This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. SuiteBilling Overview

SuiteBilling is a collection of features you can use to create subscriptions for your customers. You can create subscriptions to sell services or non-inventory items over time. SuiteBilling isn't for the sale of physical inventory items.

You use SuiteBilling to:

- Create subscription plans, price books, subscriptions, and price plans
- Set up usage and rating, including tier minimums, maximums, included usage, and an included usage multiplier
- Renew an existing subscription
- Modify an existing or renewal subscription by using a change order
- Access billing accounts, charge records, and billing operations

SuiteBilling integrates with [Revenue Recognition for SuiteBilling](#).

SuiteBilling Terminology

The following terms are used when referring to SuiteBilling:

- **Billing Account:** Shows customer or subcustomer billing information, including the billing schedule, bill-to address, ship-to address, and currency.
- **Billing Operation:** Automates the process of rating and invoicing charges.
- **Change Order:** Changes the status of a subscription or subscription line items. For example, a change order would change a subscription from **Pending Activation** to **Active** status.
- **Charge-Based Billing:** Creates charges to bill customers. Examples include project milestones, travel expenses, and time entered.
- **Price Plan:** Sets item prices, including volume or tiered pricing. You enter amounts in price plans. Price plans are defined in a price book.
- **Price Book:** Defines pricing for a collection of items or services that are sold as part of a subscription plan. A single subscription plan can be associated with multiple price books. Price plans are defined in a price book.
- **Ratable Event:** Tasks on a subscription line item that affect charge calculations. Examples of actions that cause ratable events include:
 - Activating, suspending, terminating, renewing and reactivating a line item
 - Modifying quantities, pricing, and rates on a line item
 - Saving a change order
- **Rating:** Creating charges for subscription line items. NetSuite calculates charges for subscription line items using their quantities, pricing shown in the price plan and price book, the usage and effective date of the subscription, and the status of the subscription and its line items. To set and change the status of subscription line items, use a change order. For details, see [Managing Rating Runs](#).
- **Subscription:** Includes the items being sold and the price and quantity for each item. A subscription is specific to one customer.
- **Subscription Plan:** A template of all the items sold as part of a subscription. The subscription plan includes price book information and renewal information. A subscription plan would also show possible bundles a company offers to its customers.

- **Usage:** Defines the subscription line item charge for a consumable resource, like money, time, software licenses, or internet data. For instance, a mobile phone service subscription may have a line item for a monthly fee. The monthly fee includes a specific amount of minutes or data in your customer's plan. When this included amount is exceeded, additional charges may apply. Using commit plus overage line types, you can charge in advance for a committed usage quantity and charge for overage if more than the committed quantity is used. In NetSuite, you account for the usage amount included in a subscription when creating the subscription plan.

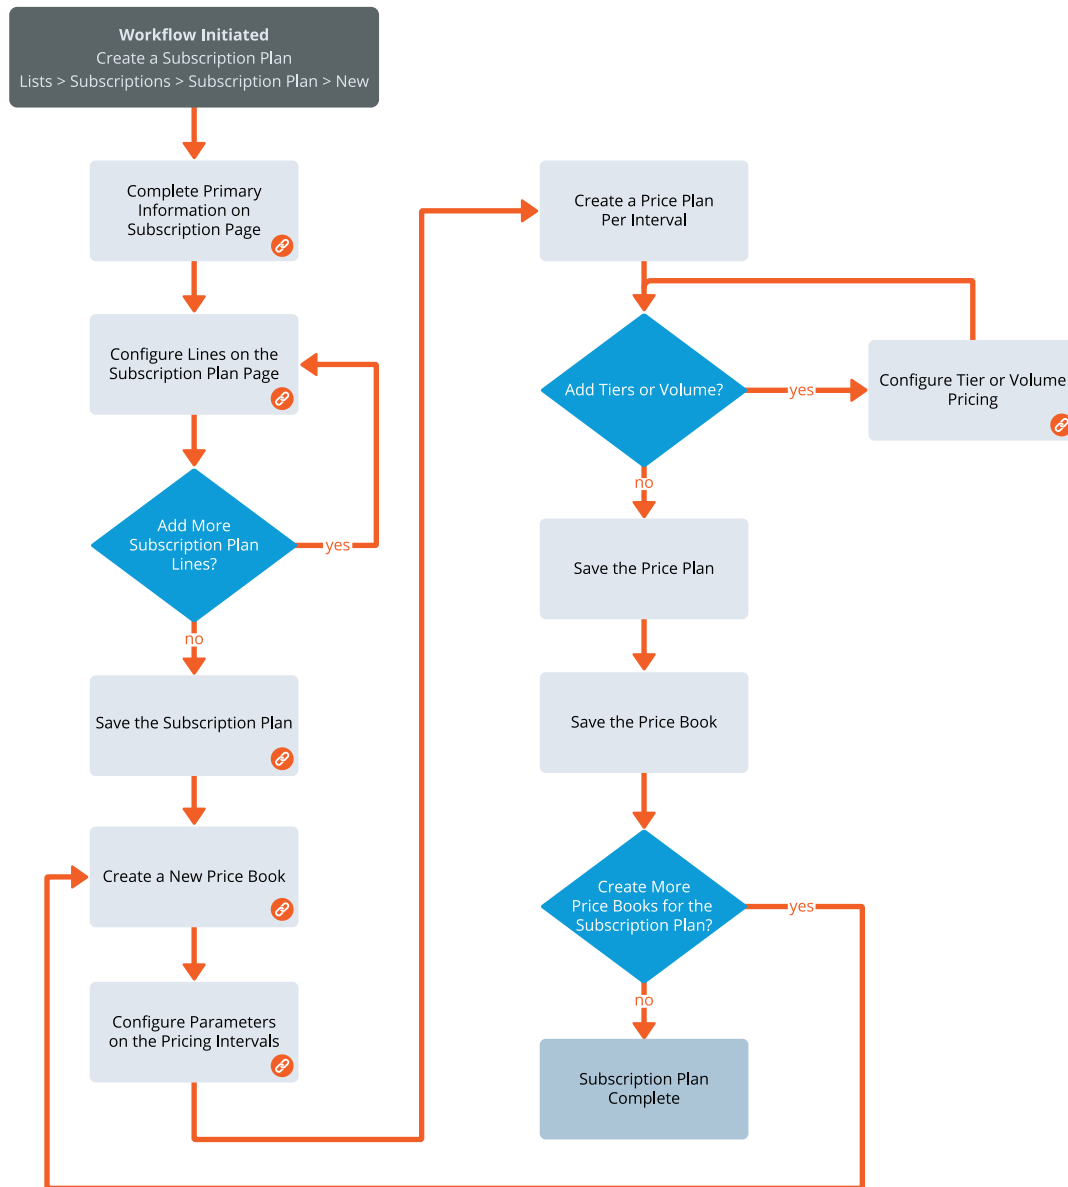

SuiteBilling Process Diagrams

This section includes high-level overview diagrams of some of the most common SuiteBilling tasks as follows.

- [Subscription Plan Creation](#)
- [New Stand-Alone Subscription Creation](#)
- [Subscription Creation from a Sales Order](#)
- [Renew and Extend a Subscription from a New Subscription Record](#)
- [Renew a Subscription with a New Subscription Record](#)

Subscription Plan Creation

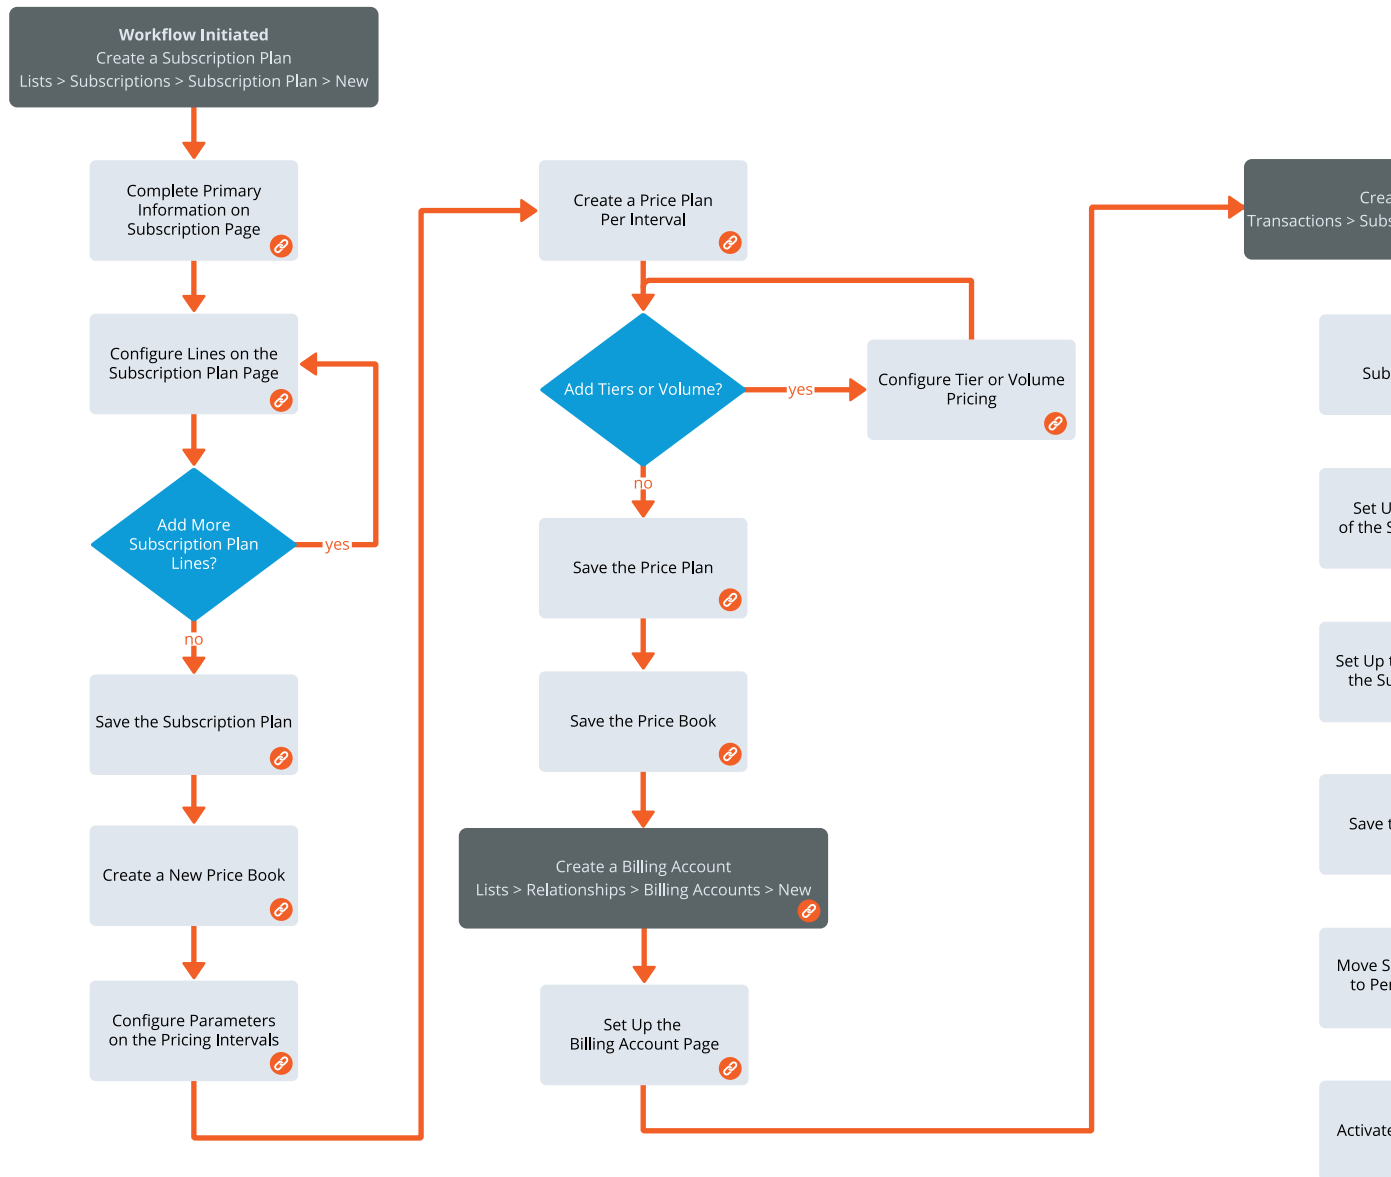

The following diagram shows how to create a new subscription plan. Click a link icon to open the instructions for a process in the diagram.

New Stand-Alone Subscription Creation

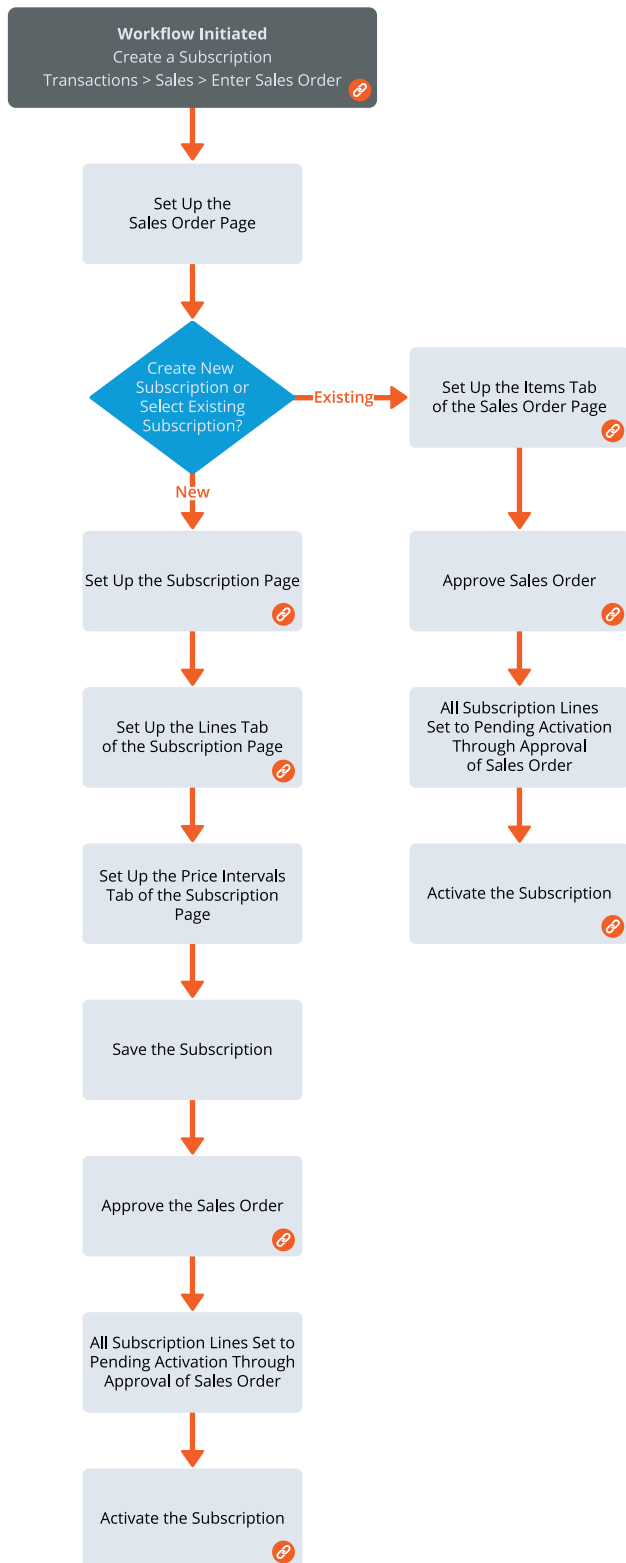

To create a subscription, you need to create and set up its components. Subscription components are items, a price plan, a price book, a subscription plan, and a billing account. The following diagram shows how to create a new subscription. Click a link icon to open the instructions for a process in the diagram.

You can create a new, stand-alone subscription without using an existing transaction or subscription. For the instructions about creating a subscription without using an existing transaction or subscription, see [Creating a New Stand-alone Subscription](#).

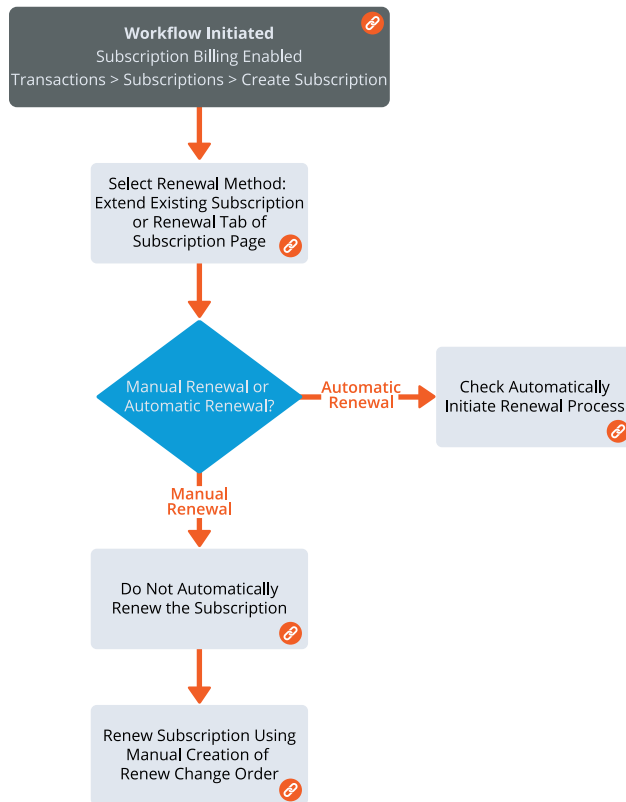

Subscription Creation from a Sales Order

The following diagram shows how to create a subscription when using the Sales role. Use this workflow to create a new subscription from a new subscription record, subscription plan, and price book from a transaction. Click a link icon to open the instructions for a process in the diagram.

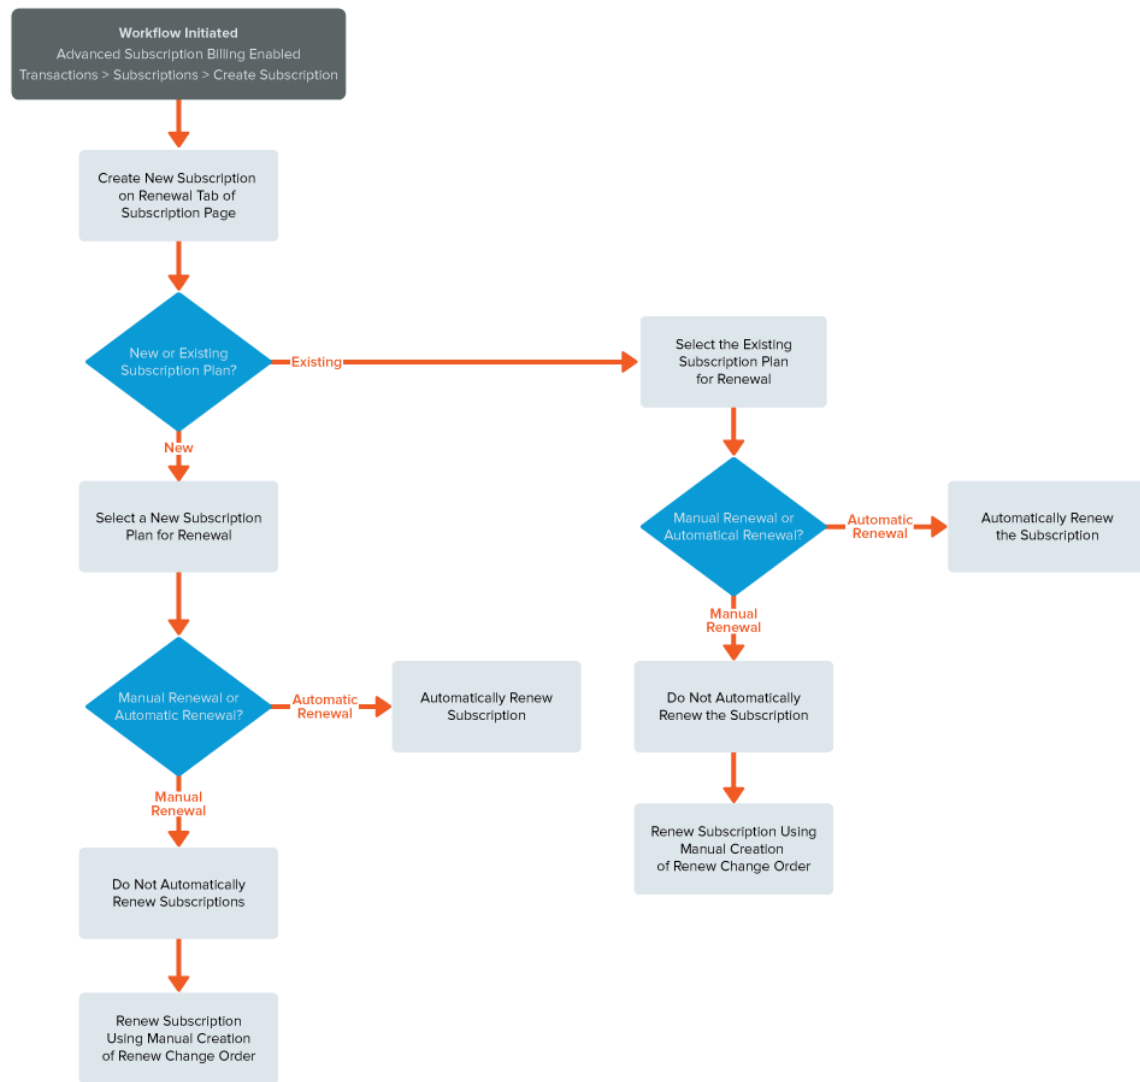

Renew and Extend a Subscription from a New Subscription Record

The following diagram shows how to renew and extend a subscription by extending the date of an existing subscription. Click a link icon to open the instructions for a process in the diagram.

Renew a Subscription with a New Subscription Record

The following diagram shows how to renew a subscription by creating a new subscription record, with either a new or existing subscription plan. Use this workflow to renew a subscription with a new subscription record. For the instructions for this process, see [Renewing a Subscription](#).

SuiteBilling Roles and Permissions

The following table lists the SuiteBilling permissions and levels for each standard role. The Center Type column shows the associated center for the role. Navigation from Center shows the menu path from each center to Subscriptions. When you use the classic interface, you access subscription-related records from the Transactions menu, Subscriptions group.

Role	Center Type	Navigation from Center	Subscription Plan	Subscriptions	Price Book	Price Plan	Subscription Change Order	Usage
A/P Clerk	Accounting Center	Financial > Subscriptions	Full	None	Full	Full	None	Full
A/R Clerk	Accounting Center	Billing > Subscriptions	Full	Edit	Full	Full	Edit	Full
Accountant	Accounting Center	Billing > Subscriptions	Full	Edit	Full	Full	Edit	Full
Accountant (Reviewer)	Accounting Center	Billing > Subscriptions	View	View	View	View	View	View

Role	Center Type	Navigation from Center	Subscription Plan	Subscriptions	Price Book	Price Plan	Subscription Change Order	Usage
Advanced Partner	Advanced Partner Center	Client > Other Transactions	Full	Full	Full	Full	Full	Full
Bookkeeper	Accounting Center	Billing > Subscriptions	Full	Edit	Full	Full	Edit	Full
CEO	Executive Center	Sales > Marketing > Lists	Full	Full	Full	Full	Full	Full
CEO (Hands Off)	Executive Center	Sales > Marketing > Lists	View	View	View	View	View	View
CFO	Accounting Center	Billing > Subscriptions	Full	Full	Full	Full	Full	Full
Sales Administrator	Sales Center	Customers > Subscriptions	View	Full	Full	Full	Full	View
Sales Manager	Sales Center	Customers > Subscriptions	View	Full	Full	Full	Full	View
Sales Person	Sales Center	Customers > Subscriptions	View	Full	Full	Full	Full	View
Sales Vice President	Sales Center	Customers > Subscriptions	View	View	View	View	View	View
Support Administrator	Support Center	Cases > Other Lists	View	Full	View	View	Full	View
Support Manager	Support Center	Cases > Other Lists	View	Edit	View	View	Edit	View
Support Person	Support Center	Cases > Other Lists	View	Edit	View	View	Edit	View
System Administrator	System Administration Center	Lists > Relationships	Full	Full	Full	Full	Full	Full
Warehouse Manager	Shipping Center	Sales/Marketing > Lists	View	None	View	View	None	None
Consultant	Project Center	use global search	None	View	View	View	View	None
Marketing Administrator	Marketing Center	Customers > Subscriptions	View	Full	View	View	Full	None
Marketing Assistant	Marketing Center	Customers > Subscriptions	View	Full	View	View	Full	None
Marketing Manager	Marketing Center	Customers > Subscriptions	View	Full	View	View	Full	None
PM Manager	Support Center	Cases > Other Lists	None	Full	View	View	Full	None
Partner Center	Partner Center	Client > Other Transactions	None	Edit	View	View	Edit	None
Product Manager	Support Center	Cases > Other Lists	None	Full	View	View	Full	None
Resource Manager	Support Center	Cases > Other Lists	View	Full	View	View	Full	View
Store Manager	E-Commerce Management Center	Sales > Other Transactions	View	Edit	View	View	Edit	View
Customer Center	Customer Center	Customer Center Home Page	None	View	None	View	View	None

Note: The Navigation From Center column shows one path, but more paths may be available. For example, A/P clerks can access Subscriptions from Financial and from Customers.

The standard roles available in your account vary based on your purchased modules and enabled features. The roles available in your account are at Setup > Users/Roles > Manage Roles. To review a role's details, click its link on the Manage Roles page.

For more information about roles and permissions, see the [Standard Roles Permissions Table](#).

Default Permissions for Subscription Records

By default, you have permission to view subscription records. Create and Edit are optional permission levels. Roles with full permission can perform these actions:

- View
- Create
- Edit
- Delete

All roles can view or edit these records:

- Price book
- Price plan
- Subscription change order

Customized roles keep their existing permissions for subscriptions and subscription plans when new permissions are given.

System Administrators can grant full permissions to subscription records. Only System Administrators can set up custom records and templates for SuiteBilling subscription processes and grant access to them. For instructions on granting permissions to subscription processes, see the help topic [Setting Permissions](#).

SuiteBilling Change Orders

Change orders are a key part of SuiteBilling. To edit an active subscription or its components, you use a change order. There are specific change orders for each subscription record type.

Change orders modify a subscription's or line item's status. For example, an activation change order moves a subscription from the Pending Activation status to the Active status. You can use a change order to suspend, renew, or terminate a subscription, or change prices, quantity, or discount.

Here are the rules for change orders:

- Change orders take effect on the Effective Date.
- Changes happen at the start of the day, except the terminate change order takes effect at the end of the day.
- Change orders can be created in any order, if a later change order doesn't conflict with an earlier one. For example, you can't create a Reactivation change order for a subscription or line item that's already active. You can't create a Modify Pricing change order on a subscription line item that's Suspended. Likewise, you can't terminate a subscription or line item that has a Suspend or Modify change order with a later effective date.
- You can have only one change order of a specific type per subscription line item per date. For example, you can't have more than one activation change order for the same subscription line item and date.

The following table includes change order types and their descriptions.

Change Order	Description
Activation	An activation change order begins a subscription. New subscriptions start in the Draft or Not Included status. The Not Included status occurs when you have optional items in the subscription

Change Order	Description
	plan that aren't included in the subscription. After you set line items to Pending Activation, you activate the subscription or subscription line items by submitting the activation change order. You can set the activation date to a past or future date. Activate dependent line items at the same time. For example, a cell phone subscription includes data usage. The amount of data included in the subscription is multiplied by the number of phones in the subscription. The included quantity multiplier is the item for the number of phones. In this case, both line items must be activated at the same time. NetSuite generates charges based on the specified activation date. You can delete activation change orders. Deleting an activation change order deletes associated charges, and the subscription reverts to the Pending Activation status. However, when there are other change orders associated with the subscription, you can't delete the activation change order. For instructions on how to activate a subscription, see Activating a Subscription.
Modify Pricing	A modify pricing change order changes pricing tiers, rates, percent uplift, discounts, and the quantity of active subscription line items. A modify pricing change order's effective date must be after its activation date. Saving a modify pricing change order automatically updates charges to reflect the changes you made. Modify pricing change orders can be deleted. Deleting a modify pricing change order removes the changes made to charges as part of that order. For instructions on how to create a modify pricing change order, see Modifying Pricing. To change to off-cycle pricing, which prorates pricing charges mid-cycle, see Off-Cycle Invoicing with Modify Pricing Change Orders.
Suspend	A suspend change order temporarily suspends a subscription or subscription line item until it's reactivated. You can apply a suspend change order to any number of subscription line items. If you suspend a usage line item, you also must suspend the associated usage multiplier line item. You can't suspend or terminate any line items or subscriptions that are already suspended. Suspended subscription lines aren't billed until they are reactivated. To make changes to a suspended subscription or line item, first reactivate it. You can terminate a line item or subscription that is in the Suspend status using a terminate change order. For instructions, see Suspending a Subscription Line Item.
Reactivate	A reactivate change order restores a suspended subscription or subscription line item. The subscription or line item is reactivated on the effective date and changes to the Active status. For instructions, see Reactivating a Subscription Line Item.
Renew	A renew change order restarts a subscription at the end of its term. You can't delete a renew change order, but you can edit them before their renewal start date. You use a renew change order to create a new subscription or extend an existing subscription. For more information about the different types of subscription renewals, see Renewing a Subscription.
Terminate	A terminate change order ends a subscription line item at the end of the day on the specified effective date. A subscription line item can be terminated only if it's status is Active, Pending Activation, or Suspend. After a terminate change order is saved, no further change orders can be applied to the subscription line item after the termination effective date. Backdating a terminate change order prevents editing or deleting the change order. You can still make changes before the termination effective date. For instructions, see Terminating a Subscription Line Item.

Renaming SuiteBilling Records

You can rename the following SuiteBilling records to better suit your specific business needs:

- Subscription
- Subscription Change Order
- Subscription Plan

When you rename a record, the new name replaces the original name in the NetSuite user interface. For example, after you change the name "subscription" to "contract," you go to Transactions > Contracts > Create Contracts instead of Transactions > Subscriptions > Create Subscriptions. The new name is also used in searches and results. However, it doesn't appear in Help Center searches or topics. The new record name is also used in reports, Key Performance Indicators (KPIs), error messages, and alerts.

 **Note:** If you change the name "subscription" to "contract," the feature name doesn't change at Setup > Company > Enable Features. The same is true with any information or error message on the Enable Features page.

Renaming the subscription record also renames its item and term records. For example, changing the name "subscription" to "contract" updates the item record to "contract item" and the term record to "contract term." Renaming change orders or subscription plans doesn't affect other record names.

To learn SuiteBilling change order fundamentals, see [SuiteBilling Change Orders](#).

For specific details and more information about renaming records in NetSuite, see the help topic [Change Record and Transaction Names](#). To learn more, view the video:

 [Renaming Billing Records](#)

To rename a SuiteBilling record:

1. Go to Setup > Company > Rename Records/Transactions.
2. Edit the names of the subscription billing records. For example, in the **Name for Subscription** field, you can change **Subscription** to **Contract**.
3. When you have finished renaming records, click **Save**.

To rename a SuiteBilling record in multiple languages:

1. If you use multiple languages in your account, set your language preference:
 - a. Go to Home > Set Preferences.
 - b. In the Localization section, from the Search Sorting list, select your language preference.
2. Repeat this process for each language in your account.

Maximum Values in SuiteBilling

The maximum number you can enter in the Quantity column of several NetSuite records is 9,999,999,999.99999999. Quantities over one billion cause an error. These records have this maximum quantity limit:

- Subscription record's Pricing subtab
- Items on a subscription Modify Pricing Change Order
- Sales Order
- Invoice
- Credit Memo
- Charge

To learn SuiteBilling change order fundamentals, see [SuiteBilling Change Orders](#).

Maximum Limit on Lines

The Subscription user interface has a 200-line limit. If you exceed the limit, it may slow loading after actions such as Create, Edit, and Save.

Decimal Precision in SuiteBilling

SuiteBilling's Price, Quantity, and Discount fields show up to eight decimal places. Values with more than eight decimal places in these fields are rounded to the eighth decimal place. These fields are on:

- Modify pricing change orders
- Renewal change orders
- Subscription change orders (activate, suspend, reactivate, terminate)
- **Price Book** subtab of subscription plans
- Price books
- Price plans
- Subscriptions
- Subscription Pricing subtab

To learn SuiteBilling change order fundamentals, see [SuiteBilling Change Orders](#).

Rounding to eight decimal places is particularly useful for usage and high-volume products. NetSuite uses eight decimal places for subscription rating calculations until the final charge is determined.

Charge amounts and precision depend on your account currency, and invoices show the amounts in that currency. Charge-based billing may show a blended rate. To add to or edit your account currencies, see [Currencies](#).

Uplift Has Higher Decimal Precision

Uplift fields support seven decimal places for precise uplift values and accurate prices.

Subscription Total Contract Value Metrics

The subscription's Summary section shows its total contract value metrics.

- **Total Active Contract Value** – Includes the total amount of all subscription lines with an activation change order.
- **Pending Total Contract Value** – Includes the total amount of all subscription lines with a pending activation status.
- **Total Active One-Time** – One-time service lines with an activation change order.
- **Total Active Recurring** – Recurring service lines with an activation change order.
- **Total Active Usage** – Usage service lines with an activation change order. This value increases even when drawing down a prepaid amount.
- **Total Active Commit Plus Overage** – Commit plus overage service lines with an activation change order. The amount includes both the committed amount and each overage charge, but they aren't shown separately.
- **Total Active Prepaid Amount** – Prepaid lines with an activation change order. When the prepaid amount is drawn down, this value doesn't decrease.

An example of the Total Contract Value Summary is shown in the following image.

Summary	
Active Total Contract Value	\$77,706.39
Pending Total Contract Value	\$0.00
Total Active One-Time	\$2,392.00
Total Active Recurring	\$74,507.40
Total Active Usage	\$0.00
Total Active Commit Plus Overage	\$558.00
Total Active Prepaid Amount	\$248.99

Lines in the Draft status aren't included in the Summary section. You can access these metrics through SuiteAnalytics, REST, SuiteScript, and Saved Search, but not legacy reports. The values change when rating is finished. If you're inserting usage records, the subscription summary value doesn't update until the rating process is done. Each subscription line shows its individual total amount.

Revenue Recognition for SuiteBilling

SuiteBilling works with Advanced Revenue Management (Essentials) and Advanced Revenue Management (Revenue Allocation) when you enable all three features. After setup, each subscription line generates a revenue element. The revenue arrangement for the subscription includes all revenue elements from its subscription lines.

Subscription lines don't make revenue elements when the Advanced Revenue Management (ARM) in Configuration Mode feature is enabled. You must disable this feature before creating revenue arrangements for subscriptions. However, you can still set up advanced revenue recognition for SuiteBilling while ARM is in Configuration Mode. For more information, see the help topic [Advanced Revenue Management in Configuration Mode](#).

Checking the Create Revenue Elements for Subscription Revisions box also triggers modification elements and revenue arrangements for subscription revisions. For more information, see [Setting the Optional Accounting Preference for Advanced Revenue Management](#).

You can use the Create Revenue Element for Subscription Revision preference with the commit plus overage feature. For instructions on using commit plus overage, see [Commit Plus Overage Charges](#).

Note: When you check the **Create Revenue Elements for Subscription Revisions** box, be sure to merge modification elements with the subscription revenue arrangements for accurate accounting. For information, see the help topic [Combination and Modification of Performance Obligations](#).

All ARM processes, Essentials and Revenue Allocation, are available for SuiteBilling. For information about Advanced Revenue Management, see the help topic [Advanced Revenue Management \(Essentials\) and \(Revenue Allocation\)](#).

