SuiteApp Control Center Guide

2025.2

September 3, 2025

Copyright © 2005, 2025, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software" or "commercial computer software documentation" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

SuiteApp Control Center Overview

SuiteApp Control Center is a single place to define and manage your SuiteApp distribution process. You can upload SuiteApp projects to SuiteApp Control Center and distribute them as SuiteApp versions to the SuiteApp Marketplace. Your users can install SuiteApps from the SuiteApp Marketplace and either perform manual upgrades for unmanaged SuiteApps or get upgrades automatically for managed SuiteApps.

Here's an overview of how to use SuiteApp Control Center:

1. **SuiteApp Definition** – You define SuiteApps in SuiteApp Control Center. For information, see [Creating a SuiteApp Definition](#). To view all SuiteApps, see [Viewing All SDF SuiteApps](#).

You can also set SuiteApp Marketplace access for each SuiteApp. For information, see [Setting SuiteApp Marketplace Access](#).

2. **SuiteApp Project** – SuiteApp Control Center distributes SuiteApps based on SuiteApp projects. The projects contain NetSuite customizations and can be validated in SDF prior to distribution. For information about creating a project, see the help topic [Creating a SuiteApp Project in SuiteCloud IDE Plug-in for WebStorm](#).

3. **SuiteApp Versions** – SuiteApps are distributed as specific versions, each containing the corresponding version of the SuiteApp project. For more information, see [SuiteApp Versions](#).

Actions you can perform include:

- Create new versions of the SuiteApp to plan for distribution. For information, see [Creating a SuiteApp Version](#).
- Delete versions that are not needed and have not been released. For information, see [Deleting a SuiteApp Version](#).
- Release versions to distribute upgrades to the SuiteApp Marketplace. For information, see [Releasing a SuiteApp Version](#).
- Push upgrades to your managed SuiteApp install base. For information, see [Pushing a SuiteApp Version Upgrade to Users](#).
- Deprecate versions that are no longer supported. For information, see [Deprecating a SuiteApp Version](#).

4. **Terms of Service** – Define terms of service (ToS) for your SuiteApp. For more information, see [Terms of Service](#).

5. **SuiteApp Marketplace** – Users install SuiteApps from the SuiteApp Marketplace. For information, see [Installing SDF SuiteApps](#).

6. **Install Base** – Manage the SuiteApp install base in SuiteApp Control Center. For information, see [Viewing the SDF SuiteApp Install Base](#).

You can also view the installation status of SuiteApps. For information, see [Viewing SDF SuiteApp Installation Status](#).

For more information about getting started with SuiteApp Control Center, see the following topics:

- [Accessing SuiteApp Control Center](#)
- [Requirements for SuiteApp Marketplace Availability](#)
- [Getting Started with SuiteApp Control Center](#)

Accessing SuiteApp Control Center

To access SuiteApp Control Center, you need the SuiteApp Release Manager role, and the SuiteApp Control Center feature has to be enabled for your account.

To define SuiteApps in SuiteApp Control Center, you need a valid Publisher ID registered to your account by SDN. For more information, see [Publisher ID for SDN Partners](#).

To access the SuiteApp Control Center:

1. Log in to NetSuite using the SuiteApp Release Manager role. If you're already logged in with a different role, switch to the SuiteApp Release Manager role. For information, see the help topic [Roles and Accounts](#).

The SuiteApp Control Center appears.

2. Go to Control Center > My SuiteApps > My SuiteApps.

The My SuiteApps page appears, showing the list of SuiteApps created in your account.

For information about the available fields and actions, see [Viewing All SDF SuiteApps](#).

Requirements for SuiteApp Marketplace Availability

This topic explains what you need to do to make a SuiteApp available to users on the SuiteApp Marketplace. You can check the status of these actions in the SuiteApp Publishing Requirements List, which gives you one place to see everything you need to meet the SuiteApp publishing requirements. The action that is completed is represented by a green check mark icon (✓), and the action that is not completed is represented by a gray cross icon (✗) in that list.

Important: You have to complete all actions for a SuiteApp to be available to users on the SuiteApp Marketplace.

To view SuiteApp Publishing Requirements List, go to Control Center > My SuiteApps > My SuiteApps, then click the SuiteApp name to see the SuiteApp details.

Here's an example of the SuiteApp Publishing Requirements List in the navigation pane of the SuiteApp details page, where all actions are completed, meaning the SuiteApp is published on the SuiteApp Marketplace:

The screenshot shows the Oracle NetSuite interface for a SuiteApp named 'Merchandise Optimization Portlet' (version 1.1.0 / 1.0.0). The left navigation pane includes sections for Definition, Access, Versions, Terms of Service, Upgrades (0), and Install Base. The 'Publishing Status' is highlighted as 'Published'. The 'Action Status' section shows three completed actions: 'Released version', 'Listing review', and 'BFN review', each marked with a green checkmark. On the right, the 'SuiteApp Publishing Requirements List' is visible, showing fields for SuiteApp Name, Project ID, Publisher ID, and Upgrades. Red arrows point from the 'Published' status and the 'Action Status' list to the 'SuiteApp Publishing Requirements List' label.

Here's what you'll find in the SuiteApp Publishing Requirements list:

- **Publishing Status** – indicates whether a SuiteApp is available to users on the SuiteApp Marketplace. The publishing status has two possible states:
 - **Not published** – the SuiteApp isn't available to users on the SuiteApp Marketplace because one or more of the three required actions aren't completed.
 - **Published** – the SuiteApp is currently available on the SuiteApp Marketplace for users to install because all three required actions are completed.

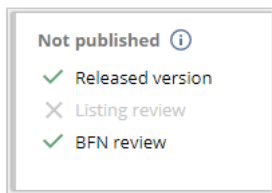

- **Action Status** – indicates whether a required action is completed or not. The action status provides a single location to view the status of all of the actions that are required to meet the SuiteApp publishing requirements.

Here are the three required actions to make a SuiteApp available to users on the SuiteApp Marketplace:

- **Released version** – at least one released version exists for the SuiteApp. To release a version, see [Releasing a SuiteApp Version](#).
- **Listing review** – SDN needs to approve the SuiteApp listing. To find out how to complete a listing review, contact SDN.
- **BFN review** – a Built for NetSuite (BFN) review is required. To find out how to complete a BFN review, see [Built for NetSuite Overview](#) and [BFN Verification Process](#).

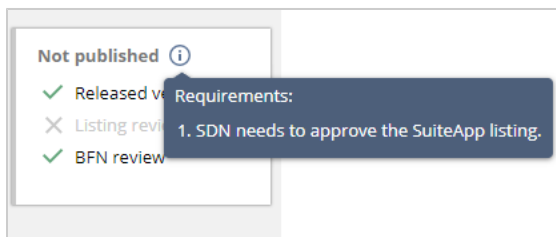

Note: Both the listing review and the BFN review are done by using the Advanced Partner Center (APC). For more information about the Advanced Partner Center role, see the help topic [The Advanced Partner Center](#).

Here's an example of the SuiteApp Publishing Requirements List where only some of the required actions are completed:

In this example, the publishing status is Not published because only some of the required actions are done. The action status shows you have a released version and the BFN review is done, but you still need to complete the listing review.

You can also view the details about pending actions by pointing to the tooltip icon (i) next to the publishing status (see below for an example):

Note: The preceding tooltip only shows the status of the actions that aren't completed. When all actions are completed and the publishing status changes to Published, the tooltip icon is not visible.

Publisher ID for SDN Partners

A publisher ID is a unique ID assigned to each SDN partner. For more information, see the help topic [SuiteApp Projects](#).

Important: You need a valid publisher ID registered to your account by SDN before you can create and distribute SDF SuiteApps.

You can get a valid publisher ID by contacting SDN. For more information about SDN, see <http://www.netsuite.com/portal/developers/sdn.shtml>.

Note: If your NetSuite account with a valid publisher ID was inactivated, contact SDN for registering your publisher ID to a new account.

Getting Started with SuiteApp Control Center

The following sections help you get started with SuiteApp Control Center:

- [SuiteApp Control Center Interface](#)
- [SuiteApp Distribution Process](#)

SuiteApp Control Center Interface

This topic gives you examples of the SuiteApp Control Center interface so you can get familiar with it and take action.

