SuiteCommerce Analytics Data Guide

2025.2

September 3, 2025

Copyright © 2005, 2025, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software" or "commercial computer software documentation" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle and Java are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. SuiteCommerce Analytics Data Overview

Watch the following help video for an overview of this feature:

 [SuiteCommerce Analytics Data Feature](#)

The SuiteCommerce Analytics Data feature uses cookies to capture detailed information about shopper behavior during visits to your SuiteCommerce web store. Behavioral data is historical, not real time, and is updated daily.

To use this analytics data feature, you first need to enable it in your account. SuiteCommerce Analytics Data includes a companion extension you use to set up a cookie consent banner and menu. The banner and menu ask shoppers to agree to having their data collected.

- [Data Privacy](#)
- [Shoppers in SuiteCommerce Data Analytics](#)
- [Setting Up the SuiteCommerce Analytics Data Feature](#)
- [Record Types](#)
- [Creating a Saved Search for SuiteCommerce Analytics Data](#)
- [Creating a Workbook for SuiteCommerce Analytics Data](#)
- [Use Cases](#)

The Challenge

Retailers want to understand their shoppers' buying habits, with the goal of encouraging them to return to their web stores for repeat purchases. They also want to provide a marketplace that shoppers find satisfying, applicable and responsive to individual interests, and intuitive to use.

Performing research at this level can prove challenging for mid-level retailer budgets, especially when trying to gain insights from multiple sources and different applications.

The Solution

SuiteCommerce Analytics Data delivers a central source of shopper knowledge and makes it available to those who make the business decisions behind your web store operations. It gives you a complete view of what shoppers do while they browse and make purchases.

It also includes demographics such as geographical location, the date and time of each visit, the type of browser device used, and whether a shopper is new or a repeat visitor.

Benefits

Businesses can use these shopper insights to plan ordering, devise up-sell strategies, nurture relationships, and understand who visits a web store and where their interests lie. Commerce managers, marketing managers, and sales representatives can use this comprehensive view of visitors as the basis for pricing and purchasing decisions.

Analysts can use results to set up key performance indicators (KPIs) that measure the success of sales initiatives and marketing campaigns. Common KPIs can be derived from a shopper's:

- Acquisition source or medium

- Page-views history
- Item-views history
- Key word searches

You can use NetSuite features like Saved Searches and Analytics Workbooks to see how shoppers behave in certain situations. A Saved Search can then be set to email an assigned sales representative when an alert is triggered. For example, you might want to send an automated alert when:

- A repeat shopper browses a web store without making a purchase. Criteria for the query might include the shopper's tracked history of item searches and views.
- A cart is abandoned over a period, using the cart contents to reach the appropriate representatives.
- A shopper assigned to a representative makes a purchase. In addition to an internal notification, this criteria is often used to populate dashboards.
- An assigned shopper requests a quote using the SuiteCommerce My Account feature.

See [Setting Up Saved Search Email Schedules and Alerts](#).

How it works

The SuiteCommerce Analytics Data feature uses an analytics cookie and cookie-consent technology to capture data populated by the shopper's browser interactions with a SuiteCommerce web store. Shoppers must opt in and accept the analytics cookie before you can start tracking their actions.

After NetSuite receives the data, it is made available to SuiteCommerce accounts using a Saved Search or Analytics Workbook. See the [Use Cases](#) for example queries.

Behavioral data is historical and is updated daily. The feature does not provide for a "real time" view.

Tip: For information about the SuiteCommerce Analytics protocols for data minimization, data deletion, and shopper opt-in mechanisms in place to protect the shopper's privacy, see [Data Privacy](#).

Terms of Service

The SuiteCommerce Analytics Data feature and the SuiteCommerce Cookie Consent extension requires agreeing to a terms of service. Contact your NetSuite Account Manager for more information.

Terminology

We use the following terms in this guide to differentiate between web store or site owner personnel and the consumer visiting a web store:

- **Shopper** — Consumer or visitor to your SuiteCommerce web store. Your customer.
- **Administrator** — Person from your business who grants access and performs other user-management tasks.
- **Web Store Owner** — Business that owns or maintains your SuiteCommerce web store.
- **Customer** — Your business or a representative from your business who is a customer of NetSuite.

Data Privacy

This chapter explains how the SuiteCommerce Analytics Data feature follows NetSuite's rules for data minimization, deletion, and letting shoppers opt in or out.

- [PII and Data Minimization](#)
- [Data Retention](#)
- [Data Security](#)
- [Data Portability](#)
- [Data Availability](#)
- [Terms of Service](#)

PII and Data Minimization

Personally identifiable information (PII) is data that can be used to identify someone. PII includes basic details like name, location, or phone number, and can also cover browsing or buying habits. PII rules vary by country, but they usually have strict guidelines for collecting, storing, and deleting personal information. There are also rules about who can access PII and how long it is kept.

A common theme is collecting the least amount of data you need to do the job. This theme is often called **data minimization**.

Keep reading to learn how NetSuite works to follow these PII guidelines.

Data Retention

NetSuite applies guidelines to ensure aging analytics data is deleted on a timely basis, and the way the data is deleted keeps it from being recreated, accessed or read.

- **Time-based Deletion** — Shopper analytics data is deleted six months after it is collected.
- **Related Record Deletion** — If a shopper's customer record is deleted, that shopper's analytics data is deleted six months after the record deletion.
- **Deletion by SuiteCommerce Customer** — Customers can delete their shopper's customer record in NetSuite.

Customers cannot delete the End User Identifiable Information (EUII) data saved in temporary data stores. Temporary EUII data is automatically removed from NetSuite after 30 days plus an offline index retention period.

