This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

SCIS User Guide Overview

This guide gives sales associates and sales managers information about how to operate SuiteCommerce InStore (SCIS). It also covers the user interface, entering transactions, and customer records. For administrator information, see the help topic [SuiteCommerce InStore Administrator's Overview](#).

SCIS is a web-based point-of-sale application. It has a touch-based interface made for tablets. You don't need a special point-of-sale hardware. SCIS supports common point-of-sale peripherals, such as credit card readers, printers, barcode scanners, and cash drawers.

Important: You need the SuiteCommerce InStore mobile app when using SCIS on an iPad or on a tablet or computer with the Windows operating system. You can't use SCIS on a desktop or laptop computer with a web browser such as Safari, Chrome, or Firefox.

Integration with NetSuite

SCIS is built to integrate natively with NetSuite. The SuiteCommerce InStore SuiteApp is installed in your organization's NetSuite account. Sales associates use the secure SCIS POS application to access SCIS. All data SCIS uses is stored in and retrieved from NetSuite. This lets SCIS use other NetSuite product areas, including Enterprise Resource Planning (ERP), Commerce web stores, and Customer Relationship management (CRM).

Access to Customer Profiles

The Customer Profile gives the sales associate a complete view of a customer's purchase activity. The Customer Timeline shows purchases, returns, shipments, and dates of customer interactions with the call center. To access the Customer Profile and Timeline, the sales associate taps the customer's name.

Roles and Permissions

Each employee who'll use SCIS needs to have one of the custom roles added to NetSuite when SuiteCommerce InStore is installed. If needed, an administrator can customize a role to comply with the business needs of the organization. To log in to SCIS, each user enters login credentials based on their assigned role.

The SuiteCommerce InStore SuiteApp installs a basic set of permissions for common retail operations, such as voiding lines and applying discounts. Employees using SCIS need the correct NetSuite permissions to perform these operations.

SuiteCommerce InStore Workflow

The following image shows a typical workflow for performing transactions, with links to the corresponding sections of documentation.

This list provides details about the typical workflow. Use the links to find more information.

1. Log in to SuiteCommerce InStore.

After you enter your login credentials, depending on your system configuration, you might need to enter an opening drawer transaction. From the **User menu**, you can pick a printer and select a Sales Rep. If you have been assigned more than one role, you can select which one you want to use when you log in. For more information, see [SuiteCommerce InStore Login](#).

2. Select a customer for a transaction.

You can use the search bar in SCIS to find existing customers. This search includes customers who bought through SCIS, customers in NetSuite, or anyone who bought from the online store. For more information, see [Adding Customers To Sales Transactions in SCIS](#). See also, [Working with Customer Profile Information](#).

3. Add items to the cart.

You can use the search bar or the QuickAdd bar to find items in SCIS. To add items to a transaction, you can use a barcode scanner or tap an item QuickAdd Key. For more information, see [Adding Items to a Sales Transaction in SCIS](#).

4. Apply discounts.

(Optional) You can add a discount to a particular item or to the entire order. Alternatively, you can apply a promotion code. For more information, see [Discounts and Markups in SCIS](#).

5. Accept payment.

SCIS supports all payment methods your system administrator has set up. For more information, see [Accepting Payments for Purchases in SCIS](#).

See the following topics to learn about other procedures and tasks that you can perform on a regular basis:

- [Working with Gift Cards in SCIS](#)
- [Processing Returns in SCIS](#)
- [Working with Credit Memos in SCIS](#)
- [SCIS Cash Drawer](#)

SuiteCommerce InStore User Interface

- [Main Application Page](#)
- [Login and User Menu](#)
- [QuickAdd Bar](#)
- [The Cart](#)
- [Product Detail Page](#)
- [Swipe to Refresh](#)
- [Popup Windows for Log Out or Application Closure](#)

Main Application Page

SCIS provides a touchscreen user interface. The following screenshot shows the interface while performing a transaction.

1. **Application Logo** – Looks different depending on how your SCIS is set up.
2. **Search Bar** – Lets you search for customer profiles, items, and transactions. Type the first few letters of a customer's name, a product name, or the first numbers of a transaction ID.
3. **Saved Transaction menu** – Tap to see a list of suspended transactions. For more information, see [Saving \(Suspending\) an Order](#).
4. **User menu** – Tap to view additional commands, such as Enable On Screen Keyboard and Drawer Operations. For more information, see [Login and User Menu](#).
5. **Cart** – Displays a list of items you've added to a transaction. For more information, see [The Cart](#).
6. **Transaction Summary** – Displays totals for the transaction, including subtotal, tax due, and amount due.
7. **QuickAdd tab** – Tap to display the QuickAdd bar. For more information, see [QuickAdd Bar](#).

Login and User Menu

The first page you encounter in SCIS, is the Login page. Enter your email address and a password assigned to you by your manager or system administrator.

The login page has a dark blue header with the Oracle NetSuite SuiteCommerce InStore logo. The main content area is white. On the left, there is a blue box with the text 'Login with your account email and password'. On the right, there is a login form with two input fields: one for the email address (sylviajones@email.com) and one for the password (represented by dots). Below the password field is a blue 'LOGIN' button.

After you log in, tap the **User menu** to select your next task.

From the **User menu**, you can do the following:

- View a report of your sales performance. For more information, see [Viewing a Sales Report in SCIS](#).
- Set the default sales representative for this session or for all sessions. For more information, see [Selecting a Sales Representative](#).
- Enable the on-screen keyboard so you can type on your tablet.
- Perform cash drawer operations, such as Opening Drawer and Closing Drawer. For more information, see [SCIS Cash Drawer](#).
- Select a printer for printing receipts. For more information, see [Selecting a Printer](#).
- View the current version of SuiteCommerce InStore you're using.
- Sign out.

QuickAdd Bar

You can use the QuickAdd bar to find items and add them to an order. Your system administrator defines the tabs that organize item QuickAdd Keys into groups on the QuickAdd bar. By default, QuickAdd Keys are organized in the following groups on the QuickAdd bar:

- New Items
- Promotions
- Hard to Scan
- Special Offers
- Correlated Items

These groups appear as tabs in SCIS, as shown in the following screenshot.

The Cart

The following screenshot shows the cart with two items added to the transaction. You can tap an item name to view its Product Detail Page.

Karen Panetta 	Qty	Price	Total
 CHAMPU ITEM #XXX	1	\$44.99	\$34.99  SweetOFF \$10 (-10.00)
 Lotion ITEM #793100111417	5	\$73.00	\$365.00

- Customer name** – Displays the customer associated with the current transaction. If you don't select a customer, the transaction is assigned to a default customer. SCIS automatically creates a default customer record for each sales associate.
- Item description** – Displays information about an item. Tap the item name to go to the Product Detail page.
- Item quantity** – Displays the quantity of an item added to the cart. Tap the item quantity to increase or decrease the number.
- Item price** – Displays the price of the item.
- Item total** – Displays the total due for a type of item. Tap the amount to apply a discount.
- Item action menu** – Tap to view a popup menu that displays additional actions you can perform on an item. For more information, see [SCIS Store Pickup and Orders for Delivery](#). See also, [Processing Returns in SCIS](#).

Product Detail Page

On the Product Detail page, also called the PDP, you can:

- View the detailed description of an item
- Add an item to the cart
- Place an order for delivery
- View or enter ratings and reviews

This screenshot shows the parts that make up the PDP.

1 Flanery Shirt
2 \$56.99

Color: **blue** green red

Size: Small Medium Large X-Large

4 Out Of Stock **5** **6** Add **7** Order

8 Description **9** Nearby stores **10** All inventory

There are so many great ways to spend a fall weekend. Taking to trails that are too hot to hike in the summer, cook-outs with cold beer and spicy chili, one last road trip.

Features

- Heathered Flannel is 100% organic cotton
- Two-piece collar
- Full-front button placket
- Two patch chest pockets

The Basics

With soft flannel, true fall colors, organic cotton and classic good looks, the Flanery shirt is an ideal companion.

Gender

- Mens

Size

- Small, Medium, Large, X-Large

1. **Product Name** – Shows up at the top of the Product Detail page.
2. **Price** – Price as configured on the item record in NetSuite.
3. **Product matrix options** – Matrix options are based on item record configuration in NetSuite.
4. **Inventory status** – Shows the quantity on hand at the location of the sales associate who is logged in.
5. **Quantity to add to cart** – Tap the plus and minus buttons to set the quantity add to the cart.
6. **Add to cart button** – Tap Add to add items to the shopping cart for cash and carry transactions.
7. **Order button** – Tap Order to place an order for delivery to the customer's address.
8. **Description** – A detailed description of the item.
9. **Nearby stores** – Shows a list of the local stores.
10. **All inventory** – Shows a list of the inventory count across different locations.

Note: You can add an item even if the inventory shows zero at your location. If an item is not on hand, you can advise the customer if shipping is available from another location.

Swipe to Refresh

Sometimes a sales associate might need to refresh the SCIS application. **Refresh** means reloading or updating data you see on the screen.

Use the refresh capability in SCIS if you run into a connectivity issue, an application error, or a role or permission problem. Refreshing the application lets you continue working or start troubleshooting.

The following table describes the gestures you can use to refresh SCIS on various devices.

Operating System/Device	Refresh Gesture
iOS	Swipe from the left edge of the screen to expose the Refresh menu.
Windows	Make a cross (x) gesture on the tablet screen with two fingers.
Laptop or desktop computer	Make a cross (x) with the cursor.

After you make a refresh gesture, options for three levels of application refresh are displayed:

- **Refresh current page** – Reloads the current page.
- **Reload initial store page** – Reloads the store login page.
- **Restart application** – Initializes the application from topmost entry point, which is the login screen.

Reload actions Choose type of reload action.
Refresh current page
Reload initial store page
Restart application
Cancel

Popup Windows for Log Out or Application Closure

Popup windows can show up when you perform any of the following actions in the SCIS application:

1. Closing SCIS by double taping the Home button and then swiping up on the app's preview:
 - a. In the middle of an order, without payments applied.
 - b. In the middle of an order, with partial payments applied.
2. Logging out of SCIS when a sale is in progress:
 - a. In the middle of an order, without payments applied.
 - b. In the middle of an order, with partial payments applied.

The following table describes actions that trigger when a popup window displays and the supported workflows for how to proceed.

Action	Workflow Options	Popup Window	Avalara Workflow
Close the SCIS App while you have an order in progress and no payments applied. (1.a)	The application closes without any notification.	No popup window displays.	If Avalara is activated, and the Submit on Update setting on the SCIS settings record is checked, a popup window displays when the sales associate logs in to SCIS. The sales associate can resume the last order or suspend it. 
Close the SCIS App while you have an order in progress and partial payments applied. (1.b)	The application closes without any notification. When the sales associate logs in again, a popup window is displayed. The sales	Without Avalara, this popup window displays.	If Avalara is activated, the behavior is the same.

Action	Workflow Options	Popup Window	Avalara Workflow
	associate can resume the last order or discard it.		
Log out of SCIS while you have an order in progress and no payments applied. (2.a)	When the sales associate taps Sign Out in the User menu , a popup window is displayed. The sales associate can choose to discard the order and log out or cancel signing out.	Without Avalara, this popup window displays. 	If Avalara is activated and the Submit on Update setting on the SCIS settings record is checked, SCIS shows this popup window.  After the sales associate logs in again, no modal is shown. The order was voided.
Log out of SCIS while you have an order in progress and partial payments applied. (2.b)	When the sales associate taps Sign Out in the User menu , a popup window is displayed. The sales associate can suspend the order and log out or cancel the log-out action and go back to the cart.	Without Avalara, this popup window displays. 	