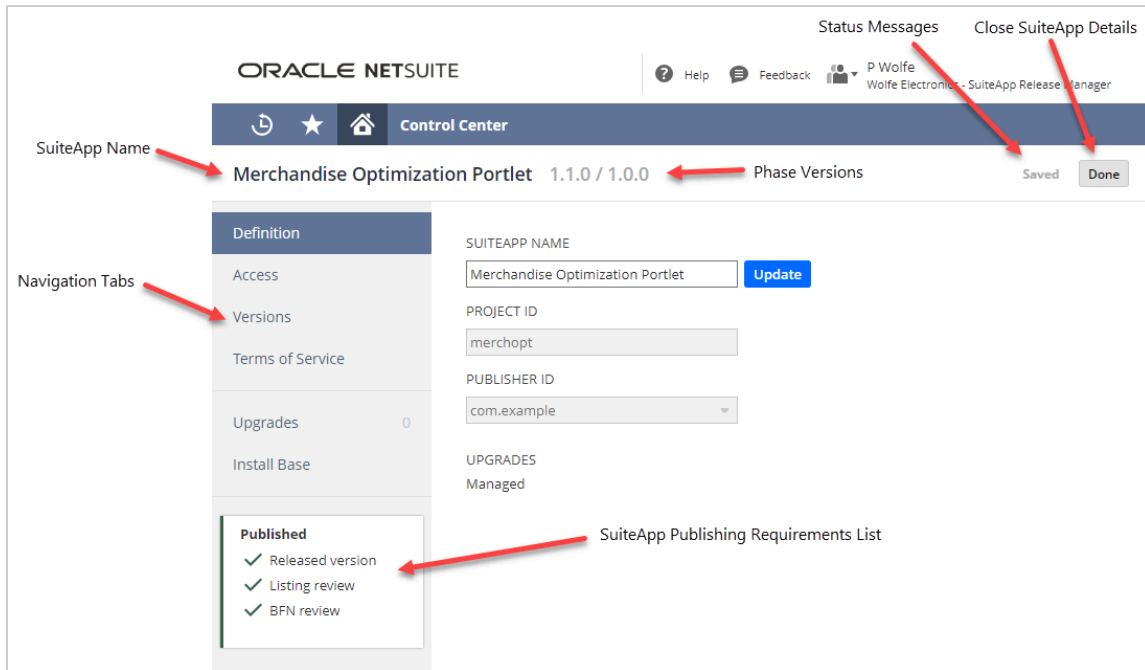

Here's an example of the My SuiteApps page:

The screenshot shows the Oracle NetSuite SuiteApp Control Center interface. At the top, there's a navigation bar with 'ORACLE NETSUITE' and a user profile 'P Wolfe Wolfe Electronics - SuiteApp Release Manager'. Below this is a 'SuiteApps' tab. The main section is titled 'My SuiteApps' and includes a 'Create New' button and a search bar labeled 'SEARCH FOR A SUITEAPP BY NAME'. A table lists SuiteApps with columns: SUITEAPP NAME, APPLICATION ID, ACCESS, STATUS, LEADING VERSION, and LAGGING VERSION. Two SuiteApps are listed: 'Merchandise Optimization Portlet' and 'Project Status Portlet', both with a 'PUBLISHED' status. An 'Action Menu' is shown on the left with red arrows pointing to the table and the 'List of SuiteApps' label.

SUITEAPP NAME	APPLICATION ID	ACCESS	STATUS	LEADING VERSION	LAGGING VERSION
Merchandise Optimization Portlet	com.example.merchopt	Shared	PUBLISHED	1.2.0	1.0.3
Project Status Portlet	com.example.pstatus	Shared	PUBLISHED	1.0.0	

For information about the list of SuiteApps and the available actions, see [Viewing All SDF SuiteApps](#).

Click the SuiteApp name to view its details. Here's an example of the SuiteApp details in SuiteApp Control Center:

The preceding example includes the following information:

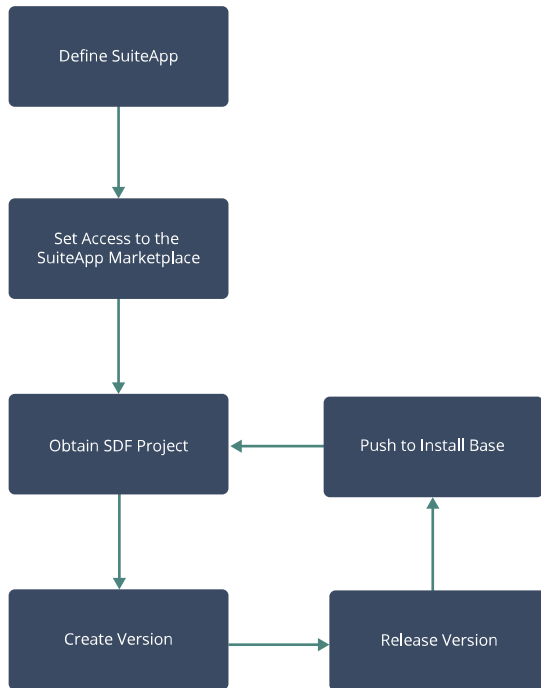

- **SuiteApp Name** – displays the name of the SuiteApp. For more information, see [Creating a SuiteApp Definition](#).
 - **Phase Versions** – displays the currently released leading and lagging versions, if they exist. For information, see [SuiteApp Version Phases](#).
 - **Navigation Tabs** – provide navigation to the following aspects of the SuiteApp and its distribution:
 - **Definition** – manages the SuiteApp definition. For information, see [Editing a SuiteApp Definition](#).
 - **Access** – manages account access to the SuiteApp on the SuiteApp Marketplace. For information, see [Setting SuiteApp Marketplace Access](#).
 - **Versions** – manages SuiteApp versions. For information, see [SuiteApp Versions](#).
 - **Terms of Service** – manages the terms of service (ToS) for your SuiteApp. For more information, see [Terms of Service](#).
 - **Install Base** – manages the install base for managed and unmanaged SuiteApps. For information, see [Viewing the SDF SuiteApp Install Base](#).
 - **Upgrades** – manages the SuiteApp upgrades that are in progress for managed SuiteApps. For information, see [Viewing SDF SuiteApp Upgrades](#).
- Note:** The **Upgrades** tab is only available for managed SuiteApps. For more information, see [Developing Managed SuiteApps](#).
- **SuiteApp Publishing Requirements List** – gives you one place to see the current publishing status of the SuiteApp, including all required actions to make it available on the SuiteApp Marketplace. For more information, see [Requirements for SuiteApp Marketplace Availability](#)
 - **Status Messages** – displays system status regarding the current SuiteApp.
 - **Close SuiteApp Details** – closes the SuiteApp and takes you back to the My SuiteApps page.

SuiteApp Distribution Process

With SuiteApp Control Center, you can get started on the tasks you need to distribute SuiteApps.

Here are the steps in the SuiteApp distribution process for SuiteApp Control Center:

Application Distribution

1. Get a SuiteApp project to distribute. To create one, see the help topic [Creating a SuiteApp Project in SuiteCloud IDE Plug-in for WebStorm](#).
2. Define a SuiteApp in SuiteApp Control Center. For information, see [Creating a SuiteApp Definition](#).
3. Set SuiteApp Marketplace access for the SuiteApp by configuring who can install it. For information, see [Setting SuiteApp Marketplace Access](#).
4. Create a SuiteApp version to represent a specific version of the SuiteApp. For information, see [Creating a SuiteApp Version](#).
5. Release the SuiteApp version to the SuiteApp Marketplace. For information, see [Releasing a SuiteApp Version](#).
6. When distributing a managed SuiteApp, push it to the install base. For information, see [Pushing a SuiteApp Version Upgrade to Users](#).

SDF SuiteApp Creation and Listing Access

The SuiteApp definition lets you set properties and control the availability of your SuiteApp for users. SuiteApps are created with the SuiteCloud Development Framework (SDF) and then defined in SuiteApp Control Center for distribution.

See the following topics:

- To define SuiteApp properties, see [Creating a SuiteApp Definition](#).
- To edit existing SuiteApp properties, see [Editing a SuiteApp Definition](#).
- To view the SuiteApp publishing requirements, see [Requirements for SuiteApp Marketplace Availability](#).
- To specify which company accounts can access the SuiteApp, see [Setting SuiteApp Marketplace Access](#).

Creating a SuiteApp Definition

SuiteApps are represented in SuiteApp Control Center by a SuiteApp definition that contains the properties for each SuiteApp.

To create a SuiteApp definition:

1. Go to Control Center > My SuiteApps > My SuiteApps.

 **Note:** You need the SuiteApp Release Manager role to access the My SuiteApps page.

2. Click **Create New**.

The New SuiteApp Definition popup window appears.

3. Enter the following information:

- **SuiteApp Name** – is the display name for the SuiteApp. For example, Merchandise Optimization Portlet.

 **Note:** The SuiteApp name that appears on the SuiteApp Marketplace is taken from the marketing content, that you must fill out in the Advanced Partner Center (APC) for your SuiteApp, whereas the SuiteApp name you define in SuiteApp Control Center is meant for the release manager's reference only. For more information about the Advanced Partner Center role, see the help topic [The Advanced Partner Center](#).

- **Project ID** – defines an ID for a specific SuiteApp project. The project ID must be unique for each SuiteApp defined with the publisher ID in SuiteApp Control Center. You can't change this value after the SuiteApp definition is created.

 **Note:** When you upload a SuiteApp ZIP archive to create a SuiteApp version, the projectid in the manifest must match the project ID you set here. For more information, see [Creating a SuiteApp Version](#) and [Properties of a SuiteApp Project](#).

- **Publisher ID** – this is the ID SDN assigned to you, and you can pick it from the list of available values. You might have more than one Publisher ID linked to your account

Important: You can't change the Publisher ID after the SuiteApp definition is created. If you want to use a different publisher ID later, you'll need to create a new SuiteApp definition.