- **Deletion by NetSuite** — Authorized NetSuite personnel can delete shopper data upon receiving a request from the shopper or the SuiteCommerce customer.

Note: Customers and shoppers cannot delete the EUII data saved in temporary data stores. However, this data is automatically removed from after 30 days.

Data Security

Only authorized NetSuite staff can access shopper data, and safeguards limit how much and what kind of data they can see. Access to data that is specific to a SuiteCommerce web store is determined by the web store owner's administrator and by NetSuite.

Data Portability

SuiteCommerce Analytics Data gives customers different ways to get structured, machine-readable data they've permitted to be uploaded and stored in NetSuite.

- Analytics data is saved as NetSuite records, and the platform supports several ways to export this data.
- Customers can use NetSuite's Saved Search and Workbook Analytics features to export analytics data in CSV format.

Data Availability

To ensure availability of shopper analytics data stored in NetSuite, information saved to customer or contact records is stored in the Oracle database with all other NetSuite customer data.

Shoppers in SuiteCommerce Data Analytics

The following SuiteCommerce Analytics Data topics describe how the feature works with the SuiteCommerce Cookie Consent extension to obtain shopper consent for analytic tracking.

- [Shopper Notice and Explicit Consent](#)
- [Tracking and Shopper Opt In/Opt Out Features](#)
- [Cookies Available for Use With Analytics Data](#)
- [Third-party Tracking Disclosures](#)
- [Example Shopper Opt-in/Opt-out Cookie Management Setup](#)

Tip: Cookie consent controls can help businesses comply with privacy regulations, such as GDPR and CCPA.

Shopper Notice and Explicit Consent

Before any analytics data is collected on a SuiteCommerce-enabled web store, shoppers must give explicit consent for data collection during their visit. Because this data includes personally identifiable information (PII), the analytics feature never assumes implied consent.

Shoppers give or deny consent through a cookie banner or cookie settings menu. The setup is configured using the SuiteCommerce Cookie Consent extension or through a custom extension.

The SuiteCommerce Cookie Consent extension creates a banner that briefly explains how the site uses cookies. The banner has buttons for shoppers to:

- **Reject All** — Block all cookies not necessary to the functioning of the site
- **Accept All** — Consent to all cookies available from the site
- **Cookie Settings** — Open a settings menu to customize consent by cookie category

The Cookie Settings menu lists consent options and ways to set preferences. The banner and menu may also link to the store's cookie policy.

The shopper's decision—reject all, accept all, or custom consent—is associated with the login and device they use for the web store.

SuiteCommerce Cookie Consent Extension

The SuiteCommerce (SC) Cookie Consent extension is designed for use with the Analytics Data feature. It provides a method for configuring a cookie consent banner and cookie consent settings menu. Web stores can include information about the cookies used, whether some cookies are strictly necessary for functioning of the site, and links that direct shoppers to a web store's unique cookie policy page

Important: The extension does not include default text. All information about cookies used must be entered by the web store account administrator.

See [Install the SC Cookie Consent Extension](#) for the steps to get and configure the extension.

Overlay to Ensure a Consent Choice

Prior to receiving a shopper's explicit cookie consent or rejection, the Cookie Consent extension applies an overlay around the cookie banner. This overlay enforces the requirement to register a choice before browsing the web store. The overlay is applied to the cookie settings menu as well. The opacity (transparency) of the overlay is configurable.

Registered Shoppers vs. Anonymous Shoppers

When shoppers log in, analytic data is linked to them; if they don't log in, it's collected as an "anonymous" account.

First Time Shoppers

A session record "New User" field is available through Saved Searches and Workbook Analytics reports to query a list of shoppers who visit a web store for the first time.

Tracking and Shopper Opt In/Opt Out Features

If a shopper who opted in later takes action to opt-out, the SuiteCommerce Analytics Data feature stops tracking their data upon receiving the opt-out request. However, opting out does not trigger automatic deletion of tracking data stored during the period when the shopper's opt-in was in effect.

Cookies Available for Use With Analytics Data

The following list describes the cookies provided with the SuiteCommerce Analytics Data feature. This list does not include third-party cookies implemented by an individual web store.

Cookie	How the cookie is used	Impact when blocked by shopper
Strictly Necessary	Save website preferences Save privacy preferences Other website functionality	Not applicable. Shopper cannot block cookie.
Analytics	Collect analytic data at customer and session levels	No analytics data is collected.

Scenarios in which an analytics cookie is updated:

- Shopper changes their consent preference values through the privacy settings.
- Shopper logs in, has a new configuration on their customer record, and accesses a web store using a browser different from previous visits.

An analytics cookie has a lifetime of six months.

Third-party Tracking Disclosures

SuiteCommerce customers are responsible for disclosing to their shoppers what cookies are being used on the web store site.

If a customer will include targeting cookies for marketing or advertising, they must integrate with a third-party cookie management solution. The third party is expected to ensure their cookies meet privacy requirements.

Important: Ultimately, customers are responsible for assessing legal and operational privacy concerns in their business and making any changes needed for compliance.

Information to be stored in a tracking cookie includes a time stamp indicating when the cookie was updated, a unique identifier, and details about any consent given by the shopper to permit usage of the cookie.

Example Shopper Opt-in/Opt-out Cookie Management Setup

This topic describes how shoppers accept or reject consent to have cookies installed from your SuiteCommerce web store. For the steps to set a banner and manager menu, see [Configure the SC Cookie Consent Extension](#).

Important: SuiteCommerce Analytics Data doesn't include default Cookie Consent text. You need to work with your legal team to create it.

