If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

SuitePeople Workforce Management

SuitePeople Workforce Management (WFM) gives you one solution to streamline shift scheduling, track time and attendance for your team, and calculate wages.

The visual scheduling tool lets managers see exactly where they need to add or adjust shifts.

Employees can clock in and out on a computer or mobile device with digital time tracking.

The mobile app makes it convenient for managers and employees to view schedules, manage shift swaps, and more.

The built-in wage rules automatically calculates wages and works seamlessly with SuitePeople U.S. Payroll.

For more information about WFM, see the following topics:

Workforce Management Terminology

The following table defines usage of terms in Workforce Management.

Term	Definition	Related Terms
Access Group	A permission structure in WFM that assigns users to specific roles or access levels, determining their capabilities within the WFM platform.	
Activation Code	A one-time code used in WFM for employee or device registration and activation of mobile or time clock applications.	
Allowance	A set additional amount awarded to employees via WFM when certain shift conditions are met. You can establish rules, such as for the first shift of a given day, and associate allowances to them, such as for uniform or laundry.	
API Keys	Unique identifiers provided to customers for securely accessing WFM APIs, granting integration capabilities with external systems or custom applications. These are requested from the NetSuite Support team.	

Term	Definition	Related Terms
Attestation	A WFM feature that allows employees to accept or dispute their approved hours with their manager.	
Audit Logs	System-generated records in WFM that capture user activities, configuration changes, and key events for compliance and troubleshooting.	
Automatch	A WFM approval feature that automatically approves punches falling within defined tolerance limits of a scheduled shift.	Rounding
Availability	An employee request or specification of their preferred or available times for scheduling. Managers can approve, deny, or change employee availability. In a wage agreement, it's a setting used to assign the region where the agreement applies.	
Biometric or Fingerprint Functionality	An optional feature in WFM, available for Windows, that enables employee identification and time capture using fingerprint data, subject to legal compliance responsibilities for biometric data collection.	
Brand	A top-level grouping that can be set up for organizations to segregate across their different product or service offerings. Every location has to be associated to a brand and will inherit its settings.	
Classification	A component of a wage agreement, which is used to assign employees specific pay rates and conditions based on factors like level, employment status, location, or job.	
Condition	A component of a wage agreement, which specifies when particular pay rates, penalties, or allowances apply to employee shifts. The four types of WFM conditions are: Regular Rate, Penalty Rate, Overtime Rate, and Allowance or Penalty.	Rule
Contract Hours	A feature available for customers in Australia, which allows organizations to define, track, and enforce employee contractual working hours within shift scheduling and payroll calculations.	
Cross-Agreement Linking	A feature allowing the connection of multiple wage or employment agreements for an employee. Linking allows employees to be paid against separate wage agreements at different WFM locations. This feature supports complex scheduling and payroll scenarios involving more than one agreement.	
Daily Shifts	A WFM scheduling view for one location and one day used to create and edit shifts, set breaks, and manage daily staffing against KPIs and forecasts.	Weekly Shifts, Multi-Location Shifts, Employee Scheduling
Day Parts	Defined segments of the day, such as morning or evening, used for more granular labor forecasting, staffing, or wage application.	
Drop Pre-Approval	A feature that requires a manager to authorize an employee's request to release a scheduled shift before it is offered to others.	

Term	Definition	Related Terms
Employed User or Active WFM Employee	A user whose WFM employment status is not Terminated.	
Employee PIN Code	A unique numeric code assigned to employees for secure login or time capture on WFM time clocks or portals.	
Employee Scheduling	A core functionality in WFM used to plan, assign, and manage employee shifts, enabling efficient and compliant workforce deployment.	Shifts: Daily, Weekly, Multi-Location
Enhanced Timesheets Using WFM Wage Rules	A WFM feature that enables employees to enter time in weekly timesheets, automatically calculate regular and overtime hours based on configured wage agreements and rules, and integrate approved time entries with SuitePeople U.S. Payroll for accurate, automated payroll processing.	
Extra Hours	Additional scheduled staff coverage beyond labor model forecasts, either fixed or dynamic, to support operational needs such as preparation or closing tasks.	
Financial Configuration	Settings available for customers in Australia, which are used for managing wage-related financial data. Settings include bank details, superannuation funds, tax file details, visa details, and term breaks.	
Forecasting or Sales Forecasting	A WFM planning feature that imports or references POS sales or unit data to generate forecasts that drive labor deployment and scheduling targets. WFM customers must configure and manage data to build forecasts.	
Job	A predefined field assigned to shifts to indicate the work an employee performs and to control shift eligibility. Employers can map the job field to NetSuite records on the employee record for time allocation.	
Junior Validation Rules	Validation rules designed to assist with compliance to specific state regulations that apply to employees classed as juniors by age.	
KPI (Key Performance Indicators)	A metric displayed in dashboards and reports to help management evaluate performance. These include total hours, wage cost and sales, labor percent, productivity, and labor efficiency.	
Labor Analytics Dashboard	A visual display of various real-time insights into labor metrics or KPIs (key performance indicators), which you can configure for single or multiple locations to manage multi-level operations. Labor metrics include hours worked, wage costs, labor cost percentage, and others.	
Labor Deployment Model	A configuration that translates forecast metrics, such as sales and units, into shift suggestions for each time interval for different stores. Models can be assigned to locations.	Forecasting
Leave or Time-Off Type	A WFM record that categorizes employee time off and defines settings such as default hours per day, multiplier or loading, weekend costing, and payroll or integration mappings to NetSuite Time-Off types.	

Term	Definition	Related Terms
	The three default leave types are: Annual Leave, Sick Leave, and Unpaid Leave. You can configure other leave types, including Time in Lieu (TIL) or Flexitime.	
Location	A predefined field typically representing a physical work site whose schedules, employees, and sales data are managed in WFM. Employers can map the location field to NetSuite records on the employee record for time allocation.	Primary Location
Maximum Hours	A scheduling constraint in SuitePeople WFM that sets the upper limit of hours an employee can be scheduled or can work within a defined period.	Minimum Hours
Minimum Hours	A scheduling constraint in SuitePeople WFM that sets the lowest number of hours an employee can be scheduled or can work within a defined period.	Maximum Hours
Mobile Applications	Native apps for WFM, including NetSuite Workforce Management and NetSuite Time Clock, that support employee and manager self-service, shift management, and time capture on iOS and Android devices.	
Multiplier	A percentage applied to base pay rates, used for overtime, penalty, or allowance calculations.	
Multi-Location Shifts	A WFM scheduling view that consolidates shifts across multiple locations to enable cross-site planning and management from a single screen.	Daily Shifts, Weekly Shifts, Employee Scheduling
Opening Hours	The business or departmental operating hours used to guide labor deployment and scheduling.	
Open Shift	An unscheduled or unassigned shift in WFM that needs to be filled, allowing managers or eligible employees to select and assign themselves as needed.	
Over-Unders	Metrics in WFM scheduling that highlight the variance between forecasted labor requirements and scheduled hours, helping to optimize staffing.	
Paid Rest Break	A short, scheduled interval during a work shift in WFM, which you can configure as hours worked. These breaks can help organizations support compliance and employee wellness.	
Payroll Integration	The process of mapping and exporting approved WFM shift and wage data into NetSuite Payroll or external payroll systems, enabling streamlined payroll processing.	
Penalty	A fixed or percentage-based increase to employee pay rates applied for shifts meeting specific nonstandard conditions, such as late hours or weekend work.	
Pre-configured Wage Agreement	Convenience-based wage rule sets within WFM that customers can use as templates for compliance with specific labor awards, subject to customer verification for legal accuracy.	Region-Based Wages
Primary Location	The main workplace assigned to an employee that is used for scheduling and reporting. The primary location also determines the managers who can approve employee availability and leave requests.	

Term	Definition	Related Terms
Region-Based Wages	A set of convenience conditions built into WFM that are loaded by default into customer's accounts within the United States. These conditions do not guarantee compliance with laws and regulations. You must validate that these rules meet your needs and own the process of configuring additional rules you need based on your local labor laws.	Pre-configured Wage Agreement
Revision	A version of a region-based wage rule or wage agreement that you can use to track changes to conditions and rules. Revisions allow historical rates, conditions, and rules to be retained for wage calculations and reporting.	
Rounding	A time-and-attendance setting that adjusts approved punches to scheduled start or finish times based on set intervals or multiples.	Automatch
Rule	A specific parameter or threshold within a condition in WFM that defines the precise criteria for when the condition is triggered.	Condition
Salary Splits	A configuration enabling the allocation of a salaried employee's pay across multiple locations or departments worked during a pay period.	
Schedule Validation	A WFM feature that checks schedules against configured rules, such as required employee counts, qualifications, or compliance thresholds. This feature helps prevent publishing or printing schedules with errors or violations.	
Shift Template	A preset configuration of shift times and roles, used to streamline scheduling by quickly assigning common shift patterns.	
Short Breaks	A feature that prevents employees from punching back in during a break before the meet minimum required break time.	
Suggested Shifts	System-generated recommendations indicating optimal staffing times or shift allocations based on sales, labor models, and scheduling rules.	
SuitePeople Time Clock	Cloud-based time and attendance app, previously referred to as AdiClock, used to capture employee punches by using a mobile (Android or iOS) or a Windows device.	
SuitePeople WFM Integration Role	A predefined NetSuite role granting permissions required to configure and run the WFM integration.	
SuitePeople Workforce Management SMS	A messaging feature that enables sending SMS notifications (subject to usage caps) from WFM to employee mobile phones, supporting shift and time management communications.	
Target Hours	The scheduled number of working hours assigned to an employee for a given scheduling period. Hours are used for shift validation and reporting.	
Teams	Groupings used to organize employees by function, location, or department for scheduling and reporting purposes.	
Timesheet Uploader	A tool that imports timesheet data from a CSV file into WFM, with header mapping and error validation.	

Term	Definition	Related Terms
Unpaid Meal Break	A designated and unpaid break period during a work shift that is excluded from total hours worked. These breaks assist organizations with meeting labor compliance requirements.	
Wage Agreement	A set of rules or conditions available to customers in Australia and New Zealand, which define employee pay rates, overtime, and penalties. Wage agreements can be configured in WFM for accurate payroll processing.	Region-Based Wages
Wage Rule Engine	A calculation engine in WFM that applies customer-configured or pre-configured rules to determine wages, overtime, penalties, and allowances based on conditions, schedules, and regional requirements. The engine is provided as a convenience tool and does not guarantee legal compliance. Customers are responsible for validating wage rules against applicable labor laws and business needs.	
Wages	Pay amounts calculated and managed within WFM, determined by configured wage rules, wage agreements, and mapped NetSuite payroll items.	
Weekly Shifts	A WFM scheduling and approval view for a location across a week that displays scheduled shifts, timesheets, and approved shifts for payroll processing.	Daily Shifts, Multi-Location Shifts, Employee Scheduling
Workforce Management Portlet	A dashboard panel with configuration options, which gives users access to WFM features in NetSuite.	

Workforce Management Setup Guide

Follow this setup guide to learn about the basics of installing and getting started with SuitePeople Workforce Management (WFM).

- [Installing Workforce Management](#)
- [Getting Started with Workforce Management](#)
- [Integrating Workforce Management with NetSuite](#)

After you have installed and set up WFM, you can review these training topics, which include some useful videos:

- [Training #1: Scheduling](#)
- [Training #2: Five-Step Scheduling with Copy and Paste](#)
- [Training #3: Approving Time](#)
- [Training #4: Find Last-Minute Fill-ins, Drop or Swap Shifts](#)

Installing Workforce Management

To install Workforce Management, follow the steps in the table.

Step	Related Help Topic
1. Log in as a NetSuite administrator.	Roles and Accounts

Step	Related Help Topic
2. Complete the prerequisites.	Prerequisites
3. Install the Workforce Management SuiteApp.	Installing the SuitePeople Workforce Management SuiteApp
4. Assign the SuitePeople WFM Integration role.	Assigning the SuitePeople WFM Integration Role
5. Deploy User Event Scripts in NetSuite.	Deploying User Event Scripts in NetSuite
6. Configure additional permissions in NetSuite.	Configuring Additional Permissions in NetSuite
7. Integrate WFM with NetSuite	Integrating Workforce Management with NetSuite

Prerequisites

To use Workforce Management, you'll need to:

- Provide your account ID to your NetSuite representative.
- Enable the Token-Based Authentication feature.

Account ID

Give your NetSuite Account ID to your NetSuite rep, and the NetSuite team will make the Workforce Management (WFM) SuiteApp available in your account.

For more information, see the help topic [Finding Your NetSuite Account ID](#).

Enable Token-Based Authentication (TBA)

TBA lets WFM use a token to access NetSuite through APIs.

For more information, see the help topic [Enable the Token-based Authentication Feature](#).

To continue setting up WFM, see [Installing the SuitePeople Workforce Management SuiteApp](#).

Installing the SuitePeople Workforce Management SuiteApp

Important: SuitePeople Workforce Management (WFM) is now available to install from the SuiteApp Marketplace.

Users of the following Adi Insights SuiteApps should install SuitePeople WFM from the Marketplace to continue using WFM features embedded in NetSuite:

- Adi Insights (Bundle ID: 317115)
- Adi Insights – Embedded (Bundle ID: 401708)

As of 2025.1, updated releases are only be available with the SuitePeople WFM SuiteApp from the Marketplace.

For more information, see [Switching to SuitePeople WFM from the Marketplace](#).

You should install the latest WFM version available on the SuiteApp Marketplace.

After you've installed WFM from the Marketplace, set up your WFM portlet to work with the new SuiteApp version.

Switching to SuitePeople WFM from the Marketplace

Users of the Adi Insights SuiteApps, **Adi Insights** (Bundle ID: 317115) and **Adi Insights – Embedded** (Bundle ID: 401708), should complete the procedure to switch to WFM from the Marketplace.

To switch to SuitePeople WFM from the Marketplace:

1. Log in to the Administrator role.
2. Enable the following features. For more information, see the help topic [Enabling Features](#).
 - SuiteTalk (Web Services): **REST (Web Services)**
 - Manage Authentication: **OAuth 2.0** and **NetSuite as OIDC Provider**
3. Install **SuitePeople Workforce Management** from the SuiteApp Marketplace. See the help topic [Installing from the SuiteApp Marketplace](#).
4. Grant access to the **SuitePeople WFM Integration** role to your account and to other employees who oversee authentication. Add this role even if the employees are already assigned the SuitePeople WFM role. See the help topic [Assigning Roles to an Employee](#).
5. Configure NetSuite as OIDC Provider. See the help topic [Configure NetSuite as OIDC Provider](#).
 - Integration name: **SuitePeople Workforce Management**
 - Entities to enable: Click **Employees**. Check the **Select All** box.
 - Roles to enable: Check the **Select All** box.
6. Edit the SuitePeople Workforce Management integration.
 - a. Go to Setup > Integration > Integration Management > Manage Integrations.
 - b. Click **SuitePeople Workforce Management**. Click **Edit**.
 - c. On the **Authentication** subtab, go to the **OAuth 2.0** section.
 - d. From the **OAuth 2.0 Consent Policy** list, select **Never Ask**. Click **Save**.
7. Uninstall the Adi Insights SuiteApps, **Adi Insights** (Bundle ID: 317115) and **Adi Insights – Embedded** (Bundle ID: 401708), from your account. See the help topic [Uninstalling a Bundle](#).

After you've finished these steps, set up the WFM portlet to work with the new SuiteApp version. See [Setting Up the Workforce Management Portlet](#).

Installing SuitePeople Workforce Management from the SuiteApp Marketplace

Using the Administrator role, follow the procedure to install SuitePeople WFM from the SuiteApp Marketplace.

To install WFM from the Marketplace

1. Go to SuiteApps.
2. In the **Search** field, enter **SuitePeople Workforce Management**.
3. Click the **SuitePeople Workforce Management** tile.
4. On the SuiteApp details page, click **Install**. Click **OK**.

The installation process begins.

For more information about installing SuiteApps from the Marketplace, see the help topic [Installing from the SuiteApp Marketplace](#).

After you've installed WFM, finish the rest of the steps in the [Switching to SuitePeople WFM from the Marketplace](#) section.

Setting Up the Workforce Management Portlet

Employees with the **WFM Integration** and **Payroll Administrator** roles can set up the WFM portlet.

To set up the Workforce Management portlet:

1. Log in to the appropriate role.
 - For customers using Infinet Cloud Payroll in Australia or Canada, log in to the **Payroll Administrator (Unlocked)** role.
 - For all other customers, log in to the **Payroll Administrator** role.
2. Go to Workforce Management.
If the tab is not available, see [Troubleshooting Missing WFM Tabs](#).
3. On the upper right corner of the page, click **Layout**.
4. (Optional) Select the **one-column** layout.
5. On the Custom Content portlet, point to the upper right corner.
6. Click the More icon. Click **Set up**.
7. From the **Source** field, select **SuitePeople Workforce Management**.
The SuitePeople Workforce Management page appears.
8. Go to Dashboard > Setup > NetSuite Integration > Settings.
A notification that a new SuiteApp has been installed in your account appears.
9. Enter your NetSuite email address and password. Click **Submit**.
Your previous data links and settings carry over to your account.

Assigning the SuitePeople WFM Integration Role

After you've installed the SuiteApp, ensure that the **SuitePeople WFM Integration** role is available to the user setting up the integration.

To assign the SuitePeople WFM Integration role:

1. As an Administrator, go to List > Employees > Employees.
2. Click **Edit** next to the name of the employee for whom you want to set up access.
3. Click the **Access** tab.
4. On the **Roles** subtab, assign the **SuitePeople WFM Integration** role.

Note: If you're using Infinet Cloud Payroll, add the **Payroll Administrator-Unlocked** role for ICS. Ensure all subsidiaries are selected.

5. Click **Add**. Click **Save**.

Assigning WFM Permissions to Roles

If you need to give WFM SuiteApp access to existing roles, add the required permissions to any roles that aren't the Employee Center Role.

If needed, assign WFM permissions to the following roles:

- HR - HR Manager
- PRL - Payroll Manager

To assign WFM permissions to roles:

1. Go to Setup > Users/Roles > Manage Roles.
2. Next to the role that needs permissions, click **Edit**.
3. On the **Permissions** subtab, click the **Setup** subtab.
4. From the Permissions list, add the following permissions with their corresponding levels.

Permission	Level
REST Web Services	Full
Log in using OAuth 2.0 Access Tokens	Full

5. Click **Save**.

To continue setting up WFM, see [Deploying User Event Scripts in NetSuite](#).

Deploying User Event Scripts in NetSuite

Deploy user event scripts from the installed WFM SuiteApp to your account.

To deploy WFM user event scripts:

1. As an Administrator, go to Customization > Scripting > Scripts.
2. Expand the filter options. From the **Type** list, select **User Event**.
3. Click **View** beside **SuitePeople WFM Webhook**.
4. Click the **Deployments** subtab.
5. Under the **Applies To** column, click on the **Employee** record.
6. Click **Edit**.
7. Check the **Deployed** box.
8. Click **Save**.
9. For the **Location** record, repeat steps 5 to 8.

Configuring Additional Permissions in NetSuite

After you've installed the SuiteApps, you might need to give the WFM role access to more record types in NetSuite.

To configure additional permissions in NetSuite:

1. As an Administrator, go to Setup > Users/Roles > Manage Roles.
2. Next to the **SuitePeople WFM Integration** role, click **Edit**.
3. If needed, add any extra permissions by clicking the **Permissions** subtab, then the **Lists** subtab.
For example, you can add permissions for the following:
 - Workplaces
 - Time-Off Administration
4. Click **OK**. Click **Save**.

For more information about setting permissions for a role, see the help topic [Setting Permissions](#).

Getting Started with Workforce Management

The WFM basic setup includes creating a brand, locations, jobs, employees, and wages. These are all found in the **Setup** subtab.

Step	Related Help Topic
1. Create a Brand.	Creating a Brand
2. Create a Location	Creating a Location
3. Set Up Jobs.	Setting Up Jobs
4. Set Up Wages.	Setting Up Wages
5. Add Employees.	Adding Employees

After you've finished the basic setup, WFM's ready to use.

If you've got finance or HR tasks, see [Finance or HR Manager Onboarding](#).

If you're a people manager, see [People Manager Onboarding](#).

Creating a Brand

A brand allows you to change settings for multiple locations in one place.

Any locations you create belong to a brand and inherit its settings. If you change brand settings, they'll affect your location, unless you've overridden location configurations. Most of the time, you'll only have one brand.

To create a Brand, go to Setup > Brands then follow the prompts.

For more information about creating a brand, see [Creating a New Brand](#).

To learn more about Brands, see [Configuring Brands](#).

Creating a Location

A location is a single place where employees get assigned shifts.

A venue or site where employees are scheduled is typically one location, although there may be cases where multiple locations belong to a venue or site.

For example, a store might have multiple departments which might require multiple schedule locations as each department is scheduled separately. Another example is a restaurant that might group employees into two schedules such as front of house and back of house.

Employees can work at more than one location.

To create a location, go to Setup > Location, then follow the prompts.

For more information, see the following topics:

- [Adding a New Location in WFM](#)
- [Locations](#)

Setting Up Jobs

Jobs define what roles employees do during their shifts, and you can run reports based on different jobs.

When you create a schedule or shift, you can assign a specific job to it. Only employees who can do that job will show up for that shift. For example, if there's a job called Management, only management staff will appear.

You'll assign jobs to each employee and location you create. As you add jobs, ensure they're linked to the right locations. To do this, go Workforce Management > Setup > Jobs. Then select the locations where each job is available.

Assign accurate jobs to each location. For example, if you have two locations and only one offers deliveries, you only need to assign the delivery job where it makes sense.

To learn more, see [Jobs](#).

Setting Up Wages

There are three different kinds of wages you can set up in WFM. A combination of all three can be set up, depending on what is best for you. Wage Agreements can be set up right away, however, setting up Hourly & Salary employees and assigning wage agreements can not be set up until employees are added.

You can set up three types of wages in WFM, and you can use any mix that works for you.

You can set up Wage Agreements right away. When setting up Hourly or Salary wage types, you must add employees first.

- **Hourly** – This wage type the basic level in WFM. Each employee gets their own hourly rate, which calculates for every hour they work.

 **Note:** Hourly wages don't calculate overtime or penalty rates. To calculate these, set up Wage Agreements.

- **Salary** – Employees on salary have their wage spread evenly over the hours they work each week. Their pay stays the same every week.
- **Wage Agreements** – Compared to the hourly wage type, wage agreements offer more flexible and added benefits. You can use it to:
 - Bulk update wages when changes occur
 - Set custom overtime and penalty conditions
 - Apply different rates for different jobs worked
 - Calculate hourly or weekly shift allowances

To manage wage types:

- For hourly and salary employees, go to their profiles. For more information, see [Managing Wages for WFM Employees](#).
- For wage agreements, in Workforce Management, go to Setup > Wage > Agreements.

After you've set up Wage Agreements, you can add them to employees in the same area. For the calculation type, select **Classification**. Then, select the employee's classification level.

Adding Employees

Now you can add employees and start entering their schedules.

To add an employee, go to Setup > Employees > List. For more information, see [Adding New WFM Employees](#).

To learn about schedules, see [Scheduling in Workforce Management](#).

Here are a few other things you might want to do to help with scheduling:

- Get employees to log in and set their availability
- Set managers up with the right access so they can approve availability

For more information, see [WFM Employee Availability](#).

Finance or HR Manager Onboarding

If you're responsible for HR or finance tasks, here are a few steps and best practices to help you set up employees and ensure they get paid properly.

These are:

- [Creating Employee Records in WFM](#)
- [Assigning Employees to Locations](#)
- [Setting Correct Wages](#)
- [Setting Job Roles](#)
- [Setting Availability](#)
- [Setting Access Group](#)

Creating Employee Records in WFM

You can create new employee records in WFM under Setup > Employees > List > New.

When setting up an employee, the required fields are:

- First name
- Last name
- Primary Location

You'll also want to add an email address so they can get their login details and published shifts.

For more information, see [Adding New WFM Employees](#)

Assigning Employees to Locations

To assign a location to an employee, go to Setup > Employees > List. Click the ID next to the employee you want to assign a location to. On the employee profile, click the **Locations** tab.

Ensure the **Primary Location** is correct. Then, check the **Can work at** field if the employee can work at more than one location.

For more information, see [Employment](#).

Setting Correct Wages

To assign a wage to an employee, go to Setup > Employees > List. Click the ID next to the employee you want to set a wage. On the employee profile, click the **Wages** tab.

You'll see one line of wage history showing a \$0 hourly rate. This is the default wage set for all employees and needs to be updated.

You can edit this wage to set their correct salary, hourly rate, or wage agreement in WFM.

For more information, see [Managing Wages for WFM Employees](#).

Setting Job Roles

On the employee profile page, click the **Jobs** tab. Click **New job** and select any jobs the employee is eligible. For example, you may have a "Training" job that all new hires are required to be assigned to. Click **Save**.

For more information, see [Jobs](#).

Setting Availability

Employees can log in and set their availability.

Or, you can set their availability so they show up as available in the schedules they can work.

For more information, see [WFM Employee Availability](#).

Setting Access Group

You can set the access group during the new employee setup. If it wasn't set, or if the employee was imported or promoted, you can change the access group later.

For more information, see [Employee Access in WFM](#).

To learn more about other important things you need to do for payroll, read [Steps for Payroll Day](#).

People Manager Onboarding

As a people manager, you can use Workforce Management (WFM) to manage staff schedules, keep labor on target, and handle staff communications.

When you first log in, you'll see a list of employees.

To help you create and manage employee schedules, see the following topics:

- [Reviewing Employee Jobs and Availability](#)

- [Managing Shifts](#)
- [Creating, Managing, and Publishing Schedules](#)
- [Duplicating and Optimizing Schedules](#)
- [Reviewing Time and Attendance and Approving Exceptions](#)
- [Short Videos: Phone App, Fill-ins, Swapping, Dropping and Approving Shifts](#)

Reviewing Employee Jobs and Availability

The employee list shows everyone available to work at your locations.

Click an employee to see their profile.

In the employee profile, check out the **Jobs** and **Availability** tabs.

- **Jobs**– See which jobs the employee can work. If there aren't any listed, you can add a new job. When you create shifts, you might want to add certain roles, like a Supervisor shift. Any jobs available at the employee's locations will show up here.

For more information, see [Jobs](#)

- **Availability** – When you make new schedules, employees will show up as available or not. To learn more, see [WFM Employee Availability](#).

If you let employees log in, they can set their availability and you'll get notified about any requests. To receive availability requests or to make changes to employee availability, read [Approvals](#).

If you're missing employees from the list, you can add them. For more information, see [Adding New WFM Employees](#).

Managing Shifts

In WFM, go to the **Shifts** menu to manage shifts.

See the following options:

- **Daily** – Lets you schedule and publish shifts. For more information, see [Scheduling in Workforce Management - Daily](#).
- **Weekly** – Lets you review and approve shifts, including exceptions. For more information, see [Weekly](#).
- **Multi-Location** – Like the weekly options but lets you view shifts across all the locations you manage. For more information, see [Multi-location](#).
- **Forecasting** – Lets you add and adjust sales projections to help plan future schedules. For more information, see [Forecasting](#).

Creating, Managing, and Publishing Schedules

Here is a short video that shows how to start scheduling:

[Scheduling from the daily view - quick start tips](#)

For more information, read the following help topics

- Creating a sales forecast - [Forecasting](#).
- Creating shifts - [Shift Creation - Daily](#).
- Extending start and end times on a location - [Location Options in WFM](#).
- Publishing a schedule - [Publishing schedules](#).

- Printing a schedule - [Printing Schedules](#).

Duplicating and Optimizing Schedules

You can duplicate schedules daily or weekly. Usually, you'll copy a previous schedule forward and tweak the shifts based on your sales forecast.

For more information, see [Copy and paste shifts](#).

Here is a video showing how you might optimize your schedules:

[Optimize your schedule using your sales forecast with labor deployment model](#)

For more information, see [Managing Workforce Management Shifts](#).

Reviewing Time and Attendance and Approving Exceptions

Every day, you'll want to check Shifts > Weekly to review the day's shifts.

If you've set up time and attendance, times will show up under each employee's scheduled shifts. If not, you can still approve and make changes to shifts.

You can add extra shifts or approve time and attendance with notes.

For more information, see [Weekly, Updating hours worked](#) and [Approving Shifts with Automatch](#).

Here is video showing how to approve time:

[Approval of hours worked](#)

Short Videos: Phone App, Fill-ins, Swapping, Dropping and Approving Shifts

The following videos demonstrate some other tasks you can do in Workforce Management.

Phone App Navigation

Get to know the WFM Phone App, where you can view your shifts, trades, and notifications.

For more information, see [SuitePeople Workforce Management Phone App](#).

Swapping Shifts

Employees can swap shifts if the manager approves.

If enabled in your account, learn how employees can swap shifts with one another. See the workflow from employee to manager, ending in the manager reviewing the potential cost differences and approving the swap.

[Swap Shift](#)

A manager can deny the swap request. The employee gets notified and can try to pick up a different shift, which sends a new approval request to the manager.

[Deny Swap](#)

Fill Shift

If an employee can't make their shift or doesn't show up, use WFM or the Phone App to quickly find a fill-in. The manager can start a fill shift and consider cost differences to make the best decision.

Find a shift Fill-in

For more information, see [Filling Shifts](#).

Drop Shift

An employee can start a drop request, and another employee can pick up the shift if the manager approves.

If it's enabled, employees can start a drop request from the Phone App if they can't make their shift.

 **Note:** This video shows Drop Pre-Approval turned on. If you turn it off, employees can drop shifts without manager approval, and the request goes to all available employees. When someone offers to pick up the shift, the manager gets notified to approve or deny. You can change this in Setup > WFM Phone App.

[Drop Shift Approved](#)

The manager can also deny the request.

Deny Drop

Approved Shifts

If it's enabled, employees can see their approved shifts in the Phone App.

Approved Shift

You can also let employees confirm or dispute their time. To learn more, read [Attestation](#).

Training #1: Scheduling

Now that you've got your WFM account set up and ready to go, create your first schedule.

Watch the video, or follow the steps below.

[Scheduling from the daily view - quick start tips](#)

To start adding shifts:

1. Go to Shifts > Daily.
2. Pick a day first using the calendar picker. Start with next week's schedule.
3. Now you're looking at the first day of next week's schedule. First, you'll want to check that your forecast is correct. For more information, see [Forecasting](#).
4. To see if the data is generating automatically, check the Sales and Units rows at the bottom of the Daily screen.
5. If the numbers look off or there's no data, click **Create Forecast** or **Edit Forecast** on the menu bar to the right of the date picker.
6. From here, you can manually generate your forecast based on a certain week and add a rolling average or index. Or, enter your forecast using your own projections.
7. When your forecast looks right, click **Create Schedule** at the top to go back to the Daily view.
8. Drag a shift out in the gray bar at the bottom, from the start time to the finish time.
9. Choose the job you want to schedule, then pick the staff member from the list on the right. People are sorted by suitability.

FAQs

- **Why do employees appear in yellow?** You haven't set up availability for employees yet. Go to **Setup > Employees > List** and click **Edit / Approve Availability**. Start from next week, and click **Always available** to make someone available 24/7). For more information, see [WFM Employee Availability](#).
- **Why do employees appear in red?** They are already scheduled on at that time.
- **Why do employees not have a cost?** You haven't set up wages for that employee yet. Go to an employee profile, then click **Wages**. For more information, see [Managing Wages for WFM Employees](#).
- **Why don't I see a staff member I'm looking for under a certain job?** You haven't set up the Jobs section of the employee profile. For more information, see [Jobs](#). To add extra jobs to your account, go to **Setup > Jobs**.
- **How do I color-code the shifts?** Click the **Options** button at the top then toggle the "Color by" option to color by job or availability.

Tips

- If you're happy with the day's schedule, you can copy shifts from one day to future days, or copy a whole week to another week. Hover over **Copy**. For more information, see [Copy and paste shifts](#).
- When you've finished the week's schedule and you're happy with it, send it to the employee. Go to **Actions > Publish Schedules**.
- Try printing out the schedule. Click **Print**.

Training #2: Five-Step Scheduling with Copy and Paste

Now that you've got your first week's schedule set in WFM, here are five steps to build your schedule each week.

Step 1: Copy and paste last week's schedule

1. Go to **Shifts > Daily**.
2. While you're looking at the current week in the daily schedule view, hover over **Copy**. Select **Copy to next week**.
3. After you make your selection, you'll be taken to the next week where all shifts and staff are pasted.

Step 2: Check sales forecast

1. If you've got historical sales data for your default date range, ensure it looks right. Start by checking the weekly sales total. You will see this in the KPI panel on the right of the daily page.
2. Check the sales forecast for each day. To do this, press Tab through the days on the daily view. The arrow in the bottom right will move you ahead one day at a time.
3. If you need to adjust the sales forecast or if no forecast appears, select **Edit forecast** or **Create forecast**.
4. To generate your sales forecast, use one of the following options (see screenshot above):
 - **Option 1 — POS defaults:** Uses past imported POS data to automatically build your forecast.
 - **Option 2 — Custom POS settings:** Pick the date you'd like your sales forecast to be based on. Dates in red mean missing sales data, so choose a week with all black dates.

- **Option 3 — Enter a manual projection:** Enter the sales or units you expect to sell each day for the week you're scheduling.

Step 3: Reassign staff to shifts they can work

1. Go to the Options button and change the "Color by" to "Availability". This will color all of the shifts in the scheduling view to Green/ Red/ Yellow/ Blue depending on Availability. [See this user manual page on Shifts Colors] to understand what all the colors mean.
2. The fastest way to reassign employees is to start on the first day and look for any red shifts. Click the red shift, then click the blue reassign arrow. An employee selection dialog displays the list of available employees.
3. Keep reassigning those red shifts to available staff until all the shifts are green.

Note: You need to add a job to each shift. Before you can assign an employee to a shift, select the job to see the list of employees who can do it.

Step 4: Optimize your schedule

1. The best way to optimize your schedule depends on whether you've set up a labor deployment model in WFM. If you have, follow Option 2.
2. **Option 1. Optimize your schedule using your sales forecast (no labor deployment model)**
 - Start by checking your labor KPIs for next week. Check if they are on target. If not, look at the busy and slow times using the sales row to spot them.
 - By checking the hourly KPIs on the daily page, you can spot areas to optimize. If your labor cost percentage target is 19 to 21%, you'll see any times outside that range marked in red. In the example below, labor percent is highest from 7 to 10 AM.

As a manager, you'd expect this if I've got a few people doing prep or opening. The first times to focus on are peak hours when sales are highest: 12 PM to 2 PM and 4 PM to 8 PM. In this example, labor percent is below target during those times.

As a manager, you might want to add a few more employees or extend existing shifts to cover those times and hit your labor cost target. As you add or adjust shifts, the metrics update in real time. When the numbers turn black, you're within your target for that hour. Follow this process daily, keeping an eye on your weekly labor cost percent target. This is the big number at the top right.
 - There are lots of ways to tweak your schedule to improve labor metrics and customer service time. You can also set targets for productivity and labor efficiency, and follow the same process to keep your metrics balanced.
3. **Option 2. Optimize your schedule using your sales forecast WITH labor deployment model**
 - The fastest way to build and optimize your schedule each week is to follow these steps. After you've finished step 3, turn on your labor deployment model. Select **Options**. On the Shift display options, switch **Labor deployment** on.
 - To optimize your schedule with the model, follow the steps in the video:
[Optimize your schedule using your sales forecast WITH labor deployment model](#)

Step 5: Communicate shifts to staff and print reports

1. To let your staff know about their shifts, select **Actions**, then click **Publish Schedules**.
2. Employees can receive their schedules through:

- SMS
- Email
- Push notifications to the phone app

If you'd like to send the schedule by SMS or email, tick those boxes in the Publish Schedules window. You can also add a message for an employee if you want to share something with their schedules, such as "Staff meeting Wednesday 10AM."

3. After you've picked how you want to notify staff and added any messages, scroll down and click **Choose all** under the Staff box to move everyone over. Only employees with shifts scheduled for that week will get notifications.

4. Click **Publish and Send**. You can find more info about publishing shifts here.

5. This emails texts the Schedule to Staff for the week at the Location you're looking at. They'll also get a notification on their smartphone if WFM phone app is installed. Staff may also log in to the browser and see published Schedules. To print, select 'Print' and choose report type:

This emails and texts the schedule to staff for the week at the location you're viewing. They'll also get a notification on their phone if the WFM app is installed. Staff can also log in on the browser to see published schedules.

To print, click **Print**, then select any of the following reports:

- Staff report shows a table view of the full week's schedule without wages.
- Daily report gives you a bar graph view without wages.
- Reports with " " in the name contain wage costs.

Training #3: Approving Time

Now you've got your first schedule, update it to follow the actual shifts.

After you've got some scheduled shifts in WFM, employees will come in and work those shifts. You can track their time with SuitePeople Time Clock, but you'll want to see these punch events next to the schedule.

Go to Shifts > Weekly. Days of the week are the columns, the rows are the person's information.

- **Scheduled Shifts** – Shows what was supposed to happen.
- **Timesheets** – Shows staff punch events from SuitePeople Time Clock.
- **Shifts** — Shows what occurred. These data are created when you approve, deny, or edit scheduled shifts or timesheets. Actual shifts are sent to payroll.

When approving a shift, note the following:

- Use the thumbs up to approve a shift as shown. This creates a shift using the start, finish, and break info.
- Use the thumbs down to deny a scheduled shift. This says that this shift wasn't worked. You can assign the shift to someone else who filled in or create leave for the employee who didn't work.
- Use the pencil icon to edit a shift. You can change the start or finish time, break, or job.

If an employee wasn't scheduled and didn't punch in, they'd have no timesheet entry. You can hover over the row for that employee to manually create a shift.

Check the % in the top right. It shows how many shifts have been processed. At the end of the week, it'll be 100% if you've processed all visible shifts.

[Approval of hours worked](#)

Training #4: Find Last-Minute Fill-ins, Drop or Swap Shifts

Phone App Navigation

- Get to know the phone app. Learn how to view your shifts, trades, and notifications.

[Phone app navigation](#)

Swap Shift: Staff agree on a Swap with Manager Approval

- If enabled in your account, learn how Staff can Swap Shifts with one another. See the workflow from Staff to Manager, ending in the Manager reviewing the potential cost differences and approving the Swap.

If it's enabled in your account, see how employees can swap shifts with each other. The workflow goes from employee to manager, with the manager reviewing any cost differences and approving the swap.

- [In this video](#), see how the Manager can deny a swap request.

The employee gets notified and can pick up a different shift instead, which sends a new swap request to the manager to approve or deny.

[Swap Shift](#)

Fill Shift

- If an employee can't make their shift or doesn't show up, use WFM or the phone app to quickly find a fill-in. See how the manager can start a fill shift and consider cost differences to make the best decision.

[Find a shift Fill-in](#)

Drop Shift: Staff initiates a Drop and Staff picks it up with Manager approval

- If it's enabled in your account, see employees can start a drop request from the phone app if they can't make their shift. The workflow goes from the employee starting the drop request to the manager reviewing it and finding a fill-in.
- [In this video](#), see how a manager can deny a drop request.

Note: This video shows Drop Pre-approval turned on. If you turn it off, the initial manager approval is skipped. When a staff member drops their shift, it automatically sends a request to all available employees. If someone offers to pick it up, the manager gets notified to approve or deny. You can change this setting in Setup > WFM Phone App.

[Drop Shift Approved](#)

Approved Shifts

- If the feature is enabled in your account, employees can see their approved shifts in the phone app.
- You can also let staff confirm or dispute their time with attestation. To learn more, see [Attestation](#).

[Approved Shift](#)

Integrating Workforce Management with NetSuite

To integrate Workforce Management (WFM) with NetSuite, you'll need the General Manager access group in WFM.

See the following help topics:

- [Integrating Payroll with WFM](#)
- [Mapping a WFM User to Enable SuiteSignOn](#)
- [Adding the WFM Portlet in NetSuite](#)
- [Troubleshooting Missing WFM Tabs](#)
- [Linking Workforce Management Fields with NetSuite](#)
- [Linking Workforce Management Records with NetSuite](#)
- [Exporting Shifts for Payroll](#)
- [Setting Up POS Imports](#)
- [Connecting Saved Searches to WFM Sales and Units Data](#)
- [Steps for Payroll Day](#)
- [NetSuite and WFM Integration FAQ](#)

Integrating Payroll with WFM

Link WFM with NetSuite so they communicate and sync with one another.

To integrate payroll with WFM:

1. Go to the stand-alone WFM website at see.adiinsights.com.
2. Go to Setup > Integrations.
3. If you are using Infinet Cloud Payroll, select **SuitePeople** or **InfinetCloud Payroll**.
4. Enter your NetSuite credentials used to access NetSuite when installing the WFM SuiteApp.
 - a. Enter your NetSuite username and password.
 - b. From the list, select **Production**.

A list of NetSuite accounts the user has access to appears.
5. Select the account that you used to install the WFM SuiteApp.

 **Note:** This list only shows accounts with the right roles assigned.

You've now successfully linked NetSuite and WFM.

Next, you'll see how to map your WFM user to your NetSuite user.

Mapping a WFM User to Enable SuiteSignOn

After you've linked WFM and NetSuite, map your own user credentials.

To map WFM users:

1. From the last step, go to the **Staff** tab on the left side of the screen.

2. Find your WFM user. Click the search field next to the user and type the name of the NetSuite user that you set up.
3. Select your name from the list.
4. Click **Link**.

You've now mapped your WFM user to your NetSuite employee record for SuiteSignOn.

If you're using the HR or Payroll Manager NetSuite role and got an authorization error when you go to the **Process Time** subtab, log in with your NetSuite credentials.

After you map your NetSuite employee record with your WFM user credentials, you can go back to NetSuite and configure the account.

Adding the WFM Portlet in NetSuite

After you've mapped your WFM user credentials to your NetSuite employee record and returned to NetSuite, finish the setup.

To complete the setup, add the WFM portlet. The portlet lets you access and manage WFM without leaving NetSuite.

You can only add the portlet if the **Workforce Management** tab is available for your center and role. This tab is available for NetSuite roles using the Accounting or Employee Center. If you don't see the tab, see [Troubleshooting Missing WFM Tabs](#).

To continue adding the portlet, see the help topics:

- [Setting Up the Workforce Management Portlet](#)
- [Dashboard Portlets](#)
- [SuiteApp Portlets](#)

After the portlet is configured you will see the following subtabs:

- Dashboard
- Availability
- Shifts
- Reports
- Process Time
- Setup

Troubleshooting Missing WFM Tabs

If your role uses the Accounting or Employee Center, the **Workforce Management** tab should show up by default.

If the tab is not available, perform the following actions:

- If you have lots of tabs, check the right-hand extension menu.
- Ensure that the SuitePeople Workforce Management SuiteApp is installed. For more information, see [Installing the SuitePeople Workforce Management SuiteApp](#).
- If you've already installed the SuiteApp and the tab still doesn't show up, check if it appears in the Center Tabs list for role's Center Type.

To check the Center Tabs list:

1. Go to Customization > Centers and Tabs > Center Tabs.
Workforce Management should show up in the list.
2. If your role doesn't use the Accounting or Employee Center type, add a new center tab.

To create a new center tab, see the help topic [Creating Center Tabs](#).

To fill in the New Center Tab page, refer to the following information:

- **Label** – Enter **Workforce Management**.
- **ID** – Use the format custcentertab_wfm_center. For example, custcentertab_wfm_customer.
- **Center** – Select the center for which you want to add the tab.
- **Content subtab** – On the **Portlets** subtab, complete the following columns:
 - **Type** – Select **Custom Portlet**.
 - **Portlet** – Select **Center**.
 - **Show** – Select **Yes**.

After you save the new tab page, the Workforce Management tab should be visible. If you've got a lot of center tabs, you might see it in the dropdown at the right of the menu.

Linking Workforce Management Fields with NetSuite

Learn more about linking WFM fields for timebills with NetSuite.

- [Guidelines for Linking WFM Fields](#)
- [Configuring WFM Fields to Link with NetSuite](#)
- [Settings for Linking WFM Fields](#)
- [Configuring WFM Time Fields for NetSuite](#)
- [Linking Workforce Management Records with NetSuite](#)

Timebill field linking options from WFM to NetSuite include but aren't limited to:

- WFM location to a NetSuite location
- WFM location to a NetSuite project
- WFM location to a NetSuite department
- WFM job to a NetSuite department
- WFM job to a NetSuite project task or service item

Guidelines for Linking WFM Fields

Keep these guidelines in mind.

- The default setup is different from what's described below, so make sure your settings match exactly.
- If you use Infinet Cloud Payroll, the payroll subsidiary and timebill wage options aren't available.
- When mapping WFM locations and jobs, ensure that employees get the right wage rate for the locations they work at and the jobs they do.
- Record and report time against projects, tasks, or other NetSuite fields.

- Adapt time-based billing.

Configuring WFM Fields to Link with NetSuite

Follow the procedure to configure WFM fields.

To configure WFM fields to link with NetSuite:

1. Go to Workforce Management.
2. Go to Setup > NetSuite Integration > Settings.
3. Click the **Configuration** subtab.
4. Refer to the actions in the **Settings for Linking WFM and NetSuite Fields** table.
5. After setting configurations, click **Save**.

Settings for Linking WFM Fields

Refer to the actions on the table to link WFM fields with NetSuite.

Section	Field	Action
Staff	Push staff member changes to NetSuite	Clear the box.
Staff	Single Subsidiary	Choose from the payroll subsidiary options. ■ Check the Single Subsidiary box – If your mapped employees will be paid from one subsidiary, check the box. If you check this box, all exported staff will be linked with the selected subsidiary. ■ Clear the Single Subsidiary box – You will need to select a subsidiary when exporting staff.
Staff	Pay from subsidiary	If you checked the Single Subsidiary box, select the subsidiary name that will be used for exporting staff.
Timebill Wage	Send rate	Check the box. If unchecked, no rate data will be sent to NetSuite with the timesheet information.
Timebill Wage	Send blended overtime	Check the box. This setting calculates blended overtime for each eligible employee across the export period.
Timebill Wage	Send combined penalties	Check the box. This setting combines penalties and segments to get an effective rate for each segment.
Timebill Wage	Payroll Item Record	Select an option.
Timebill Wage	Timebill Record	Select an option.
Timebill Wage	Allowance Record	Select an option.
Timebill Wage	Penalty Record	Select an option.
Leave/Time-Off	Handling	Select the leave or time-off method.

Section	Field	Action
		■ No action – If you use Infinet Cloud Payroll, select this option and reach out to your NetSuite account manager, if needed. ■ Pull approved Leave/Time-Off from Time Management (Adi Insights) – Select this option if leave is requested and approved in NetSuite. ■ Push approved Time-Off to Time Management (Adi Insights) – Select this option if your leave is requested and approved from within Time Management. Changing the Leave/Time-Off handling method might mean you need to adjust how Leave/Time-Off objects are linked. The relationships between linked objects depends on the data flow direction. For example, you can't import multiple Leave/Time-Off balances into a single Leave/Time-Off type.
Leave/Time-Off	Leave/Time-off Type Record	Select an option.
Leave/Time-Off	Leave/Time-off Request Record	Select an option.
Hourly-paid employees	Hourly time	Leave blank.
Salaried employees	Send salary hours	Clear the box. If checked, salary hours are sent to NetSuite. If you send salary hours, you need to ensure that employees are set up to be on a salary. Overtime hours are excluded.
Salaried employees	Normal time	Leave blank. This field lets you select the payroll item for normal salary hours.
Salaried employees	Salary overtime	Leave blank. This field lets you select the payroll item for salary overtime hours.
Salaried employees	Public holiday time	Leave blank. This field lets you select the payroll item for salary public holiday hours.
Revisions	Auto link new revisions	Check the box. With this setting, you can automatically relink allowances, penalties, rates, and multipliers from new revisions. WFM notifies you when a new revision is created for any linked agreements, regions, or location overrides.

Configuring WFM Time Fields for NetSuite

In WFM, you can set up added time fields to track more time segments in timebill records.

You can set up the:

- Fields to be used to send additional data to NetSuite
- Additional fields that employees will see when they punch in

- The order that WFM shows the fields

Managers can select the right values during approval. Any later record types that reference a previous one will have their available list filtered based on the earlier selection.

Important: Shifts with additional fields can't be approved using the automatch feature. If your shifts have added time fields, you must manually approve them. For more information, see [Automatch and Rounding Settings in WFM](#).

To configure WFM fields to link with NetSuite:

1. Go to Workforce Management
2. Go to Setup > NetSuite Integration > Settings.
3. Click the **Time Fields** subtab.
4. Click **Configure fields...**
5. On the Fields for Timebill window, complete the required details for each field.
 - **Field label** – Enter the field's label. If you leave it blank, it'll default to the record name, purpose, or field name.
 - **Record type** – Enter the record name linked to the field label in NetSuite without any spaces.
 - **Field name** – Enter the field name from the timebill.
 - **Value** – Enter **True** or **False**.
 - **Purpose** – Select why you're using this field.
 - **Required for export** – If there are added custom fields that the employee or manager needs to complete when approving time, check this box.
For the record to export, the custom field must contain data. For example, if an employee fills out extra time fields, project, project task, or service task, they also need to complete the custom field so the data can be exported.
6. (Optional) If you want to add a field, click **Create new field**.
7. Click **Submit**.
8. From the **Available** panel, drag the fields that you want to show into the **Time Field Order** panel.

Important: Fields linked to the record type are automatically selected and placed in the Available panel.

Fields that aren't mirrored can't be selected and won't show up on the panel.

9. (Optional) Reorder the fields that you moved to the **Time Field Order** panel.
10. Set the visibility for the added fields.
 - a. Click the pencil icon next to the field name.
A window appears.
 - b. Choose how you want the field to show up for customers.
 - **Do not show in Time & Attendance**– If you want to hide the field, choose this button.
 - **Show in Time & Attendance**– If you want to show the field and make it optional, choose this button. Managers can also select the added time data field before submitting time to NetSuite.
 - **Require selection in Time & Attendance**– If you want to show this field as required, choose this button.

Setting up Employees for WFM

After you've finished your NetSuite setup, set up the following employee configuration:

- Set additional locations, other than their Primary Location, where they can work.
- Set up the WFM jobs that they can do.
- Assign the right access levels.
- Send a welcome message to employees.

Can Work at Locations

Assign added locations where employees can work.

For more information, see [Employment](#).

Jobs

Assign any added jobs that employees can work.

For more information, see [Jobs](#).

WFM Access Levels

Assign employees to WFM access groups or levels. All employees start at the lowest level, **Staff**.

For more information, see [Employee Access in WFM](#).

Send Welcome email

After you've set up your employees and they're ready to start using the platform, send a welcome email so they can create their usernames and passwords.

For more information, see [Templates](#).

Linking Workforce Management Records with NetSuite

Record linking lets different records in NetSuite be mirrored in Workforce Management (WFM). It ensures that any new or updated NetSuite record is automatically created or updated in WFM.

For example, linking NetSuite employee records means certain groups of employees, based on primary location mapping, are automatically created in WFM. Any shared fields, like name, email, or base wage rate, are updated in real time.

Linking WFM Location Fields to NetSuite Records

Link NetSuite locations to Workforce Management (WFM). You can either manually or automatically create a location in WFM from NetSuite data.

To manually create a WFM location, see [Adding a New Location in WFM](#)

The following procedure lets you link a new location to NetSuite or automatically create and link WFM locations.

To link WFM locations to NetSuite locations:

1. From the Workforce Management tab, go to Setup > NetSuite Integration > Settings > Records.
2. Under Standard Records, click the **+Location** button to create the linked record for a location.
3. Under the Link Type dropdown, select **Location**.
4. (Optional) Check the **Automatically create and update data in linked objects from NetSuite records** box if you want to automatically create WFM locations. Proceed to steps 6-7.

Important: This action creates WFM jobs for all active NetSuite locations.

You can add an optional custom field on the NetSuite Location record to show if that location can auto-sync.

If you manually created a WFM location, go to steps 6 to 9.

5. Click **Save**.
6. On the location row, click the **refetch** button as shown below. If you chose to automatically create WFM locations, the procedure ends here.
7. For manually created locations, go to Setup > NetSuite Integrations > Locations.
8. In the search field next to the location, type the name of the NetSuite location you want to link. To link, click the location name in the list.

Tip: If you don't see the name of the NetSuite location, click **Refresh Locations from NetSuite** and try again.

Linking WFM Job Fields to NetSuite Department Records

Link jobs to WFM using NetSuite departments. You can either manually or automatically create a WFM job.

To manually create a WFM job, see [Create a Job](#).

The following procedure then allows you to link the new job to NetSuite or automatically create and link WFM jobs.

To create and link jobs from department data:

1. From the Workforce Management tab, go to Setup > NetSuite Integration > Settings > Records.
2. Under Standard Records, click the **+Department** button to create the linked record for a location.
3. Under the Link Type dropdown, select **Job**.
4. Check the **Automatically create and update data in linked objects from NetSuite records** box if you want to automatically create WFM jobs. Go to steps 5 to 6.

Important: This action creates WFM jobs for all active NetSuite locations.

You can create an optional custom field on the NetSuite Location record to indicate if that location can auto-sync.

If you manually created a WFM location, proceed to steps 5-8.

5. Click **Save**.
6. On the Department row, click the **refetch** button.
7. For manually created jobs, go to Setup > NetSuite Integrations > Departments.

8. In the search field next to the WFM job, type the name of the NetSuite department you want to link. To link, click the department name in the list.

Tip: If you don't see the NetSuite department name, click **Refresh Departments from NetSuite** and try again.

Creating the Workplace Linked Record

After you've linked WFM locations and jobs, create your first linked record, called Workplace.

To create the Workplace linked record:

1. From the Workforce Management tab, go to Setup > NetSuite Integration > Settings > Records.
2. Click the **+Mirror new record type** button.
3. Fill out the fields for the new record type.
 - Display name
 - Display name plural
 - Link type
 - Icon (not required)
 - Name field
 - Include sublists
 - Grouping field
 - Display fields
4. Click **Save**.

Linking the WFM Workplace Record

After you create the Workplace record, you'll need to link it to NetSuite.

To link the Workplace record:

1. Click on the Setup tab, then select the NetSuite Integrations, then select Workplace.
2. Click in the search field, then enter the name you want to map to.
3. Click the right NetSuite name and they'll link automatically.

Employee Sync Settings

Sync employee settings between NetSuite and WFM.

To sync employee settings:

1. From the Workforce Management tab, go to Setup > NetSuite Integration > Settings > Records.
2. Click **Edit** in the employee row.
3. In the Editing record data for Employee window, check the boxes as follows:
 - **Create staff** – Check the box.
 - **Update staff** – Check the box.

- **Update wage data** – Check the box.
- **Update employment periods** – Check the box.
- **Primary location field** – Select a field. If this record type isn't already mirrored, it will automatically be created for mirroring.
- **Wage type** – Select an option.
- **Salary default hours** – Enter the default number of hours.
- **Leave balance fields** – Configure fields.

4. Click **Save**.

Creating Time-Off Linked Records

If you're using SuitePeople HR, you'll need to add two linked records.

This lets approved time-off in SuitePeople flow into WFM automatically. That way, managers won't schedule employees on days they've got approved time off.

To create Time-Off linked records:

1. From the Workforce Management tab, go to Setup > NetSuite Integration > Settings > Records.
2. Click the **+Mirror new record type** button.
3. Fill out the fields in the Editing record data for Time-Off Request window.
 - **Display name** – Enter **Time-Off Request**.
 - **Display name plural** – Enter **Time-Off Requests**.
 - **Link type** – Select **Leave/Time-off Request/Approval**.
 - **Icon** – Select an icon for time off, such as the airplane icon.
 - **Name field** – Enter **name**.
 - **Include sublists** – Check the box.
4. Click **Save**.
5. Fill out the fields in the Time-Off Type record.
 - **Display name** – Enter **Time-Off Type**.
 - **Display name plural** – Enter **Time-Off Types**.
 - **Link type** – Select **Leave/Time-off Type**.
 - **Icon** – Select an icon for time off type, such as the briefcase icon.
 - **Name field** – Enter **name**.
 - **Include sublists** – Check the box.
6. Click **Save**.

Mapping Wage Conditions

To ensure that hours and rates are sent to the right place, you'll need to map wage conditions to the correct pay items.

To map wage conditions:

1. From the Workforce Management tab, go to Setup > NetSuite Integration > Region Based Wages.

On the window that opens, link the applicable wage condition to the matching pay items in NetSuite.