The following topics have detailed information about setting up advanced revenue recognition for SuiteBilling:

- [Revenue Recognition Rules for SuiteBilling](#)
- [Calculations for Revenue Plans Created on Subscription Events](#)
- [Revenue Allocation for One-Time and Recurring Subscription Lines](#)

After you configure ARM for SuiteBilling, complete the additional month-end recognize revenue steps. Here are the basic month-end revenue recognition processes:

1. Create revenue recognition journal entries. You can schedule this process. For details, see the help topic [Revenue Recognition Journal Entries](#).
2. Reclassify deferred revenue. You can also schedule the reclassification process. For details, see the help topic [Reclassification of Deferred Revenue](#).
3. Recalculate revenue forecast plans. See the help topic [Recalculating Revenue Forecast Plans](#).
4. Run and save the Deferred Revenue Waterfall Report. See the help topics [Run and Save the Deferred Revenue Waterfall Report](#) and the linked topics for the individual reports.

Revenue Recognition Rules for SuiteBilling

Note: The information in this topic applies whether you check the **Create Revenue Elements for Subscription Revisions** accounting preference, except where the accounting preference is clearly identified.

NetSuite has the following default revenue recognition rules for SuiteBilling. You select revenue recognition rules on the item record. For more information, see [Configuring Subscription Items for Revenue Recognition](#) and [Creating Items for Subscription Plans](#).

The following table matches the revenue recognition rules to the rate plans of the subscription line types:

Subscription Line Type	Revenue Recognition Rule
Recurring – Adjustable	Depends on whether the Create Revenue Elements for Subscription Revisions accounting preference is checked: ■ When checked, use Default Fixed Recurring Fee ■ When clear, use Default Adjustable Recurring Fee
Recurring – Fixed	Default Fixed Recurring Fee
One Time	Default Fixed Recurring Fee
Usage	Default Usage
Commit Plus Overage	Commitment: ■ Default Adjustable Recurring Fee – When revenue should be spread evenly but be based on each usage event ■ Default Fixed Recurring Fee – When revenue should be spread evenly regardless of the usage events created ■ Default Usage – When revenue should recognize only when a usage event was created or is used at the end of each period

You can rename these default revenue recognition rules, but you can't change their settings. The default values for these fields are in the following table. For more information about the revenue recognition rules, see the help topic [Revenue Recognition Rules](#).

Revenue Recognition Rule	Recognition Method	Amount Source	Rev Rec Start Date Source	Rev Rec End Date Source
Default Adjustable Recurring Fee	Straight-line, prorate first and last period (period-rate)	Event-Percent based on amount	Subscription Event Start Date	Subscription Event End Date

Revenue Recognition Rule	Recognition Method	Amount Source	Rev Rec Start Date Source	Rev Rec End Date Source
Default Fixed Recurring Fee	Straight-line, prorate first and last period (period-rate)	Event-Percent based on amount	Revenue Element Start Date*	Revenue Element End Date*
Default Usage	Straight-line, prorate first and last period (period-rate)	Event-Percent based on amount	Event Date	Event Date

* To generate revenue plans using these values, you usually enter the **Start Date** and **End Date** in the revenue element. However, when the revenue element source is a subscription, these dates are automatically taken from the subscription lines. For evergreen subscriptions, there is no end date, so the Estimated Revenue Recommended End Date field on the subscription header is used instead.

SuiteBilling's default revenue recognition rules don't use Event-Percent based on quantity as the amount source. This amount source isn't suitable for SuiteBilling.

When the credit memo doesn't have a linked subscription charge, the item record's revenue recognition rule is ignored. Instead, Advanced Revenue Management (Essentials) uses the rule you select with the **Default Standard Revenue Recognition Rule** accounting preference to generate the revenue plan for the credit memo line. For information about accounting preferences for revenue recognition, see the help topic [Setting Advanced Revenue Management \(Essentials\) Preferences](#).

Usage service line types don't create revenue plans until the bill run is executed because usage is calculated during the rating process. Forecasting and reforecasting aren't available for subscription lines with usage. For information about reforecasting, see the help topic [Recalculating Revenue Forecast Plans](#).

Recognition Treatment Rules for SuiteBilling

A recognition treatment rule sets the criteria for applying a recognition treatment to a revenue element. Each rule must specify a recognition treatment. The treatment rule look-up process checks the rules to see if a recognition treatment should be applied to a revenue element.

For each treatment rule, you can define criteria using these subscription line types:

- Commit
- Overage
- One-Time
- Recurring
- Usage

After treatment rules are set up, if the criteria match for each revenue element generated, the treatment rules override the item setup. This allows for different treatment rules between each type of element generated. For more information, see the help topic [Recognition Treatment Rule Management](#).

Note: When using commit plus overage subscription line types, it's key to use treatment rules with any rule except default usage.

Commit Plus Overage Charges

You can use the commit plus overage line type to charge in advance for a set number of committed usage units per period at a specific price. Any additional units over the committed quantity are charged at a different price as overage. The commitment charge period and overage charge period can differ,

such as an annual commitment with monthly overage. Overage can't have a charge period greater than the commitment charge period. Commit plus overage arrangements can be prospectively merged when using delta element functionality.

Calculations for Revenue Plans Created on Subscription Events

Note: This topic describes what happens when you clear the **Create Revenue Elements for Subscription Revisions** accounting preference. When you check the preference, the **Create Revenue Plans On** field, the preferred value is Revenue Arrangement Creation for all subscription items except usage items. For setup instructions and more details, see [Setting the Optional Accounting Preference for Advanced Revenue Management](#).

Warning: After you set the **Create Revenue Elements for Subscription Revisions** preference, you can't change it.

For Recurring – Adjustable, Usage, and Commit Plus Overage subscription line types, the preferred value for the Create Revenue Plans On field is Subscription Events. When a subscription event starts creating a revenue recognition plan, the forecast revenue plan uses the full revenue amount. Instead, actual revenue plans are based on a series of virtual plans that use the subscription event amount. The recognition methods for these virtual plans treat the charge period as the relevant period.

You can use virtual plans to set custom dates for subscription quantity or pricing changes. The revenue recognition plan updates with changes to virtual plans from the period when they occur without recalculating the entire subscription term. Virtual plan details such as subscription charges, start dates, and end dates match the lines on the Billing Account page's Charges subtab.

Because of differences in dates and amounts, the forecast and actual revenue plans may not match at the line level. The following examples show how actual and forecast revenue plans are calculated for subscription events using two revenue recognition methods:

- [Straight-Line, by Even Periods Method](#)
- [Straight-Line, Prorate First & Last Period Method](#)

Note: Don't use a custom revenue recognition method when the **Create Revenue Plans On** field is set to **Subscription Events**. This use case isn't supported.

For information and examples of recognition methods, see the help topic [Straight-Line Revenue Recognition Examples in Advanced Revenue Management \(Essentials\)](#). The examples share the following values:

- **Subscription term** – 6 months, April 9 – October 8
- **Monthly charge** – \$100
- **Total revenue amount** – \$600
- **Billing date** – The ninth day of each month, April – September

Straight-Line, by Even Periods Method

This method divides the revenue amount evenly across all periods. Currency amounts aren't prorated based on the number of days in any period. The virtual actual plans treat the charge period as the period.

The forecast plan spans seven periods with a total revenue of \$600. The last period adjusts for any rounding errors in the previous periods.

Each virtual plan has a revenue amount of \$100. The monthly charge is split evenly between the periods A and B, as shown in the following table. The actual revenue plan line is the sum of calculations for:

- The days after and including the billing date (B)
- The days before the billing date (A)

Period	Billing Date	Charge	Forecast Plan	Virtual Plan A	Virtual Plan B	Actual Plan A + B =
Apr	Apr 9	100.00	85.71		50.00 = Charge a ÷ 2	50.00
May	May 9	100.00	85.71	50.00 = Charge a ÷ 2	50.00 = Charge b ÷ 2	100.00
Jun	Jun 9	100.00	85.71	50.00 = Charge b ÷ 2	50.00 = Charge c ÷ 2	100.00
Jul	Jul 9	100.00	85.71	50.00 = Charge c ÷ 2	50.00 = Charge d ÷ 2	100.00
Aug	Aug 9	100.00	85.71	50.00 = Charge d ÷ 2	50.00 = Charge e ÷ 2	100.00
Sep	Sep 9	100.00	85.71	50.00 = Charge e ÷ 2	50.00 = Charge f ÷ 2	100.00
Oct			85.74	50.00 = Charge f ÷ 2		50.00
Total		600.00	600.00			600.00

Straight-Line, Prorate First & Last Period Method

This method recognizes revenue equally across all periods except the first and last periods, which are adjusted for the number of days in the periods. Currency amounts are prorated for the first and last periods based on its number of days, divided by the total days between the revenue recognition start and end dates, inclusive. The virtual actual plans treat the charge period as the period.

The forecast plan has 183 days with a total revenue of \$600. The last full period adjusts for any rounding errors in the previous periods.

Since each service period in the actual plan spans parts of two months, each is prorated based on the number of days in each month. The actual revenue plan line is the sum of calculations for days before (A) and after and including (B) the billing date:

Period	Billing Date	Charge	Forecast Plan	Virtual Plan A	Virtual Plan B	Actual Plan A + B =
Apr	Apr 9	100.00	72.13 = $600 \div 183 \times 22$		73.33	73.33

Period	Billing Date	Charge	Forecast Plan	Virtual Plan A	Virtual Plan B	Actual Plan A + B =
					= charge a ÷ 30 × 22	
May	May 9	100.00	100.33 = (600 – 72.13 + 26.23) ÷ 5	26.67 = charge a – 73.33	74.19 = charge b ÷ 31 × 23	100.86
Jun	Jun 9	100.00	100.33 = (600 – 72.13 + 26.23) ÷ 5	25.81 = charge b – 74.19	73.33 = charge c ÷ 30 × 22	99.14
Jul	Jul 9	100.00	100.33 = (600 – 72.13 + 26.23) ÷ 5	26.67 = charge c – 73.33	74.19 = charge d ÷ 31 × 23	100.86
Aug	Aug 9	100.00	100.33 = (600 – 72.13 + 26.23) ÷ 5	25.81 = charge d – 74.19	74.19 = charge e ÷ 31 × 23	100.00
Sep	Sep 9	100.00	100.32 = (600 – 72.13 + 26.23) ÷ 5	25.81 = charge e – 74.19	73.33 = charge f ÷ 30 × 22	99.14
Oct			26.23 = 600 ÷ 183 × 8	26.67 = charge f – 73.33		26.67
Total		600.00	600.00			600.00

Revenue Allocation for One-Time and Recurring Subscription Lines

Note: This topic applies whether you check the **Create Revenue Elements for Subscription Revisions** accounting preference, unless specified otherwise. .

You must enable the Advanced Revenue Management (Revenue Allocation) feature to use revenue allocation.

Revenue elements for one-time and recurring subscription lines include an **Alternate Quantity** field for revenue allocation. The alternate quantity is calculated by multiplying the subscription line item quantity by the **recurrence frequency**, the number of charges over the subscription term.

Example:

Consider example A has a 6-year term, annual recurrence, and a quantity of 2, resulting in an alternate quantity of 12. Example B has a 3-year term, monthly recurrence, and a quantity of 5, resulting in an alternate quantity of 180.

	Example A	Example B
Term	6 years	3 years

	Example A	Example B
Recurrence Frequency	Annually	Monthly
Term x Recurrence Frequency	6 year term × 1 charge per year = 6	3 year term × 12 charges per year = 36
Quantity	2	5
Alternate Quantity	$2 \times 6 = 12$	$5 \times 36 = 180$

The fair value price record requires the correct values for Units Type and Units to support the allocation. When you enter a value in Alternate Quantity and other alternate fields, the {quantity} field in fair value formulas uses the alternate quantity. Units Type and Units are displayed on the fair value price record only when the Multiple Units of Measure feature is enabled. For information, see the help topic [Multiple Units of Measure](#).

Alternate Quantity Computation for Activation Revenue Arrangement When the Billing Schedule Starts Mid-Month

The following example shows how the Alternate Quantity is computed for the activation revenue arrangement with a mid-month billing schedule and proration for subscription start and end dates:

- Start Date 8/1/2019
- End Date 11/30/2019
- Recurrence Date 8/16/2019

With the recurrence start date preference enabled, the billing account's invoice periods affect the subscription's recurrence pattern.

The billing account affects the alternate quantity because the charge and rating periods don't align with the start date, resulting in a recurrence start date of 8/16/2019 for the subscription. The first and last charge periods are prorated, as shown in the following table:

Rating Periods	Start Date	End Date	Days	Daily Quantity
7/16/2019	8/15/2019	31	10	0.322581
8/16/2019	9/15/2019	31	10	0.322581
9/16/2019	10/15/2019	30	10	0.333333
10/16/2019	11/15/2019	31	10	0.322581
11/16/2019	12/15/2019	30	10	0.333333
Charge Periods				
8/1/2019	8/15/2019	15	4.8387097	
8/16/2019	9/15/2019	31	10	
9/16/2019	10/15/2019	30	10	
10/16/2019	11/15/2019	31	10	
11/16/2019	11/30/2019	15	5	
			39.8387097	

Revenue Recognition and Prepay with Drawdown

The Advanced Revenue Management (Essentials) feature integrates with the Prepay with Drawdown [Prepaid Usage with Drawdown](#) feature. This integration lets you accurately recognize revenue for both prepay and usage elements.

To enable the Prepay with Drawdown feature, go to Setup > Company > Setup Tasks > Enable Features (Administrator). On the Transactions subtab, in the Billing section, check the **Prepay with Drawdown** box. Prepay with Drawdown can only be enabled if the Advanced Subscription Billing feature is enabled and the Create Revenue Elements for Subscription Revisions accounting preference is disabled.

Using the Prepay with Drawdown feature, customers can pay a set amount before using the service lines in their contract. The upfront payment is the sales amount on the prepay element, which is fully billed at the start of the subscription. As usages are recorded, the service rate determines the amount transferred from the prepay element to the usage elements. Invoices are created to reduce the prepay element's bill amount, which increases the sales and bill amounts for the usage elements.

When the subscription term ends, the service provider can either refund the remaining prepay element amount or recognize it without a refund.

For Prepay and Usage subscription line types, make sure the **Create Revenue Plans On** field is set to **Subscription Events** and the **Allocation Type** field is set to **Exclude**. If these fields have different values, then they are overridden to their earlier values when you create a revenue arrangement for the subscription. For more information about configuring subscription items for revenue recognition, see [Configuring Subscription Items for Revenue Recognition](#). For information about creating the prerequisite parts of a subscription, see [SuiteBilling Management](#).

There are two **Charge Frequency** options when for the price book's prepay line:

- **Auto-Refill** – NetSuite generates another prepayment when the minimum balance is reached. You set the prepay amount and prepay minimum balance in the price plan. For more information, see [Creating Price Plans](#).
- **One Time** – If the prepay amount is used up, NetSuite switches you to pay-as-you-go. As usages are recorded, they are added to the corresponding usage elements, without involving the prepay element. This causes an increase in the sales amount on the usage elements, which are then directly billed.

Example of Prepay with Drawdown and Revenue Recognition

The Advanced Revenue Management (Essentials) feature integrates with the Prepay with Drawdown feature. This integration lets you recognize revenue for both prepay and usage elements.

In this example, Vertex Company pays \$5,000 upfront for a three-month service contract with IT Support Company. IT Support Company has different billing rates for various support types:

- Emergency Support (Usage Support A): Billed at \$2.50 a minute.
- Standard Support (Usage Support B): Billed at \$1.30 a minute.

This example uses the following revenue recognition rule:

Recognition Method	Amount Source	Rev Rec Start Date Source	Rev Rec End Date Source
Straight-line, by even periods	Event-Percent based on amount	Event Date	Term in Days (0)

The fields in the Revenue Recognition/Amortization subtab on the items are set to the following:

- **Create Revenue Plans On:** Subscription Events
- **Allocation Type:** Exclude

For information about configuring subscription items, [Configuring Subscription Items for Revenue Recognition](#).

The Unbilled Receivable Adjustment Journal Grouping accounting preference is set to Element. For information about this accounting preference, [Groupings for Unbilled Receivable Adjustment Journal Entries](#).

May Activity

In May, the following records are created in NetSuite:

- One subscription plan
- One price book
- One subscription
- One invoice
- Two usages
- Six charges
- One revenue arrangement

To learn more about these records, see [SuiteBilling Management](#) and [Advanced Revenue Management \(Essentials\) and \(Revenue Allocation\)](#).

Note: Charges aren't shown here but are reflected in the revenue arrangement updates for each accounting period.

Three-Month Subscription

The subscription, subscription plan, and price book include three items. The prepay line has a minimum balance of \$300, which triggers a \$5,000 is refilled when the \$300 threshold is met.

Item	Line Type	Billing Mode	Prepay Line	Price	Charge Frequency	Start Date	End Date
Prepaid Service	Prepay	In Advance	—	Prepay Amount: \$5,000.00 Minimum Balance: \$300	Auto-Refill	5/1/2024	7/31/2024
Usage Support A	Usage	In Arrears	Prepaid Service	From 0: \$2.50	Monthly	5/1/2024	7/31/2024
Usage Support B	Usage	In Arrears	Prepaid Service	From 0: \$1.30	Monthly	5/1/2024	7/31/2024

May Invoice

On May 1, the IT Support Company bills the full prepay amount at the start of the subscription.

Item	Quantity	Rate	Amount
Prepaid Service	1	5,000	\$5,000

May Usages

The Vertex Company uses 1,200 minutes of emergency support and 1,500 minutes of standard support in May. The IT Support Company creates two usage records at the end of May to represent this usage.

Item	Quantity	Rate	Amount
Usage Support A	1,200	2.50	\$3,000
Usage Support B	1,500	1.30	\$1,950

May Revenue Arrangement

IT Support Company creates six charges for the prepay amount and the two usages. The revenue arrangement is updated to reflect the charges and the refill, adjusting the quantity and sales amount. The Prepaid Service is refilled because it is set to Auto-Refill at a \$300 minimum balance, and the remaining unused balance is \$50. The Prepaid Service item now has a sales amount balance of \$5,050, combining the \$5,000 refill with the remaining \$50 unused balance.

Item	Quantity	Sales Amount	Revenue Amount	Start Date	End Date
Usage Support A	1,200	\$3,000	\$3,000	5/1/2024	7/31/2024
Usage Support B	1,500	\$1,950	\$1,950	5/1/2024	7/31/2024
Prepaid Service	1	\$5,050	\$5,050	5/1/2024	7/31/2024

May Revenue Plan

The IT Support Company updates their revenue plans. The planned recognition period for the Prepaid Service item is July because the unused prepaid amount is recognized at the end of the subscription term. The subscription term ends July 31, 2024.

Item	Plan Total	Amount (Recognized)	Remaining	Planned Period
Usage Support A	\$3,000	\$0.00	\$3,000	May
Usage Support B	\$1,950	\$0.00	\$1,950	May
Prepaid Service	\$5,050	\$0.00	\$5,050	July

May Revenue Recognition Journal

The IT Support Company recognizes the two usages at the end of May.

Account	Debit	Credit
Usage Support A Deferred Revenue	3,000	
Usage Support A Income		3,000
Usage Support B Deferred Revenue	1,950	

Account	Debit	Credit
Usage Support B Income		1,950

 **Note:** The usages are billed in arrears, so not billed in May.

May Unbilled Receivable Adjustment

The IT Support Company runs reclassification at the end of May. In May, an unbilled receivable adjustment is posted because cumulative billing is lower than cumulative revenue recognition for Usage Support A and B.

The unbilled amounts are calculated as follows:

- For Usage Support A, the billed amount is 0 and the recognized amount is \$3,000, leaving an unbilled amount of \$3,000
- For Usage Support B, the billed amount is 0 and the recognized amount is \$1,950, leaving an unbilled amount of \$1,950.

Account	Debit	Credit
Usage Support A Deferred Revenue	—	3,000
Usage Support B Deferred Revenue	—	1,950
Unbilled Receivable	4,950	—

The IT Support Company closes the May accounting period.

June Activity

In June, the following records are created in NetSuite:

- One invoice
- Two usages
- Four charges
- One revenue recognition journal
- One prior unbilled receivable adjustment
- One unbilled receivable adjustment

June Invoice

On June 1, IT Support Company bills the May usages. \$3,000 is deducted from the Prepaid Service line and added to Usage Support A. Another \$1,950 is deducted from the Prepaid Service line and added to Usage Support B. In sum, \$4,950 is deducted from the Prepaid Service line. Because the Prepaid Service line has an Auto-Refill minimum balance of \$300 and only \$50 remains, the Prepaid Service is refilled and immediately billed \$5,000.

Item	Quantity	Rate	Amount
Usage Support A	1,200	2.50	\$3,000
Usage Support B	1,500	1.30	\$1,950

Item	Quantity	Rate	Amount
Prepaid Service	1	-3,000	\$-3,000
Prepaid Service	1	-1,950	\$-1,950
Prepaid Service (refill)	1	5,000	\$5,000

June Usages

Vertex Company uses 500 minutes of emergency support and 2,000 minutes of standard support in June. IT Support Company creates two usage records at the end of June to represent this usage.

Item	Quantity	Rate	Amount
Usage Support A	500	2.50	\$1,250
Usage Support B	2,000	1.30	\$2,600

Note: The usages aren't billed in June because they are billed in arrears.

June Revenue Arrangement

IT Support Company creates four charges for the two usages. The revenue arrangement quantity and sales amount are updated to reflect the charges. No refill occurs because \$1,200 remains on the Prepaid Service line, which doesn't meet the \$300 auto-refill minimum.

Item	Quantity	Sales Amount	Revenue Amount	Start Date	End Date
Usage Support A	1,700	\$4,250	\$4,250	5/1/2024	7/31/2024
Usage Support B	3,500	\$4,550	\$4,550	5/1/2024	7/31/2024
Prepaid Service	1	\$1,200	\$1,200	5/1/2024	7/31/2024

June Revenue Plan

The IT Support Company updates their revenue plans.

Item	Plan Total	Amount (Recognized)	Remaining	Planned Period
Usage Support A	\$4,250	\$3,000	\$1,250	June
Usage Support B	\$4,550	\$1,950	\$2,600	June
Prepaid Service	\$1,200	\$0.00	\$1,200	July

June Revenue Recognition Journal

IT Support Company recognizes the two usages at the end of June.

Account	Debit	Credit
Usage Support A Deferred Revenue	1,250	—

Account	Debit	Credit
Usage Support A Income	—	1,250
Usage Support B Deferred Revenue	2,600	—
Usage Support B Income	—	2,600

June Unbilled Receivable Adjustments

IT Support Company runs reclassification at the end of June. Two unbilled receivable adjustments are created.

A reversal of the prior unbilled receivable adjustment is created to reverse the May adjustment.

Account	Debit	Credit
Usage Support A Deferred Revenue	3,000	—
Usage Support B Deferred Revenue	1,950	—
Unbilled Receivable	—	4,950

Another unbilled receivable adjustment is created because cumulative billing is less than cumulative revenue recognition for Usage Support A and Usage Support B.

The unbilled receivable calculations are as follows:

- For Usage Support A, the billed amount is \$3,000 and the recognized amount is \$4,250, leaving an unbilled amount of \$1,250.
- For Usage Support B, the billed amount is \$1,950 and the recognized amount is \$4,550, leaving an unbilled amount of \$2,600.

Account	Debit	Credit
Usage Support A Deferred Revenue	—	1,250
Usage Support B Deferred Revenue	—	2,600
Unbilled Receivable	3,850	—

IT Support Company closes the June accounting period.

July Activity

In July, the following records are created in NetSuite:

- One invoice
- One revenue recognition journal
- One prior unbilled receivable adjustment

July Invoice

On July 1, IT Support Company bills the usages from June. \$1,250 is deducted from the Prepaid Service line and added to Usage Support A. Another \$2,600 is deducted from the Prepaid Service line and added

to Usage Support B. In sum, \$3,850 is deducted from the remaining balance of \$5,050 on the Prepaid Service line. No refill occurred because \$1,200 remains on the Prepaid Service line, which doesn't meet the \$300 auto-refill minimum.

Item	Quantity	Rate	Amount
Usage Support A	500	2.50	\$1,250
Usage Support B	2,000	1.30	\$2,600
Prepaid Service	1	-1,250	\$-1,250
Prepaid Service	1	-2,600	\$-2,600

July Revenue Recognition Journal

Because Vertex Company doesn't use any support in July, no usages are created. Because the subscription ends July 31, IT Support Company recognizes the remaining balance of \$1,200 on the Prepaid Service element. The recognized amount now equals the billed amount.

Account	Debit	Credit
Prepaid Service Deferred Revenue	1,200	—
Prepaid Service Income	—	1,200

The subscription term has ended, and all revenue was recognized.

July Unbilled Receivable Adjustment

A reversal of the prior unbilled receivable adjustment is created to reverse the June adjustment.

Account	Debit	Credit
Usage Support A Deferred Revenue	1,250	—
Usage Support B Deferred Revenue	2,600	—
Unbilled Receivable	—	3,850

SuiteBilling Setup

This chapter describes the steps to enable and set up SuiteBilling. You have to set preferences before enabling SuiteBilling's associated features. This chapter includes tasks that you usually need to perform only one time for your initial setup.

Setting the SuiteBilling Preferences

Note: Before you can enable the SuiteBilling feature, you must contact your NetSuite sales or account representative to provision this feature for your NetSuite account.

You can't enable the SuiteBilling features until these actions are completed:

- [Consolidating Projects on Sales Orders](#)
- [Disabling Employee Commissions](#)

You can also set optional preferences for subscription management. See [Setting Optional Preferences](#).

For high-level overview diagrams of the workflows that include this procedure, see [Subscription Plan Creation](#), [New Stand-Alone Subscription Creation](#), and [Subscription Creation from a Sales Order](#).

Consolidating Projects on Sales Orders

With the Projects feature enabled, you must set the Consolidate Projects on Sales Transactions preference before enabling SuiteBilling. You must enable Projects and Project Management to access the Consolidate Projects on Sales Transactions preference.

To set the accounting preference to consolidate projects on sales orders:

1. Go to Company > Projects.
2. Check the **Projects** and **Project Management** boxes.
3. Go to Setup > Accounting > Accounting Preferences.
4. Click the **Items/Transactions** subtab.
5. Check the **Consolidate Projects on Sales Transactions** box.
6. Click **Save**.

Disabling Employee Commissions

You need to disable the Employee Commissions feature before enabling SuiteBilling.

Note: When your account includes commissions data, that data is inaccessible, although still in the account, when Employee Commissions is disabled. To access commissions data while using SuiteBilling, you can export the data from Reports > Commissions > Commission Overview Report for Employee commissions and Reports > Commissions > Partner Commission Overview Report for Partner commissions. To correctly set the time range of the report, set the **From** field to the employee start date and the **To** field to the current date. For additional instructions, see the help topic [Exporting a Report](#).

To disable the Employee Commissions feature:

1. Go to Setup > Company > Enable Features.
2. Click the **Employees** subtab.
3. In the Commissions section, clear the **Employee Commissions** box.
4. Click **Save**.

Enabling SuiteBilling Features

SuiteBilling has a collection of features to enable.

Before you enable SuiteBilling features, ensure:

- You're logged in to NetSuite using an Administrator role.
- You've set the SuiteBilling preferences as instructed in [Setting the SuiteBilling Preferences](#).

For high-level overview diagrams of the workflows that include this procedure, see [Subscription Plan Creation](#), [New Stand-Alone Subscription Creation](#), and [Subscription Creation from a Sales Order](#).

To enable SuiteBilling features:

1. Go to Setup > Company > Enable Features.
2. Click the **Transactions** subtab.
3. In the Billing section, check the following boxes:
 - **Bill Costs to Customers**
 - **Advanced Billing**
 - **Charge-Based Billing**
 - **Billing Accounts**
 - **Billing Operations**
 - **Subscription Billing**
 - **Advanced Subscription Billing**

You need Charge-Based Billing is required to see subscription line charge pricing details.

You can check the following boxes for optional features:

- Add-on Items
- Time-Based Pricing for creating multiple time-based pricing intervals. For more information about how to use time-based pricing, see [Time-Based Pricing](#).

With Time-Based Pricing enabled, you can use the Subscription Billing Enhanced UI SuiteApp. This SuiteApp has the same Time-Based Pricing as SuiteBilling, but with a better user interface. For more information about the Subscription Billing Enhanced UI SuiteApp, see [Subscription Billing Enhanced UI](#).

- Add-on Items is required to create a subscription without a subscription plan or price book. For more information about how to create a subscription without a subscription plan or price book, see [Optional Subscription Plan and Price Book](#).
- Invoice Groups, for creating and managing invoice groups. You can group multiple invoices before sending them to a customer.
- Commit Plus Overage, for charging prepayment for a contracted minimum usage amount at a negotiated rate.

For more information about commit plus overage charges, see [Commit Plus Overage Charges](#).

- Uplift Pricing, for creating price increases for subscription lines using an uplift percentage at defined times during a subscription term.

Warning: The **Uplift Pricing** feature requires time-based pricing to be enabled.

For more information about how to use uplift pricing, see [Uplift Pricing](#).

- Prepaid Usage with Drawdown, a service type for when consumable services can be billed in advance, and usage is drawn down from the assigned service lines.

For more information about prepaid usage with drawdown, see [Prepaid Usage with Drawdown](#).

4. On the Company tab in the Classifications section, you can optionally check any of the following boxes to help segment your recurring revenue:
 - **Departments**
 - **Locations**
 - **Classes**
5. Click **Save**.

Enabling the Multi-Subsidiary Customer Feature for SuiteBilling

With billing accounts across subsidiaries, you can use the Multi-Subsidiary Customer feature. For more information, see the help topic [Assigning Subsidiaries to a Customer](#).

To enable Multi-Subsidiary Customer for SuiteBilling, see the help topic [Enable the Multi-Subsidiary Customer Feature](#).

If the Multi-Subsidiary Customer feature is enabled, the billing account field isn't automatically populated on the Subscription record.

Optional Preferences for SuiteBilling

SuiteBilling has several optional preferences.

Setting Optional Preferences

You can streamline your subscription creation and management process with optional preferences.

To set optional preferences for subscription creation and management:

1. Go to Setup > Accounting > Accounting Preferences.
2. On the **Classifications** subtab, check the box for each preference that you want to set:
 - **Make Classes Mandatory**
 - **Make Departments Mandatory**
 - **Make Locations Mandatory**
 - **Allow Per-Line Classes**

- **Allow Per-Line Departments**
- **Allow Per-Line Locations**

If you check the **Make Classes Mandatory**, **Make Departments Mandatory**, or **Make Locations Mandatory** preferences, these fields are required while you're creating the subscription or subscription line. If any of the Allow Per-Line preferences are checked, the line-level value is used for revenue reporting. If Allow Per-Line preferences are cleared, the class, department, and location values on the subscription line record are sourced from the billing account. For more information about the **Class**, **Department**, and **Location**, see [Class, Department, and Location Fields on Subscription Lines](#).

3. Go to Setup > Accounting > Invoicing Preferences.

Note: The **Subscription Management** subtab doesn't appear until you enable SuiteBilling.

4. On the **Subscription Management** subtab:

- a. Check the box for each preference that you want to set:
 - **When Sales Order Gets Approved, Auto-Change Subscription Status to 'Pending Activation'**. This moves subscription lines in Draft status to Pending Activation status if the subscription is saved on a sales order and the order gets approved.
 - **First Activation Change Order Creation Sets the Subscription Start Date**. With this preference enabled, the start date and activation date need to be the same. Otherwise, the start date changes to the line item activation date.
 - **Request Credit Memo for Off-Cycle Change Orders**. This preference automatically creates credit memos when doing off-cycle invoicing.
 - **Create Delta Charges for Changes to Invoiced Service Periods**. If this preference isn't visible in your account, contact your NetSuite account representative or NetSuite Customer Support. There is no additional cost to activate delta charges.

When set, the global invoicing preference **Create Delta Charges for Changes to Invoiced Service Periods** can generate a delta charge. A delta charge occurs when changes to invoiced service periods result in a change to the amount the customer owes. The amount of the delta charge is the difference between the invoiced amount and the new amount for the service period. If there is a change in quantity, the quantity of the delta charge is the difference between the invoiced quantity and the new quantity for the service period. If there is no change in quantity, the quantity is the new quantity for the service period.

Note: You can't turn off delta charges after the first delta charge is created.

To see how to set this preference, view the video:

[Enabling Delta Charges](#)

To learn SuiteBilling change order fundamentals, see [SuiteBilling Change Orders](#).

- b. To align subscription charges with the subscription start date, check the **Align Charge Amounts with Subscription** box.

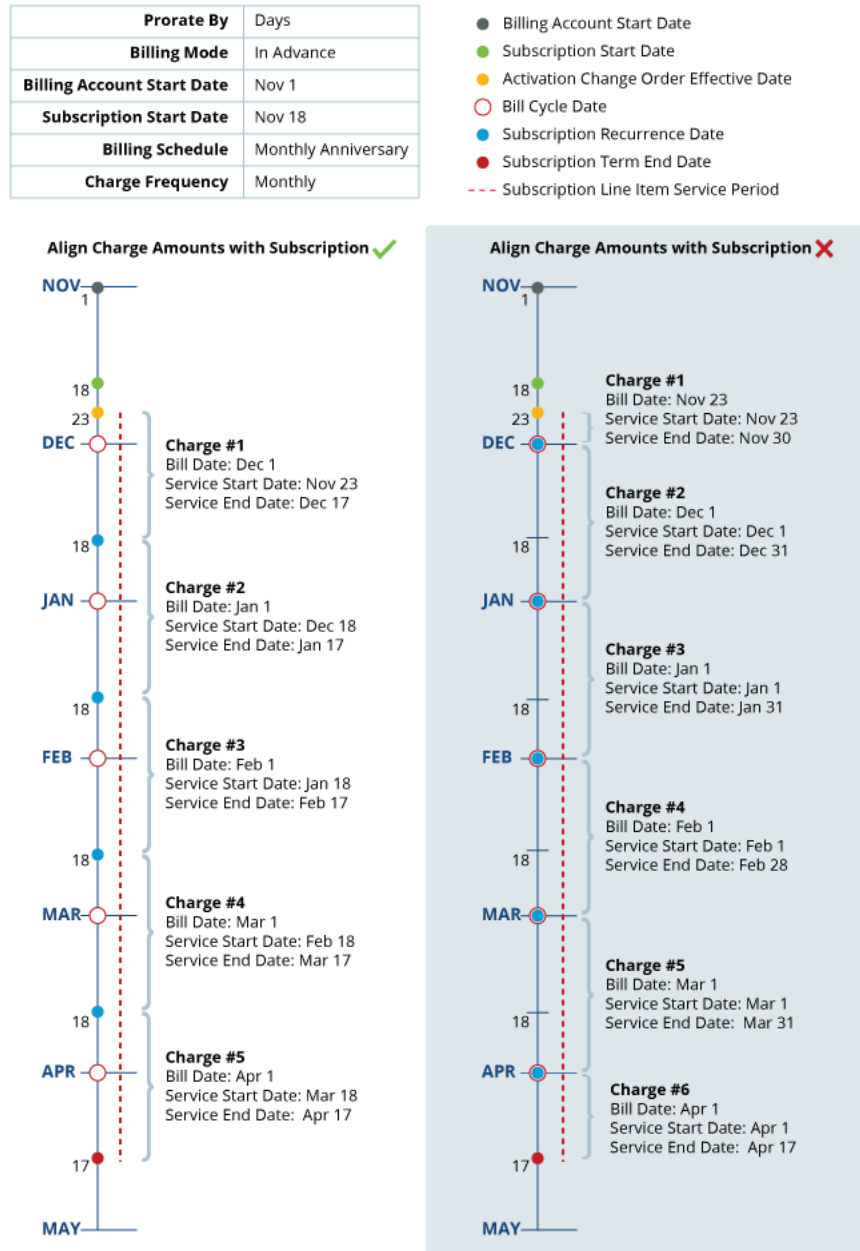

When you activate a subscription, its current preference setting dictates the subscription charge pattern.

When you check the **Align Charge Amounts with Subscription** preference, and then activate subscriptions:

- All lines within a single activated subscription have a charge pattern aligned with the subscription header start date instead of its bill dates.