Example Cookie Consent Banner

When a shopper first opens your web store page, they are presented with a cookie consent banner similar to this example. The shopper must make their choice before they can browse your site.

Your Consent Matters

We use cookies or similar technologies to deliver content and analyze usage. You can customize your consent by clicking [Cookie Settings](#), or you can choose to [Reject All](#) or [Accept All](#) cookies. For more information, see our [Cookie Policy](#) page.

[Cookie Settings](#)
[Reject All](#)
[Accept All](#)

In this example, the shopper can click:

- **Cookie Settings** — To see more information and set their privacy permissions.
- **Reject All** — To prevent the use of optional cookies.
- **Accept All** — To allow all cookies without further review.

Tip: We don't use "implied consent" for analytics or other cookies. Shoppers must actively choose to consent.

Example Cookie Consent Menu

When a shopper clicks **Cookie Settings**, they are presented with content and choices similar to this example:

Cookie Settings

We use cookies and other technology to deliver content and analyze usage. These technologies help us customize our website and make informed decisions that promote an optimized shopping experience. You can enable or disable all cookies except those listed as Strictly Necessary. For more information, please review our [Cookie Policy](#).

Strictly Necessary

We use strictly necessary cookies to enable certain website features, such as limiting search results to your geographic area. They save your privacy preferences and might be used to permit access to secure areas, such as a shopping cart. Because the site might not function as expected if these necessary cookies are disabled, they are automatically locked-in as enabled. [Learn more...](#)

☒
Analytics

We include analytics cookies to understand how you use our site and services. They help us design shopping experiences that are focused and relevant to your needs. [Learn more...](#)

☒
Third Party

This site uses third-party cookies, applications, and/or services to enhance our customers' shopping experience. Benefits include options to share website content via social media platforms and providing embedded content such as videos. To provide these benefits, a third party might need to track a portion of your online activity. [Learn more...](#)

Save Settings

Reject All

Accept All

The menu consists of these sections.

- **Cookie Settings** — Introduces the settings menu.
- **Strictly Necessary** — (No opt-out option) Describes that some cookies are required to provide website functionality.
- **Analytics** — (Defaults to disabled) Summarizes how the site can use an analytic cookie to collect behavioral data during a shopper's visit to the web store.
- **Third Party** — (Defaults to disabled) Describes how the site might use third party cookies. Examples are how these cookies enable sharing interests over social media or allow viewing content embedded from other sites.

Options available to the shopper from this menu are:

- **Save Settings** — Apply and maintain their cookie preferences.
- **Reject All** — Reject the use of optional cookies.
- **Accept All** — Allow all cookies without manually enabling each option.

✓ **Tip:** Menu text should include links that a shopper can click for more information.

Using a Custom Cookie Consent Extension

You can create a cookie consent extension to suit your unique business requirements. You must use the SuiteCommerce extensibility API to access specific methods that allow you to save a website visitor's cookie consent preferences in NetSuite. For information about creating a custom extension, see the help topic [Manage SuiteCommerce Analytics Data Cookie Preferences](#).

Setting Up the SuiteCommerce Analytics Data Feature

Use this topic to enable the analytics data feature and install/configure the cookie consent extension.

Prerequisites

The SuiteCommerce Analytics Data feature requires these or later application versions:

- NetSuite 2021.2
- SuiteCommerce 2021.2 or SuiteCommerce Advanced 2021.2

The SuiteCommerce Cookie Consent extension prerequisites are the same as for the feature:

- NetSuite 2021.2
- SuiteCommerce 2021.2 or SuiteCommerce Advanced 2021.2

 **Tip:** SuiteCommerce is a NetSuite-managed product. New releases are applied to accounts automatically. SuiteCommerce Advanced requires manual upgrades.

 **Important:** Install the SuiteCommerce Cookie Consent extension only if you will use the SuiteCommerce Analytics Data feature.

if you aren't using this feature, use the standard cookie-consent setup.

Installation Tasks

Use each set of steps to add SuiteCommerce Analytics Data to your web store environment.

1. [Enable the SuiteCommerce Analytics Data Feature](#)
2. [Install the SC Cookie Consent Extension](#)
3. [Activate the Extension for Your Web Store Domain](#)
4. [Configure the SC Cookie Consent Extension](#)
5. [Add Required Footer Links to Cookie Policy and Settings](#)

 **Tip:** NetSuite extensions are also called "SuiteApps."

Enable the SuiteCommerce Analytics Data Feature

The first task is to enable the feature in NetSuite. You must log in to NetSuite with an administrator role.

 **Important:** You see the box to enable this feature only if you've ordered the service and agreed to the terms of service.

To enable the SuiteCommerce Analytics Data feature:

1. Go to Setup > Company > Enable Features > Web Presence > Web Sites.
2. Check the **SuiteCommerce Analytics Data** box.
3. Click **Save**.

Note: You get an alert if your current SuiteCommerce release doesn't meet the prerequisite. See [Prerequisites](#).

Install the SC Cookie Consent Extension

The SuiteCommerce (SC) Cookie Consent extension provides a banner and menu that web store shoppers can use to accept or reject cookies from the site. For an overview of the extension's use, see [Shopper Notice and Explicit Consent](#).

For more information about installing an extension, see the help topic [Installing Theme and Extension SuiteApps](#).

To install the SC Cookie Consent extension:

1. Go to Customization > SuiteBundler > Search & Install Bundles.
2. In the **Keywords** field, enter the extension **Name** SC Cookie Consent.
Or you can enter the **Bundle ID**. To locate the current ID, see the help topic [Commerce Extensions](#).
3. Click **Search**.
4. Click the extension bundle **Name**.
The Bundle Details page opens.
5. Click **Install**.
6. In the confirmation popup, click **OK**.
The Preview Bundle Install page opens.
7. Click **Install Bundle**.
8. In the confirmation popup, click **OK**.
This starts the installation. The Installed Bundles page **Status** column shows a green check mark when the installation is complete.

