Copyright © 2005, 2025, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software" or "commercial computer software documentation" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. Overview

① Applies to: SuiteCommerce | SuiteCommerce MyAccount | SuiteCommerce Advanced

If you're setting up a Commerce website for the first time, these topics will guide you through the first steps to get your site up and ready to make it your own. They're your starting point and cover the basics you need to create a site.

These steps assume you've already set up one or more domains for your Commerce website. If you haven't done this, see the help topics [Domains](#) and its subtopics for more information. After your domain is ready, return to this section to continue.

Explore the following topics to learn more about setting up a Commerce site:

Record

Next Steps

Enable Features and Set Preferences

Applies to: SuiteCommerce | SuiteCommerce MyAccount | SuiteCommerce Advanced

After the correct modules are provisioned for your NetSuite account, you must:

- Enable all required features for a Commerce website.
- Set some general NetSuite preferences.

To enable features for Commerce websites:

1. In NetSuite, go to Setup > Company > Enable Features.
2. On the **Enable Features** page, click the **Web Presence** tab and enable the following required features:
 - **Web Site** field group:
 - Web Site
 - Advanced Site Customization
 - Descriptive URLs
 - One of the following, depending on the application you want to install:
 - SuiteCommerce
 - SuiteCommerce MyAccount
 - SuiteCommerce Advanced
 - Site Management Tools
 - **Publishing** field group:
 - Host HTML Files
 - **Access** field group:
 - Online Ordering
3. On the **SuiteCloud** tab, enable the following required features:
 - **SuiteScript** field group:
 - Client SuiteScript
 - Server SuiteScript
 - SuiteScript Server Pages
 - **SuiteTalk** field group:
 - SOAP Web Services
4. Click **Save**.

To set NetSuite preferences:

1. In NetSuite, go to Setup > Company > General Preferences.
2. Check the **Web Site Hosting Files Always Available** field.
This sets all files in the website hosting folder to public.
3. Save the General Preferences record.

Now that the required features are enabled, you are ready to [Install Your Commerce Website Applications](#).

Note: If your account contains a Site Builder record that you want to disable, see the help topic [Disabling Site Builder in your Account](#).

Install Your Commerce Website Applications

i Applies to: SuiteCommerce | SuiteCommerce MyAccount | SuiteCommerce Advanced

When you're installing Commerce website applications for the first time, you'll need to install the latest version of the appropriate SuiteApp (bundle) and any other related SuiteApps you need. This process creates or installs records and files into your NetSuite account that are necessary to host your website.

i Note: Before you get started, you'll need to set up one or more domains for your Commerce website, enable features, and set your site preferences. See for more information.

To install your SuiteCommerce application:

1. Go to Customization > SuiteBundler > Search & Install Bundles.
2. Install all SuiteApps (bundles) required for your implementation.

In the **Keywords** field, enter the Bundle ID of the version of the SuiteApp you want to install and click **Search**. See the following table for a list of SuiteApps and their Bundle IDs. Contact your NetSuite representative if you do not have access to shared SuiteApps.

i Note: Most Commerce SuiteApps are managed, and you automatically receive updates for fixes and enhancements for that SuiteApp without any need to update manually or migrate for future releases. But some SuiteApps, like SuiteCommerce Advanced, aren't managed and need you to update them manually.

SuiteApp	Bundle ID	Application	Required/Optional	Managed?	Shared?
SuiteCommerce	572927	- Suite Commerce - Suite Commerce MyAccount	Required	Yes	Yes
SuiteCommerce Advanced 2025.2.10	572916	SuiteCommerce Advanced	Required	No	Yes
SuiteCommerce Configuration	381166	- Suite Commerce - Suite Commerce MyAccount - Suite Commerce Advanced	Required	Yes	No
SuiteCommerce Extension Management	521562	- Suite Commerce - Suite Commerce MyAccount - Suite Commerce Advanced	Required  Important: You must install this SuiteApp before installing any theme or extension bundles.	Yes	Yes
SuiteCommerce Base Theme	572857	Suite Commerce	Required	Yes	Yes