- Multiple-year subscriptions with multiple charge frequencies, such as monthly, quarterly, and annual, recur based on the subscription start date for better alignment of charge periods.

The subscription charge patterns of the **Align Charge Amounts with Subscription** preference are shown in the following figure.

Existing subscriptions activated before setting this preference may display the original recurrence pattern.

When you clear the **Align Charge Amounts with Subscription** preference, charges align with the billing schedule of the billing account. When this preference is set, charges align the recurrence start date with the subscription start date. When the preference is set but you haven't selected a billing account for the subscription, the recurrence start date is the

subscription start date. When the subscription has no billing but **Align Charge Amounts with Subscription** is cleared, the start date isn't calculated until you save, when you must select a price book.

When you select a billing account for the subscription and click **Save**, the recurrence start date updates to align with the billing account recurrence pattern. This changes the ratable events that are generated in Draft mode, which may affect the Sales Order synchronization or other processes that depend on the ratable event amounts. When you select a billing account, rating runs.

If you clear **Align Charge Amounts with Subscription**, the total contract value may change when you select a billing account.

- c. To automatically extend the Estimated Revenue Recognition End Date for evergreen subscriptions, enter a value between 1 and 120 for the **Months To Extend Estimated Revenue Recognition End Date** preference.

Tip: Set this preference according to your billing schedule.

- If you bill evergreen subscriptions monthly, set this preference to 1 or greater.
- If you bill evergreen subscriptions quarterly, set this preference to 3 or greater.
- If you bill evergreen subscriptions annually, set this preference to 12 or greater.

Evergreen subscriptions don't have an end date unless there is a Terminate change order for the line. For all other evergreen subscriptions, the Estimated Revenue Recommended End Date field on the subscription header is used as the end date.

For more information about revenue recognition, see [Revenue Recognition for SuiteBilling](#).

- d. If you entered a value for the **Months To Extend Estimated Revenue Recognition End Date** preference, you also must enter a value between 1 and 120 for the following **Months Prior To Estimated Revenue Recognition End Date To Initiate Auto-Extend** preference.
5. To prorate days evenly regardless of the number of days in the year, check the **Exclude February 29 When Prorating by Days or Months** preference.
To see how to set this preference, view the video:
 [Setting the Leap Year Preference](#)
6. To remove a one-day charge, check the **Default Terminations Effective at Start of Day** preference.
7. To use the line item location as the source for invoice, credit memo, and cash sale locations, check the **Use the Location from the Subscription Record on Line Items for Invoices, Credit Memos, and Cash Sales** preference. If the subscription line item location is empty, the location from the employee record is used as the invoice line item location.
8. Click **Save**.

To learn SuiteBilling change order fundamentals, see [SuiteBilling Change Orders](#).

Proration Options

Set the **Exclude February 29 When Prorating by Days or Months** preference in SuiteBilling to ensure that all days are prorated to the same amount regardless of the number of days in the year. When you enable this preference, NetSuite excludes February 29th when calculating prorated amounts in leap years. To locate the preference, go to Setup > Accounting > Invoicing Preferences and click the **Subscription Management** tab.

To see how to set this preference, view the video:

On the subscription line, set the Prorate Start Date and Prorate End Date when you want to charge customers for only the time they use. All subscription items have the same end date as the subscription. If you leave the **Prorate Start Date** and **Prorate End Date** boxes cleared, NetSuite bills for the full charge period. Usually, you either check or clear both boxes.

On recurring subscription plan items:

- To set proration for the start date of an item, check the **Prorate Start Date** box.
- To set proration for the end date of an item, check the **Prorate End Date** box.

By default, if you set the Type field of a subscription plan item to Recurring, NetSuite checks the Prorate Start Date and Prorate End Date boxes.

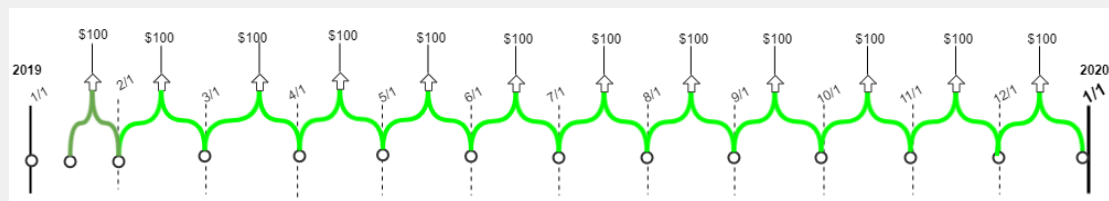

This is what happens when you check or clear one or both of these boxes:

- If you check the **Prorate Start Date** box for an item, NetSuite bases the charge on the number of days used. If service begins after the start of the charge period, NetSuite charges the customer for the days used, not the entire charge period.
- If you clear the **Prorate Start Date** box for an item, the item start date is the first day of the charge period. Charges may begin earlier than the activation start date. For example, a customer has a one-year subscription that starts December 15, and is charged for an entire year.
- If you check the **Prorate End Date** box for an item, NetSuite stops charging the day the service ends. If service ends early, the customer is billed for only the days used.
- If you clear the **Prorate End Date** box, the item end date is the last day in the charge period. Charges may extend past the subscription end date. For example, a customer cancels their phone subscription December 15 but is still charged to December 31.

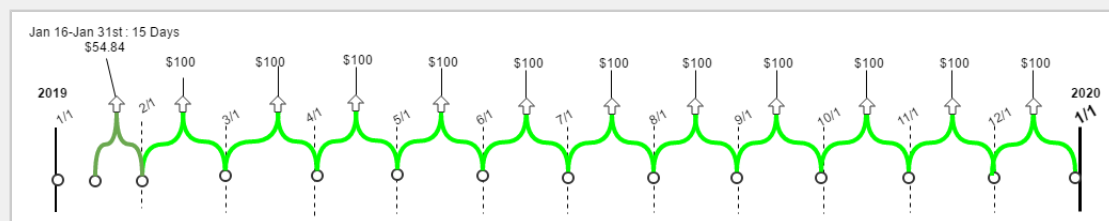

Example: A

Consider a subscription with a 12-month term with monthly charges that is activated January 15. Each item costs the customer \$100 US for one month of service.

If you clear the **Prorate Start Date** and **Prorate End Date** boxes, the customer is billed full monthly cost for January.

Checking both the **Prorate Start Date** and **Prorate End Date** boxes reduces the January charge to \$54.84. The reduced charge is based on the customer's service days. If the line is terminated before December 31, 2019, the final charge is also prorated.

Setting the Optional Accounting Preference for Advanced Revenue Management

To create individual revenue elements for each subscription change order, check the **Create Revenue Elements for Subscription Revisions** accounting preference. When you check the preference:

- Each subscription revision creates a separate revenue arrangement and corresponding revenue elements.
- All subscription revisions generate modification elements that account for the impact on revenue.

Check this preference to:

- Generate modification elements that meet ASC-606 accounting policies for subscription modifications with allocated revenue
- Prospectively merge the modification elements

You can also retrospectively merge the modification element. For instructions, see the help topic [Merging to Combine Revenue Arrangements](#). The Revenue Summary window for revenue arrangements shows merged elements. For more information, see the help topic [Revenue Summary Details](#).

For more information about revenue recognition, see [Revenue Recognition for SuiteBilling](#).

To set the optional accounting preference for Advanced Revenue Management:

1. Go to Setup > Accounting > Accounting Preferences.
2. Click the **General** subtab.
3. On the **Subscription Management** section, check the **Create Revenue Elements for Subscription Revisions** box.

Warning: After you set this preference, you can't change it.

4. Click **Save**.

When both the Create Delta Charges for Changes to Invoiced Service Periods and Create Revenue Elements for Subscription Revisions preferences are checked, a subscription line may generate many charges and revenue elements due to change orders. When a subscription line creates a new revision, the process of updating revenue elements creates new revenue elements and delta charges. During this process, the links between every charge and revenue elements are rechecked to ensure correct charge amounts. Many revisions to a subscription can slow charge and revenue element generation. If you notice slow performance when both preferences are checked, terminate the subscription and create a new subscription.

For more information, see [Revenue Recognition for SuiteBilling](#).

To learn SuiteBilling change order fundamentals, see [SuiteBilling Change Orders](#).

Creating Items for Subscription Plans

A subscription plan is made up of all of the items that define a subscription. These items include recurring services, usage, commit plus overage, and one-time charges. Before you can create a subscription plan, you need to create item records for the products and services you sell as part of subscriptions.

To learn how to create subscription items, view the video:

[Creating Subscription Items](#)

For high-level overview diagrams of the workflows that include this procedure, see [Subscription Plan Creation](#), [New Stand-Alone Subscription Creation](#), and [Subscription Creation from a Sales Order](#).

To create an item for a subscription plan:

1. Go to Lists > Accounting > Items > New.
2. Subscription items must be either a non-inventory item or a service item for sale. Other item types aren't available on subscription plans. You can either:
 - Add a non-inventory item. Under **Non-inventory Item**, click **For Sale** or **For Resale**.
 - Add a service item. Under **Service Item**, click **For Sale** or **For Resale**.
3. In the **Item Name/Number** field, enter a value.
4. You can define the **Class**, **Department**, and **Location** fields on the Subscription Line record. For more information about class, department, and location, see [Class, Department, and Location Fields on Subscription Lines](#).
5. Complete any additional fields.
6. Click the **Accounting** subtab.
7. From the **Tax Schedule** list, select a tax schedule. To add a new tax schedule to the list, click the **Open** arrow.
8. Click the **Preferences** subtab.
9. Clear the **Can Be Fulfilled/Received** box.

Note: For non-inventory items, this box is checked by default and you must clear it. For service items, this box is already cleared by default.

10. Click **Save**.

For more information about the item record and using items, see the help topic [Using Item Records](#).

To set up revenue recognition for the item, see [Configuring Subscription Items for Revenue Recognition](#). For more information about advanced revenue recognition, see [Revenue Recognition for SuiteBilling](#).

Class, Department, and Location Fields on Subscription Lines

Define the **Class**, **Department**, and **Location** fields on the Subscription and Subscription Line records when they're in the Draft or Pending Activation status. NetSuite automatically fills in these fields in this order:

1. If the Item record has values in any of these fields, the Subscription Line record uses those values.
2. If any of these fields is empty in the Item record, NetSuite checks the subscription plan and uses those values, if any.
3. If a field doesn't have a value in the subscription plan, NetSuite checks the billing account and uses its values, if any, in the field on the Subscription Line record.
4. If none of these records have values in these fields, they are empty on the Subscription Line record.

If you check any of the per-line preferences, e **Allow Per-Line Classes**, **Allow Per-Line Departments**, or **Allow Per-Line Locations**, revenue reporting uses the value from the line level. If the line-level preferences are cleared, the subscription line values come from the billing account. The values of the the subscription line **Class**, **Department**, and **Location** fields are used for reporting charges and revenue elements.

The subscription record and subscription line values flow to the charges and revenue processes, then to the invoice processes, and finally to revenue recognition. Existing subscription lines update to the value on the item or billing account, depending on your per-line preference settings. Any existing revenue elements don't change. Charges may change if you clear per-line preferences.

Configuring Subscription Items for Revenue Recognition

Note: The information in this topic applies whether or not you check the **Create Revenue Elements for Subscription Revisions** accounting preference, except where the accounting preference is clearly identified.

For more information about revenue recognition, see [Revenue Recognition for SuiteBilling](#).

To configure subscription items for revenue recognition:

1. To set up subscription items with different subscription line types, create an item record for each subscription type.

The preferred values for the subscription line types are in the following table.

Subscription Line Type	Revenue Recognition Rule	Create Revenue Plans On	Allocation Type
Subscription item fields for revenue recognition	Default Revenue Recognition Rule	Create Revenue Plans On	Allocation Type
Commit Plus Overage: Recognition based on usage	Default Usage	Subscription Events	Excluded
Commit Plus Overage: Even Amounts not dependent on usage	Default Fixed Recurring Fee	Revenue Arrangement Creation	Normal
Commit Plus Overage: Recognition based on usage with Allocations	Default Adjustable Recurring Fee	Subscription Events	Normal

With **Create Revenue Elements for Subscription Revisions** unchecked, you can't prospectively merge revenue recognition elements when allocating revenue.

Tip: With the Advanced Revenue Management (Essentials) feature enabled, the **Deferred Revenue Account** field on the **Accounting** subtab defaults to the system-generated deferred revenue account. To use a different account, be sure to select it.

For instructions, see [Creating Items for Subscription Plans](#).

2. On the **Revenue Recognition/Amortization** subtab, in the Advanced Revenue Recognition group, set the required fields for revenue recognition as follows:
 - a. Match the Rev Rec Forecast Rule and Revenue Recognition Rule values.
 - b. Leave the defaults for the fields that aren't included in the following table.
 - c. The preferred values for the subscription line types are in the following table.

Subscription Line Type	Revenue Recognition Rule	Create Revenue Plans On	Allocation Type
Recurring – Adjustable , when the Create Revenue Elements for Subscription Revisions box is cleared	Default Adjustable Recurring Fee	Subscription Events	Normal

Subscription Line Type	Revenue Recognition Rule	Create Revenue Plans On	Allocation Type
Recurring – Adjustable , when the Create Revenue Elements for Subscription Revisions box is checked	Default Fixed Recurring Fee	Revenue Arrangement Creation	Normal
Recurring – Fixed	Default Fixed Recurring Fee	Revenue Arrangement Creation	Normal
One-Time	Default Fixed Recurring Fee	Revenue Arrangement Creation	Normal
Usage	Default Usage	Subscription Events	Exclude*
Prepaid	Default Usage	Subscription Events	Exclude*
Commit	Default Adjustable Recurring Fee, Default Fixed Recurring Fee, Default Usage	Subscription Events	Normal, Exclude*
Overage	Default Usage	Subscription Events	Exclude*

* For usage service lines, set the **Allocation Type** to Exclude to prevent errors when merging revenue arrangements. You can allocate revenue for recurring, commit plus overage, and one-time subscriptions. For more information, see [Creating Usage Records](#).

3. On the **Accounting** subtab of the item record, select a **Deferred Revenue Account**.

You don't need to fill Create Revenue Plans On because you can also set it in the revenue element. Avoid using Revenue Arrangement Creation for Create Revenue Plans On when the rule uses subscription events for date sources.

The Default Adjustable Recurring Fee rule is a rule with these start and end date sources. Revenue recognition plans that are created on subscription events don't include start and end dates. For more information about plans created on subscription events, see [Calculations for Revenue Plans Created on Subscription Events](#).

To learn how to set up one-time based service items for subscription billing with advanced revenue management, view the video:

 [Setting Up One-Time Based Service Items for Subscription Billing with Advanced Revenue Management](#)

To learn how to set up usage-based service items for subscription billing with advanced revenue management, view the video:

 [Subscription Billing with Advanced Revenue Management](#)

Creating Subscription Plans

When you create a subscription plan, you choose what to include in the subscription, such as recurring services, usage, commit plus overage, and one-time charges.

A subscription plan and price book aren't required when creating a subscription using the standard form. You can create a subscription with only add-on item lines, making subscription creation simpler. To learn how to create a subscription without a subscription plan or price book, see [Optional Subscription Plan and Price Book](#).

To learn how to set up a subscription plan and price plan in NetSuite, view the video:

 [Setting Up a Subscription Plan and Price Plan](#)

For high-level overview diagrams of the workflows that include this procedure, see [Subscription Plan Creation](#), [New Stand-Alone Subscription Creation](#), and [Subscription Creation from a Sales Order](#).

To create a subscription plan:

1. Go to Lists > Subscriptions > Subscription Plans > New.
2. In the **Subscription Plan Name** field, enter a name.
3. From the **Initial Term** list, set the term:
 - Select a term from the options:
 - **Standard Term** – The subscription-level end date defines the end date for all of the items, which aligns end dates. The end date is calculated by adding the subscription term to the start date. One-time subscription lines are the exception because they are only active for a day.
 - **Custom Term** – You must set the subscription-level end date at the subscription level. This date defines the end date for all of the items, resulting in the alignment of end dates. One-time subscription lines are the exception because they are only active for a day. For custom terms, you can edit the subscription-level end date until a subscription line is active.
 - **Evergreen Term** – Revenue stops after three years unless you set up automatic invoicing to extend revenue recognition.
 - Create a new term by clicking the plus icon.
4. On the **Lines** subtab, follow these steps for each item you add:
 - a. In the **Item** column, select an item. If the item list doesn't include an item you need for this subscription plan, see [Creating Items for Subscription Plans](#).
 - b. In the **Required** column:
 - Check the box to always include this item in the subscription.
 - Clear the box to let the customer choose whether to include or exclude the item at sale time.
 - c. In the **Type** column, select one of the following types:
 - **One Time** – Items with a single charge, such as a setup or initialization fee.
 - **Recurring** – Items with ongoing charges, such as recurring services.
 - **Usage** – Items charged based on how much a customer uses, such as minutes or data.
 - **Commit Plus Overage** – Items charged up front for a set quantity (committed usage), with more charged when more than the committed quantity is used (overage).
 - d. In the **Mode** column, choose one of the following:
 - **In Advance** – Payment is due at the start of the charge period (for example, the first day of the month).
 - **In Arrears** – Payment is due at the end of the charge period (for example, the last day of the month).
 - e. In the **Include in Renewal Subscription** column, click the down arrow to see the available renewal options and if you want a different option, select it.
 - f. If required, for recurring items, check or clear the **Prorate Start Date** and **Prorate End Date** boxes. For details, see [Proration Options](#).
 - g. Click **Add**.
5. Repeat step 4 to add all items to the subscription plan.

6. Click the **Renewal** subtab and set up the renewal options. You can select the renewal plan and price book when renewing to a new subscription. See [Adding Renewal Information to Subscription Plans](#) to learn how the default from the subscription populates the renewal.
 - With **Uplift Pricing** enabled, you can set a percentage renewal uplift. After renewal setup is done, your settings apply to new subscriptions that have this plan.
 - To automate renewal, check **Automatically Initiate Renewal Process Before Subscription End Date**.
 - When **Uplift Pricing** is enabled, you can set a default percentage renewal uplift. Based on the renewal setup, the renewal description lines show in the uplift table where you set the percentage uplift. To learn how the default from subscription populates the renewal uplift on a subscription, see [Adding Renewal Information to Subscription Plans](#).

After you finish setting up renewal, your settings apply to new subscriptions that use this plan.

7. When **Uplift Pricing** is enabled, you see the **Uplift** subtab. Set the **Uplift Percent** and create intervals using the combination of **Uplift Frequency** and **Repeat Every** fields. These settings apply by default to any new subscriptions created with this plan. See [Uplift Pricing](#) to learn more about uplift for subscription plans.

When you save, the **Price Books** subtab opens. After creating a subscription plan, the next task is creating a price book by creating a price plan for each item. See [Creating Price Books](#).

Adding Renewal Information to Subscription Plans

You can set up subscription renewal details when creating the subscription plan, or add them later by editing the plan. The renewal options you choose for the plan apply to all subscriptions created from it. You can edit the plan when creating a draft subscription. You can edit all renewal subtab values in any status.

To add renewal details to a subscription plan:

1. Go to Lists > Subscriptions > Subscription Plans.
2. Click **Edit** for the subscription to renew.
3. Click the **Renewal** subtab.
4. Choose a term for the renewal subscription from the **Default Renewal Term** list.
5. Choose the default renewal method from the **Default Renewal Method** list.
 - a. If you chose **Extend Existing Subscription**, go to step 6.
 - b. If you chose **Create New Subscription**:
 - i. From the **Default Renewal Subscription Plan** list, choose a default subscription plan for the renewal subscription.
 - ii. From the **Default Renewal Transaction Type** list, select a default (**Do Not Create Sales Transaction, Estimate, Opportunity, or Sales Order**).
6. To automate the renewal process, check **Automatically Initiate Renewal Process** and enter the number of days in **Before Subscription End Date**.
7. With **Uplift Pricing** enabled, the percentage price automatically increases a customer's renewal pricing or interval price when using the **Renewal Uplift** subtab. The percentage uplift increase applies to the minimum and maximum values at both the tier and header level. The default value acts as a template for default renewal settings and the **Renewal Uplift** subtab when creating new subscriptions. When a subscription renewal is created, the price plans are automatically updated to reflect the renewal increase. When extending a renewal, new pricing intervals are automatically generated with the chosen price increase.
8. Click **Save**. The **Price Books** subtab opens.

Next, create a price book by setting up each item's price plan. See [Creating Price Books](#).

With the global Invoicing preference, **Define Percentage Uplift for Subscription Lines**, percentage price increases are automatically applied to customer renewal pricing. The percentage uplift increase applies to the minimum and maximum values at both the tier and header level. The default value acts as a template for default renewal settings when creating new subscriptions. When a subscription renewal is created, the price plans are automatically updated to reflect the renewal increase.

Creating Price Books

After saving a subscription plan, you can create pricing for the items. A price book defines the pricing for a collection of items or services that are sold as part of a subscription plan. Each item on a subscription plan needs a price plan within the price book. A subscription plan can have one or multiple price books. You can use multiple price books to create different pricing options, such as multiple currencies, or monthly, quarterly, and annual pricing.

When creating a subscription using the standard form, you don't need a subscription plan and price book. Creating a subscription using only add-on item lines simplifies the process. To learn how to create a subscription without a subscription plan or price book, see [Optional Subscription Plan and Price Book](#).

To learn how to set up a subscription plan and price book in NetSuite, view the video:

[Setting Up a Subscription Plan and Price Plan](#)

For high-level overview diagrams of the workflows that include this procedure, see [Subscription Plan Creation](#), [New Stand-Alone Subscription Creation](#), and [Subscription Creation from a Sales Order](#).

When you renew to a new subscription, you can select the renewal plan and price book. Refer to [Adding Renewal Information to Subscription Plans](#) to learn how the default from subscription populates the renewal. After renewal setup is done, your settings apply to new subscriptions created with this plan.

To create a price book:

1. On the saved subscription plan record, click the **Price Books** subtab. This subtab opens by default after you save a subscription plan.
2. Click **New Price Book**.
3. On the price book record, in the **Name** field, enter a name for the price book.
4. From the **Currency** list, select the appropriate currency.
5. On the **Price Book Lines** subtab, in the **Edit** column, click the edit icon for an item to make its price plan. For instructions on making price plans, see [Creating Price Books](#).

Note: You need to make a price plan for each item before saving the price book. Fill the required fields on the price plan, then click **Save** to return to the price book record.

6. From the **Interval** list (if showing), select the time period to set the duration of the interval. You can choose **Day**, **Week**, **Month**, or **Year**.
7. In the **Start On** field, enter a number for when the interval begins.

For example, set the **Interval** to **Month** and the **Start On** field to **1** (one). The interval runs from month 1 until the end of the term. When creating a subscription from this plan, the relative dates are converted to real dates based on the subscription start date. If you set the start date of the subscription to January 1 and the **Start On** field to 1, the interval starts on January 1.

Example:

Consider a price book, AAA Basic Plan Pricing, has currency in US dollars. The items associated with the price book include a one-time item, a recurring item, a usage item, and a commit plus overage item.

12. From the **Prorate By** column, select Month or Day.

✓ **Tip:** Prorate By Month rounds charges for the billing period. For example, a 12-month subscription costs \$12,000 that is billed monthly. If you select Prorate By Month, the charge for each month is rounded to \$1,000. With Prorate By Day for the same subscription, the monthly charge varies from \$920.55 to \$1019.18 based on the number of days in the month.

Example:

Consider that when you enable proration for an item, charges are created based on the number of days or months in the charge period. The default setting of Prorate By for recurring items is Day.

Time-Based Pricing

Use time-based pricing to create pricing models with planned pricing changes over time, also called interval pricing models. Examples include free trials, ramp pricing, and introductory pricing. You use time-based pricing to create intervals for price, quantity, or discount changes over time.

You can define how charges are calculated for time intervals during a subscription term. For example, consider a one-year subscription with an introductory pricing plan. A reduced price applies for the first three months and the full price applies for the last nine months. To set up this price plan, add an interval for the item starting on the fourth month without a discount.

For instructions on enabling time-based pricing, see [Enabling SuiteBilling Features](#).

To learn how to create a subscription plan, price book, and price plans with time-based pricing in NetSuite, view the video:

 [Creating a Subscription Plan, Price Book, and Price Plans with Time-Based Pricing](#)

 **Note:** If you use the SuiteBilling Enhanced UI SuiteApp (formerly called the Time-Based Pricing SuiteApp) with the Time-Based Pricing feature, see [Subscription Billing Enhanced UI](#).

Creating Intervals for Time-Based Pricing

You can apply a single price interval to all items on a price plan or define different price intervals for each item. Use the time-based pricing feature to add a price interval to all items in the price book and subscription.

Before creating a price interval, you need a subscription plan, price book, and price plan. See [Creating Items for Subscription Plans](#), [Creating Subscription Plans](#), and [Creating Price Books](#).

For example, consider a subscription with two line items, each with two price intervals. The new price for each item starts in the 4th month.

To create a price interval, set up the price plan using the following processes.

Adding a Price Interval to All Items at Once

You can simultaneously add a price interval to all items in a subscription plan.

To add a price interval to all items in a subscription plan:

1. From the subscription plan on the **Price Book** subtab, click the edit icon for an item. The price plan window opens.

 **Note:** Items with one-time pricing have only one price interval.

2. Click **Add Interval to All** to add a single price interval to all items at once.
3. Edit the price, discount, or quantity for the new price interval. For example, to set a price interval starting after the subscription starts, change the **Start On** value.

 **Note:** Adjacent price interval items must be unique. If you have identical adjacent price intervals, the items are combined into one price interval.

4. Click **Save** to save the intervals
5. When you're done configuring the price interval for all items, click **Save** to save the price book. The **Interval** and **Start On** columns appear on the price book. For information about these columns of the price book, see steps 6 and 7 of [Creating Price Books](#).

Adding a Price Interval to a Single Item

You can add a price interval to one subscription plan item at a time.

To add a price interval to a single item in a subscription plan:

1. Select the item with the price plan you want, and click **Make Copy**.

 **Tip:** When you copy a price interval, you save the effort of completing all the fields that a new price interval requires. For example, if you have tiered pricing and don't want to recreate the tiers for each new price interval.

2. Click the edit icon for an item. The price plan window opens.
3. Edit the price, discount, or quantity for the new price interval. For example, to create a price interval that starts after the subscription start date, change the **Start On** value.

 **Note:** Price interval items that are located next to each other must be unique. If you have two identical adjacent price intervals, the items from each interval are combined into one price interval.

4. Click **Save** to save the intervals in your price plan.
5. Repeat steps 2–4 for each remaining item in the price book.
6. When you're done configuring the price interval for all items, click **Save** to save the price book. The **Interval** and **Start On** columns appear on the price book. For information about these columns of the price book, see steps 6 and 7 of [Creating Price Books](#).

Pass-Through for Time-Based Pricing Intervals

With time-based pricing enabled, you can use pass-through for time-based pricing intervals. Pass-through happens when a change order is created between two time-based pricing intervals and the changed

field(s) are the same in both intervals. Pricing intervals that start after the change order can pass through and update the time-based pricing interval with the new value(s) if they don't change the same quantity, discount, or price field(s) as the change order.

Pass-through on time-based pricing intervals reduces manual effort by updating them automatically, so you don't have to create multiple change orders. Pass-through also makes time-based pricing intervals more consistent.

Example:

Consider a 12-month subscription starting July 18 with the following time-based pricing intervals:

LINE NUMBER	ITEM	LINE TYPE	START DATE	INTERVAL STATUS	CATALOG TYPE	INCLUDED QUANTITY MULTIPLIER	QUANTITY	PRICE	VIEW	DISCOUNT	TOTAL INTERVAL VALUE	RECURRING AMOUNT	CHARGE FREQUENCY	REPEAT EVERY	PROBATE BY
1	Monthly Recurring Subscription Service	Recurring	7/18/2023	Active	Required		1	Above 0 \$100.00		0.00%	100.00	100.00	Monthly	1	Day
1	Monthly Recurring Subscription Service	Recurring	8/1/2023	Active	Required		1	Above 0 \$200.00		0.00%	203.66	200.00	Monthly	1	Day
1	Monthly Recurring Subscription Service	Recurring	9/1/2023	Active	Required		1	Above 0 \$300.00		0.00%	294.52	300.00	Monthly	1	Day
1	Monthly Recurring Subscription Service	Recurring	10/1/2023	Active	Required		3	Above 0 \$400.00		0.00%	1,200.00	1,200.00	Monthly	1	Day

A change order is created and effective August 1, changing the quantity from 1 to 2. This change passes through and updates all subsequent time-based pricing intervals with the same quantity value as the one changed. The updated pricing intervals are as follows:

LINE NUMBER	ITEM	LINE TYPE	START DATE	INTERVAL STATUS	CATALOG TYPE	INCLUDED QUANTITY MULTIPLIER	QUANTITY	PRICE	VIEW	DISCOUNT	TOTAL INTERVAL VALUE	RECURRING AMOUNT	CHARGE FREQUENCY	REPEAT EVERY	PROBATE BY
1	Monthly Recurring Subscription Service	Recurring	7/18/2023	Active	Required		1	Above 0 \$100.00		0.00%	0.00	100.00	Monthly	1	Day
1	Monthly Recurring Subscription Service	Recurring	8/1/2023	Active	Required		2	Above 0 \$100.00		0.00%	0.00	200.00	Monthly	1	Day
1	Monthly Recurring Subscription Service	Recurring	8/1/2023	Active	Required		2	Above 0 \$200.00		0.00%	0.00	400.00	Monthly	1	Day
1	Monthly Recurring Subscription Service	Recurring	9/1/2023	Active	Required		2	Above 0 \$300.00		0.00%	0.00	600.00	Monthly	1	Day
1	Monthly Recurring Subscription Service	Recurring	10/1/2023	Active	Required		3	Above 0 \$400.00		0.00%	0.00	1,200.00	Monthly	1	Day

Deleting a Price Interval

You can delete a price interval from a price book even if it's used in a subscription. You can delete a price interval when the item is in the Draft status.

To delete a price interval:

1. Choose the price interval to delete.
2. Click **Remove**.

Setting Up Standard Pricing

As a System Administrator, you can set up standard pricing that other users can't change.

To set up standard pricing that other users cannot change:

1. Grant access permission to a subscription process with the following restrictions:
 - Limit how many users can edit the subscription pricing.
 - Restrict editing permissions for specific price plans, subscription change orders, or price books.

When access is restricted, non-System Administrators can update discounts or quantities but not the price plans, unless they have price plan permissions. To learn how to grant access permissions to a subscription process, see the help topic [Setting Permissions](#).

To learn SuiteBilling change order fundamentals, see [SuiteBilling Change Orders](#).

Copying a Price Book

To save effort in filling the fields for a similar price book, copy it. For example, you might want to copy a price book when creating price books for different currencies.

To copy a price book:

1. Open the price book record to copy.
2. From the **Actions** menu, select **Make Copy**.
3. Edit the copy with any needed changes.
4. Click **Save**.

Deleting a Price Book

When a price book hasn't been used to create any subscriptions, you can delete it.

To delete a price book:

1. Open the price book record to delete.
2. From the **Actions** menu, select **Delete**.

Creating Price Plans

Every item in a subscription plan needs a price plan. You also must create price plans for every pricing interval in a price book.

When creating a subscription using the standard form, a subscription plan and price book aren't needed. Creating a subscription with only add-on items simplifies creating a subscription. To learn how to create a subscription without a subscription plan or price book, see [Optional Subscription Plan and Price Book](#).

When creating a price plan, the quantity for each item must be more than zero (0). When modifying the price plan, you can't set the quantity to zero (0) or a negative number.

 **Note:** Volume pricing charges all units at the same rate based on the quantity.

For high-level overview diagrams of the workflows that include this procedure, see [Subscription Plan Creation](#), [New Stand-Alone Subscription Creation](#), and [Subscription Creation from a Sales Order](#).

To create a price plan:

1. From the **Price Books** subtab of the subscription plan record, select an existing price book.
If you haven't already created a price book, follow the instructions in [Creating Price Books](#).
2. Set up the price plan:
 - a. Click an item's edit icon to open the price plan window.

 **Note:** You can also click an existing price plan's edit icon to edit it.

- b. From the **Type** list, choose a type:

- **Tiered** – Typically used for recurring items. Tiered pricing charges a set rate for all items in a tier (for example, the first 10 items). If the quantity sold exceeds the tier upper limit, the extra items are charged the next tier's price.

Example:

Consider a beverage subscription with these tiered pricing levels:

Tier 1: 0–10 items, \$5.00

Tier 2: 11–20 items, \$4.95

Tier 3: 21+ items, \$4.90

For a 22-item order, the charge would be $(10 \times \$5.00) + (10 \times \$4.95) + (2 \times \$4.90) = \109.30 .

- **Volume** – Typically used for usage pricing. With volume pricing, the total quantity determines the charge rate for all items in the order.

Example:

Consider a beverage subscription with these volume pricing levels:

Tier 1: For 0-10 items, \$5.00

Tier 2: For 11-20 items, \$4.95

For an 8-item order, the per-item charge is \$5.00. The total charge would be $(8 \times \$5.00) = \40 . For a 22-item order, the per-item charge drops to \$4.95. The total charge would be $(22 \times \$4.95) = \108.90 .

When creating a price plan, you can set minimum and maximum limits for pricing tiers. See [Price Plan Minimum and Maximum Amounts](#).

- From the **Pricing Option** list, choose an option:
 - **Rate** – Calculates the item amount as (quantity x rate).
 - **Fixed Amount** – The item's charge amount doesn't change with quantity.
 - In the **Value** field, enter the item's charge amount.
 - To set pricing for more quantities, click **Add**.
- Repeat step 2 for each remaining item in the price book. Each item in a subscription plan needs a price plan.
 - Click **Save** to submit the price plan. NetSuite returns to the Price Book page and shows the new price plan.
 - From the **Charge Frequency** list, choose **Weekly**, **Monthly**, or **Annually**.
 - For non-one-time items, from the **Repeat Every** list, set how often to charge. For example, to charge monthly, select **Monthly** from the **Charge Frequency** list and enter **1** in the **Repeat Every** field.
 - Click **Save** to save the price book.

Price Plan Minimum and Maximum Amounts

Use the Minimum Amount and Maximum Amount fields on the Price Plan record to set overall minimum and maximum charges per period. If the tier setup calculates a value below the minimum or above the maximum, the the Minimum Amount and Maximum Amount fields override it. This feature lets you set overall minimum and maximum charges while still calculating tier structures separately.

Only when Advanced Subscription is enabled, the following optional new fields are added to the Price Plan record:

- Minimum Amount
- Maximum Amount

Tier-Level Minimum and Maximum

You can set minimum and maximum limits for pricing tiers. Consider the following pricing tier examples. Prices and discounts are tiered based on the quantity purchased:

- 0–100 recurring licenses, \$3.00
- 101–200 recurring licenses, \$2.00
- 201+ recurring licenses, \$1.00

If you enter a minimum amount of \$150, that would force customers to buy at least 50 licenses, even if they only need 1.

You can also set a discount that caps the cost at a certain price. If you set a maximum charge of \$500.00, customers don't pay extra for licenses after spending that amount.

Volume tiers can have a maximum price. Usually, you only need a maximum price for the top tier.

If a change order updates the price plan mid-period, the minimum and maximum amounts are prorated.

Example: Consider a customer who subscribes to your news website that has a minimum charge of \$10. You submit a change order April 13. The minimum prorated charge for April 1-12 is calculated as:

(days used ÷ total days in the month) x minimum charge

$$4 = (12 \div 30) \times 10$$

The minimum prorated charge for April 13-30 (18 days), is calculated as:

(days remaining ÷ total days in the month) x the minimum charge

$$6 = (18 \div 30) \times 10$$

To learn SuiteBilling change order fundamentals, see [SuiteBilling Change Orders](#).

Creating Billing Accounts

A billing account record shows all billing information, including the billing schedule, default payment terms, ship-to address, and currency, for a customer or sub-customer.