2. If you're using subsidiaries, select which wage condition matches the right pay item for each one.

Note: Things to keep in mind:

- SuitePeople needs payroll items to have employees assigned to receive and a rate set. As an Administrator, go to Lists > Employees > Payroll Items. Select each payroll item you'll use for exporting.
To add an effective and expiration date automatically, check the **Apply** box for each employee individually rather than use the Mark All option. Enter the rate for each employee.
- WFM Regular Hours are usually linked to the **XX-Hourly NetSuite Payroll** item. WFM Overtime is linked to an **XX-Overtime NetSuite Payroll** item.

Linking WFM Leave/Time off Types to NetSuite

If you choose to create Leave/Time Off requests in NetSuite from WFM, you'll need to link the two types.

To link WFM leave/time-off types:

1. From the Workforce Management tab, go to Setup > NetSuite Integration > Leave/Time-Off.
2. In the search field next to the WFM Leave/Time-Off, type the name of the NetSuite Time-Off you want to link. Click the Time-Off name when it pops up in the dropdown to link them.

Note: Some things to keep in mind:

- Depending on whether you import or export leave with NetSuite, you'll see different linking options. If you chose to import leave from NetSuite, you'll get a list of Time-Off Types from NetSuite to match to leave types in WFM.
- After a Time-Off type is linked to a WFM Leave type, WFM can create leave based on approved time off in NetSuite.
- When you're exporting to NetSuite, the leave is sent as soon as it's approved in WFM and not during payroll processing.
- If you're using Infinet Cloud, when you create a part-day leave in WFM, the leave hours are sent. When you create a full or multi-day leaves in NetSuite, only the dates are sent and not the required hours.

Leave Balance Imports

With NetSuite, Leave/Time-Off can pull data from NetSuite or use WFM as the source and push data to NetSuite. If you're using WFM as the source, it's important to see how much leave an employee has accrued when approving requests.

WFM can get an employee's current leave balance from NetSuite through the following:

- Using a sublist (default: availablenow) with all leave balances
- Using a custom field on the employee record for each leave/time-off type

Leave balances are imported whenever a change is detected and after data is fetched from NetSuite for an employee. Deploy the User Event Script for the employee record to process more efficiently.

NetSuite Time-Off Type/Custom Record Employee Sublist

When using NetSuite standard Time-Off Types or a custom record in a sublist, give WFM the sublist record is so it can fetch the list of choices for linking.

If this record type isn't set up for mirroring, you'll need to create it with these settings:

- **Record type** – Enter **timeofftype**.
- **Display name** – Enter **Time-Off Type**.
- **Display name plural** – Enter **Time-Off Types**.
- **Link type** – Select **Leave/Time-off Type**.
- **Name field** – Enter **name**.
- **Include sublists** – Check the box.

For more information, see [Creating Time-Off Linked Records](#).

Setting up the record type for mirroring will turn on the Leave linking page.

When Leave types are linked to NetSuite records, leave balances for that leave type will be imported.

When Leave types are linked to NetSuite records, leave balances for that type will be imported.

NetSuite Employee Custom Field

Some NetSuite setups use a different custom field on the employee record for each Leave/Time-Off Type. This value gets updated in NetSuite whenever the leave balance changes.

You can set this up in WFM by configuring the Employee Mirrored Record on the Editing record data for Employee page. Add the values for the leave types you must import.

Only leave types that you enter a field for will be imported.

Exporting Shifts for Payroll

Follow the procedure.

To export shifts for payroll:

1. Go to Workforce Management.
2. Go to Process Time.
3. On the **From** field, select the start date for the export.
4. On the **to** field, select the end date for the export.
5. Filter your locations.
 - a. In the **Locations** field, click the filter icon.
The Filter Locations window opens.

- b. From the list on the left, select a location group.
The Available Choices and Chosen Items panels for groups and locations appear.
 - c. From the Available Choices panel at the top, select the group of locations with shifts that you must export.
If you want to select all states, click **Choose All**.
To move your selections to the Chosen Items panel on the right, click the blue right arrow in the middle. All locations in those groups will show up in the Available Choices panel at the bottom.
If you want to clear your selections, click **Clear All**.
 - d. From the Available Choices panel at the bottom, select the specific locations with shifts you want to export.
 - e. Click **Done**.
6. From the **Employees** list, filter the group of employees with shifts for export.
Choose from the following options:
- All
 - with shifts to push
 - with shifts
 - with failed pushes

Setting Up POS Imports

WFM can import point of sale (POS) data from NetSuite for scheduling.

Before you set up POS imports, complete the following requirements.

- Set up and configure your WFM and NetSuite integration.
- Upgrade to the latest version of the WFM SuiteApp. See [Installing SuitePeople Workforce Management from the SuiteApp Marketplace](#).
- If you are use InfinetCloud, add these view permissions to the **Payroll Administrator - Unlocked** role from InfinetCloud:
 - Items
 - Cash Sale
 - Cash Sale Refund
 - Invoice
 - Sales Order

If you're not using InfinetCloud, these permissions are already included in the role from the WFM SuiteApp.

To set up POS imports:

1. Set up a saved search for WFM to pull transactions from NetSuite.
Make a copy of this saved search before making changes, so updates to the SuiteApp don't override your changes.
 - a. Open the list of all saved searches. For instructions, see the help topic [Accessing a Saved Search](#).
 - b. Find the **customsearch_Adi_transactions** saved search.

- c. Edit and save a copy of the saved search. For more information, see the help topic [Editing or Deleting a Saved Search](#).
 - d. Configure the search to get the results you want. For more information, see the help topic [Defining a Saved Search](#).
For example, you can include or exclude items like gift cards from the search.
 - e. Keep the search tab open and note the ID.
2. Add a new custom record in the WFM website.
 - a. Open the WFM website at see.adiinsights.com.
 - b. Go to Setup > NetSuite Integration > Configuration > Records.
 - c. Click **create new custom record**
 - d. Set the link type to **Transaction**.
 - e. In the **Record Type** field, enter the search ID noted from NetSuite earlier. You may opt to add extra filters and columns to fetch from NetSuite here.
 - f. Set the display name and display name plural to be **Transactions** or something similar.
 - g. In the **name** field, enter the name. Click **Create**.
 3. Map the fields from NetSuite to the right items in WFM.
 - a. After you create the custom record, click **Fields** for the record type you made.
 - b. Identify the fields you need to pull from NetSuite. For more information about the available fields, see [NetSuite Records Browser for Transactions](#)
 - c. For each field, specify a purpose and a field name.
 - d. Map the fields.
 - **Stats location** – This field in NetSuite maps to the WFM location where you import the data..
 - **Date** – If your sales are reported to NetSuite in real time, use the **datecreated** field. This field gives you the date and time of the sale, allowing for a 15-minute resolution.
If your sales are added in bulk at the end of the day or tracked on a different day, use either **trandate** or **saleseffectivedate**. These fields only track at a daily resolution.
You can set up the field for sale date or time as either **Date and time of the sale** or **Date** depending on if WFM will get the time from NetSuite.
 - e. **Stats types** – For sales, you should map these to amounts. Either map to **quantity** to get the number of items sold, or map to **internalid** to get a count the transactions during the period.
 - f. **Additional filters** – Use these to exclude individual items for a sale or to exclude tax lines. You may set up a test to add these.
 4. Click the **Linking** tab.
 5. From the list, select **Transaction** from the import only group. Click **Save**.
A new menu item for import sales will show up. This lets you import any missing data or fetch data again if it's wrong or you've updated the search or mapping. WFM updates sales for today and yesterday throughout the day.

Connecting Saved Searches to WFM Sales and Units Data

You can create a saved search with sales, units, and other custom info in NetSuite. Use the search to forecast shift hours and view them in WFM. Setting up forecasting in WFM helps ensure that your hours worked meet your goals.

To connect a saved search to WFM sales and units data:

1. With an Administrator role, create a saved search with the sales and units data that you want to show in WFM. For more information, see the help topic [Defining a Saved Search](#).

For example, your saved search may include, but is not limited to, the following:

- Internal ID
- Date Created
- Date
- Sales Effective Date
- Location
- Amount
- Quantity

2. Note the search ID of the custom search you created.
3. In WFM, set up the saved search record to pull data.
 - a. Go to Workforce Management.
 - b. Go to Setup > NetSuite Integration > Settings.
 - c. On the Configure NetSuite page, click **Records**.
 - d. Click **+ Mirror new record type....**
 - e. On the Editing record data for new record type window, complete the required fields.
 - **Record type** – Enter the saved search ID.
 - **Display name** – Enter a name for the record, such as **Sales Search**.
 - **Link type** – Select **Transaction**.
 - **Icon** – (Optional) Select an icon for the record.
 - **Name field** – You may leave this as default.
 - **Ordering field** – You may leave this as default.
 - **Include sublists** – Verify that the box is checked.
 - **Inactive field type** – Enter **isinactive**.
 - **Mirror this record type** – Clear the box.
 - **Fetch entire record** – Verify that the box is checked.
 - f. Click **Save**.
4. Add key fields to the saved search record.
 - a. On the **Records** tab in WFM, click **fields** beside the record type you edited.
 - b. On the Fields window for the record, click **+ Create new field**.
 - c. Create the four key fields. Refer to the following table for the fields and related configurations.

Field	Field label	Record type	Field name	Purpose
Location	Location	location	location	Stats location
Sales	—	—	amount	Sales
Units	—	—	quantity	Units
Date and time of sale	—	—	datecreated	Date and time of sale

For more information, see [Guidelines for Creating Fields Linked to Saved Searches](#).

- d. On the saved search results page in NetSuite, confirm that the correct fields are mapped to date and time of sale. For more information, see the help topic [Accessing a Saved Search](#).
- e. If the **Date** and **Sales Effective Date** columns do not coincide, adjust the field name and purpose for the **Date and time of sale field** in WFM.
 - **Field name** – Change from **datecreated** to **trandate**.
 - **Purpose** – Change from **Date and time of sale** to **Date and time of sale (aggregated to daily total)**.

Note: When you create the **Date and time of sale** field in WFM for sales with times, set the **Purpose** field to **Date and time of sale (aggregated to daily total)**. The field will aggregate all data at a daily level.

5. To ensure that sales and units are created in the right locations, map the WFM locations to the fields.
 - a. Go to Workforce Management.
 - b. Go to Setup > NetSuite Integration > Locations.
The Link Location page appears with a list of locations in WFM.
 - c. Beside the location you need to link, click to search the corresponding location name in NetSuite.
 - d. For each location, click **Link**.

6. To view the connected sales and units in WFM, go to Shifts > Weekly.

The table displays the number of sales and units as well as other KPIs. When WFM starts to consistently gather data, you can use the actual sales or units for forecasting and labor deployment.

Guidelines for Creating Fields Linked to Saved Searches

When you create fields, keep these guidelines in mind:

- **Location** – Since you can pick the field and record type, you can use a subsidiary, department, or another custom category.
- **Sales** – If you use **amount** as the field name, the numbers in the **Amount** column of the saved search are added to get to the daily sales figure.
- **Units** – The field name is **quantity**, and this field sums up the number of units sold. To monitor the number of transactions done in a day, use the **internalid** as the field name.
- **Date and time of sale** – When this field is set, you can see the date and time of the sale, like when the sale record was created in NetSuite. Use this to group data into 15-minute periods.

Steps for Payroll Day

Follow these steps in this topic before running payroll in SuitePeople or Infinet Cloud to make things smoother and cut down on after-payroll adjustments.

The Percent Approved Report

- Run the WFM Percent approved report Go to Reports > Shifts > Percent Approved.

- This report identifies the % of processed or approved shifts for each location.

Note: It's best to have managers approve time daily. The schedule should be 100% processed or approved before you process payroll.

Locking Periods

After all shifts are approved, lock the scheduled weeks. This action stops any previous time approvals from being changed after processing.

If approved hours need to change, managers will need to talk to someone with Finance Coordinator access or higher in WFM to unlock it. WFM keeps a record of who locked and unlocked the time period for auditing.

To lock a time period:

1. Go to Workforce Management.
2. Click the **Shifts** tab.
3. Select **Lock Periods**.
4. Click **+New locked period**.
5. Fill in the **Start** and **Finish** dates for the period you must lock in.
6. In the Locations section, from the Available Choices panel, select the locations you need to lock. If you want to select all states, click **Choose All**.

To move your selections to the Chosen Items panel on the right, click the blue right arrow symbol in the middle of the panels.

If you want to clear your selected items, click **Clear All**.

Payroll Preview

After you've done all that, you're ready to start processing payroll.

- Go to Workforce Management. Click the **Process Time with NetSuite** subtab.
- When the window opens, set up the info you'll use for processing.
- Select the date range.
- Processing will default to 'All active locations'. If different locations are on different payroll schedules, the Locations can be filtered out by clicking on the filter icon to the right.
- Click **Fetch staff with shifts**. You can filter the list according to duration, locations, and employees.
- An export summary will show the number of exportable shifts and the total hours being processed or pushed into SuitePeople.
- Below the summary, you'll see a preview of all staff being processed or pushed, along with their hours.
- To see more details about an employee's hours, click their name. The window will expand to show dates, hours worked, locations, payroll items, workplace, rate, and total cost for the shift.

In the following example, there are 6 hours of normal time at a rate of \$18/hr for 6 hours along with an overtime rate of \$27/hr for 1.21 hours.

Date	Departments	Locations	Payrol Item	Workplace	Hours	Rate	Total
Wednesday, June 30, 2021	—	AK Coffee	Normal Time	AK Coffee	6.0000	18.0000	108.0000
Wednesday, June 30, 2021	—	AK Coffee	OT 1.5	AK Coffee	1.2167	27.0000	32.8500

If the Payroll Item isn't showing here, you can set it up. For more information, see [NetSuite Payroll Item \(SuitePeople/Premier Payroll\) not appearing in the export preview](#)

- Below the details, you'll see a summary of the approved shift, any notes, and who in WFM approved it. The summary includes:
 - Location
 - Start
 - Finish
 - Length
 - Job
 - Notes
 - Approver
- When you're ready to push your hours for pay, scroll up to the Export Summary window and click **Push**.
- WFM will begin the push process and you will see a progress menu appear. When it's done, WFM will show you a summary of the shifts that were pushed to SuitePeople.
- Click **Acknowledge**. Your payroll processing is done.

Reviewing Exported Data in NetSuite

After the data is pushed into NetSuite, review it. You should set up a saved search for a quick overview.

For tips on setting up a saved search, see [Setting Up a Saved Search to Review Time Exported to NetSuite](#)

Deep Analysis and Validation - Approved Hours Report

If you need extra analysis or want to check things like automated overtime in WFM, or if you need to manually enter hours for a pay item that's not linked, run the Hours report for the pay period.

Go to Reports > Shifts > Hours. When the window opens, select the pay run date range and the right locations.

- In the **Shift type** field, select **Actual shifts**.
- In the **Employment status** section, move the statuses you want to filter from the Available Choices panel to the Chosen Items panel.

After you've picked your filter options, click **Preview** at the bottom. The columns will show any overtime or other conditions triggered during the selected date range. This report can also list the employee name, job worked, location, and total hours.

NetSuite and WFM Integration FAQ

Click any of the following links to see more information:

- [NetSuite Payroll Item \(SuitePeople/Premier Payroll\) not appearing in the export preview](#)
- [Setting Up a Saved Search to Review Time Exported to NetSuite](#)

NetSuite Payroll Item (SuitePeople/Premier Payroll) not appearing in the export preview

If the Payroll Item column isn't showing in the preview, you can display it with a quick configuration.

Date	Departments	Locations	Payrol Item	Workplace	Hours	Rate	Total
Thursday, March 24, 2022	Security	USVI Security	Normal Time	USVI Hotel	8.0000	10.50000	84.0000
Thursday, March 24, 2022	Security	USVI Security	OT 1.5	USVI Hotel	0.1667	15.75000	2.6250
Friday, March 25, 2022	Security	USVI Security	Normal Time	USVI Hotel	8.0000	10.50000	84.0000
Friday, March 25, 2022	Security	USVI Security	OT 1.5	USVI Hotel	0.11667	15.75000	1.8375
Saturday, March 26, 2022	Security	USVI Security	Normal Time	USVI Hotel	7.9167	10.50000	83.1250
Saturday, March 26, 2022	Security	USVI Security	Normal Time	USVI Hotel	7.9000	10.50000	82.9500

To show the payroll item in the preview, go to WFM > Setup > NetSuite Integration > Settings > Records. Do the following:

- Show the payroll item in the column.
 - Click Edit Fields next to the timebill record, then click the button at the bottom labeled Create New Custom Field. This adds a new set of fields to the table—enter payrollitem as the record type and field name, then click Submit to save.
 - If you want WFM to block exports to NetSuite when there's no mapped payroll item, check the box for Required For Export before submitting.
- Give WFM the info to show in the preview. At the bottom of the records list, click Create New Custom Record. Fill in the details as follows:
 - Record Type = payrollitem
 - Display Name = Payroll Item
 - Display Name Plural = Payroll Items
 - Name Field = name
 - Grouping Field = itemtypenohierarchy
 - Columns = subsidiary

Click **Submit**.

The next time you load an export preview, the payroll item will show up.

Setting Up a Saved Search to Review Time Exported to NetSuite

To review time exported from WFM to NetSuite, you should set up a saved search with formatting to highlight any issues before you run payroll.

To set up a saved search, go to Reports > Saved Searches > All Saved Searches > New. On the next screen, pick the type of search. Select **Time** from the list.

Enter a name, like **Workforce Management Time Export**. Then, choose to make it public, available as a list, and available in sublist view.

Under **Criteria** set up a filter. Choose the option for **Created by SuitePeople WFM (Custom Column)** and set it to **True**.

Click the **Results** subtab and set the info to display. Customize as needed. From the following items, ensure you add the ones set in bold:

- **Date**
- **Employee**
- **Payroll Item**
- Blended Overtime (Custom Column)
- Payroll Rate (Custom Column)
- **Duration**
- Time-Off Type
- Payroll Workplace
- Location
- Department
- Customer:Project
- Case/Task/Event
- Item

Choose a sort order. You may opt to sort by employee, then by date.

It's helpful to highlight anything of concern, like overtime rows, with a red background. To set this up, go to the **Highlighting** subtab. Add a condition. In Payroll Item, choose any of your overtime payroll items. Select a background color.

To make the report easier to use, set up some quick filter options in the **Available Filters** subtab. Select filters to help you query the data. The most common are Employee, Location, and Date. This action lets you filter by date range, staff member, or location.

Click on **Save**. You can now run this report by typing the report name in the search box. If you have selected the list and sublist view options, use this report to filter and display the data under the **Time Tracking** subtab when viewing an employee.

Configuring Workforce Management

Configure Workforce Management (WFM) according to your needs.

Refer to the table for available configuration options and references.

Configuration	Description	Related Help Topic
Account Settings	Choose the amount and length of breaks employees can record.	Account Settings
Availability	Choose employee options for changing their availability.	Availability
Configuring Brands	Create brands and apply default settings units under the brand.	Configuring Brands
Locations	Add locations and configure schedules, locations, and other settings.	Locations
Jobs	Create jobs and configure related locations, jobs, and other advanced settings.	Jobs

Configuration	Description	Related Help Topic
Leave/Time Off	Set leave types, time in lieu, applications, approvals, holidays, overtimes, costings, and other related details.	Leave/Time Off
Validation Rules	Establish rules and criteria around the number and ages of employees working at a certain time.	Validation Rules
Shift Metrics	Set up items to track on individual shifts to be used for allowances, payroll, and reporting.	Shift Metrics
Financial Configuration	Set up details about employee superannuation funds.	Financial Configuration
Wage Setup	Create wage agreements and configure allowance, rate, penalty, and overtime rate conditions.	Wage Setup
Notifications	Set up reminders for important events, such as birthdays, document expiration, and others.	Notifications
Shift Reports	Create reports to track important weekly and daily statistics.	Shift Reports
Categories	Create location categories and groups for use in exporting shift reports.	Categories
Audit logs	View user actions related to publishing schedules, approving leaves, adding shifts, and others.	Audit Logs
Greyscale mode	Change UI colors to high-contrast black, gray, and white for ease of viewing.	Greyscale Mode
Security Settings	Set up two-factor authentication (2FA) to secure your account.	Security Settings in WFM
Dashboard	Configure the widgets, KPIs, and groups that appear on your WFM dashboard.	Dashboard

Account Settings

Time & Attendance

This page allows you to enable or disable the option to use Rest Breaks (Paid) and prevent shifts from containing more than one break. These settings will flow through to your time and attendance devices.

To prevent creating shifts with more than one unpaid break, click the **Single break** box.

To allow creating shifts with paid or rest breaks, click the **Rest breaks** box.

When you've set time and attendance break options, click **Save**.

Single Break

The **Single break** option ensures both timesheet shifts and shifts can only contain a single break. If you are using a payroll system that only supports single breaks, enabling this option will satisfy this requirement of the payroll system.

Enabling this option will add the option for paid rest breaks to be used when employees clock out for a break, or when managers edit and approve shifts. If you disable this option, only unpaid rest breaks will be used.

By default, the **Rest breaks** option is disabled.

Paid Rest Breaks and the Weekly Scheduling View

You can manually edit timesheets and shifts after completed timesheet shifts in the Weekly Scheduling View. This includes Jobs, start and finish times of events, and comments.

In the Weekly Scheduling view, the **+Add** button will add a new event row to the bottom of the list of punches. The **Remove** button will remove the bottom row event.

It's important to note that a paid rest break is counted as hours worked, and as such is included in all KPI calculations as if it were time worked. If wage-escalation is being used, the pay rate for a Rest Break (Paid) is decided by whatever the pay rate was before starting the Rest Break (Paid).

Short Break Prevention

Short Break Prevention is available on Time Clock for Windows as well as on iPad and Android mobile devices.

Short Break Prevention prevents the employee from returning from their break before the minimum length has passed.

If an employee comes back before meeting the minimum break requirements, they will see a message on Time Clock. The message advises employees of the time when their break finishes and when they will be allowed to punch back in.

To enable Short Break Prevention, see [Preventing Short Breaks](#).

Availability

The availability configuration page allows managers to set a limit on how much forward notice an employee must give when changing their availability. Employees will be unable to change their availability during these periods.

This is useful for small businesses as last-minute changes are a more frequent occurrence which can hinder a store's efficiency.

In the Availability configuration, you can set up the **Availability cutoff** field. Select the number of days in advance that staff members are prohibited from requesting availability changes.

You block availability requests for weeks with a schedule that has already been published in advance. For example, if a schedule has been published 1 month in advance, this will block any employee from requesting an availability change for this week.

If you want to prevent employees from requesting availability changes on a published roster period, click the **Publish blocks availability** box.

When you're done configuring availability settings, click **Save**.

Configuring Brands

The use of brands within WFM helps simplify the need to segregate different sections of a company. Creating different locations within brands stops any accidental employee crossover and confusion. You can create and apply default settings under a brand. When you create a location belonging to this brand,

the default brand settings are applied to that location. You can then directly override the settings for each location. This means less time spent setting up new locations.

An example of multiple brands would be through a food company, which may own a type of chocolate bar, a soft drink, and a type of gum. Creating a different brand for each of these products will give better direction for employees and managers within the company.

Head to the following links for more information

- [Creating a New Brand](#)
- [Editing a Brand](#)
- [Deactivating and Restoring a Brand](#)

Creating a New Brand

Adding a New Brand

On the Workforce Management tab, go to Setup > Brands. To create brand, click **New Brand**.

The Create new brand page appears.

Details

On the Details tab, complete the fields.

- **Name** – Enter a name for your brand
- **Logo** – If you want to include a logo for the brand, click Browse and locate a graphic file. The file must be SVG, PNG, or JPEG format and no larger than 600x600 pixels resolution.

When you're done setting the details, click **Save** and continue.

Defaults

On the Defaults tab, complete the following fields:

- **Schedule start day:** Select which day you would like your week to start. Enter times for when you want each workday to start, shifts to start, and shifts to finish
- **Shift interval:** Shift Interval helps you when creating a shift by snapping to the set times, whether it be to the nearest 15 minute, 30 minute, or 1 hour block. Set the shift interval to 15 minutes as it will allow you greater control when optimizing your schedule.
- **Break length:** The length of the breaks that are automatically placed after a set amount of hours.
- **Break required after:** Simplifies the need to place a break by automatically doing so after a set amount of hours. The Auto add Breaks option allows you to choose whether you want WFM to automatically add a break, or if you would like to do it manually.

After you have filled in all of the areas, click **Save**.

Default Stats

Setting up default stats will allow you to easily forecast your future sales. This uses sales and units values imported from your POS system to estimate how much you will sell. If you believe that you will sell more or less, you can apply a percentage index on top of the forecasted sales.

The Default to stats from sets the amount of weeks you want to use for a forecast prior to the desired week.

The Rolling average is a more involved way to calculate a forecast by using the average for multiple weeks data to give a better estimate on the predicted profits.

By applying an index to the forecast you can change the result by whether you believe you will make profit or not.

After you have filled in all of the areas, click **Save**.

Day Parts

Day Parts is a simple way to assess a broken-down chart from a day during a weekly forecast to show when the stores sales peaked.

1. Select **Add New**.
2. Name the first day part, and then select the period that you would like it to cover (Reminder: Day Parts cannot overlap)
3. After you have created as many Day Parts as you need, click **Submit**. The bar at the bottom of the screen shows how much of the day has been covered by Day Parts.

Templates

Templates is a simple way to inform employees that they are missing essential information from their profile, and to give them a nice welcome message to inform them to update their WFM profile. This can be done over SMS or Email.

Note: Note: Templates is an advance option.

Welcome Email

The welcome email is a way to direct a new employee through the step by step process of setting up their profile with WFM.

From the Templates tab, select **Welcome email** and edit the subject and content of the template. When you select this option, the available tags you can use are shown on the page.

From here you can customize what the welcome email will say. It can be useful to use important tags when informing an employee on what steps need to be completed.

Missing Details Email

An email can be sent out at any time to an employee to inform them on the fact that they have important information missing from their profile. Missing information may have an impact on their payroll.

From the Templates tab, select **Missing details email** and edit the subject and content of the template. When you select this option, the available tags you can use are shown on the page.

To customize the email you can use useful tags such as the ones shown on the Templates tab when you edit the template.

Missing Details SMS

If you want to be sure that your employee receives the notification as soon as possible, you can send them a customized SMS.

 **Note:** Text messages are billed in increments of 160 characters, work your message around this to reduce costs.

From the Templates tab, in the SMS section, select **Missing details**. You can edit the subject and content of the template.

After you have written out the structure for the SMS you can use the helpful tags shown.

Locations

In the Locations subtab, you can see all of the Roster Units that are incorporated with this brand.

Editing a Brand

After you have created a brand there is always the option to go over what you have created and make any changes to your brand.

First of all you will need to go to Setup > Brands and select the brand you want to edit.

From here it will take you to the same page as New Brand.

Editing

Now you are dealing with all of the details that you originally had set for the brand. You can select which section you would like to edit by selecting the relevant tab name.

For more information, see [Creating a New Brand](#).

Deactivating and Restoring a Brand

To deactivate a brand:

1. Go to your brand in Setup > Brands and then select the brand you want to deactivate.
2. On the right side of the page, click **Deactivate**.
A warning appears.
3. Click **Deactivate (Brand Name)**.

You can restore a brand after it has been deactivated.

To restore a brand:

1. Go to Setup > Brands.
2. Click **Restore Brands**.
3. A list of all of the deactivated brands will show up with an option to restore them.
4. Click **Restore**.

You will be prompted with a warning message explaining that any roster units that were deactivated with the brand will be restored.

5. Click **Restore (Brand name)**.

Labor Deployment

What is labor deployment?

This interface allows you to setup your ideal employee to customer or employee to sales ratio. WFM will then predict the correct number of employees required based on the 'sales' and 'unit' forecasted in WFM. As your projected sales changes week in-week out, so does the labor deployment suggestions, ensuring your managers always have an ideal employee to customer or employee to sales ratio and are on track with their labor targets.

On the **Daily** shifts screen, WFM will calculate how many scheduled hours are required per **location load** per hour. A **scheduled hour** is effectively one employee working for 1 hour.

 **Note:** Location Load is determined by the customer and is either "units" per hour or "sales" per hour

Customers enter how they want their employee levels to be adjusted as location load varies. These levels are entered at an hourly resolution. The platform may have forecast sales data down to 15-minute resolution (there are two other intervals, 30 minute and 1 hour) in which case the platform will divide as appropriate.

Terms to understand

- **Brand:** A Brand is a way of streamlining the handling of locations. Locations may belong to a Brand, and the Brand settings will be applied to the Location. You can override Brand settings for specific locations by changing the setting directly.

Newly created Locations associated with a Brand will get all of the Brand defaults.

The Day Parts, Teams and Labor Deployment Model are set up at the Brand level and then Locations are associated with them.

Brands work at a franchise or brand level as the franchisor (will own the brand) can make changes to labor deployment and push deployment out to new franchise locations.

- **Day Parts:** You may divide a work day up into any number of non-overlapping parts. This feature is used for creating different employee targets across different parts of the day: enabling you to require a different combination of employees working a given role at different times.

Your day parts may not overlap, but you may leave gaps between them if you want. Times without an associated day part will not be available for selection when using features that rely on a day part.

 **Note:** This is more of an advanced feature - a brand knows their base labor deployment model you can then start adjusting the model for different day parts.

- **Teams:** Teams can be used to group and order jobs; shifts can be grouped according to their team in the scheduling view. Shifts are also utilized in the Labor Deployment Model where several jobs from a team can sufficiently meet the staffing needs for a shift.

For example: a customer service specialist, customer service representative or a customer service lead could cover a shift needed in the Customer Service team. You might have 10 different back-of-house jobs, but they all use the same deployment model, so you may set up one team to cover BOH. You may not care which job role works when.

- **Opening Hours:** Under Setup > Brands > Hours, you can configure opening hours to be shared to all locations. Under Setup > Locations > Scheduling > Opening hours, you can override the shared opening hours from the brand.

Opening hours are currently only used in deployment for:

- Extra hours
- Sales based deployment will be restricted to opening hours

Opening hours may not overlap from one day to the next: the opening time on a given day must be after the closing time from the previous day.

Opening hours may not be longer than 24 hours on a given day.

- **Labor model:** The labor deployment model ensures various teams have sufficient employees to meet specified criteria. You can create multiple deployment models to satisfy ideal staffing levels for different stores. For example, stores with drive-thru will have a model explicitly for the drive thru. There may even be different models depending on the resources available at different stores (eg number of fryers or counters available) as well as store volume or location (shopping mall vs standalone)
- **Extra hours:** Extra hours will be applied on top of the suggestions from the model. This is not for ensuring minimum coverage but is to be used when you require additional employees to cover duties that are not related to sales, for example assigning 3 hours of management time for office administrator work on a Monday morning or having an extra 2 employees on for an hour to receive a load of goods that need to be unpacked and stored.

Fixed hours can only be added at a location level.

- **Over-unders:** Over-unders shown in red will show you how many employee hours you need to add or remove within a 15-minute period. This will compare the sales forecast to the already scheduled shifts to allow you to see where you need to make optimizations to meet the model.

Each of the red + numbers represent the number of additional employee hours required in a 15-min period.

 **Note:** It is also possible to have negative numbers. If there are no red numbers for given periods, it means the labor model is met for that period.

- **Suggested Shifts:** The suggested shifts shown are based on the over-unders. If more than two thirds of the minimum shift length requires additional employees, WFM will suggest a shift. Suggested shifts are in the screen-shot above, denoted with no employee name as well as a dotted outline.
- **KPIs:** When the deployment mode is enabled, an extra line is shown in the KPI panel and is called Deployment. This shows the number of hours the labor model is suggesting based on the forecast. This also shows at an hour-by-hour interval under the shifts.

- KPI panel
- Hour by hour

Create your first labor model

- Reach out to your account manager to enable labor deployment on your account
- Head to Setup > Brands and select your Brand
- Create some Teams

To create a model, you must first create teams. You must do this as the employee levels are adjusted on a team-by-team basis.

Expand on the above and explain some examples EG FOH BOH Administrator Management teams.

A “team” is either one job or several jobs. This means that a certain number of “team” members are required for a certain number of units (or sales, depending on customer choice). Any employee who can do any job in a “team” can be used to fill shifts.

A labor deployment plan can be set by deciding on the staffing levels of a group of jobs (team). This would mean that any employee that could do any of the jobs in the team could be scheduled. It also means that there is no ordering on the jobs in the team or a requirement on what jobs are filled.

- **Creating and Managing Teams in WFM:** The Teams Tab allows you to create and manage your teams. When creating your team you can name the team and assign jobs that belong to this team.

When the team is created, you may drag teams by their handle to reorder them, and you may drag jobs between the various teams within a brand. The order of jobs within a team is always alphabetical.

When you are done, head to the **Deployment** tab.

Creating and Managing Deployments

The Deployment tab allows you to create and manage your deployment models.

To create a deployment model:

1. Go to Setup > Brands. Select a brand and click the Deployment tab.
2. Provide a name.
3. Set:
 - **Minimum Shift Length**
Allow the customer to specify the shortest length of time (in hours) that an employee can be scheduled. The default will be 3 hours.
4. **Maximum Shift Length**
Allow the customer to specify the longest length of time (in hours) that an employee can be scheduled. The default will be 8 hours.

Deployment Settings and Locations

1. Managers can view the deployment settings assigned to a location by going to Setup > Locations and selecting their location.
2. Select the Deployment tab to display the current settings. To view the metrics assigned against each team, click on the team name to expand out and view the number of employees assigned against the metrics range
3. For the selected location, managers are able to assign extra hours against teams using the Create option under Extra Hours.
4. Should a location have higher or lower performing employees than most of the locations that are using this model, the location can have the model copied/cloned and adjusted for that location.
5. This can be done at the location under the Deployment tab. Head to Tools and select "Clone and Edit this Model".

Note: a Deployment has been cloned, the model is no longer attached to the Brand Model. Any changes to this detached copy will only be used for this location. Changes you make to this clone will have no effect on other locations and any changes made to the Model at the Brand level will no longer affect this location.

When the above are set, you will be able to select teams for deployment and assign the metrics type to be used for the team.

For the selected team, the model can then be built. This can be done by assigning the number of employees (Staff Count) that should be scheduled to meet the metric range selected (Base).

the model has been built, you can assign the model to locations by selecting the Locations button.

For the selected team, the model can then be built. This can be done by assigning the number of employees (Staff Count) that should be scheduled to meet the metric range selected (Base).

Enter the number of employees required for an hour with the corresponding value you are basing this off (either sales or units). WFM will automatically work out how many employees you need in each 15 minute period based on the hourly value provided.

If some of your day parts require a higher level of staffing than the rest of your day you can also build a different set of requirements for the other day parts.

When the model has been built, you can assign the model to locations by selecting the Locations button.

Daily Shifts View and using Labor Deployment

To use and view your model, head to the Daily View. Under Options you can enable Labor Deployment by enabling the Shift Display Option 'Labor Deployment'.

This enables the suggested shifts view and over/under ations.

Extra Hours

Every Extra Hours object will have a name and will apply to a specific Team. Extra hours are extra hours you'd like to calculate on top of the existing deployment. A simple example of this is "I would like to add 2 employees to open and close the store each day irrespective of sales".

There are two period types:

- Fixed period
- Relative period

There are three methods of determining the number of hours:

- Fixed employee count
- Fixed hours
- Dynamic hours

You can combine the period types and the hours types together as necessary.

Fixed Period

Fixed period hours refer to a static period on the day: for instance "between 9am and 11am"

Relative Period

You may also select a Day Part, (or the period Open to Close), and then apply optional offsets to the start and finish of this period to dynamically calculate the period. This can differ when a Location has different opening hours, for instance.

You can use this to generate periods like:

- Between 1 hour before Open to Open
- Between 30 minutes before Close to 1 hour after Close
- Between 1 hour after Open until 1 hour before Close

If a Day Part is used instead of the full open period, this will be truncated as necessary to the open period.

If a Relative period evaluates to an empty period (ie, is for a Breakfast day part on a Location that does not open until Lunch), then this extra hours object will be ignored for this Location

Fixed Staff Count

This rule type is automatically included in the per-shift interval demand levels.

Fixed staff count must be an integer, as it refers to the number of extra employees required for the given period.

Fixed Hours

A Fixed Hours rule indicates that there is a set number of hours that should be allocated to employees across the designated period. These hours may overlap with one another (ie, a 2 hour rule could be met by two employees working for 1 hour each at the same or different times, or 4 employees working 30 minutes each, or 1 employee working for 2 hours).

Unallocated fixed extra hours are shown slightly differently on the scheduling view: because they could apply anywhere within the period, the total number of unallocated hours is shown with the period where they can apply.

When generating suggested shifts, the rule process will attempt to create shifts according to the preference specified (start, middle or end of the period), but this may not always work with the other shifts and demand

Demand-based hours

Similar to how the regular team rules work, it is also possible to create a table of values that indicate how many hours should be applied as “extra” hours. This takes the total figure for the period from the selected stats type (which could be a subcategory, see above), and then uses the lookup table to determine how many extra hours are required.

It then applies them using the same rules as for Fixed hours, including where it will prefer to create suggested shifts, and the mechanism for displaying unallocated hours

Display of extra hours in the scheduling view

As mentioned above, extra hours that are not “Fixed employee count” hours will be “consumed” by any shifts that are in excess of the team rule demand. Unallocated extra hours objects, because they refer to a range, will show up as the total number of unallocated extra hours, stretched over the period to which they may apply.

The graphic below shows the sales demand for the BOH team across a day, but additionally shows that there is a 2½ hour unallocated extra hours in the morning, and 7 hours extra throughout the day. These hours could be allocated to any parts of shifts within the relevant periods that are beyond the demand from the team rule.

Team rule demand will always be applied to a shift before any extra hours are considered.

Deployment level extra hours

It is possible to configure extra hours at the deployment level. These will apply to any Locations that are using that deployment model.

You may still override the extra hours at a given location: this includes not using a specific extra hours rule, or adding additional ones.

Demand based hours are calculated based on the stats and allocated the same way fixed hours are allocated

Sales Subcategories

Currently, sales subcategories are only imported from Redcat.

Within a brand, select **Stats Types**.

Here you can add subcategories to an existing stats type (Sales/Units), and these can be different between sales or units.

To add a new one click **Add new**.

To change the name, click it and type in what you want.

To deactivate click **Deactivate**.

If you've got deactivated ones, you can reactivate them.

You can set these up to drill down to whatever level of detail you need.

Deployment by Sales Subcategories

Here are the actions for deployment by sales subcategories.

- Click a button to create a new team rule.
- Choose the team and the subcategory, knowing that Sales or Units is also classed as a subcategory.
- If you select a subcategory with children, deployment adds up that subcategory and all its children.

If you create more than one model for a team, each is calculated separately and then added together for staffing needs.

For example: In a restaurant you may build a model for the FOH team based on dine-in units and a second model based on takeaway units.

When you need an employee in either model, they'll be added to the team's staffing needs.

Deployment Report

In Setup > Locations, select a location and then go to Scheduling > Deployment you will see an option within the 'tools' menu to generate a report.

This report shows deployment for either the forecast or sales. If you're changing the model and want to know how many hours it generates or how your changes look, this report will help you understand that.

This doesn't take into account any shifts during the period. It only shows the required hours after Team Rule and Extra Hours are applied to sales for that day.

Opening & Prep Hours

Dynamic Extra Hours

You can set up dynamic extra hours at a brand level and change them for a specific location if needed.

Name the extra hours, assign them to a team, and pick which days they apply to.

You can apply the extra hours to a fixed or relative period.

If there's a day part set up at the brand level, select it. Otherwise, you can only select **Full day**.

The next two options let you set how many extra hours you want to add, based on the selected period:

Underneath the **relative to** list, there are two rows with three options:

- How many hours (time wise)
- Select either "at", "before", or "after"
- "Start of period" or "Finish of period"

This field lets you pick how many extra hours you need before or after the start or end of the period.

For example, if I need employees to open the store each day, I can set the options like this:

- **Relative to** – Full day period (open -> close)
- **Between** – 2 hours before the start of the full day period (open time)
- And at 0 hours at the start of full day period (open time)

So this means it'll suggest two extra hours before my open time, right up until opening..

Employee count

This setting applies X number of employees for the whole period.

It'll be added to the +1/-1 15-minute data.

Fixed hours

Fixed hours add X hours to the period you set earlier.

Prefer hours means suggested shifts will use these hours first.

For example, if you need 3 hours of setup in the two hours before open, you can set the times as above. Then, enter **3** as fixed hours and set prefer hours to finish the period.

Demand-based hours

Demand-based hours are calculated from stats and assigned like fixed hours.

In the daily view, the first line shows sales-driven deployment with employee count.

The second line shows dynamic extra hours. You can use 2.5 hours before open, 7 hours during open hours, and 2 hours after close.

It's up to the scheduler how to use the extra hours. They must stay within the period.

Opening hours

Under Setup > Brands, select a brand. Click **Details**.

To set opening hours for all locations, select **Hours**.

To override the shared opening hours from the brand, go to Setup > Locations. Select a location and click Scheduling > Opening hours.

Opening hours are only used for deployment in these cases:

- Extra hours
- Sales based deployment will be restricted to opening hours

Locations

A location is used for single stores where a manager can control their employees. Locations have lots of options to help with opening and closing, shifts, sales forecasts, and other day-to-day improvements.

See the following topics:

- [Location Options in WFM](#)
- [Adding a New Location in WFM](#)
- [Bulk Uploading Locations in WFM](#)
- [Deactivating a Location in WFM](#)
- [Shift Templates in WFM](#)
- [Managing Public Holidays in WFM](#)

Location Options in WFM

There are lots of options to look at when editing a location, and each plays an important part in weekly shifts.

To edit a location, go to Setup > Locations and select the one you want to edit.

When you've selected a location to edit, you'll see the following options:

- [Details](#)
- [Scheduling](#)
- [KPI Targets](#)
- [Modifiers](#)
- [Approvals](#)
- [Jobs](#)

Details

When you edit a Roster Unit, the first tab is for editing the basic details.

The Details tab has a few basic info pages for the Roster Unit.

There are seven tabs on this screen.

Name

Change the Roster Unit name.

Custom ID is a custom identifier for the Roster Unit.

- Some csv reports can display the custom ID to help when importing to a spreadsheet
- If using our Generic Email importer, we can match location names to the Custom ID

Address

Enter the location name or address.

Ensure the timezone and state are correct. Timesheets and public holidays will be calculated based on these details.

Important: To comply with the Biometric Information Privacy Act (BIPA), devices in Illinois locations may not be used to capture biometric data through fingerprint scanning.

When you change a location previously set outside of Illinois to within it, an error message may appear with a list of devices that use biometric data to authenticate.

To continue changing the device location, click each of the device links and go through the device wizard. On the Authenticate by field, select PIN only as the authentication method.

Contact details

Phone will fill by default when publishing by SMS.

Contacts

These include any outside contacts who might need to be called, such as maintenance workers, delivery services, or customers.

Groups

This option only appears in specific setups.

Scheduling

Schedule days and times

Choose which day your schedule starts, like **Wednesday** if your week is Wednesday to Tuesday.

Shift interval – This interval is how often your shifts are scheduled, usually every 30 minutes. If you schedule shifts 15 minutes before or after the hour, select **15 minutes**.

Shift interval

Daily start and finish time – These times are the earliest and latest someone can be scheduled.

Show shift finish times – If you check this, shift end times will show on printed schedules.

Clear this if you only want employees to see they're needed until required.

You can have breaks auto-applied if shifts are long enough. Set this to match your award conditions, along with break length. You can still edit this while making a shift.

Display breaks on printed reports – If employees take breaks when it's not busy and don't have preset breaks, clear this option. The break will still count even if it doesn't show.

Default stats

If you have a POS integration for importing sales data, you can set the default schedule to fetch the data so you don't have to change it every week. You can also apply an index.

KPI Targets

Setting key performance indicators (KPIs) for a roster unit helps management keep a record of important information. The two main types of KPI are:

- Sales Related Targets
- Absolute Targets (Per-Week)

Sales related targets

Labour Percentage is a helpful sales-related KPI. It lets you set a daily or weekly goal for how much you spend on wages compared to profits.

Set the productivity goal KPI to see how many units get sold per hour. For example, in an electronics store, the goal might be 3 units per hour per employee. With ten employees, selling within 10% of 30 units means you met the goal.

Absolute targets

Absolute targets are limitation goals for a week's shifts.

Costs lets you set a goal for how much gets spent on wages..

Hours for the total hours worked by all employees.

You hit these targets if the result is less than or equal to the goal.

Modifiers

You can add things like superannuation and salary on-costs.

Multiplier

You can add any required costs as a percentage multiplier for the weekly schedule. You can set an effective from date and apply it to an employment status.

An example of a multiplier is superannuation.

Fixed Costs

You can add any required fixed costs to the weekly schedule. You can set an effective from date and apply it to an employment status.

An example of a fixed cost is the work cover.

Approvals

Availability

You can select which managers can be approvers for availability requests at each location. The manager will receive availability requests from employees that have that location as their primary location.

Leave

You can select which person/s can be approvers for leave requests at each location. They will receive leave requests from employees that have that location as their primary location.

IMPORTANT NOTE: This setting does not prevent the manager from adding an approved leave event for employees that they 'manage' this is defined by any roster unit/location that the manager is available to be rostered at.

Actual

If you set this, you'll get a warning if you try to approve a shift longer than what you've set.

Approvals_Actual

Automatch

For more information about these settings, see [Automatch and Rounding Settings in WFM](#).

Jobs

 **Note:** Before you can assign jobs to a Roster Unit, you must set them up. To do this, go to Workforce Management. Go to Setup > Jobs.

Select which jobs can be worked at this location. Move them over using the arrow. If all jobs apply click **Choose All**, then hit **Save**.

Adding a New Location in WFM

Follow the steps to add a new location roster in WFM to manage a separate set of employees.

Step 1: Add a new Location

1. Go to **Setup > Location**.
2. Select **Add New**.
3. Follow the prompts to add a new location.

Step 2: Configure additional Location settings

1. If there are any unique schedule settings for this unit, set up approvers and multipliers. Verify everything before you add employees.

Step 3: Set up Time Clock

1. [Setup SuitePeople Time Clock for Windows] within Location settings.
2. [Setup NetSuite Time Clock for Android & IOS] under the Time Clock Config option.

Step 4: Add employees which are available to be scheduled at this Location

1. When creating a location, you can add employees who already work in WFM or at another roster unit. This is useful if you share employees across sites or are combining locations.

2. You can create new employees as usual and assign them to the new location. You can also add the new location to existing staff in WFM.

Step 5: Start Scheduling!

1. After you complete the previous steps, you can start setting schedules and tracking employee times.
2. Some integrations might need extra setup. If you need help with the setup, contact NetSuite Customer Support.

Bulk Uploading Locations in WFM

In Workforce Management (WFM), you can upload locations in bulk using a CSV file.

To upload locations in bulk in WFM:

1. Go to Setup > Locations.
2. On the top right section, click **Bulk Actions**. Click **Uploader**.
3. On the Location uploader page, click the brand associated with the locations.
4. To download a template of the CSV file, click **Template**.
5. Format your locations according to the downloaded template.
6. Drag and drop the formatted CSV file in the upload space at the bottom of the page.
The page updates with the mapping and preview of the bulk upload.
7. On the Header Mappings section, check that the items in the **File Header** column match those in the **WFM header** column as you intended.
8. On the **Mapping Preview** section, review that the data fall under the correct headers.
9. On the **Upload options** section, check the boxes that apply to your upload. Click Upload.
A confirmation page appears.
10. Understand and check all the boxes and click **Upload**.
A summary window appears showing the counts for the successfully or failed data changes.
If there are errors in the upload, click **Errors**. A window appears to help you troubleshoot failed updates.

Important: To comply with the Biometric Information Privacy Act (BIPA), devices in Illinois locations may not be used to capture biometric data through fingerprint scanning. All devices in the Illinois locations must be set to use only pin codes to authorize, otherwise, the location will not be updated.

To view device settings, log in to Workforce Management. Go to Setup > Time Clock. From the **Activated Devices** subtab, click the device name associated with the location. On the Options page of the wizard, from the **Authenticate by** field, select **PIN only** as the authentication method.

11. Click **Done**.

Deactivating a Location in WFM

To deactivate a location, go to Setup > Locations. Select the location you want to deactivate.

On the Location screen, click **Deactivate**. Confirm the deactivation on the warning that appears.

Reactivating a Location

After deactivating a location, you can restore it any time you need.

Go to Setup > Locations.

To see a list of deactivated locations with restore options, check the **Include deactivated units** box. Select **Inactive**.

A warning message appears. Click the **Restore (Location name)**.

Shift Templates in WFM

If shift templates are enabled, you will need to be utilizing jobs within WFM.

For help setting up jobs and assigning them to employees, see [Jobs](#).

Only Managers and higher can access shift templates. Users can only see templates for locations they can view.

This guide is split into two sections:

- Creating shift templates
- Using shift templates

Creating Shift Templates

Shift templates let you set up permanent, recurring shifts without employees attached.

You will be able to set:

- Location of shifts
- Starts time of shifts
- Finish time of shifts
- Number of employees to fill each shift
- The job which is worked that shift

If you want to copy a permanent employee schedule week to week, use the copy and paste function in Workforce Management.

1. To create the initial template, go to Shift Template setup, available by **Setup > Locations** and selecting a location. When selected, click on **Scheduling** and **Template shifts**.
2. Click on a day to expand and view all template shifts on that particular day. If there are no template shifts, you will see a button 'add new shift set'
3. The list of headers that appear are:

- **Start** – start time of template shift
- **Break start** – start time of the break of the template shift (Only used with the Shift Template Model option)
- **Break finish** — end time of the break of the template shift (Only used with the Shift Template Model option)
- **Finish** — finish time of template shift
- **Job** — the job assigned to this template shift
- **Count** — number of shifts with this day (explained below)

The following are sample settings for a template shift:

- start time of **7:00am**
- finish time of **4:00pm**
- Break start time of **12:30pm**
- Break end time of **01:00pm**
- Job of **Manager**
- Count of 2 employees working this shift

The **count** of 2 above means two template shifts will appear, both starting at **7am** and finished at **1:30pm** of the job **Manager**

After your shift sets are created, you can go back here to edit them.

You can adjust template shifts when creating a schedule below.

A completed shift set may look like below:

▼ Wednesday							
⌚ 08:30 AM	⌚ 12:00 PM	⌚ 12:30 PM	⌚ 04:30 PM	Barrista	↕	2	Delete
⌚ 04:30 PM	⌚ 07:00 PM	⌚ 07:30 PM	⌚ 10:00 PM	Barrista	↕	2	Delete
⌚ 08:00 AM	⌚ 11:00 AM	⌚ 11:30 AM	⌚ 03:00 PM	Restaurant Manager	↕	1	Delete
⌚ 03:00 PM	⌚ 07:00 PM	⌚ 07:30 PM	⌚ 11:00 PM	Restaurant Manager	↕	1	Delete
⌚ 08:30 AM	⌚ --:-- --	⌚ --:-- --	⌚ 12:30 PM	Host	↕	1	Delete
⌚ 12:30 PM	⌚ --:-- --	⌚ --:-- --	⌚ 06:30 PM	Host	↕	1	Delete
⌚ 06:30 PM	⌚ --:-- --	⌚ --:-- --	⌚ 10:30 PM	Host	↕	1	Delete
+ Add new shift set							

Shift Templates in Action

Shift templates are available on the **Daily** view and the **Multi-unit** view. There are also two different layout types: Legacy and Model.

This section describes the legacy static shift templates type. This is the default shift template type.

We will start with the **Daily** view.

Click **Options** at the top of a new, blank week.

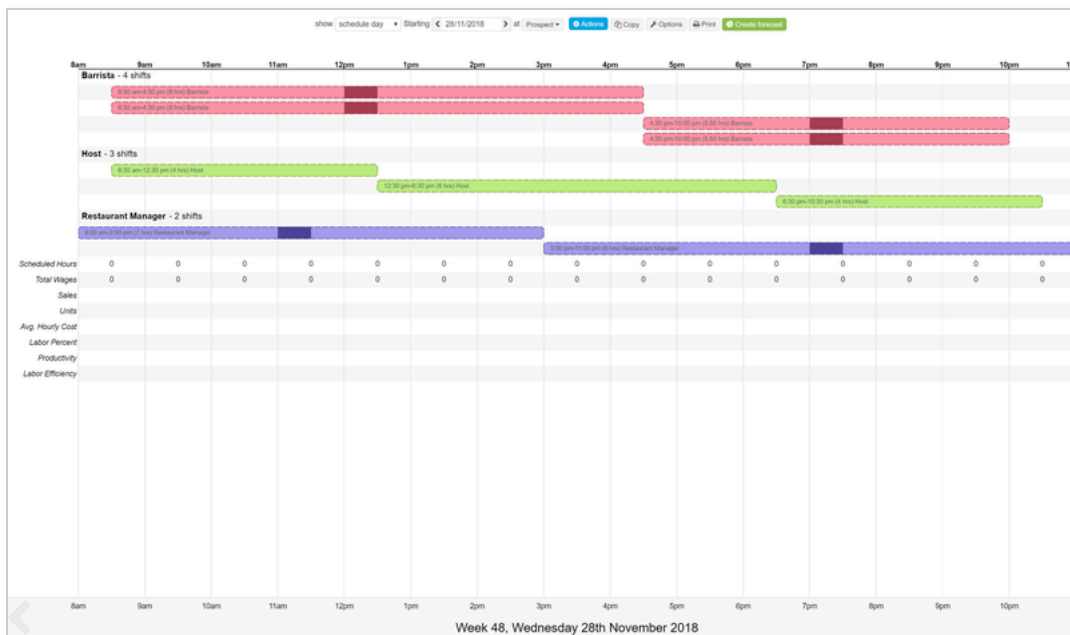

The view options pane will appear from the side. Click the **Shift Templates** option to view shift templates you previously created. You can turn these on or off at any time.

Select the **Shift templates** type to assigned to create a static template to work from.

Switch **Shift labels** to **on**, to view the details on each template.

The shifts created earlier show up below. Note the differences from normal scheduled shifts:

- No names attached to the left of shifts
- Dotted shift outline
- No cost associated to shifts
- No wages or scheduled hours added to KPI's

To assign someone to a shift template, click the shift you want to assign.

The shift shows up at the bottom with the job and available employees. Unpaid break rules still apply.

To change shift length and break times, drag the template shift at the bottom bar before assigning employees.

Selected, the new added shift will be displayed with the template.

If you delete a templated shift, it will reappear as a blank unassigned shift.

Note: You can adjust the shift length after it's assigned to an employee. If you edit template shifts, the changes will not apply if an employee has already been assigned one of these shifts.

Creating Shift Templates using Hours Met Shift Template Types

The purpose of shift templates is set up a permanent, recurring set of shifts with no employees attached.

The Hours Met shift template allows you to work dynamically on templated shifts.

You will be able to set:

- Locations of shifts
- Start time of shifts
- Finish time of shifts
- Number of employees to fill each shift
- The job which is worked that shift

Shift templates are available on the **Daily** view and the **Multi-unit** view. There are also two different layout types: Legacy and Model.

This section describes the dynamic model shift templates type.

We will start with the **Daily** view.

Click **Options** at the top of a new, blank week.

The view options pane will appear from the side. Click the **Shift Templates** option to view shift templates you previously created. You can turn these on or off at any time.

Select the **Shift templates** type to **Hours met** to create a dynamic template to work from.

Switch **Shift labels** to **on**, to view the details on each template.

To create the initial template, go to Shift template setup, available by **Setup > Locations** and selecting a location. When selected, click on **Scheduling** and **Template shifts**.

The Dynamic Model view will treat shifts with breaks as two separate shifts. Creating the template without breaks may be a layout consideration.

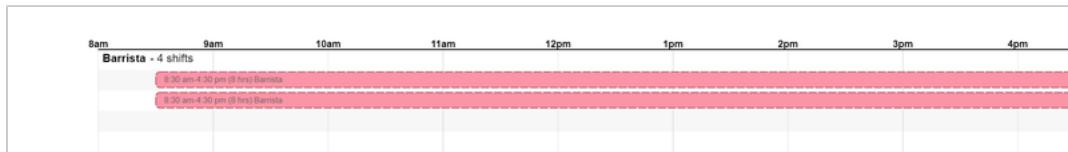

A completed shift set may look like below:

▼ Thursday							
⌚ 08:30 AM	⌚ --:-- --	⌚ --:-- --	⌚ 04:30 PM	Barrista	↕	2	🗑 Delete
⌚ 04:30 AM	⌚ --:-- --	⌚ --:-- --	⌚ 10:00 PM	Barrista	↕	2	🗑 Delete
⌚ 08:00 AM	⌚ --:-- --	⌚ --:-- --	⌚ 03:00 PM	Restaurant Manager	↕	1	🗑 Delete
⌚ 03:00 PM	⌚ --:-- --	⌚ --:-- --	⌚ 11:00 PM	Restaurant Manager	↕	1	🗑 Delete
⌚ 08:30 AM	⌚ --:-- --	⌚ --:-- --	⌚ 12:30 PM	Host	↕	1	🗑 Delete
⌚ 12:30 PM	⌚ --:-- --	⌚ --:-- --	⌚ 06:30 PM	Host	↕	1	🗑 Delete
⌚ 06:30 PM	⌚ --:-- --	⌚ --:-- --	⌚ 10:30 PM	Host	↕	1	🗑 Delete
+ Add new shift set							

When creating the template, a **count** of 2 above means two template shifts will appear, both starting at **8:30am** and finish at **4:30pm** of the job **Manager**.