SuiteCommerce InStore Login

To start working with SuiteCommerce InStore (SCIS), you must first log in. The login steps change if you work at more than one location or if your stores use advanced cash management. This section includes information about:

- [Logging In](#)
- [Logging in with iOS Touch ID for SCIS](#)
- [Selecting a Printer](#)

Logging In

To access SCIS, launch SCIS for iOS or SCIS for Windows. Then enter your login credentials.

To log in to SuiteCommerce InStore:

1. Launch the SCIS POS application.
2. In the **Email** field, enter your email address.
3. In the **Password** field, enter the password provided by your manager or system administrator.

Note: After five failed login attempts you will be locked out and you must wait 30 minutes to log in again.

4. Tap **Login**. If you are only assigned one role, then you are automatically logged in with that role.
5. If you are assigned multiple roles, the list of available roles is displayed. Tap the role you want to use.
6. Select a Sales Rep. This step is optional depending on your system configuration. For more information, see [Selecting a Sales Representative](#).

Warning: Recording a video that includes a login. It has been found that if you're using iOS versions prior to 14.3, the built-in iOS Screen Recorder can show the keystrokes and characters you type when logging in. To keep your password safe exposed when recording, ensure that you upgrade your devices to iOS 14.3 or later.

Logging in with iOS Touch ID for SCIS

You can log in to SCIS using Touch ID, but you'll need to set up Touch ID on your point-of-sale (POS) mobile device. The first time you log in to SCIS, enter your email address and password, then check the **Touch ID Login** box. Your login credentials are saved on the device, so you can use Touch ID to log in next time.

To log in with iOS Touch ID for SCIS:

1. Start the **SCIS for iOS** mobile application.
2. Tap your fingerprint on the **Touch ID for SCIS** prompt.
3. If you have multiple roles, you can choose the role to log in. If you only have one role, you are automatically logged in to SCIS.

After successfully entering your login credentials, select a printer.

Selecting a Printer

To generate receipts for each transaction, you must select a printer. A local printer is typically configured by your system administrator. You can choose the printer you want from options in the **User menu**.

 **Note:** If your store uses Advanced Cash Management, you'll need to select a printer when you open a shift. For information, read the help topic [Opening the Cash Drawer with SCIS](#).

To select a printer:

1. Tap the **User menu**.
2. Tap **Select Printer**.
3. Select a printer from the list.
4. Tap **Select**.

Receipts for all the transactions you submit will be output to that printer.

For more information about choosing a printer when opening a shift, read the help topic [Opening the Cash Drawer with SCIS](#).

 **Note:** You only have permission to complete the operations authorized for your role. The system administrator must specifically assign permissions to roles. For example, if your role does not have permission to add a discount or void a line in a transaction, you must request a manager override to complete those operations. For more information, see [Manager Override](#).

SCIS Cash Drawer

SCIS Basic Cash Drawer Management

This section includes information for sales associates using a cash drawer with SuiteCommerce InStore (SCIS). After you log in to SCIS, the next step is to enter the **Initial Loan** or **Open Shift** transaction at the start of your shift. At the end of the shift, you must enter the **End of Day** or **Close Shift** transaction.

Important: The SuiteCommerce InStore mobile app is required when using SCIS on an iPad or a tablet or computer running the Windows operating system. You can't use SCIS on a desktop or laptop with a web browser such as Safari, Chrome, or Firefox is not supported.

The cash drawer opens automatically when you complete an order paid in cash. Your system administrator might also configure the cash drawer to open automatically when you complete an order using a payment method other than cash.

If you need to open the cash drawer for any reason other than entering sales transaction, use the **Drawer Operations** option in the **User menu**.

See the following topics to learn more about working with the cash drawer:

- [SCIS Cash Drawer Management Operations](#)
- [Opening the SCIS Cash Drawer with No Sale](#)
- [SCIS Advanced Cash Drawer Management Operations](#)

SCIS Cash Drawer Management Operations

This section includes information for sales associates working in SuiteCommerce InStore (SCIS) **without** Advanced Cash Drawer Management. After logging in to SCIS, the next task for sales associates is to enter the Initial Loan transaction at the beginning of a shift. At the end of the shift, sales associates must enter the End of Day transaction.

Opening the Cash Drawer with SCIS

At the start of your shift, you receive a cash drawer. Before you enter any sales transaction, enter an **Initial Loan** transaction to record the amount in the cash drawer. During your shift, the original amount in the drawer is increased and reduced based on transactions you perform.

To enter an initial loan:

1. Log in to SuiteCommerce InStore.
2. In the **User menu**, select **Drawer Operations**.
3. Select **Initial Loan**.
4. Enter the total amount for each cash denomination in the cash drawer.

The 'Initial Loan' dialog box shows a total of \$200.00. It contains three rows of input fields for cash denominations: \$1.00, \$5.00, and \$10.00. Each row has a numeric input field, a dropdown menu for the denomination, and a trash icon. An 'ADD ROW' button is located below the input fields. At the bottom, there are 'CONFIRM' and 'CANCEL' buttons.

Denomination	Count	Total
\$1.00	50	\$50.00
\$5.00	10	\$50.00
\$10.00	10	\$100.00
Total		\$200.00

5. Touch **Confirm** when you are finished.

After logging in and submitting the initial loan, you can perform sales transactions. Each transaction you enter with SCIS includes your name on the receipt and on the transaction saved in the system. Administrators and Store Managers can track the initial loan and sales transactions entered by each sales associate in the system.

Closing the Cash Drawer with SCIS

At the end of each shift, the sales associate must enter the amount of cash that is in the cash drawer.

To enter an End of Day cash drawer transaction:

1. Open the **User menu**.
2. Select **Drawer Operations**.
3. Expand the **User menu**.
4. Select **End of Day**.
5. Enter the amount of cash in the drawer. There is a separate row for each denomination.

The 'End Of Day' dialog box shows a total of \$820.00. It contains four rows of input fields for cash denominations: \$1.00, \$5.00, \$10.00, and \$20.00. Each row has a numeric input field, a dropdown menu for the denomination, and a trash icon. An 'ADD ROW' button is located below the input fields. At the bottom, there are 'CONFIRM' and 'CANCEL' buttons.

Denomination	Count	Total
\$1.00	100	\$100.00
\$5.00	20	\$100.00
\$10.00	18	\$180.00
\$20.00	22	\$440.00
Total		\$820.00

6. Tap **Confirm** when you are finished.

After you complete the End of Day transaction, you can log out of SCIS.

Your system administrator can view your End of Day transaction in the system. If there's a difference between the amount in the cash drawer and the expected amount of cash based on the sum of all transactions entered by sales associates, the discrepancy is displayed in the system.

Opening the SCIS Cash Drawer with No Sale

Typically, the cash drawer opens automatically based on the payment method you use for an order. However, you can use the No Sale option in the SCIS **User menu** to open the cash drawer without making a sale.

After you select this option, you'll be asked to choose a reason for opening the drawer. Your NetSuite administrator sets up Open Drawer Reasons you can choose from. Here are a few reasons you might open the drawer with no sale:

- Someone asks you to make change for them.
- You make a mistake and accidentally close the cash drawer before giving the customer all their change.
- The drawer didn't open as expected after you submitted a transaction.

SCIS Advanced Cash Drawer Management Operations

- [Cash Drawer Adjustment](#)
- [Cash Drawer Activity](#)

Opening a Shift and Closing the Cash Drawer in SCIS

This section includes information for sales associates working in SuiteCommerce InStore (SCIS) with Advanced Cash Drawer Management.

To enter an opening shift transaction:

1. Log in to SuiteCommerce InStore.
2. Enter the amount in the cash drawer. You can use the calculator or enter the number of bills in each denomination. Alternately, you can enter the amount of cash in the **Starting Cash** field.

Starting Cash

\$ **250.00**

CALCULATE DRAWER CASH

Denominations

\$100 \$5
 \$50 \$1
 \$20
 \$10

CONTINUE **CANCEL** **BACK**

Note: The calculator overwrites any value entered manually. You must choose either to use the calculator or enter values manually. For example, if you type 100 in the Initial Loan field, and then use the calculator to add two 20s, the value is 40, not 140.

3. Select a printer and cash drawer combination.
4. Tap **Continue** when you are finished.

After you've opened your shift, you can start making sales transactions. Each transaction you enter with SCIS shows your name on the receipt and in the system. Administrators and Store Managers can track all of the shifts and sales transactions entered by sales associates.

If you need to add or remove cash from the drawer after you have opened a shift, create a cash drawer adjustment. For more information, read [Cash Drawer Adjustment](#).

At the end of each shift, the sales associate must close the drawer by entering the amount of cash in the cash drawer.

To enter a closing drawer transaction:

1. Open the **User menu**.
2. Select **Drawer Operations**.
3. Select **Close Shift**.
4. Count the cash in the drawer.
5. Enter the amount of cash in the drawer.

Close Shift ✕

Expected Amount **\$760.00**

End Amount \$

Please count cash in drawer and enter amount.

CALCULATE DRAWER CASH

CONTINUE **CANCEL**

Note: Depending on how the application is configured, you may not see the amount expected in the cash drawer. Sales associates must enter a note of explanation when closing a shift.

6. After you submit the closing shift transaction, the **Close Shift** receipt is printed and then you are automatically logged out of SCIS.

After you complete the Close Drawer transaction, you're automatically logged out of SCIS. You can view the dates of your past shifts and Close Drawer receipts in SCIS. For more information, read [Cash Drawer Activity](#).

Cash Drawer Adjustment

After you enter the initial loan (or opening drawer transaction), a sales associate might need to add or remove cash from the drawer. For example, the sales associate might get extra cash to pay a vendor from the cash drawer. SuiteCommerce InStore (SCIS) lets you track this influx and outflow as a cash drawer adjustment.

To perform a cash drawer adjustment:

1. From the **User menu**, select **Drawer Operations**.
2. Select **Adjustment**. The Drawer Adjustment dialog screen appears.
 - a. Select **+ Cash In** if you are adding cash to the drawer. Select **- Cash Out**, if you are removing cash from the drawer.
 - b. Enter the amount of cash.
 - c. Enter a reason for making this adjustment.
3. Tap **Apply**.

Cash Drawer Activity

Sales associates can use the Drawer Activity page in SuiteCommerce InStore (SCIS) to view the dates of past shifts and closing receipts.

To view drawer activity:

1. From the **User menu**, select **Drawer Operations**.
2. Select **Drawer Activity**.
3. The **Drawer Activity** list is displayed. Here, you can tap **Receipt** to view the details on the receipt submitted for each closing a shift.

SCIS Store Manager Permission to Close Shifts

Employees with the SCIS Store Manager role can close shifts for sales associates at the store. The SCIS Store Manager can see all the shifts created at their location and close any that are still open. This capability is useful when a sales associate is called away and forgets to close a shift, or can't close it themselves.

Drawer activity							
Shift ID	Employee	Drawer	Started	Ended	Expected Cash	End Cash	Action
10	John B Wolfe	Register-1	06/13/2018 04:35 PM	06/13/2018 04:35 PM	\$100.00		CLOSE SHIFT
9	June Wolfe	Register-2	06/13/2018 04:09 PM	06/13/2018 04:09 PM	\$150.99		CLOSE SHIFT
1	Sylvia Jones	Register-1	01/01/2018 07:00 AM	01/01/2018 07:00 AM			RECEIPT
7	John B Wolfe	Register-1	06/13/2018 01:33 PM	06/13/2018 01:33 PM	\$388.46	\$388.46	RECEIPT

Warning: An SCIS Store Manager can interfere with an employee's active shift. Before you close another employee's shift, ensure that the sales associate has logged out.

