for directed and spot counts: - For directed counts, set an account in the Count Configuration or Accounting Preferences pages. - For spot counts, set an account in the Smart Count Preferences or Accounting Preferences pages.	No inventory adjustment account is set for directed or spot counts.	Smart Count Review (web, single item)	Set an account in the appropriate configuration or preferences page.
The count cannot be approved because the subsidiary associated with the location is not shared with the item. To approve the count, go to the item record and check the Include Children box to share the item across subsidiaries.	The item and location of child subsidiary are not associated.	Smart Count Review (web, single item)	On the item record, check the Include Children box.
The count cannot be approved due to quantity variance. Reject the count record or mark the item for a recount.	Approval of an item count is attempted while in paused state.	Smart Count Review (web, single item)	Reject the count or mark for recount.
Count approved for A out of B items. For errors related to count, see the Help Center topic Smart Count Error Messages .	Multiple item counts are approved.	Smart Count Review (mobile app, multiple items)	Review errors and take appropriate action using this table.

* A, B, C are variables and will be replaced with the number of item counts.

Uninstalling the Smart Count SuiteApp

If you want to uninstall the Smart Count SuiteApp, complete the following procedure.

To uninstall the SuiteApp:

1. Go to Customization > SuiteCloud Development > Installed SuiteApp List.
2. Hover over the Actions icon next to the Smart Count SuiteApp and click **Uninstall**.