The shifts created earlier show up below. Note the following differences from normal scheduled shifts:

- No names attached to the left of shifts
- Dotted shift outline
- No cost associated to shifts
- No wages or scheduled hours added to KPI's

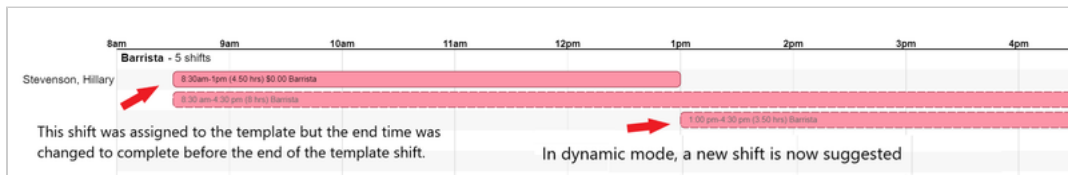

To assign an employee to a shift template, click on the shift you would like to assign an employee to.

The shift appears at the bottom with the right job and available employees.

To change shift and break times, drag the template shift at the bottom before assigning employees.

The Model Shift template is dynamic. It suggests what coverage is still needed after you start filling shifts.

If you assign part of a template, it will show what still needs to be filled.

If you delete a templated shift, it will reappear as a blank unassigned shift.

Note: You can adjust a shift's length after assigning it to an employee. Edits to templates won't apply if an employee is already assigned.

Adding Employees to a Regular Template Shift

When you're setting up or editing shift templates, you can add notes to each shift or select specific employees to show up as available choices.

- **Comments column** – Adds a comment to the corresponding template shift
- **Staff column** – Shows a selection box of available employees. You can select certain employees to appear for selection for that shift.

Shift Notes

Shift notes will show up each week when you add an employee from the template. You can change this each week if needed.

Employee Selection

Situations you may want to do this are if you have certain employees, such as full-time employees, which usually work certain shifts however any of them could work these certain shifts, these shifts are set however the employee can change each week and you must schedule a full-time employee on this shift.

You might have an employee with a regular shift every week. You can assign only that person to the shift, so they're the only one who shows up for it.

To select them, click **All employees** on the template shift.

After you've selected your employees, close out. The setup page shows how many employees are available per template shift.

Copy Templates Between Locations

If you've made a template at one location, you can copy it to other locations in the company.

You can copy all template shifts for the week, or certain days.

This is accessed on the shift template setup page underneath the template setup.

	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday	Total
1 Copy from: Blacktown (current location)	3	1	1	1	1	1	1	9
	3 ↓	↓	↓	↓	↓	↓	↓	
2 Copy to: Bondi	0	0	0	0	0	0	0	0
Combined templates	3	1	1	1	1	1	1	9
Template sets in red will be deleted								
								5 Copy

1. Select a location to copy templates from # number of template shifts on each day are listed to the right
2. Select a location to copy templates to # number of template shifts which are currently at that location are listed to the right
3. Clicking this option will gray out the icon so that day's template shifts won't get copied. This setting is useful when you only want to copy certain days.
4. Total number of template shifts which will be copied across to the selected location
5. Button to finalise the copy

Note: Copying is non-reversible

Copying template shifts between locations on certain days

You may want to copy template shifts only from certain days # for example extended hours at multiple locations on Fridays - you can make changes to Friday's template shifts at 1 location; and if they are the same at another location you can copy them over.

The below scenario we have made changes to our Monday - Friday template shifts, however do not want to copy over our Saturday + Sunday template shifts as we want them to stay the same at the location we are copying to (please note copying overrides shifts at the location you are copying to).

Click the arrow on days you don't want to copy. Those days will gray out and not get copied.

This way, Saturday and Sunday won't get copied, and the bottom number in bold will show 0 shifts for those days.

	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday	Total
Copy from: Blacktown (current location)	3	1	1	1	1	1	1	9
	↓	↓	↓	↓	↓	-	-	
Copy to: Bondi	0	0	0	0	0	0	0	0
Combined templates	3	1	1	1	1	0	0	7
Template sets in red will be deleted								
								Copy

Managing Public Holidays in WFM

You can edit public holidays by Location. To do so, go to Setup > Locations, select a location, and then click Public Holidays.

Some Enterprise Agreements, Awards or Regions may view different public holidays than the Federal or State dates (eg. regional show days).

Public holidays can be included or excluded at the WFM Location level.

For a full list of holidays for the U.S., go to <https://see.adiinsights.com/holidays/US/2023/>.

Within this menu, you will see a list of public holidays which are assigned to your Location.

Adding a Public Holiday

Holidays will generally only need to be added if you need to replace a holiday or your local area observes holidays other than state or national holidays. Note: if you add a holiday, it only applies to this location. To add a holiday, click **Add local public holiday**. Enter a name and a date for the holiday. Optionally, enter a start time and a finish time. Click **Create**. The holiday appears in the list for that location.

Excluding a public holiday

Clicking on the “Exclude” button will prompt you to confirm you’d like to exclude this particular holiday from this Location.

After excluding a public holiday a new list of holidays excluded from this Location will appear underneath the list of current holidays:

You can click “Restore” on a public holiday if you have made a mistake or need to add that holiday back to those included/observed at this Location.

Automatch and Rounding Settings in WFM

 **Note:** This setting is available if it is enabled on your account and you use the SuitePeople Time Clock (previously AdiClock) app on an Android device or iPad. To know more, contact your NetSuite account manager.

With automatch, you can minimize time spent on shift approvals by setting conditions for automatic timesheet approvals.

Guidelines When Using Automatch

Note the following guidelines:

- Automatch cannot be used with timesheet shifts that have additional time fields. When you run automatch, these shifts appear as exceptions. You must manually review and approve them. For more information, see [Configuring WFM Time Fields for NetSuite](#).
- When configuring automatch settings, avoid testing on real data. If you are using real data, ensure any users with approval rights at that location are aware so that employees do not have shifts approved incorrectly.

- When configuring automatch settings, ensure that you check the boxes for your desired settings. If the box for the setting is cleared, WFM will not check for it even if the field contains values.

To update your automatch settings, see [Updating WFM Automatch Settings](#)

For more information about using automatch when managing shifts, see [Approving Shifts with Automatch](#).

To know more about the available settings, refer to the following sections:

- [General Automatch and Rounding Settings](#)
- [Shift Settings](#)
- [Unpaid Meal Break Settings](#)
- [Paid Rest Break Settings](#)
- [Punch Events Settings](#)

General Automatch and Rounding Settings

Review the table for the related settings.

Setting	Description	Example
Default Grace Period X minutes	Enter the number of minutes before or after a scheduled shift that WFM should consider when approving timesheets. WFM automatically matches the times that fall within the grace period. If you require more detailed shift settings, define those preferences in the Shift Settings section of this page.	If you enter 15 minutes as the default grace period, WFM will automatically approve employee times within 15 minutes of the shift start and end times.
round actual shifts to a multiple of X minutes	If you want to round actual shifts to a multiple of time, check this box and enter the base number of minutes. WFM rounds off employee times to the closest multiple of the base number. Specifies the rounding to a multiple of minutes. Times will round to the closest multiple. If you don't want to round shift times, clear this box.	If you enter 15 minutes, WFM rounds off the approved start time to times within multiples of 15. These times include 9 am, 9:15 am, 9:30 am, and so on. If the employee start time is 9 am, expect the following scenarios: ■ The employee punches in at 9:07 am, and the closest 15-minute multiple of time is 9 am. That time becomes the approved shift start time. ■ The employee punches in at 9:08 am, then the approved shift start time rounds off to 9:15 am.

Shift Settings

Review the table for the related settings.

Setting	Description	Example
length is within X minutes of scheduled	Check to define the maximum number of minutes that a shift can vary from the scheduled shift length so that WFM will still approve it.	If you enter 30 minutes, WFM will approve shifts that lasts for as short as 7.5 hours to as long as 8.5 hours.

Setting	Description	Example
start is less or equal X minutes before scheduled	- Check to define the maximum number of minutes before the scheduled start time the actual shift should start so that WFM will still approve it. - You may also round the time to the scheduled start time.	If you enter 15 minutes before the scheduled start time, which is 9 am, WFM will approve shifts punched in from 8:45 am to 9 am. A shift punched in at 8:44 am must be manually approved. If rounding is checked, approved punches will round to 9 am.
start is less or equal X minutes after scheduled	- Check to define the maximum number of minutes after the scheduled start time the actual shift should start. - You may also round the time to the scheduled start time.	If you enter 15 minutes after the scheduled start time, which is 9 am, WFM will approve shifts punched in from 9:01 am to 9:15 am. A shift punched in at 9:16 am must be manually approved. If rounding is checked, approved punches will round to 9 am.
finish is less or equal X minutes before scheduled	- Check to define the maximum number of minutes before the scheduled end time the actual shift should end. - You may also round the time to the scheduled finished time.	If you enter 15 minutes before the scheduled end time, which is 6 pm, WFM will approve shifts punched out from 5:45 pm to 6 pm. A shift punched out at 5:44 pm must be manually approved. If rounding is checked, approved punches will round to 6 pm.
finish is less or equal X minutes after scheduled	- Check to define the maximum number of minutes after the scheduled end time the actual shift should end. - You may also round the time to the scheduled finished time.	If you enter 15 minutes after the scheduled end time, which is 6 pm, WFM will approve shifts punched out from 6:01 pm to 6:15 pm. A shift punched out at 6:16 pm must be manually approved. If rounding is checked, approved punches will round to 6 pm.

Unpaid Meal Break Settings

Review the table for the related settings.

Setting	Description	Example
start is within X minutes of scheduled	Check to define the maximum number of minutes after a scheduled break start time the actual break should start so that WFM will still approve the shift.	If you enter 5 minutes and the scheduled break starts at noon, WFM will approve shifts with breaks starting from noon to 12:05 pm. A shift with a break starting at 12:07 pm must be manually approved.
length is within X minutes of scheduled	Check to define the maximum number of minutes after a scheduled break end time the actual break should end.	If you enter 5 minutes and the scheduled break ends at 12:30 pm , WFM will approve

Setting	Description	Example
		shifts with breaks ending from 12:30 pm to 12:35 pm. A shift with a break ending at 12:37 pm must be manually approved.
length is at least the same as scheduled	Check to only approve shifts if the actual break length is equal to or longer than the scheduled break.	If you check this box, and the scheduled break is from noon to 12:30 pm, WFM approves shifts with breaks that ran for 30 minutes or longer. A shift with a break from noon to 12:25 pm needs to be manually approved because it ran for less than 30 minutes.

Paid Rest Break Settings

Review the table for the related settings.

 **Important:** The Paid Rest Break section appears on the settings page only if **the Rest Breaks (Paid)** feature is enabled in your account. To know more, contact your NetSuite account manager.

Setting	Description	Example
treat paid rest breaks as time worked	- Check to automatically approve timesheets with paid rest breaks that meet all other automatch criteria. - If the round actual shifts to a multiple of X minutes box is checked, WFM will apply rounding only to the worked segments and not to the paid breaks. - If rounding causes the break to extend beyond the rounded shift end time, the shift must be manually approved.	WFM will automatically approve a shift that: - has one or more paid rest breaks - meets all other automatch conditions In the following example, rounding is checked, causing the break times to extend and the shift to require manual approval: - actual shift end time is 5:51 pm - paid rest break was taken late in the shift, from 5:33 pm to 5:48 pm - with 15-minute rounding, the recorded shift end is 5:45 pm - the rounded shift end (5:45 pm) is earlier than the break end time (5:48 pm), so WFM skips approval.

Punch Events Settings

Review the table for the related settings.

Setting	Description	Example
only punches with confirmed visual verification	 Note: The Visual Verification package must be available on your account. To know more, contact your NetSuite account manager. Check to approve shifts only if they've been visually verified.	—

Setting	Description	Example
only punches with no notes	Check to approve shifts only if they do not have notes added.	—

Updating WFM Automatch Settings

You can update your automatch settings for single or multiple locations.

To update automatch settings:

1. Go to Setup > Locations.
2. On the Locations page, choose between the following:
 - Set options for a single location
 - Set options for multiple or bulk locations
3. For a single location, follow the steps.
 - a. Select a location.
 - b. From the **Approvals** tab, click the **Automatch** subtab.
4. For multiple locations, follow the steps.
 - a. Click **Bulk Actions**.
 - b. Click **Automatch**.
5. If you are updating for multiple locations, configure location settings.
 - a. Set the filters.
 - b. From the **Available Choices** panel on the left, select the locations where you want the automatch settings to apply.
If you want to select all locations, click **Choose All**.
 - c. To move the chosen locations to the **Chosen Items** panel on the right, click the blue right arrow symbol at the middle of the panels.
If you want to clear your chosen items, click **Clear All**.
6. Set the automatch and rounding settings that you want to apply to all of the selected locations. For descriptions and examples of each setting, see [Automatch and Rounding Settings in WFM](#).
7. Click **Save**.

After each setting change, you can test them without needing to refresh the page. To test, run automatch from the weekly view on your desired shifts.

Jobs

Jobs may be used to define what jobs a person will perform during their shifts. They may be applied to Scheduled and shifts, and only a person who is eligible to perform a job will be able to be assigned to a shift with that job.

Create a Job

First step that you will need to take is to go on to the job screen, which can be accessed through Setup > Jobs. you are on this screen you will need to click on "New Job" to begin.

Next you will have to enter in a name, code and color for the job. The code can be anything you prefer such as SC for sous-chef. The color will allow you to easily identify the job on the schedule view.

A description of the job is optional, but is highly when being used across numerous locations. you are happy with the job information hit "Save" to finish.

Restore a Job

Restoring an inactive job is a simple process, the first step is to go to Setup > Jobs and select "Restore Jobs".

A list of all of the inactive jobs will show up, all you have to do is select the job you want to restore.

You will be given a warning before being able to restore your job. Click the "Restore (Job name)" button to complete the process.

Edit a Job

To edit a job you will need to go to Setup > Jobs and then select the job you want to change.

You have chosen the job you want to edit, you will be directed toward the basic details of the job.

These details are:

- Name
- Code
- Color
- Description

The next section you can edit is the **Advanced** section, which gives you the option to include any hours cost with this job into the KPIs.

An example of this is if you have a job for **Offsite Training** and do not want the hours included in KPIs as they are not relevant to the productivity of the employees store, but you do want the cost included in the labor cost percentage because you still need to pay them.

The final section of a job you can edit is which locations you would have this job included with.

If you want to do a couple of stores hold down the CTRL button (Windows) or the COMMAND button (MAC), and then hit the small blue arrow.

When you are happy with how the job has turned out you can then hit "save" to finish.

Delete a Job

Deleting a job can be done in only a few steps, firstly you will have to go to Setup > Jobs, and then select the job that you would like to delete. you have opened up the job information, there will be a **Deactivate** button in the top right corner of the screen.

You will be prompted with a warning before you are able to remove the job. Accept the warning then click **Deactivate (Job name)**.

How Can I Find Out Which Shifts Don't Have Jobs

The easiest way you can tell which scheduled shifts don't have a Job is by:

- Heading to the printable PDF reports page (Reports > Shifts > Print Ready)
- Generate the "Multi-Unit Staff Report" for all Locations.
- Wait for the report to generate & then download it.
- Open the report and look for any shifts with no color. These will not have a Job assigned to them unless shift has a Job name.
- You can speak with your managers and direct them to add Jobs onto shifts moving forward by editing those shifts and adding a Job

Leave/Time Off

WFM comes with 3 leave types built in by default. These are Annual Leave, Sick Leave and Unpaid Leave. The names of these are not editable.

If you need to add in more leave types you can, simply head to Setup > Leave/Time Off at the top to and there will be a button for a new leave type.

When editing a leave type you can change:

- The name of the leave type
- The default number of hours per day for the leave type
- The multiplier or loading for the leave type
- If leave is costed on weekends

If you are using a supported payroll system, you will also be able to link a payroll ID for the leave type as well.

Adding leave when scheduling or doing the actuals

When you are deleting or denying a shift you have the option of creating leave. This will create a part day object with the amount of hours as shown in the dialog.

Costing of leave on the Schedule

Leave is costed on the schedule by taking the employee's base hourly rate, and multiplying it by the number of hours and the multiplier

If the employee has taken 20 hours of leave over 5 days it will be costed at 4 hours per day, unless one of the days is a weekend and the leave is set to not include weekends, it will do 5 hours for the 4 week days and 0 hours for the weekend day.

Does leave appear in my hours, wage and KPI totals?

Leave costs are included in wage totals for each day & week. The cost will affect your labor cost percentage, as leave costs still need to be paid out.

The hours totals will only include productive hours. This means leave hours are not included in the daily and weekly hour totals, as they are not productive (as the employee is not working). This means your other KPI's (like productivity and sales per labor hour) will also calculate correctly (based on the hours employees are working)

Time in Lieu/Flexitime

There is no function to natively handle Time In Lieu (TIL) within WFM.

If you want to use WFM to handle TIL, you are able to set up leave types to handle this and include as part of your process.

First you will need to set up leave types to account for TIL, setup is complete we will run through best practice workflows for managing this at a regular basis.

Setup

1. First, head to Setup > Leave/Time Off where you will see a list of current leave within WFM.
2. Create two new leave types. Name them Time In Lieu Accrued and Time In Lieu Taken.
3. Set the penalty loading of each new leave type to how you pay
4. For example, if you don't cost leave accruals, but you do cost the leave taken set the penalty loading for accruals to 0, and leave the penalty loading for leave taken to 1. See example below:

Name TIL Accrued Default hours 7.50000 Penalty loading 0.00000 Include weekends ☒ Include weekends in hours calculations ✓ Save	Name TIL Taken Default hours 7.50000 Penalty loading 1.00000 Include weekends ☒ Include weekends in hours calculations ✓ Save
--	--

Accruals: Best Practice

1. The leave types created above now appear for use within the system. In the example below, this employee was scheduled to finish at 9:15pm but instead finished at 10:15pm.

6:30pm-9:15pm 2.75hrs

Line Counter \$35.16

6:33pm-10:15pm 3.69hrs

2. If this employee is eligible for and accruing time in lieu for this extra 1 hour worked, first approve the scheduled shift, or the shift for the hours that are not eligible for time in lieu.

Our example below shows the scheduled shift as approved, so these hours will be paid to the employee.

	6:30pm-9:15pm 2.75hrs
	Line Counter \$35.16
	6:33pm-10:15pm 3.69hrs
	6:30pm-9:15pm 2.75hrs
	Line Counter \$35.16
	

- Next step is to head to the employee profile, and to their leave tab.
- Select TIL Accured as the 'leave type', correct cost unit, and part-day leave. In the below screenshot we have selected the time of 9:15pm to 10:15pm - as we have approved the employee's scheduled shift until 9:15pm, but worked until 10:15pm so is eligible for 1 hour of accruals.
- Head back to the Weekly screen and you will see an extra row above the scheduled shift we approved earlier - this is the leave row showing the TIL accrual which was entered on that particular day

TIL Taken: Best Practice

- There are two ways to add TIL Taken. If the employee has enough TIL accruals to take TIL on a whole shift, you can 'deny' the shift in the Weekly screen on the day, or in the past.
- Click the 'thumbs down' on the desired shift, select 'create leave' and select TIL Taken
- If you are trying to add TIL Taken in advance, such as when publishing schedules, or if an employee is only taking a small amount of TIL, such as leaving 1 hour earlier than scheduled, this will need to be added within the employee leave page.

New approved leave instance

Leave type

TIL Taken

Default hours is 7.5 per day.
Does not include hours on weekends.

Cost unit

Blacktown

☒ Full or multiple day
☐ Part day

Start

25/04/2018

Finish (inclusive)

25/04/2018

1 day

Hours

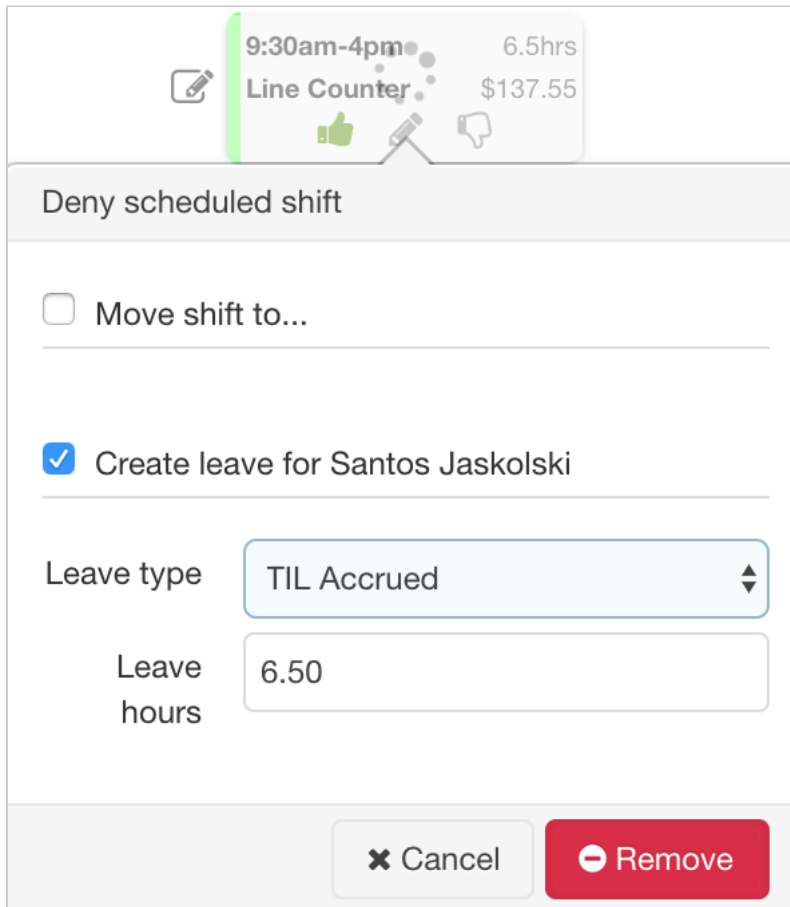

7.5

⚠ automatically updated

4. For employees taking TIL as part of the shift, be sure to select 'part day' and select the times TIL is being taken
5. As TIL is a leave type, this can be set up to export to payroll. Please contact your payroll champion for help or questions about setup.

Quickly Create Part-Day Approved leave

You can quickly add a leave accrual or part-day leave by clicking on the 'thumbs down' to deny a scheduled shift and adding the leave type taken. The example below shows TIL Accruals.

9:30am-4pm 6.5hrs \$137.55
Line Counter

Deny scheduled shift

☐ Move shift to...

☒ Create leave for Santos Jaskolski

Leave type: TIL Accrued

Leave hours: 6.50

What you then see is a grayed out scheduled shift as well as leave for the hours you entered earlier.

You will notice an icon in the middle of the grayed out shift. Click this to restore the shift. This will place the shift back, but it will not remove the TIL accrual you created.

You can then approve the shift for the desired time.

This comes in handy when the whole shift accrues TIL, for example on public holidays, or even if an employee goes home sick part-way through a shift (thus requiring sick leave taken).

Application and Approval of Leave

There are two ways leave can be entered into WFM, through an application and approval process, or by the manager when they are working on the schedule or approving hours.

Lets look at the approvals process first

Employee

When an employee logs into WFM they can head to the leave tab on the left to request time off. They will see a list of their pending and approved leaves.

Under New Leave Request, employees can fill in the details of the request and click save, sending a request to their "Leave Approvers" to approve the request.

The only other thing an employee needs to do in WFM in regards to the leave request is log back in and check the status of this request.

Manager

After an employee has applied for leave the manager who is the "Leave Approver" will get a notification in WFM. Click on the 'View' button to be taken to the request to approve or deny.

They then head to the employee's leave page, click on the Approve/deny button. From here you will have the option of editing, approving or denying the leave.

Automatic Union Holiday Leave

Step 1: Set up Leave Type Under the Leave Settings

1. Head to Setup > Leave/Time Off and create your new Leave Type
2. After Saving, head to the "Automatic leave" tab and click the button for "Use for automatic leave."

Step 2: Amend Wage Setup to include Holiday Conditions

1. Head to Setup > Wage > Region-based wages setup to view the existing default Region-based wage setup as well as any wage overrides you currently have setup. Click on your custom Wage Override you have setup. In this example below, the Wage Setup titled 'Region' is our custom Wage Setup.
 - The default Region-based wages are viewable but not editable. If you have not yet set up a custom Region-Based Wage Override, click the "+New region-based wages override" button at the bottom and follow the prompts.
2. Next, click on Conditions to view and edit your existing Wage Conditions.
3. Click Edit to update your existing Holiday Condition (or click + Create new Condition if you do not yet have a Holiday Condition setup.)

Note: Automatic Leave for Union Members before July 1, 2017 is currently defaulted to apply 8 hours of Automatic Leave so long as the employees works their Previous and Subsequent Shifts. This means you only need to setup the Override for employees that are enrolled after July 1, 2017.

After you click Edit, you will then be able to view and edit the rules for this Condition. In this example, we have named the Holiday condition "Holiday Loading" and set it as a Penalty Rate.

We have ticked the box "Only applies on public holidays" to ensure this rule only triggers on the public holidays listed on the Account.

4. You can create several different Rules to capture the different Conditions of your Holiday pay. With the new Automatic Leave functionality, comes the ability to add rules surrounding Union enrollment dates as well as if the employee worked their previous Shift before the Holiday and subsequent Shift after the Holiday. These rules are found at the bottom of the Rules Edit box.
5. Next, head to the Multipliers tab to set up the Multiplier for this Penalty Rate Condition you've created. In this instance, we have set the above Condition to trigger a multiplier of 150%. This means, if the employee works the Holiday and meets the Conditions. They will be paid at a rate of 1.5x their Regular Rate.

Step 3: Ensure employees are setup with their Union Membership dates

1. In the Employee's profile under their Employment tab, there is a box for Union Membership. Enter the employee's Union Membership date and Save.

Step 4: Viewing Automatic Leave in the Weekly View

1. See below for the example of what it will look like in the Weekly View for three different scenarios where the employees are working on a Holiday:
 - A Non-Union employee that does not trigger Automatic leave
 - An employee that was enrolled in the union **after** July 1, 2017 that is triggering the Override of 1.5X their base rate
 - An employee that was enrolled in the Union **before** July 1, 2017 that has the 8 hours of Automatic Leave in addition to their Scheduled hours
2. See below for the example of what it will look like in the Weekly View for three different scenarios where the employees are not working on the Holiday:
 - A Non-Union employee is not scheduled and does not trigger Automatic leave
 - An employee that was enrolled in the union **after** July 1, 2017 that is triggering the 8 hours of Automatic Leave
 - An employee that was enrolled in the union **before** July 1, 2017 that is triggering the 8 hours of Automatic Leave

 **Note:** The Automatic Leave and 1.5X rule will only apply if there is no action or an Approval on both the previous and subsequent Shift. This means, if the Shift before After the Holiday is denied (thumbs down), the Union Leave Conditions will be removed. If an employee enrolled in the Union after July 1, 2017 is not Schedule but ends up working the Holiday, the 8 hours of Automatic Leave will be removed and the 1.5X trigger will apply to the Approved time.

Step 5: Viewing Automatic Leave within the Employee's Profile

1. Using the example above of the 4th of July, you will now be able to see the Automatic Leave in the employee's profile under their Leave tab
2. If you hover over the Notes, it will read "Automatically generated leave due to public holiday."

Step 6: Viewing Automatic Leave in the Shift Hours Report

1. You will now be able to see the Automatic Leave hours + cost, plus the Union Member dates within the Shift Hours report

Overtime Calculation in Leave and Time-Off

When configuring leave and time-off types in Workforce Management (WFM), you can set the **Accrues Overtime** preference to enable overtime calculations. This preference lets the leave and time-off events of the selected type's hours to be eligible for overtime.

By default, the **Accrues Overtime** preference is switched off for all leave or time-off types. When checked, all leave and time-off events of the selected type are considered for overtime eligibility. This setting applies for all employees who have a calculation type that includes overtime.

For further information about assigning employees wages and calculation types, see [Managing Wages for WFM Employees](#).

Guidelines for Overtime Calculations in Leave and Time-Off

Overtime and penalties are not stored on the actual leave or time-off event. Overtime and penalties are only applied to time worked or shift segments.

If overtime applies during a leave or time-off event, it will be applied to the previous worked time or shifts.

Example 1

Example Rule: Overtime applies when, during the week, time worked exceeds 38 hours.

Scenario: The employee was on Annual Leave for 8 hours a day for the first two days of their working week. Then, they worked 8-hour shifts over the next 3 days.

Expectations: You can expect the following:

- If the **Accrues overtime** box is unchecked, they do not have any overtime hours, because only the 24 hours they worked are counted.
- If the **Accrues overtime** box is checked, then the 16 hours of leave count toward their hours worked. As such, the 40 hours are counted. Based on the example rule, the last 2 hours of their final shift include overtime.

Example 2

Example Rule: Overtime applies when, during the week, time worked exceeds 38 hours.

Scenario: For this example, overtime only applies to time worked or to a shift segment. If overtime applies during a leave or time-off event, it will be applied to the previous worked time or shift.

The employee was on **Annual Leave** for 8 hours a day for the first day of their working week. Then, they worked 8-hour shifts over the next 2 days. Then, they went on **another leave or time-off event** for 8 hours a day.

Expectations: You can expect the following:

- If the **Accrues overtime** box is unchecked, they do not have overtime, as only the 24 hours they worked are counted.
- If the **Accrues overtime** box is checked, then the 16 hours of leave count toward their hours worked. Their 40 hours of work are counted.
- Based on the example rule, the last 2 hours of the leave or time-off event at the end of the workweek are counted as overtime.
- Leave and time-off events, however, can't be assigned with overtime in WFM. The last 2 hours of overtime that count as leave or time-off are then applied to the previous shift.

Workforce Management Accrues Overtime FAQ

Does the Accrues Overtime preference apply to salaried employees?

Yes. If salaried employees are configured to apply overtime on their employee profile wage object and the leave type has the **Accrues Overtime** preference switched on, then those hours will be counted toward overtime. You can set salaried employees to overtime by setting an overtime rate on the wage object.

If I switch on Accrues Overtime for a leave type, will it apply to all instances of this type, including historical leave?

Yes. Switching on the **Accrues Overtime** preference will apply to all historical, current, and future instances of the leave type. You can also create a new leave type if you prefer.

Validation Rules

Schedule Validation Rules

To create a new validation rule go to "Config" > "Validation" and then click on "New Period Rule".

Schedule Validation rules centre around how many of a particular employee you must require to be working at a certain time. You can set rules that will prevent printing, SMS, emailing or publishing a schedule if they are not met.

Rules are a set of criteria which must all be met before being able to publish a schedule.

To be able to set rules, please contact your store manager. You will be able to create any number of specific 'rules' for your company which help safeguard errors such as putting less than minimum employees on, or having proficient enough employees working during a specific time.

Rule Name

Rule name is fairly straightforward. Enter the name of the validation rule.

Rule Details

Rule details focuses on how many employees are needed working, and whether the employees that fall under this rule have to be scheduled on between your set period of time, or the whole working day. You can choose to have more than, or less than an amount of employees working for this rule. Here you can also choose the maximum and minimum skill level of the employees for this rule. If you don't know what to choose then select "between Level 1 and" "level 10"

Next you will need to choose what Jobs fall under this Rule, the example below shows that the rule requires a "Bar" employee to be working, this may be due to the store selling products from a bar until close. To select a job click on the choice that you want (For multiple jobs hold down "ctrl" for Windows or "command" for Mac), or you can select the "Choose all" button.

You will need to then select the proficiency of the employees, this means that employees that work too efficiently (may mean that they are too expensive) or employees that aren't skilled enough are excluded from this rule if they are outside of the proficiency boundaries.

Things to know:

- Rules can be set for a single or multiple locations
- You can have multiple rules in place at

- You are able to create as many rules as you need
- You can set a minimum, maximum, or choose exactly (x) number of employees that need to be scheduled on at any given time, or at specific times and dates.

For example, you can set a rule which will enforce that at least 5 people are scheduled on during a Friday night, while having another rule alongside it needing 2 employees to be schedule on at all times.

You are able to add extra criteria to this, for example, if you would like at least two bartenders on at any time, along with one chef between 11-4 every Friday and Saturday, you would create one rule for the bartenders being schedule on at any time, and another rule for a chef needing to be on every Friday and Saturday between 11-4.

You are also able to go a step further and make sure employees above a certain level of proficiency or level of management are on during set times.

While rules are not necessary, they are as they will help safeguard against any errors or mistakes while writing up a schedule.

Junior Validation Rules

When you publish or print a schedule, WFM can validate that they comply with state regulations that apply to junior or school-aged employees.

If a schedule has a potential regulatory breach, WFM displays an error on the left side of the page. The error states the specific laws that may be breached.

To understand how WFM handles regulations for junior employees, see:

- [State and Territory Restrictions](#)
- [Excluding Employees from Junior Validation Rules](#)
- [Creating Term Break Periods for School Holidays and Pupil-Free Days](#)

State and Territory Restrictions

Junior employee restrictions differ and across different states and territories in Australia. WFM checks for employee ages, hours, and other restrictions to ensure that your published schedules are compliant.

For all of the states and territories, the following regulations apply:

- A school week starts on Sunday.
- Public holidays count as weekend days.

The following table shows the rules for different Australian states and territories that WFM validates.

State or Territory	Age	Maximum Hours	Shifts	Breaks	Prohibited Hours
Australian Capital Territory	Under 15	On a school week: ■ 6 hours daily ■ 10 hours weekly	Maximum of one shift daily	At least 12 hours between shifts	■ Between 10 p.m. and 6 a.m. the next day ■ Between midnight and sunrise
New South Wales	Under 16	On a school week, 4 hours on a weekday	■ Maximum of one shift daily	■ At least 12 hours between shifts	—

State or Territory	Age	Maximum Hours	Shifts	Breaks	Prohibited Hours
			Maximum of 5 consecutive days	At least 60 minutes after working for 4 hours	
Northern Territory	Under 15	—	—	—	Between 10 p.m. and 6 a.m. the next day
Queensland	Under 16	On a school week: 4 hours on a weekday 8 hours on a weekend 12 hours weekly On a term break week: 8 hours on a weekday 8 hours on a weekend 38 hours weekly	Maximum of one shift daily	- At least 12 hours between shifts - At least 60 minutes after working for 4 hours	Between 10 p.m. and 6 a.m. the next day
South Australia	Under 17	—	—	—	—
Tasmania	Under 18	—	—	—	—
Victoria	Under 15	On a school week: 3 hours daily 12 hours weekly On a term break week: 5.5 hours daily 30 hours weekly	—	- At least 12 hours between shifts - At least 30 minutes after working for 3 hours	Between 9 p.m. and 6 a.m. the next day
Western Australia	Under 15	—	—	—	Between 10 p.m. and 6 a.m. the next day

Important: WFM does not handle all state and territory regulations. When scheduling junior employees, manually check your schedules to ensure they do not breach the regulations that WFM excludes.

The following table shows regulations for different Australian states and territories that WFM excludes from validation.

State or Territory	Regulations Excluded in WFM
Australian Capital Territory	Junior employees are prohibited to work during school hours.

State or Territory	Regulations Excluded in WFM
	Work must not adversely affect a young person's ability to benefit from education.
New South Wales	Junior employees are prohibited to: - work during school hours - work any hours that make the combination of school and work hours in a 7-day period exceed 50 hours - work after 9 p.m. on a day where the next day is a school day
Northern Territory	Junior employees are prohibited to work during school hours.
Queensland	- Junior employees are prohibited to work during school hours. - Children between 11 and 13 years are prohibited from delivery work between 6 p.m. and 6 a.m.
South Australia	Junior employees are prohibited to: - work during school hours - work late at night or early in the morning that is likely to render them unfit to attend school or obtain the proper benefit from such attendance
Tasmania	Junior employees are prohibited to work during school hours.
Victoria	Junior employees are prohibited to: - work during school hours - perform street trading between 6 p.m. or sunset, whichever is earlier, and 6 a.m. or sunrise, whichever is later
Western Australia	- Junior employees are prohibited to work during school hours. - Children aged 10, 11, or 12 are prohibited from delivery work between 7 p.m. and 6 a.m.

Excluding Employees from Junior Validation Rules

If you have junior employees who are exempt from these rules, exclude them from the WFM junior validation rules.

To exclude employees from junior validation rules:

1. Log in with a Payroll Manager or Administrator role.
2. From Workforce Management, go to Setup > Employees > List.
3. From the employee list, locate the employee you need to exclude. Click the corresponding row.
4. On the employee page, click **Wages**.
5. Click **Edit wage**.
6. On the Edit wage page, check the **Exclude from junior restrictions** box.
7. Click **Save**.

Creating Term Break Periods for School Holidays and Pupil-Free Days

Different restrictions apply during school holidays and pupil-free days.

WFM lets you create term breaks to account for junior employee restrictions around school holidays and pupil-free days.

Employees can request term breaks for approval.

Important: State and territory restrictions may still apply to junior employees who are on a term break. Refer to the earlier table for these restrictions.

Options for creating term breaks:

- Employees with access to payroll functions create term break periods for multiple employees
- Employees submit term break requests for approval

To bulk create term breaks for employees, head to **Setup > Employees > Process Term Break Request**.

Click on the **approved** tab and select **Add Term Break**. Here you can set the period which the break covers, and select the applicable employees. The list of employees you are shown will only include employees who are considered a junior based on the locations they can be scheduled at.

Creating Term Break Periods for Multiple Employees

Follow the procedure.

To create term break periods for multiple employees:

1. Log in with a role with payroll functions.
2. Go to Setup > Employees > Process Term Break Requests.
3. Click **Approved**. Click **Add Term Break**.
4. Set the period that the term break covers.
5. From the employee list, select the employees for whom the term break applies.

Creating Term Break Requests

With ESS Extended, employees and managers can follow the procedure to create term break requests.

To create term break requests:

1. Log in to Workforce Management.
 - If you are an employee, log in to Workforce Management.
 - If you are a manager, log in with a Payroll Manager or Administrator role.
2. Open the employee profile.
 - If you are an employee, click your user icon and select **Your Details**.
 - If you are a manager, go to Setup > Employees > List.
From the employee list, click the employee name.
3. On the employee page, click **Term breaks**.
4. Click **New Request**.
The Update term break change request page opens.
5. On the **Periods** field, pick the start and end dates for the term break.
6. On the **Proof of enrolment** field, drag the appropriate file.
7. On the **Proof of holidays** field, drag the appropriate file.

8. Click **Update this request**.

After the request has been made, it is ready to be processed by any user with **Finance Co-ordinator** or **General Manager** access.

Processing Term Break Requests as an Approver

Follow the procedure.

To process term break requests as an approver:

1. Log in with a role with payroll functions.
2. Go to Setup > Employees > Process Term Break Requests.
3. In the **Tools** column, choose how you want to process requests.
 - If you want to allow the employee to take the term break, click **Approve**.
 - If the request is invalid, click **Deny**. From the list, select a reason for denial.

After a term break has been approved for an employee, any maximum hours rules applied to that employee will be ignored for the approved period.

Shift Metrics

Setting up Shift Metrics may help you track additional shift data relating to an employee. This data may be used for allowances, payroll, or reporting purposes.

Metrics are added by managers during the shift approval stage, and are allocated to each employee's shifts. This allows you to record and keep track of this information to the individual shift level.

Some examples of Metrics you can setup are:

- Deliveries
- Distance travelled
- Clients seen
- Cars

To set up a Metric, select + New Metric.

We have created a metric to track distance which an employee has traveled during a shift. It is useful to calculate reimbursement when it comes to payroll time.

The only required field for setup is "Name". "Internal name" can be a short name for the Metric. This will appear when approving shifts, if set.

You can require a metric, meaning a shift can't be approved without a value for this metric.

When approving shifts, you will see the metric field you created. You can go ahead and add the data you need to.

Note: At the moment when adding a metric, you will need to enter a comment.

The metric will appear on each approved shift that you have added it to.

Generate the Shift Hours report - it is available in the menu under Reports > Shifts.

New columns will appear to the right of the report. There will be a column for each Metric which you set up, and will view the same grouping options you select. If you summarize hours for the whole period, the sum of metrics will appear for the same period.

Financial Configuration

Here you are able to set up a **default superannuation fund** for employees. This default superannuation fund will appear within each employee's **Financial** section as a button which says **Default fund**.

When this button is hovered over, the default fund you have set up will appear for them.

Clicking this button pre-fills the details, and employees only need to fill in their superannuation account number.

Setup

Back to the **Setup > Financial** menu option, you'll see the **Superannuation defaults** fields.

Fill in the Fund name, and USI (or legacy SPIN if required) and save. This will then appear for the employee.

Note: This is set up at a company level, appearing for all employees within your WFM company.

Wage Setup

Wage Agreements for Australia and New Zealand

Wage agreements allow you to define rules that are used to calculate wage costs according to a range of calculation methods.

Wage agreements allow you to define when wage costs, such as regular rate, penalty rates, overtime, and public holidays are applied to scheduled and worked hours.

The Wage Agreement page is used to build wage conditions and rules for awards, enterprise agreements, or both.

You can also configure wage agreements for specific states or territories in the country where the agreement is available.

To understand what makes up wage agreements in Australia and New Zealand, see [Structure of a Wage Agreement](#).

Preconfigured wage agreements are also available for specific industry awards that cover employee work in Australia. For more information, see the help topics:

- [Pre-configured Wage Agreements](#)
- [Awards with Pre-configured Wage Agreements](#)

Accessing Wage Agreements

Follow the procedure.

To access wage agreements:

1. Go to Workforce Management.
2. Go to Setup > Wage.
A list of the available wage agreements appears.
3. Click the agreement you want to view.

Setting up a Wage Agreement

Follow the procedures on the table for guidance on setting up a wage agreement.

Step	Related Topic
1. Create a wage agreement.	Creating a Wage Agreement
2. Create new or update existing conditions.	Managing Conditions and Rules
3. Set up fixed rates.	Setting up an Allowance Setting up a Penalty
4. Create classifications.	Creating a Classification
5. Set up minimum hours.	Setting up Minimum Hours
6. Create a new revision.	Creating a Revision
7. (Optional) Link work agreements.	Cross-Agreement Linking

For more information about wage agreements that cover specifications and coverage of industry awards in Australia, see [Pre-configured Wage Agreements](#).

Pre-configured Wage Agreements

With WFM, you can assign preconfigured wage agreements to employees according to the industry or occupation awards that cover their work in Australia.

In preconfigured wage agreements, the following components are set up to apply the specifications and coverage of the each award to employee pay:

- Conditions and rules designed to calculate pay rates and entitlements
- Employee classifications with assigned pay rates
- Allowances and penalties for entitled employees

To see the industry awards covered in WFM as well as their default settings, see [Awards with Pre-configured Wage Agreements](#).

You must activate each preconfigured agreement so you can assign them to employees. For more information, see [Using Pre-configured Wage Agreements](#).

In preconfigured agreements, you can associate jobs with classifications, allowances, and penalties and view all information. You cannot make any changes to conditions, rules, or rates. For more information, see [Assigning Jobs for Pre-Configured Wage Agreements](#).

If you want to ensure that linked payroll items for allowances, penalties, and multipliers are carried over with each new revision, see [Linking New Revisions to Pre-Configured Wage Agreements](#).

Important: Oracle NetSuite provides wage rules as a convenience for customers. Nothing in the above is legal advice. Oracle NetSuite does not warrant the reliability, accuracy, legal compliance, completeness, correctness, or usefulness of its rules or configurations.

You must verify if the wage rules and other preconfigured rules provide the correct pay to your employees in compliance with any applicable local or federal labor laws. Please consult with your own attorney or expert on the appropriate rules to use in your business or industry in all jurisdictions in which you operate.

Awards with Pre-configured Wage Agreements

Refer to the following table for the awards with preconfigured wage agreements.

Industry or Occupation Award	Related Topic
Fast Food Industry Award [MA000003]	Fast Food Industry Award [MA000003]
General Retail Industry Award [MA000004]	General Retail Industry Award [MA000004]
Hospitality Industry (General) Award [MA000009]	Hospitality Industry (General) Award [MA000009]
Restaurant Industry Award [MA000119]	Restaurant Industry Award [MA000119]

Fast Food Industry Award [MA000003]

After you activate and review the configurations of the Fast Food Industry Award [MA000003] preconfigured agreement, it is available to be assigned to employee wages.

The agreement covers employees in the fast food industry and those who fit within the classifications of the award.

For more information about the full coverage and classification descriptions of the Fast Food Industry Award, go to the Fair Work Ombudsman website.

Fast Food Industry Award Classifications

Refer to the following table for the default classification settings of the preconfigured agreement.

Classification	Level	Employment Status
Level 1	Level 1	Full-time and Part-time

Classification	Level	Employment Status
Level 1 Casual	Level 1	Casual
Level 2	Level 2	Full-time and Part-time
Level 2 Casual	Level 2	Casual
Level 3a	Level 3	Full-time and Part-time
Level 3a Casual	Level 3	Casual
Level 3b	Level 4	Full-time and Part-time
Level 3b Casual	Level 4	Casual

Fast Food Industry Award Conditions

Refer to the following table for the default conditions of the preconfigured agreement.

Condition	Rules	Employment Status
Regular Hours (Regular Rate)	Every day	Casual, Part-time, and Full-time
After 10pm (Penalty Rate)	Every day between 10 p.m. and midnight	Casual, Part-time, and Full-time
After Midnight (Penalty Rate)	Every day between midnight and 6 a.m.	Casual, Part-time, and Full-time
Saturday (Penalty Rate)	Every Saturday	Casual, Part-time, and Full-time
Sunday (Penalty Rate)	Every Sunday	Casual, Part-time, and Full-time
Public Holiday (Penalty Rate)	Every day that is a public holiday	Casual, Part-time, and Full-time
Standard Overtime (Overtime Rate)	- Every day when during the day time worked exceeds 11 hours - Every day when during the week time worked exceeds 38 hours - Every day when more than 5 days are worked this week - Every day when more than 4 days are worked this week and more than 5 days were worked last week	Part-time and Full-time
Overtime more than 2 hours (Overtime Rate)	- Every day when during the day time matching Standard Overtime worked exceeds 2 hours - Every day when during the week time worked exceeds 40 hours - Every Sunday when during the day time worked exceeds 11 hours - Every Sunday when during the week time worked exceeds 38 hours	Part-time and Full-time
FT/PT Sunday Overtime (Overtime Rate)	Every Sunday when during the day time worked exceeds 11 hours	Part-time and Full-time

Condition	Rules	Employment Status
	- Every Sunday when during the week time worked exceeds 38 hours - Every Sunday when more than 5 days are worked this week - Every Sunday when more than 4 days are worked this week and more than 5 days were worked last week	
Public Holiday Overtime (Overtime Rate)	- Every day that is a public holiday when during the day time worked exceeds 11 hours - Every day that is a public holiday when during the week time worked exceeds 38 hours - Every day that is a public holiday when more than 5 days are worked this week - Every day that is a public holiday when more than 4 days are worked this week and more than 5 days were worked last week	Part-time and Full-time
Casual Standard Overtime (Overtime Rate)	- Every day when during the day time worked exceeds 11 hours - Every day when during the week time worked exceeds 38 hours	Casual
Overtime more than 2 hours (Overtime Rate)	- Every day when during the day time matching Casual Standard Overtime worked exceeds 2 hours - Every day when during the week time worked exceeds 40 hours - Every Sunday when during the day time worked exceeds 11 hours - Every Sunday when during the week time worked exceeds 38 hours	Casual
Public Holiday Overtime (Overtime Rate)	- Every day that is a public holiday when during the day time worked exceeds 11 hours - Every day that is a public holiday when during the week time worked exceeds 38 hours - Every day that is a public holiday when more than 4 days are worked this week and more than 5 days were worked last week - Every day that is a public holiday when more than 5 days are worked this week	Casual

Fast Food Industry Award Allowances

Refer to the following table for the default allowances of the agreement.

Allowance	Rule
Uniform (daily)	For the first shift of a given day
Uniform (weekly)	For the first shift of a given week

General Retail Industry Award [MA000004]

After you activate and review the configurations of the General Retail Industry Award [MA000004] preconfigured wage agreements, they are available to be assigned to employee wages.

The following are the two agreements that cover typically used variations of the General Retail Award:

- **[MA000004] General Retail Industry** – Use this agreement to manage employee wages that have the typical span of hours as defined in the Award.
- **[MA000004] General Retail Industry Award - Late Trading (After 9pm)** – Use this agreement when the employees you manage have late trading hours that extend beyond:
 - 9 p.m. from Monday to Friday
 - 6 p.m. on a Saturday or Sunday

Workforce Management (WFM) does not provide agreements covering the following sectors:

- Early trading
- Shift workers
- Early trading news agency
- Late trading video shop
- Apprenticeships

For more information about the full coverage and classification descriptions of the General Retail Industry Award, go to the Fair Work Ombudsman website.

[MA000004] General Retail Industry Agreement

Refer to the tables in this section for the specifications of this agreement.

WFM does not automate General Retail Industry Award allowances.

Classifications

Refer to the following table for the default classifications of the agreement.

Classification	Level	Employment Status
Retail employee level 1	Level 1	Full-time
Retail employee level 1	Level 1	Part-time
Retail employee level 1	Level 1	Casual
Retail employee level 2	Level 2	Full-time
Retail employee level 2	Level 2	Part-time
Retail employee level 2	Level 2	Casual
Retail employee level 3	Level 3	Full-time
Retail employee level 3	Level 3	Part-time
Retail employee level 3	Level 3	Casual
Retail employee level 4	Level 4	Full-time
Retail employee level 4	Level 4	Part-time
Retail employee level 4	Level 4	Casual
Retail employee level 5	Level 5	Full-time

Classification	Level	Employment Status
Retail employee level 5	Level 5	Part-time
Retail employee level 5	Level 5	Casual
Retail employee level 6	Level 6	Full-time
Retail employee level 6	Level 6	Part-time
Retail employee level 6	Level 6	Casual
Retail employee level 7	Level 7	Full-time
Retail employee level 7	Level 7	Part-time
Retail employee level 7	Level 7	Casual
Retail employee level 8	Level 8	Full-time
Retail employee level 8	Level 8	Part-time
Retail employee level 8	Level 8	Casual

Conditions

Refer to the following table for the default conditions of the agreement.

Condition	Rules	Employment Status
Regular Hours	Every day	Casual, Part-time, and Full-time
Mon - Fri 6 p.m. - 9 p.m.	Every weekday between 6 p.m. and 9 p.m.	Casual, Part-time, and Full-time
Saturday	Every Saturday	Casual, Part-time, and Full-time
Sunday	Every Sunday	Casual, Part-time, and Full-time
Public Holiday	Every public holiday	Casual, Part-time, and Full-time
OT Mon - Sat First 3 hours	- Every day from Monday to Saturday when, during the day, time worked exceeds 9 hours - Every day Monday to Saturday when, during the week, time exceeds 38 hours - Every weekday between 9 p.m. and midnight - Every Saturday between 6 p.m. and midnight - Every day from Monday to Saturday between midnight and 7 a.m.	Casual, Part-time, and Full-time
OT Mon - Sat More than 3 Hours	Every day from Monday to Saturday when, during the day, time of type overtime rate worked exceeds 3 hours	Casual, Part-time, and Full-time
OT Sunday	- Every Sunday between midnight and 9 a.m. - Every Sunday between 6 p.m. and midnight - Every Sunday when, during the shift, time worked exceeds 9 hours	Casual, Part-time, and Full-time

Condition	Rules	Employment Status
	Every Sunday when, during the week, time exceeds 38 hours	
Time Between Shifts	Every day where there has not been a clear break of 12 hours since the previous day	Casual, Part-time, and Full-time
OT Public Holiday	- Every day that is a public holiday when, during the day, time worked exceeds 9 hours - Every day that is a public holiday when, during the week, time exceeds 38 hours	Casual, Part-time, and Full-time

[MA000004] General Retail Industry Award - Late Trading (After 9pm)

Refer to the tables in this section for the specifications of this agreement.

WFM does not automate General Retail Industry Award allowances.

Classifications

The default classifications of the late trading agreement is the same as those for typical hours. See [Classifications](#).

Conditions

Refer to the following table for the default conditions of the agreement.

Condition	Rules	Employment Status
Regular Hours	Every day	Casual, Part-time, and Full-time
Mon - Fri 6 p.m. - 11 p.m.	Every weekday between 6 p.m. and 11 p.m.	Casual, Part-time, and Full-time
Saturday	Every Saturday	Casual, Part-time, and Full-time
Sunday	Every Sunday	Casual, Part-time, and Full-time
Public Holiday	Every public holiday	Casual, Part-time, and Full-time
OT Mon - Sat First 3 hours	- Every day from Monday to Saturday when, during the day, time worked exceeds 9 hours - Every day from Monday to Saturday when, during the week, time exceeds 38 hours - Every day from Monday to Saturday between 11 p.m. and midnight - Every day from Monday to Saturday between midnight and 7 a.m.	Casual, Part-time, and Full-time
OT Mon - Sat More than 3 Hours	Every day from Monday to Saturday when, during the day, time of type overtime rate worked exceeds 3 hours	Casual, Part-time, and Full-time
OT Sunday	Every Sunday between midnight and 9 a.m.	Casual, Part-time, and Full-time

Condition	Rules	Employment Status
	- Every Sunday between 11 p.m. and midnight - Every Sunday when, during the shift, time worked exceeds 9 hours - Every Sunday when, during the week, time exceeds 38 hours	
Time Between Shifts	Every day where there has not been a clear break of 12 hours since the previous day	Casual, Part-time, and Full-time
OT Public Holiday	- Every day that is a public holiday when, during the day, time worked exceeds 9 hours - Every day that is a public holiday when, during the week, time exceeds 38 hours	Casual, Part-time, and Full-time

Hospitality Industry (General) Award [MA000009]

After you activate and review the configurations of the Hospitality Industry (General) Award [MA000009] preconfigured agreement, it is available to be assigned to employee wages.

The agreement covers employees in the hospitality industry and those who fit within the classifications of the award.

For more information about the full coverage and classification descriptions of the Hospitality Industry Award, go to the Fair Work Ombudsman website.

Hospitality Industry (General) Award Classifications

Refer to the following table for the default classification settings of the preconfigured agreement.

Classification	Level	Employment Status
Introductory	Level 0	Casual
Introductory	Level 0	Full-time and Part-time
Introductory PT	Level 0	Part-time
Level 1	Level 1	Full-time and Part-time
Level 1	Level 1	Casual
Level 1 PT	Level 1	Part-time
Level 2	Level 2	Casual
Level 2	Level 2	Full-time and Part-time
Level 2 PT	Level 2	Part-time
Level 3	Level 3	Casual
Level 3	Level 3	Full-time and Part-time
Level 3 PT	Level 3	Part-time
Level 4	Level 4	Full-time and Part-time
Level 4	Level 4	Casual
Level 4 PT	Level 4	Part-time

Hospitality Industry (General) Award Conditions

Refer to the following table for the default conditions of the preconfigured agreement.