SuiteApp	Bundle ID	Application	Required/Optional	Managed?	Shared?
		- Suite Commerce MyAccount - Suite Commerce Advanced	 Note: You must activate a theme for a domain. You can activate only one theme per activation/domain at a time, but you can activate the same theme across multiple domains. There are other themes available to you. For details, see the help topic Available Commerce Themes and Supported Features .		
SMT Core Content Types	190323	- Suite Commerce - Suite Commerce Advanced - Site Management Tools	Required  Note: The following caveats apply to this bundle: - For SuiteCommerce and SuiteCommerce Advanced 19.1 or later, the SMT Core Content Types bundle is automatically updated. Automatic updates are not available for SuiteCommerce Advanced 18.2 or earlier. You must contact professional services to upgrade to a newer version of SuiteCommerce Advanced or to SuiteCommerce. - You must have SuiteCommerce or SuiteCommerce Advanced 19.1 or later installed to have access to the Enhanced Merchandising Zone. See the help topic Merchandising Zone Content.	Yes	Yes
Product Merchandising	48476	- Suite Commerce - Suite Commerce Advanced	Optional Install this SuiteApp if you want to use Merchandising Zones.	No	Yes
Reference Product Lists Records	53051	- Suite Commerce - Suite Commerce Advanced	Optional Install if implementing Product Lists or Save-for-Later lists. For details on using Product List Records, see the help topic Product List Custom Records .	Yes	No
SC Google Tag Manager Editor	250341	- Suite Commerce - Suite Commerce Advanced	Optional Install if implementing Google Tag Manager. For details on using SuiteCommerce Google Tag Manager Editor, see the help topic Google Tag Manager .	Yes	No
Reference Product Review Records	53053	- Suite Commerce - Suite Commerce Advanced	Optional Install if implementing Product Reviews. For details on using Product Review Records, see the help topic SuiteCommerce Product Reviews .	Yes	No

- Verify that the correct SuiteApp is returned in the search and select it.
- Review the SuiteApp details and then click **Install**.

 **Note:** The **Installed Bundles** page displays a list of SuiteApps. Installation of a SuiteApp might take some time. The status column indicates the progress. Refresh the page to update the status.

When you've completed installing all SuiteApps required for your needs, it's time to point your website application to a domain. See [Link Your Commerce Applications to a Domain](#) for details.

SuiteCommerce Roles and Permissions

Applies to: SuiteCommerce | SuiteCommerce MyAccount | SuiteCommerce Advanced

Employees use SuiteCommerce and NetSuite differently depending on their roles.

The following standard roles are available in your NetSuite account after you install a Commerce website application:

- **Administrator** – The Administrator has **all** permissions available in your NetSuite account at **all** levels. For more information about the Administrator role, see the help topic [NetSuite Account Administration](#).
- **Store Manager** – The Store Manager role manages non-administrative website content. See the help topic [Standard Roles Permissions Table](#) for a list of the permissions and permission levels for the Store Manager role.

The following roles interact with your Commerce web store:

- **Lead** – Leads are users who have created an account for your web store. After a lead makes a purchase, they are converted into a customer. For more information about the Lead role, see the help topic [Lead](#).
- **Customer** – Customers buy things in your web store. For more information about the Customer role, see the help topic [Customer](#).

Note: The Prospect role isn't meant for use in a Commerce web store. If someone with the Prospect role tries to create an account, they'll get an error.

See the following help topics for useful information about roles and permissions:

- [NetSuite Users & Roles](#) – Describes how to manage NetSuite roles and permissions to provide your account users with the access they need.
- [NetSuite Roles Overview](#) – Includes information about standard and custom roles, managing roles, permission differences, and the role search feature.
- [Users and Roles in Site Management Tools](#) – Details the roles that manage website content with Site Management Tools.

Differences Between the Administrator and Store Manager Roles

The Store Manager role is intended to manage your website's content but not the website itself.

The Store Manager can't create a new site and perform tasks such as technical and workflow settings changes. These tasks are performed by the Administrator. See the help topic [NetSuite Account Administration](#) for more information about key administrator tasks.

Link Your Commerce Applications to a Domain

Applies to: SuiteCommerce | SuiteCommerce MyAccount | SuiteCommerce Advanced

After you've installed your Commerce application in your NetSuite account, you'll need to link it to a domain before you can see your site. First, link it to a development domain for testing. When you're happy with your web store, you can use the same steps to link it to a production domain.