This publisher ID is also used for future versions of this SuiteApp. The ID you pick here must match the value in each SuiteApp ZIP archive for every version. For more information, see [Creating a SuiteApp Version](#).

If you don't see a publisher ID to select, contact SDN. For more information, see [Publisher ID for SDN Partners](#).

- You can select one of the following upgrade types:
 - **Managed** – This lets you and other Release Managers push SuiteApp upgrades to customer accounts. Managed is the default upgrade type for new SuiteApps. Users can't manually upgrade managed SuiteApps. For more information about using the Managed SuiteApps feature to develop managed SuiteApps, see [Developing Managed SuiteApps](#).
 - You can't change the upgrade type after the SuiteApp is created.
 - **Unmanaged** – This lets only your SuiteApp users manually upgrade the SuiteApp in their NetSuite accounts from the SuiteApp Marketplace.

After the SuiteApp is created, you can see the upgrade type in the **Upgrades** field in the SuiteApp Definition. For more information, see [Editing a SuiteApp Definition](#).

4. Click **Create**.

The SuiteApp definition is created and displayed on the **Definition** tab of the SuiteApp details. For information about the available tabs and fields displayed, see [SuiteApp Control Center Interface](#).

5. When you're done making changes, click **Done**.

The SuiteApp is added to the My SuiteApps list. For information about the available fields and actions, see [Viewing All SDF SuiteApps](#).

Important: After you create the SuiteApp definition in SuiteApp Control Center, you need to fill out the Application ID field in the Advanced Partner Center (APC).

Application ID is an ID for the SuiteApp based on the publisher ID and project ID. SuiteApps created with SuiteCloud Development Framework (SDF) are always represented by an application ID. For more information about Application ID notation, see the help topic [Properties of a SuiteApp Project](#).

Application ID is an identifier that matches your SuiteApp record in the APC with SuiteApp Control Center. You have to fill out the Application ID in the APC for the SuiteApp to show up on the SuiteApp Marketplace.

Editing a SuiteApp Definition

You can edit the definition of a SuiteApp to view its properties and change its name.

To edit a SuiteApp definition:

1. Go to Control Center > My SuiteApps > My SuiteApps.

2. Do one of the following:
 - For a SuiteApp, click  and select **Edit Definition**.
 - Click the SuiteApp name to view the SuiteApp details.

The **Definition** tab appears.

3. To modify the SuiteApp name, change the value for **SuiteApp Name** and click **Update**.
You can't change the Project ID, Publisher ID, or Upgrades. For more information, see [Creating a SuiteApp Definition](#).
4. When you're done making changes, click **Done**.

Viewing All SDF SuiteApps

You can view a list of all of the SDF SuiteApps created by your account. SuiteApps can't be deleted from the list. If you don't want a SuiteApp to be available on the SuiteApp Marketplace, you can deprecate it. For information, see [Deprecating a SuiteApp Version](#).

To view a list of all SDF SuiteApps in your account:

1. Log in to NetSuite using the SuiteApp Release Manager role. If you're already logged in with a different role, switch to the SuiteApp Release Manager role. For information, see the help topic [Roles and Accounts](#).

2. Go to Control Center > My SuiteApps > My SuiteApps.

To find a SuiteApp in the list, enter the name in the **Search For a SuiteApp By Name** field.

The following information is available for each SuiteApp:

- **SuiteApp Name** – is the name of the SuiteApp specified in the SuiteApp definition. For information, see [Editing a SuiteApp Definition](#).
- **Application ID** – is an ID for the SuiteApp that is based on the publisher ID and project ID. SuiteApps created with SuiteCloud Development Framework (SDF) are always represented by an application ID (app ID). For more information about app ID notation, see the help topic [Properties of a SuiteApp Project](#).
- **Access** – is the SuiteApp Marketplace availability setting for the SuiteApp. For information, see [Setting SuiteApp Marketplace Access](#).
- **Status** – displays the current status of the SuiteApp. Possible statuses are:
 - **Released** – the SuiteApp is currently available on the SuiteApp Marketplace for users to install.
 - **Deprecated** – the SuiteApp is not available on the SuiteApp Marketplace.

Note: For a SuiteApp to be available to users on the SuiteApp Marketplace, it must meet the SuiteApp publishing requirements. For information, see [Requirements for SuiteApp Marketplace Availability](#).

- **Leading Version** – displays the currently released leading version of the SuiteApp. For more information, see [SuiteApp Version Phases](#).
- **Lagging Version** – displays the currently released lagging version of the SuiteApp.

For each SuiteApp, you can do the following actions from the  menu button:

- **Edit Definition** – for information, see [Editing a SuiteApp Definition](#).
- **Manage Access** – for information, see [Setting SuiteApp Marketplace Access](#).

- **Manage Versions** – for information, see [SuiteApp Versions](#).
- **Manage Install Base** – for information, see [Viewing the SDF SuiteApp Install Base](#).
- **Manage Terms of Service** – for information, see [Terms of Service](#).
- **Manage Upgrades** – for information, see [Viewing SDF SuiteApp Upgrades](#).

 **Note:** The **Manage Upgrades** action is only available for managed SuiteApps. For more information, see [Developing Managed SuiteApps](#).

To create a new SuiteApp, click **Create New**. For information, see [Creating a SuiteApp Definition](#).

Setting SuiteApp Marketplace Access

You can set the SuiteApp Marketplace access for the SuiteApp by configuring who can install it.

To set SuiteApp Marketplace access for a SuiteApp:

1. Go to Control Center > My SuiteApps > My SuiteApps.
2. Do one of the following:
 - For a SuiteApp, click  and select **Manage Access**.
 - Click the SuiteApp name to view the SuiteApp details, and click the **Access** tab.

The SuiteApp Marketplace Availability page appears.

3. Set the availability of the SuiteApp on the SuiteApp Marketplace to one of the following:
 - **Public** – lets all NetSuite customers install the SuiteApp.
 - **Shared** – lets only specific companies install the SuiteApp. When set to Shared, all NetSuite customers can still see the SuiteApp.
 - **Hidden from Marketplace** – only specific companies can view and install the SuiteApp.

 **Note:** The **Hidden from Marketplace** option is available only when you set the SuiteApp marketplace availability to Shared.

If you later decide to change the SuiteApp Marketplace access for a SuiteApp from **Hidden from Marketplace** to **Shared** or **Public**, the SuiteApp becomes publicly visible on the SuiteApp Marketplace to all NetSuite users immediately.

 **Note:** When a managed SuiteApp is configured as shared or hidden from marketplace, upgrades can be pushed only to company accounts that are listed in the Allowed Accounts list.

For information about managing company accounts that are allowed to install SuiteApps that are shared or hidden from marketplace, see [Managing Allowed Accounts for SuiteApps That Are Shared or Hidden from Marketplace](#).

4. (Optional) Click **Done** to close the SuiteApp details and go back to the My SuiteApps page.

 **Note:** For a SuiteApp to be available to users on the SuiteApp Marketplace, it must meet the SuiteApp publishing requirements. For information, see [Requirements for SuiteApp Marketplace Availability](#).

Note: You don't need to share a SuiteApp in SuiteApp Control Center with Sandbox and Release Preview accounts as they're automatically included.

Note: SuiteApp Marketplace visibility for a SuiteApp is the same for Sandbox and Release Preview accounts as for a parent account. For example, if a shared SuiteApp is shared with sCompId "12345", it's visible for "12345_SB" and "12345_RP" as well.

Managing Allowed Accounts for SuiteApps That Are Shared or Hidden from Marketplace

The Allowed Accounts list is where you enable installation of shared or hidden SuiteApps from the SuiteApp Marketplace for specific company accounts.

To add a company account to the Allowed Accounts list, enter its NetSuite account ID in the **New Company ID** field and click **Add**.

Note: If you don't add any company accounts to the Allowed Accounts list when **Shared** or **Hidden from Marketplace** is enabled, no users can install the released SuiteApp version.

The following fields and actions are available in the Allowed Accounts list:

- **Company ID** – is the NetSuite account ID for the company you intend to share your SuiteApp with. Only users of the specified companies can install the SuiteApp from the SuiteApp Marketplace.
- **Added Date** – is the date and time the company account was added to the Allowed Accounts list, presented in your local time zone.
- **Action** – lists the actions you that can perform on the company account.
The **Revoke** action removes the account's access to the SuiteApp from the SuiteApp Marketplace. Users who have installed the SuiteApp still retain it after the Revoke action has been performed, but do not receive any new version upgrades. When an account is revoked, it's removed from the Allowed Accounts list, but you can add it back again later if needed.