Condition	Rules	Employment Status
Regular Hours (Regular Rate)	Every day	Casual, Part-time, and Full-time
Evening (Per-hour Penalty Rate)	Every shift if the shift is on a weekday if any part of the shift is between 7 p.m. and midnight	Casual, Part-time, and Full-time
Night work (Per-hour Penalty Rate)	Every shift if the shift is on a weekday if any part of the shift is between midnight and 7 a.m.	Casual, Part-time, and Full-time
Saturday (Penalty Rate)	Every Saturday	Casual, Part-time, and Full-time
Sunday (Penalty Rate)	Every Sunday	Casual, Part-time, and Full-time
Public Holiday (Penalty Rate)	Every day that is a public holiday	Casual, Part-time, and Full-time
Delayed meal break (Overtime Rate)	Every day when during the time worked since last break time worked exceeds 6 hours	Casual, Part-time, and Full-time
Full Time Overtime (Overtime Rate)	- Every day when during the day time worked exceeds 11.5 hours - Every day when during the week time worked exceeds 38 hours - Every day where there has not been a clear break of 10 hours since the previous day - Every day when the spread of time worked on a single day exceeds 12 hours	Full-time
M-F Overtime after 2 hours (Overtime Rate)	- Every weekend when during the day time of type overtime rate worked exceeds 2 hours - Every weekday when during the week time worked exceeds 40 hours	Full-time
Weekend (Overtime Rate)	- Every weekend when during the day any time matching Full Time Overtime is worked - Every weekend when during the week time worked exceeds 38 hours	Full-time
Part Time Overtime (Overtime Rate)	- Every day when during the day time worked exceeds 11.5 hours - Every day when during the week time worked exceeds 38 hours - Every day for the part of the shift that is longer than the scheduled hours - Every day when the spread of time worked on a single day exceeds 12 hours - Every day where there has not been a clear break of 10 hours since the previous day - Every day when more than 5 days are worked this week	Part-time

Condition	Rules	Employment Status
M-F Overtime after 2 hours (Overtime Rate)	- Every weekend when during the day time of type overtime rate worked exceeds 2 hours - Every weekday when during the week time worked exceeds 40 hours	Part-time
Weekend (Overtime Rate)	- Every weekend when during the day any time matching Part Time Overtime is worked - Every weekend when during the week time worked exceeds 38 hours	Part-time
Casual Standard Overtime (Overtime Rate)	- Every day when during the day time worked exceeds 12 hours - Every day when during the week time worked exceeds 38 hours	Casual
M-F Overtime after 2 hours (Overtime Rate)	- Every weekend when during the day time of type overtime rate worked exceeds 2 hours - Every weekday when during the week time worked exceeds 40 hours	Casual
Weekend (Overtime Rate)	- Every weekend when during the day any time matching Casual Overtime is worked - Every weekend when during the week time worked exceeds 38 hours	Casual

Hospitality Industry (General) Award Allowances

Refer to the following table for the default allowances of the agreement.

Allowance	Rule
Broken Shift Allowance 2-3 hours	Every shift where the break during or before the shift is in the range 2.0 hour(s) - 3 hours
Broken Shift Allowance Over 3 hours	Every shift where the break during or before the shift is in the range 3.01 hour(s) - 6 hours

Restaurant Industry Award [MA000119]

After you activate and review the configurations of the Restaurant Industry Award [MA000119] preconfigured agreement, it is available to be assigned to employee wages.

The agreement covers employees in the restaurant industry and those who fit within the classifications of the award.

For more information about the full coverage and classification descriptions of the Restaurant Industry Award, go to the Fair Work Ombudsman website.

Restaurant Industry Award Classifications

Refer to the following table for the default classification settings of the preconfigured agreement.

Classification	Level	Employment Status
Introductory	Level 0	Full-time and Part-time

Classification	Level	Employment Status
Introductory	Level 0	Casual
Level 1	Level 1	Casual
Level 1	Level 1	Full-time and Part-time
Level 2	Level 2	Casual
Level 2	Level 2	Full-time and Part-time
Level 3	Level 3	Casual
Level 3	Level 3	Full-time and Part-time
Level 4	Level 4	Full-time and Part-time
Level 4	Level 4	Casual
Level 5	Level 5	Full-time and Part-time
Level 5	Level 5	Casual
Level 6	Level 6	Casual
Level 6	Level 6	Full-time and Part-time

Restaurant Industry Award Conditions

Refer to the following table for the default conditions of the preconfigured agreement.

Condition	Rules	Employment Status
Regular Hours (Regular Rate)	Every day	Casual, Part-time, and Full-time
10 p.m. – Midnight (Penalty Rate)	Every weekday between 10 p.m. and midnight	Casual, Part-time, and Full-time
Midnight – 6 a.m. (Penalty Rate)	Every weekday between midnight and 6 a.m.	Casual, Part-time, and Full-time
Saturday (Penalty Rate)	Every Saturday	Casual, Part-time, and Full-time
Sunday (Penalty Rate)	Every Sunday	Casual, Part-time, and Full-time
Public Holiday (Penalty Rate)	Every day that is a public holiday	Casual, Part-time, and Full-time
Standard Overtime (Overtime Rate)	- Every day when during the day time worked exceeds 11.5 hours - Every day when during the week time worked exceeds 38 hours	Casual, Part-time, and Full-time
Spread of Hours (Overtime Rate)	Every day when the spread of time worked on a single days exceeds 12 hours	Casual, Part-time, and Full-time
Overtime - Sat (Overtime Rate)	Every Saturday when during the day time worked exceeds 11.5 hours	Casual, Part-time, and Full-time

Condition	Rules	Employment Status
	Every Saturday when during the week time worked exceeds 38 hours	
Delayed meal break (Overtime Rate)	Every day when during the time worked since last break time worked exceeds 6 hours	Casual, Part-time, and Full-time
Break since Overtime (Overtime Rate)	Every day when the last shift worked any time matching one of Standard Overtime, Time between shifts, Spread of Hours, Overtime - Sat, Delayed meal break is worked where there has not been a clear break of 8 hours since the previous day	Casual, Part-time, and Full-time
Extended Overtime (Overtime Rate)	- Every day when during the shift time matching one of Standard Overtime, Time between shifts, Spread of Hours, Overtime - Sat, Delayed meal break, Break since Overtime worked exceeds 2 hours - Every day when during the day time worked exceeds 13.5 hours - Every day when during the week time worked exceeds 40 hours - Every Sunday when during the day time worked exceeds 11.5 hours - Every Sunday when during the week time worked exceeds 38 hours	Casual, Part-time, and Full-time
Break since Extended Overtime (Overtime Rate)	Every day when during the last shift worked any time matching the condition "Extended Overtime" is worked where there has not been a clear break of 8 hours since the previous day	Casual, Part-time, and Full-time
Time between shifts (Overtime Rate)	Every day where there has not been a clear break of 10 hours since the previous day	Part-time and Full-time

Using Pre-configured Wage Agreements

To opt in to using preconfigured wage agreements, follow the procedure.

To use pre-configured wage agreements:

- Go to Workforce Management.
- Activate the preconfigured agreements.
 - Go to Setup > Wage.
 - On the upper right corner, check the **Include inactive agreements** box.
Inactive agreements appear on the list of available agreements.

Important: If preconfigured wage agreements do not appear after you click the box, please contact NetSuite Customer Support.

- Locate the agreements that correspond to your employee needs.
 - For each agreement, click + Use this agreement.
- Click and review the configurations of each agreement.
 - For each pre-configured agreement, link payroll items to WFM.
 - Go to Setup > NetSuite Integration > Agreements.
 - On the Link objects to Payrollitems page, on the Conditions subtab, locate the agreement and conditions with items you need to link to WFM.

- c. For each condition, select the payroll item you want to link. Click **Link**.
- d. For each subtab, repeat steps 4b and 4c.

Important: For classifications, you generally need to select the latest revision date. Link all applicable payroll items to conditions in different age ranges and levels.

5. Assign the agreements to employees.
 - a. Go to Setup > Employees > List.
 - b. Click the employee who must be assigned to a pre-configured agreement.
 - c. Click the name of the employee.
 - d. On the employee profile, on the left-hand panel, click **Wages**.
 - e. On the Wages page, click **Edit wage**.
The Edit wage window for the employee opens.
 - f. On the Cost calculations/rates section, from the Calculation type list, select **Agreement**.
 - g. From the Classification list, locate the pre-configured agreement.
 - h. Click the classification that applies to the employee.
 - i. Click **Save**.

When a pre-configured agreement is revised, its conditions are updated and applied to the exported data. You will, however, need to link allowances, penalties, and multipliers to payroll items again.

If you want to automatically link these payroll items to new agreement revisions, switch this WFM setting on. See [Linking New Revisions to Pre-Configured Wage Agreements](#).

Linking New Revisions to Pre-Configured Wage Agreements

When a preconfigured agreement is revised, its conditions are updated and applied to the exported data. You will, however, need to link allowances, penalties, and multipliers to payroll items again.

If you want to automatically link these payroll items to new agreement revisions, switch this WFM setting on.

To link new revisions to pre-configured wage agreements:

1. Go to Setup > NetSuite Integration > Settings.
2. Click the **Configurations** subtab.
3. Check the **Auto link new revisions** box.
4. Click **Save**.

Assigning Jobs for Pre-Configured Wage Agreements

In the preconfigured agreement classifications, you can assign jobs that will trigger the rules and rates of that classification to apply. Employees who punch in with this job can be assigned a higher level of classification, or higher duties, and paid the corresponding rates.

Employees will never be moved down to a lower level classification, so only employees who have a base classification of level 1 or below will trigger this change.

To assign jobs for pre-configured wage agreements:

1. Go to Workforce Management.
2. Go to Setup > Wage.
3. On the upper right corner, check the **Include inactive agreements** box.
4. Click the agreement. Click the **Classifications** subtab.
5. Click the **Classifications** subtab.
6. On the classifications list, select a classification.
7. Click **Availability**.
8. From the Available Choices panel on the left, select the job that will trigger the classification.
 If you want to select all jobs, click **Choose All**. To move your selections to the Chosen Items panel on the right, click the blue right arrow symbol in the middle of the panels.
 If you want to clear your selected items, click **Clear All**.
9. Click **Save**.

Structure of a Wage Agreement

Wage agreements let you define when wage costs, such as regular rate, penalty rates, overtime, and public holidays are applied to scheduled and worked hours.

The Wage Agreement page is used to build wage conditions and rules for awards, enterprise agreements, or both.

Availability

You can restrict a wage agreement to regions. For example, if your agreement applies to Australia, you can set the agreement to apply only in the states of Queensland and New South Wales (NSW).

Revisions

Revisions pertain to the various versions of the agreement that are active on different durations. Revisions help determine which rules and rates will be used for calculating costs on a specified duration. Only one revision of an agreement is active on any given date.

When applying changes to your wage agreement, you should create new revisions instead of directly changing the rates on the agreement. This way, you can track and report changes you made across different revisions.

When creating a revision, note that each one must have a start date. All previous revisions must include an end date, while the current revision does not. Revisions must not overlap. No gaps should also exist between revisions.

For more information, see [Creating a Revision](#).

Conditions and Rules

A condition is a component consisting of one or more rules, which define when wage costs are applied. Conditions are used when creating rates for classifications, allowances, and penalties.

A condition will apply when at least one rule matches the shift. You can set the order of the conditions to allow WFM to check for conditions dependent on previous conditions before applying payment rates.

Conditions can be shared across different classifications within the same wage agreement

You can create and update conditions and rules according to your needs.

For more information, see [Managing Conditions and Rules](#).

Classifications

Classifications contain the levels and pay rates in a wage agreement.

You assign conditions to each classification to establish when a different rate will apply. Each classification is assigned a level.

Classifications may be limited to locations, jobs, employment statuses, or their combinations.

For example, you may choose to create classifications according to different age ranges. You must provide the conditions that apply to each age range classified. For each condition, you would need to provide the applicable rates.

Following is an example of an hourly rates table for a classification named **Level 1**, which follows the six default conditions.

Age Range	Regular Rate	Public Holiday	Saturday	Sunday	Standard Overtime	Extended Overtime
20 years and older	\$25	\$37.5	\$31.25	\$37.5	\$37.5	\$50
19 and under 20	\$22.5	\$33.75	\$28.125	\$33.75	\$33.75	\$45
18 years old	\$20	\$20	\$30	\$25	\$30	\$40
17 years old	\$17.5	\$26.25	\$21.875	\$26.25	\$26.25	\$35
16 years old	\$15	\$22.5	\$18.75	\$22.5	\$22.5	\$30
Under 16	\$12.5	\$18.75	\$15.625	\$18.75	\$18.75	\$25

You can update the rates of classifications by creating a new revision of the agreement. For instance, if you need to increase the base rate of a specific classification at the end of a financial year, you can create a new revision of the agreement and provide the percentage increase for that classification.

For more information, see [Creating a Classification](#).

Allowances

Allowances are fixed amounts that are applied to a shift that meets a specified condition. When creating an allowance, you must define the **condition** where it will apply, the **amount** to be awarded, and the eligible **employment statuses**.

You may also specify the **jobs** of employees who are awarded the allowance. When jobs are linked to an allowance, only the shifts with one of the jobs will be eligible to receive the payment. If you provide an allowance for all employees or shifts, such as a uniform or laundry allowance, you do not need to specify the jobs.

For example, you can create a condition that triggers when an employee's work hours exceed 0, which covers employees who worked their shift. When setting up your allowance, you can select that condition then set the laundry allowance amount to fixed rate per shift, day or week.

For more information, see [Setting up an Allowance](#).

Penalties

Penalties are fixed amounts that increase the rates applied to the parts of a shift that meet the penalty conditions. For example, a penalty rate that increases rates to \$1.22 per hour for all hours after 6 pm results in an employee's rate increasing by that amount for the part of her shift that went after 6 pm.

For more information, see [Setting up a Penalty](#).

Minimum Hours

Minimum hours establish the required minimum number of hours that an employee should be assigned during their shift. You can set up different minimum hours for different types of employment statuses.

When an employee is assigned a shift that is shorter than the configured minimum hours, WFM will top up or add the missing hours to their shift payment.

For more information, see [Setting up Minimum Hours](#).

Creating a Wage Agreement

To track employee costs for public holiday, overtime, penalty rates, and other conditions in WFM, you must set up a wage agreement.

Guidelines for Creating a Wage Agreement

Before you create a wage agreement, note the following guidelines.

- If you are looking to update the rates and conditions for an existing agreement, for situations such as rate updates at the end of financial year, you should create a new revision rather than a new agreement. For more information, see [Creating a Revision](#).
- In Australia, the start date of the current revision of the wage agreement is typically the first day of the first full pay run in that period. Only enter a finish date if this agreement ends on a specific date and will not be renewed.
- You can still add, delete, or update conditions after you create an agreement.

To create a wage agreement:

1. Go to Workforce Management.
2. Go to Setup > Wage.
A list of the available wage agreements appears.
3. At the bottom of the page, click **+ New Wage Agreement**.
The Wage Agreement wizard opens.

Important: To ensure your wage agreement selections are saved, complete all the sections before you go out of the wizard.

4. On the Agreement Name section, complete the fields, then click **Next**.
 - **Name** – Enter the name of the agreement. For example, Sample Company Subsidiary.
 - **Country** – Select the country where the agreement applies, For example, Australia.
5. (Optional) On the Availability section, from the Available Choices panel on the left, select the locations where the shifts of the agreements are based.

For example, if your employees cross state lines and get paid under a different award or agreement, you can customize the locations where this agreement applies.

- If you want to select all states, click **Choose All**. To move your selections to the Chosen Items panel on the right, click the blue right arrow symbol in the middle of the panels.
 - If you want to clear your selected items, click **Clear All**.
6. When you're done or if you do not need to limit the agreement to specific locations, click **Next**.
 7. On the Starting Date section, complete the fields, then click **Next**.
 - **Start Date** – Select the date when the agreement will start to apply.
 - **Finish Date** – Select the date when the agreement will end. If the agreement has no known end date, leave blank.
 8. On the Conditions section, complete the actions, then click **Next**.
 9. From the list of default conditions, select those that apply to the agreement.
Selected conditions are highlighted in green. If you want to exclude a selected condition, clear the box.
 10. On the Confirmation section, review your previous selections.
 11. If you need to update a selection, click **Change** beside the section name.
 12. Click **Create**.

After creating your agreement, you can continue setting up your wage agreement. See [Setting up a Wage Agreement](#).

Managing Conditions and Rules

In WFM, rules provide granular options for you to define when and how conditions should apply to a wage agreement.

To know more about conditions and rules, see the help topics:

- [Default Conditions and Rules](#)
- [Types of Conditions](#)
- [Creating a Condition](#)
- [Creating or Editing a Rule](#)
- [Managing Conditions in Existing Classifications](#)

Default Conditions and Rules

By default, WFM provides the following set of conditions and rules in this order. These conditions contain the most common rules found in most classifications and awards in Australia.

Condition	Rules	Description
Regular Hours	Every day	Rates apply when no conditions apply
Public Holiday	Every day that is a public holiday	Rates apply when the rules apply
Saturday	Every Saturday	Rates apply when the rules apply
Sunday	Every Sunday	Rates apply when the rules apply
Standard Overtime	■ Every day when during the day time worked exceeds 8 hours	Rates apply when the rules apply

Condition	Rules	Description
	Every day when during week time worked exceeds 38 hours	
Extended Overtime	- Every day when during the day time worked exceeds 11 hours - Every day when during the week time worked exceeds 41 hours - Every day when during the day time worked exceeds 8 hours - Every day when during the week time worked exceeds 38 hours	Rates apply when the rules apply

Types of Conditions

When you create a wage agreement, WFM provides default conditions and rules that you can use. After creating the agreement, you can also create new conditions and rules.

For more information, see [Creating a Condition](#).

The four types of conditions in WFM are:

- **Regular Rate** – These conditions are used as base hours.
- **Penalty Rate** – These conditions are used to give a different rate to regular hours, rather than a wage increase when particular days or hours are worked. For example, hours worked between 7 pm and 10 pm on a Sunday receive a different rate, rather than an increase per hour worked.
- **Overtime Rate** – These conditions are used to give a different rate to regular hours, rather than a wage increase after a certain number of hours have already been worked. For example, every day where hours worked during the week exceed 38 hours receives a different rate.
- **Allowance or Penalty** – These conditions are used to give a wage increase rather than a different rate. For example, hours worked between 7 pm and 10 pm receive an extra \$1 per hour, rather than a different rate altogether.

Creating a Condition

After you create a new agreement, you can manage the conditions on the Conditions subtab of the wage agreement. You can also create new conditions that match your business needs.

To create a condition:

1. Open the wage agreement. See [Accessing Wage Agreements](#).
2. Click the **Conditions** subtab.
3. Click **+ Create new Condition....**
The New Condition form appears.
4. In the **Name** field, enter the name of the condition.
5. From the **Type** list, select the type of condition or rate. For more information, see [Types of Conditions](#).
6. In the **Default loading** field, enter the percentage of the rate that will be added to employee pay when the condition runs. This percentage can be used when assigning pay rates to classifications.
7. On the appropriate rule tab, complete the required information for the rule parameters you need. For more information, see [Rule Parameters in WFM](#).

8. If you need to create more rules, click **+New rule...**, then complete the required parameters.
9. After you're done adding rules, click **Save**.

Creating or Editing a Rule

When you create conditions, you must set up one or more rules when the conditions apply. The condition will apply if any of the rules apply.

Rule Parameters in WFM

Rules in WFM consist of parameters that you can manage when you add or edit a condition. Refer to the table for the available rule parameters.

Rule Parameter	Action Needed
Apply only for the dates (start date) # (end date)	If applicable, select a start date, end date, or both to indicate if the new rule is only valid during the given dates. In most cases, these values can be left blank.
Apply only for the days (type of day)	If applicable, configure the days when the condition applies. You can select or clear individual days on the first column or select Any day, Weekends, or Weekdays on the second column. If the condition applies exclusively on public holidays, check the appropriate box.
For the period between (start time) and (end time)	If the condition should only apply between hours of the day, set the start and end time.
When during the (selection) time worked of type (condition type) condition (condition name) time worked exceeds (number of hours)	If applicable, select whether the condition applies on hours worked during the shift, day, week, fortnight, four-weekly period, or time worked since last break. If applicable, select the types of condition the condition should run, either allowance or penalty, regular rate, penalty rate, overtime rate, or a combination of these types. If applicable, select a specific condition name that is required for the condition to apply. Based on the condition name, enter the number of work hours after which the condition will apply.
When the shift starts before (time) (and) the shift starts after (time) (and) the shift finishes before (time) the shift finishes after (time)	If applicable, set the condition to apply based on the time a shift starts or finishes.
For worked hours that are (selection)	If applicable, select when outside of scheduled hours the condition applies. Select only one from outside scheduled hours, before scheduled start, after scheduled finish, or longer than scheduled. This rule will check all locations and jobs that a person works for overlapping shifts.
Break length between (number of hours) and (number of hours)	If applicable, establish the lengths of breaks for split shifts. This rule applies to all parts of all shifts that occur after a break on a day that is within the designated length. A break longer than the maximum value will cause subsequent parts of shifts to no longer match this rule. A break in this rule refers to any break between shifts on the same day, or unpaid breaks within a shift.

Rule Parameter	Action Needed
	A shift that has a break within it, or immediately prior to it that has a length within the range will cause an allowance using this rule to be applied.
Previous shift less than (number of hours) ago on more than (number of days) this week	If applicable, set the condition to apply when the employee works the minimum number of hours for a maximum number of days on the same week.
Days worked this week exceeds (number of days) Days worked last week exceeds (number of days)	If applicable, set the condition to apply when the employee works the maximum number of days during the current week. You can also set it to apply when the employee works the maximum number of days during the previous week.
Days worked exceeds (number of days) over the previous (number of days)	If applicable, you can set the number of days worked over a period to apply.
Consecutive days worked exceeds (number of days) Spread of time on day exceeds (number of hours)	If applicable, set the condition to apply based on how many consecutive days an employee has worked in the current week, or based on the spread of hours worked in a day. For example, the condition applies if the spread of hours worked in a day exceeds 4 hours.
Worked previous shift	If you want the condition to apply if the employee works their previously scheduled shift, check the box.
Worked subsequent shift	If you want the condition to apply if the employee works their subsequently scheduled shift, check the box.

To create or edit a rule:

1. Open the wage agreement. See [Accessing Wage Agreements](#).
2. Click the **Conditions** subtab.
A list of available conditions appears.
3. Choose how you want to access the condition.
 - If you want to edit the rules of an existing condition, click **Edit** beside the condition. Click the subtab for the rule that you need to update.
 - If you want to create a new condition with a new rule, click **+ Create new Condition....**
The New Condition form appears.
4. If you created a new condition, complete all fields for the new condition. See [Creating a Condition](#).
5. On the appropriate rule tab, complete the required information for the rule parameters you need. For more information, see [Rule Parameters in WFM](#).
6. If you need to create more rules, click **+New rule...**, then complete the required parameters.
7. After you're done adding rules, click **Save**.

Managing Conditions in Existing Classifications

Follow the procedure to add conditions to previously created classifications.

To manage conditions in existing classifications:

1. Open the wage agreement. See [Accessing Wage Agreements](#).
2. Click the **Classifications** subtab.

A list of the classifications appears.

3. Click the classification where you need to add conditions.

The rates table for the classification appears.

4. Beside a condition heading, click the information icon.

A window opens showing a summary of the rules in that condition as well as actions you can perform for the classification.

5. To remove a condition, select **Remove condition....**

Removing a condition removes its related rates in classification, effective on the start date of the current version.

6. To replace the condition with another one, select **Select condition....**

Replacing a condition assigns its related rates in the classification with the new condition's rates, effective on the start date of the current version.

7. From the Condition field, select the new condition. Click **Change**.

The updated rates table with the new condition appears.

8. To add a new condition, select **Add condition....**

9. From the **Condition** field, select the new condition.

10. For each age range, enter the hourly rates. Click **Save**.

The updated rates table with the new condition appears.

Setting up an Allowance

After setting up your wage agreement, classifications, and conditions, you can assign allowances to a shift or period of shifts.

To set up an allowance:

1. Open the wage agreement. See [Accessing Wage Agreements](#).
2. Click the **Allowances** subtab.
3. Click **+ New allowance....**
4. On the Create new Allowance window, complete the fields.
 - **Condition** – Select the condition that applies to the allowance.
 - **Amount** – Enter the amount to give to employees when the allowance is applied.
 - **Employment status** – Check the boxes for all statuses that can receive the allowance.
 - **Jobs** – From the Available Choices panel, select the jobs that can receive this allowance.
5. Click **Save**.

Setting up a Penalty

After setting up your wage agreement, classifications, and conditions, you can assign penalties or fixed increases to a shift or period of shifts. You can set up different penalty rates for different employee levels.

To set up a penalty:

1. Open the wage agreement. See [Accessing Wage Agreements](#).

2. Click the **Penalties** subtab.
3. Click **+ New penalty...**
4. On the Create new Penalty window, complete the fields.
 - **Condition** – Select the condition that applies to the penalty.
 - **Increase** – Enter the amount to give to employees when the penalty is applied.
 - **Levels** – Choose an option.
 - **Any** – The penalty applies to any level.
 - **Between level 0 and level 0 (inclusive)** – Enter the range of levels that can receive the penalty. For example, if the penalty is for Level 1 and lower, enter **Level 0 and Level 1**. If it's for Level 2 and above enter **Level 2 and Level 0**.
 - **Jobs** – From the Available Choices panel, select the jobs that can receive this penalty. If the penalty applies to all employees or shifts, do not select jobs. When you assign a job to a penalty, only the shifts with one of those jobs will be eligible for the penalty.
5. Click **Save**.

Creating a Classification

After creating a wage agreement, you must create classifications, so WFM can assign the correct rates to the specified sets of employees.

Guidelines for Assigning Jobs in a Classification

- A job escalation is configured when a job is assigned to a classification level.
- If the employee is assigned a higher classification level on their employee profile, the employee will continue to be paid at the higher classification level.
- Job overrides only apply when an employee requires a higher rate. That is, the employee will always receive the classification of the higher level. When setting up job escalations, a job should only be assigned to one classification level for the applicable employment status.
- For example, if you associate the Supervisor job to the classification for full-time employees and chose Level 3 in the previous section, a Level 1 full-time employee who acts as a supervisor for a hectic shift will be assigned this classification and will receive the higher payment rate at level 3 for that shift.

To create a classification:

1. Open the wage agreement. See [Accessing Wage Agreements](#).
2. Click the **Classifications** subtab.
3. Click **+ Create new Classification**.
The New Classification wizard opens.
4. On the Classification Name section, enter a name for the classification. For example, **Senior Kitchen Staff**.
5. On the Level section, select the numerical level of the classification, starting from **1**.
6. On the Availability section, complete the requirements, then click **Next**.
 - **Employment status** – Check the boxes for all statuses that are included in the classification.
 - **(Optional) Jobs that should trigger this classification** – Assign a job only if you have employees receiving a higher rate when working a specific job. See Guidelines for Assigning Jobs in a Classification. To configure the job escalation, from the Available Choices panel, select

the jobs that match this classification. If you do not need to associate this classification to a job, skip this field.

7. On the Conditions section, complete the actions, then click **Next**.
 - Select which conditions will apply to this classification, based on the conditions that currently belong to the agreement.
 - From the list of default conditions, select those that apply to the agreement. Selected conditions are highlighted in green. To exclude a selected condition, clear the box.
 - In this section, you can provide a Penalty Loading for each condition, such as 100% for Regular Hours or 200% for Public Holiday.
 - In the Penalty rate fields assign the percentage of the pay that should apply to the employee's hourly pay for each condition. The percentages can be relative to the regular rate. The percentages you provide will later be used to calculate the hourly rate for each age range and condition.
 - (Optional) Click and drag each condition to reorder how they appear on the rates table.
8. If applicable, on the Age Ranges section, complete the requirements, then click **Next**.
 - Enter the age ranges included in the classification in whole values (20 years). By default, WFM uses ages for Under 18 Years to 20 Years and older.
 - To remove ages, click the **stop sign** icon.
 - To add ages, click the **+** icon.
 - To set the loading of each age, enter the rate in the **Percentage of adult rate**.

The Rates section appears with a table containing blank fields for the rates of each age range and condition.
9. In the **Regular Hours** column, enter the hourly rate for the first age range. For example, you may enter **\$33** as the hourly rate for the regular hours of employees who are 20 years and older.
10. To automatically calculate the rates for the rest of the conditions and ranges, click the Expand icon next to the cell.

WFM completes the rest of the table using the Penalty rates and Percentages of adult rates you entered in the earlier sections.
11. Confirm all automatically calculated rates to correct any rounding errors or adjust according to your needs. Click **Next**.
12. On the Confirmation section, review your previous selections.
13. If you need to update a selection, click **Change** beside the section name.
14. Click **Create**.

To continue setting up your work agreement, see [Setting up a Wage Agreement](#).

If you need to update or add more conditions, see [Managing Conditions in Existing Classifications](#).

Setting up Minimum Hours

After setting up your wage agreement, classifications, and conditions, you can configure the minimum hours that employees need to work based on their employment status and type of day worked.

To set up minimum hours:

1. Open the wage agreement. See [Accessing Wage Agreements](#).
2. Click the **Minimum Hours** subtab.

3. Click **+ Add Minimum Hours**.
4. On the Create new Minimum Hours Name window, complete the fields.
 - **Employment status** – Select the status that requires minimum hours set up.
 - **On days that are** – Select the type of day that the minimum hours apply, either regular or public holiday.
 - **Minimum shift length** – Enter the number of hours.
 - **Effective from** – Select the start date when the minimum hours apply.
5. Click **Save**.

Creating a Revision

When an update to wages or conditions needs to occur, you can create a new revision to apply these updated rates.

Employees who are on a classification which you add a new revision for will follow the updated rate as of the specified date. Historical data will still appear with the correct wage rate.

Some situations when you need to create a revision include:

- An increase to the minimum wage which supersedes old rates
- An update to penalty calculations as of a particular date
- An update to wage rates as of a particular date
- Any other change to wages which applies from a certain date, which supersedes rates already set up in the system

For example, in the US if there is an update to the minimum wage in a particular state, and new wage rates will apply to employees currently set up in the system, you can set these up as new revisions.

In Australia, when increases to the minimum wage are announced before the new financial year, you can add a new revision of wages which are affected to take effect as of the correct date.

Follow the procedure to effectively create a new version of the wage agreement with updated rates.

To create a revision:

1. Open the wage agreement. See [Accessing Wage Agreements](#).
2. Click the **Revisions** subtab.
3. Click **+ Create new revision....**
The New Revision wizard opens.
4. On the Valid period section, complete the fields, then click **Next**.
 - **Start Date** – Select the date when the revision will start to apply. If the previous revision has no finish date, WFM will update it to use the start date of the new revision as the previous revision's finish date.
 - **Finish Date** – Select the date when the revision will end. If the revision has no known end date, leave blank.
5. On the Allowances section, update the allowances, then click **Next**.
6. On the Penalties section, update the penalties, then click **Next**.
7. On the Classifications section, complete the actions, then click **Next**.
 - Check the classifications that you want to apply to the new revision.

- Clear the classifications that you want to remove from the revision. For example, you can do this when you are retiring a pay grade, however, ensure any employees currently on these classifications have a new wage added to their profile.
 - (Optional) For each classification and level, enter the percentage of increase for this revision. This will apply an increase to every rate in the classification. If individual conditions change, such as when the weekend penalty increases or decreases at a different percentage, update that on the next section. If a particular classification will still exist, but the rate doesn't change, leave the percentage box blank.
8. On the Rates section, confirm each classification rate's changes based on the percentage you entered in the previous section. If you did not enter a percentage in the previous section, update the relevant rates manually. If the rounded rate is different to what is displayed or if the base increase is not in line with the pay conditions, edit the rates here.
 9. In the Confirmation section, review your previous selections.
 10. If you need to update a selection, click **Change** beside the section name.
 11. Click **Create**.
- At the top of the Wage Agreement page, the note is updated to add information about the revision that you are viewing.

Guidelines for Creating Revisions in Wage Agreements

Refer to the following guidelines.

- If you are viewing the current revision of the agreement and the new revision you created has not started yet, the note indicates that there is a revision that starts later. To access this revision, click **View next revision**.
- If you are viewing a revision that has not started, the note on top of the page will indicate that this is not the current revision of the agreement.
- When setting employee wages, WFM shows the active agreements and revisions, as of the wage start date you selected.
- Current employees with classifications you have migrated do not need to have wages updated in their profile. The revision will supersede their wages. You will need to change their rate if their classification was not migrated.
- If your payroll integration requires classification linking, you will need to link your classifications. For more information, see [Workforce Management Integrations](#).

Cross-Agreement Linking

Important: Linking work agreements is an add-on feature to Workforce Management (WFM). If you want to implement the feature in your setup, contact NetSuite Customer Support.

Cross-agreement linking allows employees to be paid against separate wage agreements at different WFM locations.

Refer to the following example:

- **Location 1** – All employees are paid under the Retail Industry Award for all hours worked.
- **Location 2** – Some employees are paid under the Warehouse Award for all hours worked.

Cross-agreement linking allows you to set up the Warehouse Award to be paid for the hours worked of selected employees at Location 2.

Before you can link work agreements across different locations for each employee, you should first finish setting up the wage agreements and creating groups.

For more information, see [Creating a Wage Agreement](#).

To link work agreements:

1. Open the wage agreement. See [Accessing Wage Agreements](#).
2. Click the **Locations** subtab.
A list of locations that use the wage agreement to calculate shifts appears.
3. Click **+ Add locations...**
4. On the Add locations window, complete the required information.
 - **Groups** – If you have set up category groups, from the Available Choices panel, select the groups that should use the agreement to calculate wages.
 - **Locations** – From the Available Choices panel, select the groups that should use the agreement to calculate wages.
5. Click **+ Add locations**.

Assigning Employee Classification for Cross-Agreement Linking

After linking work agreements, you can assign employees to the relevant level they will be paid at locations set for cross-agreement linking.

To assign employee classification for cross-agreement linking:

1. Go to Workforce Management.
2. Go to Setup > Employees > List.
3. Click the name of the employee.
4. On the employee profile, on the left-hand panel, click **Wages**.
5. On the Wages page, click **Edit wage**.
6. On the Edit wage window, expand the Advanced section.
If you do not complete the fields in this section, the employee will be paid their default cost calculation type.
7. Select any wage agreements and classifications that apply to the employee when they work on a location with cross-agreement linking.
8. Click **Save**.

Region-Based Wages for North America

Region-based wages are a set of convenience conditions built into WFM that are loaded by default into customer's accounts within the United States.

Important: These conditions do **not** guarantee your compliance with laws and regulations. You must validate that these rules meet your needs and own the process of configuring additional rules you need based on your local labor laws.

If you have any locations in a supported US state, you will see the rules from the Wage Rule Process appear.

If the rules do not meet your business needs or if you require additional rules, you can assign your own region-based overrides.

For more information about the available preconfigured overrides for North America, see [Definitions for Region-Based Overrides](#).

Structure of Region-Based Wages

Region-based wages are convenience based preconfigured wage rules to assist with region wage rules.

Region-based wages consist of the following components:

- Revisions
- Conditions
- Multipliers
- Penalties
- Allowances
- Locations

For more information about typical wage components, see [Structure of a Wage Agreement](#).

Accessing Region-Based Wages or Overrides

To view your region-based wages or overrides follow the procedure.

To access region-based wages or overrides:

1. Go to Workforce Management.
2. Go to Setup > Wage.
A list of the available wages or overrides appears. Wage names that start with United States of America are the default region-based overrides that are preloaded with WFM.
If you created your own set of rules, your override appears on top of the preconfigured overrides.
3. Click the wage or override you want to view. You cannot edit a preconfigured override.

You can see any updates and overtime rules that apply to your employees.

After you have set the wage on an employee profile, WFM calculates overtimes based on the percentages that are set in the **Multipliers** subtab.

Setting up Region-Based Overrides

Follow the procedures on the table to set up overrides.

Step	Related Topic
1. Create categories for region-based overrides.	Creating Categories for Region-Based Overrides
2. Create region-based overrides.	Creating a Region-Based Override
3. Assign locations for region-based overrides.	Assigning Locations to Region-Based Overrides

Step	Related Topic
4. Create new or update existing conditions.	Managing Conditions for Region-Based Overrides
5. Create multipliers.	Managing Multipliers
6. Create penalties.	Setting up a Penalty
7. Create allowances.	Setting up an Allowance
9. Create a new revision.	Creating a Revision

Creating Categories for Region-Based Overrides

To apply a region-based override, you will need to create a category group with locations to apply to your region-based override.

With categories, you can create groups of locations that you can use for management oversight, reporting, and accurate location-based wage costing.

You can also use category groups to assign locations to region-based overrides.

To create categories for region-based overrides:

1. Go to Workforce Management.
2. Go to Setup > Categories.
3. Create and prepare a category. For the related procedures, see [Categories](#).
 - a. Create a category.
 - b. Create one or more groups then assign them to the category.
 - c. Assign WFM locations to the groups you created.
4. For each category you created, click **+Use for Region-based wage overrides**.

After you prepared the category group requirements for region-based overrides, you can associate the groups with the correct overrides.

Creating a Region-Based Override

After you prepared the category group requirements for region-based overrides, you can create a custom region-based override. Follow the instructions.

To create a region-based override:

1. Go to Workforce Management.
2. Go to Setup > Wage.
3. On the Region-based wages setup page, scroll to the bottom.
4. Click **+ New region-based wages override**.
5. In the **Name** field, enter a name for the override. Click **Create**.
6. Enter the start and finish dates for the wage override. Click **Next**.
7. Confirm the settings. Click **Create**.

After you create the override, you can create conditions, multipliers, penalties, allowances, groups, locations, and notes.

Definitions for Region-Based Overrides

Region-based wages are a set of convenience conditions built into WFM that are loaded by default into customer's accounts within the United States.

Important: These conditions do **not** guarantee your compliance with laws and regulations. You must validate that these rules meet your needs and own the process of configuring additional rules you need based on your local labor laws.

The following table shows the available preconfigured overrides for North America, including the options available for each one.

Override	Condition	Rule	Multiplier	Allowances
United States of America	OT1.5 over 40 hours week	Every day when during the week time of type regular rate worked exceeds 40 hours	150%	—
United States of America # California	OT1.5 day over 8 hrs	Every day when during the day time worked exceeds 8 hours	150%	—
United States of America # California	OT2.0 day over 12 hrs	Every day when during the day time worked exceeds 12 hours	200%	—
United States of America # California	OT1.5 over 6 consecutive days	Every day when more than 6 days in a row have been worked	150%	—
United States of America # California	OT2.0 consecutive days +6/+8hrs	Every day when during the day time worked exceeds 8 hours when more than 6 days in a row have been worked	200%	—
United States of America # California	OT1.5 over 40 hours week	Every day when during the week time of type regular rate worked exceeds 40 hours	150%	—
United States of America # Virgin Islands	OT1.5 day over 8 hrs	Every day when during the day time worked exceeds 8 hours	150%	—
United States of America # Virgin Islands	OT1.5 over 5 consecutive days	Every day when more than 5 days in a row have been worked	150%	—
United States of America # Virgin Islands	OT 1.5 over 40 hours week	Every day when during the week time of type regular rate worked exceeds 40 hours	150%	—
United States of America # Alaska	OT1.5 day over 8 hrs	Every day when during the day time worked exceeds 8 hours	150%	—
United States of America # Alaska	OT1.5 over 40 hours week	Every day when during the week time of type regular rate worked exceeds 40 hours	150%	—
United States of America # New York	Spread of Hours	Every shift when the spread of time worked on a single day exceeds 10 hours	150%	\$13

Override	Condition	Rule	Multiplier	Allowances
United States of America # New York	OT1.5 over 40 hours week	Every day when during the week time of type regular rate worked exceeds 40 hours	150%	—

Assigning Locations to Region-Based Overrides

After you create region-based overrides, you should assign locations associated with category groups. If you need to create categories for the overrides, see [Creating Categories for Region-Based Overrides](#).

To assign locations to region-based overrides:

1. Open the region-based override. See [Accessing Region-Based Wages or Overrides](#)
2. On the override page, click the **Groups** subtab.
3. Click **+Add group**.
4. From the list of category groups you created, select the group or groups containing the locations you need to assign.
All locations in the group you select are added to the Locations subtab of the region-based override.

After you create region-based overrides and assign locations, ensure that you test new rules with your account. You should create scheduled shifts that aim to trigger the rules as well as other scenarios or business workflows.

Managing Conditions for Region-Based Overrides

After assigning locations to region-based overrides, you can start to create conditions for your override.

To create a condition for region-based overrides:

1. Open the region-based override. See [Accessing Region-Based Wages or Overrides](#)
2. On the Region-based override page, click the **Conditions** subtab.
The New Condition form appears.
3. Click **+ Create new Condition....**
4. In the **Name** field, enter the name of the condition.
5. From the **Type** list, select the type of condition or rate. For more information, see [Types of Conditions](#).
6. On the appropriate rule tab, complete the required information for the rule parameters you need. For more information, see [Rule Parameters in WFM](#).
7. If you need to create more rules, click **+New rule....**, then complete the required parameters.
8. After you're done adding rules, click **Save**.

To create specific conditions, see the following help topics:

- [Setting up a Spread of Hours Condition for Region-Based Overrides](#)
- [Setting up Break Conditions for Region-Based Overrides](#)

Setting up a Spread of Hours Condition for Region-Based Overrides

Follow the procedure to create a spread of hours rule and condition.

To set up a spread of hours condition:

1. Open the region-based override. See [Accessing Region-Based Wages or Overrides](#)
2. Create the Spread of Hours condition.
 - a. On the Region-based override page, click the **Conditions** subtab.
 - b. Click **+ Create new Condition....**
The New Condition form appears.
 - c. In the **Name** field, enter **Spread of Hours**.
 - d. From the **Type** list, select Allowance or Penalty.
 - e. In the **Spread of time on day exceeds** field, enter the number of excess hours that require an allowance to be added. For example, you may enter **10 hours**.
3. Create the Spread of Hours multiplier.
 - a. Click the **Multipliers** subtab.
 - b. Click **+ New multiplier....**
 - c. From the **Conditions** list, select **Spread of Hours [allowance]**.
 - d. On the employment status section, check all the statuses where this multiplier applies.
 - e. In the **Rate** field, enter the multiplier rate (%). This multiplier will be applied to the shift base rate.

Setting up Break Conditions for Region-Based Overrides

After you have set up your region-based override, you can start configuring options to manage premium pay for meal or rest breaks. These breaks may include missed, untimely, shortened, or interrupted breaks.

Guidelines for Handling Noncompliant Break Periods

Before configuring options to handle noncompliant break periods, note the following guidelines:

- WFM applies an hour of pay at the employee's base hourly rate and does not consider premium pay or other types of compensations, such as commissions and nondiscretionary bonuses. You must manage and incorporate other types of compensation in your payroll solution, if applicable.
- When applicable, the employee's base hourly rate of pay is added per workday for each unpaid meal break.
- Waiving meal breaks by mutual consent of both the employer and the employee is not covered in WFM and must be managed manually outside the system.

To configure options for noncompliant breaks:

1. Open the region-based override. See [Accessing Region-Based Wages or Overrides](#)
2. Create the condition.
 - a. On the region-based override page, click the **Conditions** subtab.
 - b. Click **+ Create new Condition....**

The New Condition form appears.

- c. In the **Name** field, enter the name of the missed break condition.
 - d. From the **Type** list, select **Allowance or Penalty**.
 - e. In the **Total daily time worked** field, enter the range of work hours that apply for this condition.
3. Set the break requirements.
 - a. Go to the **Break requirements** fields.
 - b. Select the break type, either **paid** or **unpaid**.
 - c. Enter the number of minutes representing the length of the prescribed break.
 - d. Enter the number of hours that employees will work before taking prescribed breaks.
 - e. Based on the hours you entered, select the fraction and timing when the break will be required.
4. (Optional) If you need to create separate rules for various types of noncompliant breaks, create separate conditions for different break types.
5. Complete any other fields relevant to your needs. Click **Save**.
6. Create the allowance.
 - a. Click the **Allowances** subtab.
 - b. Click **+ New allowance....**
 - c. On the Create new allowance window, from the **Condition** field, select **Missed Meal Break (allowance)**.
 - d. Choose the basis for the payment.
 - In the **Amount** field, enter the amount to be paid.
 - In the **at current base rate** field, enter the number of hours that will be multiplied to the employee's base rate.
 - e. In the Employment status section, check the statuses of employees who can receive missed break payments.
 - f. Click **Create**.

Managing Multipliers

Multipliers are penalty rates that are multiplied with the employee rate to adjust their shift payment based on specified conditions.

For example, conditions for holidays can be set up with a multiplier of 150% so employees are paid 1.5 times their base hourly rate for holiday work.

For a condition to apply to time worked, a multiplier for the corresponding condition must be created.

To set up a multiplier:

1. Open the region-based override. See [Accessing Region-Based Wages or Overrides](#).
2. Click the **Multipliers** subtab.
3. Click **+ New multiplier....**
4. On the Create new Multiplier window, complete the fields.
 - **Condition** – Select the condition that applies to the multiplier.

- **Employment status** – Check the boxes for all statuses that can receive the multiplier.
- **Rate** – Enter the rate that will be multiplied to employee rates when the associated condition is applied.

5. Click **Create**.

Notifications

WFM can send you notifications when things happen, to access the notification setup section go to **Setup > Notifications**.

To view your notifications, click on the envelope at the top right corner of your screen.

There are configurable notifications for:

- Birthday Reminders
- Expiring Documents
- New Staff
- Personal Details
- Financial Details

Birthday Reminders

WFM can send you notifications to remind you of an employee's birthday. This is useful as when an employee gets older they may be entitled to a pay increase.

It also helps with employee morale.

To view your notifications, click on the envelope at the top right corner of your screen.

Setting Up Birthday Notifications

To set up an automatic notification system for employee birthdays, go to **Setup > Notifications**. Click **Birthday reminder**.

From here you have a range of settings to adjust. The first option is whether you would like WFM to send you an automatic reminder, choose this option if you want a reminder for any upcoming birthdays (**it is still important to complete the rest of the setup page as this information may still be applicable to managers**)

You will then be given the option to choose how many days before the employee's birthday you will receive a notification, as well as an option to send a reminder on the day. The last section focuses on which managers will be informed of the birthday; you firstly have the option to make it so that only the managers that have primary control over the employee will receive a notification. If you want for other employees to know about employees' birthdays, then you can also include them.

Click **Save** continue.

Expiring Visas

Set up reminders for employees whose visas are expiring.

To set up notifications for expiring visas:

1. Go to Workforce Management.
2. Go to Setup > Notifications.
3. On the Notification Config page, click **Expiring Visa**.
4. Configure notification settings.

Field	Action
Send reminder for upcoming expiring visas that have not been superseded	If you want to receive reminders, check the box.
Send it X days before expiration	Enter the number of days before the expiration date that you want to receive the reminder.
Send on date Send reminder on expiration date (in addition to above)	If you want to receive a reminder on the day the visa expires, check the box.
Notify managers Send reminder to primary location managers	If you want primary location managers to receive visa expiration notifications, check the box.
Also send notifications to	If there are any other users with manager or higher access who you would like to receive notifications, select them here. If nobody is selected, only primary location managers will receive these notifications for their employees. To select employees: 1. On the Available Choices panel, select the names of the employees who you want to receive visa expiration notifications. If you want all employees to receive the notifications, click Choose all. 2. To move your selections to the Chosen Items panel, click the blue right arrow in the middle of the panels. If you want to clear your selections, click Clear All.

5. Click **Save**.

Expiring Documents

WFM has a notification system that is able to inform you when an employee has expiring documents.

A notification will appear on the top right corner of your screen, click the icon to view it.

Setting Up Expiring Documents Notifications

To set up an automatic notification system for an employee's expiring documents you need to go to **Setup > Notifications**. From here, you can go to the "Expiring Document" tab.

From here you have a range of optional settings to set. The first option is whether you would like WFM to send you an automatic reminder, choose this option if you want a reminder for an employee's expiring document (**it is still important to complete the rest of the setup page as this information may still be applicable to managers**).

You will then be given the option to choose how many days before the employee's documents expire to receive a notification, as well as an option to send a reminder on the day.

The last section focuses on which managers will be informed of the expiring documents; you firstly have the option to make it so that only the managers that have primary control over the employee will receive a notification. If you want other employees to know about this, then you can also include them.

Click **Save** to continue.

Uploading Driver's License to an Employee

Follow the procedure.

To upload a driver's license for an employee:

1. Go to Workforce Management > Setup > Employees > List.
2. Click an employee's ID.
3. Under Employment documents, click **Add new**.
4. Fill in the required information.
 - a. In the **Label** field, enter **Driver's license**.
 - b. From the **Type** field, select **Personal Details**.
 - c. Upload the file from your device.
 - d. Set the expiry date of the driver's license.
 - e. Click **Upload**.

The uploaded document will be saved and appear in the list of Employment documents.

5. Make sure document expiry notifications are set up correctly.
 - a. In Workforce Management, go to Setup > Notifications.
 - b. Go to **Expiring Document**.
 - c. Check the reminder boxes and set the notification period that suits you.

6. Make sure document expiry notifications are set up correctly.

You will receive a notification when there is an expiring driver's license. This notification appears in your notification page.

New Employees

WFM can send you notifications when new employees are added to the system.

To view your notifications, click on the envelope at the top right corner of your screen.

Setting Up a New Staff Notification

Setting up a notification system to remind you, or any other managers about a new employee is a simple process. Go to **Setup > Notifications**, and then click **New employees created**.

The first step that you need to do is choose whether you would like to receive a notification when a new employee is created, you can ignore this section if you have no involvement with employee handling.

You will then need to choose which managers will be informed about a new employee.

Click **Save** to continue.

Personal Details

WFM can send you notifications when an employee's details are changed.

To view your notifications click on the envelope at the top right corner of your screen.

Setting Up Personal Details Notifications

Setting up a notification system to remind you, or any other managers about any change to an employee's details is a simple process. You will need to go to **Setup > Notifications**, and then click **Personal details**.

The first step is to choose from the notification options.

You can then choose which managers will be informed about a change to an employee's details.

Hit "save" to continue.

Financial Details

WFM can send you notifications when an employee's details are changed.

To view your notifications click on the envelope at the top right corner of your screen.

Setting Up Financial Details Notifications

Setting up a notification system to remind you, or any other managers about any change made to an employee's financial details is a simple process. Go to **Setup > Notifications**, and then click **Financial details**.

You can choose which managers will be informed about a change of an employee's financial details.

Click **Save** to continue.

Shift Reports

Shift reports within WFM enable you to inform employees and management about important aspects of a week. Different reports are customized for different purposes, such as the "Report" which is a weekly roster including wages and KPI information. This report can be used by management to keep track of important statistics.

It's super simple to create your own custom reports, or edit an existing report!

Ensure you are logged in as a General Manager or Franchisee.

It's important to remember that there is a big difference between weekly reports and daily reports.

The Different Types of Reports

- [Standard Week Reports](#)

- [Standard Day Reports](#)
- [Editing Day Reports](#)
- [Editing Week Reports](#)
- [Restoring or Deactivating Custom Reports](#)

Several of the Reports cannot be changed, but you are able to create copies that you are then able to edit in a way that simplifies management over the employees.

To access the shift reports go to **Setup > Shift Reports**. The different types of reports are listed on the left, click on the one you want to view.

Standard Week Reports

Standard week reports in multiple different ways to suit the needs of different employees and management. There are five types of reports that are pre-made for use; these reports are:

An report is a statement of a previous week outlining the shifts of all working employees, costs, sales, and other juicy information for management.

Printing off an report can help management compare statistics from numerous weeks, it also helps when preparing for future weeks, as you can adjust or change workers shifts according to productivity and sales.

Staff Report

The staff report is the typical schedule employees would see. This is something which can be printed out and hung up at work.

It contains shifts, any job roles, and total hours.

On the last page of this, any shift notes will be printed.

Multi-Unit Staff Report

The Multi-Unit Staff report creates a weekly shift report of two or more locations. This report is useful for any management employees overlooking multiple locations.

This type of report is also useful for employees who work at multiple locations.

Report

like the employees report, but for management only.

The Report contains wage and KPI information of previous weeks.

Standard Day Reports

The standard day reports are a useful way to dissect a specific day's schedule, this could be throughout the use of a daily schedule for employees, or more important information that could be useful for management.

All day reports are spread over multiple pages, this is so that information isn't crammed, and it is to analysis specific parts of the reports.

These reports include:

Daily by Day

The daily by day report is an employee schedule report that gives a more in-depth look into the length of an employee's shift, this is useful as it reduces room for error when employees receive their schedule.

Daily

The daily is useful for management as it shows them an accurate analysis of the predicted costs and profits. This report can be compared next to an report to show the difference between the expected sales, and the sales.

Daily

Similar to a daily by day report, the daily report shows the employees schedule; this is a more efficient way to analysis the weekly schedule as it removes as much empty space by putting each day directly next to each other.

Editing Day Reports

Report Options

Each customize report will need to be assigned a name. This new named report will be available under your existing Shift Reports.

Next, you will can choose the required features for the report, such as the inclusion of the date. To change the selection simply click on the "off" slider to turn it on, and inversely.

The last option is the choice to create a new page for each day of the week, which will reduce the chances of misreading the timetable.

Timeline Labels

Day Reports have a useful timeline feature that appears at the top of a report, when editing a report you can change features on how the time is displayed.

An example is whether it will be in 12 or 24 hour format.

Roster Day Label

This section is mostly around the aesthetics of the report, focusing on whether you would like the day to be abbreviated or not; and the heading date format. Staff Labels

The next section is about how you require your employees details to be displayed. You firstly have to choose the order of the employees' names, this can be a mix of first name, last name, preferred name.

The next two options let you choose the day and date formats. The options are either a shortened one with their name with initials or one with their WFM ID showing.

Grouping

Grouping helps segregate different employees into sections, you can choose what time or grouping you want from the selection tab. And again you are able to choose whether this is in ascending or descending order.

Shift Display

Shift display is the most important section as you will be able to select which key information is displayed on the report. (If a large amount of information is chosen to be displayed, privacy considerations may be applicable.)

The majority of the choices are self explanatory such as the first four options; these options focus on aesthetic features.

"Unspecified Breaks" will reduce the information given for breaks, this is helpful when employees are given breaks at a range of different times.

The next two options give you the option to include information about the employees job, and whether the color of the job shows up on the report.

The next few options focus on some key information that revolve around management. The "Show Hours" option is fairly straight forward; and the "Show Costs" option will add a new column on each day, this column will contain the daily costs for each employee.

The final two choices give you the option to show the salaried costs of the employees on their shift and the units sold by the employees.

Report KPI's

Having Key Performance Indicators on a report helps management evaluate key information; this section should only be used when creating reports for management.

Every option will create another row below the shifts, this is so that it can clearly show any information for a specific day; at the end of each row there is a weekly total or average, depending on which option it is.

The first option is to choose whether you would like there to be units on any of the options below.

Total hours will create a row stating how many hours are being worked in a day from all of the employees for the location(s).

Wage Cost and Sales will state the cost of the employees scheduled on for a day, and the amount of sales predicted/made for the day.

Labor percent is an option that will compare the wages of the employees to the sales.

Productivity shows how efficient the scheduled employees can be. If you have employees scheduled on that aren't as productive as you require, you will be able to look at this report and change the schedule accordingly.

The next option is quite straight-forward, where it creates a wage average for all of the shifts on a particular day.

Labour Efficiency is a row that shows the difference from your set labor percent goal, such as if you set the goal to \$15,000, the Wage cost is \$14,600, and the Labour efficiency is \$400.

Footer

Footer gives the option to have small aesthetic features implemented on to the bottom of the page.

The first option will let you choose to see any cost modifiers that a location has implemented.

Report Permissions

Report Permissions will show a list of all of the groups that have access to the report.

The Shift Jobs Key is an option that gives a small list of each of the jobs and the colors that are affiliated with them.

Editing Week Reports

Week reports are used on a regular basis to notify employees and management on important information about a coming week, it is essential that you customize your reports to your liking.

Report Options

Each customized report will need to be assigned a name. This new named report will be available under your existing Shift Reports.

Next, you will need be able to select the required features for the report, such as the inclusion of the date. To change the selection simply click on the "off" slider to turn it on, and inversely.

There are two types of shifts to choose from, the "Scheduled Shifts" will create a report based on predicted stats, whereas the "Shifts" option will create a report from the data collected from a previous week.

Selecting "Shifts" will give an extra option, this option gives you the choice to segregate exported and un-exported shifts.

The "Multi-location report" option gives you the option to include multiple locations in the report.

Staff Labels

The next section is about how you want for your employees details to be displayed. You firstly have to choose the order of the employees name, this can be a mix of first name, last name, preferred name.

The next few options are self-explanatory, where you can choose to shorten their name with initials, to have their WFM ID showing, and whether you would like to have their mobile numbers showing.

The last option is the order of the names, whether it be in ascending order, or descending.

Column Headings

This section is mostly around the aesthetics of the report, focusing on whether you would like the day to be abbreviated or not; and the heading date format.

Another option is to choose whether you would like to include the total hours for each employee.

Grouping

Grouping helps segregate different employees into sections, you can choose what time or grouping you want from the selection tab.

Again, you are also able to choose whether this is in ascending or descending order.