Activate the Extension for Your Web Store Domain

After you install the extension, you must use the Extension Manager to activate it for your domain. The steps are different if you activated an extension for the domain before. For more information, see the help topic [Manage Themes and Extensions](#).

Tip: If you are installing the Extensions Manager bundle for the first time, you must also activate that extension.

To activate the extension for your web store domain:

1. Go to Commerce > Extensions > Extension Manager.

2. If you are activating an extension the domain for the first time:
 - a. Click **New Activation**.
 - b. Use the **Select a Web Site** list to select your web store.
 - c. Use **Select a Domain** to choose your store's domain.

 **Note:** If you choose a domain that is already activated, the Extension Manager automatically launches the activation.

- d. You can leave the **Subsidiary** and **Location** choices empty.
Those fields are used with SuiteCommerce InStore (SCIS).
 - e. Click **Next** and then follow the steps below to edit an existing activation.
3. If you have activated an extension for the domain before, or to continue setting up a new activation:
 - a. Click **Edit** for the activation.
 - b. Select the **Extensions** tab.
 - c. Check the **Active** box for the **SC Cookie Consent** extension.
 - d. Click **Activate**.

 **Important:** If this is the first activation for a domain, clear the domain's cache by triggering a cache invalidation request. See the help topic [Cache Invalidation](#) for details.

Configure the SC Cookie Consent Extension

After enabling the feature and installing/activating the extension, you must set up the cookie consent text and options. This setup configures the information shown to your shoppers as they decide to accept or disallow certain cookies.

 **Important:** The SuiteCommerce Analytics Data feature and Cookie Consent extension don't include default consent-management text. Any text you see in the images in this guide are for example only.

Web store owners are responsible for adding all consent information. Owners must also ensure the text complies with privacy regulations applicable to the countries, states, or regions in which they do business.

To Enter Text for Your Cookie Consent Menu:

1. Go to Commerce > Websites > Configuration.
2. Use the **Websites** and **Domain** lists to select the web store.
3. Click **Configure**.
4. Open the **Extensions** subtab.
The Cookie Consent fields appear.
5. Enter text or make a selection for each field provided.
If you leave a field empty, it doesn't appear in the cookie consent banner or settings menu.
6. Click **Save**.

Tip: These fields can use Rich Text Format (RTF) for bold, italics, and to add links to other pages or websites.

Field	How to complete
Cookie Settings Short Text	Enter a short description of how you use cookies in your SuiteCommerce web store. This description is the header paragraph for the cookie settings menu.
Strictly Necessary Cookie Text	Enter a description of any cookie that is required for your site to function. Include that this cookie is locked-in as enabled.
Analytics Cookie Text	Enter an overview of how the analytics cookie is used on your site.
Third Party Cookie Text	Enter an overview of the one or more third-party cookies used on your site. If applicable, include that third parties might track a portion of the shopper's activities. Note that you can include links to other sites for more information.
Cookie Banner Heading	Enter a short title for the banner that alerts the shopper of their cookie consent options. This is the initial banner from which a shopper must make a choice before proceeding to your web store.
Cookie Banner Text	Enter a short description of the shopper's cookie consent options. The shopper can use the banner to allow all cookies, reject all cookies, or open the cookie settings menu. It is common to include a link to your cookie policy page.
URL Cookie Policy Page	Enter the link to your cookie policy page. The link must be relative to your other SuiteCommerce web store pages. For example, enter the link as /cookie-consent.
Cookie Banner Position	Choose where the banner will appear on your landing page — at the top or at the bottom.
Cookie Banner Overlay	Select whether to use a dark or light overlay when the cookie banner displays. The overlay prevents the shopper from accessing website content before they set their cookie consent choices.

Example Cookie Consent Banner

Text shown here is for example purposes only.

Your Consent Matters

We use cookies or similar technologies to deliver content and analyze usage. You can customize your consent by clicking [Cookie Settings](#), or you can choose to [Reject All](#) or [Accept All](#) cookies. For more information, see our [Cookie Policy](#) page.

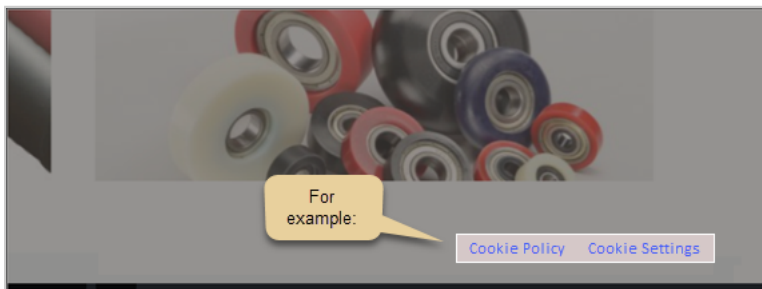

[Cookie Settings](#)
[Reject All](#)
[Accept All](#)

Example Cookie Consent Configuration

Text shown here is for example purposes only.