Consider the following when configuring the SuiteApp Marketplace access for a SuiteApp:

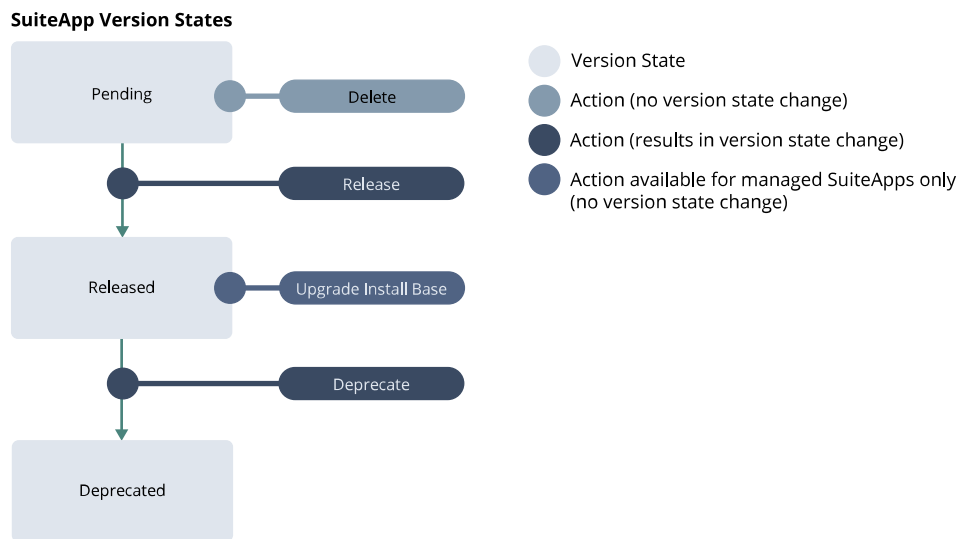

- Company accounts you add to the Allowed Accounts list stay there even if you change the SuiteApp Marketplace access type later.
- The release manager can still see the install base of all company accounts that have the **Shared** or **Hidden from Marketplace** SuiteApp installed, even after those accounts are removed from the Allowed Accounts list.

SuiteApp Versions

A SuiteApp version is a specific version of your SuiteApp. You can release a SuiteApp version to the SuiteApp Marketplace and push it to users. You can view all versions of the SuiteApp from the version history. For information, see [Viewing the SuiteApp Version History](#). To be available to users on the SuiteApp Marketplace, the SuiteApp must meet the SuiteApp publishing requirements. For information, see [Requirements for SuiteApp Marketplace Availability](#).

You can create multiple versions for a SuiteApp, but only one version can be in the Released state for each phase at a time. To create a new SuiteApp version, see [Creating a SuiteApp Version](#).

The following diagram shows the SuiteApp version state workflow and available actions:

For information about the available states and actions, see [SuiteApp Version States](#) and [SuiteApp Version Actions](#). For information about phasing SuiteApp versions, see [SuiteApp Version Phases](#).

SuiteApp Version States

SuiteApp version states show up in the SuiteApp version history. Here are the possible states for a SuiteApp version:

State	Description
Deprecated	A Deprecate action was performed on the SuiteApp version and it's no longer available on the SuiteApp Marketplace for users to install. See Deprecating a SuiteApp Version .
Pending	The SuiteApp version has been created, but it isn't yet available on the SuiteApp Marketplace for users to install. See Creating a SuiteApp Version . If a release attempt fails, the version remains in the Pending state.
Released	The SuiteApp version is available on the SuiteApp Marketplace for users to install. See Releasing a SuiteApp Version . For managed SuiteApps, the version can also be pushed to users. For information, see Pushing a SuiteApp Version Upgrade to Users .

SuiteApp Version Actions

You can perform actions on a version from the **Action** column in the SuiteApp version history.

Depending on the state, you can do one or more of the following actions on a SuiteApp version:

Action	Description
Delete	You can delete SuiteApp versions in the Pending state. A deleted version is removed from version history. For more information, see Deleting a SuiteApp Version .
Edit	You can edit SuiteApp versions in the Pending state. For more information, see Editing a SuiteApp Version .
Release	You can release SuiteApp versions in the Pending state. For more information, see Releasing a SuiteApp Version .
Deprecate	You can move SuiteApp versions in the Released state to the deprecated state so they're no longer available on the SuiteApp Marketplace. For more information, see Deprecating a SuiteApp Version .
Upgrade Install Base	Managed SuiteApp versions in the Released state can be pushed to users of the SuiteApp.  Note: This action: - doesn't change the state of the version - is only available for managed SuiteApps For more information, see Pushing a SuiteApp Version Upgrade to Users.

SuiteApp Version Phases

SuiteApp version phasing is a way to support two release streams of a SuiteApp by separating the install base into the following upgrade phases for different SuiteApp versions:

- The **Leading** phase is the newest release stream of the SuiteApp. Leading versions are released as the latest available version of the SuiteApp.

For example, the leading SuiteApp version might use a new NetSuite functionality and set a minimum NetSuite version of 2019.1. After all of your customer accounts are upgraded to 2019.1, all of your SuiteApp users can be upgraded to this leading SuiteApp version.

The leading SuiteApp version can go through several versions, as your SuiteApp is enhanced and bugs fixed.

When a leading release version is replaced, the old leading version can be deprecated or converted to the lagging release version.

- The **Lagging** phase is the pre-existing release stream of the SuiteApp that will eventually be replaced by the leading release stream.

For example, the lagging SuiteApp version might use a pre-existing NetSuite functionality and set a minimum NetSuite version of 2019.1.

The lagging SuiteApp version can go through several versions, as your SuiteApp is enhanced and bugs fixed.

You can use SuiteApp version phasing to ensure smooth distribution of your SuiteApp during the NetSuite phasing period where some of your users are on different versions of NetSuite. Matching your

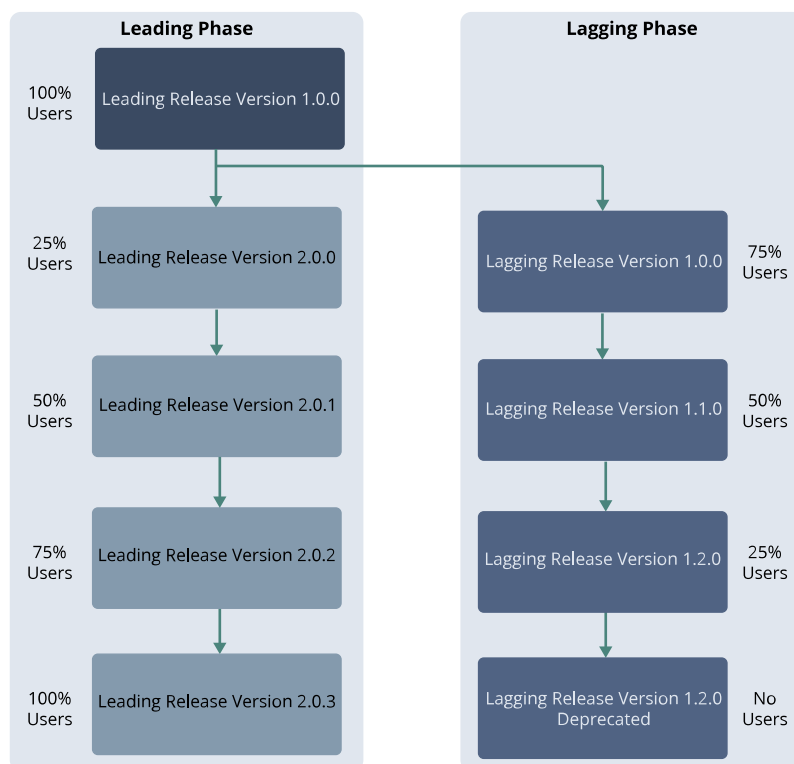

SuiteApp phasing to NetSuite release phasing provides you with a way to make use of new NetSuite functionality in your SuiteApps while still supporting users of the older SuiteApp whose accounts have not yet been upgraded. You can control what accounts have each version of the SuiteApp.

You can also phase your SuiteApp versions for the same NetSuite version. For example, both your leading and lagging SuiteApp versions can require NetSuite 2018.1. This is useful if you want to test bug fixes on a subset of your install base before rolling them out to everyone.

You can see the currently released leading and lagging versions on the My SuiteApps page, the Version History page, and under Versions in the navigation pane of the SuiteApp details.

For information about how the version phase affects releasing a version, see [Releasing a SuiteApp Version](#).

The following illustration shows an example of SuiteApp versions that make use of the leading and lagging phases:

In this example, 25% of the install base are on version 2.0.0 in the leading phase, receiving the latest features in the SuiteApp, while the remaining 75% of users are still on the 1.0.0 version that was made lagging during the 2.0.0 version release. Fixes continue to be released on the lagging phase while development of features and fixes proceeds on the leading phase. By version 2.0.3, all users are on the leading phase, and version 1.2.0 in the lagging phase is deprecated.

For information about working with SuiteApp versions, see the following topics:

- [Creating a SuiteApp Version](#)
- [Editing a SuiteApp Version](#)

- [Deleting a SuiteApp Version](#)
- [Releasing a SuiteApp Version](#)
- [Deprecating a SuiteApp Version](#)
- [Viewing the SuiteApp Version History](#)

Creating a SuiteApp Version

Each version of your SuiteApp is a version composed of a SuiteApp ZIP archive. The archive contains a SuiteApp project representing the SuiteApp. For information about SuiteApp projects, see the help topic [SuiteApp Projects](#).