To enable billing accounts, first set the Consolidate Projects on Sales Transactions preference and enable the Charge-Based Billing and Billing Accounts features. For more information, see [Setting the SuiteBilling Preferences](#) and [Enabling SuiteBilling Features](#).

If you have multiple billing accounts for a customer, the default billing account is used to create transactions. For example, when creating a new invoice or new subscription, the default customer billing account is used. You can change the start date of a billing account on the billing account record only if it isn't yet used in an active subscription.

A company can set up multiple billing accounts to set different billing schedules. For example, they can bill annual charges in advance and bill usage monthly, each with a separate billing account.

Example:

Consider a coffee shop franchise that buys software using multiple billing accounts as follows:

- The licensing fees and maintenance are billed to the parent company annually January 1. This is the first billing account, with a fixed bill date of January 1 and the ship to and bill to address is the parent company address.
- The usage for the service is billed to the individual locations. For each location, there is a separate billing account with a monthly billing schedule. The bill to and ship to address for each account is the individual franchise location.

To create a new billing account:

1. Go to Lists > Relationships > Billing Accounts > New.
2. If required, from the **Subsidiary** list, select a subsidiary or change the subsidiary from the primary subsidiary to a secondary subsidiary.
3. Indicate the customer for the billing account:
 - For an existing customer, select the customer name.
 - To create a new customer, click the plus icon.
4. From the **Currency** list, select the customer's currency.
5. From the **Billing Schedule** list, select a billing schedule.
6. Enter or select a **Start Date**.

Note: After you click **Save**, you can't:

- remove the subsidiary from this customer
- delete billing accounts for this customer and their secondary subsidiaries

7. Click **Save**.

The following screen shows a completed Billing Account record.

Billing Account			List	Search	More
Edit Back Actions					
Primary Information Account Number 1005 Subsidiary Can Subsid ☒ Customer Default Customer 10005 Can Cust USD Account Description					
Billing Billing Schedule Monthly, 1st of the Month Frequency Monthly ☒ Use Off-Cycle Invoice For Advance Charges Start Date 1/1/2024 Last Bill Cycle Date Next Bill Cycle Date 1/1/2024 Last Bill Date					
Classifications Class Department Location ☐ Inactive					

You can also create a new billing account from other records, such as the Customer record or Subscription record. To create a new billing account from the Customer record, on the **Billing**

Account subtab, click **-New-**. Follow the previous instructions. To create a new billing account while creating a new subscription, see [Creating a New Stand-alone Subscription](#).

Viewing Records Related to the Billing Account

You can view records related to the billing account, such as subscription records, charge records, and billing schedules.

To view records related to the billing account:

1. Go to the Billing Account page.
2. Click the **Related Records** tab.

Billing Addresses

The billing account's Bill-To Select list sets the account's invoice, cash sale, and credit memo billing address. If you don't select a billing address, the default billing address on the customer record is used. You can change the billing address on the billing account if needed.

Customers with multiple subscriptions on the same billing account get one invoice based on the billing account's schedule.

The Ship-to Select list sets the shipping address. If you don't select a shipping address, the default shipping address on the customer record is used.

Billing Schedules

Billing accounts use charge-based billing schedules. Charge-based billing schedules have two recurrence patterns:

- Fixed bill date schedules generate invoices on a set date. Billing is based on the bill date, frequency, recurrence frequency, and repeat every settings. Fixed date billing schedules work best for invoicing on a specific day of the month, or other set frequency.
- Anniversary bill date schedules generate invoices on an annual basis. Billing is based on the billing account start date, frequency, recurrence frequency, and repeat every settings. Use anniversary billing to invoice on the same date each year as the service start date.

If you set a billing schedule with a date that isn't in every month, the billing schedule adjusts. For example, if you specify billing on the 31st, for months that have fewer days, the bill is on the last day of that month. February 28 and April 30 are two examples.

Changing the Billing Date for Future Invoices to a Billing Account

You need edit permissions for billing accounts to change the next bill cycle date.

To change the billing date for future invoices to a billing account:

1. Go to a saved billing account with a billing schedule.

2. In the Next Bill Cycle Date list, change the date for the next bill cycle.

The list shows possible dates to advance the billing date, up to 10 billing cycles.

You can move the next bill date back, but only to the next date after the last recurring invoice. For example, if you generate a bill run too early and need to run bills for the first bill cycle date, you can move the next bill date back.

Creating Recurring Invoices for Subscriptions with Billing Accounts

You can create subscription invoices that automatically recur with a set frequency.

Usage and overage must be billed in arrears, but recurring, committed, and one-time charges can be billed in advance. For example, electricity bills are based on your usage and is billed in arrears. To get paid as early as possible, most SuiteBilling users bill their customer's recurring charges in advance. For example, cable and internet service companies bill their customers for the coming month at the beginning of the billing cycle. Charges begin the day the service is activated.

There are several ways to create a recurring invoice with a billing account.

To create a recurring invoice with a billing account:

1. Go to Lists > Relationships > Billing Accounts.
2. Click **View** next to the billing account you want to invoice.
3. Click **Next Bill**.

Note: You can also create a recurring invoice from the customer record's **Billing Account** subtab by clicking **Next Bill**.

The Create Invoice page opens with **Recurring Bill** checked. The invoice date defaults to the billing account's next bill date.

You can also create recurring invoices in these ways:

- Invoicing billable customers from the Invoice Customers page
- Using billing operations (Process Billing Operations and Schedule Billing Operations)
- Creating invoices from the Invoice page

Each customer's billing accounts that are eligible for a bill run are reviewed. If there are charges, one recurring invoice per billing account per period is generated. You can send invoices to customers by generating a bill run statement.

The billing account's next bill cycle date is the invoice date. When the invoice is created, the Last Bill Cycle Date and the Last Bill Date change to the invoice date. The Next Bill Cycle Date moves to the next billing date. If you delete the invoice, the Last Bill Cycle Date and Next Bill Cycle Date revert to their previous dates. The Last Bill Date also changes to the previous bill date.

Using Billing Accounts with Off-Cycle Invoices

Use off-cycle invoices for mid-cycle billing of immediate charges. The invoice date is set to the date when you manually enter the invoice.

To create an off-cycle invoice using a billing account:

1. Go to Transactions > Sales > Create Invoices > List.
2. Click Edit for the invoice you want to use for the off-cycle invoice.
3. Clear the **Recurring Bill** box.

When you create the invoice, the Last Bill Date updates to the invoice date. When you delete the invoice, the Last Bill Date reverts to the previous bill date.

Copying a Subscription or Billing Account

Copying a subscription or billing account saves time by reusing existing information.

To copy a subscription or billing account:

1. Under Setup > Company > Enable Features > Transactions > Billing, enable Time-Based Pricing.
2. In billing accounts and subscriptions in View mode > Actions > list view, select **Make Copy**.

Regardless of the subscription status, Make Copy is in billing accounts and subscriptions in View mode > Actions > list view. Copied subscriptions have the default status.

Make Copy creates a billing account or subscription in the Create mode with most fields automatically filled from the original record.

- The start date for copied subscriptions and billing accounts defaults to the current date.
- If the original subscription has an evergreen term, the copied subscription has an evergreen term.
- If the original subscription has a standard term that was extended, the copied subscription's term is customized to include the full period.

Copied subscriptions have the Currency and Subscription Plan locked because changing these values resets all subscription values.

Changes to subscription intervals, such as Modify Pricing change orders, are copied and converted into time-based pricing intervals with the same values. Terminations, suspensions, and reactivations aren't copied.

SuiteBilling Management

This chapter describes frequent tasks for managing subscription billing.

For instructions about creating the prerequisite parts of a subscription, see:

- [Creating Items for Subscription Plans](#)
- [Creating Subscription Plans](#)
- [Creating Price Plans](#)
- [Creating Price Books](#)
- [Creating Billing Accounts](#)

After you've created all its necessary parts, you can create a subscription.

To move the subscription through the approval process, use change orders to change its status. For overview diagrams of creating and renewing subscriptions, see [SuiteBilling Process Diagrams](#). For fundamental information about change orders, see [SuiteBilling Change Orders](#).

A new subscription's status is initially **Draft** or **Not Included**. In the **Draft** status, subscriptions don't affect revenue or charges. An approved subscription's status changes to **Pending Activation**. A subscription's status changes to **Active** when the subscription is activated. You also can manually change the status of individual subscription items.

To move a subscription through its life cycle, use change orders to update the subscription or its components. If a customer decides to temporarily suspend their subscription, create a **Suspend** change order. When the customer is ready to restart their subscription, create a **Reactivate** change order.

You also use change orders to update pricing.

Subscriptions can be created from sales opportunities, estimates, or sales orders. Create subscriptions based on:

- Customer
- Billing Account
- Subscription Plan
- Price Book
- Start Date
- Subscription Term
- Subscription Renewal

You can also create a new stand-alone subscription without using an existing transaction.

For fundamental information about change orders, see [SuiteBilling Change Orders](#).

Creating a New Stand-alone Subscription

A **stand-alone subscription** is a new subscription created on the Create Subscriptions page, not from another transaction such as a sales order.

You can activate a subscription only after you create and save the subscription's required components. For instructions about creating the necessary parts of a subscription, see the following topics:

- [Creating Items for Subscription Plans](#)

- [Creating Subscription Plans](#)
- [Creating Price Books](#)
- [Creating Billing Accounts](#)

To see a high-level overview diagram of the process for creating a subscription plan, see [Subscription Plan Creation](#).

To create a new stand-alone subscription:

1. Go to Transactions > Subscriptions > Create Subscriptions.
2. Select from the list or enter values in any order:
 - Choose the customer for the subscription:
 - From the **Customer** field, choose an active customer from the list.
 - To create a new customer, click the plus icon next to the **Customer** field and select **New**.

You can choose any active customer, with or without a billing account. When you choose a customer, the **Subsidiary** and **Currency** fields are filled with the customer's values. If you choose **Customer** and **Subsidiary** values and leave **Currency** blank, the **Billing Account** field shows the customer's billing accounts.

 **Note:** The order in which you choose values for **Customer**, **Subsidiary**, **Currency**, and **Billing Account** affects how dependent fields on the Subscription and Billing Account records are filled.

- You can set a subsidiary for a new billing account before creating it. If the customer has subsidiaries, indicate them as follows:
 - From the **Subsidiary** field list, choose an active subsidiary. The Subscription record's **Subsidiary** fields are filled with values from the billing account.
 - You can change the subsidiary from primary to secondary. You can only change the subsidiary when the subscription is in Draft or Pending Activation status.
 - To create a new subsidiary, click the plus icon and choose **New**.
- You can choose the currency for a new billing account before creating it. Indicate the currency as follows:
 - From the **Currency** field list, choose an active currency. The Subscription record's **Currency** fields are filled with the billing account's values.
 - You can change the currency only when the subscription is in Draft or Pending Activation status.
 - To create a new currency, click the plus icon and choose **New**.
- (Optional) You can create a subscription without a billing account until you activate the subscription. You can choose a billing account from the **Billing Account** field list or create a new billing account by clicking the plus icon and choosing **New**. To create a new billing account, follow the instructions in [Creating Billing Accounts](#).

The Subscription record's **Customer**, **Subsidiary**, and **Currency** fields are needed to create a billing account. After choosing a customer, the **Billing Account** field contains the customer's default billing account. When all lines in the subscription are in the Draft or Pending Activation status, you can change the billing account to another account for the same customer. After choosing a billing account, the **Subsidiary** and **Currency** fields are read-only and have the billing account's values.

A billing account isn't required on default forms. Automation and import templates work when a billing account is set during subscription creation.

To activate a subscription, you must choose a billing account with values that match the Subscription record's **Customer**, **Currency**, and **Subsidiary** fields.

Note: To ensure accurate data, choose the **Billing Account**, **Customer**, or **Subsidiary** before choosing the subscription plan and price book

3. From the **Subscription Plan** list, choose a subscription plan. The **Subscription Plan** field shows the plans for the selected billing account. If you haven't selected a billing account, you must choose values for the **Currency** and **Subsidiary** fields to choose a subscription plan.

Only subscription plans with price books with matching currency are available.

Note: You don't need a subscription plan or price book to create a subscription using the standard form. Creating a subscription with only add-on item lines simplifies the process. To create a subscription without a subscription plan or price book, see [Optional Subscription Plan and Price Book](#).

4. If needed, from the **Price Book** list, choose a different price book.
5. From the **Initial Term** list, choose a term, or choose **New** to define a different term.
6. In the **Start Date** field, enter or choose a start date for the subscription. The start date defaults to today's date.
7. You can set the **Class**, **Department**, and **Location** fields on subscriptions in Draft or Pending Activation status. These fields, located in the Plan and Term section, are useful for reporting. These fields are automatically populated in this order:

- a. If the subscription plan has values in any of the **Class**, **Department**, and **Location** fields, these values are used on the Subscription record.
- b. If the subscription plan doesn't have a value in the fields, the billing account value, if available, is used.
- c. If neither the subscription plan nor billing account has values in these fields, the fields are empty on the Subscription record.

You can change the values of the **Class**, **Department**, and **Location** fields when the Subscription or Subscription Line record is in Draft status. You can't change the values when the Subscription or Subscription Line record is in Pending Activation or Active status.

The Subscription record's Lines tab includes columns for **Class**, **Department**, and **Location**.

8. If needed, define add-on items. See [Adding Line Items to an Existing Subscription](#).
9. If Advanced Revenue Recognition is enabled, set revenue recognition options. To enable Advanced Revenue Recognition, see the help topic [Enabling the Revenue Recognition Feature](#).

For evergreen subscriptions with Advanced Revenue Recognition, the Estimated Revenue Recommended End Date field sets the revenue recognition end date.

10. Apply discounts now, if needed.

Discounts can be applied to the plan and line items. Discounts can be set on one-time, usage, commit plus overage, and recurring subscription line items. Discounts work on all line types and pricing options.

Discount can only be applied to a subscription in the **Draft** state. After a subscription is activated, you can't apply a discount. To apply a discount to a draft subscription, edit the discount field directly. For **Active** subscriptions, you can only apply discounts using a Modify Pricing change order.

Charges and invoices dynamically display the net charge amount after discounts are applied, so invoices don't have separate discount line items.

- a. Go to Transactions > Subscriptions > Create Subscriptions > List.

- b. For the draft subscription you want to discount, click the subscription name or **View**.
 - c. On the subscription record, click **Edit**.
 - d. For the desired subscription line item, enter the discount:
 - Discounts can range from 0-100.
 - For percentage discounts, include the percent sign (%), for example, 50%.
 - For flat rate discounts, enter the amount without notation, for example, 50.
 - Discounts can't be and negative or over 100%.
 - e. To add discount to an active subscription, see [Modifying Pricing](#).
11. On the subscription plan Renewal subtab, define the renewal date and default percentage uplift. See [Adding Renewal Information to Subscription Plans](#) to learn how the default from subscription populates the renewal.

 **Note:** After you click **Save**, you can't change the subscription's customer, currency, or subsidiary. Instead, create a new subscription.

12. On the Uplift tab, define the **Uplift Percent** to increase the price. Create intervals using the combination of the **Uplift Frequency** and **Repeat Every** fields. Uplift intervals are created in the **Pricing** subtab with increased prices using the uplift values after saving the subscription. See [Uplift Pricing](#) to learn more about uplift for subscriptions.
13. Click **Save**.

If a billing account doesn't process, run billing operations again or schedule them for a convenient time. A billing account may not process due to:

- A charge created after billing operations start processing charges.
- Each billing operation can process up to 100,000 lines.

Running another billing operation may process remaining invoices. For more information about Billing Operations, see the help topic [Billing Operations](#).

After creating the subscription, individually activate each line item. For more information, see [Activating a Subscription](#).

After creating the subscription, you can associate it with a sales transaction or activate it.

For more information about revenue recognition, see [Revenue Recognition for SuiteBilling](#).

Optional Subscription Plan and Price Book

You don't need a subscription plan or price book to create a subscription using the standard form. Creating a subscription with only add-on item simplifies the process.

To create a subscription without a plan or price book:

1. Go to Setup > Company > Enable Features > Transactions > Add-on Items..
2. Go to Transactions > Subscriptions > Create Subscription
3. Supply the subscription information. See [Creating a New Stand-alone Subscription](#) for instructions about creating a new subscription.
4. Leave the **Subscription Plan** and **Price Book** fields blank.

5. Choose an **Item** from its menu.
6. Select a **Line Type** from its menu.
7. Choose a **Catalog Type** from its menu.
8. Click **Add** to create an add-on item.
9. To set the item price, go to the **Pricing** subtab and click **Edit**.
10. From the Price Plan record, choose a **Pricing Option** from its menu and enter a price such as 100.
11. Click **Add**.
12. Click **Save** to save the price. The Subscription record shows the added price.
13. Choose an **Initial Term**.
14. Required fields on the Subscription record are marked with a red asterisk. Fill any missing values for required fields.
15. Click **Save** to save the subscription. Notice that the **Subscription Plan** and **Price Book** fields are empty, and the subscription has one add-on line.
16. Click **Edit**. Notice that after the subscription is saved, the **Subscription Plan** and **Price Book** fields are locked and can't be edited.

When using CSV or scripting to create a subscription without a subscription plan or price book, leave each of these fields blank on the form or null on the script.

To require subscription plan or price book fields, create a custom subscription form that requires those fields.

To make the subscription plan or price book fields required:

1. Open a subscription record and click **Edit**.
2. Select **Customize** and click **Customize Form**.
3. Select **Fields**.
4. From the **Mandatory** column, choose **Subscription Plan** and **Price Book**.
5. Click **Save**.

Uplift Pricing

With uplift pricing, you set a percentage price increase annually or monthly during the subscription term and at renewal. Price increases are automatically applied after defining them on the **Uplift** or **Renewal** subtab. Uplift can be defined on a subscription plan that defaults to the subscription.

Uplift fields now support seven decimal points for precise pricing.

On the subscription **Uplift** subtab, define the **Uplift Percent** to increase the price. Create intervals using both the **Uplift Frequency** and **Repeat Every** fields. Saving the subscription in the pricing subtab creates uplift intervals with price increases based on uplift values. Use fields in the **Uplift** subtab as follows:

- **Uplift Percent:** Enter a percentage to increase the price of each interval after the first interval.
- **Uplift Frequency:** Choose when to create new uplifted intervals, monthly or annually.
- **Repeat Every:** Choose the frequency, months or years, for generating uplift intervals.
- **Uplift Start Date:** View a read-only column showing the first three intervals to be created based on the values you input.

The uplift percentage can be updated for uplift lines or added to time-based pricing lines to increase the price, either when the line is in draft status or through modifying pricing when the line is active. Uplift can't be added to one-time lines or lines using total interval values instead of price plans.

Subscriptions active before enabling uplift pricing can't use percent uplift when modifying pricing. Uplift pricing only works on new subscriptions or those in draft status. For subscriptions active before uplift pricing was enabled, either renew the subscription or create a new one to use the percent uplift column in a modify pricing change order.

The following image is the **Uplift** subtab before saving the subscription.

Editing a Draft Subscription

You can edit a subscription record in Draft status.

To edit a draft subscription:

1. Open the draft subscription record.
2. Click **Edit**.
3. Change the field values as needed.

Note: Changing the billing account doesn't reset the subscription plan, price plan, and term.

4. Click **Save**.

Note: After saving, you can't change the customer, currency, or subsidiary. Instead, create a new subscription.

Customizing the Pricing Sublist Fields on Subscriptions

You can customize the Pricing tab's sublist fields. With the subscription in Edit mode, click the customization link and go to the Sublist Fields tab. You can reorder, relabel, and hide fields. Line Number, Item, Quantity, and Price can't be hidden.

SubtabsField GroupsFieldsActionsSublistsSublist FieldsCustom CodeRoles

Creating a Subscription from a Transaction

You can create a subscription from an opportunity, estimate, or sales order after setting up the billing account and plan.

- When converting an opportunity to an estimate, the subscription carries over to the estimate.
- When converting an estimate to a sales order, the subscription carries over to the sales order.

You can create a subscription from a transaction, using one of two approaches:

- Add a saved subscription to the transaction to send the sales transaction to the customer.
- Create a new sales transaction to synchronize it with sales or move lines to Pending Activation status.

To create a subscription from a transaction:

1. On the transaction record, choose the customer.

 **Tip:** Use the Quick Search or Recent Records portlet to find the customer record.

2. Fill in required fields based on the transaction type.
3. From **Items** > **Subscription**, choose a subscription to add or choose **New** to create a new one.

 **Tip:** Choose an existing subscription to add if sending the sales transaction to the customer. Choose New if using the transaction to synchronize with sales or move lines to Pending Activation. See [Updating a Subscription on a Transaction](#) and [Activating a Subscription](#).

 **Note:** Only draft subscriptions can be added to sales transactions.

- a. If using an existing subscription, click **Save**.
- b. If creating a new subscription:
 - i. Enter the **Subscription Name**.
 - ii. From the **Billing Account** list, choose the billing account.

 **Note:** For accurate data, choose the **Billing Account**, **Customer**, or **Subsidiary** before choosing the subscription plan and price book.

- iii. Choose the subscription plan from the **Subscription Plan** list, or choose **New** to create a new one.

 **Note:** You don't need a subscription plan or price book for creating a subscription with the standard form. You can use only add-on item lines to simplify creating a subscription. To create a subscription without a subscription plan or price book, see [Optional Subscription Plan and Price Book](#).

- iv. Optionally, from the subscription Renewal subtab, define the renewal and default percentage uplift to apply to the original subscription. See [Adding Renewal Information to Subscription Plans](#) to learn how the subscription default populates the renewal.
 - v. From the **Initial Term** list, choose the subscription's first term.
 - vi. Enter or choose the **Start Date**.
4. Click **Add** to add the subscription to the transaction.
 5. Click **Save**.

If you checked the [Setting Optional Preferences](#) preference, approve the sales order.

All subscription lines automatically move to Pending Activation.

For information about creating a new subscription plan, see [Creating Subscription Plans](#).

Updating a Subscription on a Transaction

You can update the associated sales transactions with any changes made to a subscription. This ensures the transaction has the correct subscription details and totals. Subscriptions must be in **Draft** status. After a subscription is in the **Pending Activation** status, you can't update the associated sales transactions.

When a sales transaction needs updating, NetSuite displays a warning message in the top left corner of the screen.

The screenshot shows the NetSuite interface for a Sales Order. At the top, a navigation bar includes links for Activities, Transactions, Lists, Reports, Analytics, Documents, Setup, Customization, Commerce, SuiteApps, and Support. Below this, a warning banner states: "WARNING: At least one subscription line has changed. [Click here](#) to update." The main header shows "Sales Order" with a search icon and navigation arrows. Below the header, the order details for "9 00001 International Widgets Inc" are displayed, including a "Pending Approval" status. A row of action buttons includes Edit, Back, Approve, Cancel Order, Create Deposit, and Manage Revenue Recognition. The "Primary Information" section lists fields for Order #, End Date, Customer, PO #, Date, Memo, and Start Date. On the right, a "Summary" table shows the following values:

Summary	
Subtotal	1,200.00
Discount Item	
Tax	0.00
Total	1,200.00

To update the subscription information in a sales transaction:

1. Go to the sales transaction for the updated subscription.
2. In the warning message, click the link to update the subscription.
3. Click **Save** to update the sales transaction.

Using Item Records and Change Orders

Closed Subscriptions

When a subscription term ends and doesn't automatically renew, it closes. You can renew a subscription with the Closed status. If you didn't renew the subscription before its end date, renewing pulls information and keeps the original links from the previous subscription so you don't have to re-enter them.

You can also renew a closed subscription by creating a new subscription, or by renewing and extending the existing subscription before it closes. For information about renewal options, see [Renewing a Subscription](#).

Changing a Subscription Line's Status on a Subscription Record

When a subscription record is in **Edit** mode, you can change the subscription line status from **Draft** to **Pending Activation** or from **Pending Activation** to **Draft**. You use sales orders to move subscription lines to **Pending Activation**, which removes the lines from your subscription creation flow and reduces the records you interact with.

Activating a Subscription

To activate a subscription, first move all line items to the Pending Activation status. The Activate button appears when all line items are in Pending Activation status. After you set the effective date on the

Activation change order and check each line item, the subscription becomes active. For fundamental information about change orders, see [SuiteBilling Change Orders](#).

Change orders are date-sensitive.

- NetSuite uses the effective date for future charges.
- You can choose to have the subscription start date set when you create the first activation change order. For details, see [Optional Preferences for SuiteBilling](#).

To activate a subscription:

1. Go to Transactions > Subscriptions > Create Subscriptions > List.
2. Click the subscription name you want to activate to open the subscription in edit mode or click **Edit**.
3. For optional lines in the Not Included status:
 - a. On the **Lines** subtab, check the **Include** preference.
 - b. Click **OK**.
4. Change the **Status** field from **Draft** to **Pending Activation**.
5. Click **Save**.
6. Repeat these steps for each line item.
7. At the top of the page, click **Activate**.
8. On the Subscription Change Order – Activate page, check the **Apply** preference for the items you want to activate. All line items must be in **Pending Activation** status.
9. Click **Save**.

Invoicing and Allocating Before Activating a Subscription Line

Subscription businesses often sell projects, hardware, and subscriptions together. Hardware items and projects are often delivered and invoiced before subscriptions are activated or the service starts. You can invoice the first service period amount and allocate the revenue before activating a subscription line. To invoice and allocate before activation, generate charges and create revenue elements in pending activation status instead of at activation.

To set up a subscription line to invoice the first service period:

1. Go to **Setup > Accounting > Invoicing Preferences**.
2. On the Subscription Management tab, enter a number in the Days prior to Subscription start date field to populate the first bill date.
 - The value can range from 365 days before to 365 days after the subscription line start date.
 - If you enter 0, the First Bill Date column of the subscription line is empty and charges are generated at activation.
 - The First Bill Date must be before the subscription end date.

3. Click **Save**.
4. Go to your subscription in the Draft status.
5. Click **Edit**.
6. You can generate charges before activation on any recurring, one-time, overage, or prepay subscription lines with a defined bill date. In the Status column, change to the **Pending Activation** status and click **OK**.
You can't set the First Bill Date on usage lines.
7. On any usage lines or other lines that you want to charge at activation:
 - Set the **First Bill Date** column to equal the subscription line **Start Date**.
 - Change the **Status** column to the Pending Activation status and click **OK**.
8. Click **Save**.
9. Go to the Related Records tab.
10. For the lines using the first bill date functionality, notice:
 - The **Charges** subtab shows the charges generated for the subscription lines.
 - The **Bill Date** column is automatically filled based on the value set in step 2.
 - The **Charge Stage** column shows the Ready status for the first service period. Remaining service period charges are set to Hold until activation.
11. For usage lines and lines *not* using the first bill date functionality, notice:
 - There are no generated charges.
 - The **First Bill Date** column is empty. When the First Bill Date equals the subscription line start date and you saved the subscription, the **First Bill Date** value is removed. Subscription line charges are generated at activation.
12. In the Lines tab, you can set the First Bill Date on the subscription line, creating an offset between the First Bill Date and the line's start date. If a line's start date changes while in the Draft or Pending Activation status, the First Bill Date changes by the offset amount. The First Bill Date stays unchanged when activating the subscription, even if the **First activation change order sets the start date** preference is checked.

After invoicing the first charge's service period, the First Bill Date locks per line in the Pending Activation status. First Bill Date only updates the Bill Date for the first charge per subscription line. Subsequent charges are set to the Hold status until the subscription line is activated.

To turn off the functionality for generating charges before activation:

1. Go to **Setup > Accounting > Invoicing Preferences**.
2. On the Subscription Management tab, in the Days prior to Subscription start date field, enter 0. This field specifies the first bill date.
Alternatively, on the Subscription record Lines tab, you can either remove the value in the First Bill Date column or set it to the line's start date.
3. Click **Save**.

To show the revenue and invoice functionality for this feature:

1. After setting the Sales Order to the Pending Fulfillment status with one product item and one subscription, go to the Sales Order record for the subscription.
2. Go to the linked subscription, which is in the Pending Activation status. Lines with a first bill date that isn't null or doesn't match the subscription line start date can generate revenue elements.

3. Go to Transactions > Financials > Update Revenue Arrangements and Revenue Plans to **generate Revenue Elements and Revenue Arrangements**.
4. Click the **Revenue Elements** tab. Notice that the revenue elements are generated while the subscription is in the Pending Activation status and the revenue arrangement is generated.
5. After the revenue element for the subscription is generated, you can merge it with the sales order revenue element into one revenue arrangement.
6. Go to the invoice.
7. Generate an invoice for the charge for the first service period of the subscription.
8. Go back to the subscription.
9. Click **Related Records**. The charge is updated to the Processed status.
10. When you activate the subscription, the first charge updates with any amount changes and creates adjustments when needed.

 **Note:** Revenue plans aren't generated until activation. Subscription revenue can be allocated with other revenue streams such as sales orders or projects without requiring the activation change order. However, revenue for the subscription line can't be recognized until an activation change order for the subscription line is created.

Terminating a Subscription Line Item

Terminating a subscription is a line-level action. You can edit a subscription line item on or before its termination date. After a subscription line is closed or terminated, it is locked and can't be edited. To terminate a subscription using the Terminate change order, you must first terminate each of its line items.

After terminating a line item, its status changes to **Terminated** the day after the termination date. For example, if you terminate a subscription at 8:00 a.m. July 1, the termination change order doesn't take effect until 11:59 p.m. that day. If there is a daily charge or prorated charge for the subscription, the customer is charged for July 1. Any future charges are canceled. If a line item is terminated by mistake, enter a new subscription item. You can't change the subscription line item's status after it is set to **Terminated**.

To terminate a subscription line item:

1. Go to Transactions > Subscriptions > Create Subscriptions > List.
2. Click the **Edit** link associated with the subscription with line items you want to terminate.
3. From the **Actions** menu, choose **Terminate**.
4. In the **Effective Date** field, enter or choose a date for the termination.
5. For the line item you want to terminate, check the **Apply** preference.
6. Click **Save**.

Suspending a Subscription Line Item

Use the suspend change order to suspend subscription line items. You can suspend subscription line items when your customer wants to temporarily stop receiving them. Before suspending a subscription item, you must first activate it. For instructions about how to activate a subscription line item, see [Activating a Subscription](#).

A subscription line item can be suspended only if it is the **Active** or **Pending Activation** status.

To suspend a subscription line item:

1. On the subscription record, from the **Actions** menu, choose **Suspend**.
2. In the **Effective Date** field, enter or choose a date for suspending the line item.
3. If necessary, update the **Requester** field.
4. Choose a **Modification Type** from the following options:
 - **New or Churn** - The analytics revenue impact of the change order is classified as New or Churn.
 - **Upsell or Downsell** - The analytics revenue impact of the change order is classified as Upsell or Downsell.
 - **Ignored** - The change order has no analytics revenue impact.
5. Check the **Apply** preference for the item you want to suspend. Note that for items that can't be suspended the **Apply** preference is inactive.
6. Click **Save**.

To reactivate the suspended item, use the reactivate change order.

Reactivating a Subscription Line Item

Restore suspended line items using the reactivate change order.

After an item is suspended, a customer may want to resume receiving a suspended item. To reactivate an item, it must have the **Suspended** status.

To reactivate a subscription line item:

1. On the subscription record, from the **Actions** menu, choose **Reactivate**.
2. In the **Effective Date** field, enter or choose the reactivation date.
3. If necessary, in the **Requester** field, update the requester.
4. In the **Modification Type** field, choose one of the following options:
 - **New or Churn** - The analytics revenue impact of the change order is classified as New or Churn.
 - **Upsell or Downsell** - The analytics revenue impact of the change order is classified as Upsell or Downsell.
 - **Ignored** - The change order has no analytics revenue impact.
5. Check the **Apply** preference for the line item you want to reactivate.
6. Click **Save**.

After submitting a reactivate change order, the subscription item reactivates on the effective date.

To revert a subscription line to the Pending Activation status, you must void all its change orders. For instructions, see [Voiding a Change Order](#).

Removing One-Day Charges

To remove a one-day charge caused by terminating a subscription line, create terminate change orders at the start of the day. Termination change orders can take effect either at the start of or end of the day. Termination change orders can cancel Activation change orders.

To remove a one-day charge for a single suspended day caused when you reactivate a subscription line, create a reactivation change order on the item's suspension date. To reactivate all charges, create a Reactivation change order to take effect on the same day as the Suspend change order.

To remove a one-day charge from a subscription line item:

1. Go to Setup > Accounting > Invoicing Preferences.
2. On the Subscription Management tab, click **Default Terminations Effective at Start of Day**.
3. Click **Save**.

The **Default Terminations Effective at Start of Day** preference determines the default for when termination change orders take effect, at the start or end of day. You can check or clear this preference at any time. The current setting affects all newly created termination change orders.

Removing one-day charges is useful when you accidentally activate a subscription and need to correct it. You need to remove all of the charges from that subscription line. When you create a Termination change order on the same date as the Activation change order, and this preference is checked, all charges for that subscription line are removed. For instance, if you create a Termination change order for January 1 with **Default Terminations Effective at Start of Day** checked, there is no charge for January 1. Termination change orders set to take place at start of day and created on the same day as the activation cancel the activation and remove all charges for the line. There is no single-day charge.

Similarly, you can create a Reactivation change order on the same day as a Suspend change order. Prior to NetSuite version 21.1, Reactivation change orders couldn't be created on the same day as a Suspend change order. A Suspend change order would leave a single-day charge in the On Hold status, preventing it from being billed. For example, you have a subscription that was created with two lines. In Related records, you can see that invoices were sent January and February. One of the lines was suspended on 3/1/2021, so all charges from that date forward are on hold.

Lines Pricing Renewal Subscription Change Orders Uplift Related Records System Information									
Charges • Transactions • Revenue Elements									
View Custom Default Customize View									
#	Subscription Line	Item	Charge Type	Service Start Date ^	Service End Date	Bill Date	Amount	Currency	Charge Stage
1	Mid Market Data Storage: 2	Data Storage	Recurring Service	1/1/2024	1/31/2024	1/1/2024	\$500.00	US Dollar	Processed
2	Mid Market Data Storage: 1	Initial Setup	One-Time	1/1/2024	1/1/2024	1/1/2024	\$2,000.00	US Dollar	Processed
3	Mid Market Data Storage: 2	Data Storage	Recurring Service	2/1/2024	2/29/2024	2/1/2024	\$500.00	US Dollar	Processed
4	Mid Market Data Storage: 2	Data Storage	Recurring Service	3/1/2024	3/31/2024	3/1/2024	\$500.00	US Dollar	Hold
5	Mid Market Data Storage: 2	Data Storage	Recurring Service	4/1/2024	4/30/2024	4/1/2024	\$500.00	US Dollar	Hold
6	Mid Market Data Storage: 2	Data Storage	Recurring Service	5/1/2024	5/31/2024	5/1/2024	\$500.00	US Dollar	Hold
7	Mid Market Data Storage: 2	Data Storage	Recurring Service	6/1/2024	6/30/2024	6/1/2024	\$500.00	US Dollar	Hold

Creating a Reactivation change order to take effect on the same day as a Suspend change order results in the full charge amount returning to the Ready state.

To remove a one-day charge for a single suspended day caused by reactivating a subscription line:

1. From the **Actions** menu, choose **Reactivate**.
2. On the Reactivate change order, set the **Effective Date** to 3/1/2021.
3. For the line item you want to suspend, check the **Apply** preference.
4. Click **Save**.

After saving, all charges are in the Ready status when you return to the Related Records tab.

This cancels the suspension, making the full charge amount billable again. You can only create one suspend or reactivation change order per day for a subscription line. You can't create a second suspend or reactivate change order for the same day.

Modifying Pricing

To change pricing, use the modify pricing change order. Modify pricing change orders update the price of one or more active subscription items by changing the quantity, rate, or discount. For fundamental information about change orders, see [SuiteBilling Change Orders](#).

You may need to update an item's rate, quantity, or discount during the subscription term. For example, a client asks for more licenses three months into the subscription term. Or, a client may need a bigger discount during the term because their service was disrupted.