Shift Display

Shift display is the most important section as you will be able to select which key information is displayed on the report. (If a large amount of information is chosen to be displayed, privacy considerations may be applicable.)

The majority of the choices are self-explanatory, such as the first four options; these options focus on aesthetic features.

"Unspecified Breaks" will reduce the information given for breaks, this is helpful when employees are given breaks at a range of different times.

The next two options give you the option to include information about the employees job, and whether the color of the job shows up on the report.

The next few options focus on some key information that revolve around management. The "Show Hours" option is fairly straight forward; and the "Show Costs" option will add a new column on each day, this column will contain the daily costs for each employee.

If you have chosen to show the costs, another option "Show Salaried Costs" will appear.

The last two options are aesthetic features which make the report easier to understand. One of the two options is "Show Icon on Shift with Notes"; when a shift is changed and a note is added, a small icon will appear on that shift.

If the report is an "Report", a final option will appear, this option is "Show icon on shifts exported to payroll". This option applies an icon to any applicable shift.

Report KPIs

Having Key Performance Indicators on a report helps management evaluate key information; this section should only be used when creating reports for management. Every option will create another row below the shifts, this is so that it can clearly show any information for a specific day; at the end of each row there is a weekly total or average, depending on which option it is.

Total hours will create a row stating how many hours are being worked in a day from all of the employees for the location

Wage Cost and Sales will state the cost of the employees scheduled on for a day, and the amount of sales predicted/made for the day.

Labor percent is an option that will compare the wages of the employees to the sales.

Productivity shows how efficient the scheduled employees can be. If you have a small amount of low productivity employees on, you will be able to look at this report and change the schedule accordingly.

The next option is quite straight-forward, where it creates a wage average for all of the shifts on a particular day.

Labor Efficiency is a row that shows the difference from your set labor percent goal. for example If you set the goal to be \$15000, and the wages cost \$14600, the Labor efficiency would be \$400.

KPI Options

KPI Options has one aesthetic choice that allows you to choose whether you would like the units for all of the options from "Report KPI" to show.

Footer

Footer gives the option to have small aesthetic features implemented onto the bottom of the page.

The first option will show what type of icons are being used in the report, and what they are.

The next option will let you choose to see any cost modifiers that a location has implemented.

The Shift Jobs Key is an option that gives a small list of each of the jobs and the colours that are affiliated with them.

Page numbers is self-explanatory.

Appendices

The appendices tab allows you to create a section dedicated to extra information.

The first option will create an extra table which shows all of the shift notes for employees. (Notes such as "Clean the windows")

The next choice can add a list of all of the employees that don't currently have a shift.

The last three options are all of the same options from the "Footer" tab.

Report Permissions

Report Permissions will show a list of all of the groups that have access to the report.

Restoring or Deactivating Custom Reports

It's always important to be able to remove anything you deem unnecessary, and to be able to restore anything that has only recently become useful again. With WFM's deactivation and restoration system within "Shift Reports" it is a simple process to follow.

Deactivating a Custom Report

If a custom report has been created that you decide isn't a necessary requirement, you are able to go deactivate it. Simply select the report that you want to deactivate, and then hit the "Deactivate" button on the top right corner.

You will then be prompted with a warning to confirm that you want to deactivate the custom report. Select the "Deactivate (report name)" button.

Restoring a Custom Report

Restoring a deactivated report is a simple process, all you have to do is select the "Restore Reports" button on the bottom left of the screen. Then you will have to select the "Restore" button for the report you want to reactivate.

After this you will then be given a warning indicating that you want to restore the report.

Categories

You may use the Categories feature to group locations in multiple ways. Examples of this can include grouping into:

- Regions
- Area/Regional Managers
- Store type
- Anything!

A Category has a name, and may contain any number of Groups within. These may be organised into a hierarchy, or be a simple flat list. Each Group may only have one manager at a given time - a manager being a management user who is in charge of locations within that group (and any sub-groups).

Assigning a new manager for a new period will trim or remove the previous manager's management period.

On any given date, a manager may view all locations associated with the groups managed, if their association period contains that date. If there is a hierarchy of groups, then she will also be able to view locations that are currently associated with groups within that hierarchy.

Creating a new category

- Click on +New Category
- Add a name
- Add a description (optional)
- Click create

The created category can have groups added to it. To do this:

- Select a category
- Click on +New Group
- Add a name
- Click 'ok'

An example of a category you could create could be a state, and within each category. The groups could each be regions/group of locations.

Sub grouping

You can create a sub-group within a group.

- Click on +New group
- Name this group
- Select the parent group which this sub-group will belong to from the dropdown

This will nest the group you created within the 'parent' group you selected:

Assign locations

To assign a location to a group you've created:

- Select the group from the drop down (above)
- Select **+Assign locations**

Select a start date & locations you would like to be apart of this group.

A start date is required but a finish date is not.

selected and saved you will see what locations belong to a group on the group page (screenshot above).

Assigning Manager

Only one person can be the manager of a single group at any given point.

The manager of a group will be able to see locations which belong to this group - including any sub-groups.

Above: Clicking the icon in the top-left shows a list of groups & sub groups to select from.

To assign a manager to a group you've created:

Select a group/sub-group to assign a manager to (above)

Click on +New Manager

Select a manager to assign to this group

Select a start-date (start date is required but finish date is not)

A manager is now assigned to this group

You can see a history of managers on each group page:

This will list any previous and future managers for this group. If a manager does not have an end date set this is fine, however if a new manager is taking over you may see an information message letting you

know there may be an overlap. If there is no overlap, the screen indicates that there are no overlapping manager associations.

A common example of this is a manager going on leave for a few weeks and they won't be able to log in, in which case there are two options.

Set a finish date for the manager

Select a new manager to take over for those few weeks.

If you set a finish date for the manager, the manager of the parent group will now become the manager of these locations.

Please note: The assigned manager will be able to see the locations on the daily and weekly screen as well as change their settings, however they will not be able to see the employees profiles unless they have those locations explicitly assigned on their profiles.

Where do these appear?

If you try and generate any shift reports where reporting by location is an option, you'll see these groups that you have created.

These groups will filter the list of available locations to choose from.

On the Can be rostered at page for each employee, you can select a particular group. Employees with an associated group will be available to be scheduled at all locations belonging to this group.

Audit Logs

You can generate audit log reports to track user actions in Workforce Management (WFM).

To access Audit Logs, go to Workforce Management > Reports. Click **Audit Logs**.

You can use audit logs to meet the following goals:

- View who published a schedule and the date and time it was published
- View who unpublished a schedule and when, such as when amendments are made to shifts
- Check whether any changes were made to shifts, including reassigning employees and changing times
- Check payroll to see if shifts were added after a shift export was run
- View who approved a leave or availability and when it was approved
- Pinpoint if someone made changes to external integration configurations, such as unlinked Xero or MYOB locations or employees
- View changes to employee personal details

You can filter audit logs according to the following:

- **Action** – Filters logs based on specific actions.
- **Date** – Filters logs based on on a specific date or period..
- **Anyone** – Filters logs based on the user.
- **Type** – Filters logs according to the Table column, which specifies the generic data type the user changed, such as Agreement, Brand, or Condition.

The Audit Logs page lists user actions starting with the most recent.

The following table shows the data available in audit logs.

Data	Description	Content
Action	Shows the type of action performed.	Actions may include: ■ Create ■ Update ■ Delete
Timestamp	Shows the date and time the action was performed based on your current timezone. If you download the CSV log, however, the timestamp shows time in GMT.	N/A
User	Shows the user who performed the action.	N/A
IP address	Shows the network IP address of the user who made the action.	The red numbers or letters after the IP address is a unique session or instance ID. This ID is used to identify actions that were made in the same logged in session. For example, if a user logs in, makes a change, logs out, and then logs in again, the instance ID of the actions in the first session will be different from that of the actions in the second session.
Instance	Shows the specific field that was changed in relation to the Table column.	Some examples that may appear in this row include: ■ For a published schedule, the location name and week number ■ For an update on personal details, the employee name with their shift times and location worked
Table	Shows the general type of data field that the user changed, which was specified in the Instance column.	Some examples are: ■ Company mobile settings ■ Brand ■ Timesheet shift
Changes	Shows the change made as a comparison between the original value and the updated value. If there was no data there originally then it will show a blank value.	N/A

Sample Audit Log

To better understand how to interpret audit logs, refer to the following table.

Action	Timestamp	User	IP Address	Instance	Table	Changes
Insert	May 21, 2019, 10:57 a.m. 2 days ago	Jasmine Connor	61.68.198.142 qd7dl8...	Blacktown [week 21 2019]	Released Roster	week: no value => 21

Action	Timestamp	User	IP Address	Instance	Table	Changes
						releaser: no value => Jasmine Connor 236752 location: no value => Blacktown 11695 id: no value => 742180 year: no value => 2019
Update	May 21, 2019, 10:55 a.m. 2 days ago	Jasmine Connor	61.68.198.142 qd7dl8...	[26991351] Matthew Townsend @ Blacktown 2019-05-30 9:30 am to 2:30 pm	Rostered Shift	person: Casey Gleeson 236259 => Matthew Townsend
Update	May 21, 2019, 10:54 a.m. 2 days ago	Jasmine Connor	61.68.198.102 3m1j2n...	Vanessa Piong	Person	email: vpiong@example.com => Vanessa.Piong@example.com

The first instance is for a location with week number attached. It is on the **Released Roster** table, meaning a roster or schedule has been released or sent out. The schedule is for Blacktown on week 21 in 2019.

The second instance is for an employee name at a location with a shift on May 30, 2019. Based on the **Table** column, this instance is for a scheduled shift. A user reassigned this shift that was previously for Casey.

The third instance is for an employees name based on the **Personal** table. The personal details field was changed. Based on the **Changes** column, the email address was updated.

Security Settings in WFM

You can enable two-factor authentication (2FA) in Workforce Management (WFM) to add a layer of security to your account.

Before you enable the setting, do the following:

- Set up your mobile number in your profile. You must have a valid mobile number to enable recovery of your account if you lose your token generator and your backup codes.
- Understand the use of token-based authenticator apps and download one on your mobile device. With 2FA turned on, an authenticator app will generate the verification code required for you to sign in to your account.

To enable two-factor authentication:

1. Go to the configuration page.
 - If you are working on the standalone WFM site, from the upper right corner of the screen, click the user icon. Click **Configure 2-factor**.
 - If you are working on WFM in NetSuite, go to Workforce Management. Go to Setup > Security Settings.
2. On the Enable Two-Factor Authentication page, scan the bar code which is generated on-screen.
3. Enter the code that appears on the authenticator app. Click **Next**.
4. On the **Expire verification after** field, enter the maximum number of minutes that you will be allowed to enter the code from the authenticator in future verification sessions. Click **Save**.

Changes to this field will only affect new verification events. Existing verified sessions will expire according to the settings that were in place when the verification occurred.

5. (Optional) Generate backup codes and store these somewhere secure, as these can be used to validate your login if you do not have access to the authenticator.

If you don't have backup codes set up, you can request a code to be sent via SMS to remove your 2FA setting.

After you configure your 2FA settings, you will be required to validate your login when you:

- Access employee financial details
- Access Payroll integrations
- Change your password
- Change 2FA settings

When asked to validate your login, provide the code from your authenticator app. This code changes every 30 seconds.

You can continue accessing these pages until the validation has expired or until you log out.

User Details

You can view your account details in Workforce Management (WFM) to configure various settings.

To open the configuration page, refer to the following:

- If you are working on the standalone WFM site, from the upper right corner of the screen, click the user icon. Click **Your Details**.
- If you are working on WFM in NetSuite, go to Workforce Management. From the upper right corner of the screen, click the user icon. Click **Your Details**.

The Your Details page contains the following settings:

- **Personal** – Lets you update personal information, such as name and date of birth.
- **Employment** – Shows the status of employment, locations, and notes.
- **Access** – Shows the username for WFM as well as the Time Clock pin code.
- **Wages** – Shows the wage setup that currently applies to you, including the calculation type and rent.
- **Jobs** – Shows your job name, effective date, proficiency, and tools.
- **Availability** – Shows your schedule availability for work.

Grayscale Mode

To facilitate ease of viewing, you can switch the Grayscale Mode on in Workforce Management (WFM). This setting changes the display to use high-contrast colors of black, gray, and white.

To switch Grayscale Mode on or off:

1. Go to Workforce Management.
2. From the upper right corner of the page, click the user icon.

3. From the panel, click the **Grayscale Mode** switch to turn it on or off.

Login History

You can view a report containing a history of login sessions in Workforce Management (WFM) across various sources.

To access the page, go to Workforce Management. From the upper right corner of the screen, click the user icon. Click **Login history**.

The page displays the most recent sessions first.

The page contains the following information:

- Source
- Logged in at
- Logged out at
- IP address
- Session status

Dashboard

Watch the following videos for brief demonstrations of the WFM Dashboard.

Intro to your dashboard & using the default widgets.

[Dashboard Introduction and Default Widget Groups](#)

Adding extra KPIs to your widget groups.

[Adding Extra KPI Widget to Your Widget Group](#)

What are my numbers telling me?

[What are My Numbers Telling Me?](#)

If you remove all widgets from your dashboard you'll see two options.

Click Add Historical Graph to add a graph of a particular KPI for a day in the past

Click Add Live Graph - this will show you a graph of particular KPI you select for the current day

Select your Restaurant and the metric you want to graph.

this has been added you will see that graph as a rectangular widget on screen. You can then add additional tiles by clicking the + in the bottom right

Options to add a historical or live graph then appear. You can then continue adding the graphs you want.

Live graph will ask you for a location, KPI to view, as well as the time period you'd like to appear.

You can hit the + magnifying glass to expand a graph you want to view at a larger resolution.

The following fields are adjustable to your preferences:

- Date
- Resolution

The important one to be able to play with is the date field on the historic graph, so you can have access to any day.

Managing Workforce Management Employees

You can use the Employee list to configure and manage your employees.

For information about managing employees, see the help topics:

- [Employee List](#)
- [Viewing and Editing Employee Details](#)
- [Adding New WFM Employees](#)
- [WFM Employee Availability](#)
- [Importing Employees to WFM](#)

Employee List

From the Workforce Management page, click Setup, and then click Employees > List. You can sort the list by clicking on the table heading. Click it again to reverse the order. This list will sort based on:

- WFM ID
- First name
- Last name
- Preferred
- Email
- Mobile
- Primary Location
- Calculation type
- Employment status
- State
- Country
- Employed?
- Payroll ID
- Timesheet PIN
- Group

To search for an employee, type their name in the search field.

By default, only current employees appear in this list. To filter the employee list by other parameters, select one from the dropdown list:

- Only employed staff
- All staff
- Only terminated staff

To open the employee profile, click the employee's name. For more information, see [Viewing and Editing Employee Details](#).

Viewing WFM Employee Headcount

To keep track of the current number of WFM employees and count it against the provisioned number of employees, go to the Billing Information page.

Go to Setup > Company > View Billing Information.

On the **Billable Components** subtab, find **Workforce Management Employee**. You can compare the corresponding figures under the **Current Provisioned Qty** and **Current Used Qty** columns.

Viewing and Editing Employee Details

When you select an employee to view, their personal details page appears.

On an employee's personal page, you'll be able to update their personal details.

To update their details, click **Edit**.

To save the changes after you've edited them, click **Save** or **Save & Close**.

If you make a mistake you can click on Cancel to avoid saving.

Personal Details

Personal details are a necessary step when setting up employees in WFM. When employees are imported from NetSuite, this information is included by default.

The Personal details page include:

- Name
- Preferred name
- Gender
- Date of birth
- Email address
- Mobile
- Phone
- Address

Emergency Contacts

In case of an emergency, it's always important to have the information of a relative or associate of the employee involved.

You'll need basic contact details, such as their name, mobile number, relationship to the employee, and their address.

Profile Photo

Including a photo of the employee can be a useful feature to help distinguish the visual difference between employees. This is particularly important if you're using the Visual Verification functionality, since it lets you compare the employee's punch photo with their profile photo. The employee's photo is shared between the Workforce Management browser and the Phone App. An employee can update their profile picture in either the browser or the phone app, and that picture is automatically synced to the other application.

Managers can also upload a photo for the employee. Click **Browse**, select an image, and click **Save**.

The employee profile photo will appear on:

- the Daily/ Weekly/ Multi-Location Schedule views
- Employee selection list on shift creation, reassign and fill shift
- Employee list
- Phone App
- Employee profile

Employee Self-Service (ESS) Extended for Australia

Important: The Employee Self-Service (ESS) Extended feature for Australia is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

Employee Self-Service (ESS) Extended lets employees sign in to their WFM profiles and fill in their own financial information, eliminating the need for paper forms.

With ESS Extended, employees will have access to:

- New tabs on their profile
 - **Financial** – Employees can update and view their bank details, tax file number declaration, and superannuation fund details. This information will also carry over to payroll systems integrated with WFM.
 Only Finance/payroll and franchisee users will be able to see this tab on staff members profiles.
 Bank details and superannuation details will be filled in by employees upon onboarding, replacing current paper methods. This reduces paperwork and manual data entry. This data sync is ongoing.
 To know more about financial information available with ESS Extended, read [Financial Details for ESS Extended](#).
 - **Visa details** – You can add visa details for selected employees. You'll get reminders when a visa is close to expiring.
 - **Term breaks** – Employees on a Student Visa might be able to work extra hours over holiday periods, if they can show the correct required information. Managers can view & approve these Term break requests, so these employees can be scheduled on for extra hours over this period automatically. Please visit this page for more information regarding Term Breaks.
- Updates to existing tabs

- **Personal** – Fields are added.
 - **Education/Qualifications** – Employees, payroll employees, and managers can add this information. Any courses completed by employees, which you want to track, can be uploaded here.
 - **Emergency Contacts** – Employees can enter emergency contacts upon employment. This provides quick access for managers to view this information if they need to during a shift.
- **Employment** – Employees can store employment documents like contracts, tax forms, visas, and job descriptions. Employees can remove and override or update documents with revised versions. An expiry date can be set to notify users when a document is about to expire.

Financial Details for ESS Extended

Important: The Financial Details feature is part of the Employee Self-Service (ESS) feature for Australia available only where it's already provisioned. It's not included with the current SuitePeople WFM solution.

With this feature, your employees can update their financial details. Updates can sync automatically with the payroll system integrated with Workforce Management (WFM).

Employees can view and update the following sections:

- Bank details
- Tax file number declaration
- Superannuation fund details

Editing Financial Details for ESS Extended

Follow the procedure.

To edit financial details:

1. Log in to Workforce Management.
2. To open the right-hand panel, click your user icon.
3. Click **Your Details**.
Your employee profile will appear.
4. Click **Financial**.
5. From the upper right corner, click **Edit**.
6. Edit your details on the page.
7. When you're done, click **Save and Close**.

Bank Details

The Bank Details section shows:

- Account name
- Bank State Branch (BSB)
- Account number

Tax File Number Declaration

The Tax File Number (TFN) declaration can only be completed by staff. This is a requirement from the Australian Taxation Office (ATO) to treat this as a signed copy of the form.

When it's completed, you can view a read-only copy of the form.

The Tax file number declaration form includes:

- Tax file number
- Name
- Previous surname
- Date of birth
- Address
- Employment basis
- Residency status
- Tax free threshold claimed
- Senior or pensioner tax offset claimed
- Special tax offset claimed
- Higher Education Contribution Scheme – Higher Education Loan Program (HECS-HELP) and Student Financial Supplement Scheme (SFSS) debt

Note: If your linked payroll package can't lodge the TFN declaration form electronically, you'll need to continue using paper forms. For more information about which payroll packages can lodge forms, check page 9 of this document. Otherwise, a paper form is still required.

Editing the TFN Form

Follow the procedure to edit the TFN.

Tax File Numbers are distributed based on an algorithm. WFM uses this same algorithm (provided by the ATO) to identify if a staff member has entered a valid TFN.

All other options on the WFM form mirror the paper TFN declaration form exactly.

Editing the TFN form in WFM:

1. To go to the page, see [Editing Financial Details for ESS Extended](#).
2. Answer the questions.
 - **What is your tax file number (TFN)?** – Enter your TFN or choose from the following:
 - I have made a separate application for a new/existing TFN.
 - I am claiming an exemption because I am under 18 and do not earn enough to pay tax.
 - I am claiming an exemption because I am in receipt of a pension, benefit, or allowance.
 - I choose not to provide my TFN. I am aware I will be taxed at a higher rate.
 - **What is your name?** – Choose from the following titles. Then, enter your first, last, and other names in the corresponding boxes.
 - Mr.
 - Mrs.
 - Miss

- ☐ Ms.
 - ☒ **If you have changed your name since you last dealt with the Australian Taxation Office, show your previous family name** – If this question applies to you, enter the name before the change.
 - ☒ **What is your date of birth?** – Pick your birth date.
 - ☒ **What is your home address in Australia?** – Enter your home address in the corresponding boxes.
 - ☒ **On what basis are you employed?** – Choose your employment status.
 - ☐ Full-time employment
 - ☐ Part-time employment
 - ☐ Labour hire
 - ☐ Superannuation/annuity income stream
 - ☐ Casual employment
 - ☒ **Are you an Australian resident for tax purposes?** – Choose your tax residency. To confirm, visit the ATO website.
 - ☐ Australian resident for tax purposes
 - ☐ Foreign resident for tax purposes
 - ☐ Working holiday maker for tax purposes
 - ☒ **Do you wish to claim the tax-free threshold from this payer?** – Choose Yes or No. Only claim the tax-free threshold from one payer at a time, unless your total income from all sources from the financial year will be less than the tax-free threshold.
 - ☒ **Do you want to claim the seniors and pensioners tax offset by reducing the amount withheld from payments made to you?** – Choose Yes or No.
 - ☒ **Do you want to claim a zone, overseas fores, dependent spouse or dependent (invalid and carer) tax offset by reducing the amount withheld from payments made to you?** – Choose Yes or No.
 - ☒ **Do you have an accumulated Higher Education Loan Program (HELP) debt, or an accumulated Financial Supplement debt?**
 - ☐ **Do you have an accumulated Higher Education Loan Program debt?** – Choose Yes or No. Your payer will withhold additional amounts to cover any compulsory repayments that may be raised on your notice of assessment.
 - ☐ **Do you have an accumulated Financial Supplement debt?** – Choose Yes or No.
3. On the **Confirmation** section, enter your username and password.
 4. Click **Save changes**.

Saving your TFN form acts as a digital signature.

Superannuation Fund Details

If a staff member is linked with a compatible payroll system, they'll see a list of super funds to select from. These will be the funds that exist in the payroll system. They will be able to select other to enter in the details of their fund.

These details include:

- ☒ Fund name
- ☒ Super Product Identifier Number (SPIN)

- Unique Superannuation Identifier (USI)
- Account number

Visa Details

Users with Finance Co-ordinator access and above can add Visa details to employees on Visa restrictions.

Entitlements, expiry date, and proof of visa documents can be added. The expiry date will notify selected users within WFM before the visa details expire.

The visa details page includes:

- Expiry date
- Passport number
- Country of issue
- Nationality
- Visa class
- Work entitlement
- Notes
- Associated documents

Term Breaks in Visa Details

Term breaks appear only for employees who have a visa set up in WFM.

For more information about term breaks and how they're used in WFM, see [Term Breaks in WFM for ESS Extended](#).

Term Breaks in WFM for ESS Extended

Important: The Term Break feature is available to customers who currently have the Employee Self-Service (ESS) Extended feature set up.

ESS Extended feature is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

The purpose of this package is to allow employees on a visa to enter proof of course breaks.

Term Break Permitted Hours

An employee on a student visa, for example, might only be able to work 20 hours per week while their course is in session.

In the employee's WFM wage profile, their maximum hours may be set to 20 per week (meaning they can't be scheduled greater than 20 hours per week, otherwise this breaches the conditions of their visa).

When the employee has course holidays, they may be permitted to work a greater amount of hours than this. Term break automatically over-ride the 'maximum hours' field set in WFM for that employee, for that period of time.

The employee can add in their periods of holidays they are applying for, including their proof of enrollment & proof of holidays (like a course or university timetable). The request notifies payroll users within WFM. And after they review the proof given, can apply the Term break.

Over these holiday periods, the employee won't be restricted to the maximum hours set in their profile.

Term break overrides let an employee temporarily adjust their hourly work targets. This can be used so that overseas students who are legally prevented from exceeding a certain number of hours during term, can increase their holiday hourly target, after submitting the relevant documentation.

Term Break Weekly Schedule

Term Break requests need to be for a full schedule week.

For example, if your schedule is Monday to Sunday, the request needs to apply starting on a Monday and ending on a Sunday.

Accessing Term Breaks

You can access the visa for your employee by selecting their profile from your Employee List and going to Visa Details. Term breaks only appear for employees with a valid visa set up in WFM.

Only the highest levels of access can approve term break requests. Check with (Enter point of contact) if you're unsure of this level of access.

You're able to set managers and primary location managers to receive notifications of requests. These users will receive requests through notifications in WFM, but they can't approve these requests.

Requesting Term Breaks

To know more about how to create and process term break requests, see [Creating Term Break Periods for School Holidays and Pupil-Free Days](#).

Employment

On the employment page, you can terminate and re-hire employees, reassign their primary location, and add and remove locations they can work at.

Primary Location

The employee's primary location is sometimes referenced as their "home location." This location is automatically imported from the mapped field on their employee record in NetSuite. When employees request availability changes or submit leave requests (if using Leave in WFM), those requests go to the manager(s) of their primary location.

Can work at

This is a list of locations the employee can punch in or be scheduled to work.

To add or remove locations the employee can work at, click **Edit**.

When editing, the box on the right will list locations they can work at. The box on the left shows locations you can view and add to the employees. You'll only see locations you have access to. If you're trying to add a location you can't see here, you'll need to ask someone with higher access to add this to your account or add this to the employees on behalf of you.

Multi-add locations or groups

If you can see categories or groups, you're able to allocate all locations in these groups to an employee.

When editing the can work at, there's an option underneath the location boxes:

The table(s) below shows a summary of which **Locations** from a **Category** or **Group** Abdullah Alswayan can work at, while also providing short cuts to quickly add and remove **Locations**.

State	4/709	+ Add all	x Remove all
NSW	0/185	+ Add all	x Remove all
QLD	0/193	+ Add all	x Remove all
VIC	4/331	+ Add all	x Remove all
VIC - North & CBD	4/79	+ Add all	x Remove all
VIC - South & South East	0/128	+ Add all	x Remove all
VIC - West & Regional	0/101	+ Add all	x Remove all

This lists the categories and groups you have access to view. In the screenshot, we have a group for each state. You can "Add all" locations from a group to an employee. This is useful if employees can work at any location in that group.

You can continue expanding the hierarchy to add all locations from a specific group:

Beside each group, the number of locations in the group appears, along with how many of those are allocated to the employees.

To add the locations to the selection boxes above, click "add all". You can fine-tune this selection and remove any if required before saving.

Terminating a WFM employee

You terminate employees from the Employees page. From the Workforce Management tab, go to Setup > Employees > List.

Note: Employee terminations and rehires will sync automatically from the NetSuite employee record. If you believe you need the ability to add or terminate employees within WFM, please contact your Account Manager.

To terminate an employee:

1. From the Workforce Management tab, go to Setup > Employees > List.
2. Click the ID number of the employee you want to terminate.
3. Click **Terminate employment**.
4. When prompted, enter a **Termination date** and a **Reason for termination**. Click **Terminate employment**.

Warning: Ensure that the termination date is correct, as this can't be changed.

After the person is terminated, they'll appear in WFM until that date is reached.

You can also re-employ an employee if they leave and come back. Examples include seasonal employees or students.

Re-employing a Terminated Employee

Note: Employee terminations and rehires will sync automatically from the NetSuite employee record. If you believe you need the ability to add or terminate employees within WFM, please contact your Account Manager.

To re-employ a terminated employee from the Workforce Management tab, go to Setup > Employees > List.

Select **Only terminated staff** from the dropdown list. Click on the person's name to open their details.

Click on the **Employment** tab.

On this page, you'll be able to re-employ the employee.

Note: Employee terminations and rehires will sync automatically from the NetSuite employee record. If you believe you need the ability to add or terminate employees within WFM, please contact your Account Manager.

Updating an employee's primary location

An employee's primary location is the roster unit where they were employed, will receive the most shifts, and where their manager is possibly located.

To change or add a primary location:

1. On the employee's page, click **Locations**.
2. Beside Primary Location, click **Edit**.
3. In the Location dropdown list, select a location.
4. Select a date from the **Effective from** calendar.
5. To delete a location, click the **Delete** button beside it.
6. To add a location, click the **Add new** button.
7. To save these settings and continue working, click **Save**. To save the settings and close these settings, click **Save & Close**.

Employee Access in WFM

As part of configuring employee management for Workforce Management, you can use the employee details page to control an employee's access, change their username, and set what group they're in.

From the Workforce Management tab, go to Setup > Employees > List. Click the ID number of the employee you want to configure. Click the **Details** tab. Click **Edit** to change these settings.

To confirm any changes, click **Save** or **Save and Close**.

You can also update the SuitePeople Time Clock PIN on this page. To have WFM set a new available PIN for the employee, click **Edit**. Click **Generate PIN**, and then click **Save PIN**.

Sending Employee Login Details

To send employees an email with their username and a link to reset their password, click the email icon in the blue bar. WFM will send an email to the address associated with this employee.

WFM Access Groups

WFM access groups are independent from NetSuite roles.

The available access groups depend on the date when your WFM account was provisioned. Accounts provisioned after November 17, 2023, have access to renamed and additional access groups that allow for flexibility when assigned to employees.

Note: If your usage requires the use of a specific access group currently not available in your account, contact NetSuite customer support.

To use the permissions and reports provided to an access group, an employee should access WFM by using the NetSuite Employee Center then going to the **Workforce Management** tab.

The following tables identify the access groups available to employees based on when their accounts were provisioned.

Administrator and Similar Roles

Refer to the following table.

Before November 17, 2023	After November 17, 2023	Permissions	Reports
General Manager	Administrator	■ Can Manage Wage Agreements ■ Can Create and Configure Time Clock Devices ■ Can Process Payroll ■ Can lock Periods for Payroll ■ Can schedule and approve shifts ■ Can publish schedules ■ Can view Employee's details for ALL WFM locations ■ Can add Employee's availability ■ Can create Employee's leave ■ Can view and Edit Employee's wages ■ Can be set as a Leave and Availability approver for Assistant Managers and Employees ■ Can view Contract Hours (AU) ■ Can add leave types ■ Can create customized quick shift reports ■ Can Create and Manage Categories	Shift Reports Reports > Shifts ■ Print Ready ■ Hours ■ Hours And Times ■ Approved Hours, Times and Stats ■ Open Shifts ■ Variance (Tardy+) ■ Timesheet ■ Overtime Checks ■ Percent Approved ■ Weekday Split ■ Allowances ■ Employee Payroll Query ■ Day Worked Frequency ■ Zero Hours ■ DST Ambiguous Shifts ■ Punch Breaks Employee Reports Reports > Employee ■ All ■ Terminated ■ Wage Changes ■ Birthdays ■ Missing Details ■ Average Ages ■ Monthly Turnover ■ Leave/Time-Off Location Reports Reports > Location ■ Variance ■ Forecasting Analysis ■ Percent Hours Per Location Audit Logs

Employee Role

Refer to the following table.

Before November 17, 2023	After November 17, 2023	Permissions	Reports
Staff	Employee	Can view Schedule, can request availability changes and leave requests	—

Managing Wages for WFM Employees

Setting and editing the wages for employees is a crucial part of workforce management. You set an employee's wages from their employee details page. Note that an employee can only have one active wage.

First, select an employee for whom you want to create or edit a wage. Go to Setup > Employees > List and click the employee. On the employee profile, click **Wages**.

The Wages tab should display at least one wage based on the employee's base rate set in their employee record in NetSuite.

An employee's base rate will sync automatically from the employee record in NetSuite. Editing or adding wages directly into WFM is typically only used if you have employees that are paid different rates dependent on the Location and/or Job that they are working.

Employment Details

Select an employment status from the dropdown list: **Full-time**, **Part-time**, **Casual**, and **Contract**. If Casual is selected, the next option will be automatically filled in with "Wages".

In the Wage type list, select **Salary** or **Wages**. The choice that you make here will affect how the employee's shift details will appear.

Cost Calculations/Rate

The cost calculation/rate section is the most important part of setting a wage as this setting controls how much an employee earns in an hour, week, and year.

First, you'll need to select the calculation type. There are six options:

- Agreement
- Salary
- Fixed hourly rate
- Base rate with conditions applied
- Base rate with location overrides
- Base rate with only job overrides

Agreements

Agreements are used if you have Wage Agreements set up within Workforce Management. Select Agreement then select the Classification from the drop-down list. This feature is currently only available through the help of support.

Fixed hourly rate

If you select **Hourly**, select the hourly rate of the employee.

Salary

If an employee has an annual salary, fill in the **Annual salary** field. The **Monthly salary** and **Weekly salary** fields are updated automatically.

Next, enter how many **Hours per week** they work. The **Salary hourly rate** is updated automatically.

Salary overtime/public holiday

If you pay your salaried employees overtime or higher public holiday rates, enter the rates here.

If employees are paid the same rate regardless of how many hours they work, then choosing a fixed hourly rate means that overtime and any other wage conditions won't apply to the employee.

Base rate with conditions applied

This selection will pay employees their base rate and apply any wage conditions that have been configured in your account. These conditions might include overtime, shift differentials, worked holiday premiums, and so on.

Base rate with location

Use this selection if an employee is paid different rates when working at different locations. Select the Location, the Job and enter the rate.

Click **Create New** to add another row.

Base rate with only job

This selection is to be used if employees are paid different rates for working different jobs, but the rate does **not** vary from location to location.

Click **Create New** to add another row and select the job and associated rate.

If an employee works a job that doesn't have a designated job rate, it will default to their Hourly Rate.

Classification

Classification is a feature that is currently only available through the help of support.

When you select **Classification**, you can select the award or enterprise agreement classification.

Hours of Work

Hours of work is how employee hours-per-week validation is managed and maintained.

All of these values are based on one schedule week.

Here are the hours of work settings:

- **Target hours** - By default, this is set to 38. These are the target number of hours this employee would usually work each week. Employees being scheduled at or exceeding target hours will notify the user scheduling when employees have reached their target hours. However, it still allows the scheduling of additional hours. This validation occurs within schedule mode.
- **Minimum hours** - By default, this is set to 0. If an employee has minimum hours set, the schedule won't be published until the minimum hours are reached for the employee. This validation will occur when trying to Publish or Print the week's schedule.
- **Maximum hours** - By default, this is set to 168 (since this is how many hours there are in a week). You can't schedule an employee on for more than the maximum hours. This validation will occur when trying to Publish or print the week's schedule.
- **Salary splits** - By default, this is checked. This only appears for employees on a salary. If the employee works across multiple locations, WFM will automatically assign the employee wages across all locations worked that week, evenly distributed. If this box is cleared, you can send percentages of the salary to different locations this employee is available to work at. You can also assign 100 percent of the salary to one location, no matter how many hours are worked at other locations.

Understanding WFM Salary Calculations

Workforce Management makes employee salary calculations to reflect the actual cost of a salary worker day-to-day. While salary costs are the same week to week, the value of their work can change depending on how much or little they work on each day and during the week. If salary costs are equal on each day, the value of work done on days where they work longer is less.

For example, if an employee works 12 hours on 3 days of a week and then 7 hours on the last 2 scheduled days of the week, then the value of their work on the 12-hour days is effectively less on the 7-hour days.

WFM calculates salaries by dividing the weekly salary into an hourly rate based on the number of hours scheduled or worked that week.

Here are some examples:

- An employee is paid \$1,000 per week and they work 45 hours in a week. Let's use the example that the salary is fixed each day ($\$1,000/5 \text{ days} = \$200/\text{day}$) so if they worked 12 hours on day 1, the hourly rate for that day is \$16.6667 ($\$200/12 \text{ hours}$.) If they then work 7 hours the next day, their hourly rate is \$28.57 ($\$200/7 \text{ hours}$.) This means that on one day their work is paid at \$16.67 per hour and the next day they're at \$28.
- Let's use the same example of an employee who is paid \$1,000 per week and works 45 hours in a week. The system calculates the weekly average hourly rate for the salary employee to \$22 per hour for the week ($\$1,000/45 \text{ hours}$.) So, when the employee is scheduled on for the 12-hour day, the system calculates the shift to be \$264 for that day ($\$22 \times 12 \text{ hours}$.) The next day is a 7-hour shift and this is calculated to be \$154 for the day ($\$22 \times 7 \text{ hours}$.) In this instance, the employee's hourly value is consistent during each shift while showing at a higher level the weight of the hours they work monetized to give a more accurate wage figure which is consistent with hours worked.

Overtime for Salaried Employees

Salaried employees with an overtime rate set will have any hours worked after their hours per week value calculated at overtime.

For example, an employee is paid \$1,000 per week and is paid overtime when they work more than 38 hours at a rate of \$39.47. If they work 40 hours, WFM will set their weekly cost as \$1,078.94 ($\$1,000 + 2(\$39.47)$).

Higher Rates on a Public Holiday

If you pay your salaried employees a higher rate of pay on a public holiday and have set up a public holiday rate on their wage details, WFM will add the cost of the public holiday to their weekly wage.

For example, Aaron is rostered to work 9 a.m. to 5 p.m. on Monday to Friday with a 30-minute break on each day. Aaron's weekly Salary is \$1,000 and he is paid \$39.47 when he works on a public holiday. If a holiday is set at 7.5 hours, then the shift is costed at 7.5 hours multiplied by \$39.47, giving a total cost of \$296.02.

JobKeeper

Important: The JobKeeper feature is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

Under the Australian JobKeeper Payment Scheme, businesses significantly impacted by the COVID-19 pandemic can access a subsidy from the Government to continue paying their staff.

This assistance will help businesses to keep people in their jobs and re-start when the crisis is over. If you need more information, you can review the following government resource: <https://www.ato.gov.au/general/JobKeeper-Payment/>

To help manage this, we've added the JobKeeper section to employee profiles.

Users with access to payroll functions can view and change this information.

To set employees for JobKeeper payment:

1. Go to Workforce Management.
2. (Add navigation path in WFM)
3. On the JobKeeper Payment for employers and employees page, check the **Claiming JobKeeper payment** box.
4. Click **Save**.

To view a report of employees who are set to claim JobKeeper:

1. Go to Workforce Management.
2. Go to Reports > Employee > All.
3. Click the **Show JobKeeper** box.
4. Click **Preview** or **Download**.

WFM generates a list of employees. The rightmost side of the report includes a job_keeper column. If the employee receives JobKeeper, the column indicates **True**. Otherwise, it shows **False**.

Jobs

On the jobs page, you can set the jobs that employees can perform. These may be skill-based or role-based.

The effective from date lets you forward-date a job that is if that person is undergoing training in a month's time, you can set the job to start in a month. The proficiency tells managers how proficient the employee is at that job. Examples of jobs include:

- Barista
- First Aid
- Duty Manager
- Retail Assistant
- Packaging
- Shipping

Jobs could also be the equivalent of projects if you're projects-based, or task-related if you want more granular time recording.

Adding a Job to an Employee

To add one or multiple jobs to an employee, go to the Jobs tab of the employee profile and click **New job**.

Select the jobs which will apply to this employee.

You can also select when this change will become effective, allowing you to be proactive by adding jobs that will take effect in the future.

When you're finished adding jobs, click **Save**.

Removing a Job from an Employee

To remove a job from an employee, go to the Jobs tab of the employee's profile and click **Edit**.

Click **Remove job**. When prompted, click **Confirm removal**.

Confirm the removal.

Adding New WFM Employees

Note: It's best practice to pull employees in from NetSuite and as such, the ability to add employees directly to WFM is disabled by default. If you believe you have a need to enter employees directly into Workforce Management, reach out to your Account Manager.

You add a new employee from the employee list page. From the Workforce Management tab, click Setup > Employees > List. Click **New**.

The first section asks for the personal details of the new employee. This includes the employee's first and last names, their preferred name (if there are more than one employee of the same name or they go by a name different to their legal name), their date of birth, and their gender.

All of the fields with the asterisk next to them must be filled in for this section.

The next section asks for basic contact details. Although this section can be skipped, it's highly recommended that all fields are filled in. After the contact details, it is essential that you fill in the country that the new employee lives in.

Now you'll need to choose how much access to Workforce Management you want to give to the new employee by choosing their group. You can choose to let the employee have login details by checking **Can login** box. If the new employee gave you an email for their contact details, you have the choice to let that be their login details, as well as a password of your choice.

If you give an employee access to WFM, you must give them a username and a group.

The final section requires you to fill in their employment status. Make sure you correctly state the starting date of when they were employed. After that, you'll need to select the primary location of the new employee, and any other secondary locations that they can work at.

Click **Save** to continue.

WFM Employee Availability

Availability is an essential communication piece in Workforce Management. When you add scheduled shifts, you may notice some employees appearing yellow red due to being unavailable.

How do we set up availability?

There are four different availability workflows:

- Employees **requesting** an availability change
- Manager **approving** an availability request
- Manager **denying** an availability request
- Manager **changing** employee availability

Concepts to understand

A **primary location availability approver** needs to be set up. This is individually set for each location. After you've set this up for your locations, you can view employee availability. To set the availability approver, go to Setup > Locations. Select the location. Click Approvals. On the Availability tab, move the approver to the chosen items column and click **Save**.

Employees can request a change to their regular availability (either change it ongoing or for a set number of weeks). Any change request made needs a 'reason' provided. That employee's primary location availability approver will then get a notification within WFM.

 **Note:** Please note: If there is more than one availability approver per location, when availability is approved by one approver, it removes the notification from any other approver's notifications.

The person approving availability can view these notifications, and then approve/deny each of the availability requests.

Manager changing availability

After you've set up yourself or the required managers as availability approvers, you can now add and change employee availability.

You can change this on employee profiles. Go to **Setup > Employees > List** and click **Edit / Approve Availability**.

You can choose to view only employees at the primary location you oversee, or all employees that work at that Location. You can then choose to group by **Day** to view coverage, or by **Person** to see employees alphabetically.

Availability is created by moving to a desired day in a future week and dragging out the green bars across the day for the times when the employee is available for work, or by clicking **Always Available** to set an employee with open availability.

When these settings are saved, schedules are updated.

 **Note:** As an availability approver, you don't need to enter in a reason for changing the availability. This is only required for employees.

Employee availability

This is what employees see when they're logged in to WFM and open their availability page:

Viewing availability for Harley Streten

Show week containing  30/05/2018  **1**

What do the symbols mean? **2**

-  Approved availability
-  ... repeats for 3 weeks
-  ... repeats indefinitely
-  Approved Leave period
-  Pending availability
-  ... repeats every two weeks, for 7 repeats (14 weeks)
-  Non-editable day (schedule published, or past cutoff date)

Day	Date	Availability	Notes
Monday	May 28, 2018	09:45 - 24:00	3 Always Available
Tuesday	May 29, 2018	10:30 - 23:45	cutoff date passed
Wednesday	May 30, 2018	02:15 - 24:00	4 cutoff date passed
Thursday	May 31, 2018		cutoff date passed
Friday	June 1, 2018	10:00 - 22:15	cutoff date passed
Saturday	June 2, 2018	07:00 - 24:00	5 Clear
Sunday	June 3, 2018	07:00 - 24:00	6 Clear

- Date-picker lets employees move forward. Availability can be future-dated.
- Legend shows what different colors and icons appear for **Always available**, so that employees can quickly make themselves always available.
- If a schedule is published or the cutoff date has passed, a message will appear next to those days since they can't edit their availability.
- Purple bars mean the availability can't be changed due to above reasons.
- Currently set availability. Times appear within the green bars. The green bars mean the employee is available at those times, on those days/dates.

Employees can make changes to their availability, and must enter a reason to submit a change request.

 **Note:** Any pending employee availability won't appear on schedules until approved.

Managers can deny availability from the notification that appears. Select **View** and click the Deny button that appears next to the employee availability.

Importing Employees to WFM

Employees should be imported from NetSuite. There may be a requirement to import employees that aren't available in NetSuite, such as contractors. You can conduct a bulk import of your employees into WFM using the Employee Importer. You can create or update multiple employees at a time.

This feature is available for Finance and General Manager user groups.

To import employees, go to Setup > Employees > List and then click **Import**.

Before importing, prepare a CSV file with the list of employees. Drag that file into the box or click the box and select the file.

Note: WFM will automatically detect if there are headings in the file and check the **First row is headers** box for you.

Here is an example file that you can set up columns for:

first_name	last_name	email	mobile	date of birth	state	country	list of locations	start date	classification name	wage type	employment status	list of jobs
Test	Staff	test@gmail.com	0455522312	04/04/2000	QLD	AU	location name	2021-01-01	Level 2	Wages	FT	FOH

Note: Mobile and date of birth fields are optional. If you're adding employee addresses, ensure that the country code and state are included as separate columns.

The sample image above is a common example of data you can import when setting up employees for the first time. Please make sure that the locations, classifications, and jobs match exactly as they are set up in WFM. This includes capitalizations and making sure there are no extra spaces.

If you want to import employee wages, you'll need to make sure you have wages set up in your WFM account first.

After you've uploaded your CSV file, review the field mapping to WFM fields.

WFM matches fields based on your column headers. However, some might not be automatically selected. If this is the case, **Do not use** appears in the dropdown. Click that and then select the correct WFM field.

If a field isn't available, it's already selected for another column. Please ensure that you've selected the correct fields.

Underneath the header mapping, the first few rows are displayed as an example. Below that, a bigger example of one employee appears with a summary so that you can ensure that the mapping is correct.

Note: Ensure that "Date format for CSV" matches the date format in your CSV, otherwise dates of birth and start dates will import incorrectly.

After you've confirmed that the import mapping is correct, click **Begin** and your employees' details will either update automatically or be entered into WFM.

Other notes

Round decimal places is a helpful checkbox if you're importing/updating leave balances. This means we'll round any extra trailing decimals.

Managing Workforce Management Shifts

Scheduling in Workforce Management

Workforce Management has three different views for building employee schedules. The scheduling views can be found under the **Shifts** tab.

Daily

The Daily view lets you schedule for one location, for one day at a time. By seeing your sales fluctuations throughout the day, you can efficiently build and optimize schedules that meet demand.

As shifts are created, they're displayed on the page along with important KPI information. With several viewing options, the Daily view lets you create a schedule that shows and helps you understand crucial information for management.

The Daily view can be taken a step further with the addition of labor deployment. If you have a labor model in the system, Workforce Management shows your managers exactly where they need to add or adjust shifts throughout the day to meet your targets.

Weekly

The Weekly view lets you view and build your schedule for one location in a weekly format.

You can use the Weekly view to alter shifts from a previous week to account for any last minute changes that weren't recorded.

On the weekly view you're required to confirm or deny any shifts; if you have SuitePeople Time Clock incorporated with your company, you're able to receive precise information about the staffs clock in/out times.

Scheduling in Workforce Management - Daily

You can go to this page by clicking **Shifts > Daily**.

Getting around the page

At the top of the page, you can see a drop-down box labeled "schedule day". This is your typical schedule day, starting and finishing at your open times.

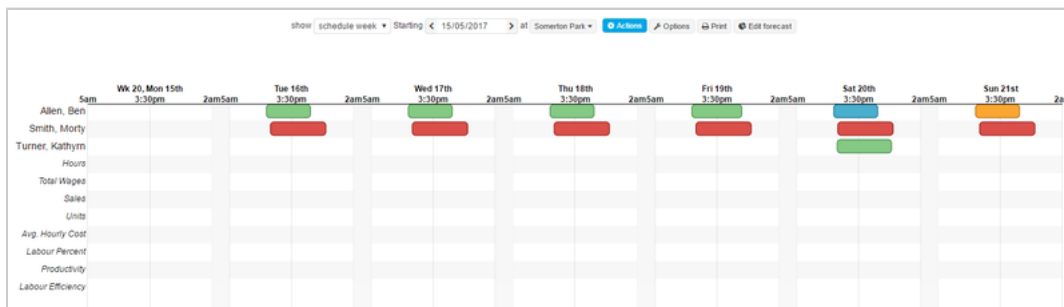

There are more viewing options when you click this box. These are:

- Schedule day
- Day
- Schedule week
- Week
- Custom

You can go throughout the days by using the date picker at the top of the page or the arrows at the bottom left and right-hand side

You can move between schedules by selecting the location name from the next drop-down box.

Stats panel on the right - your projections and targets will appear here, along with your staff wages, and your relevant KPIs.

Statistics/KPI's - Projected Sales Data - Daily

You can enter in custom forecasted sales data to schedule shifts or if you have a POS integrations setup, you can use historical sales and units information to automatically generate an accurate forecast.

To view or adjust your forecast for the week, click **Edit Forecast** from the top menu bar.

From here, you have three options for generating a forecast:

- Use POS defaults

If you have a POS integration setup, these will be the default settings that are applied to the stats. Update your default settings by going to Setup > Locations > select location > Scheduling > Default stats

- Use custom POS settings

If you have a POS integration setup, you can use the date selector to choose which week of data you want to use to build your forecast. You can also choose to apply a rolling average and/or an index.

- Use an entered projection

If you don't have a POS integration setup, you can manually enter the forecasted sales and units by day or by the week. If you enter a weekly total, you can then use percentages to distribute the sales and units appropriately throughout the week.

When you've chosen your forecast method, click **Generate forecast for week**.

When it generates, you'll see the forecasted sales and/or units for the future week you've selected. You can drill into the individual days and fine tune the forecast by clicking the gray edit pencil next to the day you want to adjust.

If you want to adjust a certain time of the day, you can click **expand** to expand out the day and fine tune it further.

When you're happy with your forecast, scroll back to the top and click **Create schedule** to be taken back to the daily view for this location to build your schedule.

On the right-hand side of the screen, you'll see a statistics panel. The top of this panel displays your total projected labor cost percentage for the week. The next set of data contains your wage data. You'll have the total costs for the day and the week. If any on-costs are set up, you'll see them underneath the base wage cost.

WEEK 18 LABOUR PERCENT 0.58%			
pm			
Wages (\$)			
	Mon	Week	
Base	93.47	172.07	
On Costs	10.28	18.93	
Laundry	1.25	2.50	
Total	105.00	193.50	
Labour percent (%) Sales (\$)			
Target	20.00		
Week	0.58	Week	33474.89
Mon	2.60	Mon	4041.38
Labour efficiency (\$/hr) Hours rostered (hrs)			
		Target	300.00
Week	1716.66	Week	19.50
Mon	621.75	Mon	6.50
Productivity Units sold			
Target	11.00		
Week	231.44	Week	4513.00
Mon	87.08	Mon	566.00
Required sales (\$) Average hourly cost (\$/hr)			
Week	967.49	Week	9.92
Mon	525.01	Mon	16.15

The statistics in the KPI panel represent:

- **Wages:** The total cost of wages. Base shows the raw cost of wages, while any modifiers set up for your location will be individually listed and included in the total wage figure.
- **Sales:** Forecasted sales based on actual sales figures.
- **Units:** Forecasted units based on actual units figures. Units can represent different figures depending on your POS, but often represent the number of transactions or individual items sold.
- **Hours Schedule:** The total number of hours scheduled.
- **Labor percent:** The percentage of how much of your projected sales are going toward the projected wages, ie: labor as a percent of sales.
- **Labor efficiency:** The sales per labor hour.
- **Productivity:** The units per labor hour.
- **Required sales:** How much you'll need to make in sales to meet your labor percent target, based on your wage cost.
- **Average hourly cost:** The total wages divided by the number of hours.

Shift Creation - Daily

Creating shifts is done by using the gray bar at the bottom of the page.

This bar is the perfect size for your thumb; you can schedule on touchscreen devices. It also indicates the current day which you're creating shifts for.

Rather than manually entering start and finish times, you click and draw out the times from this timeline.

1. Hover your mouse over a shift start time and click down.
2. Draw your mouse to the right side of the screen. A green bar will appear, starting from the time you selected.
3. Drag your mouse to a shift finishing time and let it go.

4. The green selection will be a shift period.
5. If you have breaks configured on the location settings, a gray area will appear in the middle of the shift where the scheduled break has been auto generated. You can click and drag this break during shift creation to stagger break times.

Employee Selection

After you've created the length of a shift, a list of all the employees who can work at that location will appear to the right.

At the top of this list will be a tab which has all the jobs associated with the location.

To narrow down the range of employees, simply select the job that you require for the shift. Employees will be sorted in order of cost effectiveness, with the most cost effective employees at the top.

Any employees unable to work at that time due to availability will be colored yellow at the bottom. Employees who can't work due to being scheduled on at that time, either at this location or another, will be in red at the bottom. This will prevent issues with double scheduling

Shift Editing

You can change the start and finish times by hovering over one side of the shift period - your cursor will turn into a double-sided arrow and allow you to drag the time. If you need to edit a break time or the job, you can click on the scheduled shift and then click the edit pencil.

If you need to reassign a shift to a different employee, click on the scheduled shift and then click on the blue arrow icon. From here, you'll see the other employees who are able to work that job at that location. Select the employee and click **Save** to reassign the shift.

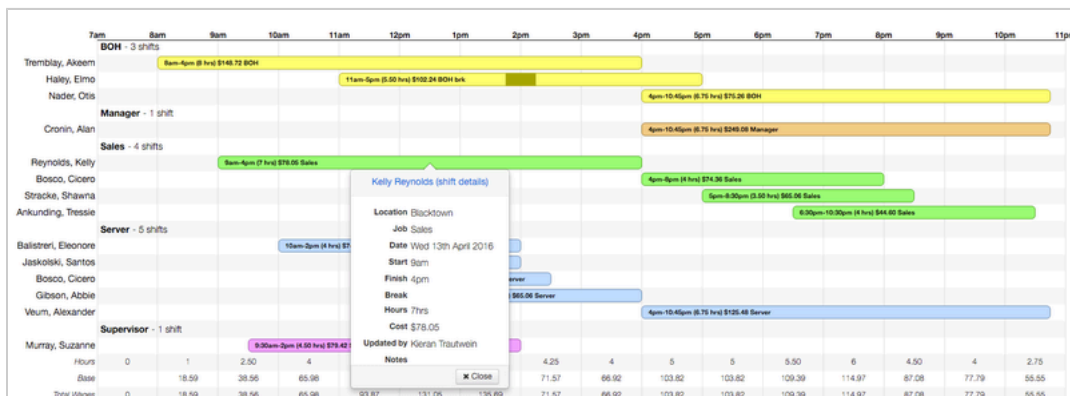

If you need to remove a scheduled shift from the schedule, click on the shift and click the red circle icon. From here, you can choose to move the shift to someone else or create an open shift. Click **Remove** if you'd like to proceed with simply removing the shift altogether.

Past Schedules

Schedules from the past cannot be edited.

If you try to edit or create a shift in a past schedule, your mouse will show a cancel sign on the shift creation bar, which means that you won't be able to do anything.

When you go to change a past shift through the shift details bubble that pops open after selecting a shift, there will be no possible way to edit any of the details shown.

Daily Schedule Options

Schedule options is a side tab that opens after you select the **Options** button. From there you have a variety of useful tools to aid you with viewing the daily schedule.

You can configure the following options:

- Statistics Options
 - Statistics visible
- Shift Display Options
 - Shift labels
 - Shift order
 - Shift groups
 - Shift color
- Name Display Options
 - Name
 - Name format

Statistic Options

This section gives you a drop-down list of all of the information that you may want to view.

Click on the individual statistics to toggle them on or off.

Shift Display

Shift Labels is an on/off button which toggles whether any information is displayed on the shifts.

Next you can choose how the employees are listed on the schedule; whether it be by time (for example, 7am-7pm), or the alphabetical order of their first or last name.

You can then select how the employees are grouped. The options given are by "Job", "Wage", "Category" or "Group".