For information about creating the SuiteApp ZIP archive, see the help topic [Managing SuiteCloud Projects as Compressed Files in SuiteCloud IDE Plug-in for WebStorm](#).

To be valid for SuiteApp Control Center, your SuiteApp ZIP archive must meet the following criteria:

- The ZIP is a valid archive.
- The ZIP contains a manifest.xml file.
- The manifest element in manifest.xml file has the projecttype attribute value set to SUITEAPP.
- The projectid field exists in manifest.xml, and its value matches the Project ID value set for the SuiteApp in SuiteApp Control Center. For information, see the help topics [Properties of a SuiteApp Project](#) and [Creating a SuiteApp Definition](#).
- The publisherid field exists in manifest.xml, and its value matches the Publisher ID value defined for the SuiteApp in SuiteApp Control Center. For information, see the help topics [Properties of a SuiteApp Project](#) and [Creating a SuiteApp Definition](#).
- The manifest.xml file has a projectversion field value that's higher than the version number of either the leading release version or lagging release version. A new version can't use the same project version number as an existing version, but you can reuse a version number from a deleted version.
- The manifest.xml file has a valid projectversion field value. The value must use semantic versioning. For example, if the project version is 1.02 with a minor revision 01242017, the project version is 1.02.01242017.
- The manifest.xml file contains a projectname field value.

Important: Even though locking preferences (locking.xml) and hiding preferences (hiding.xml) aren't part of SuiteApp ZIP validation, you still need to set them up in the SuiteApp project for the installation to work. These preferences are only required for SuiteApps defined in SuiteApp Control Center. For information about configuring those preferences, see the help topic [Setting Installation Preferences in SuiteCloud IDE Plug-in for WebStorm](#).

To create a SuiteApp version:

1. Go to Control Center > My SuiteApps > My SuiteApps.
2. Do one of the following:
 - For a SuiteApp, click  and select **Manage Versions**.
 - Click the SuiteApp name to view its details, then click the **Versions** tab.
3. Click **Create New**. The New SuiteApp Version popup window appears.
4. Click **Choose file** and select a SuiteApp ZIP archive from a local directory or network share. NetSuite File Cabinet files can't be selected. After you upload the SuiteApp ZIP archive, the **Project**

Version field is populated with the value from the `projectversion` field in the manifest of the SuiteApp project contained in the ZIP. That value becomes the version number, for example, 1.0.1.

5. Specify the following options:
 - **Phase** – is the SuiteApp version phase, which can be Leading or Lagging. For information about those phases, see [SuiteApp Version Phases](#).
You can also change this option when editing the SuiteApp version, if the version is in the Pending state.
 - **Minimal Required NetSuite Version** – is the minimum NetSuite version required for the install base to install this version of the SuiteApp.
6. Click **Create**. The new version is added to the Version History list, and you'll see a confirmation that the version was saved.
For information about the version fields and actions you can take, see [Viewing the SuiteApp Version History](#).
7. (Optional) Click **Done** to close the SuiteApp details and go back to the My SuiteApps page.

Editing a SuiteApp Version

You can edit SuiteApp versions when they're in the Pending state.

To edit a SuiteApp version:

1. Go to Control Center > My SuiteApps > My SuiteApps.
2. Do one of the following:
 - For a SuiteApp, click and select **Manage Versions**.
 - Click the SuiteApp name to view its details, then click the **Versions** tab.
3. Find the SuiteApp version by its version number in the Version History list. In the **Action** column, click **Edit**.
4. The following options can be edited:
 - **Phase** – is the SuiteApp version phase, which can be Leading or Lagging. For information about those phases, see [SuiteApp Version Phases](#).
 - **Minimal Supported NetSuite Version** – is the minimum NetSuite version required for the install base to install this version of the SuiteApp.

To save and close the Edit SuiteApp Version popup window, click **Save**.
5. (Optional) Click **Done** to close the SuiteApp details and go back to the My SuiteApps page.

Deleting a SuiteApp Version

If a SuiteApp version doesn't need to be released, you can delete it from the version history. You can only delete a version when it's in the Pending state, meaning it hasn't been released yet. Not allowing deletion of released versions helps keep your SuiteApp's version history intact. To remove a released version from the SuiteApp Marketplace, see [Deprecating a SuiteApp Version](#).

To delete a SuiteApp version:

1. Go to Control Center > My SuiteApps > My SuiteApps.

2. Do one of the following:
 - For a SuiteApp, click  and select **Manage Versions**.
 - Click the SuiteApp name to view the SuiteApp details, then click the **Versions** tab.
3. Find the SuiteApp version by its version number in the Version History list. In the **Action** column, click **Delete**.

Warning: You can't undo deleting a version. But you can create another version with the same version number as the deleted one by uploading a SuiteApp archive with that project version.

To confirm, click **Delete**. The version is deleted from the Version History list and you'll see a confirmation that it was deleted.

4. (Optional) Click **Done** to close the SuiteApp details and go back to the My SuiteApps page.

Releasing a SuiteApp Version

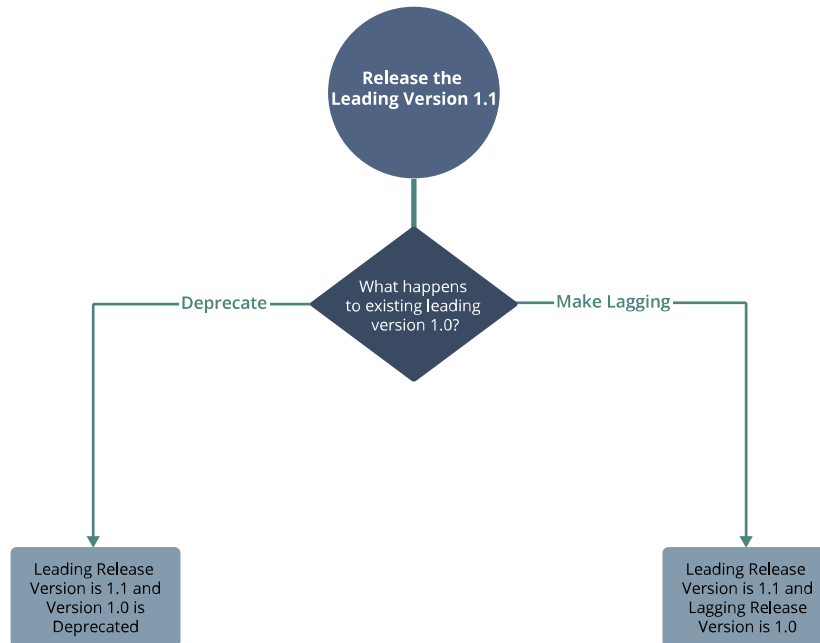

SuiteApps are made available on the SuiteApp Marketplace by releasing a version of the SuiteApp. To release a SuiteApp version, it has to be in the Pending state. For a SuiteApp to be available to users on the SuiteApp Marketplace, it must meet the publishing requirements. For information, see [Requirements for SuiteApp Marketplace Availability](#).

Keep these constraints in mind when releasing a SuiteApp version:

- Only two versions can be in the Released state at a time, one leading and one lagging. For more information, see [SuiteApp Version Phases](#).
- When you release the first version of a SuiteApp, it must be leading and can be any version number.
- When you release the second version of a SuiteApp (and the first version was released as leading), the second version also has to be leading, and its version number must be higher than the first.
- When releasing additional versions:
 - You can replace the previously released version by deprecating it. For more information about version states, see [SuiteApp Version States](#).
 - You can make the previous version the lagging version, which replaces and deprecates the old lagging version.
 - After removing the SuiteApp from the SuiteApp Marketplace, the new version you release must have a version number higher than the last deprecated version.
 - To release a version as leading, its version number must be higher than both the last leading and last lagging release versions.
 - To release a version as lagging, its version number must be higher than the last lagging version and lower than the last leading version.
 - Releasing the version as lagging also deprecates the existing lagging version.
- You can't release the first lagging version directly. To create it, release a new leading version and make the current leading version the new lagging version. After that, you can release lagging versions directly.
- You can't release the same version twice. If you need to make changes, release a new version. You can also deprecate released versions at any time. For more information, see [Deprecating a SuiteApp Version](#).
- After your users click Upgrade for an unmanaged SuiteApp, they might see a choice of SuiteApp versions if:

- Both SuiteApp versions support the account's current NetSuite version.
- Both available versions are newer than the current SuiteApp version the account has installed.

The following diagram shows an example of choices you can make when releasing a leading 1.1 version while a leading 1.0 version already exists:

To release a SuiteApp Version:

1. Go to Control Center > My SuiteApps > My SuiteApps.
2. Do one of the following:
 - For a SuiteApp, click  and select **Manage Versions**.
 - Click the SuiteApp name to view the SuiteApp details, then click the **Versions** tab.
3. In the **Version** column, find the SuiteApp version you want to release and click **Release**.

Keep the following in mind when releasing a leading or lagging version:

- If you're releasing a leading version and one already exists, you can do the following options with the existing version:
 - **Deprecate** deprecates the current leading version.
 - **Make Lagging** makes the current leading version the new lagging version and deprecates the old lagging version.
- If you're releasing a lagging version and one already exists, the current lagging version is deprecated.