Add Required Footer Links to Cookie Policy and Settings

As part of the setup required for consent compliance, you must add a footer to your web store landing page or other pages as you choose. The footer must contain links to your **Cookie Policy** page and to the **Cookie Settings** menu. For example:

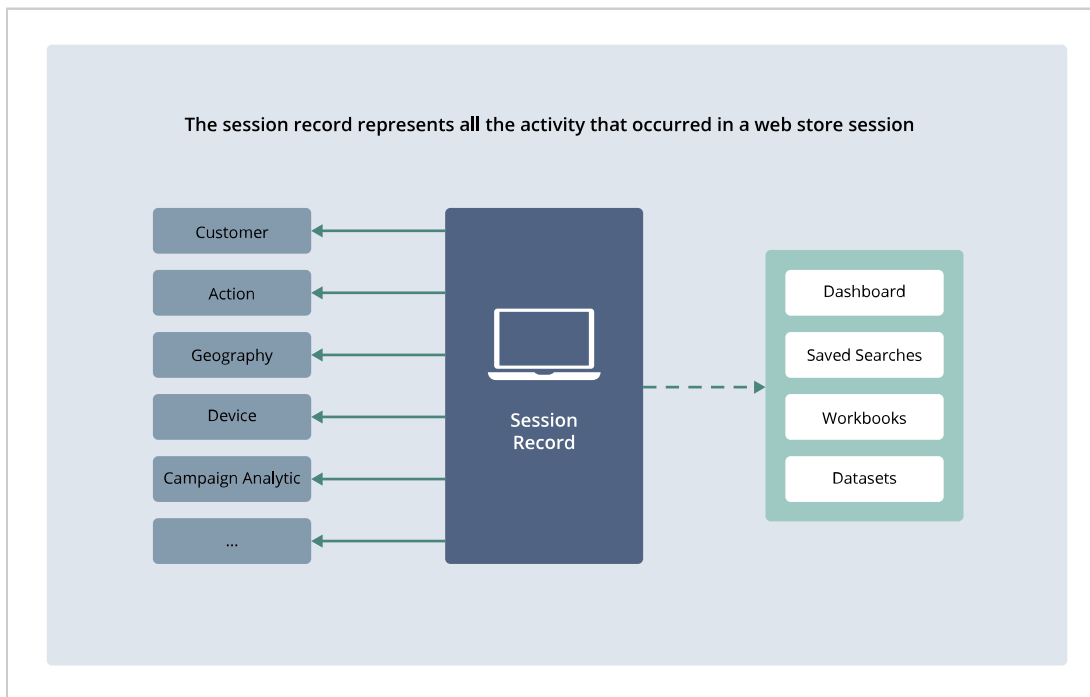

If you are using a SuiteCommerce theme, see the help topic [Configuring the Footer](#) for the steps.

Using Extensibility For a Custom Cookie Consent Process

You can create a cookie consent extension to suit your unique business requirements. You must use the SuiteCommerce extensibility API to access specific methods that allow you to save a website visitor's cookie consent preferences in NetSuite. For information about creating a custom extension, see the help topic [Manage SuiteCommerce Analytics Data Cookie Preferences](#).

Record Types

This topic lists the record types and fields used in SuiteCommerce Analytics Data. The session record forms the basis for other analytics data records.

Review these topics to see the data captured for each record type.

- [Action Record](#)
- [Campaign Analytic Record](#)
- [Customer Record](#)
- [Device Record](#)
- [Geography Record](#)
- [Journey Record](#)
- [Page URL Record](#)
- [Search Record](#)
- [Session Record](#)
- [User Interaction Record](#)

To include these records in a query or report, see [Creating a Saved Search for SuiteCommerce Analytics Data](#). To use the records to build workbook datasets, see [Creating a Workbook for SuiteCommerce Analytics Data](#).

Action Record

SuiteCommerce Analytics Data action record provides the actions a shopper took during a web store visit. For example, it lists items added to the cart, page views, and changes to profile information such as a new registration or an address update.

Analytics Workbooks		Saved Search		Content
Label	Type	Label	Type	Provides
Action Type	Select	User Interaction: Action Type	Select	The type of action a shopper performed while visiting a web store

Analytics Workbooks		Saved Search		Content
Label	Type	Label	Type	Provides
				Values can be: ■ Add to Cart ■ Customer Registration ■ Item View ■ Page View ■ Place Order ■ Remove from Cart ■ Save Address ■ Save Credit Card

Campaign Analytic Record

The SuiteCommerce Data Analytics campaign analytic record lists the campaign, if used, that prompted the shopper to visit the web store.

Analytics Workbooks		Saved Search		Content
Label	Type	Label	Type	Provides
Campaign	Text Select	Campaign Analytics: Campaign	Text Select	Campaign that brought shopper to web store
Campaign Term	Text Select	Campaign Analytics: Campaign Term	Text	Term included in campaign that brought shopper to web store

Customer Record

The SuiteCommerce Data Analytics customer record gives details about a shopper's visit, like the date and time, how they found the site, their device type, and a link to their session details.

Analytics Workbooks		Saved Search		Content
Label	Type	Label	Type	Provides
Last Session Date	Date	Customer: Last Session Date	Date	Date and time of shopper's last visit to web store
Acquisition Source	Text Select	Customer: Acquisition Source	Text	Source that prompted shopper to visit. For example, an email campaign
Most Used Device Category	Text Select	Customer: Most Used Device Category	Text	Device used by the shopper to browse web store ■ Desktop ■ Phone ■ Tablet

Device Record

The SuiteCommerce Data Analytics device record captures the category of equipment the shopper used to browse the web store.

Analytics Workbooks		Saved Search		Content
Label	Type	Label	Type	Provides
Device Category	Select	Device: Device Category	Select	Device category: - Desktop - Phone - Tablet

Geography Record

The SuiteCommerce Data Analytics geography record lists where a shopper was located when they browsed a web store.