To close a shift for a sales associate:

1. From the **User menu**, select **Drawer Operations**.
2. Select **Drawer Activity**.
3. You can view the list of all shifts in your location.
 - Shifts that are still open, show **Close Shift** in the **Action** column.
 - Shifts that are already closed, show **Receipt** in the **Action** column.
4. Tap **Close Shift**. You must complete the closing drawer tasks: count the amount of cash in the drawer, enter the amount in the drawer, and submit the closing drawer transaction.

Entering Transactions Using SuiteCommerce InStore

These topics cover making point-of-sale (POS) transactions using SuiteCommerce InStore (SCIS).

Most tasks are for sales associates and cashiers having the SCIS Clerk Role, but others can be used by store managers with the SCIS Store Manager Role. To learn more about Roles, see the help topic [SCIS Roles and Permissions](#).

Read through the material to learn about common tasks or click a link to review a specific task.

Entering a Sales Transaction in SCIS

Sales transactions are the core of SuiteCommerce InStore (SCIS). The general workflow for entering transactions in SCIS is:

1. Choose or add a customer (optional).

2. Add items to the order.
3. Add a discount (if applicable).
4. Accept payment.

To understand more about performing sales transactions, read the following:

- [Adding Items to a Sales Transaction in SCIS](#)
- [Selecting a Sales Representative](#)
- [Adding a Serialized or Lot Numbered Item to an SCIS Order](#)
- [SCIS Store Pickup and Orders for Delivery](#)
- [Delete, Save, or Resume a Transaction in SCIS](#)
- [Adding Notes to Items and Transactions in SCIS](#)
- [Accepting Payments for Purchases in SCIS](#)

To learn how to add a customer to a transaction, read [Adding Customers To Sales Transactions in SCIS](#).

Adding Items to a Sales Transaction in SCIS

After selecting the customer on a sales transaction, add items to the cart. SuiteCommerce InStore (SCIS) enables you to add items to a transaction in the following ways:

- [Adding Items Using the QuickAdd Bar](#)
- [Adding Items Using a Barcode Scanner](#)
- [Adding Items from the Search Results Page](#)
- [Adding Items to an Order from a Product List](#)

Note: Save for later is not supported in SCIS Fallback.

Note: You can add an item even if the inventory shows zero at your location. If an item is not on hand, you can advise the customer if shipping is available from another location.

Adding Items Using the QuickAdd Bar

A QuickAdd key for each item is displayed on the QuickAdd bar. You can use the QuickAdd bar to find items to add to a sales transaction.

To select an item using QuickAdd keys:

1. Expand the QuickAdd bar using the tab located below the cart area.
2. Select the QuickAdd group that includes the item you want to add. The system administrator defines QuickAdd groups to organize items on the QuickAdd bar.

3. Tap **Add** . If you need to add more than one item, add the item to the cart, and then modify the quantity in the cart.
4. When you have finished adding items, you can collapse the QuickAdd bar.

Adding Items Using a Barcode Scanner

If you have a barcode scanner connected to your tablet, add an item to the cart by scanning the bar code on the item label. See your barcode scanner documentation for more information.

Adding Items from the Search Results Page

You can add items to a transaction directly from the Search Results page. Search for an item based on the item name, SKU, or keywords used in the description.

To add an item from a list of search results:

1. Tap in the **Search** bar at the top of the SCIS application.
2. Enter the name of the item you want to search.
3. Tap the **Items** tab. You can tap the item image or the item name to view the Product Detail page which displays more information.
4. (Optional) Filter the search results. Use the icons at the top of the Search Results page:
 - **List** – Tap to display the search results as a list.
 - **Grid** – Tap to display the search results as a table.
 - **Sort By** – Select to sort the search results based on price.

From the Search Results page, you can tap Add to add the item to the current transaction. Also, you can tap the item name to access the Product Detail page.

Adding Items to an Order from a Product List

Items that are saved for later on a product list are accessible from SuiteCommerce InStore (SCIS) and from your organization's website.

To order an item from a product list:

1. Find the customer in SCIS.
2. Tap the customer name to view the Customer Profile. The product list (or wish list) is displayed in the Customer Profile.

Wish Lists (1)		
	LIST	QTY
▼	Carlos' Items	2
		ADD

3. Tap **Add** to add the items to an order.

Using SCIS, you can also save a item to a customer's product list. Customers can log in to their customer account online and purchase the item.

To save an item for later:

1. Add the customer to the order as described in [Adding Customers To Sales Transactions in SCIS](#).
2. Tap the **Item Action menu**, then tap **Save**.

3. Enter a product list name, then tap **Create and Add Item**. If a customer has previously created a list, you can select the list.
4. Tap the **X** in the upper right corner to close the popup.

Adding an Open Item

The open item is a generic, variable price item created by the administrator and used by sales associates. Use the open item to sell items that might not have a price. Set the price of the open item after it is added into the cart. For example, if the customer wants to buy a floor model, you can add it to the order as an open item and set the price in the cart.

To add an open item to an order:

1. Find the open item using **Search** or the **QuickAdd Bar**.
2. Tap **Add**. The Variable Price Item screen appears.

 A screenshot of the 'Variable Price Item' screen. On the left, there is a placeholder image of a cardboard box labeled 'Open Item'. Below it is a label 'Amount' and a text input field with a dollar sign and the number '5'. On the right, under the heading 'Choose available amount below', there are seven buttons with the following values: '\$1.00', '\$2.00', '\$5.00', '\$10.00', '\$20.00', '\$50.00', and '\$100.00'. At the bottom, there are two buttons: 'ADD' (in blue) and 'CANCEL' (in light blue).

3. Enter a price, and then tap **Add**.

The open item is then added to the order with the price you entered. Complete the order by accepting payment and providing the customer with a receipt.

Selecting a Sales Representative

When performing a sales transaction in SuiteCommerce InStore (SCIS), you have the option to assign a sales representative to the transaction.

Employees defined as Sales Reps can participate in commission plans. Transactions attributed to sales representatives can be used to determine commissions or calculate sales metrics. When you assign a sales representative to a transaction, this information is stored as part of the transaction record.

Note: Depending on how your system is configured, selecting a sales representative may be required before you can perform a transaction.

To select a sales representative:

1. Log in to SuiteCommerce InStore.
2. Tap **Select Sales Rep** in the transaction summary.

3. Tap the name of the sales representative you want to select.

The name of the sales representative appears at the bottom of the transaction summary.

To change the current sales representative:

1. Tap the name of the current sales representative in the transaction summary.
2. Tap the name of the new sales representative you want to select.
3. Select **None** if you do not want to associate a sales representative with the transaction.

Adding a Serialized or Lot Numbered Item to an SCIS Order

To add a serial numbered or lot numbered item to the shopping cart, find the item and then set the serial or lot number of that item. The item is added to the cart after the serial or lot number is confirmed.

To add a serialized item or lot numbered item to the cart:

1. Using one of the following methods, find the item: :
 - By tapping **Add** from the QuickAdd bar
 - Using the Search bar
 - From the Product Detail page (PDP)

Note: Serialized items can be matrix items with matrix options. Matrix Product Detail page can be set on the item's PDP.

- Barcode scan

2. Assign the serial number to the item. After the item is added to the cart, a popup dialog appears. You can use a barcode scanner to read the serial number from a label on the item, or tap **Manual Entry** to choose a serial number from a list.

3. Tap a payment option to complete the order.

Note the following limitations for selling serialized items and lot numbered items with SCIS:

- You cannot set the quantity of serialized or lot items in SCIS. A single line item is always added to the cart. You can add multiple items to the cart but each line item must have a unique serial or lot number.
- Serial and lot numbered items are not eligible for delivery orders with SCIS. This is because the serial or lot number must be defined on the order prior to delivery.

SCIS Store Pickup and Orders for Delivery

You can enter an order in SuiteCommerce InStore (SCIS) and then have the customer pick up the order at a different store location or have the items shipped.

Customer Information is Required

Store pick up and delivery orders require selecting or adding a customer. The minimum information required for these order types is the customer's name, street address, and email address. If you remove, modify, or replace the customer while the transaction is open:

- Items configured to be shipped to the customer's address are removed from the order.
- Items configured for pickup at another store are kept in the order but the pickup information is removed. The items are reconfigured as default purchase items, without delivery or pickup. This default purchase method is sometimes called "cash and carry."
- Items configured as default purchases, without delivery or pickup, are unchanged.

Ensure the customer's information is accurate before adding items to a store pickup or delivery order.

✓ **Tip:** For information about adding notes to items in an order, read [Adding Notes to Items and Transactions in SCIS](#).

To order an item for store pick up or delivery:

1. Select a customer or add a new customer.
2. Add one item or more to the transaction.
3. Tap the Item Action menu under the item for Store Pickup, then tap **Order**.

4. Tap **Pickup**.
 - a. Select a store location where the customer can pick up the order.
 - b. Tap **Order**.

To order an item for delivery:

1. Select a customer, or add a new customer.
2. Add one item or more to the transaction.
3. Tap the Item Action menu under the item for delivery, then tap **Delivery**.
4. Select an existing address for the customer or tap **Add a new address**. By default, SCIS uses the address defined in the customer profile.

If you choose to add a new address, complete the following steps:

- a. Tap **Add a New Address**.
- b. Enter values for each of the required fields. Required fields are those fields marked with an asterisk (*).
- c. Select the following options that apply (you can choose more than one):
 - **This is a Residential Address** – marks the address as a residential address for delivery purposes.
 - **Default Billing Address** – designates this address as the default billing address for this customer.
 - **Default Shipping Address** – designates this address as the default shipping address for this customer.
- d. Tap **Add**.
5. Select a shipping method.
6. Tap **Order**

After taping **Order**, the following changes appear in the transaction:

- The delivery icon appears below the item in the Cart. Tap this icon to edit the shipping address if necessary.
- The shipping charges are added to the transaction summary. Tap the amount in the transaction summary to void shipping and handling charges.

Delete, Save, or Resume a Transaction in SCIS

In SuiteCommerce InStore (SCIS), you can delete a transaction or save it. Saved transactions can be resumed later.

Deleting a Transaction

Deleting a transaction is useful if you've made a mistake and want to start building the transaction from the beginning. You can also delete an order that has been saved. To delete a transaction, tap the trash can in the Transaction Summary. After a transaction is deleted, there is no record of that transaction in NetSuite.

If you created a new customer and added that customer to the transaction, deleting the transaction does not affect the customer record. The customer record that you created is still in place.

Saving (Suspending) an Order

Also called “suspending” an order, saving is useful if your customer is not ready to complete a transaction. Saved orders can be resumed later. To save an order, tap the Pause icon found on the lower right.

You can view all saved orders by tapping the **Transaction Summary** icon.

Important: You cannot save an order in progress if:

- It includes a partial payment
- A single-use promotion was applied
- A payment on the order is attempted – but fails – using a payment device, and **Invoice in Advance of Fulfillment** is not enabled.

For more information about this payment device option and how it affects orders, see the help topic [Invoice in Advance of Fulfillment with Optimize EMV](#) in the SCIS Administrator Guide.

Resuming an Order

To resume a saved order, tap the **Saved** icon at the top of the **Transaction Summary**.

A popup displays showing a list of saved orders. Tap the arrow next to the order you want to resume. Tap **Resume** to continue. Tap **Delete** and confirm to remove the order.

Adding Notes to Items and Transactions in SCIS

You can add a note to an line item on an order or to the entire transaction. This is useful for adding information to an order. For example, you may want to add a note that the customer was referred by a friend or that the customer prefers pickup.

To add Notes to a transaction:

1. Touch or tap the note icon under an item in the cart or in the transaction summary area. A screen pops up where you can select a preset note.