To confirm, click **Release** in the Confirm Action popup window.

The SuiteApp version is released to the SuiteApp Marketplace, and the **Status** column is updated to Released. You'll see a confirmation that the release is successful.

Note: For a SuiteApp to be available to users on the SuiteApp Marketplace, it must meet the SuiteApp publishing requirements. For information, see [Requirements for SuiteApp Marketplace Availability](#).

4. (Optional) If it's a managed SuiteApp, you can push the SuiteApp version to the install base. For information, see [Pushing a SuiteApp Version Upgrade to Users](#).
5. (Optional) Click **Done** to close the SuiteApp details and go back to the My SuiteApps page.

Deprecating a SuiteApp Version

You can deprecate a released version when it is no longer needed. You might do this to stop users from installing the SuiteApp until a bug is fixed, or to end the SuiteApp's lifecycle.

Deprecated versions are removed from the SuiteApp Marketplace, so users can't install them until a new version is released. Anyone who already has the SuiteApp installed keeps that version until they uninstall it or a new version replaces it.

To deprecate a version:

1. Go to Control Center > My SuiteApps > My SuiteApps.
2. Do one of the following:
 - For a SuiteApp, click  and select **Manage Versions**.
 - Click the SuiteApp name to view the SuiteApp details, then click the **Versions** tab.
3. Find the SuiteApp version by its version number in the Version History list. In the **Action** column, click **Deprecate**.
To confirm, click **Deprecate**. The version moves to the Deprecated state and is no longer available on the SuiteApp Marketplace.
4. (Optional) Click **Done** to close the SuiteApp details and go back to the My SuiteApps page.

Viewing the SuiteApp Version History

The version history provides a single location to view and manage your SuiteApps.

Note: Deleted versions don't show up in the SuiteApp version history. For more information, see [Deleting a SuiteApp Version](#).

To view the SuiteApp version history:

1. Go to Control Center > My SuiteApps > My SuiteApps.
2. Do one of the following:
 - For a SuiteApp, click  and select **Manage Versions**.
 - Click the SuiteApp name to view the SuiteApp details, then click the **Versions** tab.

The Version History list appears and shows the following information:

- **Version** – is the version number, which is populated by the projectversion field value in the manifest of the SuiteApp project contained in the SuiteApp archive ZIP. For more information,

see [Creating a SuiteApp Version](#) and [Managing SuiteCloud Projects as Compressed Files in SuiteCloud IDE Plug-in for WebStorm](#).

- **Status** – is the current state of the version. For version states and their descriptions, see [SuiteApp Version States](#).
- **Phase** – shows the version phase, which can be Leading or Lagging. For information about those phases, see [SuiteApp Version Phases](#).
- **Minimal Required NetSuite Version** – is the minimum NetSuite version required for the install base to install this version of the SuiteApp.
- **Release Date** – is the date and time when the version was released, displayed in your current time zone.
- **Installation Count** – is the number of accounts that have a SuiteApp version installed.

Note: SuiteApp installations that failed validation aren't included in the total SuiteApp version installation count when the following scenarios occur:

- A SuiteApp installation failed validation during an install attempt when a user didn't have a SuiteApp version installed yet.
- A SuiteApp installation failed validation when a user tried to upgrade an existing SuiteApp. In this case, the installation count still includes the failed upgrade attempt in the previous SuiteApp version's count.

- **Action** – lists actions you can take on the version. See [SuiteApp Version Actions](#).

3. (Optional) Click **Done** to close the SuiteApp details and go back to the My SuiteApps page.

Terms of Service

You can add terms of service (ToS) to your SuiteApp and choose to require users to accept them before installing the SuiteApp. You can also update the SuiteApp's terms of service any time.

Defining SuiteApp Terms of Service

You can set terms of service for your SuiteApp by adding the text to the form on the Terms of Service tab on the SuiteApp details page.

To define SuiteApp-specific terms of service:

1. Go to Control Center > My SuiteApps > My SuiteApps.
2. Do one of the following:
 - For a SuiteApp, click  and select **Manage Terms of Service**.
 - Click the SuiteApp name to view the SuiteApp details, then click the **Terms of Service** tab.
3. In the form, enter the terms of service for using your SuiteApp.
4. If you want users to agree to the terms of service before installing, check the **Require acceptance prior to installation** box. When this is checked, users have to agree to the terms before they can install your SuiteApp.
5. Click **Update** to save your SuiteApp's terms of service.

Revising SuiteApp Terms of Service

You can update your SuiteApp's terms of service any time by editing the text in the form on the Terms of Service tab.

To revise SuiteApp-specific terms of service:

1. Go to Control Center > My SuiteApps > My SuiteApps.
2. Do one of the following:
 - For a SuiteApp, click  and select **Manage Terms of Service**.
 - Click the SuiteApp name to view the SuiteApp details, then click the **Terms of Service** tab.
3. In the form, edit the terms of service for your SuiteApp.
4. If you want users to agree to the terms of service before installing, check the **Require acceptance prior to installation** box. When this is checked, users have to agree to the terms before they can install your SuiteApp.
5. Click **Update** to save the your SuiteApp's terms of service.

Important: The system only stores the current version of Terms of Service (ToS) text. Previous ToS versions are not saved and you cannot access them. It is the responsibility of the SDN Partner to maintain and track changes to the ToS text by your organization.

SDF SuiteApp Installation and Upgrade

Your users can install any SuiteApp if it's shared to their accounts and supports their NetSuite account version. They can manually upgrade unmanaged SuiteApps or get upgrades automatically for managed SuiteApps. Upgrading a SuiteApp gives your users new customizations and settings that can help their organization.

For information about managing the installation and upgrade of your SDF SuiteApps, see the following topics:

- [Installing SDF SuiteApps](#)
- [Viewing SDF SuiteApp Installation Status](#)
- [Viewing the SDF SuiteApp Install Base](#)
- [Developing Managed SuiteApps](#)

You can also use SuiteScript to get information about installed bundles and SuiteApps. For more information, see the help topic [N/suiteAppInfo Module](#).

Installing SDF SuiteApps

Users can install SuiteApps from their accounts by going to the SuiteApp Marketplace. For information, see the help topics [SuiteApp Marketplace in NetSuite](#), [SuiteApp Installation](#) and [Requirements for SuiteApp Marketplace Availability](#).

The latest version of the SuiteApp that works with the user's NetSuite version shows up on the SuiteApp Marketplace. If the account's NetSuite version doesn't meet the minimum required version for the SuiteApp (leading or lagging), the latest SuiteApp version still appears but is labeled "Not compatible."

You can also use SuiteScript to get information about installed bundles and SuiteApps. For more information, see the help topic [N/suiteAppInfo Module](#).

- Note:** The administrator account shown in the Installed By column on the Installed SuiteApps page depends on the following:
- When you install a SuiteApp from the SuiteApp Marketplace, the Installed By column on the Installed SuiteApps page shows the administrator account that triggered the installation.
 - When you upgrade an unmanaged SuiteApp from the SuiteApp Marketplace, the Installed By column on the Installed SuiteApps page shows the administrator account that triggered the upgrade.
 - When a SuiteApp release manager upgrades a managed SuiteApp from the SuiteApp Control Center, the Installed By column on the Installed SuiteApps page shows the first active administrator on a target account. The administrator account can change with each managed upgrade.

- Note:** Installing from the SuiteApp Marketplace works the same for Sandbox and Release Preview accounts as for the parent account. For example, if you can install a SuiteApp from sCompId "12345", you can also install it from "12345_SB" and "12345_RP".

Viewing SDF SuiteApp Installation Status

You can view the SuiteApp status from the **Install Base** tab in the SuiteApp details. For information about viewing the install base, see [Viewing the SDF SuiteApp Install Base](#).

The SuiteApp status shows the current state of the SuiteApp workflow after you start an install, upgrade, or uninstall.

To view all the state transitions in SuiteApp workflow, see [SuiteApp Workflow](#).