To modify pricing:

1. Go to Transactions > Subscriptions > Create Subscriptions > List.
2. Click **View** for the subscription you want to change.
3. Click **Modify Pricing**.
4. (Optional) To use off-cycle pricing, check the **Use Off-Cycle Invoice for Advance Charges** preference. For information about off-cycle invoicing, see [Off-Cycle Invoicing with Modify Pricing Change Orders](#).
5. In the **Effective Date** field, enter or choose a date.
6. If necessary, update the **Requester** field.
7. In the **Modification Type** field, choose one of the following options:
 - **New or Churn** - The analytics revenue impact of the change order is classified as New or Churn.
 - **Upsell or Downsell** - The analytics revenue impact of the change order is classified as Upsell or Downsell.
 - **Ignored** - The change order has no analytics revenue impact.
8. Check the **Apply** preference for the line you want to change. You can update the discount, price, quantity, uplift, overage price, or overage discount.
9. If you are modifying the price, click the new price plan and fill in the price plan details.
10. Review and update any other field values as needed.
11. Click **Save**.

When Create Revenue Elements per Subscription Revision is checked and a price changes, the linked modification element won't have a revenue amount. Price changes can be a rate or discount change with no quantity change. Because these types of changes don't affect the performance obligation, you can retrospectively merge them back to the subscription arrangement. You can also prospectively merge the modification element.

Changes that don't start on the previous charge period's start date on the line item require proration. Proration is based on factors such as the charge frequency, prorate by, recurrence start date, and other change orders within the same period.

To go back to the subscription, go to Transactions > Subscriptions > Create Subscriptions > List.

Off-Cycle Invoicing with Modify Pricing Change Orders

For in-advance charges, use the off-cycle invoice with a modify pricing change order to generate an invoice for the charges resulting from the change order. Charges generated with a start date before the

next bill cycle date are invoiced. To confirm if you can perform this action, make sure an Off-Cycle Request is still available under the Related Records tab. When processing the off-cycle invoice, check only the Bill Run (Off-Cycle Transactions) preference to avoid processing the invoice as a normal bill run. For details, see the help topic [Billing Operations](#). For fundamental information about change orders, see [SuiteBilling Change Orders](#).

After modifying pricing, you can return to the subscription by going to Transactions > Subscriptions > Create Subscriptions > List.

Pricing Amount Details

On the Subscription record, the Amount Detail column shows information about all charge and transaction lines. The Amount Detail column includes:

- Price plan details
- Quantity breakdowns per price tier
- Proration percentages
- Discount amounts
- The delta charge prior to invoiced amounts if there are invoiced amounts for that charge period

Note: Consider a usage charge in a previously invoiced period with a price modification for the same charge period. When you generate charges, then re-invoice for the delta charge, there aren't values in the pricing amount details if the invoice was generated before version 24.2.

The pricing amount details are a standard column on the invoice.

Prepaid usage drawdown charges have blank amount details because the parent usage charge already includes the amount details.

For prorated charges, the pricing amount detail includes the percentage used to calculate the charge amount.

For delta charges, the pricing amount detail includes the prior invoiced amounts and the total amount calculation. Proration can affect the total invoiced amounts. The total amount calculation might not match because invoiced amounts were individually prorated.

The pricing amount detail shows the pricing section, which is the price plan set up for each tier in the charge. The current charge detail shows the quantity and amount per tier used in the charge. Standard volume pricing has only one tier, because all quantities use that tier.

For commit plus overage charges, the proration percentage is based on the quantity, not the amount.

Example:

Here is a simple example of the Amount Detail:

Charge Quantity: 100, Amount: \$239.35, Rate \$2.39

Pricing:

- Tier 0-5: \$5.00
- Tier 6-10: \$4.00
- Tier 11-40: \$3.00
- Tier 41 and above: \$2.00

The current charge amount details are as follows:

5 x \$5.00 = \$25.00

$5 \times \$4.00 = \20.0
 $40 \times \$3.00 = \120.00
 $50 \times \$2.00 = \100.00
 Prorated at 90.32228% for the partial period

Example:

Here is a complex delta charge refund example:

Charge Quantity: 9, Amount: -\$6.60, Rate -\$0.73318842

Pricing:

- Tier 0-4: \$100.00 Min: \$1.00 Max: \$20.00
- Tier 5-6: Fixed Amount \$5.00
- Tier 7-9: \$200.00 Max: \$20.00
- Tier 10 and above: \$5.00 Min: \$50.00

The current charge amount details are as follows:

$4 \times \$100.00 = \400.00 Max: \$20.00

2 at Fixed Amount \$5.00

$3 \times \$200.00 = \600.00 Max: \$20.00

$1 \times \$5.00 = \5.00 Min \$50.00

Prorated at 67.7419% for the partial period

Discount amount: \$3.22

Previously invoiced charges are:

$1 \times \$74.19 = \74.19

And this charge amount is:

$\$61.13 - \$67.74 = -\$6.60$

Adding Line Items to an Existing Subscription

To add items to an existing subscription, enable the Add-On Items feature. See [Enabling SuiteBilling Features](#).

You can add new line items to a subscription at any time, including after it starts. On the subscription's **Lines** subtab, in the Catalog Type column, new line items are identified as Add-On. After adding an add-on item, the item follows the same workflow as any other subscription line item.

You can add multiple subscription line items at one time.

Add-on items are optional. You set their prices while you create it. There is no predefined pricing. You can add any service or non-inventory item from the subscription catalog to a subscription. After saving, an add-on item is treated like any other subscription line item and can be moved to Pending Activation status, then activated.

You can prorate committed or recurring add-on items, but not one-time, overage, or usage items. You can prorate charges by month or day.

Note: The Prorate By setting can be changed only when the recurring subscription item is in Draft status.

For commit plus overage services, the commitment quantity is prorated based on the prorate setting, not the amounts.

Example:

The following table shows the difference in charges with Proration By Day checked versus Proration By Month for a 12-month contract:

	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
Days in Month	31	28	31	30	31	30	31	31	30	31	30	31
Monthly Charge with Prorate By Day	1,019.18	920.55	1,019.18	1,019.18	1,019.18	1,019.18	1,019.18	1,019.18	1,019.18	1,019.18	1,019.18	1,019.18
Monthly Charge with Prorate By Month	1,000	1,000	1,000	1,000	1,000	1,000	1,000	1,000	1,000	1,000	1,000	1,000

For more information and an example, see [Proration Options](#).

Included quantity multipliers aren't permitted for usage-based add-on items. You can't define recurring add-on items as an included quantity multiplier for any usage line items. For more information about pricing, see [Creating Price Books](#).

To add a new line item to a subscription:

1. Go to Transactions > Subscriptions > Create Subscriptions > List.
2. Click the subscription name to edit.
3. On the Subscription record, click **Edit**.

A new item with the Catalog Type set to **Add-On** appears at the bottom of the page.

4. On the **Lines** subtab, complete the information for the add-on item:

- a. In the **Item** column, choose the item you want to add.
- b. In the **Subscription Line Type** column, choose the appropriate line type: **One Time**, **Recurring**, **Usage**, or **Commit Plus Overage**.

Using the Commit Plus Overage line type, you can charge in advance for a committed usage quantity and charge for overage if more is used than the committed quantity.

After an add-on item line is saved, the line type can't change even if the line is still in Draft status. For example, if the add-on line is saved as a recurring line type, it can't subsequently be edited and changed to a usage line type. Any change to line type is stopped after the add-on is saved.

- c. Review the following fields and update the values if needed:
 - **Include** – The preference is checked by default to include this item in the subscription.
 - **Billing Mode** – From the list, choose the required billing mode: **In Advance** or **In Arrears**.
 - **Prorate Start Date** and **Prorate End Date** – Click in the field to show the checkbox. Turn proration on or off as needed.
 - **Include in Renewal Subscription** – Click in the field to show the checkbox. Check the checkbox to include this item in any future renewals.
 - **Revenue Recognition Option** – Choose one of the following options:

- For example, a 12-month subscription costs \$12,000 and is billed monthly, but only 11 months are active. With the default setting of **Prorate By Day**, the monthly charge is \$1098.08. If you choose **Prorate By Month** instead, the charge for each month is rounded to \$1,000.

Charges Based on a Fixed Amount

You can enter a total amount for a subscription line and charge frequency to calculate recurring amounts, instead of creating a price plan and quantity, when negotiating a total amount over the subscription term. You can enter a total amount for a subscription line as an alternative to a price plan.

You set a total value for a subscription line in the **Total Interval Value** field. When the subscription is saved, the corresponding price plan is generated.

The screenshot shows the 'Subscription' form in SuiteBilling. It includes sections for Primary Information, Plan and Term, and Billing Account. At the bottom, there is a table for subscription lines with columns for Line Number, Item, Line Type, Start Date, Interval Status, Catalog Type, Included Quantity, Multiplier, Quantity, Price, Edit, Discount, Total Interval Value, Recurring Amount, Charge Frequency, Repeat Every, and Prorate By. The first line is a 'Set-up Fee' with a quantity of 1 and a price of \$1,000.00, resulting in a total interval value of 1000.00.

LINE NUMBER	ITEM	LINE TYPE	START DATE	INTERVAL STATUS	CATALOG TYPE	INCLUDED QUANTITY	MULTIPLIER	QUANTITY	PRICE	EDIT	DISCOUNT	TOTAL INTERVAL VALUE	RECURRING AMOUNT	CHARGE FREQUENCY	REPEAT EVERY	PRORATE BY
1	Set-up Fee	One Time	1/1/2021	Draft	Required			1	Above 0: \$1,000.00			1000.00		One Time	0	

When calculating a price plan value, the following parameters affect the Total Interval Value:

- repeat every
- charge frequency
- prorate start
- prorate end
- discount
- subscription term

Populating the total interval value clears the price plan values. Re-entering a price plan value clears the total interval value. Set either the total interval value or the price plan for a subscription line, but not both.

Total interval values can be entered only when a subscription line is in Draft status. You can't use total interval values on usage items or evergreen terms. When a total interval value is entered, generated price plans are always single-tiered price plans.

Modifying the Class, Department, or Location of a Subscription Line

To modify the Class, Department, or Location field of a subscription line, the line must be in the Draft status. Void any change orders for the subscription line. Change the subscription line status to Draft, then update the Class, Department, or Location field.

To move a subscription line back to Draft status when a sales order is attached, change the sales order from the Approved status to Draft status. When changing only one line, you only need to move the line back to Draft status. You don't have to void all change orders. For fundamental information about change orders, see [SuiteBilling Change Orders](#).

For fundamental information about change orders, see [SuiteBilling Change Orders](#).

Change Order Type-Specific Revenue Impacts

Different types of subscription change orders have these key differences:

- Activation and Reactivation change orders start revenue generation, and serve as the base element for reporting structures. Each line in the change order creates a revenue element that starts on the change order effective date and ends on the subscription end date.
- In a Modify Pricing change order, a single line change could create multiple revenue elements for one revision. This happens when the line goes through future change orders such as quantity or price modifications. The start and end dates are determined by the number of scheduled future change orders.
- Suspend and Termination change orders reverse all revenue beyond the effective date. Each modify, extend, or activation change order generates a revenue element.
- Renew-Extend change orders create a revenue element for each active subscription line on the extension's start date. The entry date is the effective date for Renew-Extend change orders.

For fundamental information about change orders, see [SuiteBilling Change Orders](#).

Voiding a Change Order

As of NetSuite version 2020.1, it's impossible to delete a subscription change orders, except for Renew-New change orders. For all other change order types, instead of deleting, void subscription change orders. For information about change order types, see [SuiteBilling Change Orders](#).

A voided change order can't be edited. Suspend and Reactivate change orders can be voided only if their effective date is in the future; otherwise, there is no Void button.

To void a change order:

1. If needed, find and open the change order record to void. For the navigation path of a change order, refer to the procedure for the type of change order you want to find. For example, for an activation change order, see [Activating a Subscription](#).
2. On the change order record, click **Void**.
3. For change orders that are the type that can clear revisions, void the change order first, then clear the revisions. See [Clearing Revisions](#).

Using SuiteScript, you can search for, view, and void change orders. The SuiteScript delete methods, version 1.0 `nlapiDeleteRecord` or version 2.0 `record.delete`, void subscription change orders instead of deleting them. When searching for subscription change orders in SuiteScript, use the Status field to filter out voided change orders and show only active ones.

Viewing a Voided Change Order

Voided records are included in search results to help you track revenue and contract changes.

To view a voided change order:

1. Click a change order that has a Voided status.
2. To see details, click the column heading.

SuiteBilling Subscription Revisions

When you create, edit, or void a subscription change order, a subscription revision with the individual contract modifications and the associated revenue impacts is generated. Saving a change order stores all changes associated in the subscription revision.

Subscription revisions keep a record of all changes made to the subscription. You can track to a specific change order changes to contracts and revenue that are made after activation. You can also monitor changes to values throughout the whole contract term. For fundamental information about subscription changes orders, see [SuiteBilling Change Orders](#).

You can't delete a change order, but you can void it instead. Although voided change orders are still visible, they don't impact charge amounts, so you can track the revenue changes even after change orders is removed. For instructions, see [Voiding a Change Order](#).

Viewing Subscription Revisions

Subscription revisions are on the Subscription Line record and the Subscription Change Order record.

For fundamental information about change orders, see [SuiteBilling Change Orders](#).

To view a subscription revision:

1. View a subscription revision in the following records:
 - On the Subscription Line record > **Revisions** subtab > Subscription Revision column
 - On the Subscription Change Order record > **Lines** subtab > Subscription Line Revisions column:

For subscriptions activated before NetSuite version 20.1, editing or deleting them doesn't create new subscription revisions. New subscription revisions for a subscription that was activated before version 20.1 are created only when you next save a subscription change order.

Subscription revisions have the following information:

- **Change Order Effective Date** – Effective date of the change order.
- **Discount** – Applied discount.
- **Price Plan** – Associated price plan.
- **Revenue Element** – For a Usage or Committed line, the revision includes a link to the Revenue Element that resulted from a specific modification. For One-Time, Recurring, and Overage lines, the revision includes links to Revenue Elements from specific modifications.
- **Created From Void** – Indicates changes from a voided change order.
- **Applied to Change Order** – Shows lines removed from a change order by clearing the **Apply** preference.
- **Created By** – The user who created the revision.
- **End Date** – The line end date when the change order and revision are created.

For One-Time and Recurring line types, subscription revisions also include:

- **Quantity** – The quantity of line items
- **Recurring Amount** – The line's recurring amount.
- **Delta Quantity** – The total change from the change order effective date to the line end date. For Evergreen subscriptions, the delta value is the Estimated Revenue Recognition End Date, or 3 years if Advanced Revenue Recognition is disabled.
- **Delta Amount** – The change amount.
- **Total Contract Value** – The Total Contract Value of the contract term for the subscription line.

Revisions and Revenue Impact For Evergreen Subscriptions

Updating the Estimated Revenue Recognition End Date of an Evergreen subscription increments the revision of Activate change order lines without a closed date or termination date.

The Estimated Revenue Recognition End Date field has these restrictions and behaviors:

- When active evergreen subscriptions with non-voided Activate change orders and no termination or close date, the Estimated Revenue Recognition End Date can't be cleared or set to a date before the current date or the subscription start date.
- If all subscription lines are in the Draft or Pending Activation status, or a have a non-voided Terminate change order, the Estimated Revenue Recognition End Date can be updated or cleared.
- Updating the Estimated Revenue Recognition End Date doesn't change the end dates of terminated or one-time subscription lines.
- If a line is activated, such as from voiding a Terminate change order, and the Estimated Revenue Recognition End Date is empty or before today's date, the system sets Estimated Revenue Recognition End Date to the first date after today from the following options:
 1. Subscription start date + 3 years
 2. Activate or Void termination change order effective date + 3 years
 3. Current date + 3 years (guaranteed to be after current date)

For example, if today's date is 1/1/2023, and the Subscription Start Date is 1/1/2016:

The first option isn't used because its resulting date is 12/31/2019, which is before today's date.

The second option is used only if the void termination date is after 1/1/2020, resulting in a date that's the same as or after today's date.

If the first two options don't apply, the third option is used. The third option results in an end date of 12/31/2026.

Clearing Revisions

Revisions can only be cleared when no revenue is recognized or merged. Clear Revisions does the following:

- Clears the change order history from the Change Order subtab
- Removes all revision history
- Removes all revenue arrangements and elements associated with the subscription

The Clear Revisions link only appears after voiding the initial Activate change order, not other types or subsequent add- item activations.

To clear all of a subscription's revisions:

1. For the subscription to clear, click its name, **View**, or **Edit**.

Tip: To find the subscription, you can:

- Look in the **Recent Records** tab for recently viewed subscriptions.
- Search for the subscription name or ID using the **Global Search** field.

2. From the Actions list, choose **Clear Revisions**.

For fundamental information about change orders, see [SuiteBilling Change Orders](#).

Creating Usage Records

Usage defines the charge for a subscription line item that can be consumed, such as money, time, software licenses, or internet data. Some subscription line items include an amount of usage. For example, consider a company that sells mobile phone service plans. The subscription may have a line item for a monthly fee that includes a specific amount of minutes or data in the customer's plan. When this included amount is exceeded, additional charges apply. In NetSuite, include a usage amount when creating the subscription plan.

You can also multiply the amount of usage included in a subscription. For example, a household has a total of five people that are part of a cell phone plan. When you create the price book, you can multiply the included usage for the data item by five. This gives each person the same amount of included usage. For instructions, see [Creating Price Books](#).

One time, commitment, and recurring charges often bill in advance, but usage charges bill in arrears. Usage and overage can't be billed until the item is used.

The Billing Specialist role without the accounting list permission can create usage with a usage record. When adding usage to commit plus overage lines, overage amounts are created only after a rating run is done. Any usage only within the commitment doesn't generate a charge, but instead can be viewed on the subscription line commitment details subtab.

You can't delete a usage charge after a rating run, but you can void it. For more information, see [Voiding a Usage Record](#).

To create a usage record:

1. Go to Transactions > Subscriptions > Create Usage.
2. (Optional) From the **Customer** list, choose a customer.
3. (Optional) From the **Item** list, choose the item to associate with usage.
4. (Optional) From the **Subscription Plan** list, choose the subscription plan to add usage to.
5. From the **Subscription** list, choose a subscription.
6. From the **Subscription Line** list, choose a subscription line item.
7. In the **Quantity** field, enter the quantity.
8. In the **Usage Date** field, enter or choose a date.
9. Click **Save**.

 **Note:** Usage records don't support user event scripts.

Voiding a Usage Record

You can void any usage record in the Active or Suspended status. You can void a usage record at any time, even when it is already rated or invoiced. If a usage record was invoiced or revenue was recognized, voiding it generates any required reversing charges or revenue. Voiding usage records eliminates manually entering credits and corrections for incorrectly rated usage.

You can't delete a voided usage record. When a usage record is voided, it permanently becomes a view-only record. Active usage records can't be voided even if the related Subscription record is already closed.

When you void a usage record and create another one before rating or revenue updates, the net quantity change is used to generate the charge amount.

You can create a termination change order even if a usage record exists after the termination effective date. Usage records created after a termination change order are automatically voided.

 **Note:** Usage in a suspended period doesn't count against the active commitment. Usage on commit plus overage lines isn't rated if in a suspended period.

To void a usage record:

1. Go to Transactions > Subscriptions > Create Usage > List.
2. Click the usage line number to void.

 **Important:** The usage record's subscription line must be in the Active or Suspended status. You can't void a usage record if its subscription line status is Terminated, Closed, Pending Activation or Draft.

3. On the Usage record, click **Void**.
4. Click **Save**.

For fundamental information about change orders, see [SuiteBilling Change Orders](#).

Managing Rating Runs

Rating is the process of creating charges for subscription line items. Charges for a subscription are calculated based on its line item details:

- The quantities, pricing, and usage in the price plan and price book
- The effective date of the subscription
- The status of the subscription and its line items

To set and change the status of subscription line items, use a change order.

Certain tasks done on a subscription line item that affect charge calculations are called **ratable events**. Ratable events may be caused by:

- Activating a line item
- Reactivating a line item
- Renewing a line item
- Suspending a line item
- Terminating a line item
- Modifying quantities and rates on a line item
- Saving a change order

For fundamental information about change orders, see [SuiteBilling Change Orders](#).

Automatic Rating Runs

Saving an action that causes a ratable event automatically starts the charge calculation process, known as a **rating run**. You can also generate charges on demand or schedule them with your current billing operations. Run ratings from the Billing Operation page.

Saving a change order is a ratable event and starts a rating run. You can only submit one change order of a specific type per day for a subscription line item. For example, if you submit a modify pricing change order to change a line item's price and later want to add a discount to the same line, you must wait 24 hours.

The same is true for quantity changes. If you submit a change order that changes the quantity of a line item, you must wait at least 24 hours before submitting another.

Changing a draft subscription's pricing also starts an automatic rating run. Although this rating run doesn't generate charges, it helps calculate the total subscription amount when synchronizing a draft subscription with a sales order. Rating runs are asynchronous server processes, so the latest results may not be immediately available after saving the draft subscription. For the current data, resynchronize the sales order.

Example:

Suppose you have a subscription line item, cell phone service, from January 1, 2029 to December 31, 2029.

1. You create a change order that changes the subscription start date to February 1, 2029. When you save the activation change order, rating occurs. Charges are created from February to the end of the subscription term, reflecting the new start date.
2. May 1, you create a suspend change order for the cell phone service subscription line item. When you save the change order, rating occurs. A rating run starts and calculates the charges from May 1 to the end of the subscription term, and places the charges **On Hold**. If earlier charges were invoiced, negative charges could occur.

For fundamental information about change orders, see [SuiteBilling Change Orders](#).

Manually Starting a Rating Run with Billing Operations

You can start a rating run manually at any time to create charges. For example, you might use billing operations manually when a subscription's price changes. Another situation is when a customer cancels their subscription early and is entitled to a partial refund. In this case, you use billing operations to create a credit memo. A subscription change order could require you to manually create SuiteBilling charges. For more information about billing operations, see the help topic [Billing Operations](#). For fundamental information about change orders, see [SuiteBilling Change Orders](#).

To manually start a rating run to generate charges with Billing Operations:

1. Go to Transactions > Billing > Process Billing Operations.
2. On the Billing Operation page, check the **Rating Run** preference, then click **Run**.

Creating a Scheduled Rating Run Using Billing Operations

You can schedule a rating run to create subscription charges for a specific day and time, such as for billing monthly subscription charges. For more information about Billing Operations, see the help topic [Billing Operations](#).

To create a scheduled rating run using Billing Operations:

1. Go to Transactions > Billing > Schedule Billing Operations.
2. Under Primary Information, enter a name and description for the bill run schedule. To delay the bill run schedule, check the **Inactive** box.
3. Under Schedule, set up a schedule for the bill run.
4. Under Billing Operations, check the **Bill Run** preference.
5. Under Billables, choose the transaction types to bill.
6. Under Accounting, indicate whether the credit card is approved.
7. Under Communication, choose whether bills are printed, emailed, or faxed.
8. Click **Save**.

Prepaid Usage with Drawdown

Prepaid Usage with Drawdown is a service type for usage services to be billed in advance, with usage drawn from assigned service lines. Prepayment services can be added to both subscriptions and plans. Prepaid lines can only be linked to usage lines in the draft status. Prepaid lines can't be modified, activated, or suspended. Prepayments are activated when their associated usage services are activated.

Using the Prepay with Drawdown feature, you can set up a prepay service on one subscription, then charge and burn down the prepayment with usage services on the same or a different subscription.

Prepaid service lines have two frequency options:

- **One-Time** – payments are estimated amounts paid in advance for expected usage. Usage is deducted from the balance. When the prepayment amount is gone, the service becomes a "pay as you go" service. When the prepayment balance is 0, you need to create a new subscription or subscription lines for prepayment and usage to add another prepayment.
- **Auto-Refill** – requires a minimum balance of 0 or more. If the prepaid amount reaches the minimum balance, new prepayment charges are automatically created. For auto-refilled prepayments, the minimum balance is only validated after rating is completed for the submitted usage.

When the subscription term ends, the service provider can either refund the remaining prepay element amount or recognize it without a refund.

To enable Prepaid Usage with Drawdown:

1. Go to Setup > Company > Enable Features (Administrator).
2. On the Transactions subtab, in the Billing section, check the **Prepay with Drawdown** box.

 **Note:** You can't use this feature if the Create Revenue Elements for Subscription Revisions preference is checked.

Accumulated Rating

To make a charge per use for usage and overage services, you can price in one frequency and charge in another frequency. For instance, you can set an annual service price in a price book but charge customers monthly. This resets the pricing tiers annually and charges monthly for use.

Pricing frequencies determine how often to reset subscription line tiers. **Charge frequencies** indicate how often to charge the customer for the service. For example, annual pricing with monthly charging resets tiers annually but charges for any usage monthly.

Pricing frequency and charge frequency must be divisible by each other. Examples include quarterly and monthly, or weekly and biweekly. The pricing frequency and charge frequency must match for one-time, recurring, prepay and commit services types. Frequencies can only be changed when the subscription line is in the Draft or Pending Activation status.

Subscription plans have a Charge Per Usage Record column. You can choose Yes only for commit plus overage service and usage service types in the Draft or Pending Activation status.

Both subscription lines and plan lines have a Charge Per Usage field. To generate a charge per usage record, check the Charge Per Usage field.

When multiple charges are created in the same period, pricing details on the charge and invoice lines aren't combined.

Example:

A software provider offers a cloud storage service where customers are billed based on their data usage. The company wants to advertise an annual data allowance but let customers pay monthly, making budgeting easier for customers while keeping the offer competitive. The subscription is set up as follows:

- **Service Plan:** Cloud Storage that includes 1200 GB of data per year.
- **Annual Price (in the price book):** \$1,200 (covering up to 1200 GB for the year).
- **Pricing Frequency:** Annual (tiers reset each year).
- **Charge Frequency:** Monthly (customer is billed each month).

How accumulated rating works:

- The pricing structure could be as follows:
 - Tier 1, from 0 – 600 GB: \$90 rate
 - Tier 2, from 601 to 1000 GB – \$100 rate
 - Tier 3, over 1000 GB – \$110 rate
- Data usage is tracked each month by adding usage tied to the service line. The quantity is accumulated over each month resulting in a specific price for each usage record.
- Whenever the accumulated usage goes past the thresholds of 600 or 1000, the rate jumps to the higher rate for those specific usage records, based on the total usage over the annual period.
- Then the pricing tiers reset at the start of the next annual cycle.

Summary Table 1: Accumulated Rating for Usage Services With Annual Pricing and Monthly Charging

Month	Monthly Usage (GB)	Cumulative Usage (GB)	Charge (USD)
1	90	90	\$100
2	100	190	\$100
3	450	650	\$40,990
...	...	...	...
12	120	1300	\$100

For Commit Plus Overage services where the overage is annual pricing with monthly charging, the overage tier accumulation doesn't start until the commitment is fully consumed for the commitment pricing period.

With a 600-GB commitment, the tiers would start to be consumed after the 600-GB limit is reached. The cumulative usage at the end of the 12-month period of 1300 GB means that 700 GB is overage, resulting in hitting only the first two tiers.

Summary Table 2: Commit Plus Overage Services With Annual Pricing and Monthly Charging

Month	Monthly Usage (GB)	Cumulative Usage (GB)	Charge (USD)	Overage Charge
Commit Charge	0	0	20,000	—
1	90	90	\$0	—
2	110	200	\$0	—
3	450	650	\$0	\$4500
...	...	...	...	...
12	120	1300	\$0	\$12000

Billing for Usage and Commit Plus Overage Charges

The Charge Commit On Usage line-level preference offers a flexible way to bill commit plus overage (C+O) amounts for usage services and commit plus overage services. Set this preference when you don't want to charge the entire commitment quantity or the full minimum amount upfront on the first usage record.

To set this preference, on the line, in the **Charge Commit On Usage** column, click to check the box.

Commit Plus Overage Capabilities

With the Commit Plus Overage subscription model, you can manage commitment credits across multiple usage services, giving you greater flexibility in how SuiteBilling handles commitments and overages. Commitment credits may be shared among different usage lines, and you can apply different overage rates to each usage line. For example, rates can be tailored by service type or consultant tier.

This model also works for subscriptions grouped by customer, currency, and subsidiary, offering support for more complex billing scenarios.

How It Works

- **Commitment amounts** are billed from the C+O line, and commitments reset at the end of each pricing period.
- **Commitment credits** can be allocated across multiple usage services, which allows for shared commitments across different lines.
- **Overage charges** are accurately billed at the individual usage line level, according to each service's price plan.

- **Overage price plan and frequency fields** do not apply when usage is recorded against a usage service tied to the commitment plus overage line.
- **Breakage and overage revenue** are tracked against the C+O line.

Usage Capabilities

For usage services, the **Charge Commit On Usage** line-level preference lets you control when the system bills the minimum amount from the price plan header:

- Check the **Charge Commit On Usage** box to have the unused portion of the minimum amount billed at the end of the pricing period.
- If this preference is not set, the full minimum amount is charged on the first usage transaction.

 **Note:** At least one usage is required for the system to bill the minimum amount for a usage line.

For commit plus overage services:

- Checking the **Charge Commit On Usage** box charges the commitment quantity at the end of the pricing period when the billing mode is in arrears.
- If the billing mode is not in arrears, the system invoices usage up to the commitment quantity according to the billing account invoice frequency.

Example 1:

On the price plan header, you set a minimum \$1000 USD on a usage service, priced annually and billed monthly. On the subscription line, you check the box in the Charge Commit On Usage column. At the end of the year, a total usage of \$600 has been billed. You can now bill for the unused \$400 to meet the annual minimum.

Example 2:

Your company offers to charge commitment credits at a single discounted rate to be shared among your consulting service usage lines. You set a total annual commitment of 100 hours to be shared across both tiers. Between the two usage lines you use up 110 hours. The remaining 10 hours will use the individual usage rates to charge the overage quantity.

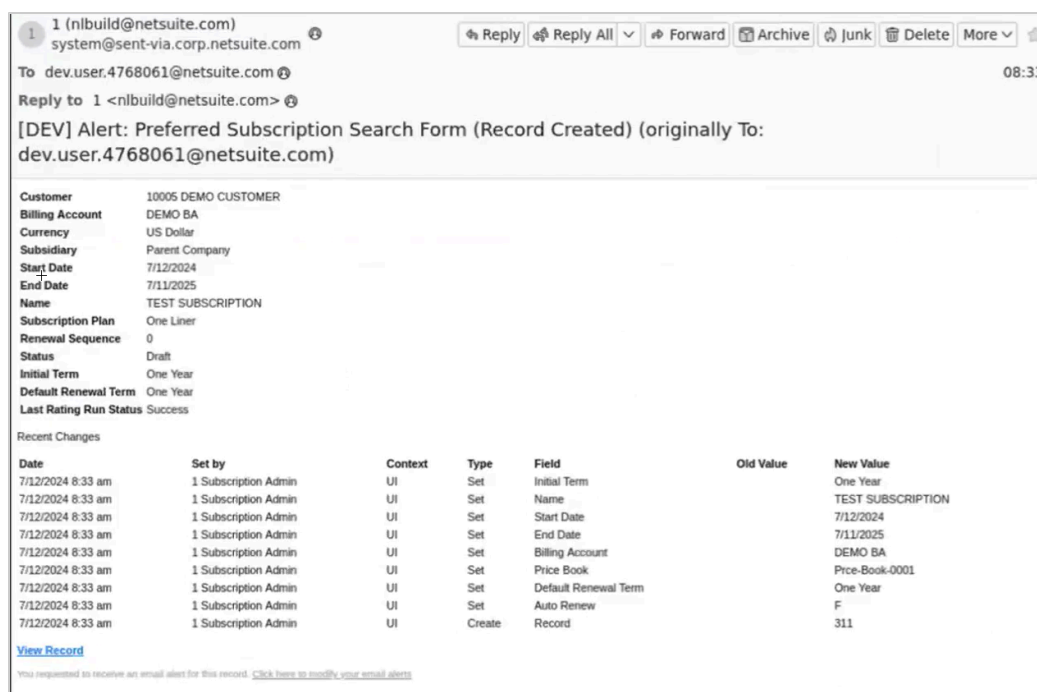

Saved Search Email Alerts

Use a saved search to set up email alerts for subscriptions, subscription lines, or change orders to track when it is created or updated, or when specific fields you define are updated.

To set up a subscription email alert:

1. Go to Transactions > Subscriptions > Create Subscriptions > Search.
2. On the Subscription Search page, choose **Personalize Search**.
3. In the Personalize Subscription Search Form, choose **More Options**.
4. Choose the criteria and results for your email alert.
5. Click the **Email** tab.

6. Check the **Send Email Alerts When Records Are Created/Updated** preference.
7. Choose the email recipient, which can be an internal employee email address or a customer email using a join.
8. Check **Send on Update** and **Show Recent Changes** to include a Recent Changes section in the email alert, which is sourced from the record's system notes.
9. Click **Add**.
10. (Optional) Choose **Updated Fields** to receive email alerts when specific fields are updated.
11. (Optional) Choose **When Old Value Is** or **When New Value Is** to receive email alerts only when the selected field's values change. The Recent Changes section has a detailed view of each record's changes, including change types, updated fields, and the old and new values, sourced from system notes, .
12. Click **Save** to save the search.
13. Go to Transactions > Subscriptions > Create Subscription.
14. Fill out the subscription information. To learn how to make a new subscription, see [Creating a New Stand-alone Subscription](#).
15. Click **Save**. An email alert similar to the following image is displayed.

The email alert header comes from the saved search's results tab. The Recent Changes section has a detailed view of changes, including change types, updated fields, and the old and new values.

Renewing a Subscription

There are several ways to specify whether and how to renew a subscription:

- Renew (or extend) an existing subscription. To view the process diagram, see [Renew and Extend a Subscription from a New Subscription Record](#). When you want to renew a subscription before its end date, you can extend the end date of the existing subscription. However, if the renewal requires a new subscription transaction, the subscription can't be renewed using the extend existing subscription

method. When you automatically initiate the renewal process before the subscription end date, you can define the term, method, transaction type, and how you want to renew the subscription price plan.

- Renew by creating a new subscription transaction that uses the existing plan or a new plan. To view the process diagram, see [Renew a Subscription with a New Subscription Record](#).

When you renew to a new subscription, you can choose the renewal plan and price book. A subscription that renews to a new subscription record also can have a different billing account from the original subscription. During subscription renewal, the newly created subscription has the billing account from the original subscription. However, you can change the billing account after you create the subscription while it is in the Draft or Pending Activation status. Refer to [Adding Renewal Information to Subscription Plans](#) to learn how the default from a subscription populates the renew change order.

- You can renew a subscription with the Closed status. If you didn't renew the subscription before the subscription end date, renewing populates information from the previous subscription so you don't have to re-enter it. Renewing also retains links attached to the original subscription that are lost when creating a new subscription.

When you choose the Create New Subscription renewal method, the start date on the new subscription is the original subscription's renewal date.

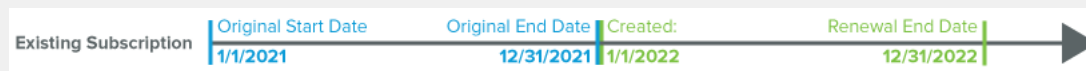

When you choose the Extend Existing Subscription renewal method:

- The subscription end date is pushed out by the selected term.
- Rating is triggered to run and new charges for the renewal period are generated even if charges may be in the past.
- If the original end date of the subscription plus the extension is still before today's date, the subscription remains closed but new charges are ready to bill.
- Alternatively, during the subscription term, you can manually create a Renew change order. The new subscription uses the existing subscription plan.

Subscription renewals are considered either low-touch or high-touch:

- A low-touch renewal is one that automatically renews, or extends, when the initial subscription ends.
- A high-touch renewal requires more effort. Someone such as a sales representative, for example, needs to contact the customer or manually renew the subscription.