2. Select a note type.
3. Add more information if needed.
4. Tap **Save**.

After you have added a note to a transaction, a red circle appears on the note icon. If you see this on a saved order, then you know that a note was entered by the previous sales associate.

Accepting Payments for Purchases in SCIS

After you've added items to the customer's cart, the transaction summary shows buttons for paying with cash, credit card, or other methods. The payment methods available in SCIS are based on configuration performed by the system administrator.

- [Paying with Cash](#)
[Recovering From Cash, Check, or Custom Tendering Issues](#)
- [Paying with a Check](#)
- [Paying via an EMV Payment Device](#)
- [Paying via Manual Credit or Debit Card Entry](#)
- [Paying With a Gift Card](#)
- [Purchase On Account](#)

Paying with Cash

Cash denominations are configured by the system administrator for SuiteCommerce InStore (SCIS). When you tap the Cash button in the Transaction Summary, you can use QuickCash buttons to enter the amount received from the customer.

To accept a cash payment:

1. Add items to a transaction as described in [Adding Items to a Sales Transaction in SCIS](#).
2. Tap **Cash**.
3. Enter the amount received. You have three options:
 - **Quick Cash** – Use the QuickCash buttons to increment the amount received from the customer.
 - **Manual** – Type the amount of cash received from the customer in the **Amount Tendered** field.
 - **Tender Up** – Tap this button to automatically enter a value equal to the next highest increment. For example, if the total due is \$20.90, the Tender Up button inserts \$30.00 in the **Amount Tendered** field.
4. Tap **Apply Payment**.
5. Provide the receipt to the customer.

If the amount received is equal to or greater than the total amount due, then the transaction is complete and the customer receipt displays on the screen. If the amount received is less than the amount due, then the amount received is calculated and SuiteCommerce InStore returns to the transaction screen. You can choose an additional form of payment.

Recovering From Cash, Check, or Custom Tendering Issues

Cash, check, or custom payments might have issues during tendering after you tap **Apply Payment**. Sometimes the SCIS mobile device loses connection while processing the payment. A different tendering issue is when the SCIS application is closed while a payment is tendering.

SCIS displays prompts with actions you can take to recover and complete a payment, such as reconnecting, resuming, going to Fallback, or dismissing the transaction. Your recovery options will show in a pop-up when the issue happens or after you restart the SCIS app.

Note: These payment methods are not supported for tendering recovery: Purchase on Account (also called Terms), Gift Card, and Credit Memo.

The following are typical message prompts and the actions available.

■ Connection is not available

This issue might occur when an internet connection is lost while applying a payment. SCIS tries to restore the connection for 60 seconds, with an option to retry for another 60 seconds.

If Fallback is enabled in your setup, you can abandon the recovery attempts by going to Fallback and re-entering the transaction.

■ **Application was closed while the payment was in progress**

If the SCIS application is closed during a payment, and then restarted, the application offers to resume and complete the transaction. The application might close because the sales associate shut it down by accident, or SCIS might experience an issue that causes it to close.

You can dismiss the transaction instead of resuming it. This option is helpful if you need to begin a new transaction.

Note: If a sales associate dismisses the transaction, the associated record in NetSuite is assigned a POS Status of **Dismissed**.

Different popup windows display based on the type of payment issue and whether Fallback is enabled. In each case, the messages list the options that you can take.

Paying with a Check

Authorized payment methods are configured by the system administrator for SuiteCommerce InStore (SCIS). If you are permitted to accept a personal check for payment, the option will be available to you in the Transaction Summary.

To accept a check payment:

1. Add items to a transaction as described in [Adding Items to a Sales Transaction in SCIS](#).
2. Tap **Check**.
3. Enter the amount on the check. You have three options:
 - **Quick Cash** – Use the QuickCash buttons.
 - **Manual** – Type the amount of cash received from the customer in the **Amount Tendered** field.
 - **Tender Up** – Tap this button to automatically enter a value equal to the next highest increment.
For example, if the total due is \$20.90, the Tender Up button will insert \$30.00 in the Amount Tendered field.
4. Tap **Next**.
5. Enter the **Check Number**.
6. Tap **Apply Payment**.
7. Provide the receipt to the customer.

Paying via an EMV Payment Device

Payment devices connected to a SuiteCommerce InStore (SCIS) point-of-sale (POS) device enable a customer to tender payment electronically using a **credit card** or **debit card**. Most devices include a PIN pad for entering a security code and a screen for responding to prompts. Some models include an electronic signature option with an attached stylus.

Informational

- [EMV Technology](#)
- [Third-Party Payment Partners](#)
- [When the Payment Device is Priming](#)

Tendering Payment

- [Accepting payment via PIN pad or other EMV device](#)
- [If a Signature is Required](#)

Troubleshooting

- [Reasons an EMV Payment Might Not Complete](#)
- [When an EMV Card Payment is Declined](#)
- [Payment Issues from Invoice Processing](#)
- [Paying via Manual Credit or Debit Card Entry](#)

EMV Technology

Modern payment devices include a chip reader. The device uses the encrypted information stored on cards that include a chip to securely transmit card information. This card-processing technology is called EMV. EMV stands for the three companies that originally sponsored this secure protocol: Europay, Mastercard, and Visa.

Important: To meet Payment Card Industry (PCI) standards, SCIS supports EMV-enabled payment devices only.

We do not support payments entered by swiping a magnetic stripe. If an EMV payment device is not available, see [Paying via Manual Credit or Debit Card Entry](#). Note the warning about validation.

Third-Party Payment Partners

Payment devices connect to SCIS POS devices through third-party payment partners. These partner businesses exchange information with financial institutions to determine if a card is valid and if sufficient funds are available for the payment. The results are provided to the SCIS application so that a sales associate can complete the transaction or, if the card payment was declined, request another source of payment.

Most often the payment information is exchanged over the internet, but some setups use telephone lines or other electronic methods.

When the Payment Device is Priming

When you tap **Payment Device** to take an EMV card payment, the device undergoes priming to get ready to exchange information with your payment partner's applications. This step is also called initialization.

When priming is complete, the device prompts the customer to insert their card.

Accepting payment via PIN pad or other EMV device

Follow these steps to take an EMV credit or debit card payment for an SCIS transaction.

To accept payment via PIN pad or other EMV device:

1. Add items to a transaction as described in [Adding Items to a Sales Transaction in SCIS](#).
2. Tap **Payment Device**. The device begins priming.

 **Tip:** If more than one device is available, select the device and tap **Confirm**.

3. Ask your customer to insert their card into the payment device when prompted by the device.

The device should guide them through any additional steps required by the payment partner.

4. If the payment is accepted, the receipt displays.
If the payment was rejected or failed, see [Reasons an EMV Payment Might Not Complete](#).
5. Provide receipt to your customer.

If a Signature is Required

Some payment devices might require a customer to sign for a payment. Many PIN pads include a signature area and attached stylus.

Signatures might be required for payments from an international card, where the funds are drawn from an account based in a different country. Some retailers request that a payment partner require a signature if the payment value is more than a set amount.

If your PIN pads do not include signature capability, options are available for your customer to sign on an SCIS POS tablet.

If a customer signs using an SCIS POS tablet, the signature is imaged on the receipt and saved with the transaction record in NetSuite.

Note: Some receipt templates do not include a place for a signature image. Those templates will not show the customer signature on the receipt.

Reasons an EMV Payment Might Not Complete

This list provides common reasons that an EMV credit/debit card payment might fail to complete. The images are from an SCIS POS device. Messages that display on a payment device are unique to the hardware brand/model and payment application, and are not shown here.

- **Failure to prime EMV payment device** — The device failed to “wake up” or initialize and become ready to transmit the payment information.

Action: Tap **OK** and then **Payment Device** to try again. If priming continues to fail, you should contact your store manager.

EMV Payment processing

Amount due \$65.25	Initializing Pin Pad...		CANCEL
Charge amount \$ 65.25			

EMV Payment processing

Amount due \$65.25	Payment failed		OK
Charge amount \$ 65.25	Please try again or choose different Transaction device		

- **Time out** — The device did not send or receive card information within the time required.

Action: Tap **OK** and then **Payment Device** to try again. If the device continues to time out, you should contact your store manager.

- **Rejected** — The payment partner rejected the EMV card payment.

EMV Payment processing

Amount due \$65.25	Waiting for customer payment		CANCEL
Charge amount \$ 65.25			

Also called having the transaction “denied,” reasons for rejection include:

- ❑ **Expired credit/debit card** — Current date is later than the expiration date shown on card.
- ❑ **Card is not active/valid** — Card or account has been closed, card was reported stolen, or card is disabled for other reasons.
- ❑ **Insufficient funds** — Account linked to card does not have the available credit or fund balance to complete the payment.

Action: Ask customer to use a different card or payment type.

- **Communications failure** — You receive an error similar to “Application unexpectedly closed while payment was in progress.”

Action: Follow the message prompts to try to reconnect, resume, go to Fallback, or dismiss. See [Recovering From Cash, Check, or Custom Tendering Issues](#) for more information.

When an EMV Card Payment is Declined

If a customer’s card payment is declined, they can try to pay using a different card or payment type. However, if the customer decides not to complete the purchase, you must delete the order to void the transaction.

To void a transaction when an EMV card is declined:

1. Go to the **Transaction Summary**.
2. Open the transaction menu and tap **Delete**.

3. Tap **Delete** to confirm.

Note: Administrators — When a sales associate deletes a transaction, the transaction is saved in NetSuite for reference purposes. The transaction **Status** is set to **Closed** and the **Memo** field displays **Void**.

Payment Issues from Invoice Processing

EMV payments include behind-the-scenes processing to create and save invoices in NetSuite. An error that can occur is having a card payment approved and the funds withdrawn, but the transaction fails to complete the internal invoice steps.

Because the failure happens after payment is drawn from the card, the customer must receive a refund. SCIS attempts to perform a refund to the card automatically. If the attempt fails, manual intervention through a system administrator is needed.

Important: The customer's payment must be refunded before you can attempt to take payment again

If this error occurs, you will receive one of two alerts:

- **Customer payment was automatically refunded** — This alert means that no manual action is needed from you for the refund. You should:

1. Tap **Return to Cart**
 2. Resubmit the payment.
 3. If the error continues to happen, notify your store manager. Ask for instructions on how to proceed with your customer.
- **You must manually refund the payment** — The automatic refund failed to complete. An administrator must set up the refund in NetSuite. Then you can attempt to complete the sales transaction.

EMV Payment processing

Invoice did not save, customer payment not refunded.

Checkout was canceled, but customer's payment could not be refunded automatically.

You must manually refund the payment.

RETURN TO CART

You can try again from the cart. If it fails again, have your store manager contact the system administrator.

1. Ask your store manager to contact the system administrator.
The administrator will find the customer's payment in NetSuite and make the refund. The admin will notify your store manager when the refund is complete. (Administrators, see the help topic [Refunding an Open Balance](#).)
2. When you are notified by your manager to proceed, tap **Return to Cart**.
3. Resubmit the payment.
4. If the error continues to happen, notify your store manager. Ask for instructions on how to proceed with your customer.

Note: Failure to save an invoice is not due to an issue with the credit card. Your customer can try to pay again using the same card, a different card, or another payment method, such as cash.

Paying via Manual Credit or Debit Card Entry

If your payment devices are offline, and you are authorized to do so, you can enter card information manually.

Warning: SCIS does not validate card information entered manually to determine if a card is genuine or if funds are available.

The manual method should be used only if an EMV payment device is not available AND your retail business accepts manual card information as payment.