Important: These steps assume you've already set up one or more domains for your website. If you haven't yet acquired a domain and set it up for NetSuite, see the help topic [Domains](#). After your domain is ready, return to this topic to set up your web store.

To complete your application installation, you need to perform the following procedures:

- [Link SSP Application to Your Domain](#) – Link the SSP application for your implementation to a previously set up domain.
- [Deploy SSP Application to Your Domain](#) – Deploys the SuiteCommerce SuiteScript 2.0 (SS2) application for your implementation to your domain or site.

Note: A development domain is the domain used by developers before your site goes live. In the early stages of site set up, the best practice is to link your application to this development domain to ensure everything is set up correctly. When you are ready to go live with your web store, follow this same procedure to link the application to your production domain.

Link SSP Application to Your Domain

Applies to: SuiteCommerce | SuiteCommerce MyAccount | SuiteCommerce Advanced

This step links the SSP application for your implementation to a previously set up domain.

To link your application to your domain:

1. In NetSuite, go to Commerce > Hosting > SSP Applications.
2. Click **View** next to the correct application:

Implementation	Application Name
SuiteCommerce	SuiteCommerce
SuiteCommerce MyAccount	SuiteCommerce
SuiteCommerce Advanced	SuiteCommerce Advanced - Dev xxxx (where xxxx equals the SCA version being installed)

3. Click **Link to Domain** to link touch points to your domain.

Important: Touch points configured for a domain override the touch points configured for the related web site. To take advantage of themes and extensions, you must link the SSP to a domain. However, you must also define touch points on the web site record. Domain-only touch point configuration is not supported. See the help topics [Link a Website or Domain to an SSP Application](#) and [Select Supported Touch Points](#) for details.

If you're implementing SuiteCommerce Advanced 2019.1 or later, the next step is to deploy the SS2 SSP application for your implementation. See [Deploy SSP Application to Your Domain](#).

Deploy SSP Application to Your Domain

Applies to: SuiteCommerce | SuiteCommerce MyAccount | SuiteCommerce Advanced

The next step is to deploy the SuiteCommerce SuiteScript 2.0 (SS2) application to a domain and a site in NetSuite.

Note: If you're implementing SuiteCommerce Advanced 2018.2 or earlier, you can disregard this procedure.

To deploy the SuiteScript 2.0 (SS2) application:

1. In NetSuite, go to Commerce > Hosting > SSP Applications.
2. Click **View** next to the correct **SS2** application:

Note: The SS2 SSP application is included with SuiteCommerce, SuiteCommerce MyAccount, and SuiteCommerce Advanced applications (2019.1 and later). This SSP application is required to manage scripting written in SuiteScript 2.0. For an advanced description of SSP applications written for SuiteScript 2.0, see the help topic [SuiteScript 2.0 SSP Applications](#).

Implementation	Application Name
SuiteCommerce	SuiteCommerce SS2
SuiteCommerce MyAccount	SuiteCommerce SS2
SuiteCommerce Advanced 2019.1, 2019.2, and 2020.1	SuiteCommerce Advanced - Dev xxxx SS2 (xxxx equals the SCA version being installed; for example SuiteCommerce Advanced - Dev 2019.2 SS2)
SuiteCommerce Advanced 2020.2 and later	SuiteCommerce Advanced - Dev xxxx v2 (xxxx equals the SCA version being installed; for example SuiteCommerce Advanced - Dev 2020.2.0 v2)

3. If your Commerce website uses a single, secure domain for shopping and checkout:

Note: This step includes SuiteCommerce MyAccount implementations, which should be set up to use a single, secure domain.

- a. In the SSP Application record, click **Deploy to Domain**.
 - b. In the **Domain** field, select the domain for your site.
 - c. Click **Save**.
4. If your Commerce web store uses two separate domains for shopping and checkout:
 - a. In the SSP Application record, click **Deploy to Site**.
 - b. In the **Deploy to All Shopping Domains on Site** field, select the site associated with your shopping domain.
 - c. In the **Deploy to Checkout Domain on Site** field, select the site associated with your checkout domain.

Now that your applications are installed and properly linked to a domain, you're ready to configure the Web Site Setup record. See [Prepare the Web Site Setup Record](#) for details.