Example 1: Low-Touch Renewal at the End of the Term

In this example, the figure represents an existing magazine subscription that runs from January 1, 2021 to December 31, 2021. On January 1, 2022, the subscription automatically renews for another year using the extend existing subscription method with the same subscription plan and existing pricing.

To renew a subscription automatically:

1. Go to Transactions > Subscriptions > Create Subscriptions > List.
2. For the subscription you want to renew, click **Edit**.
3. Click the **Renewal** subtab.
4. From the **Default Renewal Term** list, choose a term for the renewal subscription.
5. From the **Default Renewal Method** list, choose a default renewal method.
 - a. If you selected **Extend Existing Subscription**, go to step 6.

- b. If you selected **Create New Subscription**:
 - i. From the **Default Renewal Subscription Plan** list, choose a default subscription plan for the renewal subscription.
 - ii. From the **Default Renewal Price Book** list, choose a pricing option for the renewal subscription.
 - iii. From the **Default Renewal Transaction Type** list, choose one of the available options (**Do Not Create Sales Transaction Estimate**, **Opportunity**, or **Sales Order**).
6. When the **Uplift Pricing** feature is enabled in the **Renewal** subtab of the subscription plan or subscription, you can define the default percentage renewal uplift to apply to renewal subscription lines on the original subscription. The renew change order has renewal configuration and uplift values based on the renewal configuration from the subscription. The lines displayed in the uplift table are based on the renewal configuration.
7. To set up your renewal to happen automatically, check the **Automatically Initiate Renewal Process** preference and enter the appropriate number into the **Before Subscription End Date** field. You should renew no later than 30 days in advance of the end date.

Note: The appropriate number to enter depends on your organization. It indicates how many days before the subscription ends that you want to contact the customer. For example, you might want to contact the customer to renegotiate the subscription terms.

8. Click **Save**.

Example 2: High-Touch Renewal Before the End of the Term

In this example, an existing one-year subscription expires on December 31, 2021, but isn't set to automatically renew. A sales person needs to contact the customer to negotiate another subscription. A new subscription is created using the create new subscription renewal method. This method is useful when the new subscription requires changes to the subscription plan or a change in price, and is created with a **Draft** status. The associated sales order is created with **Pending Approval** status.

To renew a subscription manually:

1. Go to Transactions > Subscriptions > Create Subscriptions > List.
2. For the subscription you want to renew, click **Edit**.
3. From the Actions menu, click **Renew**.
4. From the **Default Renewal Term** list, choose a term for the renewal subscription.
5. From the **Default Renewal Method** list, choose a default renewal method.
 - a. If you selected **Extend Existing Subscription**, go to step 6.
 - b. If you selected **Create New Subscription**:
 - i. From the **Default Renewal Subscription Plan** list, choose a default subscription plan for the renewal subscription.
 - ii. From the **Default Renewal Price Book** list, choose a pricing option for the renewal subscription.

- iii. From the **Default Renewal Transaction Type** list, choose one of the available options (**Do Not Create Sales Transaction**, **Estimate**, **Opportunity**, or **Sales Order**). If you choose **Do Not Create Sales Transaction**, upon renewal, NetSuite creates a new subscription that isn't associated with a sales transaction.
- 6. When the **Uplift Pricing** feature is enabled, you can define the percentage renewal uplift you want to apply to each subscription line on the renew change order. The renew change order has renewal configuration and uplift values based on the renewal configuration from the subscription. The lines displayed in the uplift table are based on the renewal configuration.
- 7. When you enable the **Uplift Pricing** feature, NetSuite automatically applies percentage price increases to a customer's renewal pricing. When a new subscription is created, the default value acts as a template for the default renewal settings. When the subscription renewal is created, the price plans are automatically updated.
- 8. Click **Save**.

Including Add-On Items in Subscription Renewals

When renewing a subscription manually using a renewal change order, you have the option to edit each line item before saving the draft subscription. Reasons you might want to edit lines include adding or removing items from the subscription. Perhaps a service is no longer available or was replaced by a new service.

The following default rules apply to add-on items with the **Include In Renewal Subscription** preference checked:

For these default renewal settings:	These rules apply:
Method – Extend Existing Subscription	All add-on items are included at the same price and quantity for the extended renewal period.
Method – Create New Subscription Subscription Plan – Same Subscription Plan Price Book – Keep Existing Pricing	All add-on items are included in the draft renewal subscription with the same price and quantity.
Method – Create New Subscription Subscription Plan – Same Subscription Plan Price Book – a specific price book	All add-on items are included in the draft renewal subscription with the same quantity. Prices are defined by the specific price book.
Method – Create New Subscription Subscription Plan – (a different plan from the original subscription selected)	Add-on items from the original subscription aren't included in the draft renewal subscription. Only line items defined in the renewal plan are included on the renewal subscription.

Deleting a Subscription

Before you can delete a subscription, you must void all change order records and then remove them by clearing the subscription revisions.

To delete a subscription:

1. Void all change order records. For instructions, see [Voiding a Change Order](#).

2. Use the Clear Revisions feature to remove subscription change orders. For instructions, see [Clearing Revisions](#).
3. For the subscription you want to delete, click the subscription name or **Edit**.

Tip: To find the subscription, you can:

- Look in the **Recent Records** tab for recently completed subscriptions.
- Enter the subscription name or subscription ID into the Global Search field.

4. From the Actions list, choose **Delete**.

SuiteBilling Reports

SuiteBilling offers several reports that let you to monitor your subscriptions and customers:

- [Monthly Recurring Revenue Report](#)
- [Monthly Recurring Revenue Report](#)
- [Total Contract Value Report](#)
- [Billings to Date Report](#)
- [Churn By Customer Report](#)
- [Churn By Revenue Report](#)

To view the SuiteBilling reports, go to Reports > Subscriptions.

Tip: If you don't see the Subscriptions option in the Reports menu, switch to an administrative role or contact your NetSuite administrator.

Annual Recurring Revenue (ARR) and Monthly Recurring Revenue (MRR)

Subscription businesses have a unique set of metrics called SaaS (software as a service) metrics. Recurring revenue, either MRR or ARR, is the basis many of these metrics. SaaS metrics are used to determine the health of a business and to help inform if changes are needed. Depending on the nature of the business, MRR or ARR may be more important. SuiteBilling has ARR and MRR functionality in SuiteAnalytics and reporting.

Monthly Recurring Revenue Report

The Monthly Recurring Revenue report shows the sum of recurring line items for a specified month or range.

Each line of the Monthly Recurring Revenue report includes the following columns:

- Customer
- Subscription Plan
- Subscription

The default date range is the previous rolling year.

To view the Monthly Recurring Revenue report:

1. Go to Reports > Subscriptions > Monthly Recurring Revenue.
2. If you want to customize this report, click [Report Customization](#).

The Monthly Recurring Revenue report shows the final rating value for a given month. This report does not include prorated amounts, even if proration is enabled for a line item.

Suspended subscriptions are reported the same as active subscriptions, but closed or terminated subscriptions are not reported. In addition, draft subscriptions are not currently reported.

The Monthly Recurring Revenue report assumes that subscriptions are renewed. Any subscriptions that are not terminated or closed continue to report into the future.

For more information about reporting, see the help topic [Reporting Overview](#).

ARR Analytics and Dashboard

There is also an ARR workbook with standard reports and enhanced dashboard portlets ARR metrics. The Annual Recurring Revenue Report shows the sum of recurring line items for a specified year.

Go to Analytics > Annual Recurring Revenue.

To customize this report, click Report Customization.

The Annual Recurring Revenue Report workbook includes the following reports:

- Annual Recurring Revenue: a pivot table with a yearly summary of recurring billing on subscriptions for SaaS metrics
- Current Annual Recurring Revenue Detail: a pivot table with current year SaaS metrics at a subscription level
- Customer Lifetime Value: a pivot table with current year recurring revenue at a customer level
- Current Annual Recurring Revenue Month-Over-Month: a pivot table with current year annual recurring revenue reported at a month level
- Annual Recurring Revenue Year-Over-Year: a column chart with recurring revenue year-over-year

The ARR reports do not include prorated amounts, even if proration is enabled for a line item. The report leverages the recurring amount from a subscription line.

A subscription must be in an active status to be displayed in the reports. A subscription that is terminated or closed stops being reported after the termination or end date of the subscription unless renewed. Evergreen subscriptions report until terminated.

For more information about reporting, see the help topic [Reporting Overview](#).

Total Contract Value Report

The Total Contract Value report shows total bill charges for the full term of a subscription. To see charges up to the current time for a subscription, see the [Billings to Date Report](#).

The Total Contract Value report does not include usage or overage charges because usage can vary each billing period.

Each line of the Total Contract Value report includes the following columns:

- Customer
- Subscription Plan
- Subscription

To view the Total Contract Value report:

1. Go to Reports > Subscriptions > Total Contract Value.
2. If you want to customize the TCV report, click [Report Customization](#).

The data is represented as the total sum of all charges for a given subscription. Credit memos are represented in the months in which they are created.

Future months beyond the current bill cycle show the total contract value based on any change orders or modifications to the subscription to date.

For more information about reporting, see the help topic [Reporting Overview](#).

Billings to Date Report

The Billings to Date report shows total billed charges, up to the current cycle, for a subscription. To view charges for the full subscription term, see the [Total Contract Value Report](#).

Each line of the report includes the following columns:

- Customer
- Subscription Plan
- Subscription

To view the Billings to Date report:

1. Go to Reports > Subscriptions > Billings To Date.
2. If you want to customize the report, click [Report Customization](#).

The data is represented as a rolling transaction total from month to month. Credit memos are represented in the months in which they are created.

Future months beyond the current bill cycle show the total billings to date based on the last billing transaction for that subscription.

For more information about reporting, see the help topic [Reporting Overview](#).

Churn By Customer Report

The Churn by Customer report shows how many customers are canceling or have subscriptions ending in a given month. Churn is calculated differently by different customers. Consequently, the structure of the Churn by Customer report is different from most other NetSuite reports. It allows for the addition of fields.

To view the Churn By Customer report:

1. Go to Reports > Subscriptions > Churn by Customer.
2. If you want to customize the report, click [Report Customization](#).

For more information about reporting, see the help topic [Reporting Overview](#).

The following table provides a list of columns and their definitions.

Column	Definition
Customers at beginning of month	The number of customers with active subscriptions at the beginning of the month.

Column	Definition
Customers at end of month	The number of customers at the end of the month. This total is calculated by adding net new customers to the number of customers at the beginning of the month.
New Customers	Customers who activated their first new subscription at any point in the month.
Churned Customers	Customers whose subscriptions have all closed or terminated in the month.
Net New Customers	New customers minus churned customers. This can be a positive or negative number.
Customer Churn %	Churned customers divided by customers at the beginning of the month.

Notes about calculating churn and customers:

- Churn is included only in the month that the subscription ends.
- The default date selection is Last Rolling Year. This report only shows information for full months of data.
- Customers with a subscription in the first month of data collection are counted toward total customers.
- All customers in the first month of data collection are considered new customers.
- Customer churn % is calculated as: churned customers divided by new customers, then multiplied by 100 in the first month of data collection.
- Suspended subscriptions do not count toward churn.
- If the number of customers at the beginning of the month equal zero (0), the customer churn % cannot be calculated.

Churn By Revenue Report

The Churn by Revenue report shows the reduction in MRR due to subscriptions being reduced in value, canceled, or ending.

To view the Churn By Revenue report

1. Go to Reports > Subscriptions > Churn by Revenue.
2. If you want to customize the report, click [Report Customization](#).

For more information about reporting, see the help topic [Reporting Overview](#).

The following table is a list of rows and their definitions.

Row	Definition
MRR at Beginning (of Month)	MRR calculated on the last day of the previous month. This is the same amount reported for a prior month on the Monthly Recurring Revenue report.
MRR at End (of Month)	MRR calculated on the last day of a specific month. This is the same amount reported for a specific month in the Monthly Recurring Revenue Report.
New MRR	MRR associated with new subscriptions started in a specific month. This is equal to the sum value of all subscriptions with a start date in a specific month.
Expansion MRR	MRR associated with the upsell of existing subscriptions in a specific month. This is the sum value of all subscriptions that increased in value in a specific month.

Row	Definition
Contraction MRR	MRR associated with the downsell of existing subscriptions. This is the sum value of all subscriptions that decreased in value in a specific month.
Lost MRR	Overall recurring revenue lost in a specific month from canceled or closed subscriptions. This is the sum value of all monthly subscriptions that were canceled or closed in a specific month.
MRR Churn	The churn in recurring revenue from cancelled subscriptions and downgraded subscriptions.
New New MRR	This is the sum of new MRR plus expansion MRR minus lost MRR.
MRR Churn (%)	MRR churn divided by MRR at the beginning of the month.

Notes about calculating churn and MRR:

- All MRR is considered new on the first month.
- Churn % cannot be calculated on the first month because all MRR is new.
- Revenue associated with suspended subscriptions does not count toward churn. Only revenue that has been lost or is lost in the specific month contributed to MRR churn.
- If MRR at the beginning of the month equals zero (0), MRR churn cannot be calculated.

SuiteBilling Features Provided by NetSuite SuiteApps

This topic has details about SuiteBilling features provided by two SuiteApps:

- [Subscription Billing Enhanced UI](#) – This SuiteApp provides an enhanced user interface for Subscription Billing records.
- [SuiteBilling Enhancements](#) – This SuiteApp enables you to:
 - create usage records using a RESTlet
 - perform subscription billing bulk operations, and
 - process bulk customer payments

Subscription Billing Enhanced UI

Subscription Billing Enhanced UI (formerly known as Time-Based Pricing SuiteApp) is a SuiteApp developed by NetSuite. This SuiteApp provides an enhanced user interface for subscription plans, price books, and subscriptions. It is designed for the creation and maintenance of complex subscription plans and subscriptions that require predefined pricing changes over time.

Subscription Billing Enhanced UI SuiteApp is provided free of charge to customers who use SuiteBilling and have enabled the Time-Based Pricing feature. For information about SuiteBilling features, see the help topic [SuiteBilling](#).

This SuiteApp provides an enhanced time-based pricing UI for:

- Creating and editing price books
- Creating and editing pricing intervals

Subscription Billing Enhanced UI SuiteApp also supports the following features:

- **Decimal precision** – Rounding to eight decimal places for the Price, Quantity, and Discount fields on the subscription plan, price book, and subscription records is supported. These fields also display up to eight decimal places. For more information, see [Decimal Precision in SuiteBilling](#).
- **Flat rate and percentage discounts** – Discount fields at the subscription plan and subscription line levels support flat rate and percentage discounts..
- **Recurring amount** – Recurring amount data is available on pricing intervals for recurring subscription lines on subscription records.
- **Proration by month** – By default, recurring subscription lines are prorated by day. The monthly proration option is available to recurring lines with a charge frequency that is greater than one month. You can set the proration option for recurring lines in the Prorate By field on subscription plans and subscriptions. For general information about proration options for SuiteBilling subscriptions, see [Proration Options](#).
- **Add-on items** – You can add subscription items to new or existing subscriptions at the time of sale or during the subscription term.
- **Add interval to multiple subscription lines** – You can create a new pricing interval for all recurring and usage subscription lines in the price book. For subscriptions, a new interval is created only for recurring and usage lines in Draft status.

 **Note:** The Subscription Billing Enhanced UI SuiteApp does not support the Commit Plus Overage feature for subscriptions.

Read the following topics for information about installing and using this SuiteApp:

- [Installing the Subscription Billing Enhanced UI SuiteApp](#)
- [Creating Items for Subscription Plans with Subscription Billing Enhanced UI](#)
- [Creating Subscription Plans with Subscription Billing Enhanced UI](#)
- [Managing Price Books and Price Plans with Subscription Billing Enhanced UI](#)
- [Managing Subscriptions with Subscription Billing Enhanced UI](#)

Installing the Subscription Billing Enhanced UI SuiteApp

You can create subscription plans and subscriptions using the Time-Based Pricing feature before you install the SuiteApp. After you install the SuiteApp, all of your subscription plans, price books, and subscriptions automatically use the enhanced UI supported by the SuiteApp.

Prerequisites

Before installing the Subscription Billing Enhanced UI SuiteApp you must enable SuiteBilling and Time-Based Pricing features:

- To enable SuiteBilling and prerequisite features, go to Setup > Company > Enable Features. Select the **Transactions** subtab and check the boxes for the required features under the Billing section. For information about SuiteBilling and prerequisite features, see [Enabling SuiteBilling Features](#).
- To enable the Time-Based Pricing feature, go to Setup > Company > Enable Features. Select the **Transactions** subtab, and check the Time-Based Pricing box under the Billing section.

You should also review the following help topics for general information about SuiteBilling and its initial setup:

- [SuiteBilling Overview](#)
 - [SuiteBilling Terminology](#)
 - [SuiteBilling Process Diagrams](#)
 - [SuiteBilling Roles and Permissions](#)
 - [SuiteBilling Change Orders](#)
- [SuiteBilling Setup](#)
 - [Setting the SuiteBilling Preferences](#)
 - [Enabling SuiteBilling Features](#)

Installation

After setting up SuiteBilling and enabling the Time-Based Pricing feature, you can install the SuiteApp from either the Enable Features page or the Search and Install Bundles page.

Subscription Billing Enhanced UI is a managed SuiteApp and is automatically updated whenever there are enhancements or new features added.

To install Subscription Billing Enhanced UI from the Enable Features page:

1. Go to Setup > Company > Enable Features.
2. Select the **Transactions** subtab, and scroll down to the Billing section.
3. Under Related SuiteApps, click the **Subscription Billing Enhanced UI SuiteApp** link.
4. On the SuiteApp Details page, click **Install**.

To install Subscription Billing Enhanced UI from the Search and Install Bundles page:

1. Go to Customization > SuiteBundler > Search & Install Bundles.
2. In the **Keywords** field, enter **Subscription Billing Enhanced UI**.

 **Note:** You can also search by entering the bundle ID: 363984.

3. Under the **Name** column, select **Subscription Billing Enhanced UI**.
4. Click **Install**.

For more information about installing a SuiteApp, see the help topic [Installing a Bundle](#).

If you decide to uninstall the SuiteApp, any subscription plans created in the SuiteApp remain accessible and usable with the Time-Based Pricing feature. For more information, see the help topic [Uninstalling a Bundle](#).

Creating Items for Subscription Plans with Subscription Billing Enhanced UI

A subscription plan is made up of all of the items that define a subscription. These items include recurring services, usage, and one-time charges. Before you can create a subscription plan, you must create item records for the products and services you sell as part of subscriptions.

 **Note:** Creating items with the Subscription Billing Enhanced UI SuiteApp is the same as creating them using the Time-Based Pricing feature without the SuiteApp.

To create an item for a subscription plan:

1. Go to Lists > Accounting > Items > New.
2. Subscription items must be either a non-inventory item or a service item for sale. Other item types are not available on subscription plans. Do one of the following:
 - To add a non-inventory item, under **Non-inventory Item**, click **For Sale** or **For Resale**.
 - To add a service item, under **Service Item**, click **For Sale** or **For Resale**.
3. In the **Item Name/Number** field, enter a value.
4. Specify values for the **Class**, **Department**, and **Location** fields, if needed.

 **Note:** Subscription Billing Enhanced UI SuiteApp also lets you define or modify the class, department, and location for subscription lines. For more information, see [Class, Department, and Location Fields on Subscription Lines](#).

5. Complete any additional fields.
6. Click the **Accounting** subtab.
7. From the **Tax Schedule** list, select a tax schedule. To add a new tax schedule to the list, click the **Open** arrow.
8. Click the **Preferences** subtab.
9. Clear the **Can Be Fulfilled/Received** box.

 **Note:** For non-inventory items, this box is checked by default and you must clear it. For service items, this box is cleared by default.

10. Click **Save**.

For more information on the item record and using items, see the help topic [Using Item Records](#).

Creating Subscription Plans with Subscription Billing Enhanced UI

When you create a subscription plan, you specify the items, such as recurring services, usage, and one-time charges, to include in the subscription.

 **Note:** Creating subscription plans with the Subscription Billing Enhanced UI SuiteApp is the same as creating them using the Time-Based Pricing feature without the SuiteApp.

To create a subscription plan:

1. Go to Lists > Subscriptions > Subscription Plans > New.
2. In the **Subscription Plan Name** field, enter a name.
3. From the **Initial Term** list, do one of the following tasks:
 - Select a term. Options include the following:
 - **Evergreen Term** – Revenue ends after three years unless you set optional invoicing preferences to automatically extend revenue recognition.
 - **Standard Term** – The subscription-level end date defines the end date for all of the items. This results in the alignment of end dates. NetSuite calculates the end date as the subscription start date plus the indicated subscription term. One-time subscription lines are the exception, because they are only active for one day.
 - **Custom Term** – You must set the subscription-level end date at the subscription level. This date defines the end date for all of the items, resulting in the alignment of end dates. One-time subscription lines are the exception, because they are only active for one day. The subscription-level end date for a custom term remains editable until any subscription line becomes active.
 - Create a new term by clicking the plus icon.
4. Specify values for the **Class**, **Department**, and **Location** fields, if needed.

 **Note:** Subscription Billing Enhanced UI SuiteApp also lets you define or modify the class, department, and location for subscription lines. For more information, see [Class, Department, and Location Fields on Subscription Lines](#).

5. On the **Lines** subtab, do the following for each item you want to add:
 - a. In the **Item** column, select an item. If the item list does not include an item you need for this subscription plan, see [Creating Items for Subscription Plans with Subscription Billing Enhanced UI](#).
 - b. In the **Required** column:
 - Check the box if you want the subscription to always include this item.
 - Clear the box if you want the customer to be able to include or exclude the item as an option at the time of sale.
 - c. In the **Type** column, select one of the following:
 - **One Time** – Items that incur a single charge, such as a setup or initialization fee.
 - **Recurring** – Items that incur charges throughout the subscription, such as recurring service.

- **Usage** – Items that incur charges based upon how much or how often the customer uses them, such as minutes or data.
- d. In the **Billing Mode** column, select one of the following:
 - **In Advance** – Payment is due at the beginning of the charge period (for example, the first day of the month).
 - **In Arrears** – Payment is due at the end of the charge period (for example, the last day of the month).
- e. If required, for recurring items, check or clear the **Prorate Start Date** and **Prorate End Date** boxes. For details, see [Proration Options](#).
- f. In the **Include in Renewal Subscription** column, click the down arrow to display the available renewal options and select a different option if desired.
- g. Click **Add**.
- 6. Repeat step 4 until you have added all items to the subscription plan.
- 7. Complete any necessary additional fields, and then click **Save**.

When you save the subscription plan, NetSuite opens the **Price Books** subtab. After creating a subscription plan, the next task is to create a price book by creating a price plan for each item. With the Subscription Billing Enhanced UI SuiteApp, you can create price books and price plans for your subscription plans using an enhanced time-based pricing UI. For more information, see [Managing Price Books and Price Plans with Subscription Billing Enhanced UI](#).

Managing Price Books and Price Plans with Subscription Billing Enhanced UI

After you save a subscription plan, you can create pricing for the items. A price book defines the pricing for a collection of items or services that are sold as part of a subscription plan. Every item on a subscription plan must be assigned to a price plan within the price book. A subscription plan can have one or multiple price books. You can use multiple price books to create different pricing options, such as multiple currencies, or monthly, quarterly, and annual pricing.

The following section describes the price book and price plan UI when the Subscription Billing Enhanced UI SuiteApp is installed in your NetSuite account. For a step-by-step procedure on creating price books and price plans using the SuiteApp, see [Creating Price Books and Price Plans for Subscription Plans](#).

Enhanced UI for Price Book and Price Plan

You can create a new price book for a subscription plan by clicking the **New Price Book** button on the **Price Books** subtab of a saved subscription plan.

Each item from the subscription plan appears as a line on the New Price Book window. The lines are color-coded based on the line type:

- One-time lines appear with a left-justified blue line.
- Recurring lines appear with a left-justified green line.
- Usage lines appear with a left-justified orange line.

New Price Book

NAME *

As you create pricing intervals, they appear linked, in sequence, across the line. If the number of pricing intervals exceed the current viewing area, use the vertical scroll bar at the bottom of the subscription line to view pricing intervals that extend to the next page.

On the top left corner of the price book, you can find the following:

- **Quick View** – Click this icon to display a graphical price book summary, showing all pricing intervals with their duration.
- **Filter** – Click this icon and check the appropriate boxes to filter the plan item attributes that you want to view.
- **Add Interval To All** – Click this button to create a new pricing interval for all recurring and usage lines in the price book. After the new interval is created, you can edit the pricing information as needed.

Note: Pricing intervals that are located next to each other must be unique. If you have two identical adjacent pricing intervals, NetSuite combines them into one interval.

For more information, see [Adding a Price Interval to All Items at Once](#).

For detailed instructions on creating price books and price plans, see [Creating Price Books and Price Plans for Subscription Plans](#).

Creating Price Books and Price Plans for Subscription Plans

After you save a subscription plan, you can create a price book by setting up a price plan for each item. For information about how to create subscription plans, see [Creating Subscription Plans with Subscription Billing Enhanced UI](#).

The following procedure describes how to create price books and price plans using the enhanced time-based pricing UI provided by the Subscription Billing Enhanced UI SuiteApp.

To create price books and price plans using the Subscription Billing Enhanced UI SuiteApp:

1. Open a saved subscription plan record in view mode.
2. Click the **Price Books** subtab.
3. To create a new price book, click **New Price Book**.
4. In the **Name** field, enter a name for the new price book.
5. In the **Currency** field, select the appropriate currency for the price book.
6. Set up the price plan for each item in the price book.
 - a. To edit a pricing interval, click anywhere on the pricing interval box or click the ellipsis icon on the top right corner of the box and select **Edit**.
 - b. Select a start interval from the list and enter the number for when you want the interval to start. For example, Month 1 or Month 6.

 **Note:** You can set the start interval to Week, Month, or Year only for the first interval. You cannot change this value on succeeding pricing intervals. Also, the first pricing interval for each item always begins with an interval start of 1 and cannot be edited. For example, the first pricing interval is always Week 1, Month 1, or Year 1.

 - c. In the **Pricing Model** field, select one of the following:
 - **Tiered** – This pricing model is based on the incremental quantity sold. It is commonly used for recurring items. Tiered pricing charges a specified rate for all items sold in the tier (for example, the first 10 items). When the quantity sold exceeds the upper limit for the tier, NetSuite charges the price specified for the next tier for the additional items.
 - **Volume** – This pricing model is based on the aggregate quantity sold. It is commonly used for usage pricing. For volume pricing, the total quantity sold defines the charge rate for all items in the order.
 - d. In the **Discount** field, enter a discount, if applicable. Both percentage and flat rate discounts are supported. To enter a percentage discount, include the percentage sign (%) after the positive number you enter in the **Discount** field. To enter a flat rate discount, enter the numeric value only.
 - e. For usage lines, enter a value in the **Included Quantity** field, if applicable.
 - f. For recurring or usage lines, set how often you want the charge to occur by selecting a **Charge Frequency** and entering a number in the **Repeat Every** field.

In the **Repeat Every** field, you can enter any positive integer from 1 up to the maximum value, depending on the **Charge Frequency**:

 - If **Charge Frequency** is set to **Annually**, the maximum value for the **Repeat Every** field is 10.
 - If **Charge Frequency** is set to **Monthly** or **Weekly**, the maximum value for the **Repeat Every** field is 120.

- g. For recurring lines, select a proration option in the **Prorate By** field. You can set the value for this field only on the first pricing interval of a recurring line. The default setting is Prorate by Day. If the charge frequency is more than one month, you have the option to select Prorate by Day or Month.
- h. Set the values for the price tiers. For each tier, enter values for the following:
 - **Above Quantity** (required) – Default value is zero for the first tier. For succeeding tiers, the value you specify in this field indicates the upper limit for the previous tier.
 - **Pricing Option** (optional) – Select one of the following options:
 - **Rate** (default) – Calculates the item amount as quantity multiplied by rate.
 - **Fixed Amount** – The defined charge amount for the item is not affected by its quantity.
 - **Value** (required) – Enter an amount to charge for the item.
 - **Min Amount** (optional) – Enter the minimum amount limit for the tier.
 - **Max Amount** (optional) – Enter the maximum amount limit for the tier.

Click the plus (+) icon on the right side of the tier to create a new pricing tier for additional quantities.
- i. When you are finished entering information in the pricing interval, click the check icon on the top right corner of the box to save your changes.

Note: When you save a price plan for the first time, a popup window appears indicating that after the price plan is saved, the price book currency cannot be changed. Verify if the currency is correct, then click **OK** to save the price plan. Click **Cancel** if you want to change the currency before saving the price plan..

7. To create additional pricing intervals for recurring and usage lines, do any of the following:
 - To create a new interval, click the plus (+) icon on the right side of the last interval.
 - To create a copy of an existing pricing interval, click the ellipsis icon on the pricing interval and select **Make Copy**. The pricing interval for one-time lines cannot be copied.
 - To create a new interval for all recurring and usage lines in the price book, click the **Add Interval To All** button at the top of the price book. For more information, see [Adding a Price Interval to All Items at Once](#).

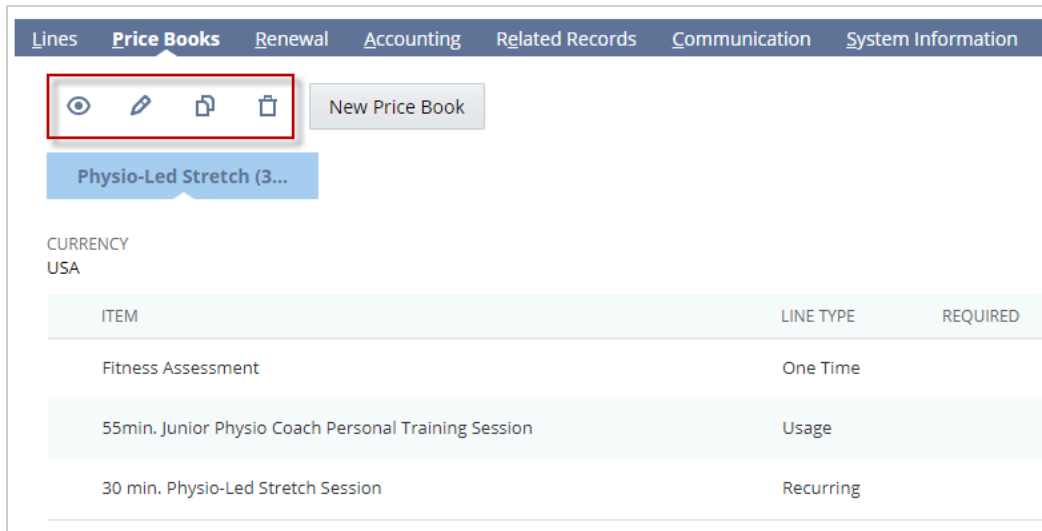

Edit the pricing information for additional or copied pricing intervals as needed.

Note: Pricing intervals that are located next to each other must be unique. If you have two identical adjacent pricing intervals, NetSuite combines them into one interval.

8. Repeat step 6 (and step 7 as needed) for each item in the price book. Every item in a subscription plan must have an associated price plan.
9. To save the price book, click **Save** on the price book window.

You can view the price books that you created on the **Price Books** subtab of the subscription plan. Click the name of the price book to view the price book details. It may take a few seconds for all of the information to appear. For each price book, you can do the following actions by clicking the appropriate icon on the top left corner of the **Price Books** subtab:

- **Quick View** – Click this icon to show the price book summary in graphical form.
- **Edit** – Click this icon to open an existing price book for editing.
- **Make Copy** – Click this icon to create a copy of the price book. For example, a new price book may be needed for a different currency.
- **Delete** – Click this icon to delete a price book.

Managing Subscriptions with Subscription Billing Enhanced UI

The Subscription Billing Enhanced UI SuiteApp includes an enhanced subscription record UI, which provides access to both subscription lines and pricing intervals in a single display subtab.

For information about the changes to the subscription record when the SuiteApp is installed, see [Enhanced UI for Subscription](#).

Read the following topics for information about creating and managing subscriptions and subscription lines using the enhanced UI provided by the SuiteApp:

- [Creating Subscriptions with Subscription Billing Enhanced UI](#)
- [Editing Subscription Lines on Subscriptions](#)
- [Managing Add-On Items on Subscriptions](#)

Enhanced UI for Subscription

When the Subscription Billing Enhanced UI SuiteApp is installed in your NetSuite account, the **Lines** subtab on the subscription record shows an enhanced UI instead of the subscription line sublist. The **Pricing** subtab is also removed from the subscription record.

With the enhanced UI of the **Lines** subtab, you can see the subscription lines, price plans, and pricing intervals displayed on a single subtab.

For each subscription line, you can see the subscription item name, line type, billing mode, and status. If you enabled per-line classifications, the **Class**, **Department**, and **Location** fields are also available at the

subscription line level. For more information, see [Class, Department, and Location Fields on Subscription Lines](#).

The initial pricing intervals for subscription lines are based on the subscription plan and price book that you selected in the subscription header fields. Each pricing interval shows the following price plan details on view mode:

- Start and end dates based on the start date and price book selected in the subscription header fields
- Status of the pricing interval if there is a change order (other than modify pricing) applied to the subscription
- Detailed pricing information, including price tiers

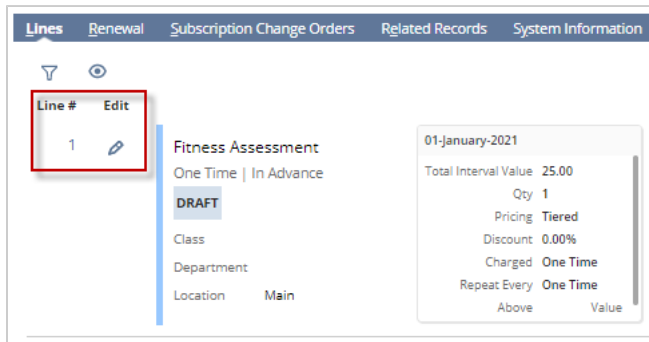

Any setting that is different from the previous period is also shown in colored text. If available, you can use the vertical scroll bars on the pricing interval to show other details that are not available in the current viewing area.

The screenshot displays the 'Lines' subtab in the Subscription Billing Enhanced UI. It shows three subscription lines, each with a list of pricing intervals. Line 1 is a 'Fitness Assessment' (One Time | In Advance, DRAFT) with a single interval from 01-January-2021 to 01-January-2021. Line 2 is a 'Membership Fee' (Recurring | In Advance, DRAFT) with three intervals: 01-January-2021 to 31-December-2021, 01-January-2022 to 31-January-2022, and 01-February-2022 to 31-December-2022. Line 3 is a '55 min. Junior Physio Coach Personal Training Session' (Usage | In Arrears, NOT INCLUDED) with two intervals: 01-January-2021 to 31-March-2021 and 01-April-2021 to 31-December-2022. Each interval card displays details such as Total Interval Value, Recurring Amt, Qty, Pricing, Discount, Charged, Repeat Every, and Above/Value.

Line #	Description	Usage	Status	Class	Department	Location
1	Fitness Assessment	One Time In Advance	DRAFT			Main
2	Membership Fee	Recurring In Advance	DRAFT			Main
3	55 min. Junior Physio Coach Personal Training Session	Usage In Arrears	NOT INCLUDED			

The following features are also available on the enhanced UI of the **Lines** subtab:

- **Access to Subscription Line Records** – From the subscription record (view mode), you can access the subscription line record by doing any of the following:
 - To open the subscription line record on view mode, click the number in the **Line #** column.
 - To open the subscription line record on edit mode, click the edit icon in the **Edit** column.