To enter card information manually:

1. Add items to a transaction as described in [Adding Items to a Sales Transaction in SCIS](#).
2. Tap **Credit Card**.

AMOUNT DUE \$10.00

MANUAL ENTRY

CANCEL

3. If requested by your customer, adjust the **Charge amount** to pay from the card.
4. Tap **Manual Entry** and complete these fields:
 - **Card Number** — Enter the digits found on the front or back of the card, without dashes. Most cards use 16 digits.
 - **Expiration** — Select the month and year the card expires.
 - **Card Holder** — Enter the card holder's name exactly as shown on the card.
 - **CVV Code** — Enter the 3 or four digit code located on the back of the card.
This code is the Card Verification Value (CVV) or Card Security Code (CSC).
 - (optional) **ZIP Code** — Enter the card holder's billing address ZIP or postal code.
 - (optional) **Billing Address** — Enter the customer's address in the format specified by your business rules. For example, enter:
401 Island Parkway Redwood Shores, CA
5. Tap **Next** to apply the payment.
6. Provide receipt to your customer.

Paying With a Gift Card

Important: If you are permitted to accept gift cards for payment, the option is displayed under **Other Payment**.
This permission must be first be configured by your SCIS administrator. Otherwise, the **Other Payment** choice will not be available.

Accepting payment with a gift card:

1. Add items to a transaction as described in [Adding Items to a Sales Transaction in SCIS](#).
2. In the transaction summary window, select **Other Payment**, then select **Gift Card**.
3. Enter the gift card information:
 - If the gift card is a physical card, you can swipe the card or scan the card's barcode.
 - If the gift card is a digital gift certificate, tap **Manual Entry**, enter the authorization code, and then tap **Next**.

4. Enter the amount you want to apply, then Tap **Apply**.

Note: A customer can apply part or all of the gift card to the balance of the transaction

5. Provide the receipt to the customer.

The amount applied appears in the transaction summary and the amount due is updated. To apply multiple gift certificates to a transaction, repeat the previous procedure.

Purchase On Account

In SuiteCommerce InStore (SCIS), the **Purchase On Account** option enables customers to purchase items using payment terms that an administrator has already set up in NetSuite. After selecting a customer on the order, you can select the Purchase on Account option from the list of Other Payment options. When an order is placed using Purchase on Account, an invoice is created in NetSuite.

Note: Subsequent payments on the order can only be made in NetSuite.

If the customer already has terms defined on the customer record, those terms are preselected in SCIS. If the sales associate is entering a new customer at the point-of-sale, then the sales associate can choose from the list of customer payment terms defined by the Administrator in NetSuite.

To use Purchase On Account:

1. Add items to a transaction as described in [Adding Items to a Sales Transaction in SCIS](#).

Note: You must select a customer or enter a customer to complete an order using Purchase on Account.

2. Select **Other Payment**, then select **Purchase On Account**.

3. Choose payment terms for the customer or accept the terms that are preselected.

4. Provide the receipt to the customer.

Manager Override

To complete an operation that is restricted in SuiteCommerce InStore (SCIS), a system administrator must configure authorized roles on payment methods and a SCIS Access Code on employee records. An employee is not permitted to perform an operation without the required permissions.

For example, a manager may be required to authorize the transaction when an item is voided from an order. In this case, an alert message requesting a SCIS Access Code displays preventing the sales associate from proceeding with the order. The sales manager must enter a SCIS Access Code in the alert box to enable the sales associate to proceed.

Note: The NetSuite administrator can enter a value for SCIS Access Code on the Custom subtab of the employee record. SCIS Access Codes must be communicated to employees who are required to perform manager overrides.

Fulfilling Orders for Shipping and Pickup with SCIS

Sales associates can use SuiteCommerce InStore (SCIS) to process orders for shipping and orders for pickup in-store. Tap the shopping bag icon in the SCIS header bar to view a list of all the orders that are ready for processing.

ORACLE NETSUITE						1 SAVED	JOHNNY

∨	122853	Helen Morales	Ship	7/13/2017 8:00 am	New	OPEN	
∨	122852	Carlos Bueno	Ship	7/11/2017 4:18 pm	✓ Packed - Johnny B	OPEN	

Page Element	Description
1 Fulfillment type filter	Select one of the following to view a certain type of fulfillment request in the list:

	Page Element	Description
		- Any Type - Ship - Store Pickup
2	Order status filter	Select one of the following to view a certain type of order status: - Any Status - New - In Progress - Picked - Packed  Note: By default, packages that have been shipped are not displayed on the Fulfillment Request list.
3	Column headers	You can tap a column header to sort the list as you wish. The following information is displayed: - Document Number - Customer Name - Fulfillment Type – Shows Ship or Pickup. - Date – Shows the date and time of the order. - Status – Shows the current status of the order. Orders remain open until they are shipped. If the Open button is dim, that means you cannot access the order. Either someone else is working on the order or it is being fulfilled from a location other than your own.

For more information, read the following topics:

- [Fulfilling Orders for Shipping](#)
- [Preparing Orders for Pickup In-Store](#)

 **Note:** The following are limitations to ship from store and pickup in-store capabilities:

- Serialized inventory and lot numbered items cannot be shipped.
- Partial quantities cannot be shipped or picked up in store. If the entire quantity on a line item is not available, then you must reject that line on the picking list. The order appears on the Fulfillment Request list again, assigned to a different location for processing.

Fulfilling Orders for Shipping

When you fulfill orders for shipping, you must go through each step in the process of order fulfillment: picking, packing, and shipping. When you are working on an order, the order is displayed on the list as in progress, along with your name.

Document Number	Name	Fulfillment Type	Date	Status	
122851		Store Pickup	7/10/2017 3:51 pm	New	OPEN
122852		Ship	7/11/2017 4:18 pm	✓ Packed - John B Wolfe	OPEN
122854		Ship	9/14/2017 12:20 pm	Picked - John B Wolfe	OPEN

Only the sales associate who is working on an order can complete the fulfillment process. After you complete each step in the process, you are directed back to the Fulfillment Request page to complete the next step.

Picking is the first step in preparing the order for shipping. You are taking and collecting the items from the stock in the warehouse, or wherever the items are stored at your location.

To pick an order for shipping:

1. Tap the shopping bag icon to be directed to the **Fulfillment Request** list.
2. Find an order on the list with Fulfillment type set to **Ship** and status **New**.
3. Tap **Open**.
4. On the Ship Request page, you can:
 - Select **Pick**.

Note: You cannot ship partial quantities. If not all of the items are available for picking, you must reject the whole line on the picking list.

- Select **Reject**. You must select a reason and enter a note. When you reject an item for fulfillment, the fulfillment remains open.

5. If you chose **Pick**, then you are directed back to the Fulfillment Request page.

Packing an order is placing the order into a box in preparation for shipping.

To pack an order for shipping:

1. Find the order that you have picked. It is displayed in the Fulfillment Request list with the status of **Picked**, along with your name. The order is still Open.
2. Tap **Open**. You are directed to the Ship Request page.
3. Tap **Print** to print the receipt and include it in the box for shipping to the customer.

4. Put items from the order in the box along with the receipt.
5. Tap **Shipping Method**. The shipping method you select here determines the shipping label available for printing in the last step of the fulfillment process.
6. Tap **Pack**. You are directed back to the Fulfillment Request page.

The next step is to label the box in preparation for shipping.

To label and ship the order:

1. Find the order that you have packed. It is displayed on the Fulfillment Request list with the status of **Packed**, along with your name. The order is still **Open**.
2. Tap **Open**. You are directed to the Ship Request page.
3. Tap **Label Package**. The Shipping Details window pops up. Depending on the shipping method selected, a shipping label with a barcode is displayed.
4. Print the label and attach it to the box.

You should send the PDF shown in the printing window. Enter the email address, then tap **Send Email**. The administrator should have configured the system to print shipping labels in PDF format.

5. After the order has been handed over to the shipping company, you can tap **Mark Shipped**.

Preparing Orders for Pickup In-Store

The workflow described below assumes that you are working directly with the customer.

To prepare an order for pickup in-store:

1. Tap the icon to be directed to the **Fulfillment Request** list.
2. Find an order that is labeled **Pickup**, and has the status of **New**.
3. Tap **Open**.
4. On the Store Pickup Request page, choose **Pick**. You must pick the quantity of items specified on the order.

Note: You cannot pick partial quantities. If not all the items are available for picking, you must reject the whole line on the picking list.

5. Tap **Print** to print the receipt and give it to the customer.
6. Tap **Pick**, and then hand the order over to the customer. You are directed back to the Fulfillment Request page.

Adding an Item to the Order for Pickup

If the customer wants to add another item to the order, you can tap **Add Item** on the **Store Pickup Request** page. In this case, you are redirected to the main SCIS screen. Here, you can see the items that the customer paid for online. These items are omitted from the subtotal amount. Only the new items added to this order are included in the order summary and the receipt.

Entering Quotes in SCIS

Some businesses provide an estimate or quote for specific products a customer wants to buy. As a sales associate, you can create a quote based on items and discounts in the cart and then print or email it to the customer. After a customer reviews a quote, you can make changes as needed and then convert the quote to a sales order or cash sale.

As a sales associate, your workflow likely includes:

- [Creating a Quote](#)
- [Finding a Quote](#)
- [Converting a Quote into an Order](#)
- [Removing a Promotion from a Quote](#)

Creating a Quote

After you create a quote, you can reopen it to make changes. You can print the quote or send the quote to the customer in an email message.

To create a quote:

1. Select a customer.
2. Add items to the order.
3. Tap **Quote** in the menu below the transaction summary.

4. Enter information in the **Quotes** window. The fields displayed in the popup window are defined by your account administrator. Note that the fields displayed in your implementation of SCIS may be different from the screenshot below.

 A 'Quotes' popup window with a blue header bar containing the title 'Quotes' and a close button (X). The main area has two input fields: 'Memo' with the text 'Estimate created by Sofia' and 'Expiration Date' with the date '09 / 12 / 2018'. At the bottom is a blue 'ADD' button.

5. Tap **Add**.
6. Tap **Save**.

After you save the quote, you can perform the following actions:

- Tap **Email/Print** to email the quote to the customer or print it.
- Tap **View Details** to open the Quote window, and view information saved on the quote, such as expiration date and notes.
- Tap **Convert To Order** to turn the quote into a sales transaction.
- Tap **Done** to save and exit the quote.

Important: You should not make changes to an order that was converted from a quote.

Finding a Quote

As a sales associate, you can find a quote that you entered yourself, and quotes entered by colleagues. There are three ways to search in SCIS for an existing quote:

- Scan the transaction number on a receipt.
- Type the transaction number in the search box.
- Type the customer's name in the search box, and then open the Customer Profile.

In the **Customer Profile**, quotes are displayed on the **Quotes** subtab. Tap the quote in the timeline to open it.

If the expiration date of the quote is in the past, you can still open the quote, modify it, change the date, and save it again if needed. Alternately, you can convert the quote to an order.

Expired quotes are displayed in search results. Expand the line in search results to see the expiration message highlighted in yellow.

OPEN QUOTE

Converting a Quote into an Order

To turn a quote into a sales transaction, open the quote, and tap **Convert to Order**. You can also add the customer's address and make arrangements to ship the order. After you convert the quote to an order, select a payment method and submit the order.

✓ **Tip:** Opening a quote removes any items currently in the cart.

To convert a quote into an order:

1. Find the quote. For more information, read [Finding a Quote](#).
2. Open the quote.
3. While the quote is open, you can add or remove items and adjust the total by adding or removing discounts/promotions.

⚠ **Important:** Ensure that all parts of the quote are correct. You should not make changes to an order that was converted from a quote.

4. After the customer agrees to place the order, tap **Convert to Order**.

CONVERT TO ORDER

DONE

5. Select a payment method.
6. Submit the order.

Removing a Promotion from a Quote

You can remove a promotion from a quote, but you cannot remove a promotion after the quote has been converted to an order.