Prepare the Web Site Setup Record

Applies to: SuiteCommerce | SuiteCommerce MyAccount | SuiteCommerce Advanced

After installing your application, you're ready to set preferences for your site. To do this, access the Web Site Setup Record in NetSuite and follow these steps. After that, you can view your site on a development domain.

Explore the following topics to learn how you can edit the Web Site Setup record and prepare your site:

- [Set Minimum Site Record Fields](#)
- [Set Up Initial Field Sets](#)
- [Set Up a Initial Search Index](#)

You can also view the [Comprehensive Web Site Setup Reference](#) topic for a list of all options located on the Web Site Setup record.

Set Minimum Site Record Fields

Applies to: SuiteCommerce | SuiteCommerce MyAccount | SuiteCommerce Advanced

Although you can set up many features and fields using the Web Site Setup record, a few minimum settings are required before you can view your site on a domain. This topic explains the minimum settings you'll need to get your site up and running.

Later, you can view the [Comprehensive Web Site Setup Reference](#) topic for more detailed configuration options.

The minimum setup requirements depend on the type of site you're implementing:

- [Minimum Website Setup for SuiteCommerce MyAccount](#)
- [Minimum Website Setup for SuiteCommerce and SuiteCommerce Advanced](#)

Minimum Website Setup for SuiteCommerce MyAccount

Applies to: SuiteCommerce MyAccount

This topic explains the minimum setup requirements to get your SuiteCommerce MyAccount site running. For more information about other settings and options available on the Web Site Setup record, see the help topic [Comprehensive Web Site Setup Reference](#).

To set minimum Web Site record fields for SCMA:

1. In NetSuite, go to Commerce > Websites > New to launch the **New Web Site** page.
This page describes each type of website available for you to set up. Your implementation only lets you select from options provisioned for your account. For more detailed information about each product, see the help topic [SuiteCommerce Website Comparisons](#).
You must have a license available to select a product. Contact your NetSuite administrator if you do not have a provisioned license for SuiteCommerce MyAccount.

2. Click **Select** under **SuiteCommerce MyAccount**.
3. In the **Display Name** field add a name that you want to display in the heading of your site.
This name is exposed to your customers. Do not use the special character ' as part of the display name.
4. In the **Internal Name** field, add a name for your site as you want it to appear in your NetSuite account.
This name isn't exposed to customers. Fill in this field, even if the name is identical to your Display Name.
5. On the **Setup** tab:
 - a. From the **Default Hosting Root** dropdown list (under Home Page), select the folder where you store HTML files for your web site. This should be **Website Hosting Files : Live Hosting Files**.

Minimum Website Setup for SuiteCommerce and SuiteCommerce Advanced

Applies to: SuiteCommerce | SuiteCommerce Advanced

This topic explains the minimum setup requirements to get your SuiteCommerce or SuiteCommerce Advanced site running. For more information about other settings and options available on the Web Site Setup record, see the help topic [Comprehensive Web Site Setup Reference](#).

To set minimum Web Site record fields for SC and SCA:

1. In NetSuite, go to Commerce > Websites > New to launch the **New Web Site** page.
This page describes each type of website available for you to set up. Your implementation only lets you select from options provisioned for your account. For more detailed information about each product, see the help topic [SuiteCommerce Website Comparisons](#).
You must have a license available to select a product. Contact your NetSuite administrator if you do not have a provisioned license for SuiteCommerce or SuiteCommerce Advanced.
2. Click **Select** associated with your site:
 - SuiteCommerce
 - SuiteCommerce Advanced
3. In the **Display Name** field add a name that you want to display in the heading of your site.
This name is exposed to your customers. Do not use the special character ' as part of the display name.
4. In the **Internal Name** field, add a name for your site as you want it to appear in your NetSuite account.
This name isn't exposed to customers. Fill in this field, even if the name is identical to your Display Name.
5. On the **Setup** tab:
 - a. From the **Default Hosting Root** dropdown list (in the Home Page section), select the folder where you store HTML files for your web site. This should be **Website Hosting Files : Live Hosting Files**.
6. On the **Shopping** tab, **Currency** and **Languages** areas, enable at least one currency and one language to be online as the default.