Analytics Workbooks		Saved Search		Content
Label	Type	Label	Type	Provides
City	Text Select	Geography: City	Text	City location while browsing web store
Country	Select	Geography: Country	Select	Country location while browsing web store
State	Select	Geography: State	Select	State location while browsing web store

Journey Record

The SuiteCommerce Data Analytics journey record shows what transactions a shopper made while visiting a web store, like purchases and returns.

This record is available through the Analytics Workbooks feature only.

Analytics Workbooks		Saved Search		Content
Label	Type	Label	Type	Provides
Transaction	Select	Journey: Transaction	N/A	Transaction information

Page URL Record

The SuiteCommerce Data Analytics page URL record lists each page visited by a shopper plus, if used, the search term the shopper entered to arrive at the page.

Analytics Workbooks		Saved Search		Content
Label	Type	Label	Type	Provides
Page	Text Select	Page URL: Page	Text	Web store page visited by a shopper
Search Term	Text Select	Page URL: Search Term	Text Select	Web store page with the search term used by the shopper to go to the page

Search Record

The SuiteCommerce Data Analytics search record gives details about the search terms a shopper entered during their visit, including the date and time of the search.

Analytics Workbooks		Saved Search		Content
Label	Type	Label	Type	Provides
Time	DateTime	Search: Time	DateTime	Date and time a shopper entered a search term
Search Term	Text Select	Search: Search Term	Text Select	Search term entered by a shopper

Session Record

The SuiteCommerce Data Analytics session record tracks a shopper's visit to a web store. A session can be active for up to 24 hours.

Analytics Workbooks		Saved Search		Content
Label	Type	Label	Type	Provides
Device	Select	Device: Device Category	Select	Category of device used to visit web store
Geography	Select	Geography: City Geography: Country Geography: State	Text Select	Shopper's geographical location during the session.
Start Time	DateTime	Start Time	DateTime	Session start date and time
End Time	DateTime	End Time	DateTime	Session start date and time
Site	Select	Site	Select	Web store URL visited by the shopper
Customer	Select	Customer	Select	Information about the shopper
Referral Source	Text Select	Referral Source	Text	Source from which the shopper accessed the web store, such as a search or campaign

Analytics Workbooks		Saved Search		Content
Label	Type	Label	Type	Provides
Campaign Analytics	Select	Campaign Analytics: Campaign Campaign Analytics: Campaign Term	Text Select	Campaign details if was the referral source
Landing Page Title	Text Select	Landing Page Title	Text Select	Title of page where the shopper entered the web store
New User	Boolean	New User	Box	Identifies if session is shopper's first visit to web store as a registered user
Journey	Select	N/A	N/A	Lists any transactions made while browsing web store
User Interaction	Select	User Interaction	Select	Shopper's interactions with web store pages, searches, and items
Search	Select	Search	Text Select	Search terms entered while visiting web store

User Interaction Record

The SuiteCommerce Data Analytics user interaction record lists details about a shopper's visit, including the date and time, domain, actions, items and item quantities, and search terms entered.

Analytics Workbooks		Saved Search		Content
Label	Type	Label	Type	Provides
Time	DateTime	User Interaction: Time	DateTime	Date and time a shopper action occurred
Domain	Select	User Interaction: Domain	Select	Domain visited by shopper
Page URL	Text Select	User Interaction: Page URL	Text	URL of page visit
Action	Select	User Interaction: Action Type	Select	Shopper's actions while visiting web store
Item	Text Select	User Interaction: Item	Text Select	Item added to or removed from cart by shopper
Item Quantity	Integer	User Interaction: Item Quantity	Integer	Number of items added to or removed from cart
Commerce Category URL	Text Select	User Interaction: Commerce Category URL	Text Select	Category of item added to or removed from cart

Creating a Saved Search for SuiteCommerce Analytics Data

Use these procedures to build query-based searches that provide key data for analyzing shopper behavior and buying decisions. Searches based on SuiteCommerce Analytics Data use the fields found in the [Record Types](#) topic.

A Saved Search gives you historical data that's updated daily. The analytics data feature doesn't offer a real-time view.

To view complete details on working with saved searches, see the help topic [Saved Searches](#). Of note are steps to safeguard your shoppers' privacy by restricting internal access to searches and records. See the help topic [Permissions for Searches](#).

Overview Steps

These brief steps are an overview of setting up a Saved Search for SuiteCommerce Analytics Data.

1. Start a **New Saved Search**.
2. Choose **Customer** as the search type.
3. Go to the Criteria > Standard subtab.
4. Select **Session Record Fields...** to choose from the available filters.
5. Select the fields to view in the search results.
6. **Preview** the results.
7. **Save** your search.

Detailed Steps

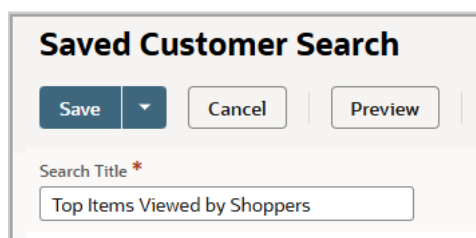

These steps include detailed steps for creating a Saved Search. Follow the links for additional information.

Defining Your Saved Search

The first steps for running a Saved Search are to define the records and fields you want to include. Then you set up how to display the results. For more information, see the help topic [Defining a Saved Search](#).

To define a saved search and the search results:

1. Go to Reports > Saved Searches > All Saved Searches > New.
2. Choose the **Search Type**, such as **Customer**.
Use case examples in this guide include the **Search Type** to choose. See [Use Cases](#).
3. Enter a name or **Search Title** for your search. The name should describe the purpose. For example, "Top Items Viewed by Shoppers."
4. If you want the search to be available to other NetSuite users in your account, check the **Public** box.