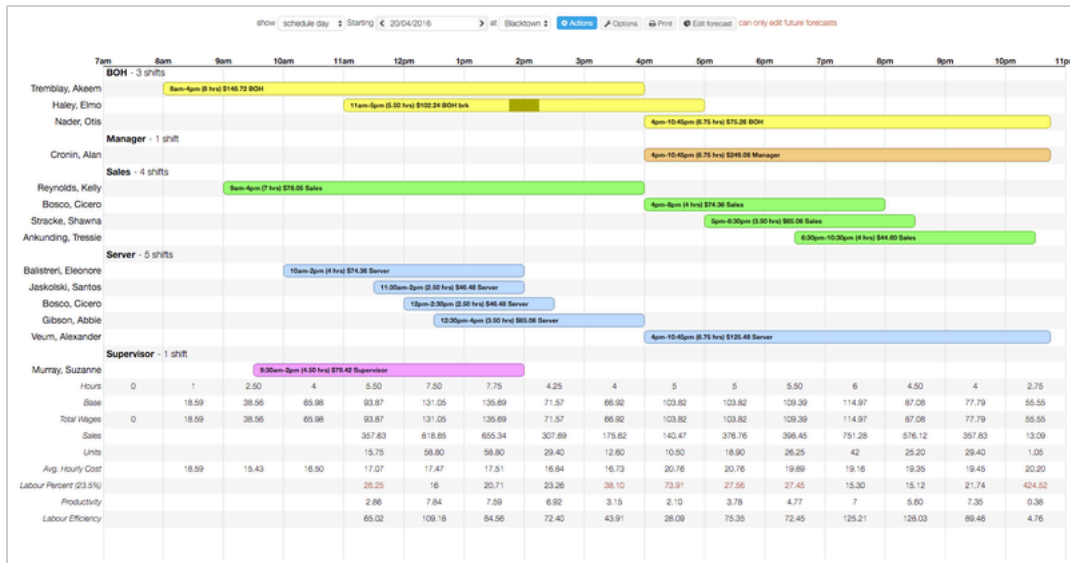

The final shift option is shift color. You can color by availability to see if any employees are no longer available to work their assigned shifts. Using this information, you can then adjust the schedule to make sure that everyone is available by reassigning shifts.

The second option is to show the color of the jobs, this is useful for seeing if somewhere in the schedule there's too many staff members with the same job scheduled on.

Name Display

These two options focus on how the names of the employees are displayed. The first option is to show the employee's first name, or preferred name. You should use preferred name to reduce confusion in companies with a large number of staff, or if your employees use a different name to their legal name.

The second option focuses on the ordering of the employees name, whether it be "First name (Preferred), Last name" or "Last name, First name (Preferred)".

Printing the weekly schedule

Workforce Management has a wide variety of different printable shift reports. The different types of reports that can be printed include:

- Daily by day
- Daily
- Daily Master
- Staff Report
- Master Report
- Multi Unit Staff Report

You can print with the shifts grouped by job, wage, category or even WFM access group.

It's also possible to remove and include extra KPIs on an hour-by-hour basis.

You can click on the options button to make the changes.

To obtain a report for printing, go to the **Print** button next to the options.

Custom Reports

A custom report will be available to print after it has been created from **Setup > Shift Reports**. Custom Reports are a way to customize schedule reports. This could include wages or KPI information depending on who it's available for.

Staff Report

The staff report is the typical schedule that employees see. This is something that can be printed out and hung up at work.

It contains shifts, any job roles, and total hours worked.

On the last page of this, any shift notes will be printed.

Master Report

The Master Report is like the staff report, but for management only.

It contains wage and KPI information of previous weeks.

Daily Report

The Daily Report lets you view the week's schedule. It creates a singular report that shows the shifts for one location in a day-by-day format.

This report is useful for managers because of its simple layout.

Daily Master Report

The Daily Master report gives an hour by hour, day by day analysis of the weekly master report.

This report is useful as it gives more in-depth information about important features such as the employee wages and KPI information.

Daily By Day Report

A Daily By Day report is very similar to a daily report, the main difference between the two is that the Daily By Day report print a day per page. This is useful to managers as it leaves extra room for them to add small notes after it has been printed out.

Multi-Unit Staff Report

The Multi Unit Staff report creates a weekly shift report of two or more locations. This report is useful for any management staff overlooking multiple locations.

This type of report is also useful for employees who work at multiple locations.

What do shift colors mean?

If you're viewing shifts based on availability (Options > Shift color > Availability) you'll see 4 different kinds of shift colors on screen (if your schedules are entered).

Click on any shift with a color other than green, and a message with the reason will appear.

The colors are

- Green
- Red
- Orange
- Blue

Green

Employee is available to work the whole shift. Conditions of this:

- Availability is set to 'available' and available for the duration of the shift

Red

Employee may not be able to work part-of or all-of the shift. Possibilities for shifts to appear red are:

- Unavailable for any part of the shift
- On leave at that time
- Already working at that time at that location
- Already working at that time at another location

Orange

There may be a shift conflict for you to confirm:

- Already working on that day, shift doesn't overlap - at that location
- Already working on that day, shift doesn't overlap - at another location

Blue

Target hours for the week have been reached.

Weekly

Updating hours worked

Both the Weekly view and Multi-Location view serve two purposes. The first is for scheduling and the second is for approving time. To get to the Weekly view, go to **Shifts > Weekly**.

The Weekly view shows the schedule week for one Location.

In the navigation bar at the top, you'll see:

- Current Week - Date picker.
- Current location
- Schedule actions - Copy (hover for additional options).
- View options
- Print reports - Create / Edit Forecast.
- Schedule to Approval mode toggle
- Percentage of actioned shifts for the current week

									7.58 hrs \$166.83

Statistics

The KPI panel in the Weekly view is formatted in columns at the top of the Weekly view. You can adjust the KPIs you're viewing by clicking on the **Options** button.

You'll see actual (actioned shifts) data such as hours worked per day, wages, as well as your actual sales & transaction data (if you have your Point of Sale integrated) from that day. If not, you can manually add your sales data for each day.

Updating shifts worked

You can open this page at any time to update shifts in the past. Best practice is to approve time daily.

The days of the week are across the top with the employees on the left and their shifts in the middle.

Each employee will have three rows next to them. Starting from the top, you'll see:

- Scheduled shifts
- Timesheet data
- Actual (approved or actioned shifts)

Actioning shifts worked

If you want to pay exactly to the clock on & off times, approve the timesheet times with the green thumbs up icon. If you need to make an edit, you can edit the timesheet and amend start & finish times or the job using the pencil icon.

If you want to see timesheets in more detail, all you need to do is click on the timesheet box. This will expand and provide more information about the timesheet.

Shift flags

An orange warning triangle will appear on timesheet shifts that:

- Needs visual verification reviewed or has notes.

A red clock icon will appear on scheduled or approved shifts that:

- Have overtime calculated on the shift

Note: If you click on the timesheet it'll pop up to provide further info about the timesheet and the symbol that appears. For example, the overtime condition which is calculating will appear letting you know what OT condition is being triggered, while clicking on a timesheet with notes will show you what the note is.

Creating an actual shift

If an employee who wasn't scheduled on a particular day ends up working, you'll need to create an actual shift for them.

1. Head to the Weekly View and find the employees name on the left-hand side.
2. Select the day on which the employee worked and move your mouse over the "actual" row. By clicking in this area, you'll be able to create an actual shift.
3. Clicking on this will pop up a shift creation dialogue box.
4. When this is filled out and saved, you'll see the actual shift appear in place.

Weekly view options

When you select the **Options** button from the top of the page, you'll be provided with a side menu that will slide out from the right side of the screen. This side menu will include several choices that will allow you to customize the weekly view to your preference.

Forecast Stats - Choose between always seeing forecasted stats (alongside your actual stats) or when viewing the schedule.

Statistics Visible - Select which statistics and KPI data you'd like to view on-screen (to minimize clutter). For example, you might only want to see your sales data, hours, and labor %.

Table options

- **Show all staff** - Choose whether all employees are displayed on-screen rather than only those with shifts
- **Show exceptions** - Gray out any shifts that have already been actioned
- **List order** - Order employees by First Name or Last Name
- **Shift groups** - Group shifts by: (eg waiter, cook, etc)
 - Wage calculation type (salaried, hourly, or classification staff)
 - Employment status (FT, PT, or Casual)
 - Category (see staff levels)
 - Group (managers, employees, area managers, etc)
 - Name (first or preferred name)
 - Name format (how names will be displayed on this page)

Name options

- **Name** - Display first or preferred names for employees
- **Format** - Display employee names as First Last or Last, First

Shift options

- **Color** - Switch between coloring shifts by job color or availability (only available in schedule mode)
- **Style** - Choose to show colors on shifts with Strips or colored background
- **Icons** - Show extra shift icons such as Geolocation Confirmation and Tips

To help with viewing important shift information like the start and finish of a shift, the default job color has been moved to the left as a stripe. This enables a greater contrast between the shift information and the background, making it easier to view in a wider number of settings.

You can still set the background of the shift to be the job color (with Shift Options as above), however, it'll be toned down - this is to increase the amount of contrast between the shift information and the background, making the important information like shift start and finish times easier to read.

Change jobs on an actual shift

1. If you already have an approved shift you'd like to change the job, find the shift and then select the blue pencil icon.
2. A message will appear. There will be a drop-down box next to **Job**
3. Within this drop-down box you'll see a list of jobs which this employee is eligible to work, and which are available at the location this shift is scheduled at.

 **Note:** If you make a change to the job you might be required to add an approval note.

 **Note:** If no jobs appear, or the correct jobs don't appear, either the employee isn't eligible to work that job, or the job isn't available at that location.

Add sick leave to an unworked shift (if using Leave in WFM)

If enabled on your account and an employee calls in sick for a shift, or leaves sick part way through a shift, you can record this within Workforce Management.

1. On the Weekly screen, find the employees shift which you'd like to replace with sick leave.
2. Click the red **thumbs down** icon.
3. Check the **Create leave for x employee** box.
4. Select the 'Sick Leave' or other leave you'd like to replace the shift.

This leave will appear as a new line above the scheduled shift. The scheduled shift will gray out indicating it has been actioned.

If you need to remove the leave you created, you can do this under their profile.

If you need to re-instate the shift, click the icon on the grayed-out shift.

Options button

Within the Weekly Scheduling view there are several options that can be set to change the way you view the schedule.

To access the scheduling view options, click on the Options button located in the top toolbar.

After you've clicked Options, the schedule screen will shift to the left and a menu bar will appear on the right hand side.

Options

When the Options menu has appeared, you'll have a variety of ways to see and sort your data as it pertains to the weekly schedule. Below is a list of the menu items and what they do. It's also important to note that when the options are set, they'll stay in place for that user until changed, so there is no need to remember and reconfigure after you logout of the system.

Statistics Options

- **Forecast Stats:** This can be toggled between 'Schedule' and 'Always'. Schedule will only show you the actual statistics for the day's that appear in your weekly schedule. Always will show you the forecasted stats along with the actuals stats for each day within the week.
- **Statistics Visible:** This option lets you toggle various statistic on and off within your weekly view. As some statistics may be monitored more closely than others, this is a great way to un-clutter your view.

Table Options

- **Show All Staff:** This option lets you view all employees for the location or only those employees that have been scheduled. Show all staff set to **No** will only show those employees that have been scheduled. Show all staff set to **Yes** will show employees that are scheduled and aren't scheduled.
- **Show Exceptions:** This option will gray out any actioned shifts so your attention is drawn to those needing actioning. You can also click the percentage wheel at the top right of the weekly view to toggle between viewing exceptions.
- **Shift Groups:** This is a drop down list that will group employees in the schedule view based on the commonality of the option selected.
- **List Order:** This option lets you sort the employees within the schedule by first or last name.

Name Options

- **Name:** This option lets you view employees by their first name or preferred name within the schedule view.
- **Format:** This option lets you view employees in the schedule view by either First, Last name or by Last, First name.

Shift Options

- **Color:** When viewing the weekly schedule view, this option lets you view employees by the color assigned to a job or the employees availability for shifts.
To see the availability colors, you'll need to change the schedule to schedule view by clicking on the Switch button in the upper toolbar so that it appears like pictured below.
- **Style:** This option will toggle how the colors are displayed on shifts, either by a color stripe along the left hand side of the scheduled shift, or will fill in the entire shift to the applicable color.
- **Icons:** This option will either hide or show time punch notifications from the employees recorded time punches. ie; how the staff member punched in (SuitePeople Time Clock and/or by the phone app) or any forced punch notifications.

Visual verification

Your company will need to have the "Enable Visual Verification" package added to their Account.

In the Weekly View, you can access Visual Verification by clicking on the Actions button and going to the bottom of the list.

In the Multi-Location View, you can access Visual Verification by clicking the Verification button on the top bar.

When you click the Visual Verification button, a dialogue box will appear. By default, you'll see the list of all of the people with unverified punch photos. Visual Verification shows a photo per punch event and all must be verified.

When completing Visual Verification, you're looking for the exceptions (ie: the people that don't match their photo or have a bad uniform.)

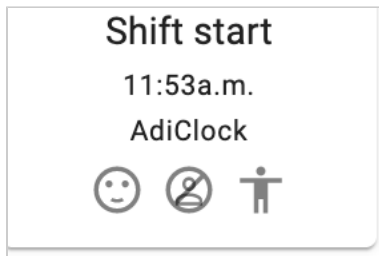

On each photo, there are three action icons:

1. **Smiley Face:** confirm the employee's name punching in matches the photo. You'll then be able to approve or edit/approve the timesheet as usual.

Note: You don't have to click this for each photo. See below for how to bulk verify those that match their photos.

2. **Not Them:** click this if the employee's name punching in doesn't match the photo. This won't let you approve the timesheet, so you don't pay an employee for work they didn't do.
3. **Bad Uniform:** the employee's name matches the punch, however, they have a bad uniform/ don't meet uniform requirements. This will add a note to the timesheet and let you approve or edit/approve the timesheet.

When you've gone through and clicked the corresponding buttons on the exceptions (those that don't match their photo or have a bad uniform), you can then click the green Verify Visible button at the bottom of the box. Any photos with no actions on them will be marked with the Smiley Face and verified.

When the verification is complete, you can change the filtering in the dialogue box from "Unverified" to "All" to review the photos that have been verified. If you need to make a change, you can do it from this view. In this filtering, you can select "In Progress" to only view those employees that have Shifts that are still in progress.

To ensure the accuracy of punches and to get the most out of insights in Workforce Management, you can complete the Visual Verification and approvals daily.

Tips and tricks

- If Visual Verification is enabled, you won't see the "thumbs up" on the Timesheet to approve until Visual Verification is complete. If you try and click the pencil icon to edit and approve, you'll receive a message that there are unchecked punch photos, and you won't be able to approve.
- To open the Visual Verification dialogue box to a specific employee, you can click on that employee's Timesheet and under the Visual Verification section, click **Edit**.
- If an employee has more than four unverified photos, you'll see a Next icon at the bottom of that employee's photos to tab to the next page of their punch photos.
- You can search for a specific employee's punch photos in the search box at the top of the dialogue box.
- If an employee doesn't have a profile picture set in Workforce Management, you can click on one of their Punch Photos in the Visual Verification dialogue box and set that as their profile picture. This will let you see their photo in the Verification view for easier identification and comparison. You'll then see their photo in the Employee List and the scheduling views.

Using AutoMatch + Visual Verification

If Visual Verification is enabled on your account, you'll need to ensure that:

You enable the “only punches with verified visual verification” option in location settings. Otherwise, if this isn't done, automatch will still work regardless of if visual verification has been completed or not.

When this setting is enabled on the location configuration, all verification will need to be complete prior to clicking Automatch. If you click Automatch and Verification isn't complete, the Visual Verification will pop up, prompting you to finish Verification. When you complete the Visual Verification steps (Mark any exceptions then Verify Visible) you'll then be able to click the Automatch button to move forward with approvals.

Approving Shifts with Automatch

With automatch, Workforce Management (WFM) can automatically approve times when they meet a set of criteria.

For assistance on configuring automatch settings, see the following help topics:

- [Automatch and Rounding Settings in WFM](#)
- [Updating WFM Automatch Settings](#)

To approve shifts with automatch:

1. Go to Workforce Management.
2. Open the Shifts page.
 - Go to Shifts > Weekly.
 - Go to Shifts > Multi-Location.
3. Click **Actions**. Click **Automatch**.

WFM automatically approves shifts that match the automatch and rounding settings, then grays them out. You can continue to approve the shifts that require manual approval.

Multi-location

The Multi-location view is a variation of the Weekly view that can be used to approve and manage shifts for multiple locations a time.

This screen is a great tool for anyone managing the approval of shifts across more than one site.

Selecting locations

When you first visit this page, you'll be prompted to select which locations and week you want to look at. Move any locations you'd like to view over to the **Chosen Items** column on the right-hand side and select which week you'd like to view using the calendar selector.

View staff hours across multiple locations

In some situations, you may need to view total hours worked throughout a week, including hours across multiple locations.

For example, scheduling employees and making sure they're working less than X hours per week, even across different locations.

You can view those shifts on the **Multi Location** screen.

1. When you've selected a particular week & location to view, click on **Options**.
2. In the Options dialog select **All shifts for staff** and make sure it says **Yes**

If there is a manager that can only view one location, but has an employee that works across multiple, any extra hours or shifts which an employee works will appear here.

Below screenshot of an employee when this is turned off (default):

	Monday, May 14th	Tuesday, May 15th	Wednesday, May 16th	Thursday, May 17th	Friday, May 18th	Saturday, May 19th	Sunday, May 20th	
Abbie Gibson			Stockroom 12pm-4pm FOH 4hrs \$167.79	Stockroom 10am-2pm FOH 4hrs \$167.79	Stockroom 6pm-9pm FOH 3hrs \$112.16	Stockroom 12pm-4pm FOH 4hrs \$167.79	Stockroom 12:30pm-4pm FOH 3.5hrs \$112.16	18.50 hrs \$440.28

Below screenshot of an employee when this is turned on:

	Monday, May 14th	Tuesday, May 15th	Wednesday, May 16th	Thursday, May 17th	Friday, May 18th	Saturday, May 19th	Sunday, May 20th	
Abbie Gibson	Control Shift 9am-5pm 8hrs \$167.79		Stockroom 12pm-4pm FOH 4hrs \$167.79	Stockroom 10am-2pm FOH 4hrs \$167.79	Stockroom 6pm-9pm FOH 3hrs \$112.16	Stockroom 12pm-4pm FOH 4hrs \$167.79	Stockroom 12:30pm-4pm FOH 3.5hrs \$112.16	26.50 hrs \$608.07

View overtime

Any shifts which incur overtime will appear with a red clock symbol next to their job (or wage cost). Total overtime for the week will also appear under their total number of hours for the week in the right column:

Control Shift 9am-5pm 8hrs \$167.79	19.5hrs	10am-5pm Manager 7hrs \$167.79	7hrs	9am-6pm Manager 8hrs \$167.79	8hrs	10am-5pm Manager 7hrs \$167.79	7hrs	10am-5pm Manager 7hrs \$167.79	7hrs	10am-5pm Manager 7hrs \$167.79	7hrs	56.50 hrs OT: 12.50 hrs
--	---------	---	------	--	------	---	------	---	------	---	------	----------------------------

This icon appears when overtime has been applied to some part of those shifts. Clicking on the shift will show a breakdown of hours triggered so you can identify which overtime is being triggered.

The overtime icon is triggered by any salary overtime, if setup, or any wage conditions set to "overtime".

A summary of hours worked appears when a shift is clicked on - click on any part of a shift box to appear (note: will not appear if you click on the shift icons).

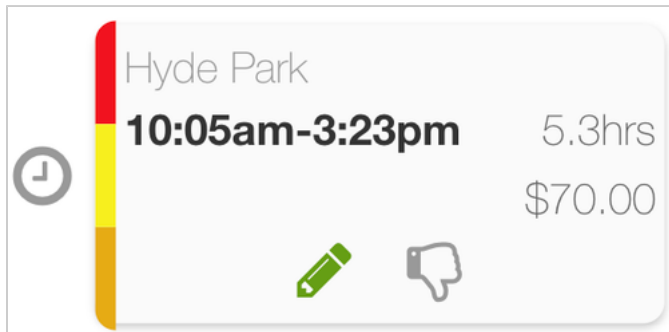

Shift segments

Shift segments occur when employees 'change job' on iPad & Android SuitePeople Time Clock. These let you track employee time worked on different jobs as they happen - without needing to make changes after the fact. When an employee is clocked in and then enter in their pin code, they have the option to change jobs.

When a staff member is clocked in and then enter in their pin code, they have the option to change jobs. They can click **Change Job**.

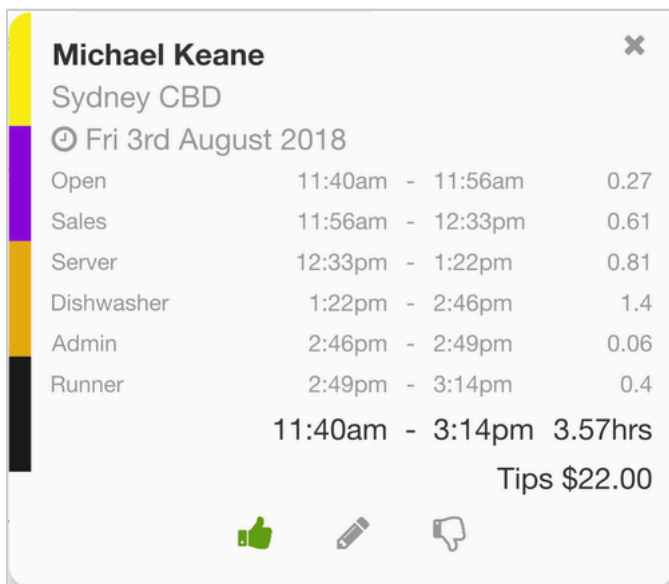

Each time an employee changes job (or clocks out for a break) the time which they clocked out or changed job appears within their timesheet during approvals.

If you're viewing shifts 'colored by job' you may see multiple different colors on a timesheet shift. This means they've changed jobs part-way through the shift:

This shift has 3 different colored stripes to the left - meaning there are 3 different segments to this shift.

Clicking on any part of the shift (except for the thumbs up to approve, edit, or thumbs down) will expand and show you details of each segment. Below is a shift with 6 separate segments:

The total time worked for the shift appears in dark writing at the bottom (3.57 hours).

Above this, each job worked appears on the left, next to the exact times they worked before switching job.

Note: Workforce Management will show a maximum of 5 colors on a shift, even if more than 5 different jobs are worked.

Note: The Windows version of SuitePeople Time Clock doesn't allow staff to change jobs during their shift. They'll need to fully punch out and back in to change jobs.

Editing segments

To edit each segment you can click the pencil icon.

Note: You can only edit the finish time of the last segment.

To edit a segment part-way through a shift you'll need to click 'remove' to remove the final segment. You can then make a change and then 'add' the final segment. Tick the 'break' button if a break occurred at this time.

Forecasting

Why should I do this?

Having an accurate weekly sales forecast will let you:

- Meet your expected sales demands
- Optimize sales growth both during and off-peak
- Display KPIs to deploy labor that meets the business needs

How does Workforce Management help with this?

Workforce Management has user workflows to help you from start to finish with planning your labor deployment, starting with building your sales forecast.

Workforce Management has the ability to:

- Forecast sales taking a rolling average for multiple weeks
- View forecast by day part and hours
- Edit forecast by day, day-part and hours

Set Up

Top level users can set "default stats" for their entire organization or a group of locations by going through the **Setup > Brands** menu.

Defaults can be created for the following additional items within a brand:

- Schedule start day
- Shift intervals
- Break lengths
- Break required after X Hours

In this screen, you can set defaults for Sales forecasting that apply to all locations within this brand.

Two you'll have when selecting a period for the default stats are:

- 52 weeks ago (last year's actual sales)
- 2-4 weeks ago (current sales pattern)

Use rolling average, on or off?

- This option when turned on uses multiple weeks to average the hourly POS KPIs. This removes abnormalities in a single day's POS data.
- Rolling average calculates backwards in time, for example, a rolling average of 4 weeks starting 2 weeks ago will take the average of your stats from 2, 3, 4 and 5 weeks ago.

Apply an index of?

Applying an index should be used to apply your current sales comp when using POS data from last year.

- To apply a sales comp of 15%, you would enter an index of 15
- To apply a sales comp of -10% you would enter an index of -10

Additionally, you can set individual default stats for their locations by going through **Setup > Locations**.

Generating the forecast

Generating an accurate sales forecast is the first step in creating a weekly schedule that meets the expected volume demand, grows sales, and provides business outcomes. You have three options to create a sales forecast.

POS defaults

Selecting this option uses the locations default settings. Setting up default settings is explained under Set Up. If you don't have access to set this up, your manager or Franchisee will.

This option uses historical POS hourly sales data and has the flexibility to let you to use a rolling average and apply an index (Multiplier or Sales Comp) to the selected data.

Use custom POS settings

This option is the equivalent of use POS defaults; however it lets you override the locations defaults and use POS data relevant for an individual week.

Understanding the sales forecast screen

When your sales have been generated, the "view forecast" screen displays total week by day, representing the current forecasted Sales and transactions by day of the week. Sales are the blue bar using the left axis. Units are the red bars using the right axis.

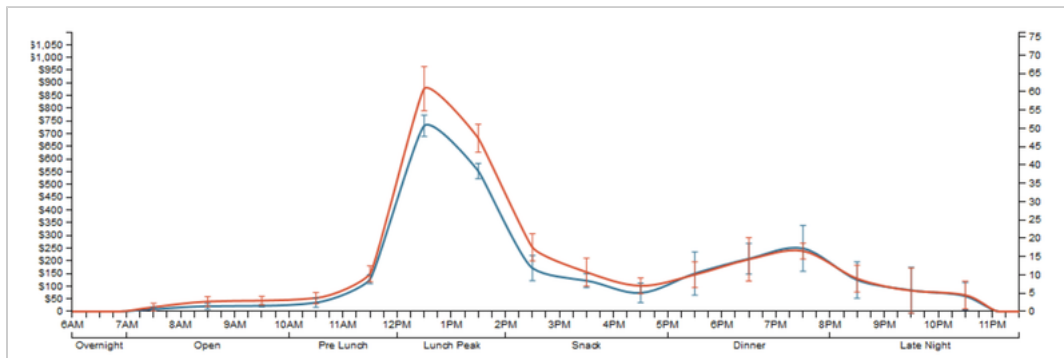

Above also shows the daily break down of Sales and transactions used, index applied, and type of POS data used. Pencils available at the end of each row can edit an individual day's forecast, and the expand section will direct you to another graph which shows the day part and hourly sales for that day.

Day part and hourly forecasting

By clicking "expand" on the right of any individual day, you can now see the day part and hourly breakdown of the sales forecast. This is represented by both a graph and summary of the actual

projection; the graph details both the Sales (Blue line) and Units (Red Line). The graph also uses vertical exponential data bars to highlight the variance in the data set used for the forecasted hour.

Large bars represent a large fluctuating data set; low bars represent a consistent data set.

In the below example the lunch 12-1pm period is showing a large vertical bar, this means that the rolling average data used for that hour wasn't consistent and might have a week included that's causing an abnormality in the data, this could be because a day was unusually busy, or unusually quiet.

Hours with a large vertical bar should be checked for accuracy in the forecast. Within this screen, you can edit an individual day part or particular time of day. This targeted approach to sales forecasting lets you accurately deploy labor at the appropriate times.

Forecasting with sales subcategories

The forecasting screen is split into 3 widgets (2 on top, one underneath):

- View
- Basic
- Graph/Advanced

View

Changing the options here will change the week and location you are forecasting for. Move between locations you manage as well as forward through the future. You can also create forecasts ahead of time.

Basic

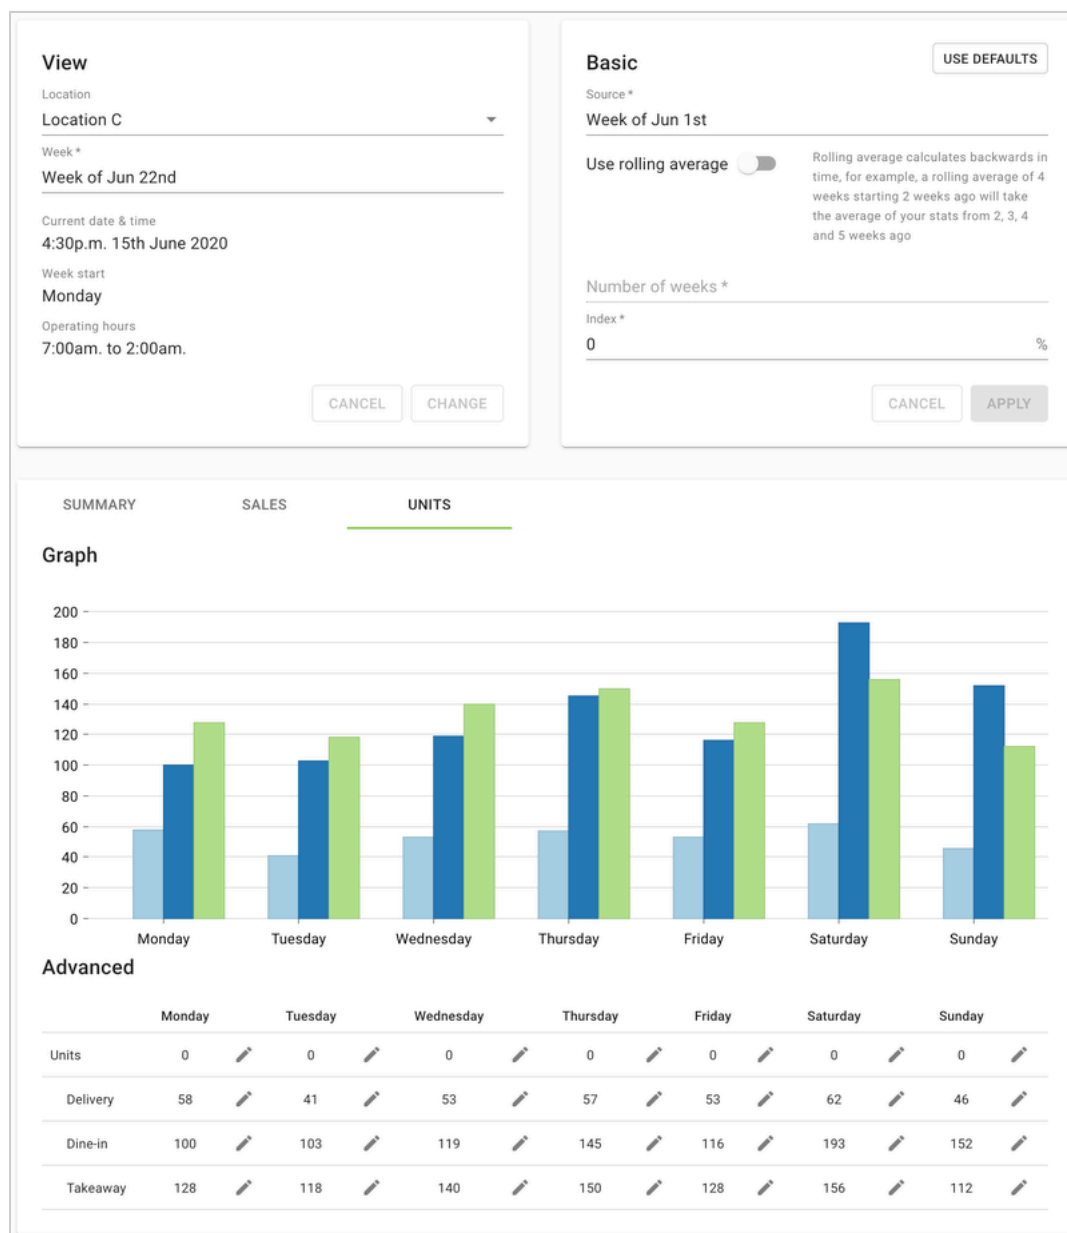

Basic forecasting information to help you get started.

Select a week in the past that you want to forecast sales to. If you have setup a default fetch period, it'll automatically show fetch period (and pre-load it if all the data is available).

This is a week in the past which you think may have similar sales due to factors such as events, weather, or promotions. After it has been selected, you can add a rolling average or change the index percentage (ie. if you expect the forecast for the week to be a 2% increase from the period you selected, type '2')

Graph/advanced

Comparative graphs show you the sales & units that you have forecasted for each day of the week ahead. This helps with visualizing which days of the week will have the busiest demand.

The "Summary" lets you edit the sales or units for each day that week by clicking the pencil icon next to the day & stats type. You'll get a popup box similar to the "Basic" widget - this lets you change that day/ stats type you've selected - this won't affect the rest of your forecast. For example, you may want to edit only a public holiday as you're expecting increased demand.

Selecting "Sales" or "Units" at the top of the widget lets you edit the values for different sale subtypes - for example if you're expecting increased takeaway & drive-thru orders.

Publishing schedules

You can play around with and change as much of the schedule and shifts as you need (so long as they're on a future day).

During this time, no employees can see their shifts. For employees to receive their schedule and view the schedule in the phone app/ online, you'll need to publish the schedule.

There are up to 4 ways for employees to receive their shifts when you've published the schedule:

1. Push notification to the SuitePeople Workforce Management (Adi Insights) phone app
2. Email with their own shifts
3. SMS with their own shifts (only if SMS is enabled for the company)
4. Printing a PDF of staff shifts

You can publish on any of the scheduling screens (this includes Daily, Weekly & Multi-location screens):

First, make sure you're on the week you want to publish (or if you're on the Daily, on a day in the week you want to publish - this will publish the whole week you're currently in). Scroll down if you're using the Multi-location screen to publish as the instructions differ.

Publishing the daily and weekly schedules

1. Click **Actions**, then **Publish Schedules**.
2. The publish interface will pop-up and you can pick if you want employees to receive the schedule via SMS and/or email.
3. Employees will always receive a push notification to the SuitePeople Workforce Management (Adi Insights) phone app - so if you're only using the phone app, you can press the blue **Publish** button to confirm. Employees will receive a push notification to their mobile phone & can see all published shifts at locations they can work.

If you aren't using the phone app, or you'd also like to send emails to Employees with their shifts:

1. Check "Email schedules to staff" - extra options will appear allowing you to change the email staff get by:
 - Changing the reply-to email (if staff have questions and need to reply). By default, this is your Workforce Management email address.
 - Pre-fills your name, so employees know who's sending it out.
 - Add an additional short message to the email - for example, reminding employees about temperature and wellness checks, or a special event or team meeting.

Note: You'll need to select which employees receive this email by selecting employees in the list on the left, and moving them to the right.

2. Alternatively click **Choose All** to move all employees to the right. Only employees on the right-hand side will receive this email, and only employees with shifts will receive an email. This means

if an employee is selected but don't have any scheduled shifts, they won't receive an email. Employees will receive their shifts for the week at the location you've published

The SuitePeople Workforce Management (Adi Insights) phone app will show employees all shifts at locations they can work, and can filter it to show only their shifts within the filtering options.

The SMS function works in the same way - however SMS will only send if they're enabled on your company (you'll receive an error message if you can't send them).

Publishing and validation messages

1. When the publish interface appears, a validation check runs to make sure there aren't any issues preventing publish. If there are no validation warnings or errors, you'll be able to press **Publish** at the bottom
2. If you see an orange bar at the top - this means there's a validation warning. If there are multiple - click the arrow to expand and show them all. However, you can still **Publish Anyway**, otherwise you can cancel & address the warning before coming back here to publish.
3. If you see the red bar appear, this means there's at least one validation error preventing you from publishing. Clicking **View** will slide-out a list of these validation errors.

Common errors are minimum hours on an employee's wage haven't been reached, schedule validation rules not being met (Require X employees between X times), and if you have configured either Minimum Shift Length and Contract Hours to flag as an error.

Unpublish schedules

If you've published schedules but need to make changes ahead of time, you'll need to unpublish the schedule.

This can be done by heading to the Daily & Weekly, pressing **Actions** and then **Unpublish Schedule**.

Press the orange **Unpublish**, and you'll be able to make changes to that week. Don't forget to **Publish** after you've made your changes!

If you've only changed 1 or 2 employees shifts and publish by email - you can select only the affected employees to receive email notifications.

Note: You're only able to change scheduled shifts for days in the future - if you're trying to change shifts for later today it's recommended to use the fill/swap shift function in the phone app. For shifts in the past, you can deny the scheduled shift (if the employee didn't work) and you'll approve the timesheet or add an actual shift for the employee (if any) worked that shift.

Multi-location publishing

1. To publish shifts on the multi-location, make sure you're on the week to publish with the locations you'd like to publish. Press **Publish** at the top center of the screen:
The same publish interface appears as in Daily and Weekly. This time, you'll see a box at the top of the screen for each location. Each location has its own validation - and if one location has validation errors you won't be able to publish (and you'll need to view & resolve the validation error first).
2. You can publish with email or SMS - Phone app push notifications will also send when you press publish. Employees will receive a separate email per location - so if 1 employee works across 2 locations, they'll receive 2 emails - both with shifts for that location

If you're not seeing a location you are expecting to see on this screen - make sure you're viewing it. Go back to the multi-location & check the locations that are appearing:

3. When you've addressed all errors - you can publish. If there's a location that you don't want to publish you can un-check it at the top. When you publish - all other locations will publish, except for the one you've un-checked.

Copy and paste shifts

Quickly create new schedules by copy & pasting previous shifts and schedules.

Copying shifts and schedules will copy:

- Shifts
- Shift Breaks
- Employees associated with the shifts
- Jobs on each shift

After being copied, you can still add & remove shifts, change shift length, and reassign employees to different shifts.

This is intended as a quick way to create a schedule by copying an optimized schedule and optimizing it further for the week it's copied to.

There is a copy dialogue available on both **Daily** and **Weekly** views.

Hovering over the **Copy** button provides the following quick actions:

- Copy to next week
- Copy to 2 weeks away
- Advanced week copy
- Advanced day copy

The first choice will be to copy specific days from one week to another week.

Select the days in your base week that you want to copy, and then select the week that you want to paste them onto.

For multiple weeks select the "Paste Repeating" option, and then how many times you want for the week to repeat itself.

OR you can copy a single day to another day, select the day you want to copy, and then the day(s) that you want to paste the day onto.

Tip: When pasting day shifts, all the shown days are from the following week, always double check the date when copying and pasting shifts.

When you're happy with what you've created, select the "Copy" button to save all changes.

If you've overlapped shifts, you'll be given a warning for every shift that is in danger, to confirm the changes select "Remove all of these changes" and then "Copy" again.

Viewing Published Shifts

Employees can view the published schedules of the units they belong to.

Select "Shifts" from the top menu bar.

You'll be able to select "View Published Schedules" - Select a unit, as well as a week to view.

If a schedule has been published for that week, the weekly schedule will appear - if it hasn't been published, a message will inform you.

An example of a successfully published schedule can be seen below.

A published schedule will only show staff members with shifts, on the example below you can see that the times, job, and date are all shown; the necessary information for a staff to see.

for the week containing

Schedule for test roster unit, week starting Monday, August 27th 2018

Staff member	Mon 27th Aug	Tue 28th Aug	Wed 29th Aug	Thu 30th Aug	Fri 31st Aug
Abbie Gibson	10 a.m. - 4 p.m. FOH	5 p.m. - 8 p.m. FOH	noon - 4 p.m. FOH		
Akeem Tremblay	5 p.m. - 8 p.m. Line Counter	9 a.m. - 2 p.m. BOH	9 a.m. - 4 p.m. BOH		
Alan Cronin	9 a.m. - 4 p.m. Manager		4 p.m. - 10 p.m. Manager		

Schedule Validation

An advanced feature in Workforce Management is the use of validation rules.

You can set shift goals which must be achieved to successfully publish a schedule or print a report.

An example of a validation rule may be: 'There must be at least 1 manager working from Monday to Friday.'

If you don't achieve your validation goals you'll receive an error when you attempt to print a report or publish a schedule.

Shifts will also be validated if they overlap with another shift or with leave, preventing employees from being scheduled for multiple shifts or leaves at the same time.

If you attempt to print a shift report for a schedule that has validation errors, you'll receive an error, blocking you from publishing a schedule. Fix any validation errors and you can then continue with publishing schedules and printing reports.

Printing Schedules

To print a report, head to the **Print** button in the Daily or Weekly view or go to **Reports > Shifts > Print Ready**.

Select your report and click the **Generate Report** button.

The report will appear in your notifications when generated in about 15-30 seconds.

Filling Shifts

Fill shift can be used to find another available employees member to work an already existing shift on the current day/in the future, after a schedule has been published.

This is commonly used after an employee is unable to work a shift last minute.

Head to the Weekly view and find the shift you need to 'fill' - you'll see the below icon on the shift; click this to open the fill shift prompt.

Note: You'll only see this icon if the schedule for the week has been published

Copy Options Print Edit forecast Switch PUBLISHED			
Thursday, Jun 27th	Friday, Jun 28th	Saturday, Jun 29th	Sunday, Jun 30th
10am-2pm 4hrs \$94.91 FOH	6pm-9pm 3hrs \$71.61 FOH	12pm-4pm 4hrs \$141.52 FOH	12:30pm-4pm 3.5hrs \$103.63 FOH

From here, you'll see the 'Fill shift' dialog box. It shows the same information as the 'select staff' dialog when you're creating or reassigning the shift, however, also includes employee mobile numbers (if set up.)

Select the checkbox on the left-hand side to select that employee member to be notified about the shift fill. They'll receive a notification in the SuitePeople Workforce Management (Adi Insights) phone app (if they've installed and set it up). You can also check the 'also send via SMS' box to send them an SMS with this information (if they have a mobile number).

Available employees can reach out and accept the shift via reply; the employee can then work the shift and the shift can be 'reassigned' during approvals. If the employee accepts the fill via the Phone App, it will swap the shift over to them.

Daylight Savings Times (DST)

There are two DST transitions: skipping an hour (clocks move forward) and repeating an hour (clocks move back)

Workforce Management calculates the hours and cost of shifts that cross over a DST transition, taking into account the two transitions; however when clocks move back there are some complicated situations that need your attention, so we added the 'DST ambiguous report'. See more information below:

Clocks move forward

The simpler transition is skipping an hour, and Workforce Management handles this in two ways:

1. Workforce Management doesn't let you have a shift:
 - start
 - finish
 - have break times
 - job changes
 during an hour that doesn't exist.
2. The cost of a shift and length of a shift won't include the hour that isn't worked.

For example, a shift going from 11pm to 7 am with no break, as this shift goes over the transition period the actual worked time will be 7 hours (rather than the standard 8).

Clocks move backward

The complicated transition is when the hour between 2 am and 3 am is repeated. If the shift doesn't start, end or not breaks or job changes that occur within this two-hour window a shift's hours and cost will be calculated without any issues.

Using the 11 pm to 7 am example again, this would now be 9 hours worked instead of the standard 8 hour shift.

When there are any shift events that occur during this 2-hour window, the shift is considered ambiguous as there is more than one possible length of the shift.

If a shift started at 7pm and finished at 2:30 am, this shift could be either 7.5 or 8.5 hours long depending on which 2:30 am the employee finished at. You'll need to manually confirm and correct the hours exported to payroll for these shifts.

To assist you with this process there is a new report available that highlights ambiguous shifts. Head to **Reports > Shifts > DST ambiguous shifts**, pick the day that the DST backward transition occurred and click search for shifts, you can also download this as a CSV.

Open Shift

An Open Shift is created like a regular scheduled shift; but there isn't an employee assigned to it.

Open Shifts are available for any employee to 'pick up' and work - in addition to any of their regular scheduled shifts. Offering to work an Open Shift requires employees to be using the SuitePeople Workforce Management (Adi Insights) phone app.

Requirements:

Employees must be using the SuitePeople Workforce Management (Adi Insights) phone app, and Open Shifts must be activated on your Workforce Management company.

Below are some examples of what Open Shifts look like when they're created and before an employee is allocated on scheduling interfaces and the phone app.

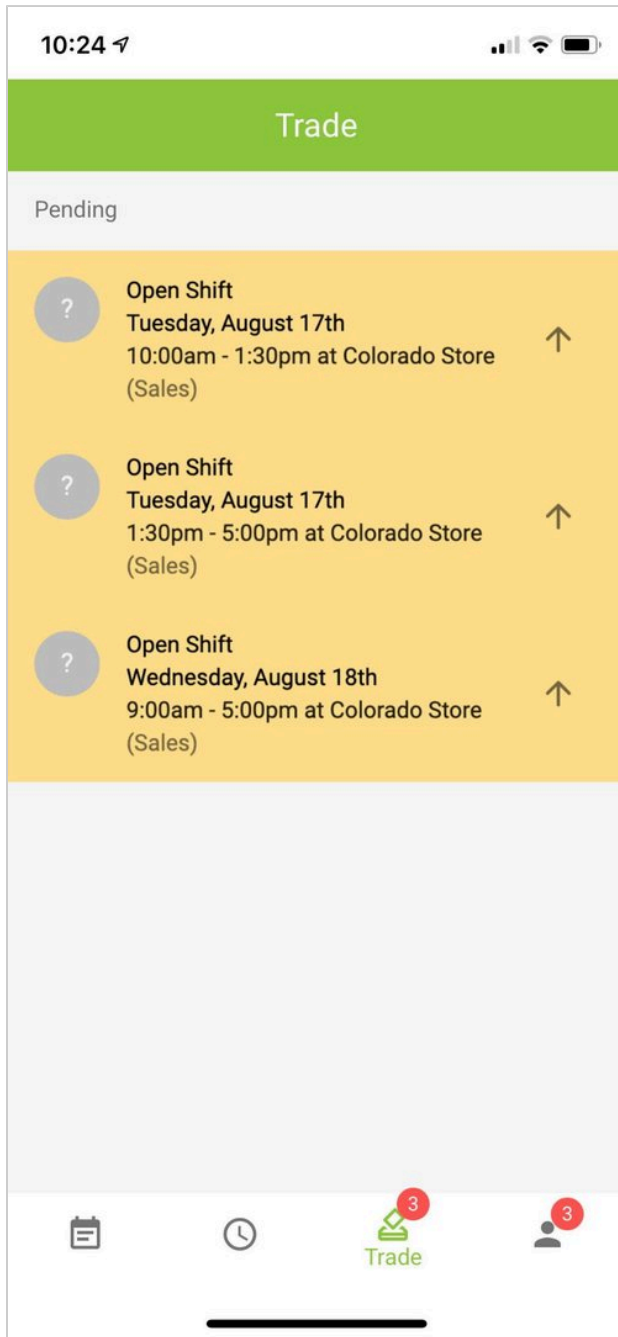

Weekly - Open Shifts appear in the top row

Daily - Open Shifts appear in red with an exclamation mark

show Starting at

	7am	8am	9am	10am	11am	12pm	1pm	2pm	3pm	4pm	5pm	6pm	T
⚠ Open Shift			⚠ 9am-6pm (9 hrs) Sales										
⚠ Open Shift			⚠ 9am-6pm (9 hrs) Sales										
⚠ Open Shift			⚠ 9am-6pm (9 hrs) Sales										
Scheduled Hours	0	0	3	3	3	3	3	3	3	3	3	0	

Phone app - Open Shifts appear in normal shift view with an orange background

Creating an Open Shift

An Open Shift can be added to a schedule on the Daily, Weekly, and Multi Location views, as well as on Shift Templates (if enabled on your account).

On the Weekly & Daily View

1. To create an Open Shift, go to any unpublished future schedule (or unpublish your current schedule if you need to add Open Shifts for the remaining days).
2. Click on the blue **Actions** button, then select **Create Open Shift**. This option is highlighted in the image below.

3. Select the date you want to add this Open Shift.
4. Enter the start & finish times of the shift.
5. Enter the break start & finish times (this step is optional - otherwise leave blank).
6. Add the desired job to apply to the Open Shift.
7. Changing the 'Shift count' will create that number of Open Shifts with the configuration you've set.
8. Click **Save**.

A window will appear with the following fields:

- Date
- Start
- Finish
- Break
- Job
- Comments
- Shift Count

A shift count is the number of Open Shifts with the same date, times, and job as you have set in the pop-up.

For example - if you need three half-day shifts at short notice for tomorrow, all at the same time and employees working the same job, set the shift count to three.

Template Shifts - Open Shift Creation

You can create Open Shifts by using shift templates, found in your location configuration.

When creating your template shifts, if 'All staff' is selected on the template. All of these shifts will be created as Open Shifts within the schedule.

Start	Break start	Break finish	Finish	Job	Comments	Staff	Count
Monday							
Tuesday							
09:00 AM	--:--	--:--	06:00 PM	Sales	shift comments	All staff	3
11:00 AM	--:--	--:--	06:00 PM	Manager	shift comments	1 staff selected	1

The below image shows how some of the above shift templates would appear in the Multi-location view.

	Monday, Jul 19th	Tuesday, Jul 20th
Colorado Store		
Shift Templates		9am-6pm Manager x 1 9am-6pm Sales x 3 11am-6pm Manager x 1

1. When your templates have been created, head to the Multi-location view and make sure shift templates have been enabled in your view options.
2. Click the 'Allocate template shifts button', which is in the top bar as highlighted below.
3. Select the locations that you'd like to have the shift templates automatically fill for and click **Allocate templates**. An example of the pop-up that appears is below.
4. This allocates employees to the templates you've created.

Note: If specific employees are selected for a set of shifts in your shift template but some are unavailable when the template is used, it creates an Open Shift automatically to fill the vacancy. You'll receive a notification within Workforce Management when this happens, giving you the reason why the template shift was turned into an Open Shift.

Multi-Location View

Within the Multi-location view, if overseeing and creating shifts for multiple locations, you can create Open Shifts here quickly and efficiently.

1. Select the locations you want to view or add Open Shifts to.
2. Select the blue **Add open shift** button (highlighted below).
3. Fill in the pop-up with the required information - this is similar to the pop-up that appears on the Daily & Weekly views when creating Open Shifts, however you'll need to input a Location for this Open Shift to be attached to.

The window includes the following fields:

- Date
- Location
- Start
- Finish
- Break
- Comments
- Shift Count

Editing Shifts

The below will guide you through how to convert existing scheduled shifts to Open Shifts.

An Open Shift can be created by converting an existing scheduled shift. Either on the Weekly, Daily, or Multi-location views.

1. Unpublish a current schedule (or go to an unpublished future week).
2. When in the Daily view, select the shift you want to convert and then click the red 'Remove' button; if you're not in the Daily view you can directly click the 'Remove' button on the shift.
3. Click on the Open Shift box and click on the green Open Shift button.
4. This shift has now been converted to an Open Shift. When you're ready, republish the schedule.

Any employee available to work this shift and job will receive a notification on the phone app if there is an Open Shift available.

Copying Open Shifts

Open Shift also creates new opportunities when copying a week forward.

When using the 'Advanced week copy' (found by hovering over the 'Copy' function) you can change the 'Keep staff on shifts' option to 'No', which will copy all the desired shifts into the chosen weeks as Open Shifts.

When completed, don't forget to publish your schedules.

Mobile App and Open Shifts

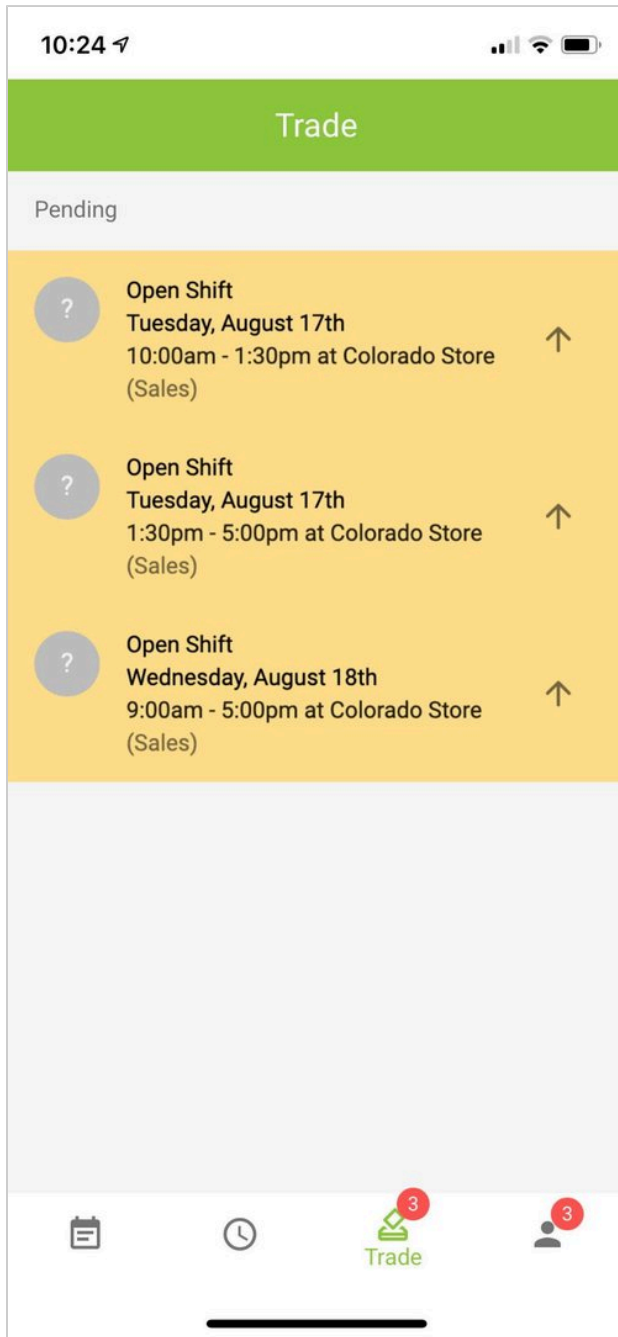

When a schedule is published containing Open Shifts, some employees will receive notifications that there are Open Shifts available to pick-up. You'll receive these notifications in addition to your regular 'shifts published' notifications.

You're eligible to pick up an Open Shift if you:

- Are able to be scheduled at the location.
- Are able to work the job allocated to the Open Shift.

Managers can also allocate employees to Open Shifts.

How to request a pick-up

When you receive a notification about a published schedule, open the phone app & head to the 'Trade' tab on the shifts page. The image below gives an example of some Open Shifts and where to find them in the phone app.

Open Shifts are highlighted in orange and say "Open Shift" in the title.

You can request to pick up the Open Shift by pressing the arrow icon - this will send a request to your manager.

After your manager approves the request, you'll be notified that your request has been approved.

Note: Sending a pick-up request doesn't guarantee that you'll be allocated to the shift - this sends a notification to your manager, but they have the final say on who will be allocated to the shift. If assigned the shift, you'll receive a notification that the Open Shift has been assigned to you.

If you've requested to take up an Open Shift but aren't selected, you'll receive a notification within the mobile app to that effect. An example of the message you'd receive is: Your pick up offer was denied by (employee name).

How managers can assign open shifts in the SuitePeople Workforce Management phone app

When employees request to work an Open Shift, the manager will see a list of the employees which have requested to pick-up the Open Shift.

To access this list, click on the 'Trade' tab.

Press the 'Assign' button to assign the employee to the requested shift. Any other employees that have requested to pick up that shift will disappear from this list. An example of the employee list that will appear when viewing an Open Shift is shown below.

If an employee hasn't been notified of the Open Shift, due to availability, the notify button (envelope) will let the manager to notify a specific employee of the Open Shift. If grayed out (as it is in the image above), the employee has already been notified by the app.

Note: The "unavailable at that time" messages relates to employee availability in Workforce Management, however you can still allocate these employees to the Open Shift if they've requested to work it.

Open Shift FAQ

Question: Can I assign employees an Open Shift without unpublishing and then re-publishing the schedule?

Answer: Yes!

Open Shifts let you assign someone to a schedule even after it has been published. Eliminating the need to unpublish and then republish a schedule. By using the arrow on the Open Shift, employees can be assigned.

Question: Are employees notified of the shift assignment even though I didn't unpublish and re-publish the schedule after the assignment?

Answer: Yes!

Employees are notified of being assigned to an Open Shift through the SuitePeople Workforce Management (Adi Insights) phone app even if the schedule is already published.

Question: I'm receiving a schedule validation error when I attempt to publish my schedule with Open Shifts. The validation error is stating that my KPI targets are not being met. How do I publish my schedule?

Answer:

KPI's, e.g. Labor Percent, Hours, etc., are incalculable if Open Shifts are left unassigned. Workforce Management is looking for specific metrics before your schedule can be published. To prevent this validation error, ensure under your locations 'KPI Targets' that you have unticked the 'Values outside of this range should prevent schedule publish' box. The below image shows an example of one of the boxes you may need to untick in 'KPI Targets'.

Question: I have templates already available in my account and use them. What is the difference between Templated Shifts and Open Shifts?

Answer:

Template Shifts require someone with Manager access, or higher, to manually assign employees to vacant template schedules. Whereas, Open Shifts are visible to employees and therefore can be filled by their volunteering, followed by manager approval, through the SuitePeople Workforce Management (Adi Insights) phone app.

Contract Hours

The Contract Hours module is designed to help employers manage compliance regarding employees working hours that are different from their contracted hours (sometimes known as regular pattern of work). This module ensures that employees have agreed to the hours they're working, helps them manage labor and communication with their team around their contractual obligations & variations to those obligations. This is a digital and paperless way to track employee shift variations.