7. To use the shipping feature on your website, check **Shipping Information is Required**. See the help topic [Shipping Page](#).
This applies to SuiteCommerce and SuiteCommerce Advanced releases 2020.1.2 and later.
8. Save the Web Site Setup record.

Set Up Initial Field Sets

Applies to: SuiteCommerce | SuiteCommerce MyAccount | SuiteCommerce Advanced

Field sets expose information from NetSuite records to your website. Before you can use your Commerce website effectively, you need to set up field sets in your Web Site Setup record. How you do this depends on your implementation:

- [Initial Field Sets for SuiteCommerce MyAccount](#) – You only need to set up one field set for SCMA implementations, as described below. We don't offer a setup script, but this setup is minimal.
- [Initial Field Sets for SuiteCommerce and SuiteCommerce Advanced](#) – It's best to use a pre-defined script (below) to quickly add the required Field Sets to your new site. Use this field set setup script to get started. Later, you can add fields specific for your business to this script or accept the defaults to begin.

Initial Field Sets for SuiteCommerce MyAccount

Applies to: SuiteCommerce MyAccount

Before you can use SuiteCommerce MyAccount, you'll need to set up the **order** fields in your Web Site Setup record. If you don't set these fields, the Order History section of My Account won't work as expected. For more information about field sets, see the help topic [Define Field Sets](#).

To add the order field to the Web Site Setup Record:

1. In NetSuite, go to Commerce > Websites > Web Site List.
2. Click **Edit** next to the website to which you're setting up SuiteCommerce MyAccount.
3. Go to the **Field Sets** subtab.
4. Add the **orders** field sets:
 - a. In the **Name** column, add: **Order**
 - b. In the **fieldset id** column, add: **order**
 - c. In the **Fields Included in Field Set** column, click the **Set** button.
 - d. Select the fields listed below from the **Field Name** list and click **Add** for each.

Name	Field Set ID	Fields Included in Field Set
Order	order	itemimages_detail: Item Images (Detail) itemoptions_detail: Item Options (Detail) onlinecustomerprice_detail: Price for Current Customer (Detail) displayname: Display Name internalid: Internal ID itemid: Name

Name	Field Set ID	Fields Included in Field Set
		isfulfillable: Can be Fulfilled/Received storedisplayname2: Store Display Name 2 urlcomponent: URL Component outofstockmessage: Out Of Stock Message showoutofstockmessage: Display Out-of-Stock Message isinstock: In Stock isbackorderable: Available for Backorder ispurchasable: Available for Purchase pricelevel1: Base Price pricelevel1_formatted: Base Price (Formatted) stockdescription: Stock Description matrixchilditems_detail: Matrix Child Items (Detail) itemtype: Type minimumquantity: Minimum Quantity maximumquantity: Maximum Quantity isonline: Available Online isinactive: Inactive

- e. After adding the fields to all of the field sets, click **Submit**.
5. Click **Save** to save the Website record.

Initial Field Sets for SuiteCommerce and SuiteCommerce Advanced

Applies to: SuiteCommerce | SuiteCommerce Advanced

If you're implementing SuiteCommerce or SuiteCommerce Advanced, you can get started with a pre-defined setup script. This script defines a standard set of fields to expose to your web store. Later, you can add fields specific for your business to this script or accept the defaults to begin. For advanced field set overview and setup instructions, see the help topic [Define Field Sets](#).

Warning: Take great care when editing field sets, as this may cause unintended results and compromise site integrity.

To set up the Field Set Setup script:

1. Copy the contents of the [Field Set Setup Script](#) to a text editor.
2. Edit the `siteID` variable with the site id you want to use.

The site id is displayed in the URL when you go to the Web Site Setup page for the desired site.

Note: The default value of 9999 fails, since no site is ever assigned an ID of 9999.

3. Set the configurable options as required.

Each Field Set Setup Script includes a few options you can set. The default options add fields for using Product Reviews but not for Pickup In Store. Set the `has_store_pickup` flag to true if you intend to use Pickup In Store in your web store.

4. Optionally, add any field set definitions as needed for your site.

The script includes all required fields and provides a good starting point for your website.

Important: The Field Set to return item details is named **details**. If you use a different name, you must configure that change as described in [Items Fields Advanced Name](#) on the [Backend Subtab](#).

5. Save your modified script.

Your modified script can be used to quickly replicate a site setup during development.