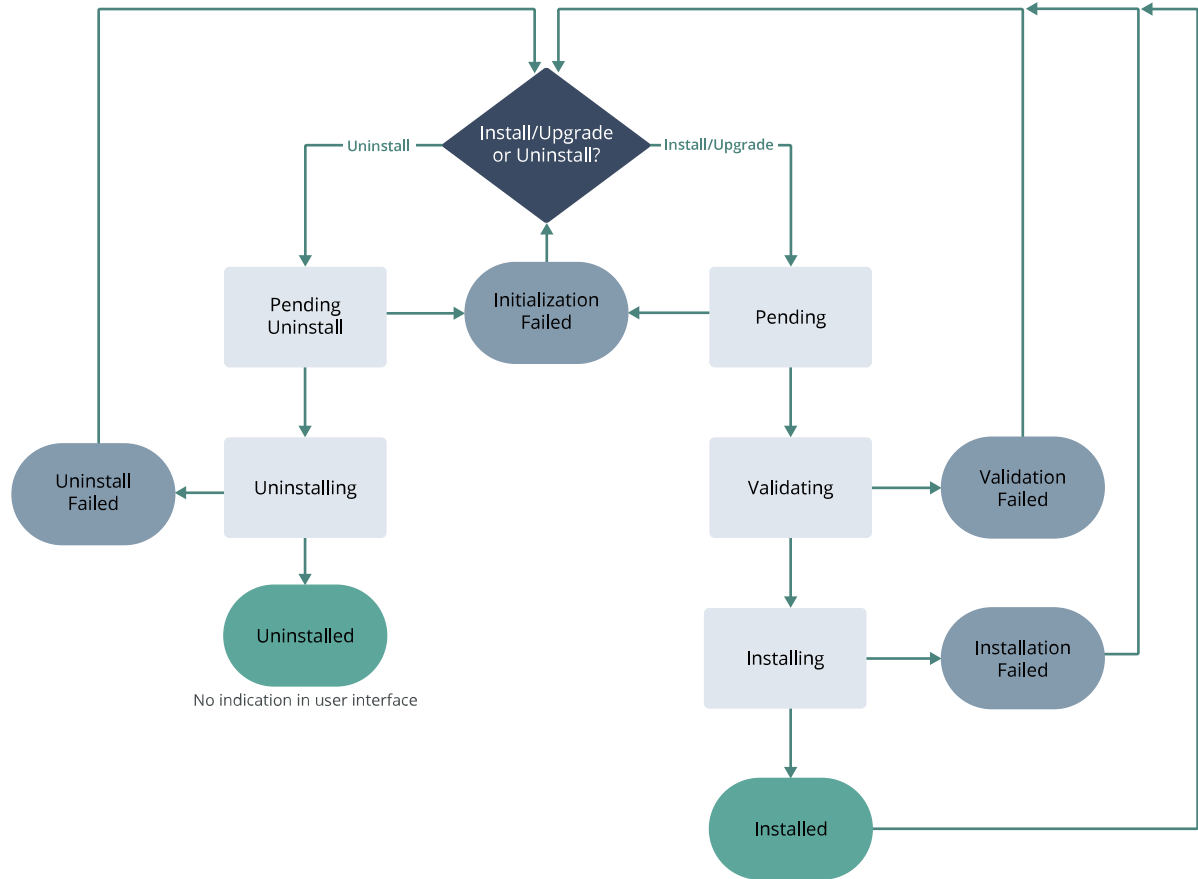

For definitions of each state in the workflow, see [SuiteApp States](#).

The following topics cover the installation, upgrade, and uninstall process:

- To install a SuiteApp, see [Installing SDF SuiteApps](#).
- To upgrade a SuiteApp, see [Pushing a SuiteApp Version Upgrade to Users](#).
- To view the upgrade status, see [Viewing SDF SuiteApp Upgrades](#).
- To uninstall a SuiteApp, see [Viewing and Uninstalling SuiteApps from a NetSuite Account](#).
- To view the version history, see [Viewing the SuiteApp Version History](#).

SuiteApp Workflow

Here are the possible states for a SuiteApp during the installation, upgrade, or uninstallation process:

SuiteApp States

The table below describes the possible states for a SuiteApp during the installation, upgrade, or uninstallation process:

Status	Description
Initialization Failed	Shows an error occurred, preventing one of the following: - A SuiteApp installation or upgrade was requested, but the initialization failed before the validation step. For more information, see Addressing SuiteApp Installation Failures. - A SuiteApp uninstall was requested, but the initialization failed before starting the uninstall. For information about the failure, consult the Deployment Audit Trail page. Documentation for that page is available in the Deployment Logs for SuiteCloud Projects.
Installation Failed	The SuiteApp failed to install. Check the installation log for more information. For information about the log, see Addressing SuiteApp Installation Failures .
Installed	The SuiteApp was installed successfully in the account. From here, you can request to upgrade or uninstall the SuiteApp.

Status	Description
Installing	The SuiteApp installation is in progress. If the SuiteApp successfully installs, it moves to the Installed state. If the SuiteApp fails to install, it moves to the Installation Failed state.
Pending	A request to install or upgrade the SuiteApp has started, but the installation hasn't begun yet. If the process is successfully initialized, the SuiteApp moves to the Validating state. If it fails, the SuiteApp moves to the Initialization Failed state.
Pending Uninstall	A request to uninstall the SuiteApp has started, but the uninstallation hasn't begun yet. If the process is successfully initialized, the SuiteApp moves to the Uninstalling state. If the initialization process fails, the SuiteApp moves to the Initialization Failed state.
Uninstalling	The SuiteApp uninstallation is in progress. If the SuiteApp successfully uninstalls, it's removed from the Installed SuiteApps list. If the SuiteApp fails to uninstall, it moves to the Uninstall Failed state.
Uninstall Failed	The SuiteApp failed to uninstall. Check the Deployment Audit Trail page for more information. For information about the page, see the help topic Deployment Logs for SuiteCloud Projects.
Validating	The SuiteApp install or upgrade process was initialized successfully and the SuiteApp contents are being validated. If the SuiteApp passes validation, it moves to the Installing state. If the SuiteApp fails validation, it moves to the Validation Failed state.
Validation Failed	The SuiteApp failed validation and didn't install. The target account is unchanged. Check the installation log for more information. For information about the log, see Addressing SuiteApp Installation Failures.
Failed	Shows an error has occurred. To view the error, click the tooltip icon (i).
Request Access	This SuiteApp isn't shared with your account. Please contact the SuiteApp publisher for more info.
Not Compatible	The NetSuite version for your account doesn't meet the minimal required version for the SuiteApp version.

Addressing SuiteApp Installation Failures

Users in your install base can view the installation log from their NetSuite Accounts. The installation log on the Deployment Audit Trail page helps with troubleshooting install, upgrade, and uninstall failures. For more information, see the help topic [Deployment Logs for SuiteCloud Projects](#).

Note: A SuiteApp can only be upgraded to a version with a higher number than what's currently installed. If the new version fails to install, you can try installing the same version again.

For information about SuiteApp validation errors, see the help topic [SuiteCloud Project Validation](#).

Viewing the SDF SuiteApp Install Base

You can see all company accounts that have installed a SuiteApp from one central spot in the SuiteApp details.

To view the SuiteApp install base:

1. Go to Control Center > My SuiteApps > My SuiteApps. The My SuiteApps page appears.
2. Do one of the following:

- For a SuiteApp, click  and select **Manage Install Base**.
- Click the SuiteApp name to view the SuiteApp details, then click the **Install Base** tab.

The Install Base panel appears and shows the following information:

- **Company ID** – is the company ID for the account that installed the SuiteApp.
- **Company Name** – is the company name for the account that installed the SuiteApp.
- **Account Type** – is the account type for the account that belongs to Install base and has the SuiteApp installed.

It can be one of the following:

1. Production
2. Release Preview
3. Sandbox
4. Development

For more information about NetSuite account types, see the help topic [Understanding NetSuite Account Types](#).

- **Status** – is the current SuiteApp installation status. For information about the list of statuses, see [Viewing SDF SuiteApp Installation Status](#).
- **SuiteApp Version** – is the version of the SuiteApp that matches the current SuiteApp status.
- **NetSuite Version** – is the NetSuite version for the account that installed the SuiteApp.
- **Last Updated** – is the date of the last successful SuiteApp installation or upgrade.

You can filter the list by:

- **Company** – filter by a company ID or company name. Enter a company ID or company name.
- **Status** – filter by installation status. Pick a status from the list. For information about SuiteApp installation status, see [Viewing SDF SuiteApp Installation Status](#).
- **SuiteApp Version** – filter by SuiteApp version. Select the version number from the list.
- **NetSuite Version** – filter by NetSuite version. Select the version number from the list.

3. (Optional) Click **Done** to close the SuiteApp details and go back to the My SuiteApps page.

You can also use SuiteScript to get information about installed bundles and SuiteApps. For more information, see the help topic [N/suiteAppInfo Module](#).

Viewing and Uninstalling SuiteApps from a NetSuite Account

Your install base can uninstall SuiteApps from the Installed SuiteApps page in their NetSuite accounts. For more information, see the help topic [Viewing and Uninstalling SDF SuiteApps in a NetSuite Account](#). For information about the states during the uninstall, see [Viewing SDF SuiteApp Installation Status](#).

Developing Managed SuiteApps

Managed SuiteApps let you control when SDF SuiteApps are upgraded in accounts. When a managed SuiteApp is installed, the installer agrees to subscribe to future upgrades. As upgrades are developed, the

SuiteApp release manager can install them into the accounts without the account admin needing to do anything.

One of the issues that solution providers face is ensuring that users of their SuiteApps apply upgrades as they become available. Managed SuiteApps allow you to upgrade SuiteApps in the accounts where they are installed whenever a new version is available.

Users who've installed a managed SuiteApp don't have to worry about updates; you, as the SuiteApp release manager, handle updates whenever you want. For managed SuiteApps, only a user with the SuiteApp Release Manager role can apply upgrades to the install base. For information about installing upgrades, see [Pushing a SuiteApp Version Upgrade to Users](#). To view current managed SuiteApp upgrades in progress, see [Viewing SDF SuiteApp Upgrades](#).