Contract hours can help manage labor (depending on your set up) by:

- Automating recording requirements for employees working outside contract hours (For example, regular pattern of work and agreement to vary)
- Automating overtime entitlements if an employee needs to work outside contract hours
- Providing real-time workflows to ensure seamless electronic recording
- Minimizing any unnecessary overtime associated with contract hours requirements

How do I enable the Contract Hours module?

If you'd like to find out more about turning on Contract Hours and any associated fees, reach out to your Account Manager.

Overview

Employees need to be using the SuitePeople Workforce Management phone app, and punch-in using SuitePeople Time Clock on iPad/Android.

Contract Hours are configured per Wage Agreement and employment status.

When contract hours are enabled & configured, managers will talk employees through their contract hours. Managers enter these into Workforce Management - employees will login & accept the contract hours in Workforce Management.

When an employee agrees to the Contract Hours entered by their manager, the process is complete. The process goes as follows:

1: Employee Agrees to their Contract Hours

For example, the employee's agreed Contract Hours are as follows: on Mondays, Tuesdays, and Saturdays every week at those times.

- Monday – Working 5.5 hours between 2:15 pm and 8:15 pm, with a 30-minute break at 4 pm
- Tuesday – Working 3 hours between noon and 3 pm
- Saturday – Working 5.5 hours between noon and 6 pm, with a 30-minute break at 3 pm

2: Manager is aware of the employee Contract Hours during scheduling and alerted to issues

When entering shifts, managers can visually see when an employee is required to be scheduled for these Contract Hours:

	8am	9am	10am	11am	12pm	1pm	2pm	3pm
No Team								
McGuire, Joe					←-----→			

The dotted line with arrows at the end (showing the employee Contract Hours) will disappear when you draw the shifts in for the employee.

You can schedule other shifts for these employees - a button will appear in the phone app where employees can agree to work each extra shift or extra hours.

Workforce Management will run compliance checks and alert managers when publishing if there are any missing Contract Hours or extra hours in addition to their Contract Hours

3: Employees whose published shifts differ from their Contract Hours will get a notification to agree to the variation on the Phone App

All employees will receive a push notification with their shifts. If they have shifts outside of their contract hours, these shifts have the option for employees to agree to the shift.

After they press agree, this will appear as a “variation” to their Contract Hours - meaning the employee has agreed to work additional/different shifts to their Contract Hours.

If employees haven't agreed to this in the phone app, they'll be presented with a similar screen when they punch-in to SuitePeople Time Clock.

4: Employees will agree to variations as they punch for work on SuitePeople Time Clock if it is different to their current agreed Contract Hours

If employees punch for their shift early or late, they'll receive a similar message indicating they're punching in different to their agreed variation to Contract Hours - and will need to agree to the variation message. They'll also see this message if they punch-out early or late. If employees take a break at a different time to their contract or agreed Contract Hours variation, including for a different break length - this message will pop-up when they punch out for their shift.

These messages appearing when employees punch-in differently to their Contract Hours can give you confidence that you're being compliant to clauses in your labor agreements (when you've configured the parameters correctly based on your legal advice).

You'll notice employees have the option to Decline next to the agree button at all stages. If employees decline at any point, there's a different action depending on what stage Decline is pressed.

5: Check variation messages and icons while doing approvals

When an employee is scheduled for a Contract Hours shift & works the shift as normal - you won't see any extra messages.

When an employee has agreed to a variation - either agreed based on the scheduled shift, or punches in & out different to their scheduled shift - and agrees to it, these will appear on the approved shift as “Agreed Variation”

If an employee declines a variation to a scheduled shift, the shift will appear as “outside of contract hours”. Note that when you create a shift outside of their contract hours, it will show as already show “outside of contract hours” until the employee agrees to it.

If employees decline a variation - either from the schedule or when they punch in/out, this shift will show “Outside of contract hours” and trigger overtime (if you've set the rule up).

Enable and Configure Contract Hours

If you'd like to find out more about turning on Contract Hours and any associated fees please contact your Account Manager.

Warning: Clauses in Awards, Enterprise Agreements and other Labor law legislation related to working outside something like Contract Hours is often complicated. You must seek independent legal advice to determine how using Contract Hours may help with these types of clauses.

Configuring Contract Hours Parameters

When the Contract hours module is enabled a new menu item will appear under Setup > Contract Hours. Only finance & above users can access this new page.

This configuration area lets you customize the Contract Hours fields and table that appear in an employee's profile under their Contract Hours tab.

Configure Contract Hours

Click the "Create" button to begin (note: default settings aren't required to be set up, so skip that heading)

Select the agreement & employment status these Contract Hours are being set up for.

You can create multiple Contract Hours sets for employment status and agreements if you have multiple agreements.

The screenshot below is an example of a set of Contract Hours for one of the Australian Modern Awards for Part-time employees.

Contract hours settings

The settings in this page are used to restrict the selections allowable in Staff Members' Contract Hours configuration. They do not have a direct effect upon the validation or overtime costs for shifts for a given staff member until they have been configured for that staff member. It is possible to configure global default settings, and then override settings for any Employment Status or Agreement, or any combination of the two.

Strict mode ☒ Automatically set the required hours on any given day to the value calculated from the start/finish times and meal time/break length. This sets the selected and required fields, and makes some settings required.

Selected fields

	Include on form	Require entry	
Start Time	☒	☒	Required in Strict Mode.
Finish Time	☒	☒	Required in Strict Mode.
Meal Time	☒	☐	ⓘ This value is used as a scheduling guide only. Optional (based on length) in Strict Mode.
All Day	☐	☐	Disabled when Start Time or Finish Time are required.
Min Length	☐	☐	Automatically populated in Strict Mode.
Max Length	☐	☐	Automatically populated in Strict Mode.
Break Length	☒	☐	Shown, but not editable in Strict Mode.

Breaks

⚠ These fields are required in Strict Mode.

Break required after hours Require a meal break on shifts longer than this amount.

Fixed break length minutes

Automatically set the break length to this value on Contract Hours that have a meal break.

Hours per day

Minimum Hours Per Day hours Required in Strict Mode

Maximum Hours Per Day hours

Restrictions

Allow split shifts ☐

Allow changes before days

The period of time before a new set of Contract Hours comes into effect that it may be edited/approved.

Apart from the Agreement & Employment status options at the top - the same options appear as they do on the Default settings configuration. If you need to change Contract Hours options for that agreement & employment type, select that combination from this list before making changes.

After you've selected the correct options & save, you'll see the agreement name & employment type for the Contract Hours configuration you've set up.

Contract Hour settings you can configure

Contract Hours settings you can configure:

Strict Mode

Strict mode is the easiest way to configure Contract Hours Options. All that managers will need to fill out for each employee's Contract Hours are:

- Start time
- Finish time
- Meal time (only if the shift is longer than the length specified above)

Strict mode doesn't let you change any options under "Selected fields".

If you don't use strict mode, you can customize any of these options.

Whenever Contract Hours are entered or updated, any of the fields shown in the "Include on form" column will be shown in the form to the user. Any fields that have a check in the "Require entry" column will be required.

Breaks

"Break required after" ensures that when Contract Hours longer than this length are created, a "Meal Time" is also entered.

"Fixed break length" prevents users from being able to enter a break length for Contract Hours.

Hours per day

Using these fields, it's possible to restrict the range of values that users may enter in the "Min Length" and "Max Length" fields of a Contract Hours object. Strict Mode requires a "Minimum hours per day", and ensures that the shift created is at least this long.

Restrictions

Allow split shifts enables the creation of multiple Contract Hours objects on the same day.

"Allow changes before" will restrict the creation, editing or agreement of Contract Hours changes so that they start at least this many days from today. If you leave this field blank - Contract Hours can be entered to start from tomorrow onwards - you can't create Contract Hours in the past. This also means if employees don't agree to Contract Hours before the start day - these will change into expired Contract Hours and you'll need to add Contract Hours for the employees again.

If you set this field to 7 days - a manager can't create Contract Hours to start within 7 days of the date they're creating these on, and the employees must agree to these before 7 days of the Contract Hours start date.

In most cases, Strict Mode, with no Restrictions (and appropriate values for Break Required After, Fixed Break Length and Minimum Hours Per Day) should be configured.

Agreement/Employment Status settings selection

When one or more Agreement and/or Employment Status based options are present, the "best match" will be used. If an employee is working Part-Time on the FFIA, then an options object for "FFIA -> Part-time" would be applied, followed by one for "FFIA" with no Employment Status, followed by one for "Part-time" with no Agreement.

When there are Agreement/Employment Status options created within a company, this triggers the requirement that employees matching these have Agreed Contract Hours. Failure to configure Contract Hours for employees will prevent the publishing of a schedule containing those employees.

Configure contract hour overtime rules

The following section describes how to set up overtime to automatically apply to any hours worked or scheduled outside of Contract Hours if overtime applies when there is no Agreed Variation through the Workforce Management functionality.

If you don't set up overtime options, Contract Hours will still work - and hours outside of contract will still be shown to users - however, no automatic overtime will apply, (In this instance you can generate reports with a list of hours worked outside of Contract Hours).

Setup

There is a rule that can be set to calculate appropriate penalties/overtime rates for periods of time outside of their Agreed Contract Hours (or Agreed variations to their Contract Hours) that they work.

This can be enabled within any Agreement by creating a new overtime condition, or updating an existing overtime condition (by adding extra rules).

The option "fall outside of contract hours" will be used to create the rule for contract hours. Keep in mind that multiple clauses within a single rule will only apply if all clauses are met, allowing for different rates for time outside of Contract Hours on a public holiday, for instance.

For example purposes only, below we walk through the creation a new wage condition. To create a new condition, make sure your user has access to edit Wage Agreement & go to Setup > Wage Setup. Select the agreement you are adding to, and click the Conditions tab:

At the bottom you'll see an option to Create new.

Name the condition & select Overtime Rate.

Select this option from the list

A typical Outside Contract Hours condition/rule may apply only for specified dates or stop applying after a given date. In most cases, the **Apply only for the dates** fields should be left blank.

When you've configured this, you'll need to make sure you add it to any applicable classifications.

To add this extra rule onto any of your existing overtime conditions instead of creating new ones, you can edit the overtime conditions you need & add this extra rule.

Note: In this situation, you can create this rule to only apply from a certain date, so it doesn't affect any historical data:

Setup contract hours on Employees profile

All changes to Contract Hours must be agreed to by both parties within Workforce Management. Depending on the package selected, this could mean that all Contract Hours changes must be initiated by the manager/ employer and agreed to by employees.

The processes are largely the same for whoever is requesting the changes: the restrictions that apply according to the "active" options object still apply regardless of who is creating the changes, and all changes must be agreed to AS-IS (ie, without adjustments) by both parties before they're deemed to be

"Agreed". These changes must be agreed to before they start (or several days in advance, according to the configuration).

Viewing existing Agreed Contract Hours

The employee's Contract Hours page shows the current (or selected) Agreed Contract Hours, if one is present. It also shows any pending changes and allows the viewing of declined or expired changes.

Changing Contract Hours

Creating a new set of Contract Hours requires at least two steps. The first is the creation of the change request, which must have a start date, may have a finish date, and may have notes for the communication process. It may also have Contract Hours data for each weekday.

The actual columns will be shown depending on the selected columns from the active options for this employee. These may change depending on the start date of the valid period if this changes the employment status or agreement of the employee.

Whatever options are in-place at the start of the employee's Contract Hours will be used.

On any given weekday, an employee may be marked as "Not working", or have their Contract Hours defined for that day. As mentioned above, the different restrictions based on the options configuration will change which columns are available and/or required. Some values may be automatically calculated (the required shift length in strict mode).

When submitted, employees will get notifications.

Ending Contract Hours

If a contracted employee no longer needs to have contract hours applied, an end date can be set which prevents contract hours related rules and restrictions from applying from the specified end date. This can be useful when part-time employees that are currently on a set contract are moved to full-time and no longer need contract hours restrictions to be applied.

Ending contract hours doesn't need to be approved by employees.

How do employees agree to Contract Hours changes?

When the data is saved, it moves into a state that requires the other party (For example, the employee themselves if it was a change initiated by the manager/employer) to agree to it.

If the contract hours are agreed to by both parties, they're "committed", and will override any existing agreed contract hours for the period which they're valid. This could replace any existing objects or split or truncate them. For instance, it could be possible to have a change of Contract Hours that applies for the 6-week period of school holidays over summer as an employee changes their work pattern due to parenting responsibilities.

Notifications will be generated for pending change requests (and adjustments that are made). These will appear in the phone app for logged in users.

When an agreement to change Contract Hours is completed, the employee's member's availability for the period of the Contract Hours is automatically updated to ensure that they're available for the entirety of their Contract Hours.

Scheduling with contract hours

Employees without Contract Hours

If an employee member should have an Agreed Contract Hours: this could mean they're on an Agreement with one or more Contract Hours rules, or there is a matching "Contract Hours Options" for

their employment status and/or agreement. They'll not be able to be scheduled until they have an Agreed Contract hours that is valid for that date.

The schedule also can't be published under these circumstances, which could result when Contract Hours are enabled for a period of time after the schedule has been created, but before it has been published.

Employees scheduled outside of their Contract Hours

When an employee is scheduled, and an Agreed Contract Hours is found that applies to that date, the shift is compared to the Contract Hours. If the shift falls "outside" of the Contract Hours, then this will trigger any rules that need to apply.

The shift will also be tagged as "Outside Contract Hours" in the Workforce Management.

Employees who are working outside of their Contract Hours are grouped with Unavailable employees and appear further down the list of employees in the "Employee Selection" dialog boxes.

When the schedule is published, the user is notified that employees scheduled outside of contract will receive a notification to agree to work this shift, otherwise known as an agreed variation.

Employees working less than the Minimum Hours

When an Agreed Contract Hours contains a minimum length (or the Agreement under which an employee is paid contains a Minimum Hours amount), then any shifts that fail to meet these minimum hours requirements is "topped up" to the largest matching minimum hours. That is, if an employee is employed under an agreement that indicates they're permitted to work a minimum of 3 hours, but their Contract Hours state they're guaranteed a minimum of 4 hours, any shift they work that is less than 4 hours would be eligible for a "top-up" payment as if they had worked the 4 hours.

This type of payment is shown in the Workforce Management interface. It may result in a shift longer than their worked hours being sent to a payroll system to ensure that the minimum payment is applied.

Top-up hours do count toward monetary values for calculating KPIs but doesn't count toward number of hours for the same. That is, top-up hours affect Labor Cost Percentage, but don't affect Productivity.

Agreed variations

Most agreements that relate to Contract Hours have some concept of Variations. These are the mutually agreed non-permanent changes to Contract Hours for a single day. This lets employers/managers and employees use Workforce Management to store their mutual agreement to the changed hours that an employee works.

An agreed Variation will change the effective Contract Hours on that day, for Outside Contract Hours (or potentially the Minimum Hours to pup value, but this can't reduce that value below the Agreement Minimum Hours).

Any subsequent agreed Variation on the same date will result in the existing variation becoming Superseded. It's still visible within the system (for auditing purposes) but won't affect shifts on that date.

Publishing schedules with Contract Hours Violations

When a schedule is published that has any employees who are scheduled outside of their contract hours, Workforce Management will first show a summary of these employees. The process of publishing the schedule will then result in the generation of a Pending Variation for each employee, allowing them to agree or decline to the variation. If they agree, it will alter the effective Agreed Contract Hours on that date, and potentially remove their eligibility for overtime.

Employees are under no obligation to agree to Variation, and if they fail to agree prior to the end of the shift, the effect is the same as if they had declined it.

Swap/Drop/Fill Variations

When a "Swap" is initiated by two employees using the phone app, this is taken to mean that both employees are requesting a variation for their contract hours on the day or days of the shifts. The manager agreeing to the swap is deemed to be the other end of the agreement, and both employees will have an Agreed Variation created within Workforce Management.

When a Drop or Fill is initiated, employees will be able to select if they agree to a variation on that date, and that data will be used to calculate the differences in cost for the shift. When the drop or fill is completed, the agree/decline status to the Variation will result in the creation of a Variation with the same status.

Reporting

There are several different reports that may be used to gather data about how the Contract Hours features have been used.

Agreed Contract Hours Report

This report shows, for a given date, exactly what Contract Hours objects are in operation.

It shows a line for each employee, on each weekday that have any Contract Hours. It doesn't show days that they don't have Contract Hours and doesn't show employees who don't have any Contract Hours.

Contract Hours Variations Reports

There are reports for each type of Variation: Pending, Agreed, Declined and Superseded.

All variations matching the selected type that are on any of the days of the report will be shown, showing both the varied hours and the original agreed Contract Hours on that day.

Changed Contract Hours Report

Rather than showing the data that affects a given date or date range, this report instead shows all the agreements to Contract hours changes that were made during a given period. If a manager requests an employee change their agreed contract hours effective July 4th, but this is agreed to on June 22nd, then this report will use that date to collect data.

This report shows a line per agreed change, with a sub-line for each weekday within that period.

The CSV version of this report provides a structured breakdown of the agreed changes (each field is provided, rather than only a textual representation).

Pending Contract Hours Changes Report

This report shows all Pending Contract Hours Changes at the company that affect the given date range (which defaults to today onwards).

It's also possible to view expired changes (those that weren't agreed to or declined before they came into effect).

Pending Contract Hours Variations Report

This report shows all currently Pending Variations. It doesn't allow selecting a date range, as only variations from today onwards are deemed to be "Pending".

This report shows a single line for each variation, with both the varied and original contract hours visible.

Scheduling colors reference sheet

Shift colors

If you've colored the daily or weekly scheduling views by 'Availability', you'll notice 4 different colors shifts can be.

- Green
- Blue
- Red
- Yellow

You can enable this option by clicking 'Options' and selecting 'Availability' from the 'Shift color' option.

Green

Green shifts mean the shift is within the employee's availability, and there are no issues found with the shift.

Red

Red usually means the shift is outside of the employee's availability.

It can also mean another issue with the shift - either the employee is on leave, the shift takes them above their "maximum hours", there is a clash with another shift they're working - such as scheduled elsewhere at the same time, or they're no longer employed.

Orange

Orange indicates something that may need your attention - they might be scheduled to work a split shift, have another shift on that day but at another location, or the shift is outside of their Contract Hours and has not yet been agreed to.

Blue

Blue shifts let you know the employee has hit their weekly 'Target hours'.

Shift Icons

You may notice some status icons which appear on some shifts. They are:

- **Red clock icon** – Indicates overtime will apply to this shift.
- **Arrow pointing up icon and Minimum Hours top-up text** – Indicates this shift is less than the employee's 'minimum hours' and will be paid a top-up.
- **Warning icon and Outside Contract Hours text** – Indicates this shift is outside of the employee's contract hours.

Tip Pooling

Tip Pools can be used to automatically pool tips based on location, job, or group.

This feature is available with some integrations already in Workforce Management (WFM). If you'd like to confirm if your POS or Payroll integration works with WFM tip pooling, contact your NetSuite account manager.

Tip Pool Overview

The overview window for each tip pool report or calculation shows important information about the pool. The page varies depending on if the pool is aggregated by day or by period.

The overview window includes the following details:

- Pool name
- Period
- Created at
- Created by
- Pool calculations
 - **Unallocated** – Contains tips that couldn't be divided evenly among staff due to rounding/the way the Tip Pool is configured
 - **Total** – Contains tips that couldn't be divided evenly among staff due to rounding/the way the Tip Pool is configured

Important: Staff tips are rounded down to two decimal places. Unallocated and totals tips for a day or period, however, aren't rounded down. Using the exact numbers ensures the accuracy of the imported data and any card processing fees.

- Settings used
 - Locations
 - Tip sources
 - Cash adjustment
 - Staff for pool
 - Aggregated by
 - Distributed by
 - Jobs for distribution
 - Tip types for pool
 - Card processing fee

Creating a Tip Pool

Follow the procedure below.

To create a tip pool:

1. Go to Workforce Management.
2. Go to Setup > Pooling.
3. Click **+ New Pool**.
The New Tip Pool form appears.
4. In the **Name** field, enter the name for the tip pool.
5. From the **Pool By** field, select how you want to create the pool.
 - **Group**– Select this option if you want to create a pool based on a predetermined group setup in WFM.
 - **Location**– Select this option if you want to manually select the locations in a pool. If you want to pool locations separate from each other you'll need to configure a pool for each location.
6. If you're pooling by group, from the **Group** field, select the predetermined group.

7. If you're pooling by location, select the locations.
 - a. From the **Available Choices** panel on the left, select the locations where you want the tip pool to apply.
If you want to select all locations, click **Choose All**.
 - b. To move the chosen locations to the **Chosen Items** panel on the right, click the blue right arrow symbol at the middle of the panels.
If you want to clear your chosen items, click **Clear All**.
8. From the **Aggregate by** field, select how you want to group the total tips and approved hours.
 - **Day** – Select this option if you want to group the totals for each day. Tips distributed daily are based on the hours approved for that day.
 - **Period** – Select this option if you want to group the totals according to your chosen period. Tips distributed during that period are based on the hours approved for that period.
9. From the **Distribute tips by** field, select how you want to distribute the tips to employees.
 - **Hours worked** – Select this option if you want to distribute tips based on the hours an employee worked compared to the total hours that all employees worked.
 - **Job worked** – Select this option if you want to distribute tips based on the hours an employee worked on a chosen job compared to the total hours that all employees worked on chosen jobs.
10. On the **Jobs** panels, follow the steps in Step 7.
11. If your POS system only provides tip data on card payments, select the tip pool sources from the **Tips for pool** panels. Follow the steps in Step 7.
12. If a fee is taken when processing credit card payments, from the **Card processing fee** field, enter the percentage taken out of the tip pool.
13. Click **Save**.

Creating Tip Pool Reports

After you create your tip pools, you can create reports to run calculations on those pools.

To create tip pool reports:

1. Go to Workforce Management.
2. Go to Shifts > Tip Pooling.
3. Click **+ New**.
A tip pool report setting window appears.
4. From the **Tip pool** field, select the name of the tip pool.
5. In the **Start** field, select the start date for the tip pool calculations.
6. In the **Finish** field, select the end date for the tip pool calculations.
7. In the **Cash adjustment** field, enter any cash tips or other POS corrections. This number can be positive or negative.

For example, the management team has \$200 of tips on hand for distribution to staff. An employee also mentioned that they reported an excess of \$25 in POS tips. The cash adjustment would reflect the additional \$200 and subtract the excess of \$25. On this field, the proper entry is \$175.
8. Click **Create**.

The tip pool report row will appear on top of the table, and WFM will start running the calculations.

When the **Status** column shows a green tick mark for the report, the report is ready for viewing.

9. From the Report column, click **View**.

The Overview window will then appear.

Timesheet Uploader

The Timesheet uploader lets you to import timesheets via a CSV file.

To access the feature, go to Shifts > Upload Timesheet.

When you visit the page, the first thing you'll see is a guideline showing the columns that are required to be included in any CSV files, and a description of what each column is used for.

Select the Template button to download a CSV file with all the column headers prefilled.

Header	Required	Description
Employee	#	A unique identifier for the employee can be their UUID, WFM ID, or their name Name matching format for Employee with no Preferred Name set: <First Name> <Last Name> Name matching format for Employee with Preferred Name set: <First Name> (<Preferred Name>) <Last Name>
Location	#	A unique identifier for the Location the employee worked at, can be the UUID, WFM ID, or the name
Date	#	The date this segment began, all dates in the file must use the same format
Start	#	The start time for this segment, all times in the file must use the same format
Finish	#	The finish time for this segment, all times in the file must use the same format
Segment Type	#	Unpaid break, Break, or Unpaid to indicate a Meal Break or Unpaid Break A unique identifier for the Job the employee worked during this segment, can be the UUID, Adi ID, or the name

When filling out the CSV, it is important to note that all entries in a column must use the same format. For example, if you've decided to use WFM ID to identify your locations, employees, and jobs, all rows in the CSV for these must use the WFM ID.

After you've uploaded your completed timesheet CSV, the system will display a mapping interface that lets you select which columns map to each field in WFM.

If you're using the provided template, the mapped headers will be selected automatically based on the header names in the files. If any headers aren't mapped or are mapped incorrectly, these can be updated [here](#).

In the CSV Header Mappings page, you can map your CSV headers to the WFM headers. The headers you can map include:

- Employee
- Location

- Date
- Start
- Finish
- Segment Type

You can select file formats for:

- Date
- Time
- Identifier

When selecting the header mappings, the system will show the selected file in a Mapping Preview window. This preview is to assist with troubleshooting the mapping of the provided data.

Data is shown against the WFM headers and will show any errors, such as data that isn't formatted correctly based on the selected options.

When all of the headers have been mapped, the system will display an Upload Preview page, which can be used to confirm that the timesheets picked up from the CSV look correct before completing the upload.

Troubleshooting Errors

If any errors are detected while uploading the timesheets, WFM will show how many timesheets were created successfully, and how many failed to be created.

In the event that some timesheets failed to import, selecting the Errors button will download a file showing exactly which rows in the original file caused an error, and what the error was. This helps you check which rows need to be processed again and what needs to be changed in the original file before uploading again. Any timesheets that import correctly should be removed from the file before uploading again, ensure that any subsequent uploads only include timesheets that weren't already imported.

Weekly Timesheets with Workforce Management

When used with Workforce Management (WFM), the weekly timesheets interface is updated with added features. These updates ensure that you can accurately track employee hours and minimize errors.

If you are using weekly timesheets with the Enhanced Timesheets Using WFM Wage Rules feature, see [Enhanced Timesheets Using WFM Wage Rules](#).

If you are tracking hours on weekly timesheets and use both WFM and Field Service Management (FSM) SuiteApps, see [Tracking Weekly Timesheets with WFM and FSM Hours](#).

To ensure that total payroll hours for WFM records show up in weekly timesheets, see [Setting Custom Forms to Show WFM Payroll Hours](#).

Enhanced Timesheets Using WFM Wage Rules

With the Enhanced Timesheets Using Workforce Management Wage Rules feature, employees can enter time in weekly timesheets, preview a breakdown of their hours, and send those hours for approval.

The feature automatically calculates overtime hours based on the employees' entries and the WFM wage rules enabled in the account.

By enabling this feature, organizations can save time, reduce errors, and ensure payroll accuracy with minimal manual effort.

The person in the company who manages WFM and NetSuite, such as a manager or bookkeeper, can configure the time entry options available to employees.

Important: If your employees mostly use weekly timesheets to enter time, you should enable this feature for quicker overtime calculations.

If your organization uses WFM mobile apps to capture time, your employees shouldn't manually enter time in weekly timesheets to avoid discrepancies.

Employee Type

This feature is applicable for **nonexempt employees** who must be paid overtime work, most commonly employees who need to enter work hours and are paid hourly wages.

Benefits of Enhanced Timesheets Using WFM

When enabled, the Enhanced Timesheets Using Workforce Management Wage Rules feature provides the following benefits:

- HR Managers or similar roles
 - Use the **Require Employees to Enter Shift Start and End Times on Timesheets** preference to ensure that employees enter complete shift details. For more information, see [Configuring Enhanced Timesheets Using WFM](#).
 - To aid when approving timesheets, view a breakdown of each employee's total regular and overtime hours for the week. See [Approving Hours in Enhanced Timesheets Using WFM](#).
- Employees
 - When entering time, either enter the shift and break times or enter the number of hours worked. See [Entering Time in Enhanced Timesheets Using WFM](#).
 - The feature automatically calculates regular and overtime hours based on the shift and break times you provide. You don't need to create separate entries for overtime hours.
 - View a graphical display of your total weekly hours color-coded between regular and overtime hours.
- Bookkeepers, payroll managers, or similar roles

Important: The Enhanced Timesheets Using Workforce Management Wage Rules feature is not available for integration with third-party payroll systems.

User Interface of Enhanced Timesheets Using WFM

When the Enhanced Timesheets Using Workforce Management Wage Rules feature is enabled, an updated version of the new weekly timesheets interface is available to WFM customers.

Hours Breakdown

The enhanced UI includes an **Hours Breakdown** section where employees and managers can view time entries and applicable overtime conditions in a calendar.

The following screenshot shows the UI when you view a weekly timesheet with hours entered:

Customer	Payroll Item	Service Item	Department	Class	Sun, 17	Mon, 18	Tue, 19	Wed, 20	Thu, 21	Fri, 22	Sat, 23	Total
Blue Semiconductor	Wage		Sales		0:00	9:00	10:00	11:00	12:00	13:00	0:00	55:00

Hours Breakdown

Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday
17	18	19	20	21	22	23
	Regular Hours 8:00	Regular Hours 8:00	Regular Hours 8:00	Regular Hours 8:00	Regular Hours 8:00	
	OT1.5 day over 8hrs 1:00	Missed Meal Break 1:00	Missed Meal Break 1:00	Missed Meal Break 1:00	Missed Meal Break 1:00	
		OT1.5 day over 8hrs 2:00	OT1.5 day over 8hrs 3:00	OT1.5 day over 8hrs 4:00	OT1.5 day over 8hrs 4:00	
					OT2.0 day over 12hrs 1:00	

Current Week

Regular Hours 40:00	Missed Meal Break 4:00	OT1.5 day over 8hrs 14:00	OT2.0 day over 12hrs 1:00
---------------------	------------------------	---------------------------	---------------------------

On the **Enter Time** table, the approval status colors are as follows:

- **Open** – White
- **Pending** – Light orange
- **Approved** – Green
- **Rejected** – Red

On the **Hours Breakdown** section, time entries are color-coded to distinguish between regular and overtime hours, as follows:

- **Regular Hours** – Blue
- **Overtime Hours** – Lilac

The overtime entries show the name of the corresponding WFM condition that apply to the specific hour or hours.

Time Entry

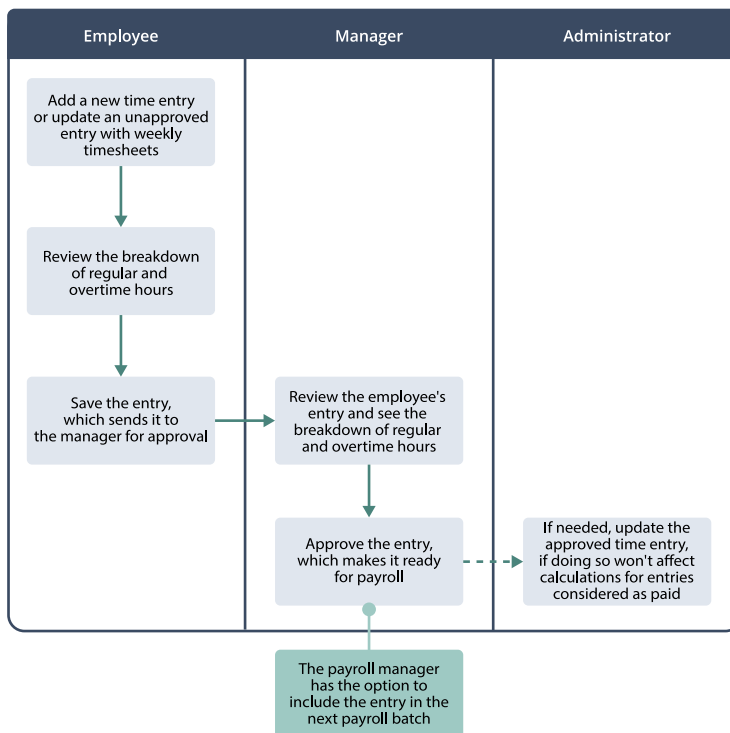

The feature provides additional fields for employees to enter details about their shift.

The following screenshot shows the fields that appear when you click the lower right corner of any day's cell:

For more information, see [Entering Time in Enhanced Timesheets Using WFM](#).

Sample Workflow with Enhanced Timesheets Using WFM

The following diagram shows the steps to a sample business workflow where the Enhanced Timesheets Using Workforce Management Wage Rules feature is enabled:

Automated Calculations with Enhanced Timesheets Using WFM

When automating regular and overtime hour calculations, the Enhanced Timesheets Using Workforce Management (WFM) Wage Rules feature aligns with existing WFM conditions and payroll preferences.

Wage Setup

The feature applies WFM wage agreements or region-based conditions set up in the account. It considers conditions, rules, and parameters that apply to each time entry.

These include default conditions, such as regular hours, standard overtime, extended overtime, and more. As an administrator, you can review existing conditions for employee accounts. For more information, see [Managing Conditions and Rules](#).

WFM Mapping

To ensure proper linking with WFM fields and records, you will need to complete the prerequisites, which includes mapping time bill fields. For more information, see [Prerequisites of Enhanced Timesheets Using WFM](#).

Payroll Items

The feature calculates overtime for timesheet entries that use the **Wage** or **Salary** payroll item types. It excludes overtime calculation for entries that use overtime payroll items.

Before entering time as an employee, to ensure that you're using the correct payroll item, check with your manager, payroll manager, or administrator.

Important: For administrators or roles setting up the feature, the payroll items eligible for automatic overtime calculations include:

- Earning: Wage
- Earning: Salary

The feature automatically calculates regular and overtime hours and will exclude entries that use payroll items associated with overtime. When providing payroll items for employees, don't use ones with overtime pay codes. These may include **Overtime Premium** or **Overtime Straight**.

While employees shouldn't use payroll items associated with overtime codes when entering time, you should still link the appropriate overtime payroll items that an employee is eligible for.

For more information about verifying payroll settings, see [Prerequisites of Enhanced Timesheets Using WFM](#).

Paid Time Processing

Note the following guidelines on how the feature processes time entries that are considered paid.

Entries for the Current Week or Next Payroll Batch

If an employee is included in the next payroll batch, the feature automatically calculates overtime for their approved time entries. The feature ensures that entries with overtime information are compatible and ready for payroll processing.

To allow for accurate calculations, the feature considers these time entries included in the next payroll batch as paid. The following guidelines apply:

- **Employees**
 - Can continue to enter time on the same payroll batch only if they don't overlap with paid time
 - Can't enter time that changes overtime calculations for the batch's paid time
- **Administrators**
 - Can only edit paid time entries if they don't affect the batch's paid time
 - Can't delete the paid time entries
 - Can only approve and edit unpaid time entries for the same payroll batch if they don't overlap with paid time
 - Can't update or delete unpaid time entries if doing so can change overtime calculations for the batch's paid time

After time entries are included in a payroll batch, neither employees nor administrators can make changes that would affect overtime calculations for those entries. Only new, nonoverlapping, and nonimpactful entries can be added or updated.

See the following example:

An office employee has the following approved hours for the week.

Sun, 19	Mon, 20	Tue, 21	Wed, 22	Thu, 23	Fri, 24	Sat, 25
—	8:00	8:00	8:00	—	9:00	—

The company set up the following WFM conditions when overtime applies:

- Every day when, during the day, time worked exceeds 8 hours
- Every day, when, during the week, time worked exceeds 40 hours

The employee is eligible for one hour of overtime on Friday. The payroll manager then runs a payroll batch, and the overtime pay is included in the calculations. The payroll manager notifies employees that the payroll is processed for the week.

The employee, however, remembers the following:

- On Thursday, they worked for 4 hours and was unable to record
- On Friday, they were requested to work for 2 more hours

At this point, the employee can add an entry for Thursday for 4 hours. This entry doesn't overlap with paid time and is saved.

When the employee tries to update the entry for Friday for 11 hours, however, the entry does not save. Adding more hours on that day will affect paid overtime calculations for the week. The employee should discuss how to handle the case with their manager or payroll department.

Entries for Previous Weeks

Any new or updated entries for the previous week are only allowed if they don't overlap with already paid time and won't affect the overtime calculations for the current week's paid time. This condition ensures payroll accuracy and prevents retroactive changes that could impact overtime already processed for the current week.

If an employee included in the next weekly payroll batch has approved time entries for current and previous weeks, the following guidelines apply:

- Employees
 - Can continue to enter time for the previous week only if they don't overlap with paid time
 - Can't enter time for the previous week if doing so can change overtime calculations for the current week's paid time
- Administrators
 - Can approve and update unpaid time entries for the previous week only if they don't overlap with paid time
 - Can't delete unpaid time entries for the previous week if doing so can change overtime calculations for the current week's paid time

After an employee's time entries for the current week are approved and included in the next payroll batch, both employees and administrators have limited ability to add or change time entries for the previous week.

As a best practice, employees should always ensure that entries from the previous week are approved before entering time for the current week. To effectively manage employee time entries, see [Best Practices and Limitations of Enhanced Timesheets Using WFM](#).

Best Practices and Limitations of Enhanced Timesheets Using WFM

Know more about the best practices and limitations when using the feature.

Best Practices for Entering Payroll Hours

When entering payroll hours, keep these in mind:

- Approved time entries from the previous week may be used to calculate overtime for the following week. Before adding time entries for the week, ensure that entries from the previous week are approved. See [Automated Calculations with Enhanced Timesheets Using WFM](#).
- Before entering time, ensure that you're using the correct payroll item type that your supervisor, payroll manager, or administrator provided.
- Ensure that there are no overlapping hours across your entries for the week.
- Ensure that new or updated entries wouldn't overlap nor change overtime calculations of paid time for current or previous weeks.
- Before saving your entry, verify that the details are correct and complete. After an entry is approved, only employees with the Administrator role can update them.

For more information about entering time with the feature, see [Entering Time in Enhanced Timesheets Using WFM](#).

Best Practices for Approving Hours

When approving hours, verify time entries before approving. Approved time entries for employees included in the next payroll batch are considered paid. Administrators can no longer edit or delete these entries.

For more information, see [Approving Hours in Enhanced Timesheets Using WFM](#).

Limitations

The following are known limitations.

- Overtime Calculations
 - Overtime calculations are currently available only with time entered on the New Weekly Timesheet interface.
 - Overtime calculations apply only when time entries do not go over the next day. Shifts that cross over to the next day should be divided into two different entries.
 - Overtime calculations are currently unavailable for time entries allocated across multiple projects. This limitation includes entries added using **SuiteProjects** or **SuiteProjects Pro**.
 - Overtime calculations are currently unavailable for time on events, tasks, or calls that were added using the **Time Tracking for CRM** feature.
- Payroll

The feature can only be used with SuitePeople U.S. Payroll. Use with third-party payroll systems is currently unavailable
- CSV File Import

When importing employee timesheets with a CSV file, you won't be able to provide specific shift and break times. The feature can only map the duration and other employee details. For more information, see [Using Enhanced Timesheets with CSV File Import](#).
- WFM Features
 - The feature provides timesheet enhancements only in weekly timesheets. Managing timesheets using WFM features, such as approvals, reporting, and attestation is currently unavailable.
 - The feature can't be used with dashboard widgets in WFM.

Setting Up Enhanced Timesheets Using WFM

This topic explains how employees with the Administrator role can set up the feature.

Follow the steps in the table.

Step	Related Help Topic
1. Log in as an Administrator.	Roles and Accounts
2. Complete the prerequisites.	Prerequisites of Enhanced Timesheets Using WFM
3. Map time bill fields.	Mapping Time Bill Fields for Enhanced Timesheets Using WFM
4. Enable the feature.	Enabling Enhanced Timesheets Using WFM
5. Assign custom role permissions.	Granting Permissions for Enhanced Timesheets Using WFM
6. Configure options for employees.	Configuring Enhanced Timesheets Using WFM

Step	Related Help Topic
7. (Optional) Disable the feature.	Disabling Enhanced Timesheets Using WFM

Prerequisites of Enhanced Timesheets Using WFM

Before you enable the feature, note the following prerequisites.

Prerequisite	Action
The New Weekly Timesheets Interface feature must be enabled in your account.	In NetSuite, enable the feature. See the help topic Weekly Timesheet .
SuitePeople Workforce Management and SuitePeople U.S. Payroll must be part of your implementation.	To learn more, contact your NetSuite account manager. See the following topics: ■ SuitePeople Workforce Management ■ SuitePeople U.S. Payroll
 Important: The Enhanced Timesheets Using Workforce Management Wage Rules feature is not available for integration with third-party payroll systems.	
The SuitePeople Workforce Management (WFM) SuiteApp must be installed in the account.	Install the SuiteApp. See Installing Workforce Management .
WFM is properly integrated in your NetSuite account. This includes ensuring the proper linking of records, fields, and employees.	In WFM, do the following: ■ Import and sync employees. See: □ Importing Employees to WFM □ Employee Sync Settings ■ Verify payroll settings. See: □ Linking Payroll Items in WFM □ Managing Wages for WFM Employees □ Managing Conditions and Rules ■ Verify any other applicable NetSuite integration settings. See Integrating Workforce Management with NetSuite. ■ Map time bill records. See Mapping Time Bill Fields for Enhanced Timesheets Using WFM.

To read about the complete setup instructions for the feature, see [Setting Up Enhanced Timesheets Using WFM](#).

Mapping Time Bill Fields for Enhanced Timesheets Using WFM

In Workforce Management, ensure that you map the NetSuite time bill records with the corresponding locations and jobs in WFM.

To map the time bill fields for the feature:

1. Go to Workforce Management.
2. Go to Setup > NetSuite Integration > Settings.
3. Click the **Records** subtab.
4. Beside the **Timebill** record, click **Fields**.

5. Create a field to map the WFM location to the time bill record.
 - a. Beside the **Location** record, click **Edit**. Note the existing record type and field name.
 - b. Click **Create new field**.
 - In the **Record type** field, enter the current type of the Location record.
 - In the **Field name** field, enter the current type of the Location record.
 - From the **Purpose** list, under Enhanced Timesheets Using Workforce Management Wage Rules, select **Mapping to Location**.
 - c. Click **Submit**.
6. Create a field to map the WFM job to the time bill record.
 - a. Beside the **Job** record, click **Edit**. Note the existing record type and field name.
 - b. Click **Create new field**.
 - In the **Record type** field, enter the current type of the Job record.
 - In the **Field name** field, enter the current type of the Job record.
 - From the **Purpose** list, under Enhanced Timesheets Using Workforce Management Wage Rules, select **Mapping to Job**.
 - c. Click **Submit**.

To read about the complete setup instructions for the feature, see [Setting Up Enhanced Timesheets Using WFM](#).

Enabling Enhanced Timesheets Using WFM

If you have the Administrator role, you can enable the feature required to view an enhanced weekly timesheets interface using Workforce Management (WFM). If you don't have the role, reach out to the person in your company who manages NetSuite.

To enable the feature:

1. Go to Setup > Company > Enable Features.
2. On the **Employees** subtab, go to **Time & Expenses**.
3. Check the **Enhanced Timesheets Using Workforce Management Wage Rules** box.
4. Click **Save**.

To read about the complete setup instructions for the feature, see [Setting Up Enhanced Timesheets Using WFM](#).

Granting Permissions for Enhanced Timesheets Using WFM

Review the procedures in this topic to provide the appropriate permissions to custom roles.

Granting Permissions for Viewing Enhanced Timesheets

If you want to ensure that custom permissions can access the enhanced weekly timesheets with overtime calculations, follow the procedure.

To grant permissions for viewing enhanced timesheets:

1. Go to Setup > Users/Roles > User Management > Manage Roles (Administrator).

2. On the Manage Roles list page, beside the role that needs the permissions, click **Customize**.
3. On the **Permissions** subtab, click the **Transactions** subtab.
4. From the **Permissions** list, select **Track Time**.
5. In the corresponding **Level** column, select **View** or any higher level of permission.
6. Click **Add**. Click **Save**.

Granting Permissions for Setting Feature Preferences

You can assign feature permissions to custom roles to allow employees in non-administrative roles to set feature preferences.

Feature permissions are only available for roles that are assigned the Accounting or Classic center types.

Important: Important: The following procedure assigns full level Accounting Preferences permission to custom roles. It allows the role access to multiple other features, such as intercompany preferences. Assign this role only to the right employees.

To grant permissions for setting feature preferences:

1. Go to Setup > Users/Roles > User Management > Manage Roles (Administrator).
2. On the Manage Roles list page, beside the role that needs the permissions, click **Customize**.
3. On the **Permissions** subtab, click the Setup subtab.
4. From the **Permissions** list, select **Accounting Preferences**.
5. In the corresponding **Level** column, select **Full**.
6. Click **Add**. Click **Save**.

To read about the complete setup instructions for the feature, see [Setting Up Enhanced Timesheets Using WFM](#).

Configuring Enhanced Timesheets Using WFM

After Enhanced Timesheets Using Workforce Management Wage Rules is enabled, the following general configuration options are available.

General Use Case	Configuration	Changes on Timesheets
Most employees have different work schedules	Require employees to enter work and break times	On the time entry window for each day, employees must enter shift and break times
Most employees have the same work schedule	Set default shift and break times	On the time entry window for each day: ■ For shifts that follow the default times, employees only need to enter the number of hours worked ■ For shifts that differ from the default times, employees can enter their actual shift and break times

The person in your company who manages Workforce Management (WFM) and NetSuite, such as a manager or bookkeeper, can adjust these configurations.

To configure enhanced timesheets using WFM:

1. Go to Setup > Accounting > Accounting Preferences.
2. On the **Time & Expenses** subtab, go to **Time Tracking**.
3. Choose the use case that applies to your organization.
 - a. If most employees have different schedules, you may require employees to enter shift and break times. If you choose this option, you cannot enter default shift and break times. See **Step 4**.
 - b. If most employees have the same schedule, you may set default shift and break times. See **Step 5**.
4. If you want to require employees to enter shift and break times, check the **Require Employees to Enter Shift Start and End Times on Timesheets** box.

When you check the box, the entries for default shift and break times are disabled.

Important: This requirement will only be enforced for time entries that may require overtime calculation. Time entries that logically don't qualify for overtime, such as time-offs, are not included.

5. If you want to set default shift and break times:
 - a. Clear the **Require Employees to Enter Shift Start and End Times on Timesheets** box.
 - b. In the **Default Shift Start Time** field, enter the default time when the employee shift starts. This time is used to calculate the cost of the shift when employees are not required to enter their shift start time.
 - c. (Optional) If you do not need to set default break preferences, check the **Disable Break** box. When this field is checked, the **Default Hours Worked Before Break and Default Break Duration in Hours** fields are both set to 0. If needed, employees can still enter their actual break times to override this default.
 - d. In the **Default Hours Worked Before Break** field, enter the default number of hours that an employee has to work before they are required to take a break during their shift. Enter a value greater than 0 but less than 24 in decimal (4.5) or hour and minute (4:30) format.
 - e. In the **Default Break Duration in Hours** field, enter the default length of the breaks that an employee should take after they have worked the prescribed number of hours during their shift. Enter a value greater than 0 but less than 24 in decimal (1.5) or hour and minute (1:30) format.
6. Click **Save**.

To read about the complete setup instructions for the feature, see [Setting Up Enhanced Timesheets Using WFM](#).

Disabling Enhanced Timesheets Using WFM

If you need to uninstall the SuitePeople WFM SuiteApp after enabling this feature, disable this feature first.

Expect the following changes when you disable the feature:

- WFM will stop calculating overtime hours in timesheets.
- Time entries with overtime hours must be manually changed to differentiate between regular and overtime hours. For more information, see [Editing Time Entries After Disabling Enhanced Timesheets Using WFM](#).

- For approved time entries, only employees who have the Administrator role can make these changes.
- For unapproved time entries, employees with or without the Administrator role can make the changes.

Editing Time Entries After Disabling Enhanced Timesheets Using WFM

If you disabled the Enhanced Timesheets Using Workforce Management Wage Rules feature, you must manually change submitted time entries to differentiate between regular and overtime hours.

When editing time entries, note the expected changes and expectations mentioned at the start of this topic.

To resolve the entries, you may choose to do either of the following:

- Edit an existing time entry to represent only the regular hours, then create an additional time entry for the overtime hours.
- Delete the existing time entry. Create two new time entries for the regular and overtime hours.

See the following example:

An employee worked for 11 hours during their shift. They worked for 8 hours as part of their regular shift then had to extend for 3 hours overtime.

While the feature was turned on, the employee submitted an entry for those hours using weekly timesheets. Because the feature automatically calculates overtime hours, they submitted only one entry for 11 hours.

Their manager approved the entry. The company disables the feature. Because the entry was approved, an administrator must manually process the employee's entry to differentiate regular and overtime hours.

They can choose to do either of the following:

- Edit the employee's time entry to show only 8 hours of regular work. Then, create a new time entry to show 3 hours of overtime.
- Delete the single time entry showing 11 hours of work. Then, create two new entries, one for 8 hours of regular work and one for 3 hours of overtime.

To read about the complete setup instructions for the feature, see [Setting Up Enhanced Timesheets Using WFM](#).

Entering Time in Enhanced Timesheets Using WFM

This topic explains how employees can use the weekly timesheets with the Workforce Management (WFM) SuiteApp and the Enhanced Timesheets Using Workforce Management Wage Rules feature.

To ensure that you're following the correct procedure, check with the person in your company who manages NetSuite and WFM. For more information, see the following help topics:

- If you use weekly timesheets without the WFM SuiteApp and the enhanced timesheets feature, see the help topic [Weekly Timesheets](#).
- If you use weekly timesheets with WFM and FSM SuiteApps without the enhanced timesheets feature, see [Tracking Weekly Timesheets with WFM and FSM Hours](#).

Before you start entering time with the feature enabled, note the follow guidelines:

- To see best practices when using the feature, see [Best Practices and Limitations of Enhanced Timesheets Using WFM](#).
- To understand the conditions around paid time entries, see [Paid Time Processing](#).

As an employee, complete the following procedure to enter time in weekly timesheets with the feature enabled.

Administrators may also opt to upload CSV files containing employee time. For more information, see [Using Enhanced Timesheets with CSV File Import](#).

Important: To avoid errors, complete the fields as instructed in the procedure. For instance, if you miss adding a location, the page is unable to calculate for overtime and show the hours breakdown.

To enter time in weekly timesheets:

1. Open Weekly Timesheets.
 - On the Employee Center, go to the **Home Links** portlet. Under **Time Tracking**, click **Weekly Timesheet**.
 - With an Administrator role, go to Transactions > Employees > Weekly Time Tracking.
 - With an Administrator role, go to Transactions > Employees > Weekly Timesheet.
2. In the **Primary Information** section, in the **Week of** field, enter the first day of the week you want to track time for, or click the calendar icon to choose a date.
The page loads a new or existing timesheet.
3. In the **Enter Time** section, complete the required information.
 - a. From the **Payroll Item** list, select the payroll type that applies to the entry. To ensure automatic overtime calculations, select the correct payroll item type that your supervisor, payroll manager, or administrator provided.
 - b. From the **Location** list, select the location where you worked.
 - c. Complete the other columns as prescribed by your company. For more information about filling up the columns, see the help topic [Weekly Timesheets](#).
4. For each day of the week, enter your payroll hours.
 - a. If your company requires you to enter shift and break times, click the day of the week. Enter values for the following fields:
 - Shift Start Time
 - Shift End Time
 - Break Start Time
 - Break End Time
 - (Optional) Memo

The total number of hours shown for the day is calculated by subtracting the length of the break from the length of the shift.
 - b. If your company has set up default shift values, you are not required to fill in each field mentioned. Instead, enter the number of hours you worked for the day.
However, if your actual hours are different from the default values, enter the correct times in the fields.

Important: The feature does not calculate overtime for time entries in the following scenarios:

- Entries that go over the next day
- Entries allocated across multiple projects, including entries adding using **SuiteProjects** or **SuiteProjects Pro**
- Initial entries added using the **Time Tracking for CRM** feature

For more information about feature limitations, see [Best Practices and Limitations of Enhanced Timesheets Using WFM](#).

5. Review the **Hours Breakdown** section. When you enter your hours for each day, this section automatically displays time entries color-coded to distinguish between regular and overtime hours.
6. On the **Current Week** section, review the total hours for regular and overtime work.

Important: To keep your timesheets accurate and avoid errors, ensure that there are no overlapping hours across your entries for the week. Entries you add shouldn't overlap nor change overtime calculations of paid time for current or previous weeks.

7. Click **Save**.

The timesheet is sent over to your manager for approval. On the **Primary Information** section, the status on the **Approval Status** field shows as **Pending Approval**.

Using Enhanced Timesheets with CSV File Import

As an Administrator, you can upload CSV files to import employee time.

To import CSV records, prepare the CSV file. Refer to the following table for the sample format.

Date	Employee	Payroll Item	Duration	Location
7/13/2025	John Adams	Wage	10:00	Warehouse - East Coast
7/14/2025	John Adams	Wage	12:00	Warehouse - East Coast
7/15/2025	John Adams	Wage	14:00	Warehouse - East Coast

After preparing the file, complete the procedure.

To use enhanced timesheets with CSV files import:

1. Go to Setup > Import/Export > Import Tasks > Import CSV Records.
The Import Assistant opens.
2. On the Scan & Upload File page, update the following fields.
 - **Import Type** – Employees
 - **Record Type** – Track Time
3. On the **CSV File(s)** section, choose **One File to Upload**.

4. Click **Select**, then find the CSV file you prepared. Click **Next**.
5. On the Import Options page, on the **Data Handling** section, choose your preferred handling. Click **Next**.
6. On the Field Mapping page, verify that your fields are mapped to NetSuite fields as shown in the following table. Click **Next**.

Your Fields	NetSuite Fields
Date	Time: Date
Employee	Time: Employee
Payroll Item	Time: Payroll Item
Duration	Time: Duration
Location	Time: Location

For more information, see the help topic [Step Four Field Mapping](#).

7. In the Save mapping & Start Import page, complete the required fields. For more information, see the help topic [Step Five Save Mapping & Start Import](#).
8. Click the save or run button corresponding to your desired option.

Approving Hours in Enhanced Timesheets Using WFM

This topic explains how managers, administrators, and other configured roles can approve time entries that employees submitted.

Using SuitePeople U.S. Payroll and Workforce Management, approved time entries are used to process payroll for employees.

Approved entries can only be edited by employees with the Administrator role. Regular employee roles can edit entries only if they're not yet approved.

Approved time entries for employees included in the next payroll batch are considered paid. Administrators can no longer edit or delete these entries.

Keep best practices in mind when approving hours. For more information, see [Best Practices and Limitations of Enhanced Timesheets Using WFM](#).

You can approve time through the following options:

- **Use the Approve Time page** – For more information, see [Approving or Rejecting a Time Transaction](#).
- **Use the Weekly Timesheets page** – You should approve time on this page because doing so shows you the visual breakdown of regular and overtime hours for the submitted timesheet. Refer to the procedure that follows.

To approve payroll hours using weekly timesheets:

1. Open the Approve Timesheets page.
 - With an Administrator role, go to Transactions > Employees > Weekly Time Tracking.
 - On the Employee Center, go to the **Home Links** portlet. Under **Time Tracking**, click **Approve Time**.
2. On the Approve Timesheets page, locate the name of the employee whose time you want to approve.

3. From the **Period** column, click the specific pay period you want to review.
The submitted timesheet opens.
4. Review the **Hours Breakdown** section. This section automatically displays time entries color-coded to distinguish between regular and overtime hours.
5. On the **Current Week** section, review the total hours for regular and overtime work.
6. On the **Enter Time** section, choose to approve time entries one at a time or all at once.
 - To approve all pending work hours, click Approve All Pending.
 - To approve individual time entries, click the entry for the day. Click Approve.

Tracking Weekly Timesheets with WFM and FSM Hours

To help you accurately track employee hours, weekly timesheets contain added features when used with Workforce Management (WFM) and Field Service Management (FSM).

If you're using WFM with the Enhanced Timesheets Using Workforce Management Wage Rules feature, see [Enhanced Timesheets Using WFM Wage Rules](#).

Weekly Timesheets Features with WFM and FSM

When used with both the WFM and FSM SuiteApps, the Weekly Timesheets page shows the following changes:

- On the **Enter Time** subtab, on both **Edit** and **View** modes, the row showing the daily total hours under the table header is removed.
- On the same subtab, on **View** mode, the removed row is replaced with the following totals appearing at the end of the list:
 - **Service Hours Total** – Shows the total number of hours of field service time sourced from FSM and other sources for each day of the week.
 - **WFM Payroll Hours Total** – Shows the total number of payroll hours sourced only from WFM, which are checked in the **Created by SuitePeople WFM** column, for each day of the week.

To view total WFM and FSM hours, open the Weekly Timesheets page. For more information, see the help topic [Weekly Timesheets](#).

Guidelines for Tracking WFM and FSM Hours on Weekly Timesheets

If you're tracking weekly hours on weekly timesheets and use both WFM and FSM, review the following guidelines:

- If you're entering hours in WFM, avoid adding hours manually on weekly timesheets. To ensure that the total calculations can accurately represent the time employees worked, enter hours in WFM and only view the total hours in weekly timesheets.
- Use the FSM mobile application to log field service hours. This ensures you capture accurate and complete service time records.
- The **Created by SuitePeople WFM** column on weekly timesheets is available by default when you have WFM installed. This column is checked when the line item is sourced from WFM. Checked items count toward the **WFM Payroll Hours Total** row.