To remove a promotion from a quote before it is converted to an order:

1. Open the quote that has a promotion applied.
2. Remove the Promotion.
3. Save the Quote.
4. Convert the quote to an Order.
5. Finish the transaction.

Discounts and Markups in SCIS

Using SuiteCommerce InStore (SCIS), you can apply discounts to a specific item or to the whole order. Discounts can be a specific amount, or they can be a percent discount. To apply a discount to a line-item, tap the item price in the cart. To apply a discount to the order subtotal, tap the subtotal amount in the Transaction Summary.

Alternately, store managers and sales associates can override the subtotal of an order. The price override capability permits you to increase the amount of the order.

Applying Discounts

In SCIS, you can apply a discount to a line-item in the cart, or to the subtotal of an order. You have the choice of applying a custom discount, or a predefined discount. A custom discount is a discount amount that's not already defined. You set the rate for a custom discount. Alternatively, you can choose a predefined discount from a list.

To apply a discount to an item in the cart:

1. Add items to a transaction as described in [Adding Items to a Sales Transaction in SCIS](#)
2. Tap the price of the item in the cart. The **Select Discount** window appears.
3. Choose one of the predefined discounts, or tap **Custom Discount**.
If you choose to add a custom discount, enter the discount as a percentage, flat rate discount, or enter a new price for the item. Then choose one of the predefined reasons for the custom discount. If you choose custom reason, enter the reason in the text box.
4. Tap **Apply**.

The discount appears in red below the item total. If you apply a custom discount, the reason for giving the discount is also displayed. To apply a discount to the entire order, tap the **Subtotal** of the transaction in the Transaction Summary. Follow Steps 3- 4 as described above.

Applying a Markup or Price Override

In SCIS, tap on the amount in the line-item in the cart or the order subtotal. Then use the custom discount user interface to change the amount.

To apply price override on an order

1. Tap the price in the line-item in the cart, or the order subtotal.

SUBTOTAL	\$70.00
TAX	\$0.00
TOTAL	\$70.00
AMOUNT DUE	\$70.00

2. In the **Select Discount** window, tap **Custom Discount**.
3. Tap the equal sign, and then enter the new price. You can enter a custom reason, if a reason for price override is not already defined.

Select Discount

Total Markup \$5.00 After Discount **\$75.00**

Select rate

-% - **=**

75

Select reason

☐ Regular customer

☐ Other

☒ Price Override

APPLY **CANCEL** **BACK**

4. Tap **Apply**.

After you apply a markup, the tax amount, total amount, and amount due are updated according to the markup.

Note: When marking up the price of a line-item in the cart, you cannot mark up the price more than the 100% of the existing price. For example, on an item that costs 70.00, you cannot set the markup to 141.00. However, you can mark up the subtotal on an order more than 100%.

Applying Promotion Codes to Transactions in SCIS

In SuiteCommerce InStore (SCIS), you can apply a coupon or promotion code to a sales transaction. Tap the tag icon in the Transaction Summary pane and enter the promotion code. The appropriate discount is automatically subtracted from the subtotal, and the coupon code is displayed in the transaction summary.

An administrator must first configure promotions in NetSuite, before sales associates can start using them in SCIS. The basic procedure for applying a promotion is the same, no matter the type of promotion you are working with.

Note: Stackable Promotions, and Auto-Apply Promotions are available only if the administrator has enabled SuitePromotions.

Read the following topics to learn more about using different types of promotions in SCIS:

- [Basic Procedure for Applying a Promotion in SCIS](#)
- [Working with Stackable Promotions in SCIS](#)
- [Working with Auto-Apply Promotions in SCIS](#)
- [Working with Auto-Apply and Stackable Promotions in SCIS](#)

Basic Procedure for Applying a Promotion in SCIS

Use the following steps to add any type of promotion to orders in SCIS.

To apply a promotion code in SCIS:

1. Add items to a transaction as described in [Adding Items to a Sales Transaction in SCIS](#)
2. Tap the tag icon in the Transaction Summary pane.

3. Enter or scan the coupon code.

4. Tap **Submit**.

Working with Stackable Promotions in SCIS

With stackable promotions, you can add more than one coupon code to an order. You can add any combination of item promotions and order promotions to a sales transaction. An **item promotion** applies to a specific item. An **order promotions** applies to the total amount of a sales transaction.

An administrator must define which promotions can be stacked and promotions which are exclusive and cannot be combined with other promotions. If you make a mistake, you can remove coupon codes that were applied in error.

To apply stackable promotions in SCIS:

1. Add items to the cart.
2. Tap the price tag icon in the main SCIS screen.
3. Enter or scan a coupon code in the popup.

The promotion can be applied either to the item in the cart, or it can be applied to the subtotal of the sales transaction. The way in which a coupon code is applied depends on how the administrator has configured promotions in the system. You can tap the item price or the order subtotal, and then tap the **Promotions** subtab in the popup window to see the promotion applied.

4. You can tap **Add/Remove** to update the promotions applied to the order.

You can stack order promotions on top of item promotions, or you can add multiple coupon codes to the whole order. When you have finished building the order, apply payment, and then submit the order.

Working with Auto-Apply Promotions in SCIS

Promotions can be automatically applied to an order without the need to research which items are eligible for promotions. If the administrator has configured Auto-Apply promotions in the system, then a promotion-related discount is applied to the sales transaction when an eligible item is added to the cart. The system determines which promotions are applicable to a transaction.

Note: Up to 30 active promotions can be added to a transaction for a specific date range per location. You can add more promotions manually if the transaction is eligible.

Adding a Free Gift Promotion to the Cart

An administrator can set up a store promotion where customers automatically receive a free item along with the purchase of a another item. The free item is applied when you select a payment option.

To add a free gift to the cart:

1. Add an item to the cart.
Free gift promotions are created in the system by an administrator. Typically, the administrator sets up a free gift promotion and chooses which items will be free gifts.
2. Select a payment option.
3. The **Accept Free Gifts** popup window displays.
 - a. Choose the free gift.
 - b. Tap **Continue to Payment** to close the window. If you don't want to add the free gift, then tap **Close**.
4. In the cart, select a payment option, and complete the order.

If the item associated with the free gift promotion is removed from the order, you have to remove the free gift. If increasing the quantity of items in the cart triggers more free gifts, then the **Accept Free Gifts** popup window displays again and you can select more free gifts.

Working with Auto-Apply and Stackable Promotions in SCIS

The best offer logic automatically applies the promotion or promotions that provide the greatest discount to the customer. This means several promotions can be automatically stacked on a transaction.

To use auto-apply promotions with stackable promotions in SCIS:

1. Add items to the cart. Auto-Apply promotions are applied immediately after items are added to the cart.
2. To enter additional stackable promotions, tap the price tag icon in the main SCIS screen.
3. Enter a coupon code in the popup window. Eligible promotions impact the discount amount on the order.

Note: You can remove stackable promotions from a sales transaction, but you **cannot** remove auto-apply promotions.

When you have finished building the sales transaction, apply payment, and then submit.

Processing Returns in SCIS

The method used to process a return in SuiteCommerce InStore (SCIS) depends on whether information about the original sales transaction is available. Make a **validated** return when the customer presents a receipt as proof-of-purchase or you have a record of the original sales transaction in SCIS. Make an **unvalidated** return when the customer does not have a receipt and SCIS does not have a record of the purchase.

To return a serial or lot numbered item, you must use the validated return process.

Read the following topics for more information:

- [Validated Returns](#)
- [Unvalidated Returns](#)
- [Returning Lot Numbered Items and Serialized Items](#)

[SCIS Returns](#)

Validated Returns

In a validated return, the sales associate verifies the details of a purchase by reviewing the original transaction. It permits you to authenticate that the purchase was made through your retailer before issuing a refund. Validated returns can reduce fraud and mistakes.

When processing a validated return, you need a record of the original transaction from when the customer purchased the item. The first step is to scan the receipt or use another method to open the transaction details. Customers can return one or more items from a single transaction.

Verifying Transaction Details for a Validated Return

You can find the transaction by:

- Scanning the customer's copy of the receipt.
- Entering the transaction ID from the receipt into the Search Bar.
- Searching for the customer and reviewing their Customer Profile timeline.
- Reviewing the Transaction History list.

While performing the return, you can view details from the Returns page by:

- Opening the transaction link.

- Opening any credit memo links from previous returns of the transaction.

To process a validated return:

- Find the original purchase transaction in SCIS.
- Touch or tap **Return** to add the item to the cart and initiate the return process.

This example shows a return started from the Transaction History.

ID	Type	Customer	Amount		
CASH10079	cashsale	Default Customer (Sofia Jones)	\$20.20	RECEIPT	RETURN
CASH10078	cashsale	Jenny Smith	\$303.00	RECEIPT	RETURN

- Review the top of the returns page for any alerts or credit memos from previous returns.

Important: If the original transaction included a **promotion**, SCIS cannot verify the **item quantity** originally purchased or previously returned.

For example, if a customer bought three hats on promotion, but now wants to return those hats, SCIS will not automatically limit the return of hats to only three. The sales associate must verify the eligible quantities before proceeding with the return.

The original transaction included one or more promotions. Ensure the number of items match the original purchase.

If SCIS cannot verify the original quantity purchased, an alert message displays at the top. You should manually verify the quantity eligible for return. See [Verifying Transaction Details for a Validated Return](#).

- Choose the items and quantities to return by adjusting the return quantity for those items.
Touch or tap the + or – button. The first number is the quantity of this item to be returned, the second is the quantity eligible for return.

REFUND DUE -\$303.00

REFUND CASH

REFUND CREDIT CARD

For more information on refunds, read [Processing Refunds with SCIS](#).

Unvalidated Returns

This return type doesn't require the sales associate to locate the original transaction. It occurs when a receipt or other proof-of-purchase is unavailable.

Start the return by scanning or adding the returned item to determine the refund amount. Customers can return one or more items from an order.

To process a return without a receipt:

1. Add the item to the order.
2. Touch or tap the line Item action menu, and then select **Return**.

	Qty	Price	Total
Pants-Medium-Green	1	\$150.00	\$150.00

3. The order line shows a return is in progress. Select a reason for return.

	Qty	Price	Total
PANTS-MEDIUM-GREEN	1	\$150.00	\$150.00

RETURNED
COLOR: GREEN, SIZE: MEDIUM

Damaged

4. Choose a payment method to refund the customer.

Returning Lot Numbered Items and Serialized Items

When returning a lot numbered item or serialized item, find the existing purchase transaction and process a validated return. For more information, read [Validated Returns](#).

Note: Unvalidated returns are not supported for lot numbered and serialized items.

Processing an Exchange in SCIS

Rather than receive a cash/credit card refund or credit memo, a customer can request to exchange the return item for another item. The item can be the same or different from the original item. Processing an exchange requires creating a return transaction and then adding the exchange item to the cart.

To perform an exchange transaction:

1. Start by creating a return transaction. For more information, see [Validated Returns](#).
2. Add the exchange item to the return transaction. You can add the same item as the one being returned.

For example, a customer may want a different size or color of the same item they originally purchased. In this case, find the correct size and color, and add the item to the cart.

Important: Sales associates cannot perform exchanges that include an item for **shipping** or **pickup**.

For example, the customer cannot exchange an item already purchased for an item that will be shipped or picked up in-store. Instead, the associate must first complete a return transaction and then enter a sales transaction for the shipping or pickup item.

3. Note the following information about how the balance due is determined for exchanges:
 - If the total of the exchange **is more** than the total of the return, then a balance is due.
 - If the total of the exchange **is equal** to the total amount of the return transaction, then no balance or refund is due.
 - If the total of the exchange **is less** than the total amount of the return, then a refund is due.