If you want your users to manually upgrade a SuiteApp in their accounts, choose Unmanaged when you create the SuiteApp definition in SuiteApp Control Center. For more information, see [Creating a SuiteApp Definition](#).

Note: Managed upgrades from SuiteApp Control Center aren't possible for Sandbox and Release Preview accounts. Users can see the upgrade button on the SuiteApp details page in the SuiteApp Marketplace.

Note: If the user that pushed a managed SuiteApp upgrade from the SuiteApp Control Center exists in the target account, the "Set By" column in system notes shows the internal ID of this user. If that user doesn't exist in the target account, this column shows the administrator that has the lowest internal ID in the target account.

Managed SuiteApps - Best Practices

Follow these practices when distributing managed SuiteApps:

- Develop a communication plan for your upgrades. You can push bug fix upgrades quickly and seamlessly without disturbing your install base. For new versions, be sure to communicate with your install base ahead of time.
- Avoid pushing upgrades during install base's peak hours.
- Be sure that SuiteApp upgrades don't overlap with the NetSuite phased release cycle if your upgrades rely on new features that are only available in the leading version.
- Be aware that the order in which scripts run in the source account is maintained when the SuiteApp is installed in target accounts. You can set up script execution order for client and user event scripts on the Scripted Records page, at Customization> Scripting > Scripted Records. See the help topic [The Scripted Records Page](#).
- Lock objects in managed SuiteApps to avoid clobbering customizations in target accounts.

Pushing a SuiteApp Version Upgrade to Users

Managed SuiteApps are upgraded in accounts by a Push operation performed on the SuiteApp version. Pushing the SuiteApp installs that SuiteApp version to accounts and replaces the previously existing version.

You can push a SuiteApp version upgrade to accounts in a couple of ways:

- [Pushing Upgrades From the Version History](#)
- [Pushing Upgrades From the Upgrades Tab](#)

Pushing Upgrades From the Version History

You can push upgrades to users from the version history of a managed SuiteApp.

To push upgrades from the version history:

1. Go to Control Center > My SuiteApps > My SuiteApps. The My SuiteApps page appears.
2. Do one of the following:
 - For a SuiteApp, click  and select **Manage Versions**.
 - Click the SuiteApp name to view the SuiteApp details, then click the **Versions** tab.
3. In the **Version** column, find the SuiteApp version you want to push, and click **Upgrade Install Base**. The New Upgrade page appears.

 **Note:** The **Upgrade Install Base** action is only available for managed SuiteApps. For more information, see [Developing Managed SuiteApps](#).

4. To change the version you want to push, pick one from the **SuiteApp Version** list. All released versions for the SuiteApp are available. Then, select the accounts you want to upgrade.
Before you pick accounts to upgrade, keep this things in mind:
 - To add a note about the upgrade, type it in the Memo field. Memos can be helpful when you're looking at upgrades on the Upgrades tab.
 - To filter the list of accounts available to upgrade, use this options:
 - **Company** – filter by company ID or company name.
 - **Status** – filter by installation status.
 - **SuiteApp Version** – filter by the SuiteApp version.
 - **NetSuite Version** – filter by the NetSuite version.
5. Select the accounts that are to receive the SuiteApp installation.
To push the SuiteApp version to the selected accounts, click **Push to Selected**.
Pushing the SuiteApp version replaces the version those accounts currently have installed. To confirm, click **Push** on the Confirm Action popup window.
The push starts for the selected accounts, and the SuiteApp installation status updates when the process begins. For information about the installation status, see [Viewing SDF SuiteApp Installation Status](#).
6. (Optional) Click **Done** to close the SuiteApp details and go back to the My SuiteApps page.

Pushing Upgrades From the Upgrades Tab

You can push new upgrades from the same place where you manage all upgrades.

 **Note:** The **Upgrades** tab is only available for managed SuiteApps. For more information, see [Developing Managed SuiteApps](#).

To push upgrades from the Upgrades tab:

1. Go to Control Center > My SuiteApps > My SuiteApps. The My SuiteApps page appears.
2. Do one of the following:

- For a SuiteApp, click  and select **Manage Upgrades**.
 - Click the SuiteApp name to view the SuiteApp details, then click the **Upgrades** tab.
3. Click **Create New**. The New Upgrade page appears.
 4. To change the version you want to push, pick one from the **SuiteApp Version** list field selection. All released versions for the SuiteApp are available. Then, select the accounts you want to upgrade.
Before you pick accounts to upgrade, keep these things in mind:
 - To add a note about the upgrade, type it in the Memo field. Memos can be helpful when you're looking at upgrades on the Upgrades tab.
 - To filter the list of accounts to upgrade, use this options:
 - **Company** – filter by company ID or company name.
 - **Status** – filter by installation status.
 - **SuiteApp Version** – filter by SuiteApp version.
 - **NetSuite Version** – filter by the NetSuite version.
 5. Select the accounts that are to receive the SuiteApp installation.
To push the SuiteApp version to the selected accounts, click **Push to Selected**.
Pushing the SuiteApp version replaces the version those accounts currently have installed. To confirm, click **Push** on the Confirm Action popup window.
The push starts for the selected accounts, and the SuiteApp installation status updates when the process begins. For information about the installation status, see [Viewing SDF SuiteApp Installation Status](#).
 6. (Optional) Click **Done** to close the SuiteApp details and go back to the My SuiteApps page.

Viewing SDF SuiteApp Upgrades

You can view information about the managed SuiteApp upgrades that are currently in progress. The status of each Push Upgrade operation is available, as well as the upgrade status of individual accounts.

To view SuiteApp upgrades:

1. Go to Control Center > My SuiteApps > My SuiteApps. The My SuiteApps page appears.
2. Do one of the following:
 - For a SuiteApp, click  and select **Manage Upgrades**.
 - Click the SuiteApp name to view the SuiteApp details, then click the **Upgrades** tab.

 **Note:** The **Manage Upgrades** action and **Upgrades** tab are only available for managed SuiteApps. For more information, see [Developing Managed SuiteApps](#).

Each row of the table represents a single SuiteApp version upgrade that was pushed to a selection of accounts. Here's what you'll see for each upgrade:

- **Version** – is the SuiteApp version being pushed to the accounts. Each selected account gets upgraded to this version.
- **Accounts** – is the number of accounts getting the SuiteApp upgrade. Click the number to see details for each account. For more information, see [Upgrade Details for Each Account](#).
- **Errors** – is the number of errors from the upgrade, if any. Click the number to see error details for each account. For information about the account upgrade details, see [Upgrade Details for](#)

[Each Account](#). For information about resolving errors, see [Addressing SuiteApp Installation Failures](#).

- **Started** – is the time the push operation started the upgrades.
- **Finished** – is the time the last account finished the upgrade. This field is empty if there are still accounts in the upgrade queue.
- **Status** – is the current status of the push operation. Possible statuses are:
 - **Complete** – the push operation finished for the selected accounts. Even if the push is complete, some individual upgrades might have failed. To view errors for individual upgrades, check the Errors column.
 - **Pending** – the push operation hasn't started processing the SuiteApp upgrades for the selected accounts yet.
 - **Installing** – the installation is in progress to upgrade the SuiteApp for the selected accounts.
 - **Error** – the push operation returned an error. Click the number in the Accounts or Errors column to see details for each account.

You can see detailed states for the SuiteApp upgrade in the SuiteApp Version History and Installed SuiteApps pages. For more information, see [Viewing SDF SuiteApp Installation Status](#).

- **Memo** – is the note added by the release manager when the upgrade was pushed.
- **View Details** – takes you to the Upgrade details page for the current push operation.

3. (Optional) Click **Done** to close the SuiteApp details and go back to the My SuiteApps page.

Upgrade Details for Each Account

The Upgrades page shows upgrade details for each account that go the upgrade.

Here's what you'll see for the upgrade operation:

- **Version** – is the SuiteApp version that was pushed to the accounts.
- **Started** – is the date and time the push operation started the upgrades.
- **Finished** – is the time the last account finished the upgrade. This field is empty if there are still accounts in the upgrade queue.
- **Created By** – is the release manager who started the upgrade.
- **Memo** – is the note added by the release manager when the upgrade was pushed.

Here's what you'll see for each account:

- **Company Name** – is the company name for the account that installed the SuiteApp.
- **Company ID** – is the company ID for the account that installed the SuiteApp.
- **Status** – is the current status of the SuiteApp upgrade for the account.
 - **Complete** – the push operation finished for the selected accounts. Even if the push is complete, some individual upgrades might have failed. Check the Errors column for details.
 - **Pending** – the push operation hasn't started processing the SuiteApp upgrades for the selected accounts yet.
 - **Installing** – the installation is in progress to upgrade the SuiteApp for the selected accounts.
 - **Error** – the upgrade returned an error. To view the error, click the exclamation mark icon (⚠). For information about resolving errors, see [Addressing SuiteApp Installation Failures](#).
- **Started** – is the time the SuiteApp upgrade started for the account.

- **Finished** – is the time the SuiteApp upgrade finished for the account.