5. (Optional) Choose from the dashboard or other **View** options as desired. See the help topic [Using a Saved Search as a View](#).
6. On the **Criteria** subtab, select the data **Filter** and the **Description**. See the help topic [Defining Standard Search Filters](#).

Tip: You will use the session record as the starting point for most filters.

7. Click **Add** to include more filters as desired.
8. On the **Results** subtab, choose how to display the search results. For example, choose the sort order and the output type.
9. In the **Columns** section, choose the column order and other options.
10. In the **Drill Down Fields** section (if available), select what happens when drilling down into results.
11. If desired, choose options from the **Highlighting**, **Available Filters**, **Audience**, and other subtabs.
12. Click **Preview** to review and refine the search results.
13. Click **Return to Criteria**.
14. Click **Save** to keep the search for future use.

Also see the help topic [Displaying Saved Search Results on Your Dashboard](#).

Setting Up Saved Search Email Schedules and Alerts

You can set up system-generated email messages on the **Email** tab of a saved search page. Search results can be sent on a schedule or triggered by additions or updates to shopper records. Typical email recipients are the sales representatives assigned to your shoppers. See the help topics [Enabling Saved Search Scheduled Email](#) and [Enabling Saved Search Email Alerts](#).

Alert Triggers

Alerts are sent when a record included in your saved search is created or directly updated. NetSuite doesn't send alerts if an update comes from changes to other record types.

Note that automated alerts are not available for all Saved Searches, including searches that provide summarized results. See the help topic [Types of Saved Searches Available for Alerts](#).

Accessing Your Saved Search

You can run a saved search periodically to measure changes to key performance indicators (KPIs), such as the effectiveness of a new web store layout or sales before, during, and after a promotion.

To access a saved search:

1. Go to Reports > Saved Searches > All Saved Searches
2. To change search criteria, click **Edit** by the desired search.
3. To display search results, click **View**.

Creating a Workbook for SuiteCommerce Analytics Data

A workbook is where you analyze the results of a query against one or more datasets. You can build workbook visualizations such as tables, pivot tables, and charts to help with your analysis.

Use this procedure as a starting point to build an Analytics Workbook for SuiteCommerce Analytics Data. The procedure uses fields found in the [Record Types](#) topic.

For a discussion on using Analytics Workbooks, see the help topic [SuiteAnalytics Workbook Overview](#). For additional details on setting up a workbook, see the help topic [Creating a Workbook](#).

Note that data available for your Analytics Workbook is historical but refreshed daily. The analytics data feature isn't designed for real-time views.

Overview Steps

These brief steps are an overview of setting up a workbook for SuiteCommerce Analytics Data.

1. Create a **New Dataset** using the **Session** or **Customer** record type.
2. Build the data set by finding and dropping the desired **Session** fields to the table.
3. Add filters by finding and dropping **Session** fields to the **Criteria** bar.
4. Review the results.
5. **Save** your workbook.

The screenshot illustrates the configuration of a 'Customer Dataset' in the SuiteCommerce Analytics interface. On the left, a tree view shows the hierarchy: Customer > SCIS Customer Group > Session. The 'Session' folder is selected. On the right, the 'Criteria summary' bar shows two filters: 'Last Session Date within 7 Days ago, 1 Days ago' and 'Action: Action Type is not Place Order'. Below the criteria bar, a table displays the results of the query. The table has five columns: ENTITY ID, CUSTOMER, EMAIL, PHONE, and PRIMARY CONTACT. The data rows are as follows:

ENTITY ID	CUSTOMER	EMAIL	PHONE	PRIMARY CONTACT
-1001	Inc.	@		
-1002	Group	@		
-1003	Comp...	@	n...	
-1004	Company	@		

Detailed Steps

These steps include detailed steps for workbook creation. Follow the links for additional information.

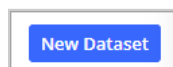

To create an Analytics Workbook:

1. Go to Analytics > Workbooks tab.
2. Click **New Workbook** in the upper right.

3. Click **New Dataset** in the upper right.

✓ **Tip:** If you already have a dataset, you can click the **Dataset Name** instead of creating a new dataset.

4. Select a record type to analyze. Use the search bar to locate a record type. Enter any word or character from the record type name. No wild cards are needed.
See [Record Types](#) for a list of records used in SuiteCommerce Analytics Data.
5. Select the desired fields and criteria filters.
See the help topics [Defining a Dataset](#) and [Dataset Criteria Filters](#).

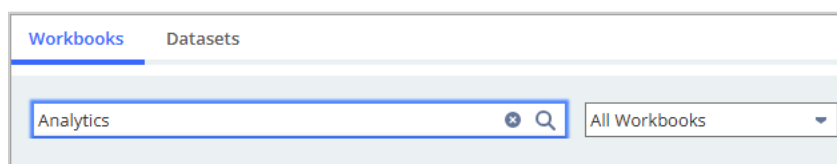

✓ **Tip:** Use the session record as the basis for all filters.

6. Click **Apply to workbook**.
7. To add another dataset, click **Connect Dataset**.
 - a. Select a record type to analyze.
 - b. Select the desired fields and criteria filters.
 - c. Click **Apply to workbook**.
8. Choose a **visualization type**.
9. Edit the layout and formatting as desired.
See the help topics [Workbook Table Views](#), [Workbook Pivot Tables](#), or [Workbook Charts](#).
10. Click **Save**.
11. Enter a name and description for the workbook and click **Save**.
12. (Optional) Click **Share** to share the workbook with other users in your NetSuite account.