If no balance or refund is due, the associate can tap **End Transaction** to complete the exchange.
4. Give the receipt to the customer.

Processing Refunds with SCIS

You can use any payment method available in SCIS for providing a refund while processing a return. The following are most common:

■ Refund cash or credit card

If you choose to refund cash or a credit card, then the refund is processed similar to a sales transaction. You can refund the customer from the cash drawer. If the original payment was made with only one credit card, then you can process the return without swiping the card.

■ Split Tender Refund

You can split a refund amount across multiple payment types. For example, if the total amount of the return order is \$100. You can refund \$25 in cash and \$75 to a credit card.

Sales associates can only process a referenced refund when the original sales transaction has **one** credit/debit card payment method. After the payment is approved, the payment provider sets a PNREF to it. When the refund takes place, SCIS uses the PNREF to send the refund directly to the credit/debit account. In this case, the sales associate is not required to use the payment device to complete the refund.

Note: If the original payment was submitted with more than one credit/debit card, then to process the refund, the sales associate must use the payment device to swipe or enter each card associated with the original payment and select the amounts to be refunded.

■ Refund credit memo

If you choose to provide a credit memo as a refund, tap **Refund Credit Memo**

A credit memo can be issued during a return transaction. Customers can use credit memos as store credit the next time they visit the store or shop online.

The Credit Memo number shows on the receipt. When the customer wants to use the credit memo as payment on a future purchase, you can find the Credit memo by typing in the number. For more information, see [Working with Credit Memos in SCIS](#).

Processing Refund

The following steps describe how to process returns with SCIS.

To process a refund:

1. Select how you want to refund the customer:
 - Refund cash
 - Refund credit card
 - Refund credit memo
 - Other Refund
2. Refund the customer:
 - Refund cash – Open the cash drawer, and then refund cash.

- Refund credit card:
 - If the original transaction was paid with **one** credit card – There is no need to swipe the card to refund the customer.
 - If the original transaction was paid with more than one credit card – Swipe each card to refund the amount paid by each card.
- Refund credit memo – Print the receipt. The number for the credit memo is printed on the receipt. The customer can return and use it for store credit.
- Other Refund – Your system administrator may have set up other methods for refunding the customer. Contact your manager or system administrator for more information.

 **Note:** If you overcharge the customer, for example, the customer did not receive the discount they were entitled, you can't refund only the discount amount in SCIS. You must refund the entire amount of the original transaction, and then create a new sales transaction for the correct amount.

Refunding a Partially Paid Transaction

If the customer makes a partial payment on an order, and then decides not to complete the order, the sales associate must perform a refund transaction. Canceling the partially paid transaction is not supported in SCIS.

To refund a partially paid transaction:

1. Finish the sale using cash as the payment method. If the customer made the partial payment with a credit card, then complete the transaction with partial payment from the credit card, and the balance in cash.
2. Make the refund of the sale. On the refund, create the same type of transaction as in Step 1. Create a partial refund with cash and, the amount on the credit card from the original sale.
3. Refund the customer's credit card for the amount charged to the credit card from the original sale.

Working with Gift Cards in SCIS

You can sell gift cards with SuiteCommerce InStore (SCIS). Gift cards are added to a transaction and paid for like other items. Gift cards are redeemed later. You can sell a physical gift card or a digital gift certificate, where the recipient gets an email with a gift message and the authorization code.

See [Paying With a Gift Card](#) for more information on using a gift card as payment on a transaction.

To sell a gift card:

1. Use the search bar or the QuickAdd bar to find the gift card item in SCIS.
2. Tap **Add**, to add it to the order.
3. Swipe the gift card in a card reader to record the authorization code.
4. Tap **Add**.

The gift card appears in the transaction list. Customers can pay for the gift card like any other item. For more information, see [Accepting Payments for Purchases in SCIS](#).

To sell a digital gift certificate:

1. Use the search bar or the QuickAdd bar to find the digital gift card item in SCIS.
2. Tap **Add**, to add it to the order.
3. Enter the gift certificate amount.
4. Tap **Next**.
5. Enter the following information:
 - **From** – the person sending the gift certificate.
 - **Recipient Name** – the name of the person receiving the gift certificate.
 - **Recipient Email** – the email address of the recipient.
 - **Auth Code** – the authentication code of the gift certificate. This code may be automatically generated by SuiteCommerce InStore, depending on system configuration. You can use this code to search for the gift certificate after it is sold.
 - **Message** – (Optional) Add a message that appears on the digital gift certificate.
6. Tap **Add**.
The gift certificate appears in the transaction list. Customers can pay for the gift certificate like any other item.

After purchase, an email message is sent to the recipient of the digital gift certificate. The email message includes the authorization code and the gift message (if a gift message was entered). The authorization code is also printed on the receipt.

Working with Credit Memos in SCIS

In SuiteCommerce InStore (SCIS), a credit memo can be applied as payment. If the customer was refunded with a credit memo, the credit memo number is displayed on the receipt from the return transaction. You can apply that credit memo to the customer's next purchase. Search for the customer in SCIS and retrieve the return transaction from their profile.

Note: It is not possible to issue a credit memo without a customer defined on the transaction.

To apply a credit memo as payment:

1. Add the customer to an order.
2. Add items to the order.
3. Tap **Other Payment**, and then tap **Credit Memo**. Available credit memos display in a list.

4. Choose the credit memo to apply to the order.

#	Number	Date	Amount
19737	26	10/28/2019	33.70

5. Tap **Next**.
6. Tap **Apply**.
7. The amount of the credit memo shows in the transaction summary as a credit.
8. Tap the appropriate payment method for any outstanding amount.
9. Give the receipt to the customer.

Limitations when Applying Credit Memos

Sales associates can't accept a Credit Memo as payment for any transaction that generates a sales order. NetSuite creates sales orders for SCIS transactions with items for shipping or in-store pickup. If a sales associate attempts to apply a credit memo as a payment on a transaction where it is not supported, SCIS displays an error message. They can't proceed until they select a different payment method.

Viewing a Sales Report in SCIS

With SuiteCommerce InStore (SCIS) sales associates can view a report to track sales. A sales report is displayed as a graph and an itemized list showing total sales for a date range or category.

A sales report contains the following information:

- **Net Sales** – Displays the total sales for the period specified. Sales for a single day are displayed as a bar graph. Sales for a long range are displayed as a line graph.
- **Sales by Class** – Displays the sales for each item type.
- **Retail Tenders** – Displays sales information based on the type of payment received from the customer. Credit card sales information is split among each type of credit card.

To view a sales report:

1. Log in to SuiteCommerce InStore.
2. Tap the **User menu**.
3. Select **Sales Report**.
4. Select the period for which you want to generate a sales report from the dropdown list. The following default values are available:
 - Today
 - Yesterday
 - Week to date
 - Last 7 Days

- Month to date
- Last 30 days

Viewing a Saved Search in the SCIS User Menu

As a sales associate, you can access saved searches from the **User menu**. These are searches created by your account administrator to show important information that can be useful to complete your daily tasks.

To view saved searches:

1. Tap the **User menu**.
2. Tap **Saved Searches**.
3. Tap on a Saved Search in the list.

You can sort the search results by tapping a column header. You can also tap links in search results to drill down to see more information about a customer, item, or transaction.

Printing Receipts from the Transaction History

Use the Transaction History to print receipts for various transactions entered in SuiteCommerce InStore (SCIS) and to initiate Return transactions.

To view the Transaction History:

1. Log in to SCIS.
2. Touch or tap, tap the clock icon at the top of the screen.
3. Use the filters at the top of the page to refine search results.

ID	Type	Customer	Day, Time	Amount	RECEIPT	RETURN
183	cashsale	Default Customer (Johnny B Goode, HEADQUARTERS : AMERICAS : Generation N US)	5/23/2019 11:18 am	\$104.39	RECEIPT	RETURN
22	creditmemo	April Rodriguez	4/18/2019 1:00 pm	\$-65.25	RECEIPT	RETURN
0901	invoice	April Rodriguez	4/18/2019 12:26 pm	\$98.95	RECEIPT	RETURN

- **Mine, All** – Select **Mine** to show transactions submitted for the customers that you worked with. Select **All** to show all transactions submitted within a certain date range.
- **Date filters** - Select the date range for the transactions you want to view.
- 4. View the list of transactions, print a receipt, or initiate a return transaction. The Transaction History shows the following information:
 - **Transaction ID**
 - **Transaction Type** – Quotes, returns, and purchase transactions are displayed on the SCIS Transaction Detail list.
 - **Customer** – Tap the link to show the customer's profile in SCIS.

- **Date of the transaction**
- **Amount** – Shows the grand total for the transaction.
- **Receipt button** – Tap the button to print the transaction receipt.
- **Return button** – Tap the button to initiate a return transaction. For more information on returns, read [Processing Returns in SCIS](#).

Working with Customer Profile Information

You can add a new customer or edit a customer profile in SuiteCommerce InStore (SCIS). The Customer Profile in SCIS lets you to view customer information along with their purchase history. It has basic contact information, such as name, street address, and email address.

 **Note:** When operating in Fallback, you can't create, edit, or view customer information. However, you can still assign a customer to an order. For more information, read the help topic [Assigning a Customer to an Order in Fallback](#).

For more information, read the following:

- [Adding Customers To Sales Transactions in SCIS](#)
- [Updating a Customer Record in SCIS](#)
- [Viewing the Customer Profile](#)
- [Adding Customer Notes in SCIS](#)
- [Customer Timeline](#)
- [Customer Statistics](#)

Adding Customers To Sales Transactions in SCIS

In SuiteCommerce InStore (SCIS), you can add an existing customer to an order or add a new customer while creating an order. To do this, tap the Add Customer link in the cart, then start typing the customer's name. If there's a match in the system, the customer's name is displayed. You can select the customer to add them to the order. If there is no match, or you don't see the customer you want, tap the link to add new customer information.

Adding an existing customer to a transaction:

1. In the SCIS shopping cart, tap **Add Customer**.
2. Enter the name of an existing customer. If there is a match in the system, you can select the customer you want to add to the order.
To remove the customer on the order, touch or tap the **X**.
3. (Optional) Tap **New Customer** to enter information to create a new customer in the system. The **Add New Customer** dialog window appears.
 - a. Decide whether the customer should be recorded as an **Individual** or as a **Company**.
 - b. Tap the **Required**, then enter the customer information as necessary.
 - c. (Optional) Tap the **Optional**, then enter information as necessary.
4. Tap **Create and Add** to save the new customer information and add the customer to the transaction in the cart.

Creating a Customer Record in SCIS

You can create a customer record in SuiteCommerce InStore (SCIS) from the Customers list. Note that any changes you make in SCIS are also recorded in NetSuite.

In SuiteCommerce InStore (SCIS), you have the can search for the customer's name by typing a few letters of their first or last name in the search bar. Tap Add to Order, then start adding items to the cart. If the customer isn't in the system and doesn't want to provide contact information, you can skip this step and start adding items to the order.

To create a customer:

1. Type some letters or numbers in the search bar that may or may not return a customer in search results.
2. Tap **Add New Customer**.
3. The new Customer dialog appears.
 - a. If the customer is an individual customer, tap **Individual**. Tap **Company** if the customer is a company.
 - b. Tap the **Required** tab, then enter the customer information as necessary.
 - c. Tap the **Optional** tab, then enter information as necessary.
4. Tap **Save**.

Updating a Customer Record in SCIS

You can update a customer record in SuiteCommerce InStore (SCIS) by editing the Customer Profile. Note that any changes you make in SCIS are also recorded in NetSuite.