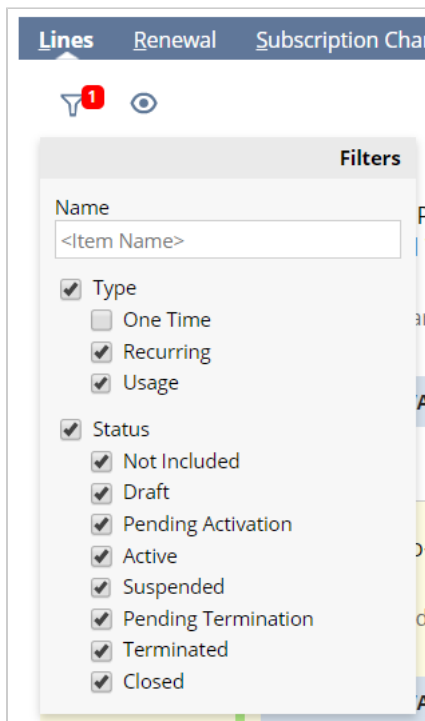

The subscription line record opens in a new browser tab. The subscription page will refresh after you save the changes that you made to the subscription line record.

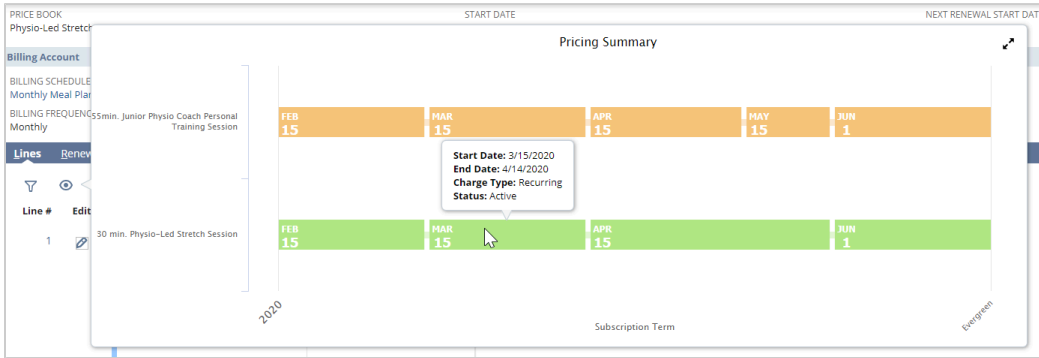

You can also edit subscription lines directly from the subscription record. For more information, see [Editing Subscription Lines on Subscriptions](#).

- **Subscription Line Filters** – Using the filter icon on the top left corner of the **Lines** subtab, you can filter the subscription lines by name, type, or status.

When you apply filters, the filter icon shows a badge with the number of subscription lines that are not shown.

- **Quick View** – Using the quick view icon on the top left corner of the **Lines** subtab, you can view the pricing summary of the subscription lines. On the quick view pane, you can click the expand icon on the top right corner to see an expanded view of the pricing summary.

- **Editing Subscription Lines and Pricing Intervals** – When you are creating or editing a subscription record, you can perform the following actions for the subscription lines on the **Lines** subtab:
 - Check the **Include** box for optional items if you want to include it to the subscription. Clear the box to exclude an optional item.
 - Change the status of subscription lines from Draft to Pending Activation, or vice versa.
 - If the **Class**, **Department**, and **Location** fields are available, you can set or modify the classification if the line status is Draft or Not Included.
 - Modify the pricing intervals of subscription lines with a Draft status. Click the ellipsis icon on the top right corner of each interval to show possible actions for each pricing interval: **Edit**, **Make Copy** (available only for recurring and usage lines), or **Delete** (not available for the first pricing interval).
 - Create new pricing intervals for all recurring and usage lines with a Draft status by clicking the **Add Interval To All** button.
 - Add items to the subscription by clicking the **Add Item** button.

For more information about creating and editing subscriptions with the Subscription Billing Enhanced UI SuiteApp, read the following topics:

- Creating Subscriptions with Subscription Billing Enhanced UI

- [Editing Subscription Lines on Subscriptions](#)
- [Managing Add-On Items on Subscriptions](#)

Creating Subscriptions with Subscription Billing Enhanced UI

After creating items, subscription plans, and price books, you can create a subscription.

For instructions on how to create the prerequisite parts of a subscription, see the following topics:

- [Creating Items for Subscription Plans with Subscription Billing Enhanced UI](#)
- [Creating Subscription Plans with Subscription Billing Enhanced UI](#)
- [Creating Price Books and Price Plans for Subscription Plans](#)
- [Creating Billing Accounts](#)

You can activate a subscription only after you create and save the subscription's required components.

 **Note:** Creating subscriptions with the Subscription Billing Enhanced UI SuiteApp is the same as creating a standalone subscription using the Time-Based Pricing feature without the SuiteApp.

To create a new subscription using the Subscription Billing Enhanced UI SuiteApp:

1. Go to Transactions > Subscriptions > Create Subscriptions.
2. In the Primary Information section, select from the list or enter values for the following fields in any order:

- Indicate the customer for whom you are creating the subscription:
 - From the **Customer** field, select an active customer from the list.
 - To create a new customer, click the plus icon next to the **Customer** field and select **-New-**.

You can select any active customer, regardless of whether they have a billing account. When you select a customer, the **Subsidiary** and **Currency** fields contain the values you specified for those fields for that customer. When you select values for the **Customer** and **Subsidiary** and leave **Currency** blank, the **Billing Account** field shows the billing accounts that are available for that customer.

 **Note:** Depending on the order in which you select the values for the **Customer**, **Subsidiary**, **Currency**, and **Billing Account** fields, NetSuite fills the values of fields dependent on the Subscription and Billing Account records.

- You can set a subsidiary to use in a new billing account before creating it. If the customer has subsidiaries, indicate them as follows:
 - From the list in the **Subsidiary** field, select an active subsidiary. NetSuite populates the **Subsidiary** fields of the subscription record with the field's values from the billing account.
 - You can change the subsidiary from the primary subsidiary to a secondary subsidiary. The subscription must be in Draft or Pending Activation status to change the subsidiary.
 - To create a new subsidiary, click the plus icon and select **-New-**.
- You can set a currency to use in a new billing account before creating it. Indicate the currency as follows:
 - From the list in the **Currency** field, select an active currency. NetSuite populates the **Currency** fields of the subscription record with the field's values from the billing account.
 - You can change the currency when the subscription is in Draft or Pending Activation status.

- To create a new currency, click the plus icon and select **-New-**.
- (Optional) You can create a subscription without a billing account until you activate the subscription. You can select a billing account from the list in the **Billing Account** field, or to create a new billing account, click the plus icon and select **-New-**. To create a new billing account, follow the instructions in [Creating Billing Accounts](#).

On the subscription record, the **Customer**, **Subsidiary**, and **Currency** fields are required for creating a billing account. When you have selected a customer on the subscription record, the **Billing Account** field contains the customer's default billing account. When all lines in the subscription are in Draft or Pending Activation status, you can change the billing account to another billing account for the same customer. When you select a billing account, the **Subsidiary** and **Currency** fields are read only and contain the values for those fields from the billing account.

The billing account is not required on default forms. Any automation or import templates work when you set a billing account value when you create the subscription.

You cannot activate a subscription until you select a billing account that matches the values of the **Customer**, **Currency**, and **Subsidiary** fields on the subscription record.

 **Note:** To ensure accurate data, select the **Billing Account**, **Customer**, or **Subsidiary** before selecting the subscription plan and price book

3. From the **Subscription Plan** list, select a subscription plan. The **Subscription Plan** field lists the subscription plans for the selected billing account. If you have not selected a billing account, you must select values for the **Currency** and **Subsidiary** fields to select a subscription plan.
Only subscription plans with price books in the currency that corresponds to the selected price book currency are available to select.
4. If required, from the **Price Book** list, choose a different price book.
5. From the **Initial Term** list, select a term, or select **-New-** to define a different term.
6. In the **Start Date** field, enter or select a start date for the subscription. The default value is today's date.
7. You can define the **Class**, **Department**, and **Location** fields for subscription records in Draft status. These fields, located in the Plan and Term section, are useful for reporting. The values of these fields on the subscription record are automatically populated in the following order:
 1. If the selected subscription plan has values in any of the **Class**, **Department**, and **Location** fields, the field on the subscription record shows its subscription plan value.
 2. If a field does not have a value in the subscription plan, NetSuite checks the billing account and the field on the subscription record shows its billing account value, if any.
 3. If neither the subscription plan nor the billing account have values in these fields, they are empty on the subscription record.

If the subscription is in Draft status, you can change the values of the **Class**, **Department**, and **Location** fields. You cannot change the values in these fields when the subscription is in Pending Activation or Active status.

 **Note:** If you enabled per-line classifications, you can also set or modify the classifications at the subscription line level. For more information, see [Class, Department, and Location Fields on Subscription Lines](#).

8. Edit the subscription lines on the **Lines** subtab as needed. For information about the actions that you can perform on subscription lines, see [Editing Subscription Lines on Subscriptions](#).
9. If required, define one or more add-on items. See [Managing Add-On Items on Subscriptions](#).
10. If Revenue Recognition is enabled, set revenue recognition options.

 **Note:** After you click **Save**, you cannot change the subscription's customer, currency, or subsidiary. In this case, you must create a new subscription.

11. Click **Save**.

If a billing account that you expect to process during billing operations does not process, run billing operations a second time or schedule billing operations for a convenient time for your business. Reasons why a billing account is not processed during billing operations include:

- A charge is created after billing operations begins processing charges.
- A single billing operation can process up to 100,000 processing lines.

Running a subsequent billing operation may process any remaining invoices. For more information about Billing Operations, see the help topic [Billing Operations](#).

After you have created the subscription, you must individually activate each line item..

After creating the subscription, you can either associate it with a sales transaction or activate it.

Editing Subscription Lines on Subscriptions

The information in this section applies to subscriptions that use the enhanced UI supported by Subscription Billing Enhanced UI SuiteApp.

When you create a subscription, the initial pricing intervals of subscription lines are generated based on the subscription plan and price book that you selected in the header fields.

You can edit a subscription lines in Draft status.

To edit the subscription lines on a subscription:

1. Create a new subscription or edit a subscription with a Draft status. For information about creating subscriptions, see [Creating Subscriptions with Subscription Billing Enhanced UI](#).
2. On the **Lines** subtab, edit the subscription line-level fields if necessary:
 - **Include** – For optional items, you can check or clear this box. When you check this box for an optional item, the subscription line status changes from Not Included to Draft. For required items, this box is checked by default and is not editable.
 - **Status** – Click the dropdown field to change the status of the subscription line from Draft to Pending Activation, or vice versa. This field is editable only if the subscription line is included and its status is Draft or Pending Activation.
 - **Class, Department, Location** – Set or modify the values for the classification fields. You can change the values for these fields only if the subscription line status is Draft or Not Included. For information about how the **Class**, **Department**, and **Location** fields on subscription lines are populated, see [Class, Department, and Location Fields on Subscription Lines](#).
By default, these fields show all active classes, departments, and locations. You can also use public saved searches to define the list of options for these fields. For more information, see [Setting Up the List of Class, Department, and Location Options for Subscription Lines](#).
3. To edit a pricing interval for a subscription line, click the ellipsis icon on the top right corner of the box and select **Edit**. You can also click anywhere on the pricing interval box to open it for editing (if the subscription line is included) or viewing (if the subscription line is not included).

The price plan fields that you can edit vary depending on the subscription line type and sequence of the pricing interval. These fields are available in the price plan details:

- **Start** – Enter a different date or select from the date picker.

■ **Pricing Model** – Select one of the following:

- **Tiered** – This pricing model is based on the incremental quantity sold. It is commonly used for recurring items. Tiered pricing charges a specified rate for all items sold in the tier (for example, the first 10 items). When the quantity sold exceeds the upper limit for the tier, NetSuite charges the price specified for the next tier for the additional items.
- **Volume** – This pricing model is based on the aggregate quantity sold. It is commonly used for usage pricing. For volume pricing, the total quantity sold defines the charge rate for all items in the order.

■ **Charge Frequency and Repeat Every** – For recurring and usage lines, set how often you want the charge to occur. You can set the values for these fields only on the first pricing interval.

In the **Repeat Every** field, you can enter any positive integer from 1 up to the maximum value, depending on the value set for **Charge Frequency**:

- If **Charge Frequency** is set to **Annually**, maximum value for **Repeat Every** field is 10.
- If **Charge Frequency** is set to **Monthly** or **Weekly**, maximum value for **Repeat Every** field is 120.

■ **Total Interval Value** – If you want to set the charge amount for the interval instead of using the price plan value, enter the charge amount in this field. This field is available only for recurring and one-time lines. You can set the value for this field only if the line status is Draft. In addition, for recurring lines, this field is editable only if the initial term for the subscription is not Evergreen.

Take note of the following when using the total interval value:

- When you set a total interval value and confirm that you want to use it instead of the price plan value, the price plan value will be cleared. When you save the subscription, the price plan value will be calculated based on the total interval value that you set.
- If you modify the price plan value after setting the total interval value, the total interval value will be cleared when you confirm that you want to use the price plan value. If total interval value is not set, its value will be calculated based on the price plan value when you save the subscription.

■ **Prorate By** – For recurring lines, select a proration option. You can set the value for this field only on the first pricing interval of a recurring line. The default setting is Prorate by Day. If the charge frequency is more than one month, you have the option to select Prorate by Day or Month.

■ **Quantity** – For recurring or one-time lines, enter a quantity that is greater than zero. Initial value for an existing pricing interval is 1. However, if you make a copy of an existing pricing interval or add a new interval, the **Quantity** field on the new pricing interval is set to blank.

■ **Included Quantity** – For usage lines, enter a value that is greater than zero for included quantity, if applicable.

■ **Discount** – Both percentage and flat rate discounts are supported. To enter a percentage discount, include the percentage sign (%) after the positive number that you enter in the **Discount** field. To enter a flat rate discount, enter the numeric value only.

■ **Recurring Amount** – For recurring lines, this field shows the recurring amount value based on the rate or fixed amount, quantity, and discount.

■ **Price tiers** – Edit the existing values for **Above Quantity**, **Pricing Option**, **Value**, **Min Amount**, and **Max Amount** as needed. You can also create new tiers by clicking the plus (+) icon on the right side of an existing price tier.

4. When you are finished editing a pricing interval, click the check icon on the top right corner of the box to save your changes. If you want to discard your changes, click the X icon instead.

5. To create additional intervals for recurring and usage lines, do any of the following:

- To create a single pricing interval for a subscription line, click the plus (+) icon on the right side of the last pricing interval.
- To copy an existing pricing interval, click the ellipsis icon on the top right corner of the pricing interval and select **Make Copy**.
- To create a new interval for all recurring and usage lines in the subscription, click the **Add Interval To All** button at the top of the **Lines** subtab. This action creates a new pricing interval for all recurring and usage lines in Draft status. For more information, see [Adding a Price Interval to All Items at Once](#).

Edit the pricing information for additional or copied pricing intervals as needed.

 **Note:** Pricing intervals that are located next to each other must be unique. If you have two identical adjacent pricing intervals, NetSuite combines them into one interval.

6. If you want to delete a pricing interval, click the ellipsis icon on the pricing interval and select **Delete**. You cannot delete the first interval for any subscription line.
7. When you are finished editing the subscription lines and pricing intervals on the **Lines** subtab, click the **Save** button on the subscription record to save your changes.

Class, Department, and Location Fields on Subscription Lines

With Subscription Billing Enhanced UI SuiteApp, you can set or modify the class, department, and location of a subscription line if the following features are enabled in your NetSuite account:

Classification Fields on Subscription Lines	To show the field on subscription lines		To make the classification field mandatory
	Enable Features (Company)	Accounting Preferences (General)	Accounting Preferences (General)
Class	Class	Allow Per-Line Classes	Make Classes Mandatory
Department	Department	Allow Per-Line Departments	Make Departments Mandatory
Location	Location	Allow Per-Line Locations	Make Locations Mandatory

When the **Class**, **Department**, and **Location** fields are available on subscription lines, these fields are automatically populated in the following order:

1. If the item used in the subscription line has values in any of the **Class**, **Department**, and **Location** fields, the field on the subscription line shows the value specified on the item record.
2. If a field does not have a value on the item record, the field on the subscription line shows the value specified on the subscription plan.

 **Important:** The SuiteApp uses the classification set on the subscription plan record, not the classification set on the subscription under the Plan and Term section.

3. If a field does not have a value on the item record and subscription plan, the field on the subscription line shows the value specified on the billing account.
4. If a field does not have a value on the item record, subscription plan, and billing account, the field on the subscription line is set to blank.

You can modify the values in the **Class**, **Department**, and **Location** fields if the subscription line status is Draft or Not Included. To change the classification of a subscription line, open the subscription

record or subscription line record in edit mode. For more information, see [Editing Subscription Lines on Subscriptions](#).

Setting Up the List of Class, Department, and Location Options for Subscription Lines

By default, you can select all active classes, departments, and locations in the **Class**, **Department**, and **Location** fields on subscription lines. If you want to modify the list of options that can be selected at the subscription line level, you can define a public saved search for classes, departments, and locations. Then, you can specify the saved searches in the Subscription Billing Enhanced UI preferences.

Important: The SuiteApp automatically adds the following filters to any saved search specified in these preferences:

- Subsidiary filter based on the subscription subsidiary
- Inactive filter to ensure that the list of options include only active records

To avoid any issues, do not include subsidiary and inactive filters in saved searches that you plan to use for these preferences.

To set these preferences, go to Setup > Company > General Preferences. Click the **Custom Preferences** subtab, then select the appropriate saved search for the following preferences under Subscription Billing Enhanced UI Feature section:

- **Classes Saved Search** – Select the saved search that you want to use to define the list of options for classes in subscription lines.
- **Departments Saved Search** – Select the saved search that you want to use to define the list of options for departments in subscription lines.
- **Locations Saved Search** – Select the saved search that you want to use to define the list of options for locations in subscription lines.

Click the **Save** button on top of the General Preferences page to save your changes.

Subscription Billing Enhanced UI uses the search results from the specified saved searches to define the options for the corresponding fields on subscription lines.

Managing Add-On Items on Subscriptions

The Add-On Items feature enables you to add subscription lines to a subscription using items that are not originally part of the subscription plan. You can add items upon creation, at the time of sale, or any time during the subscription term. This feature simplifies the workflow by reducing the number of steps required to create a new subscription or upsell an existing subscription. For information about enabling the Add-On Items feature, see [Enabling SuiteBilling Features](#).

The Subscription Billing Enhanced UI SuiteApp includes support for add-on items on new or existing subscriptions.

For information about setting up the list of items that can be used as add-on items, see [Setting Up the List of Available Add-On Items](#).

For information about adding items to a subscription using the enhanced UI provided by the SuiteApp, see [Adding Items to a Subscription](#).

Setting Up the List of Available Add-On Items

By default, you can select any active service or non-fulfillable non-inventory items as add-on items. If you want to modify the list of items that can be added to a subscription, you can define a saved search for add-on items.

Subscription Billing Enhanced UI SuiteApp includes a predefined item saved search that you can use as a template to set up the add-on items list. After setting up the item saved search, you need to select it in the **Add On Items Saved Search** field on the General Preferences page for the company.

To set up the list of items that can be used as add-on items:

1. Go to Lists > Search > Saved Searches.
2. On the saved search list, look for the item saved search with the following details:
 - Title: TBP_AddOn_Items
 - ID: customsearch_tbp_add_on_items
 Click the **Edit** link for the saved search.
3. In the **Search Title** field, enter a unique title for the saved search.
4. Make sure that the **Public** box is checked.
5. On the **Criteria** subtab, set the filters that you want to use for the add-on items saved search. The following filters are set by default.

NOT	PARENS	FILTER *	DESCRIPTION *	FORMULA	PARENS	AND/OR
	(	Type	is Service			Or
	(	Type	is Non-inventory Item			And
		Can be Fulfilled	is false		))	And
		Inactive	is false			

☐

Important: In addition, the SuiteApp automatically adds the following filters to the saved search that you specify in the **Add On Items Saved Search** preference:

- Subsidiary filter based on the subscription subsidiary
- Inactive filter to ensure that the list of options include only active records

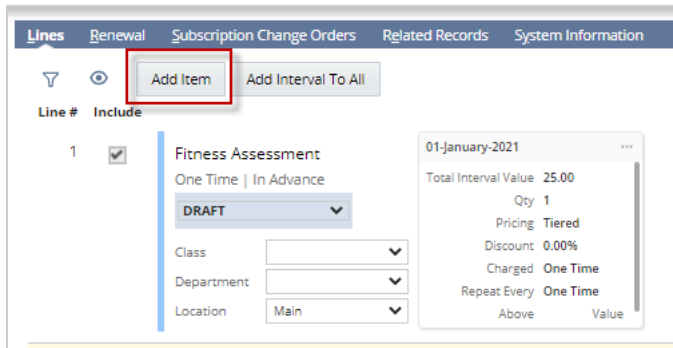

To avoid any issues, do not include subsidiary and inactive filters in the saved search that you plan to use for this preference.

6. If you want to see the list of items that will be included based on your search criteria, click the **Preview** button. Click **Return to Criteria** to go back to the saved search definition page.
7. When you are done setting up the criteria for the add-on item saved search, click **Save As**.
8. After setting up the saved search, you need to select it in the Add On Items Saved Search field on the General Preferences page for the company.
 - a. Go to Setup > Company > General Preferences.
 - b. Go to the **Custom Preferences** subtab.

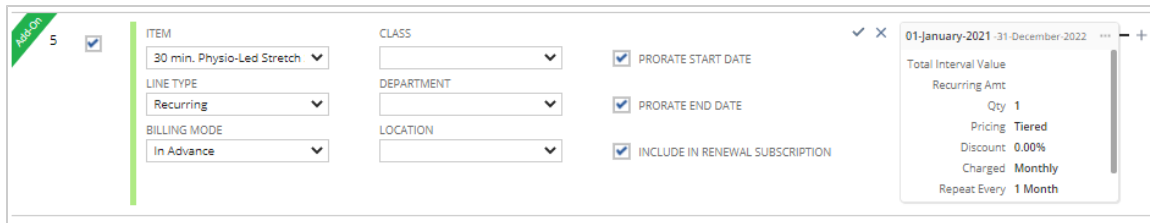

- c. In the **Add On Items Saved Search** field under Subscription Billing Enhanced UI, select the add-on items saved search that you created.
- d. Click **Save**.

Adding Items to a Subscription

If you enabled the Add-On Items feature, you can add subscription lines to new or existing subscriptions. When the Subscription Billing Enhanced UI SuiteApp is installed in your NetSuite account, the **Add Item** button is available on the top left corner of the **Lines** subtab when you edit a subscription.

Add-on items are optional, but the **Include** box is initially checked when you create the item. Additional items are marked as **Add-On** on the top left corner of the subscription line.

Add-on items have no predefined pricing, so you need to set the price of each item as you create it. Proration is permitted for recurring lines, but not permitted for one time and usage lines.

An add-on item in a subscription cannot be deleted after you saved the changes to the subscription. However, you can edit the item or add more items even after saving the subscription. If the add-on item is still in Draft status, you can change the status to Not Included by editing the subscription and clearing the Included box for the subscription line. After you add an add-on item to the subscription, that item follows the same workflow as any subscription line.

To add a new item to a subscription:

1. Open a subscription record in edit mode. To see the list of subscriptions, go to Transactions > Subscriptions > Create Subscriptions > List.
2. On the **Lines** subtab and click the **Add Item** button on the top of the subscription lines list.
3. On the new line for the add-on item, set up the details for the item that you want to add:
 - **Item** – Select the add-on item. By default, this field shows active service and non-fulfillable non-inventory items. If you defined a saved search in the **Add On Items Saved Search** field on General Preferences page, this field shows the search results based on the criteria that you set on the saved search. For more information, see [Setting Up the List of Available Add-On Items](#).
 - **Line Type** – Select one of the following:
 - **One Time** – Items that incur a single charge, such as a setup or initialization fee.

- **Recurring** – Items that incur charges throughout the subscription, such as recurring service.
- **Usage** – Items that incur charges based upon how much or how often the customer uses them, such as minutes or data.
- **Billing Mode** – Select when you want to bill the charges for the add-on item. One time or recurring amount charges can be billed in advance or in arrears. Usage charges are always billed in arrears.
- **Class, Department, Location** – If you enabled per-line classifications, specify the class, department, and location for the add-on item. For information about setting classifications for subscription lines, see [Class, Department, and Location Fields on Subscription Lines](#).
By default, these fields show all active classes, departments, and locations. You can also use public saved searches to define the list of options for these fields. For more information, see [Setting Up the List of Class, Department, and Location Options for Subscription Lines](#).
- **Prorate Start Date and Prorate End Date** – You can prorate the charges for recurring lines by keeping these boxes checked. Clear the boxes if you do not want to apply proration. Proration is not permitted for one time and usage lines.
- **Include in Renewal Subscription** – Keep this box checked if you want to include the add-on item in the renewal subscription. Otherwise, clear this box to exclude the item from renewal.

Click the check icon on the top right corner to save the item settings.

4. Set up the pricing for the add-on item. To set the values for the first pricing interval, click anywhere on the pricing interval or click the ellipsis icon and select **Edit**. Then, specify values for the following fields:

- **Pricing Model** – Select one of the following:
 - **Tiered** – This pricing model is based on the incremental quantity sold. It is commonly used for recurring items. Tiered pricing charges a specified rate for all items sold in the tier (for example, the first 10 items). When the quantity sold exceeds the upper limit for the tier, NetSuite charges the price specified for the next tier for the additional items.
 - **Volume** – This pricing model is based on the aggregate quantity sold. It is commonly used for usage pricing. For volume pricing, the total quantity sold defines the charge rate for all items in the order.
- **Charge Frequency and Repeat Every** – For recurring and usage lines, set how often you want the charge to occur. You can set the values for these fields only on the first pricing interval.
In the **Repeat Every** field, you can enter any positive integer from 1 up to the maximum value, depending on the value set for **Charge Frequency**:
 - If **Charge Frequency** is set to **Annually**, maximum value for **Repeat Every** field is 10.
 - If **Charge Frequency** is set to **Monthly** or **Weekly**, maximum value for **Repeat Every** field is 120.
- **Total Interval Value** – If you want to set the charge amount for the interval instead of using the price plan value, enter the charge amount in this field. This field is available only for recurring and one-time lines. You can set the value for this field only if the line status is Draft. In addition, for recurring lines, this field is editable only if the initial term for the subscription is not Evergreen.

Take note of the following when using the total interval value:

- When you set a total interval value and confirm that you want to use it instead of the price plan value, the price plan value will be cleared. When you save the subscription, the price plan value will be calculated based on the total interval value that you set.
- If you modify the price plan value after setting the total interval value, the total interval value will be cleared when you confirm that you want to use the price plan value. If total interval

value is not set, its value will be calculated based on the price plan value when you save the subscription.

- **Prorate By** – For recurring lines, select a proration option. You can set the value for this field only on the first pricing interval of a recurring line. The default setting is Prorate by Day. If the charge frequency is more than one month, you have the option to select Prorate by Day or Month.
- **Quantity** – For recurring or one-time lines, enter a quantity that is greater than zero. Initial value for an existing pricing interval is 1. However, if you make a copy of an existing pricing interval or add a new interval, the **Quantity** field on the new pricing interval is set to blank.
- **Included Quantity** – For usage lines, enter a value that is greater than zero for included quantity, if applicable.
- **Discount** – Both percentage and flat rate discounts are supported. To enter a percentage discount, include the percentage sign (%) after the positive number that you enter in the **Discount** field. To enter a flat rate discount, enter the numeric value only.
- **Recurring Amount** – For recurring lines, this field shows the recurring amount value based on the rate or fixed amount, quantity, and discount.
- Price tiers – Set up the price for each tier by specifying values for the following fields:
 - **Above Quantity** (required) – Default value is zero for the first tier. For succeeding tiers, the value you specify in this field indicates the upper limit for the previous tier.
 - **Pricing Option** (optional) – Select one of the following options:
 - **Rate** (default) – Calculates the item amount as quantity multiplied by rate.
 - **Fixed Amount** – The defined charge amount for the item is not affected by its quantity.
 - **Value** (required) – Enter an amount to charge for the item.
 - **Min Amount** (optional) – Enter the minimum amount limit for the tier.
 - **Max Amount** (optional) – Enter the maximum amount limit for the tier.

Click the plus (+) icon on the right side of the tiers to create a new tier.

Click the check icon on the top right corner of the pricing interval to save the pricing information.

If you want to create additional pricing intervals, click the ellipsis icon on the top right corner of an existing pricing interval and select Make Copy. You can then edit the copied pricing interval to change the pricing or discount as needed. You can also create a new pricing interval by clicking the plus (+) icon on the right side of the last pricing interval.

One time lines cannot have more than one pricing interval.

5. If you want to add more items, click the **Add Item** button and repeat Steps 3 through 4.
6. When you are done adding items, click **Save**.

SuiteBilling Enhancements

SuiteBilling Enhancements is a SuiteApp that provides additional features that you can use with Advanced Subscription Billing features.

The SuiteApp supports these features:

- Create usage records individually or in bulk using a RESTlet
- Perform bulk operations for deleting, voiding, or updating subscription related records using mass update
- Perform status changes or change orders for subscriptions or subscription lines in bulk

- View the summary and audit trail for bulk operations
- Perform bulk customer payments

Read these topics for information about this SuiteApp:

- [Installing the SuiteBilling Enhancements SuiteApp](#)
- [Optimizing the Performance of the SuiteBilling Enhancement Script](#)
- [Creating Usage Records Using the RESTlet](#)
- [Subscription Billing Bulk Operations](#)
 - [Performing Subscription Billing Bulk Operations Using Mass Update](#)
 - [Processing Subscription Billing Bulk Changes Orders](#)
 - [Viewing the Bulk Operations Summary Page and Audit Trail Records](#)
- [Bulk Customer Payments](#)
 - [Permissions for Bulk Customer Payments](#)
 - [Setting the Default Account for Bulk Customer Payments](#)
 - [Setting the Payment Preferences for Billing Accounts](#)
 - [Creating Bulk Customer Payments](#)
 - [Viewing Transactions Processed in Bulk Customer Payments](#)

Installing the SuiteBilling Enhancements SuiteApp

Before installing the SuiteBilling Enhancements SuiteApp, ensure that these features and preference are enabled in your NetSuite account.

- Enable these features:
 - Billing Accounts
 - Billing Operations
 - Charge-Based Billing
 - Subscription Billing
 - Advanced Subscription Billing

To enable these features, go to Setup > Company > Enable Features. Click the **Transactions** subtab, and check the boxes for the features under the Billing section.

- Enable the **Consolidate Projects on Sales Transactions** preference. To do this, go to Setup > Accounting > Accounting Preferences. Click the **Items/Transactions** subtab, and under the Sales/Pricing section, check the box for the preference.

The SuiteBilling Enhancements SuiteApp is free, but it has to be shared with your account before you can install it. Contact NetSuite Customer Support to request access to this SuiteApp. When the SuiteApp is shared with your account, you can install it from the Enable Features page or from the Search & Install Bundles page.

 **Note:** If the SuiteApp isn't shared with your account, the **Install** button won't be available on the SuiteApp Details or Bundle Details page.

To install the SuiteApp from the Enable Features page:

1. Go to Setup > Company > Enable Features.
2. Click the **Transactions** subtab.

3. On the Billing section, click the **SuiteBilling Enhancements** link under Related SuiteApps.
4. On the SuiteApp Details page, click **Install**.

To install the SuiteApp from the Search & Install Bundles page:

1. Go to Customization > SuiteBundler > Search & Install Bundles.
2. In the **Keywords** field, enter **SuiteBilling Enhancements**.
3. Click **Search**.
4. From the search results, click the link for the bundle with these details:
 - Name: **SuiteBilling Enhancements**
 - Bundle ID: **419588**
5. On the Bundle Details page, click **Install**.

The SuiteBilling Enhancements SuiteApp is a managed SuiteApp and it's updated automatically. Any fixes and enhancements will be available after the SuiteApp is updated in your production account.

For more information about installing a SuiteApp, see the help topic [Installing a Bundle](#).

Optimizing the Performance of the SuiteBilling Enhancement Script

The SuiteBilling Enhancements SuiteApp uses a map/reduce script to process usage creation and bulk operation requests.

A map/reduce script type permits parallel processing, wherein multiple SuiteCloud Processors can work simultaneously to run a single script deployment instance. You can control the number of processors used for each script instance by using the Concurrency Limit field on the script deployment record. You can also set the Priority Level to identify critical jobs that require more immediate processing. For more information, see the help topic [SuiteCloud Processors](#).

After installing the SuiteApp, you can change the default settings on the map/reduce script deployment record to optimize its performance. You can adjust the concurrency limit and priority level to make the most of available processors in your account and parallel processing by the script.

To optimize the map/reduce script:

1. Go to Customization > Scripting > Scripts.
2. On the page filters, set the **Type** to **Map/Reduce** to show only map/reduce scripts.
3. Look for the **sbe_mr_processor (customscript_sbe_mr_processor)** script and click the **Deployment** link for it.
4. Click the **Edit** link for the deployment with ID: **customdeploy_sbe_mr_processor**.
5. To optimize the performance of the script, you can change the values for these fields:
 - **Priority** – By default, the priority for this script is set to **Standard**. If you want to mark this deployment as a critical job that requires more immediate processing, you can set the priority to **High**. For more information, see the help topic [SuiteCloud Processors Priority Levels](#).
 - **Concurrency Limit** – Set the number of processors that can be used to process the jobs associated with this script deployment. By default, the concurrency limit for this script deployment is set to **1**. For more information, see the help topic [Concurrency Limit](#).

For more information about the fields on the map/reduce script deployment record, see the help topic [Map/Reduce Script Deployment Record](#).

6. Click **Save**.

Creating Usage Records Using the RESTlet

With the Advanced Subscription Billing feature, you can create usage data records for subscription items through the user interface or by CSV import. When the SuiteBilling Enhancements SuiteApp is installed, you can also create usage data records using a RESTlet provided by the SuiteApp.

You can send a request to the usage data RESTlet in two ways:

- using required fields on the usage record
- using custom fields from the subscription or subscription line that are mapped to the usage record

The RESTlet supports creating usage data records individually or in bulk.

Read these topics for more information about sending requests to the usage data RESTlet:

- [Usage RESTlet Request Headers](#)
- [Usage RESTlet Supported Methods](#)
- [Usage RESTlet Error Messages](#)

Usage RESTlet Request Headers

When you send a request, ensure to include these request headers as part of the request.

Name	Value
Method	POST
URL	<RESTlet External URL>
Headers	
User-Agent-X	SuiteScript-Call
Content-Type	application/json
Authorization	NLAAuth nlauth_account= SCOMPID , nlauth_email= USEREMAIL , nlauth_signature= USERPASSWORD , nlauth_role=3

Follow these steps to get the value for the RESTlet external URL.

To get the value for the RESTlet external URL:

1. Go to Customization > Scripting > Scripts.
2. Set the filters to view only RESTlet script types.
3. Look for the **sbe_rs_main** (customscript_sbe_rs_main) script and click the **Deployments** link.
4. Click the **View** link for the **customdeploy_sbe_rs_main** deployment record.
5. Copy the URL specified in the **External URL** field. Use this value for the URL in the request header.

Usage RESTlet Supported Methods

The usage data RESTlet supports these methods:

- [sbCreateUsage](#) – Creates usage records for subscription items in NetSuite.
- [sbGetUsageCreationStatus](#) – Returns the status of the request ID for usage data creation.

sbCreateUsage

Use this method to send a request to create usage records for subscription items in NetSuite.

When the RESTlet receives a request using this method, it performs these tasks:

- creates a SuiteBilling operation record
- runs or queues the SuiteBilling operation map/reduce script that will process the usage creation

Even if the usage creation process isn't finished yet, the RESTlet returns the request ID right away in the response object. You can use the request ID to determine the status of the usage data creation request using the [sbGetUsageCreationStatus](#) method.

When the map/reduce script runs, it processes the SuiteBilling operation record created in the request. A SuiteBilling operation detail record is created for each usage object.

Note: Usage creation takes longer as more usage objects are added to the request. For information about optimizing the performance of the map/reduce script for usage creation, see [Optimizing the Performance of the SuiteBilling Enhancement Script](#).