To open an existing workbook:

1. Go to Analytics > Workbooks tab.
2. Click a workbook tile or enter a workbook name in the search bar.
To search, enter any word or character from the workbook name. No wild cards are needed.

✓ **Tip:** Workbook tiles labeled **Template** include the dataset only. You must select the fields and criteria.

3. To retrieve the most current data, click the More icon  and click **Clear cache**.
4. Click **Save** or **Save As** if you make changes.

Use Cases

This topic covers common SuiteCommerce Analytics use cases a web store might use to measure performance and figure out next steps for success.

- [Shoppers Who Purchased Item X and Also Viewed Item Y](#)
- [Shoppers Who Have Not Visited My Web Store Within the Last X Days](#)
- [Top Items Viewed by Shoppers](#)
- [Top Keywords Searched by a Specific Shopper](#)
- [Shoppers Who Added Items to the Cart, But Did Not Make a Purchase](#)
- [Items a Shopper Viewed Within a Time Frame](#)

The included examples show how to query the data from a Saved Search. Some examples include criteria for an Analytic Workbook setup. For more information, see:

- [Creating a Saved Search for SuiteCommerce Analytics Data](#)
- [Creating a Workbook for SuiteCommerce Analytics Data](#)

Tip: When creating a Saved Search or Analytics Workbook, you'll use the session record as the starting point for most filters.

Note: The Saved Search > Results setups shown here are examples. You can pick from the available fields to tailor results for your business model.

Shoppers Who Purchased Item X and Also Viewed Item Y

This scenario lists shoppers by name and email who bought a specific item through any NetSuite channel and also viewed a different item in a SuiteCommerce web store. The search filters the results to specific time frames.

Saved Search

Search type: Customer

Select filter: Session Record (except for Transaction filter)

Criteria Tab	Results Tab
Subtab: Standard ■ Filter: Transaction: Item Description: Is item X ■ Filter: Session Record: User Interaction: Action Type Description: is item view ■ Filter: Session Record: User Interaction: Item (Select) Description: is item Y ■ Filter: Session Record: Start Time Description: is within last month	Sort By: ID (ascending) Subtab: Columns Fields: ■ ID ■ Name ■ Email ■ Session Record: User Interaction: Item ■ Session Record: User Interaction: Action Type

Shoppers Who Have Not Visited My Web Store Within the Last X Days

This use case shows shoppers by company name and email who haven't visited your web store within a specific number of days from today. You can adjust the period for days, weeks, and so on.

Saved Search

Search type: Customer

Select filter: Session Record

Criteria Tab	Results Tab
Subtab: Standard Filter: Session Record: Customer: Last Session Date Description: is not after ten days ago Filter: Session Record: Customer: Last Session Date Description: is not empty	Sort By: Company Name (ascending) Subtab: Columns Fields: - ID - Company Name - Email - Session Record: Customer: Last Session Date

Analytic Workbook

Create dataset from: Customer Record or Session Record

Root Record Type	Joined Record Type	Custom Formula Field	Data Grid	Criteria Filters
Customer	(none)	(none)	- Session: Customer - Email - Last Session Date	Last Session Date: before 10 Days ago

Criteria Filters, Data Grid, and Results

Example analytics setup for this use case.

Top Items Viewed by Shoppers

Build this search to see which items your shoppers viewed most within a chosen time frame. Results show how many times each item was viewed.

Saved Search

Search type: Customer

Select filter: Session Record

Criteria Tab	Results Tab
Subtab: Standard ■ Filter: Session Record Description: is after 10 days ago ■ Filter: Session Record: User Interaction: Action Type Description: is Item view	Sort By: Session Record: User Interaction: Time (descending) Subtab: Columns ■ Field: Session Record: User Interaction: Item Summary Type: Group ■ Field: Session Record: User Interaction: Time Summary Type: Group

Top Keywords Searched by a Specific Shopper

Use this example to show the top search keywords a shopper entered while visiting your web store on a specific date.

Saved Search

Search type: Customer

Select filter: Company Name

Criteria Tab	Results Tab
Subtab: Standard ■ Filter: Company Name Description: is company x	Sort By: Session Record: Search: Time (descending) Subtab: Columns ■ Field: Company Name Summary Type: Group ■ Field: Session Record: Search: Search Term Summary Type: Group ■ Field: Session Record: Search: Time Summary Type: Count

Shoppers Who Added Items to the Cart, But Did Not Make a Purchase

Create this search to see who added items to their online cart but didn't complete the purchase. The search shows events within the time frame you enter.

Saved Search

Search type: Customer

Select filter: Session Record

Criteria Tab	Results Tab
Subtab: Standard ■ Filter: Session Record: User Interaction: Action Type Description: is Add to Cart ■ Filter: Transaction: Amount Description: is empty ■ Filter: Session Record: User Interaction: Time Description: is within last month	Sort By: Company Name (ascending) Subtab: Columns Fields: ■ ID ■ Company Name ■ Email ■ Session Record: User Interaction: Item ■ Session Record: User Interaction: Time

Note: The result fields shown here serve as an example. You can pick from the available fields to tailor results for your business.

Items a Shopper Viewed Within a Time Frame

This case identifies items a shopper viewed while visiting your web store. You can use the time frame to see what interested them and compare it to any current promotions or specials.

Saved Search

Search type: Customer

Select filter: Session Record

Criteria Tab	Results Tab
Subtab: Standard ■ Filter: Session Record: User Interaction: Action Type Description: is Item view ■ Filter: Session Record: User Interaction: Time Description: is within last month	Sort By: Company Name (ascending) Subtab: Columns Fields: ■ Company Name ■ Email ■ Session Record: User Interaction: Item ■ Session Record: User Interaction: Time