To update customer information:

1. Search for the customer whose data you want to view.
 - a. In the search bar, type the first few letters of the customer's name.
 - b. Tap the **Customers** list to view the customer search results.
2. Tap the customer name. The customer profile displays.
3. Tap **Edit Profile**.
4. Edit the customer information as required.
5. Tap **Save** to save the customer profile. SuiteCommerce InStore displays the updated customer profile and updates the customer record in NetSuite.

Viewing the Customer Profile

The Customer Profile in SuiteCommerce InStore (SCIS) enables you to view a customer's contact information, including address and email. It also displays a customer's purchase history.

Multi-Subsidiary Customers

The store where you work may do business in multiple regions or subsidiaries. You may work with customers who have purchased items from a store location in a different region, using a different currency. You can still view the customer's profile as well as their transactions from any subsidiary. You can also enter orders for these customers.

To view the Customer Profile:

1. Use the search bar to find a customer.
2. (Optional) Use the **Origin** list to find customers who may be assigned to a subsidiary different from your own.

3. Tap the customer name. The customer profile is displayed.

Basic customer information appears as shown in the following screenshot. Not all of this information may be defined for each customer. Tap **Edit Profile** to add or edit information.

This area displays the following information about a customer or company:

- **Name** displays the first and last name of the customer. In a company profile, only the company name is displayed.
- **Address:** displays the customers address. This can be a street name and number, post office box, etc.
- **City, state, postal code, and country:** displays the information defined in the customer's profile.
- **Email:** displays the email address of the customer. This is the address used to communicate with a customer and send transaction receipts.
- **Membership date:** displays the date the customer's profile was created.
- **Average transaction amount:** displays the average amount the customer spends during each transaction.
- **Average time between transactions:** displays the average time between each customer's transaction.
- **Add to Order:** Tap to add this customer to the current transaction.
- **Edit Profile:** Tap to edit the customer's profile.

Adding Customer Notes in SCIS

You can add a note to a customer profile in SuiteCommerce InStore (SCIS). For example, you may want to add a note about the customer's product preferences. The notes you add to customer profiles are also attached to the customer record in the system and are available for administrators to view.

To add a note to a customer profile:

1. Touch or tap View Notes in the customer profile. A screen pops up where you can select a preset note.

2. Select a note type.
3. Add more information if needed.

4. Tap Save.

After you have added a note to the customer profile, a red circle appears on the note icon. If you see this, then you know that a note has already been entered for that customer. You can tap on the icon to view or edit the note. You can also add another note.

Customer Timeline

In the Customer profile in SuiteCommerce InStore (SCIS), you can view a timeline of the customer's activity. This timeline displays a customer's purchases, returns, and support calls.

Note: Customer activity only appears when a customer has previous purchases. If a customer has no previous purchase, customer activity is not displayed.

To view the Customer Timeline:

1. Use the search bar to find a customer.
2. Tap the customer name. The customer profile displays.
3. To view details about customer activity, tap the area you are interested in.

SCIS may group events together. Tap the group of events to view a detailed list of the events. From this list, you can select an individual event to view the receipt and more details.

The customer activity timeline displays the following types of events:

- **All** – Displays all customer data.
- **Purchases** – Shows transactions performed by the customer.
- **Returns** – Shows returns performed by the customer.
- **Calls** – Shows support calls submitted or received by the customer.
- **Shipments** – Shows shipments to the customer.
- **Quotes** – Shows estimates or quotes entered in SCIS for the customer.
- **Shipments** – Shows shipments sent to the customer.

You can also filter the customer activity timeline by performing the following:

- Select one of the tabs to restrict the types of events displayed on the timeline.
- Zoom in and out of the timeline using the zoom icons.
- Navigate chronologically through the timeline using the left and right arrows.

Customer Statistics

SuiteCommerce InStore helps sales associates view information about a customer to better understand a customer's needs and enhance up sell possibilities.

Note: Customer statistics only appear when a customer has previous purchases.

The customer statistics area displays information about a customer's previous purchases in graphical form. The following screenshot shows an example of how this information appears in the customer profile.

This information is divided into the following graphs and charts:

- Purchase and Returns
- Visit Count
- Purchases Breakdown

SCIS Fallback for Sales Associates

Fallback lets sales associates perform basic point-of-sale operations when SuiteCommerce InStore (SCIS) isn't available. Sales associates can continue entering orders in Fallback, but some features normally available from the shopping cart aren't available.

For more information about using Fallback, read the following:

- [Logging into Fallback](#)
- [Handling Fallback Transactions](#)

Logging into Fallback

Sales associates use a Personal Identification Number (PIN) to log in to Fallback. Administrators or Store Managers need to share the PIN with employees. All employees at a location use the same PIN.

To log in to Fallback:

1. To log in to Fallback, you can use:
 - The login window
 - The Fallback option in the **User menu**
2. Enter the PIN.
3. Tap **Enter Fallback**.
4. The Fallback shopping cart displays, and you can start entering orders in Fallback.

Tip: Although you can use Fallback at any time by selecting the option in the **User menu**, you should use Fallback only when SCIS isn't available.

Handling Fallback Transactions

The shopping cart in Fallback looks and operates like the shopping cart in SCIS. In most instances, you handle customer purchases in Fallback like you do in online mode. However, some features might be limited or unavailable. Note the following limitations in Fallback mode:

- Black and white color scheme.
- No product images.
- No related items or upsell items are displayed in the cart.
- Voided lines are automatically removed from the cart.
- Only limited payment options are available in Fallback.
- The following features are **not** supported in Fallback:
 - Returns, refunds, and quotes
 - Currency rounding
 - Save for later
 - Shipping and in-store pickup
 - Order fulfillment tasks
 - Adding promotions
 - Selling gift cards

- Using gift certificates for payment

Use the following topics as a guide to working in Fallback.

- [Entering an Order in Fallback](#)
- [Entering an Order using a Fallback Open Item](#)
- [Assigning a Customer to an Order in Fallback](#)

Entering an Order in Fallback

These procedures cover how common tasks are performed in Fallback, such as adding items, applying discounts, and selecting a payment option. Also see [Entering an Order using a Fallback Open Item](#).

To enter an order in Fallback:

1. (Optional) Assign a sales rep to the order.
Use the same procedure in Fallback as you use in SCIS online. For more information, read [Selecting a Sales Representative](#).
2. (Optional) Assign a customer to the order.
For more information, read [Assigning a Customer to an Order in Fallback](#).
3. Add items to the cart.
To add items to an order, use the QuickAdd bar, a bar code scanner, or find the item using search. For step-by-step instructions, read [Adding Items to a Sales Transaction in SCIS](#)
4. (Optional) Add a discount to the line item or to the whole order.

Note: Use a custom discount instead of a promotion code. Promo codes aren't supported in Fallback.

- a. Touch or tap the **line item price** to apply a discount to an item in the cart. Touch or tap the **subtotal** of the transaction to apply a discount to the entire order.
 - b. In the **Select Discount** window, touch or tap **Custom Discount**.
 - c. Enter the discount as a percentage, a flat rate, or enter a new price for the item. Then choose one of the predefined reasons for the custom discount.
If you choose **custom reason**, enter the reason in the text box. For example, you may be entering a custom discount because promotion codes aren't supported in Fallback. In the text box, you could type, "Replacing Promo Code X."
 - d. Touch or tap **Apply**.
5. (Optional) Add a note to the order.
Touch or tap the note icon under the line item or below the payment options. For more information, read [Adding Notes to Items and Transactions in SCIS](#).
 6. Select a payment method.

Note: Some of the payment methods you use in SCIS may not be available in Fallback. Your administrator is responsible for setting up payment methods that you can use in Fallback.

The following payment methods are supported in Fallback:

- **Cash**
For more information, read, [Paying with Cash](#).

- **External PIN Pad**

This includes Google Wallet, credit cards, and all-in-one payment methods. For more information, read [Paying via Manual Credit or Debit Card Entry](#).

- **Check**

For more information, read [Paying with a Check](#).

Warning: You must complete orders in either SCIS or Fallback. Don't start an order in SCIS and then switch to Fallback to complete the order.

Entering an Order using a Fallback Open Item

Fallback relies on a downloaded copy of your item and price catalog. The catalog copy is refreshed each time a sales associate logs into the device.

However, iOS and Windows devices have limits on the storage space available for a Fallback catalog. Exceeding the storage limit could cause the SCIS application to fail on a device. This limit often applies to catalogs of over 20,000 items.

If your catalog is too big, you can use a Fallback **Open Item** solution. This option uses a single generic item instead of the actual item being sold. For example, the QuickAdd bar only lists the single open item to choose from.

Because the item is generic, you must manually enter the price after adding or scanning the item. Although the receipt does not include the actual item names, it does include the UPCs from where each bar code was scanned or entered manually.

Variable Price Item	
Fallback Open Item	Choose available amount below
Amount	\$0.01 \$0.05 \$0.10
\$ 9.95	\$0.25 \$1 \$5
	\$10 \$20 \$50
	\$100
	ADD
	CANCEL

Store Manager	
SoMa - San Francisco, #100	
401 11th Street	
San Francisco CA 94103

FBTRNnull000001	
Operation: Purchase	
(1x) Fallback Open Item	\$9.95
** ScannedUPC: 055555333331	
(1x) Fallback Open Item	\$7.49
** ScannedUPC: 055555444442	
Subtotal	\$17.44
Tax	\$1.61
Total	\$19.05

Transactions made in Fallback mode don't upload to NetSuite until the device is back online. Then, back office staff must reconcile those transactions in NetSuite to show the correct items.

The following steps begin with your mobile device offline and in Fallback mode.

To enter an order using the Fallback Open Item:

1. Scan the item's barcode or add a **Fallback Open Item** from the QuickAdd bar or an item search.
2. Manually enter the price.
3. If you scanned the barcode, SCIS automatically captures the UPC in a **ScannedUPC Note**.
If you added a **Fallback Open Item** from the QuickAdd bar or a search, you should enter the item's UPC manually.

1. Tap the **Note** icon.

2. Tap **+ScannedUPC**.
3. Enter the bar code digits (UPC). Enter all digits, without dashes or other characters.

4. Tap **Save**.
4. Continue scanning or adding Fallback Open Items, entering prices, and adding bar code UPC notes as needed for every item in the purchase.
5. Accept the customer's payment and provide the receipt.

Important: Using a **ScannedUPC Note** for entering a UPC must be enabled by the system administrator. Otherwise, the option will not appear.

Assigning a Customer to an Order in Fallback

The customer profile isn't available when you are running in Fallback mode. You can't create new customers, or edit customer information. However, you can use the **Assign Customer** link in the cart to assign a customer to an order while using Fallback. Assigning a customer to an order is always optional.

To assign a customer to an order in Fallback:

1. Tap the **Assign Customer** link.
2. Enter a customer identifier in the popup dialog window.
The customer identifier can be an email address or a customer ID. You must enter at least one identifier to assign a customer to an order in Fallback. Entering the customer's first or last name is optional.
3. Touch or tap **Save**.

Resuming an Order in Fallback

Unlike normal SCIS online mode, Fallback doesn't have a button to suspend or resume an order. However, if you apply a partial payment to an order, and then log out of Fallback or switch to online mode, the incomplete Fallback transaction is saved on the device. Any sales associate with the right Fallback PIN can resume the transaction while in Fallback, and finish applying payments.

If there are suspended orders in Fallback, you'll see a red dot on the pause icon at the top of the application.

ID	DATE & TIME	TYPE	CUSTOMER	TOTAL	SALES REP
 PROPOP82	02/02/18 - 5:21PM	Sales Order	customer@domain.com	\$23,000	Derek Moore

There's no option to discard the transaction if partial payment has already been applied.

Tip: At the end of a shift, ensure that there aren't any partially paid transactions suspended in Fallback.