Request Properties

Property	Data Type	Required?	Description
method	string	Yes	Method name of the process to run. In this case, value must be <code>sbCreateUsage</code> to create usage records.
usages	array	Yes	Array list of usage objects to create.
usages[x].subscriptionId	number	Required if subscriptionName, sbLookup, and sbLineLookup aren't provided.	Internal ID of the subscription record that you're creating usage for.
usages[x].subscriptionName	string	Required if subscriptionId, sbLookup, and sbLineLookup aren't provided.	Name of the subscription record that you're creating usage for. Important: If the subscription name that you provided is used for multiple subscriptions, an error will be returned.
usages[x].sbLookup	object	Required if subscriptionId, subscriptionName, and sbLineLookup aren't provided.	Object containing the field ID and value that will be used for subscription lookup. ■ <code>fieldId</code> - Field ID on the subscription record to be used for subscription lookup. ■ <code>value</code> - Value of the field on the subscription record to be used for subscription lookup.

Property	Data Type	Required?	Description
usages[x].line	number	Required if sbLineLookup isn't provided.	Subscription line number that you want to create usage for.
usages[x].sbLineLookup	object	Required if subscriptionId, subscriptionName, and sbLookup aren't provided.	Object containing the field ID and value which will be used for subscription line lookup. - fieldId - Field ID on the subscription line record to be used for subscription line lookup. - value - Value of the field on the subscription line record to be used for subscription line lookup.
usages[x].quantity	number	Yes	Quantity of usage to be created.
usages[x].date	date	Yes	Date of usage to be created. Date format must follow the format specified in the account preference.
usages[x].memo	string	No	Notes that you want to include on the usage record.
usages[x].customFields	array	No	Array list of custom field objects with field ID - value pairs. The custom fields are set on the usage record. - fieldId - Field ID on the usage record which will be set with the value provided. - value - Value to be set in the custom field on the usage record.

Sample Request

```

1  {
2    "method": "sbCreateUsage",
3    "usages": [{
4      "subscriptionId": "1",
5      "line": "3",
6      "quantity": "5",
7      "date": "1/3/2018",
8      "memo": "this is a note"
9    }, {
10     "subscriptionName": "Test Sub 001 - 1/1/2018",
11     "line": "1",
12     "quantity": "3",
13     "date": "1/4/2018"
14   }, {
15     "sbLookup": {
16       "fieldId": "custrecord_sb_service_id",
17       "value": "1001"
18     },
19     "line": "4",
20     "quantity": "10",
21     "date": "1/4/2018"
22   }, {
23     "sbLineLookup": {
24       "fieldId": "custrecord_sb_line_service_id",
25       "value": "1234"
26     },
27     "quantity": "10",
28     "date": "1/4/2018"

```

```

29     }, {
30       "subscriptionName": "USD Free One Month Trial - 2/4/2018",
31       "line": "1",
32       "quantity": "5",
33       "date": "2/4/2018",
34       "customFields": [{
35         "fieldId": "custrecord_usage_source",
36         "value": "data"
37       }, {
38         "fieldId": "custrecord_usage_unit",
39         "value": "MB"
40       }]
41     }]
42   }

```

Response Properties

If the SuiteBilling operation record for the request is created successfully, this property is returned.

Property	Data Type	Description
requestId	number	Internal ID of the SuiteBilling operation record. You can use this value to get the status of the usage creation.

Sample Response

```

1  {
2    "requestId": 101
3  }

```

sbGetUsageCreationStatus

Use this method to get the status and results of the usage creation request made using the [sbCreateUsage](#) method. Use the request ID returned by the [sbCreateUsage](#) method when you send a request using this method.

When the RESTlet receives a request using this method, it searches for the SuiteBilling operation record associated with the request ID. If an operation record is found, the method returns the usage creation status in the response object.

Request Properties

Property	Data Type	Required?	Description
method	string	Yes	Method name of the process to run. In this case, value must be sbGetUsageCreationStatus to check the status of the usage creation.
requestId	number	Yes	Internal ID of the SuiteBilling operation record. This value is returned by the sbCreateUsage method used for the usage creation request.

Sample Request

```

1  {
2    "method": "sbGetUsageCreationStatus",

```

```

3 | "requestId": "1101"
4 | }

```

Response Properties

Property	Data Type	Description
requestId	number	Internal ID of the SuiteBilling operation record.
status	string	Status of the usage creation, which can be any of these values: - Not Started - In Progress - Completed - Error
result	object	Result object that contains the information of successful records, failed records, and unhandled errors.
result.successes	array	Array list of usage objects that are successfully created. Each object contains the index, data, and result. - index - Position or index of the usage object in the usage array. - data - Usage object in the usage array - result - Resulting object after processing the usage object. This property holds the internal ID of the created usage record.
result.failures	array	Array list of usage objects that failed. Each object contains index, data, and result. - index - Position or index of the usage object in the usage array. - data - Usage object in the usage array. - result - Resulting object after processing the usage object. This property holds error information, the reason a usage record isn't created.
result.errors	array	Array list of error information that occurred at different stages of the map/reduce script. These errors occurred outside the scope of usage creation (that is, beyond SuiteBilling Operation Detail record creation). - stage - Stage in the map/reduce script where the error occurred. - key - Key property of the context object. This value is usually the unique key processed in the map/reduce stages. - name - Code or title of the error. - message - Descriptive information about the error.

Sample Response

This example shows the response when the operation record for the request ID is obtained. In this case, the usage creation is completed, one record is created successfully, one fails, and there are no unhandled errors.

```

1 | {
2 |   "requestId": "1101",
3 |   "status": "Completed",
4 |   "result": {

```

```

5      "successes": [
6        {
7          "index": 0,
8          "data": {
9            "subscription": "1",
10           "line": "3",
11           "quantity": "5",
12           "date": "1/3/2018",
13           "memo": "this is a note"
14         },
15         "result": {
16           "usageId": 101
17         }
18       },
19     ],
20     "failures": [
21       {
22         "index": 1,
23         "data": {
24           "subscription": "1",
25           "line": "5",
26           "quantity": "15",
27           "date": "1/3/2018"
28         },
29         "result": {
30           "name": "INVALID_KEY_OR_REF",
31           "message": "Invalid usagesubscriptionline reference key Ems SP 001 - 1/1/2018: 5."
32         }
33       }
34     ],
35     "errors": []
36   }
37 }

```

In the next example, the status of the usage creation is completed and there is one unhandled error.

```

1  {
2    "requestId": "1102",

```

Usage RESTlet Error Messages

The following table shows the error messages that you can receive from the RESTlet.

Error Code	Error Message
MISSING_REQUEST_DATA	Request data is missing.
MISSING_REQUEST_PROPERTY	The {0} property is missing in {1} object.
INVALID_REQUEST_METHOD	Request method is invalid: {0}
EMPTY_REQUEST_OBJECT	The {0} object is empty.

Error Code	Error Message
EMPTY_REQUEST_PROPERTY	The {0} property is empty.
INVALID_PROPERTY_FORMAT	The value for {0} property has invalid format. Format must be: {1}.
SUBSCRIPTION_NOT_FOUND	Subscription record isn't found using the {0} property.
SUBSCRIPTION_LINE_NOT_FOUND	Subscription Line record isn't found using the {0} property.
REQUIRED_VALUE_NOT_FOUND	{0} isn't found in the usage object.
MULTIPLE_VALUES_NOT_MATCH	Multiple values of {0} don't match.
FIELD_DOES_NOT_EXIST	The field {0} doesn't exist.
REQUEST_NOT_FOUND	Request {0} isn't found using the {1} property
MULTIPLE_RECORDS_FOUND	Multiple records found for {0} using the {1} property.

Subscription Billing Bulk Operations

SuiteBilling Enhancements SuiteApp enables you to perform bulk operations for subscription billing records.

Bulk operations provide a flexible way to clean up charge, usage, and change order records that you no longer need. You can also update specific fields on charge or change order records, or change the status of subscriptions or subscription lines in bulk. Bulk operation changes are tracked in audit trail records you can view on the Bulk Operations Summary page.

- You can perform these bulk operations with mass update:
 - **Delete Records** – Delete erroneous, obsolete, or irrelevant charge records.
 - **Void Records** – Void erroneous, obsolete, or irrelevant usage or change order records.
 - **Set Charge Stage to Non-Billable** – Change the value of the Stage field on charge records to Non-Billable.
 - **Update Change Order Effective Date** – Change the value of the Effective Date field on change order records.

Learn more about performing bulk operations using mass update, see [Performing Subscription Billing Bulk Operations Using Mass Update](#).

- You can perform these status changes on the Bulk Process Change Order page:
 - Draft to Pending Activation
 - Draft to Active
 - Pending Activation to Draft
 - Pending Activation to Active
 - Active to Suspend
 - Suspend to Reactivate

Learn more about processing bulk change orders, see [Processing Subscription Billing Bulk Changes Orders](#).

- View a list of bulk operations performed and access audit trail records through the Bulk Operations Summary page. To learn more, see [Viewing the Bulk Operations Summary Page and Audit Trail Records](#).

Performing Subscription Billing Bulk Operations Using Mass Update

SuiteBilling Enhancements SuiteApp includes custom mass updates in performing bulk operations for charge, usage, and change order records. Supported bulk operations include:

- Deleting charge records
- Voiding usage or change order records
- Setting the charge stage to Non-Billable for charge records
- Updating effective date on change order records

Only roles with access to charge, subscription change order, and usage records have access to the mass update actions for bulk operations.

Each bulk operation run creates a Bulk Operations Audit Trail record with details of the mass update. You can view the list of bulk operations and access audit trail records on the Bulk Operations Summary page. To learn more, see [Viewing the Bulk Operations Summary Page and Audit Trail Records](#).

To update, void, or delete subscription billing records using mass update:

1. Go to Lists > Mass Update > Mass Updates.
2. On the Mass Updates list, click **Custom Updates** to expand.
3. Select the bulk operation that you want to perform.

The table shows the bulk operations that you can perform for supported subscription billing records.

Subscription Billing Record	Bulk Operation (Mass Update Action)	Description
Charge	Delete Records	Delete erroneous or obsolete charge records
	Set Charge Stage to Non-Billable	Change the value of the Stage field on charge records to Non-Billable
Subscription Change Order	Void Records	Void erroneous or obsolete change order records
	Update Change Order Effective Date	Change the value of the Effective Date field on change order records
Usage	Void Records	Void erroneous or obsolete usage records

4. On the Mass Update page:
 1. If you want to save this mass update, enter a name in the **Title of Action** field.
 2. In the **Job Name** field, enter a unique name to help you identify this bulk operation run. Default value for this field is the date and time when the Mass Update page is loaded.
 3. If you selected the **Update Change Order Effective Date** action, enter the new effective date for the change orders in the **Effective Date** field.
 4. On the **Criteria** subtab, select the filters that you want to use to set the criteria fields for the records that you want to process.
 5. If necessary, edit or set the values on the **Results**, **Audience**, and **Schedule** subtabs.
 6. Click **Preview** to preview the list of records that will be processed based on the filters you set on the **Criteria** subtab.

On the Mass Update Preview Results page, you can do the following:

- In the **Apply** column, keep the box checked for records that you want to include in the mass update. Clear the box if you want to exclude a specific record from the mass update.
- Click **Return to Criteria** if you want to make further changes to the filters that you previously set.
- Click **Perform Update** to run the mass update action for the selected records.
- Click **Save** to save the mass update without performing any changes.

 **Note:** If you checked the **Run Update According to Schedule** and specified a schedule on the **Schedule** subtab, the mass update will run according to the schedule after you save it.

- If you don't want to continue with this mass update, click **Cancel** to return to the Mass Updates category list.

Processing Subscription Billing Bulk Changes Orders

SuiteBilling Enhancements SuiteApp includes support for processing bulk change orders for subscriptions and subscription lines.

 **Important:** Make sure the roles in your account are set up with the appropriate permissions to process bulk change orders and customize filters and columns on the Bulk Process Change Order page. For more information, see [Permissions for Bulk Process Change Order](#).

On the Bulk Process Change Order page, you can do the following:

- **Search for Records to Process** – You can search for subscriptions or subscription lines using predefined filters such as customer, billing account, subscription plan, start date, and end date.
- **Customize Search Filters and Sublist Columns** – You can customize the filters that you can use to search for records. You can also customize the columns that you want to include in the record sublist for the search results.
- **Specify the Status Change and Change Order Details** – You can change the status from Draft to Pending Activation, or inversely. You can also apply activation, suspend, or reactivation change order by selecting the associated status change. For change orders, you must also specify the effective date, requester, and modification type. For activation change order, you've the option to request for off-cycle invoice for advanced charges.
- **Process Multiple Records for Bulk Change Order** – After searching for records, you can select multiple subscriptions or subscription lines to process for bulk change orders.

Each bulk operation run creates a Bulk Operations Audit Trail record, which contains information about the change order. You can view the list of bulk operations performed and access the audit trail records from the Bulk Operations Summary page. For more information, see [Viewing the Bulk Operations Summary Page and Audit Trail Records](#).

To process bulk change orders for subscriptions or subscription lines:

1. Go to Transactions > Subscriptions > Process Bulk Change Orders.
2. On the Bulk Process Change Order page, under the Primary Information section:
 - a. In the **Records to Process** field, select whether you want to search for and apply change orders to **Subscription** records or **Subscription Lines**.
 - b. In the **Status Change** field, select the status change that you want to apply:

- Draft to Pending Activation
 - Draft to Active
 - Pending Activation to Draft
 - Pending Activation to Active
 - Active to Suspend
 - Suspend to Reactivate
- c. For status changes related to activation, suspend, or reactivate change order, you must also specify values for the following fields:
- **Effective Date** – Select the date when the change order takes effect.
 - **Request Off-Cycle Invoice for Advanced Charges** – Check this box to set the default for off-cycle invoices, which is inherited from other records. An off-cycle invoice bills for subscriptions with a partial period. For example, sending a bill before the recurring scheduled bills. This option applies only to activation change order.
 - **Requester** – Select the name of the employee requesting the change order. This field shows employees who have Create, Edit, or Full permission for subscription change order records. Administrators are excluded.
 - **Modification Type** – Specify how the change order impacts subscription recurring revenue analytics.
 - **New or Churn** - Analytics revenue impact of the change order is classified as New or Churn.
 - **Upsell or Downsell** - Analytics revenue impact of the change order is classified as Upsell or Downsell.
 - **Ignored** - The change order has no analytics revenue impact.
 - **Memo** (optional) – Use this field to enter notes.
3. In the Filters section, select at least one filter to use for searching records. The following filters are available:
- **Customer** – When you select a customer, the default billing account associated with the customer is automatically selected in the **Billing Account** field.
 - **Billing Account** – If you selected a customer, this field is automatically set to the default billing account of the customer. The list is also filtered to show only billing accounts associated with the customer.

If a customer isn't selected yet, when you select a billing account, the customer associated with the billing account is automatically selected in the **Customer** field.
 - **Subscription Plan** – To filter by subscription plan, select a subscription plan in this field. The list shows all subscription plans in the account.
 - **Start Date** – To filter by start date, select a date in this field. This date must be earlier than the end date (if specified).
 - **End Date** – To filter by end date, select a date in this field. This date must be later than the start date (if specified).

 **Note:** You can customize the filters that you want to use to search for records. For more information, see [Customizing the Search Filters and Sublist Columns for Bulk Process Change Order](#).

If you've added custom filters before, the fields are available in the Additional Filters section of the Bulk Process Change Order page.

4. Click **Search**.

- The search results returned are shown in the record sublist. From this list, select the records that you want to process. All records are selected by default. If the results are shown in multiple pages, click the page navigation buttons to go through the pages.

Note: The number of rows for the record sublist is based on the value set in the **Number of Rows in List Segments** user preference.

By default, the records in the list are sorted by the last column on the right, in ascending order. You can change the sorting by clicking any of the column headers, but only the records on the current page will be sorted.

- To remove the current selection, click **Unmark All**. This action clears the **Include** box for any selected records across all pages.
- To individually select records, check the box in the **Include** column for each record that you want to include. Clear the box for records that you want to exclude.
- To select all records in the list, click **Mark All**. This action checks the **Include** box for all lines in the list, across all pages.

If you modified a search filter after running an initial search, be sure to click the **Search** button again to update the results in the record sublist. Then, you can select records to include again from the updated results.

- After selecting records, click **Process Bulk Change Order**.

When you submit a bulk change order request, a corresponding SuiteBilling Operation record is generated and the map/reduce script that will process the request runs or is queued. After clicking the Process Bulk Change Order button, a confirmation banner with a link to the generated SuiteBilling Operation record appears at the top of the Bulk Process Change Order page. Click the link to view the status of the bulk change order request.

Note: For information about how to optimize the performance of the map/reduce script for bulk operations, see [Optimizing the Performance of the SuiteBilling Enhancement Script](#).

You can also view the audit trail record for the bulk operation run on the Bulk Operation Summary page. For more information, see [Viewing the Bulk Operations Summary Page and Audit Trail Records](#).

Permissions for Bulk Process Change Order

SuiteBilling Enhancements SuiteApp provides a Bulk Process Change Order page. You need to have the appropriate permissions to be able to process bulk change orders and customize the filters and columns on this page.

The following permissions are required for any role (except an Administrator) who will perform bulk change orders:

Subtab	Permission	Level	Notes
Lists	Billing Schedules	View	For additional filters
	Classes	View	For additional filters

Subtab	Permission	Level	Notes
	Currency	View	For additional filters Note: This permission isn't available on single currency accounts.
	Custom Record Entries	Full	For processing change orders
	Customers	View	For filters
	Departments	View	For additional filters
	Documents and Files	View	For processing change orders
	Items	View	For additional filters
	Locations	View	For additional filters
	Price Books	View	For additional filters
	Price Plans	View	For additional filters
	Subscription Change Orders	Full	For processing change orders
	Subscription Plans	View	For filters
	Subscriptions	Full	For processing change orders
	Subsidiaries	View	For additional filters
Setup	Accounting Lists	View	For additional filters
	SuiteScript	View	For processing change orders
	SuiteScript Scheduling	Full	For processing change orders
Custom Record	SBE Bulk Change Orders Column	Full	For customizing additional columns
	SBE Bulk Change Orders Filter	Full	For customizing additional filters

Customizing the Search Filters and Sublist Columns for Bulk Process Change Order

With the SuiteBilling Enhancements SuiteApp, you can customize the search filters that you want to use on the Bulk Process Change Order page. You can also customize the columns that you want to include in the record sublist for the search results.

When you run a search that returns at least one record, a **Customize** button appears on the record sublist. Click this button to open the page where you can select additional filters and columns.

Important: Using a select type custom field as an additional filter won't work if it's dependent on another field. For example, a custom field is an Employee list and has a filter of Employee's Subsidiary = Subscription's Subsidiary. When you add the custom field as an additional filter, no options will be shown in that field because it is dependent on a field that doesn't exist on the Bulk Process Change Order page.

To customize the search filters and sublist columns:

1. Run a subscription or subscription line record search on the Bulk Process Change Order page. For more information, see [Processing Subscription Billing Bulk Changes Orders](#).
2. When the search results are returned, click the **Customize** button on the record sublist.

 **Note:** The **Customize** button is available only if the search returned at least one record.

3. On the Customize Sublist page, the following subtabs are available:
 - **Additional Columns** – This subtab shows the list of fields available to the record type used in the search. To include a field as a column in the sublist for search results, check the **Include** box for the field. The default columns that should always be included in the sublist remain dimmed.
 - **Additional Filters** – This subtab shows the list of fields available to the subscription record, regardless of the record type used in the search. To include a field as an additional search filter on the page, check the **Include** box for the field. The primary filters that are already available on the page remain dimmed.
4. After selecting more columns and filters, click **Save**.

On the Bulk Process Change Order page, the custom filters that you included are shown in the Additional Filters section. When you run a search, the additional columns are listed after the default columns in the sublist.

Viewing the Bulk Operations Summary Page and Audit Trail Records

SuiteBilling Enhancements SuiteApp includes a Bulk Operations Summary page, which can help you keep track of bulk operations that were performed in the account. To view the Bulk Operations Summary page, go to Transactions > Subscriptions > Bulk Operations Summary.

You can view the following information about the Bulk Operations Summary page.

Bulk Operations Summary Column	Description
Job Name	Shows the job name for the bulk operation run. For bulk operations performed using mass update, this field shows the job name specified on the Mass Update page for this bulk operation run. For bulk change orders, this field shows Generate Bulk Change Order and ID of the related SuiteBilling Operation record.
Bulk Operation Type	Shows the type of action performed in the bulk operation run: ■ Set Charge Stage to Non-Billable ■ Update Change Order Effective Date ■ Delete Records ■ Void Records ■ Draft to Pending Activation ■ Draft to Active ■ Pending Activation to Draft ■ Pending Activation to Active ■ Active to Suspend ■ Suspend to Reactivate

Bulk Operations Summary Column	Description
	 Note: Starting version 21.2, Delete Records is changed to Void Records for usage and change order records. This change is applied only to new bulk operation runs performed after the upgrade to version 21.2. Audit trails showing Delete Records actions for usage and change order records prior to version 21.2 will be unchanged.
Record Type	Shows the type of record processed in the bulk operation run.
Created By	Shows the name of the person who performed the bulk operation run.
Created Date	Shows the date and time of the bulk operation run.
Records Processed	Shows the number of records successfully processed (X) out of the total number of records included in the bulk operation run (Y). This value is shown in the format X/Y. The total number of records (Y) shows all records that were selected to be included in the bulk operation request. Based on the total number of records, the number of records successfully processed (X) shows all records that didn't encounter errors during the bulk operation run, regardless if the record was updated or not. The difference between the two values indicate the number of records that encountered errors.

From the Bulk Operations Summary page, you can click the link in the **Job Name** column to access the Bulk Operations Audit Trail record for that specific run.

The same information from the Bulk Operations Summary page are shown in the header section and on the **Job Info** subtab of the Bulk Operation Audit Trail record.

On the **Records** subtab, you can see more details about each record included in the bulk operation run. By default, the list of records under the **Audit Trail** subtab is sorted by record ID in ascending order. Use the following options to change the way the records are sorted:

- **Sort By** – Select which field you want the results sorted by. The available values in this field differ depending on the bulk operation type.

 **Note:** You can also sort the list by clicking the column header on the **Audit Trail** subtab. However, doing so will sort only the records listed on the current page. Use the **Sort By** field to sort all records that are part of the bulk operation run.

- **Descending** – Check this box to sort the list by descending order. Clear this box to sort the list by ascending order.
- **Page** – Select the results page that you want to view. The page labels depend on the current sorting of the audit trail records. Each page displays 25 records.
- **Show Failures Only** – Check this box to show only failed records.

The columns on the **Audit Trail** subtab also differ depending on the bulk operation type.

Bulk Operation Type	Columns
■ Delete Records ■ Void Records	■ View ■ Record ID ■ Status

Bulk Operation Type	Columns
	Error Message
- Set Charge Stage to Non-Billable - Update Change Order Effective Date - Draft to Pending Activation - Draft to Active - Pending Activation to Draft - Pending Activation to Active - Active to Suspend - Suspend to Reactivate	- View - Record ID - Old Value - New Value - Status - Error Message

You can click the link (if available) in the View column to view a specific record.

Bulk Customer Payments

When the SuiteBilling Enhancements SuiteApp is installed in your NetSuite account, you can accept customer payments in bulk. The bulk customer payments feature enables you to generate payments for one or more customers and apply the payments to the appropriate invoices.

Before using the bulk customer payments feature, make sure the roles in your NetSuite account are set up with appropriate permissions. For more information, see [Permissions for Bulk Customer Payments](#).

Note: The Bulk Customer Payments feature isn't compatible with the Multi-Subsidiary Customer feature. Using Bulk Customer Payments with Multi-Subsidiary Customer enabled may cause an issue, because the customer's primary subsidiary may be different from the subsidiary of the invoice or the Payment Processing Profile. Ensure that Multi-Subsidiary Customer isn't enabled before using Bulk Customer Payments.

Read the following help topics for information about the capabilities provided by this feature:

- [Setting the Default Account for Bulk Customer Payments](#) – Specify the default payment account that will be set on generated payments.
- [Setting the Payment Preferences for Billing Accounts](#) – Set the payment preferences for billing accounts.
- [Creating Bulk Customer Payments](#) – Create bulk customer payments where you can set the invoice search criteria, bulk payments run schedule, payment processing options, and accounting options for the bulk payments run.
- [Viewing Transactions Processed in Bulk Customer Payments](#) – Keep track of the processed invoices and generated payments for each bulk payments run.

Permissions for Bulk Customer Payments

You need to have the appropriate permissions to be able to process bulk customer payments and access related records.

For information about the minimum permissions required to use bulk customer payments provided by the SuiteBilling Enhancements SuiteApp, see [Basic Permissions for Bulk Customer Payments](#).

For information about the additional setup tasks when the Payment Instruments feature is enabled, see [Setting Up Bulk Customer Payments with Payment Instruments Feature Enabled](#).

Basic Permissions for Bulk Customer Payments

The following table shows the required permissions for any role (except an Administrator) who will perform bulk customer payments.

For information about reviewing and setting permissions, see the help topics [Reviewing Permissions Assigned to Roles](#) and [Setting Permissions](#).

Subtab	Name	Level	Description
Transaction	Customer Payment	Edit	Enables customer payment creation.
Reports	Account Receivable	View	Enables access to accounts receivable report.
Custom Record	Bulk Customer Payments	Full	Enables bulk customer payments record creation and access to bulk customer payments menu. ■ In the Classic Center, you can access the menu through Transactions > Bulk Customer Payments. ■ In the Accounting Center, you can access the menu through Financial > Other Transactions > Bulk Customer Payments.
	Bulk Payments Run	Full	Required to run bulk customer payments.

Setting Up Bulk Customer Payments with Payment Instruments Feature Enabled

By default, these SuiteBilling Enhancements script deployments, which need access to payment card data, are set to run using the administrator role:

- SBE Payment UE Load Credit Cards List (ID: customdeploy_sbe_pay_ue_loadcclist)
- SBE Payment UE Validate Credit Card (ID: customdeploy_sbe_pay_ue_validate_cc)
- SBE Pay SL Bulk Payments Service (ID: customdeploy_sbe_pay_sl_bulkpaymentsvc)

However, as a best practice, you should consider changing this setting to any role that has minimum access permissions instead.

To change the execute as role setting, go to Customization > Scripting > Script Deployments. Edit the script deployment. Then, set the **Execute as Role** field to any role that has the following permissions:

Subtab	Name	Level	Description
Lists	Payment Card	Full	Required if you use payment cards for payments.
	Payment Card Token	Full	Required if you use payment card tokens for payments.
	Payment Instrument	Full	Required if you use payment instruments for payments.

Note: These permissions are available only if the Payment Instruments feature is enabled in your account. If this feature is disabled, you won't be able to assign these permissions to custom roles. In this case, you can set the **Execute as Role** to any standard role that has access payment card data (for example, A/R Clerk).

For more information, see the help topic [Payment Instruments](#).

Setting the Default Account for Bulk Customer Payments

With the SuiteBilling Enhancements SuiteApp, you can set the default payment account for bulk customer payments on the General Preferences page. You can select the bank account where the payments are deposited, or you can opt to record the payments as undeposited funds. This preference sets the value in the Account field on payment records generated for bulk customer payments.

To set the default payment account for bulk customer payments:

1. Go to Setup > Company > General Preferences.
2. Click the **Custom Preferences** subtab.
3. To set the default account for bulk customer payments, use the following preferences under SuiteBilling Enhancements Feature:
 - **Default Payment Account** – If the payments are deposited to a bank account, select the bank account in this field.
 - **Record Payments as Undeposited Funds** – If the payments will be deposited to a bank account later, check this box.

If you leave both preferences blank, the system will use the account set in the **Default Payment Account** field on the Accounting Preferences page.

If you set both preferences, the payments will be recorded as undeposited funds by default.

4. Click **Save**.

Setting the Payment Preferences for Billing Accounts

With the SuiteBilling Enhancements SuiteApp, you can set the payment processing profile and payment instrument that will be used to process payment transactions for a billing account. These fields are available on billing account records only if the Credit Card Payments feature is enabled.

The SuiteApp determines the payment processing profile and payment instrument that will be used for customer payments based on the following hierarchy:

Payment Processing Profile

1. Value in the Payment Processing Profile field on the bulk customer payments record
2. Value in the Payment Processing Profile field on the billing account record
3. Value in the Pref. CC Processor field on the customer record
4. System default (which is the first payment processing profile in the record list)

Note: If the Multi-Subsidiary Customer feature is enabled in your account, the customer's primary subsidiary may be different from the subsidiary in the Payment Processing Profile, which may cause an issue. Ensure that Multi-Subsidiary Customer isn't enabled before using Bulk Customer Payments.

Payment Instrument

1. Value in the Payment Instrument field on the billing account record
2. Default payment instrument on the customer record

To set the payment processing profile and payment instrument for billing accounts:

1. Go to Lists > Relationships > Billing Accounts.
2. Click the Edit link for the billing account.
3. Under SuiteBilling Enhancements, select a value for the following fields:
 - **Payment Processing Profile** – Select the payment processing profile that you want to use when processing payment transactions for this billing account. Options include all payment processing profiles set up in the account.
 - **Payment Instrument** – Select the payment instrument that you want to use when processing payment transactions for this billing account. When the Payment Instruments feature is enabled, options include all payment instruments associated with the selected customer. When the Payment Instruments feature is disabled, options include credit cards only. For information about payment instruments, see the help topic [Payment Instruments](#).
4. Click **Save**.

Creating Bulk Customer Payments

Important: Make sure the roles in your account are set up with the appropriate permissions to use bulk customer payments. For more information, see [Permissions for Bulk Customer Payments](#).

With the SuiteBilling Enhancements SuiteApp, you can set up bulk payments by creating a bulk customer payments (BCP) record. On this record, you can do the following:

- Set the invoice filters.
- Set a recurring schedule for bulk payments.
- Specify the payment processing profile that will be used to process transactions in the bulk payments run.
- Set payment options for transactions included in the bulk payments run.

When the SuiteApp processes a BCP record, it searches for invoices that match the criteria specified and generates payments for all applicable invoices.

A bulk payments run (BPR) record logs the results of each BCP process run. This record includes a list of processed invoices and generated payments. You can view the list of generated BPRs on the **Bulk Payments Run** subtab of the BCP record. You can also view a list of all BPR records by going to Transactions > Bulk Customer Payments > View Bulk Payments Run. For more information, see [Viewing Transactions Processed in Bulk Customer Payments](#)

Note: The Bulk Customer Payments feature isn't compatible with the Multi-Subsidiary Customer feature. Using Bulk Customer Payments with Multi-Subsidiary Customer enabled may cause an issue, because the customer's primary subsidiary may be different from the subsidiary of the invoice or the Payment Processing Profile. Ensure that Multi-Subsidiary Customer isn't enabled before using Bulk Customer Payments.

To create bulk customer payments:

1. Go to Transactions > Bulk Customer Payments > View Bulk Customer Payments > New.
2. In the **Name** field, enter a name for the bulk customer payments record.
3. Set the date criteria for the invoice search using the following fields:
 - **Offset Days From Current Date** – BCP returns all invoices until the current date unless an offset value is specified in this field. The offset is applied to the current date to adjust the invoice

end date filter. The default offset value is zero, which indicates the current date. You can enter any positive or negative integer.

When you use offset, customer invoices are filtered using the following formula for date range:

- Start Date = January 1, 1900
- End date = current date + offset days

For example, if offset value is -2 and the current date is January 1, 2022, then the search will include customer invoices from January 1, 1900 through December 30, 2021.

- **Use Date Range** – If you want to set a specific date range for the invoice search, check this box. Use the **From** and **To** fields to set the date range. If both date fields are blank, all open invoices for the customer will be searched.
- **Filter Invoices By Date Type** – Select whether the invoices are searched by transaction date or by due date.

4. Specify when you want to run the bulk payments.

- If you want to create a one-time bulk payments run, keep the **Recurring** box cleared. Bulk payments will be processed after saving the record.
- If you want to set up a recurring schedule for bulk payments, check the **Recurring** box and set the values in the following fields:
 - **Frequency** and **Repeat Every** – Use these fields to set how often the bulk payments will be processed.
For example, if you want to process bulk payments every 2 weeks, set the following:
 - Frequency = Week (unit of time)
 - Repeat Every = 2 (interval)
 - **Start Date** – Specify the start date for the recurring bulk payments schedule.
If the specified date is earlier than the current date, the bulk payments will be processed immediately upon saving.
 - **Start Time** – Specify the start time for recurring bulk payments schedule.

Take note of the following:

- If you're editing or viewing a bulk payments record that has been processed, the **Last Run Date** field shows date and time of the most recent bulk payments run.
- If you don't want the system to process this bulk payments record, you can check the **Inactive** box to inactivate it.

5. Specify the customer for which you want to process bulk payments.

- **Customers** – If you want the search to include invoices for specific customers only, select a value in this field. You can select a customer, a static customer group, or a dynamic group based on a customer saved search.

Note: For dynamic customer groups, you must set the saved search to Public and use standard search filters to define the search criteria. Currently, using filter expressions isn't supported.

- **All Customers** – If you want the search to include invoices for all customers, check this box.

6. In **Payment Processing Profile**, select the payment processing profile that you want to use to process payment transactions. You can set this field only if the Credit Card Payments feature is enabled in your account.

If this field is blank, the system will use the payment processing profile specified on the billing account record, customer record, or the system default. For information about the payment processing profile hierarchy, see [Setting the Payment Preferences for Billing Accounts](#).

7. Set the accounting options using the following fields:

- **Record Payment As** – Credit card is the default payment method. If you want to use a non-credit card payment method, select from the options in this field. The list is sourced from the Payment Method accounting list and includes only non-credit card payment methods.

When this field is set, other fields related to credit card payments are dimmed.

This field is required when the Credit Card Payments feature is disabled in your account.

The following fields are editable only if the payment type is credit card.

- If the Payment Instruments feature is enabled in your account, you can set the following fields.
 - **Handling Mode** – Select the handling mode for the generated customer payments.
 - **Process** – Triggers payment processing through a payment gateway with the selected payment option and payment processing profile.
 - **Record External Event** – Creates a NetSuite record of a payment that took place outside of NetSuite, for example, in an ecommerce solution that authorizes payments outside of NetSuite.
 - **Save Only** – Saves the data entered on the form but doesn't trigger payment process.
 - To exclude invoices that use specific payment instruments, check the appropriate box:
 - **Exclude General Tokens**
 - **Exclude Payment Cards**
 - **Exclude Payment Card Tokens**

For more information about the Payment Instruments feature, see the help topic [Payment Instruments](#).

- If the Payment Instruments feature is disabled in your account, you can use the following fields to specify how to handle credit card payments:
 - If you want to trigger payment processing upon creation of the customer payment record, check the **Charge Credit Card** box.
 - If you want to record external payments, check the **Mark CC Approved** box. This option checks the **CC Approved** box on the generated customer payment, which indicates that the payment took place outside of NetSuite.
 - If you want to save the data entered on the payment transaction, leave both the **Charge Credit Card** and **Mark CC Approved** boxes cleared.

8. When you finish, click **Save**.

To view the bulk payments run information and processed transactions, see [Viewing Transactions Processed in Bulk Customer Payments](#).

Viewing Transactions Processed in Bulk Customer Payments

To help you keep track of processed transactions for bulk payments, a bulk payments run (BPR) record is generated each time a bulk customer payments (BCP) record is processed by the SuiteBilling Enhancements SuiteApp.

The BPR record shows the following information for each run:

- Bulk payment details sourced from the BCP record
- Date and time when the bulk payments are processed
- Status of the bulk payments run
- List of successful invoices, failed invoices, and generated payments

You can view the list of generated BPRs on the **Bulk Payments Run** subtab of the BCP record. You can also view a list of all BPR records from Transactions > Bulk Customer Payments > View Bulk Payments Run.

In addition, a **SuiteBilling Enhancements** subtab is available on invoice and payment records.

- On processed invoices, this subtab contains links to the generated payment and BPR record. If a payment was not generated, you can also see the payment failure reason on this subtab.
- On generated payments, this subtab contains links to the invoice where the payment is applied and BPR record.