6. Execute the script in the SuiteScript debugger.

- a. Go to Customization > Scripting > Script Debugger.
- b. Enter the SuiteScript Debugger domain (by clicking the link as indicated) and then re-enter your login credentials if prompted.
- c. From the API Version dropdown, select 1.0.

Important: This script can only be run against **SuiteScript Version 1.0**.

- d. Copy and paste your modified script code into the debugger.
- e. Click **Debug Script** and then hit the **Continue** button.

After the script has executed, field sets are properly populated and can be verified in the **Field Sets** tab of the Web Site Setup record.

When you have completed this initial field set setup, you should now set up a rudimentary item search index for your web store. See [Set Up a Initial Search Index](#).

Field Set Script

Note: If you've already set up fields for your site, delete any field sets currently defined for the website before running this script. Use caution when doing this as deleting field sets required for your site can have unintended results.

[Field Set Setup Script](#)

Set Up a Initial Search Index

Applies to: SuiteCommerce | SuiteCommerce Advanced

After setting up your field sets, SuiteCommerce and SuiteCommerce Advanced customers should create a search index. This section explains how to set up a basic search index to get you started. For more detailed instructions, see the help topic [Search](#).

Your web store needs the search index to access data from your defined field sets.

To set up the search index:

1. In NetSuite, go to Commerce > Websites > Web Site List.
2. Click **Edit** next to the site you want to set up.
3. On the **Search Index** tab, **Facet Fields** subtab, select at least one facet in the **Facet Field Name** field to enable in the frontend (for example, Online Price).

4. Save the Web Site record.

When you've completed this rudimentary search index, see [Next Steps](#) for further instructions on setting up your web store.

Next Steps

i Applies to: SuiteCommerce | SuiteCommerce Advanced | SuiteCommerce MyAccount

After you complete the steps outlined in the [Getting Started](#) section, you can view your site on your development domain. At this point, this is a basic site to get you started. Your next steps depend on the type of site you are creating:

- [SuiteCommerce MyAccount Sites](#)
- [SuiteCommerce and SuiteCommerce Advanced Sites](#)

SuiteCommerce MyAccount Sites

i Applies to: SuiteCommerce MyAccount

SuiteCommerce MyAccount sites don't incorporate shopping or checkout-related features. Browse through the following setup options to see what is best for your site. But keep these main topics in mind as your most important next steps:

- [Item Record Setup](#) – Set up your item records to allow product images to appear on a customer's purchase history, returns, invoices, and quotes.
- [Themes & Extensions](#) – Install and activate themes to change the look and feel of your site or extensions to add functionality.
- – Set up your site's My Account area so your customers can access subscriptions, review orders, etc.

SuiteCommerce and SuiteCommerce Advanced Sites

i Applies to: SuiteCommerce | SuiteCommerce Advanced

The SuiteCommerce Storefront topics offer many options for your site, from item search preferences to marketing features and site analytics. Browse through the various set up options to see what is best for your site. But keep these main topics in mind as your most important next steps:

- [Web Store Items](#) – Make items that are set up in NetSuite available to site visitors for viewing and purchasing on your web store.
- [Transactions](#) – Set up payments, shipping, and checkout.
- [Themes & Extensions](#) – Install and activate themes to change the look and feel of your site or extensions to add functionality.
- [Search](#) – Set up item search to help customers quickly find items they are looking for.
- [Orders](#) – Make online ordering quick and simple for your customers.
- – Set up your site's My Account area so your customers can access subscriptions, wishlists, review orders, etc.
- – Optimize your site for search engines and set up site analytics.
- [Marketing](#) – Enable features to help you reach out and attract customers.

Site Management Tools

The Site Management Tools user interface lets you manage and preview content in real-time using an unpublished version of your site. You drag and drop new content, edit or remove existing content, and rearrange content by dragging it from one location to another. See the help topic [Site Management Tools Overview](#) to learn more about SMT, including the types of content you can manage, how to set it up, and how to use it.

Site Management Tools help you perform several important website management related tasks, including:

- Manage content (HTML, text, images, and merchandising zones)
- Add landing pages and enhance existing pages
- Customize and enable skins for themes
- Change page layouts
- Manage commerce categories and subcategories
- Assign items to categories