If the column doesn't appear, you can check that the custom entry form for time tracking is set properly. For more information, see [Setting Custom Forms to Show WFM Payroll Hours](#).

Setting Custom Forms to Show WFM Payroll Hours

When you install the Workforce Management (WFM) SuiteApp, the Created by SuitePeople WFM column becomes available by default, including on weekly timesheets.

If the column doesn't appear, you can check that the custom entry form for time tracking is set properly.

 **Warning:** The **Created by SuitePeople WFM** field is a component used across WFM to calculate total payroll hours accurately. For records coming from WFM, ensure that the **Show** box is always checked.

Don't clear the box. If you clear the box, the WFM Payroll Hours Total count won't be available in weekly timesheets.

You don't need to verify this box for records coming from FSM.

To set custom entry forms to show WFM hours:

1. Open the custom form used for tracking time. For more information, go to [Creating Custom Entry and Transaction Forms](#)
2. On the Custom Entry Form page, click the **Fields** subtab.
3. Beside the **Created by SuitePeople WFM** field, check the **Show** box.
4. Click **Save**.

SuitePeople Workforce Management Phone App

WFM Phone App

 **Important:** Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

Employees can view their shifts and receive shift notifications in the SuitePeople Workforce Management phone app. The app is called **NetSuite Workforce Management** in the App Store for iOS and the Google Play store for Android.

In the SuitePeople Workforce Management phone app, employees can do the following:

- Receive notifications when their scheduled shifts are published or changed
- View their own published scheduled shifts
- View other published scheduled shifts at locations they work at
- Receive notifications for open shift trades

If employees have additional features enabled in their account, they can do the following:

- Clock in and clock out in mobile timesheets
- Request a shift drop
- Request a shift swap
- Confirm scheduled shifts
- View approved shifts
- Accept or dispute approved shifts

In the SuitePeople Workforce Management phone app, managers can do the following:

- Receive notifications when their scheduled shifts are published or changed
- View their own published scheduled shifts
- View other published scheduled shifts at locations they work at
- Receive notifications for open shift trades
- Manage employee shift trades and notify affected employees
- Initiate and manage a fill shift request

If managers have additional features enabled in their account, they can do the following:

- Clock in and clock out in mobile timesheets
- Request a shift drop
- Review and manage shift drop requests
- Request a shift swap
- Review and manage shift swap requests
- Confirm scheduled shifts

For more information about SuitePeople Time Clock, see the following topics:

- [Quick Start Guide for Employees](#)
- [Quick Start Guide for Managers](#)
- [Viewing Shifts](#)
- [Filling Shifts](#)
- [Dropping Shifts](#)
- [Swapping Shifts](#)

- [Attestation](#)
- [Checking that the SuitePeople Workforce Management phone app is up to date](#)
- [Offline Mode](#)
- [Shift Confirmation](#)
- [Paid Rest Breaks for the SuitePeople Workforce Management Phone App](#)

Minimum Requirements for WFM Mobile Apps

Following are the minimum requirements for mobile devices to run **NetSuite Workforce Management** apps.

Requirement Type	Details	Related Link
Hardware Requirements	- Global Positioning System (GPS) - Front-facing and rear-facing cameras with autofocus	—
Software Requirements	- Android version 12.0 or later  Important: As of February 18, 2025, support ends for SuitePeople Workforce Management Time Clock and SuitePeople Workforce Management mobile applications on Android 11 and earlier versions. For more information, see SuitePeople Workforce Management on Unsupported Android Devices. - iPad OS version 13 or later	NetSuite Workforce Management for Android NetSuite Workforce Management for iOS

Quick Start Guide for Employees

 **Important:** Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

To log into the SuitePeople Workforce Management phone app, use the same login information you use to log into SuitePeople Workforce Management online.

Navigating the SuitePeople Workforce Management Phone App

After you log in, the SuitePeople Workforce Management app shows you all the published shifts for today.

You can filter by location or show only your shifts on one page.

The dates show each day of the month and week. You can move forward or back and pick any day you want to see shifts for. Click the **Today** button to jump to the current day.

In the navigation bar, you'll see the time clock if your company and location have it turned on.

To view your shifts:

1. Click the icon on the top right of **Scheduled Shifts**.

2. Select **Only My Shifts**.

Notifications

A number icon appears on your profile tab if you have notifications. To view them, click on the profile tab and then the number icon at the top right.

If any changes are made to the schedule during the week, you'll receive a notification for them. Greyed out shifts means you're not working them. When your manager publishes the schedule again, your shifts will appear in black.

You will also receive notifications for any open shift trades, as well as if you are late for your shift or need to clock in.

For information about the quick start guide for managers, see [Quick Start Guide for Managers](#).

Quick Start Guide for Managers

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

To log into the SuitePeople Workforce Management phone app, use the same login information you use to log into SuitePeople Workforce Management online.

For more information about the quick start guide for managers, see the following topics:

- [Navigating the SuitePeople Workforce Management Phone App](#)
- [Viewing Employees' Clock-in and Clock-out Events](#)
- [Mobile Time and Attendance](#)

Navigating the SuitePeople Workforce Management Phone App

After you log in, the SuitePeople Workforce Management app shows you all the published shifts for today.

You can filter by location, or show only your shifts on one page.

The dates show each day of the month and week. You can move forward or back and select any day you want to see shifts for. Click the **Today** button to jump to the current day.

In the navigation bar, you'll see the time clock if your company and location have it turned on.

Viewing Employees' Clock-in and Clock-out Events

If an employee hasn't clocked in at the start of their shift, you'll get a notification. In the Shifts view, you'll see a red exclamation point and a note showing how many minutes late they are.

When an employee clocks in, a clock icon shows up next to their shift. The clock-in time appears in black, and the scheduled finish time shows up in grey.

When the employee clocks out, the clock-out time appears in black and replaces the scheduled finish time. These times stay visible for 15 hours, then go back to showing the scheduled times.

Mobile Time and Attendance

If Mobile Time and Attendance is activated for your account, employees see **Time Clock** on the bottom menu bar.

When an employee clocks in, the Time Clock shows their next shift as an option to clock in to. If that's the shift they've come in for, they can tap **Punch-In**. If they've been called in for an unscheduled shift or need to work at a different job or location, they can tap **Change** to pick the new location or job.

If they're clocking in manually, employees see a list of locations they can clock in to. They just select a location and click **Next**.

Employees will then select a job from a list of eligible jobs for this location and then select **Punch-In**.

They'll see the following after they've successfully clocked in:

- The current date and time
- The **At Location** option or the **Away from location** option
- The location and job of the clocked in shift
- The **Start Break** option
- The **Punch Out** option

At Location means the employee clocked in within 50 meters of the job site's address. You can check this during approvals by clicking the employee's timesheet shift in Weekly View. **Away from Location** means they clocked in off site, based on the address set in SuitePeople Workforce Management.

When employees take an unpaid break, they can click **Start Break** in the app. When they're ready to return, they click **Finish Break** to end the break and start the next part of their shift.

For information about the quick start guide for employees, see [Quick Start Guide for Employees](#).

Viewing Shifts

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

When you're logged in, you'll land on a page that shows all today's published shifts and includes:

- Clicking the icon at the top right displays different options for viewing shifts. For example, you can filter by location, or view only your shifts.

- The dates show each date of the month and week. You can select any days you want to view shifts for and click the **Today** button to return to the current day.
- The navigation bar is located at the bottom of the app. You'll only see Time Clock if your company and locations have it set up. The tabs from left to right are: published shifts, Time Clock (if set up), trades, notifications, and your profile.
- A list of published shifts.

For information about filling shifts, see [Filling Shifts](#).

For information about dropping shifts, see [Dropping Shifts](#).

For more information about swapping shifts, see [Swapping Shifts](#).

Viewing Employee Clock-in and Clock-out Events

As a manager, you'll get a notification if an employee's shift starts and they haven't clocked in yet.

If employees are late to clock in, the app shows you how late they are with the minutes in red and an exclamation point next to their shift.

When they're clocked in, a clock icon appears next to their shift. The clock-in time appears in black and replaces their scheduled start time, and the scheduled finish time appears in grey.

When the employee clocks out, the clock-out time appears in black and replaces the scheduled finish time. These punch times stay visible for 15 hours, then return to showing the scheduled times.

Filling Shifts

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

When employees can't make it to their shifts, managers can fill shifts quickly in the SuitePeople Workforce Management phone app.

To fill a shift from the SuitePeople Workforce Management phone app, a manager can click on the scheduled shift they want to fill then click the **Fill** button. From here, they'll see anyone else who can work that job at that location, along with any associated cost difference for filling that shift.

The manager can click on employees to notify them and ask if they can fill the shift, or assign it directly.

Instead of notifying individuals, the manager can notify everyone by clicking the **+** button at the bottom right. The manager will receive notifications when employees offer to pick up the shift and can choose who to assign it to.

For information about viewing shifts, see [Viewing Shifts](#)

For information about dropping shifts, see [Dropping Shifts](#).

For more information about swapping shifts, see [Swapping Shifts](#).

Dropping Shifts

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

If the **Drop Shifts** feature is enabled in your account, employees can start a drop shift request in the app if they can't make their shift.

To drop a shift, the employee selects their scheduled shift in the app and selects **Drop**. They'll be asked to enter a reason and told the shift is still theirs until the manager approves the drop. After entering the reason, they click **Request**.

The manager then receives a trade notification in the app. They can review the reason and either deny the request by clicking **No** or pre-approve the drop and find a fill-in by clicking **Fill**.

Note: By default, the **Drop Pre-Approval** feature is enabled. If this feature is off, managers don't need to approve the dropped shift. The dropped shift will automatically send a request to all available employees. When someone picks up the shift, the manager will be notified to approve or deny the change. You can change this by going to **Setup > Adi phone app**.

For information about viewing shifts, see [Viewing Shifts](#)

For information about filling shifts, see [Filling Shifts](#).

For more information about swapping shifts, see [Swapping Shifts](#).

Swapping Shifts

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

To start a shift swap, the employee selects their scheduled shift in the app and clicks **Swap**. They'll be asked to enter a reason and told the shift is still theirs until the manager approves the swap.

After entering a reason, they click **Request**. Then, employees who can work that job at that location are notified in the app. If someone wants to offer a shift to swap, they click the trade notification and the swap icon to offer a shift in return.

The employee selects the shifts they want to offer and then clicks **Offer**. The original employee receives notifications in the app when others make swap offers. They can click the Trade icon to see their open trades and click the number tag to see swap options.

After looking over the options, they select the shift swap they want to accept and click **Accept**. When the swap is accepted, the manager receives a notification in the app. They can see the proposed swap, any cost difference, and the reason for the swap, then approve it by clicking **Yes** or deny it by clicking **No**.

If denied, the employee is notified and can choose to pick up a different shift. The manager will receive a new notification to approve or deny the next swap request.

For information about viewing shifts, see [Viewing Shifts](#)

For information about filling shifts, see [Filling Shifts](#).

For information about dropping shifts, see [Dropping Shifts](#).

Viewing Approved Hours in the SuitePeople Workforce Management Phone App

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

Employees can see their worked shifts that have been approved by their manager in the SuitePeople Workforce Management phone app. They can use the **Attestation** feature to accept or dispute approved hours.

To view approved hours:

1. Open the SuitePeople Workforce Management phone app. The **Scheduled Shifts** screen is displayed by default.
2. If your manager approved your shifts, a red notification badge appears on the **Shifts** icon. You'll also receive a notification to your general notifications folder in your profile. Click on the Shifts tab.
3. Select the **Shifts** tab.
4. Click **Approved Hours** in the upper right-hand corner.

To compare approved hours to your timesheet and scheduled shift, click the chevron arrow icon. The following screenshot shows this view:

Attestation

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

The **Attestation** feature allows employees to accept or dispute their approved hours with their manager.

To enable the Attestation feature, contact your account manager.

Navigating to the Attestation feature in the SuitePeople Workforce Management Phone App

1. When your manager approves your shifts, you'll see a red badge on the Shifts icon in the lower left corner. This means you have shifts that need to be attested.
2. Click on the Shifts tab then Approved Hours in the upper right-hand side.

Note: The red notification badge will have a number associated with it. This informs you about how many shifts that need to be attested by you.

3. After you click Approved Hours, the approved shifts you need to accept or dispute will load. These are the shifts your manager approved in the weekly schedule view.
 - To view more details about a shift or to compare it against your timesheet and scheduled shifts, click the chevron arrow icon to expand the details about the shift.

Navigating to the Attestation Feature on SuitePeople Time Clock for Android and iOS tablets

1. Enter your PIN to log into SuitePeople Time Clock.
2. Click the **Shifts** icon to view your approved shifts.

Note: If there's a red notification badge on the **Shifts** icon, it tells you how many approved shifts are waiting to be attested.

3. To view more details about a shift, click the arrow icon. This shows the related timesheet and scheduled shift.

For more information about attestation, see the following topics:

- [Attesting Approved Shifts](#)
- [Preventing Clock-in Events with Attestation](#)
- [Attestation Feature in SuitePeople Time Clock](#)
- [Attestation Feature in the SuitePeople Workforce Management phone app](#)

Attesting Approved Shifts

Employees can accept or dispute approved shifts by starting a chat with their manager. Attesting approved shifts works the same way in both the SuitePeople Workforce Management phone app and SuitePeople Time Clock for iOS and Android tablet.

Accepting an Approved Shift

To accept the approved shift, click **Accept**. The dollar sign icon on the shift will turn green.

After the employee accepts their approved shift, a green checkmark icon appears on that shift in the weekly schedule view.

Disputing an Approved Shift

To dispute an approved shift, click **Dispute**.

After the employee enters a reason for the dispute and clicks **Create**, a chat with your manager opens and your reason is shown.

A dispute appears as a red approved shift in the weekly schedule view.

The manager can click **View Disputes** in the right corner of weekly schedule view to view disputed shifts.

Preventing Clock-in Events with Attestation

With this advanced Attestation feature, employees have to accept or dispute all approved shifts before they can clock in. This makes sure everyone knows their approved hours so any issues can be fixed before the next payroll run.

Attestation Feature in SuitePeople Time Clock

To use the Attestation feature in SuitePeople Time Clock as an employee:

1. Enter your PIN code to log into SuitePeople Time Clock.
2. SuitePeople Time Clock determines there's a required attestation
3. A screen lets you know that an attestation is required.
4. Click **Resolve**.
5. Accept or dispute the shift in the **Approved Shifts** tab.
6. Select the Time Clock icon to clock in successfully.

For information about the Attestation feature in the SuitePeople Workforce Management phone app, see [Attestation Feature in the SuitePeople Workforce Management phone app](#).

Attestation Feature in the SuitePeople Workforce Management phone app

To use the Attestation feature in the SuitePeople Workforce Management phone app as an employee:

1. Open the app and select the Time Clock icon.
2. SuitePeople Workforce Management determines that there is an attestation action required.
3. A screen alerts you that there is an attestation action required.

4. Click **Resolve**.
5. Accept or dispute the shift in the **Approved Shifts** tab.
6. Select the Time Clock icon to clock in successfully.

For information about the Attestation feature in SuitePeople Time Clock, see [Attestation Feature in SuitePeople Time Clock](#).

Checking that the SuitePeople Workforce Management phone app is up to date

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

Sometimes, the SuitePeople Workforce Management (WFM) phone app gets small tweaks or updates that just need you to reload the app instead of doing a full update.

Guidelines for SuitePeople WFM App Updates

Read the guidelines before updating your SuitePeople WFM phone app.

- Refer to the changed names when updating apps.
 - Adiclock is called SuitePeople Time Clock.
 - In the iOS App Store and Google Play Store, SuitePeople Time Clock is called **NetSuite Time Clock**.
- Before updating your WFM apps, ensure that any time punches captured while your device was offline are completely synced with the SuitePeople WFM system.

For more information, see [Syncing Time Punches Captured Offline](#).

Syncing Time Punches Captured Offline

When you're planning to upgrade your WFM apps, first ensure all time punches are synced with the SuitePeople WFM system.

To sync time punches captured offline

1. Before an upcoming upgrade release, turn off automatic updates on your mobile devices.
2. After the upgrade release, complete the following steps.
 - a. Connect your mobile device to a cellular or Wi-Fi connection.
 - b. Open the SuitePeople Workforce Management or SuitePeople Time Clock mobile app.
The app will automatically sync with WFM servers and ensure all employee time are saved, including any recorded while the device was offline.

- c. Download the latest version of the app from the Apple App Store or Google Play Store.
- d. Turn on automatic updates.
- e. Repeat steps A to D for each app.

Checking for app updates

There are two ways to check if your version of the NetSuite Workforce Management phone app is up to date:

- Check for updates in the SuitePeople Workforce Management phone app
- Check for updates in the Google Play Store and the iOS App Store

To check for updates in the SuitePeople Workforce Management phone app:

1. Enter your username and password to log in.
2. Click the **Profile** tab.

The version number and build is displayed under the device menu section.

To check for updates in the Google Play Store:

1. Open the Google Play Store.
2. Search for **NetSuite Workforce Management** and select it from the list.
3. If an update is available, click **Update**. To check the current version of the app, go to the **Read More** section of the app's description.

To check for updates in the iOS App Store:

1. Open the iOS App Store.
2. Search for **NetSuite Workforce Management** and select it from the list.
3. If an update is available, click **Update**. To check the current version of the app, go to the **What's New** section of the app's description.

Offline Mode

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

If the SuitePeople Workforce Management phone app loses Internet connection, the **Offline** badge will appear above your profile icon.

The following functions are still available without Internet connection:

- Viewing your published shifts
- Clocking in and out of your shifts (if this feature is enabled in your account)

After you restore Internet connection, a red loading badge appears above the time clock icon. This indicates that the app is retrieving and sending data.

Shift Confirmation

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

When you publish your schedule and employees receive their shifts, they need to confirm the shifts they can work if you enable shift confirmation.

To confirm a published shift, the employee clicks the grey arrow next to their shift in the SuitePeople Workforce Management phone app. The grey arrow turns green and a green check mark appears on the scheduled shift in the weekly scheduling view on the manager's end.

Paid Rest Breaks for the SuitePeople Workforce Management Phone App

Important: Starting **August 5, 2025**, SuitePeople Workforce Management apps that are not using the latest version will automatically be updated.

To safely upgrade to the latest version and avoid interruptions later, complete required actions before August 5, 2025.

For more information, see [Action Required: Upcoming SuitePeople Workforce Management Mobile App Version Release and Automatic Update](#).

When employees select the **Time Clock** icon, they are taken to the **Time Clock** page.

An employee can start a paid rest break by selecting **Rest**. The app automatically clocks in the employee to their break. If a employee starts an unpaid break, they need to select **Start Break**.

Employees can only take one unpaid break but they can take multiple paid breaks. After the unpaid break is completed, the **Start Break** option is unavailable.

If you have rest breaks enabled and an employee hasn't clocked in for a paid rest break during their shift, the app asks the employee if they've taken a paid rest break.

Answering either **Yes** or **No** will change the message that appears on their timesheet shift in the weekly view.

If the employee selects **No**, their timesheet shift will display a message that says: "Employee has indicated they did not take a Rest Break".

Workforce Management AdiOrg

Important: The AdiOrg feature is available only to accounts where it is already provisioned. It's not included with the current SuitePeople WFM solution.

In Workforce Management (WFM), the AdiOrg feature helps large organizations manage several brands and enables organizations to generate specific reports.

AdiOrg Reports

Refer to the table for the reports available with AdiOrg.

Report	Description
Variance	Lets you sort locations by region and sub-region. It also lets you see your scheduled shifts, actual shifts, the variance of your wage cost, hours worked, sales, units, labor cost percentage, and other KPIs. For more information, see Variance .
Shift	Lets you view rostered or actual shifts from any of your roster units.
Labor	Lets you see a location's worked hours, leave, and total wages broken down by hours, amounts, and rate.
Hourly Breakdown	Lets you view the number of hours worked at a selected location between two chosen dates.

Granting Access to AdiOrg

Access to AdiOrg is managed separately from Workforce Management.

You can grant access to AdiOrg by doing one of the following:

- Grant access to an existing WFM user
- Create a new user

To grant access to an existing WFM user:

1. Go to Workforce Management.
2. Go to AdiOrg > Manage.
3. Select **Create from Adi User**.
4. Select the user you want to give access to and select **Permit access to AdiOrg**.
5. Select the location you want to give them access to.
6. (Optional) Customize the tags assigned to a location.
7. Click **Save**.

The next time the WFM user logs in, they can see a menu item for AdiOrg.

SuitePeople Time Clock

SuitePeople Time Clock is the SuitePeople Workforce Management time and attendance app previously referred to as AdiClock.

The app enables organizations to efficiently measure, record, and manage employee work hours digitally. It is a cloud-based app that syncs employees' clock-in and clock-out times with WFM. During approvals, managers or HR employees can compare employee punch data with their scheduled shifts.

Benefits of SuitePeople Time Clock

Following are some benefits of using the app:

- Employees can clock in and out of shifts directly using an iOS or Android mobile device or a Windows computer.
- Organizations can accurately track employee time. SuitePeople Time Clock automatically records start or end times, breaks, and meal periods. These features reduce manual entry errors and buddy punching.
- Managers and employees experience streamlined calculations for wages and overtime. The app feeds accurate time and attendance data directly into approval processes.
- By accurately tracking work hours and breaks, the app helps organizations comply with labor laws and company attendance policies.
- Managers and HR employees gain real-time visibility into attendance, absences, and labor costs, supporting workforce planning and management.

Device Support for SuitePeople Time Clock

As a bring-your-own-device model, SuitePeople Time Clock can be downloaded on the devices in the table.

Device	App Name	Download Method	Related Help Topic
iOS and Android	NetSuite Time Clock	Official app stores	Minimum Requirements for SuitePeople Time Clock Mobile Apps
Windows	SuitePeople Time Clock	WFM platform	Installing SuitePeople Time Clock Components for Windows

Login Options for SuitePeople Time Clock

Refer to the table for the login options available for supported devices.

Device	PIN Code	Visual Verification	Fingerprint Scanning
iOS and Android	Yes	Yes, as an option after every punch	No

Device	PIN Code	Visual Verification	Fingerprint Scanning
Windows	Yes	No	Yes, as a two-factor authentication method option to prevent buddy punching  Important: To follow the Biometric Information Privacy Act (BIPA), you can't use fingerprint scanning on Windows devices in Illinois. If you're setting up a Windows device there, employees can only punch in with pin codes.

For more information about SuitePeople Time Clock, see the following topics:

- [Minimum Requirements for SuitePeople Time Clock Mobile Apps](#)
- [Setting up SuitePeople Time Clock](#)
- [Troubleshooting SuitePeople Time Clock](#)
- [Updating SuitePeople Time Clock](#)
- [Breaks for SuitePeople Time Clock](#)
- [SuitePeople Time Clock for Windows](#)
- [Timesheets and SuitePeople Time Clock](#)
- [Contract Hours in SuitePeople Time Clock](#)

Minimum Requirements for SuitePeople Time Clock Mobile Apps

The following table shows the minimum requirements for devices to run SuitePeople Time Clock.

Requirement Type	Details	Related Link
Hardware Requirements	■ Global Positioning System (GPS) ■ Front-facing and rear-facing cameras with autofocus	—
Software Requirements	■ Android version 12.0 or later ■ iPad OS version 13 or later	■ NetSuite Time Clock for Android ■ NetSuite Time Clock for iPadOS

Setting up SuitePeople Time Clock

Only certain users can access the setup options for SuitePeople Time Clock. If you think you should have access to this page, consult an employee with an Administrator role.

To set up SuitePeople Time Clock, complete the following procedures:

- [Generating an Activation Code](#)
- [Installing SuitePeople Time Clock](#)
- [Activating a New Device](#)
- [Setting up Employee PIN Codes](#)

- [Preventing Early Punches](#)
- [Preventing Short Breaks](#)

Generating an Activation Code

Generate an activation code for the device where SuitePeople Time Clock will be installed.

You must have a Manager role or higher level of access to generate an activation code.

To generate an activation code:

1. Go to Workforce Management.
2. Go to Setup > Time Clock.
3. Click **New Device**.
4. In the New Device wizard, complete the required fields.
 - **Name and Operating System** – Complete the fields.
 - **Name** – Enter the name you'd like to assign to the new device.
 - **Operating System** – Select the operating system running on the device. Your options are:
 - Android
 - iOS/iPadOS
 - Windows

The available punch-in options depends on the operating system you're setting up.

- **Locations** – From the **Available Choices** panel on the left, select the locations for employees to clock in and out of this device.

If you want to select all locations, click **Choose All**.

To move the chosen locations to the **Chosen Items** panel on the right, click the blue right arrow symbol at the middle of the panels.

If you want to clear your chosen items, click **Clear All**.

Important: To follow the Biometric Information Privacy Act (BIPA), you can't use fingerprint scanning on Windows devices in Illinois. If you're setting up a Windows device there, employees can only punch in with pin codes.

- **Options** – Refer to the table to configure the available punch-in options for each operating system.

Operating System	Available Options
Android and iOS/ iPadOS	Visual Verification – By default, Android and iOS devices lets employees punch in with pin codes only. If you turn this option on, the device takes a photo of each employee after every punch.
Windows	Authenticate by – Select the authentication method available for employees during punch-in. The options are: □ PIN only □ Finger scan only □ PIN or Finger scan □ Two-factor authentication (PIN then Finger scan)

Operating System	Available Options
	 Note: If you are setting up a Windows device in Illinois, your employees can only punch in using a PIN code. Check for updates every – Enter how many minutes (at least 5) you'd like the device to wait before syncing updates from WFM. Time Clock automatically syncs with WFM, so timesheets go through without needing to refresh or wait.

- **Confirm** – Review the device details.

If you choose to capture biometric information with finger scanning, you'll need to agree to the customer responsibilities for biometric or fingerprint features. Check the **Agree** box.

5. Click **Create**.

On the Time Clock page, view the 8-letter activation code for the new device on the **Activation code** column.

You'll use the activation code as the password and your email as the username when you launch SuitePeople Time Clock for the first time.

After you've generated the activation code, install SuitePeople Time Clock on the new device. For more information, see [Installing SuitePeople Time Clock](#).

Installing SuitePeople Time Clock

Install SuitePeople Time Clock on a supported device before you activate it. For more information, see [Minimum Requirements for SuitePeople Time Clock Mobile Apps](#).

To install SuitePeople Time Clock on mobile devices:

1. Go to the designated app store, either the App Store for iOS or iPadOS or Google Play for Android.
2. Search **NetSuite Time Clock**.
3. Install the app.

To install SuitePeople Time Clock on Windows, see [Installing SuitePeople Time Clock Components for Windows](#).

After installing SuitePeople Time Clock, activate the new device. For more information, see [Activating a New Device](#).

Activating a New Device

When you open SuitePeople Time Clock for the first time, you need to activate the device using a previously generated activation code. For more information, see [Generating an Activation Code](#).

To activate a new device:

1. Open the SuitePeople Time Clock app on your device.
2. In the **Username** field, enter your email address.
3. In the **Password** field, enter the unique activation code that was generated for the device.

To find the code, go to Setup > Time Clock. From the **Pending Activation Devices** subtab, locate the device code on the corresponding Activation code column.

4. Click **Register**.

After you successfully activate the device, the clock-in page appears.

For employees at locations registered with the device to start clocking in and out, you'll need to set up employee PIN codes. For more information, see [Setting up Employee PIN Codes](#).

Setting up Employee PIN Codes

WFM assigns randomly generated PIN codes to employees. Employees use PIN codes to log in to SuitePeople Time Clock.

If you're an employee with access to a WFM account, you can find your PIN code when you log in. On the Your Details page, click Access. If you need to change your code, reach out to someone with a Manager role or higher.

If your account has a Manager role or higher level of access, you can set up employee PIN codes.

To set up employee PIN codes:

1. Go to Workforce Management.
2. Go to Setup > Employees > List.
The employee list appears with corresponding PINS on the **Timesheet PIN** column.
3. Click an employee name.
4. On the employee profile, on the lefthand panel, click **Details**.
5. On the AdiClock PIN section, click **Edit**.
6. Choose how you want to set the PIN code.
 - To assign a PIN, enter a unique 6-digit PIN on the **Timesheet pin** field.
 - To let WFM create a PIN, click **Generate Random PIN**.
7. Click **Save PIN**.

Preventing Early Punches

If you have a Manager role or higher level of access, you can turn on Early Punch Prevention for certain locations to stop employees from punching in before a set time.

To prevent early punches:

1. Go to Workforce Management.
2. Go to Setup > Time Clock.
3. At the top right corner, click **Early Punch Prevention**.
The Early Punch-in Prevention window appears.
4. From the **Filter by** field, select an option to filter locations.
5. From the **Available Choices** panel on the left, select the locations where you want to prevent early punches.

If you want to select all locations, click **Choose All**.

To move the chosen locations to the **Chosen Items** panel on the right, click the blue right arrow symbol at the middle of the panels.

If you want to clear your chosen items, click **Clear All**.

6. Click the Early Punch-in prevention switch to turn it green.
7. In the **Grace period** field, enter how many minutes before a shift employees aren't allowed to punch in.
8. Click **Save**.

Preventing Short Breaks

If you have a Manager role or higher level of access, you can turn on Short Break Prevention to stop employees from taking breaks that are too short or don't meet the minimum required length.

Note: This setting is system-wide and applies to all Workforce Management locations and devices employees use to punch in.

This change stops employees from coming back from their break before the minimum time has passed.

If an employee tries to clock in before their break is over, SuitePeople Time Clock will stop them from punching back in and let them know when their break ends.

To prevent short breaks:

1. Go to Workforce Management.
2. Go to Setup > Account Settings > Time & Attendance.
3. On the Time & Attendance page, check the **Short break prevention** box.
4. In the **Unpaid break minimum length** field, enter the minimum number of minutes for unpaid breaks.
5. In the **Paid break minimum length** field, enter the minimum number of minutes for paid breaks.
6. Click **Save**.

Troubleshooting SuitePeople Time Clock

Before you troubleshoot any issues, ensure SuitePeople Time Clock is using the latest version. For more information, see [Updating SuitePeople Time Clock](#).

To learn more about troubleshooting SuitePeople Time Clock issues, see the following procedures:

- [To help employees unable to clock in after device activation:](#)
- [To help employees unable to clock in with their PIN code:](#)
- [To see timesheets in the weekly view:](#)
- [To help employees clock in if the device registered them as clocked in already:](#)
- [To resolve a blank screen on the Android app:](#)
- [To resolve incorrect time on the app:](#)

To help employees unable to clock in after device activation:

1. Check that the device has an Internet connection.
2. Ensure the device is online and doesn't show any label saying it's offline.
3. Update the device name and wait for the change to go through.
 - a. Go to Workforce Management.
 - b. Go to Setup > Time Clock.
 - c. Click the device name.
 - d. On the device settings window, edit the entry in the **Name** field.
 - e. Click **Save**.
4. Check the app version.
 - Check that the device is running the latest app version by looking at the version number at the bottom of the app pages. Compare it with the latest version in the app store. For more information, see [Minimum Requirements for SuitePeople Time Clock Mobile Apps](#).
 - If the app is outdated, update it. For more information, see [Updating SuitePeople Time Clock](#).
5. Restart the app.
6. Check if the required locations are set to be available on the device.
 - a. Open the device settings window. See instructions in Step 3.
 - b. On the Locations section, check that the required locations are added on the **Chosen Items** panel. Edit the entry in the **Name** field.

 From the **Available Choices** panel on the left, select the locations you want to add.

 If you want to select all locations, click **Choose All**.

 To move the chosen locations to the **Chosen Items** panel on the right, click the blue right arrow symbol at the middle of the panels.

 If you want to clear your chosen items, click **Clear All**.
 - c. Click **Save**.
7. Check if the employee can work at the location and has a PIN set.
 - a. Go to Workforce Management.
 - b. Go to Setup > Employees > List.
 - c. Click the employee name.
 - d. On the employee profile, from the left-hand panel, click **Location**.
 - e. Verify that the employee is assigned to work at the specified location. To add a location, on the **Can work at** section, click **Edit**. From the **Available Choices** panel on the left, move the required location to the **Chosen Items** panel. Click **Save**.
 - f. From the left-hand panel, click **Details**. On the Adiclock PIN section, check that a PIN code is assigned. To assign a PIN code, see [Setting up Employee PIN Codes](#).

To help employees unable to clock in with their PIN code:

1. Check if SuitePeople Time Clock is offline.
2. Check if the employee's PIN code was recently updated. If so, connect the device online to update any PIN codes that were recently changed.
3. Repeat the steps in the earlier procedure. See [To help employees unable to clock in after device activation](#).

To see timesheets in the weekly view:

1. Check that the device is connected to the Internet.
2. When the device is connected to the Internet, it will upload any timesheets that haven't appeared in the weekly view.

To help employees clock in if the device registered them as clocked in already:

1. Verify if the employee is clocked in.
 - a. On SuitePeople Time Clock, click the **IN** tab on the top left corner.
 - b. Check if the employee is on the list of currently clocked-in shifts and note how long they've been clocked in.
2. Verify if the employee clocked out from their previous shift.
3. Verify if the employee accidentally clocked in with another employee's PIN code.
4. Verify if the employee can clock out. If they can't clock out, verify if a manager can clock out the employee for them.

To resolve a blank screen on the Android app:

1. Fully close the app.
 - a. On your Android device, swipe up from the bottom and let go. This automatically closes the app.
 - b. Open SuitePeople Time Clock. If the white screen is still present, clear the app data.
2. Clear the app data.
 - a. On your device's home screen, press and hold the app.
 - b. Select **App info**.
 - c. Select **Storage**.
 - d. Select **Clear data**.

 **Note:** SuitePeople Time Clock syncs with the server to show the correct time. Even if the system clock changes, it'll always show the correct time.

To resolve incorrect time on the app:

1. If SuitePeople Time Clock shows incorrect time but your system time is correct, check your device's time and date settings.
On iOS devices, ensure the **Set automatically** feature is on.
2. Alternatively, ensure the correct time zone is set on the device. If you have set a different time zone in SuitePeople Time Clock but your device's time is different, there'll be a mismatch.
This will also affect the final timesheet.

Updating SuitePeople Time Clock

To update SuitePeople Time Clock, follow the procedure.

To update SuitePeople Time Clock:

1. Check the current version of SuitePeople Time Clock at the bottom of the app screen.
2. Compare the app version with the latest version of SuitePeople Time Clock.
 - **Android** – Open the Google Play store and search for NetSuite Time Clock. It's available under the **Read More** section in the app description.
 - **iOS or iPadOS** – Open the iOS App Store and search for NetSuite Time Clock. It's available under the **What's New** section in the app's description.
3. On the app, click **Update**.

Breaks for SuitePeople Time Clock

The following table shows the options for employees to track breaks after clocking in on SuitePeople Time Clock.

Break Type	Actions	Description
Paid Breaks	Click Rest .	The employee is punched into a paid break event. If you have the Rest Breaks (Paid) feature and an employee hasn't punched in for a paid rest break during their shift, SuitePeople Time Clock will show a message asking if they've taken a paid rest break. When an employee answers Yes or No, it'll change the message that appears on their timesheet shift in the Weekly view. If the employee chooses No, the message on their timesheet shift will say: "Employee has indicated they did not take a Rest Break."
Unpaid Breaks	Click Start Break .	The employee is punched into an unpaid break event. Employees can take one unpaid break but can take multiple paid rest breaks. After an employee takes one unpaid break, Start Break will be unavailable.

SuitePeople Time Clock for Windows

For more information about SuitePeople Time Clock for Windows, see the following topics:

- Preparations before installation
 - [Registering Fingerprints for SuitePeople Time Clock](#)
 - [Activating SuitePeople Time Clock for Windows](#)
- App installation
 - [Installing SuitePeople Time Clock Components for Windows](#)
 - [Verifying the SuitePeople Time Clock for Windows Installer](#)
- App setup
 - [Setting up SuitePeople Time Clock for Windows](#)
- App usage
 - [Using SuitePeople Time Clock for Windows](#)
- App maintenance

- [Updating SuitePeople Time Clock for Windows](#)
- [Troubleshooting SuitePeople Time Clock for Windows](#)

Minimum Screen Requirements for SuitePeople Time Clock for Windows

The following table shows the minimum screen requirements for Windows devices to run SuitePeople Time Clock.

Device	Screen Resolution
Desktop	1440 × 900 pixels
Tablet	768 × 1024 pixels

SuitePeople Time Clock for Windows Limitations

Following are some known limitations when using SuitePeople Time Clock for Windows:

- The Windows app is designed for use with the Futronics FS88H device. Right now, it doesn't work with other fingerprint scanners.
- Fingerprint quality is different for everyone, and sometimes the Windows app can't capture prints because of physical issues or other reasons. If that happens, employees can use the PIN only option. For more information, see [Setting up SuitePeople Time Clock for Windows](#).

Registering Fingerprints for SuitePeople Time Clock

SuitePeople Time Clock for Windows is required if you are using a fingerprint scanner.

Important: To follow the Biometric Information Privacy Act (BIPA), you can't use fingerprint scanning on Windows devices in Illinois. If you're setting up a Windows device there, employees can only punch in with pin codes.

To enroll a new employee with the scanner, SuitePeople Time Clock requires the following:

- An active Internet connection
- The Futronic fingerprint scanner driver

To install the fingerprint scanner driver, see [Installing SuitePeople Time Clock Components for Windows](#).

New employees can be set up to use either their PIN code, fingerprint, or both.

To register an employee to use the fingerprint scanner:

1. Authenticate as a manager (requires manager access or higher).
2. Click the Settings icon in the bottom-left corner of SuitePeople Time Clock.
3. Click **Enroll Employee**.
4. Select the employee you want to set up from the employee list.

5. Select the finger you want to enroll for the employee. You can register all 10 fingers for the employee.
6. SuitePeople Time Clock will prompt the employee to place their finger on the scanner. This process will occur eight times per finger.
7. Click **OK** to continue.
8. Follow this process for each finger you're registering.
9. After you've registered all the employee's fingers, click **Save** to finish setting up the new employee.

If you are encountering issues, see [Troubleshooting SuitePeople Time Clock for Windows](#).

Activating SuitePeople Time Clock for Windows

The first time you run SuitePeople Time Clock, it'll ask for an activation code to link the installation with a roster unit.

For more information about activating a Windows device, see the following topics:

- [Generating an Activation Code](#)
- [Activating a New Device](#)

If you can't see the option for SuitePeople Time Clock in your configuration menu, you'll need to speak to someone who has higher access to the system.

Save the activation code—you'll need it when you install SuitePeople Time Clock for Windows.

Activating Additional Units

To activate additional units, select **Actions** from the main menu bar and select **Activate Unit** from the dropdown menu.

SuitePeople Time Clock will require an activation code to authenticate use on the additional unit.

When the new unit has been successfully activated, their name will appear under the green header.

Installing SuitePeople Time Clock Components for Windows

With your activation code ready, prepare to install the SuitePeople Time Clock components on your Windows device.

Confirm that your Windows device meet the minimum screen requirements for Time Clock. For more information, see [Minimum Screen Requirements for SuitePeople Time Clock for Windows](#)

To install SuitePeople Time Clock components for Windows:

1. Go to Workforce Management.
2. Go to Setup > Time Clock.
3. On the upper right corner of the Time Clock page, click **Download Apps**.
4. On the **Download Time Clock Apps** window, click **Download** beside the Windows platform.

The file downloads in the background.

5. To verify the integrity of the installed file, note the installer hash in the window. Then follow the procedure to verify the installer. For more information, see [Verifying the SuitePeople Time Clock for Windows Installer](#).
6. Run the SuitePeople Time Clock installer.
7. On the Choose Components page, select components to install.
 - If you don't have the Futronic fingerprint scanner, check only **SuitePeople Time Clock**.
 - If you have the Futronic fingerprint scanner and don't have Time Clock installed, check both the **SuitePeople Time Clock** and **Futronic Fingerscanner Drivers** components.
 - If you already have Time Clock installed and is installing the Futronic fingerprint scanner, check only **Futronic Fingerscanner Drivers**.
8. Click **Next**.
9. Choose the install location. Click **Install**.
The wizard automatically installs the components.
10. If you checked the **Futronic Fingerscanner Drivers** box, the Futronic Fingerprint Scanner Setup page appears. Click **Next**.
The installer adds the driver.
11. Click **Finish**. Click **Close**.
12. If your installation includes SuitePeople Time Clock, open the app on your Windows device.
13. Enter the activation code. Click **Activate**.
SuitePeople Time Clock opens to a number pad screen that employees can use to clock in.
For more information about clocking in and out, see [Using SuitePeople Time Clock for Windows](#).

Verifying the SuitePeople Time Clock for Windows Installer

To verify the integrity of the Windows application file installed, you can compare the hash code of the downloaded installer with the WFM hash code.

The WFM installer hash code is available on the Download Time Clock Apps window, as noted in **Step 3** of the procedure [To install SuitePeople Time Clock components for Windows](#).

To verify the Windows app installer:

1. After noting the installer hash code, open Windows PowerShell. For reference, read the article [Starting Windows PowerShell](#).
2. In the following command, replace *path to installer* with the file path for the installer file. For example, replace it with `C:\Users\user\Downloads\timeclock_2_0_1_0.exe`.

```
1 | Get-FileHash path to installer -Algorithm SHA512 | Format-List
```

3. Run the command.

The window displays the results of the command. In the following example, the set of numbers in bold formatting represents the hash code.

```
1 | Get-FileHash C:\Users\user\Downloads\timeclock_2_0_1_0.exe -Algorithm SHA512 | Format-List
2
3 | Algorithm : SHA512

4. Compare this hash code with the hash code on the WFM window.

If the codes are similar, proceed to **Step 6** of the procedure [To install SuitePeople Time Clock components for Windows](#).

Warning: If the hash codes are different, the installer file may have been modified. In this case, **do not run** the installer. Perform security measures that follow the policies of your organization.

Setting up SuitePeople Time Clock for Windows

If you have access to an account with higher permissions than an employee, you can complete the following configurations in SuitePeople Time Clock for Windows:

- [Managing Settings in SuitePeople Time Clock for Windows](#)
- [Setting the SuitePeople Time Clock for Windows Authentication Method](#)
- [Enabling Two-Factor Authentication in SuitePeople Time Clock for Windows](#)

Managing Settings in SuitePeople Time Clock for Windows

In SuitePeople Time Clock for Windows, you can edit various settings to manage how the app functions.

To view the available settings, open SuitePeople Time Clock on your Windows device, then log in to the app. Click the cog or settings icon on the bottom left corner of the screen.

The following table shows the available settings.

Setting	Description
Refresh	This option synchronizes data in the Windows device to WFM.
Check for updates	This option lets you check for the most recent Time Clock version.
Enroll Employee	If you have a fingerprint scanner installed and have the authentication method set to an option that is not PIN only, this option lets you register fingerprints for an employee.

Setting the SuitePeople Time Clock for Windows Authentication Method

The following table shows the available authentication methods you can update on the Workforce Management SuiteApp or the standalone WFM website.

Important: To follow the Biometric Information Privacy Act (BIPA), you can't use fingerprint scanning on Windows devices in Illinois. If you're setting up a Windows device there, employees can only punch in with pin codes.

Setting	Description
PIN only	This option enables the PIN authentication option. SuitePeople Time Clock needs to restart for this change to take effect.
Finger scan only	This option enables the fingerprint authentication options. SuitePeople Time Clock needs to restart for this change to take effect.

Setting	Description
Pin or finger scan	This option enables either the PIN or finger scan options.
Two-factor authentication (PIN then finger scan)	This option enables two factor authentication. This allows users to sign in with both a PIN then finger scanning.

To set the authentication method for SuitePeople Time Clock for Windows:

1. Log in to Workforce Management.
2. Go to Setup > Time Clock.
3. Click the **Activated Devices** subtab.
4. Click the device name. Click **Edit**.
The wizard appears.
5. On the Options page, from the **Authenticated By** field, select the authentication method. Click **Next**.
6. On the Confirmation page, review the changes. Click **Update**.

Enabling Two-Factor Authentication in SuitePeople Time Clock for Windows

SuitePeople Time Clock for Windows offers two-factor authentication for when employees clock in and out. Two-factor authentication includes a fingerprint option and a PIN option for the user to verify their identity.

Important: To follow the Biometric Information Privacy Act (BIPA), you can't use fingerprint scanning on Windows devices in Illinois. If you're setting up a Windows device there, employees can only punch in with pin codes.

To view device settings, log in to Workforce Management. Go to Setup > Time Clock. From the **Activated Devices** subtab, click the device name. On the Options page of the wizard, from the **Authenticate by** field, select **PIN only** as the authentication method.

Before you enable this setting, ensure employees have enrolled their fingerprints and set up their PIN codes. For more information, see the following help topics:

- [Registering Fingerprints for SuitePeople Time Clock](#)
- [Setting up Employee PIN Codes](#)

To manage Time Clock settings on WFM SuiteApp or stand-alone website:

1. Log in to Workforce Management.
2. Go to Setup > Time Clock.
3. Click the **Activated Devices** subtab.
4. Click the device name. Click **Edit**.
The wizard appears.
5. On the Options page, from the **Authenticated By** field, select **Two-factor authentication (PIN then finger scan)**. Click **Next**.

6. On the Confirmation page, review the changes. Click **Update**.

Updating SuitePeople Time Clock for Windows

To keep things running smoothly with WFM, update to the latest SuitePeople Time Clock version as soon as you can. Updates are designed to address security and compliance considerations and improve overall performance.

Important: After you update SuitePeople Time Clock for Windows, you can no longer revert it to the previous version.

To update SuitePeople Time Clock for Windows:

1. Install the update.
 - If you've set up the app to automatically check for updates, you'll see a notification that a new version is available. On the notification window, click **Install update**.
 - If you haven't set up automatic checks for updates or if you haven't seen the notification, manually check for updates in SuitePeople Time Clock. You will need an account with higher permissions than an employee. See [Manually Updating SuitePeople Time Clock for Windows](#).
2. Restart the app.

After you've updated and restarted SuitePeople Time Clock, you'll see the new version number at the bottom of the keypad screen.

For more information about troubleshooting issues, see [Troubleshooting SuitePeople Time Clock for Windows](#).

Manually Updating SuitePeople Time Clock for Windows

If you have access to an account with higher permissions than an employee, you can check for updates in SuitePeople Time Clock for Windows. For more information about the different access groups available in WFM, see [Employee Access in WFM](#).

To manually update SuitePeople Time Clock for Windows:

1. Open SuitePeople Time Clock on your device.
2. Enter your PIN code.
3. On the lower left corner of the screen, click the settings icon.
4. From the list, select **Check for update**.
 - If an update is available, click **Install update**. After the update, restart the app.
 - If SuitePeople Time Clock is up to date, a window appears confirming that you're using the newest available version.

Using SuitePeople Time Clock for Windows

For more information about different ways to use the app, see the following sections:

- [Clocking in on a Scheduled Shift](#)

- [Clocking in on an Unscheduled Shift](#)
- [Changing Jobs During a Shift](#)
- [Clocking Out of a Shift](#)

If you're encountering issues with using Time Clock for Windows, see [Troubleshooting SuitePeople Time Clock for Windows](#).

You'll see different options when employees clock in with or without a scheduled shift.

Clocking in on a Scheduled Shift

Employees who clock in with a scheduled shift can use the Quick Punch feature.

The Quick Punch feature is available if the schedule's been published when employees punch in. If they don't see it, the schedule might not be published or the might not have any scheduled shifts.

To clock in with Quick Punch on a scheduled shift:

1. Open SuitePeople Time Clock on your Windows device.
2. On the keypad screen, enter your PIN code.
3. Click **Enter**.
If the schedule was published, the screen shows a green **Quick Punch** button.
4. (Optional) In the **Notes** field, enter details related to the clock-in event.
5. If you need to clock in to a job or location that's different than what's scheduled, click **Change**.
6. Select the new location and job.
7. Click **Quick Punch**.

Clocking in on an Unscheduled Shift

If an employee clocks in for an unscheduled shift, they'll need to select the location and job they are clocking into.

To clock in on an unscheduled shift:

1. Open SuitePeople Time Clock on your Windows device.
2. On the keypad screen, enter your PIN code.
3. Click **Enter**.
4. On the **Locations** section, select the location where you will work your shift.
5. On the **Jobs** section, select the job that you will take for this shift.
6. (Optional) In the **Notes** field, enter details related to the clock-in event.
7. Click **Punch-in**.

The screen shows a green screen that confirms your location, job, and punch-in time.

 **Note:** When you successfully clock in, you won't be able to clock out for 10 seconds.

The next screen shows the main Time Clock screen, with the employee name listed in the **Currently Working** panel.

Changing Jobs During a Shift

If you have multiple jobs set up for the location where you are clocked in, you can change jobs during your shift.

To change jobs during a shift:

1. Open SuitePeople Time Clock on your Windows device.
On the main Time Clock screen, your name is listed in the **Currently Working** panel.
2. On the keypad screen, enter your PIN code.
3. Click **Enter**.
4. On the **Jobs** section, select the job that you must change to for this shift.
5. Click **Job Change**.
The screen shows confirmation of the job change, including the location and current job on the shift.

Clocking Out of a Shift

Clock out of shifts on the main screen of SuitePeople Time Clock.

To clock out of a shift:

1. Open SuitePeople Time Clock on your Windows device.
On the main Time Clock screen, your name is listed in the **Currently Working** panel.
2. On the keypad screen, enter your PIN code.
3. Click **Enter**.
4. On the **Jobs** section, select the job that you'll take for this shift.
5. (Optional) In the **Notes** field, enter details related to the job change event.
6. Click **Punch-out**.
The screen shows a screen that confirms that you have punched out.
The next screen shows the main Time Clock screen, with the employee name listed in the **Recently Finished** panel.

Clocking In and Out for Multiple Units

On the SuitePeople Time Clock main window, enter your PIN. Select **Enter**.

If multiple locations are active, a dialog appears asking the employee to select where they're working.

Note: The **Please select a unit** dialog appears if the employee clocking in is available at both locations. It can also appear if the **Show all staff** option was selected when the activation code was generated.

In the **Currently active staff** list, you will see the employee you have clocked in.

Troubleshooting SuitePeople Time Clock for Windows

Refer to the table on how to troubleshoot errors in SuitePeople Time Clock for Windows.

Error	Description	Required Action
Sorry Try Again	The error occurs when the employee displayed an incorrect PIN code or the fingerprint was not recognized.	If you unsuccessfully clock in or out, you can try again in 3 seconds. Verify that the PIN code of the employee is correct. For more information about resolving fingerprint scanner issues, see Troubleshooting Scanner Issues in Time Clock for Windows.

For information about force clocking out employees, see [Force Clocking out Employees](#).

Troubleshooting UI Issues in Time Clock for Windows

If you're experiencing issues with viewing SuitePeople Time Clock for Windows correctly on your device, try the following options:

- Change your display scale to ensure all UI components appear on screen. For more information, refer to [Change your screen resolution and layout in Windows](#).

If you're working on a small screen, cast or extend the screen to a larger display.

If some UI components aren't visible or partly visible under the taskbar, hide the taskbar. For more information, refer to [Customize the Taskbar in Windows](#).

Troubleshooting Scanner Issues in Time Clock for Windows

If the fingerprint scanner doesn't read fingerprints, you can try the following options:

- Check your hardware.
 - Check that the fingerprint scanner driver is installed. For more information, see [Installing SuitePeople Time Clock Components for Windows](#).
 - Check that the USB port for the fingerprint scanner is firmly plugged into the computer to ensure a stable connection.
 - Unplug the fingerprint scanner and plug it back in.
- Ensure a clear scan.
 - Before scanning, help raise the ridges of the finger by doing any of the following:
 - Apply gentle downward pressure or rub the finger that's to be scanned between the thumb and forefinger.
 - Moisturize by applying lotion or corn huskers oil on the hands. Clean the scanner after each use.
 - Press firmly on the glass of the fingerprint scanner with the finger in the correct position.
 - Clean the glass scanning area with a tissue or cloth to remove residue from previous fingerprint scans.
- Explore other fingerprint registration and scanning options.
 - Use another registered fingerprint.
 - Have the employee register their fingerprints for all 10 fingers.
 - If all of the previous troubleshooting steps haven't worked, remove the current registered fingerprints of the employee and register the fingerprints again.
- Try using the Futronic ScanAPI Demo Application for Windows, which gives you a video feed of the scanner's capture process. You can compare scans from employees who have trouble with those who scan successfully. For more information, go to the [Microsoft Store](#).

Timesheets and SuitePeople Time Clock

Important: As of February 18, 2025, support ends for SuitePeople Workforce Management Time Clock and SuitePeople Workforce Management mobile applications on Android 11 and earlier versions.

If you're using these versions, update your Android devices to version 12 or later to continue using WFM apps.

For more information, see [SuitePeople Workforce Management on Unsupported Android Devices](#).

Read this page to know more about how SuitePeople Time Clock works with timesheets.

Timesheet Sources

There are different icons on a timesheet shift that show how the employee clocked in or clocked out for a shift.

Note: Adiclock is now called SuitePeople Time Clock.

In the iOS App Store and Google Play Store, SuitePeople Time Clock is called **NetSuite Time Clock**.

In Windows, the app is targeted to be renamed **SuitePeople Time Clock** in June 2024.

- Phone app - The following screenshot shows an employee's timesheet shift that has a phone icon. This indicates the employee clocked in and out on their phone.
- SuitePeople Time Clock - The following screenshot shows an employee's timesheet shift that has a building icon. This indicates the employee clocked in and out of SuitePeople Time Clock app at their shift's location.
- Mixed or multiple sources - The following screenshot shows an employee's timesheet shift that has a two-arrow icon. This indicates the employee clocked in and out of SuitePeople Time Clock from more than one source. For example, the employee may have clocked in on their phone and clocked out at their shift's location.

To display a detailed breakdown of an employee's clock-in and clock-out events during their shift, you can click on the timesheet shift to expand it.

The clock-in and clock-out events have a green pin icon beside them, which means the clock-in and clock-out events were completed on the job site.

Force Clocking out Employees

There are two ways to clock out an employee if they have forgotten to clock out:

- From the Weekly or Multi-Location view
- Ask a manager to clock out an employee from the device using SuitePeople Time Clock.

Note: SuitePeople Time Clock force clocks out employees after 24 hours.

From the Weekly or Multi-Location view, you can click the **Eject** button on an employee's open timesheet.

After the employee's been clocked out, their timesheet will keep the original start time of the shift and the time they clocked out at.

For more information about clocking out employees, see [Using SuitePeople Time Clock for Windows](#).

Auto-closing Timesheets

Timesheets will automatically close if they're left open for 24 hours and employees will automatically be clocked out. This occurs on the phone app and SuitePeople Time Clock for Windows, Android, and iOS.

Contract Hours in SuitePeople Time Clock

Important: As of February 18, 2025, support ends for SuitePeople Workforce Management Time Clock and SuitePeople Workforce Management mobile applications on Android 11 and earlier versions.

If you're using these versions, update your Android devices to version 12 or later to continue using WFM apps.

For more information, see [SuitePeople Workforce Management on Unsupported Android Devices](#).

You can set up contract hours for employees. Once that's done, employees can create variations to these hours by clocking in or out.

If an employee's clock-in or clock-out time is different from their agreed contract or a previous variation, they'll be prompted to agree to a new variation for that day. They might be prompted at the start and end of their shift to agree to the new hours.

For information about contract hours in SuitePeople Time Clock for Windows, see [Contract Hours in SuitePeople Time Clock for Windows](#).

For information about contract hours in SuitePeople Time Clock for Android and iOS, see [Contract Hours in SuitePeople Time Clock for Android and iOS](#).

Contract Hours in SuitePeople Time Clock for Windows

The **Action Required** window displays the modified contract hours for the employee. For example, this employee's modified contract hours are from 2:45 pm to 5:45 pm.

If the employee selects **Agree**, their shift begins with the modified contract hours.

If the employee selects **Decline**, their shift won't begin with the modified contract hours and SuitePeople Time Clock will return to the PIN entry screen.

Before the employee selects **Decline**, they must enter a reason in the **Comments** field for declining the modified contract hours. A manager needs to enter their PIN and provide a reason for agreeing or declining an employee's choice to decline their modified contract hours.

The employee can then clock in to their shift.

For more information about contract hours, see [Contract Hours in SuitePeople Time Clock](#).

For information about contract hours in SuitePeople Time Clock for Android and iOS, see [Contract Hours in SuitePeople Time Clock for Android and iOS](#).

Contract Hours in SuitePeople Time Clock for Android and iOS

Note: AdClock is now referred to as SuitePeople Time Clock.

In the iOS App Store and Google Play Store, SuitePeople Time Clock is called **NetSuite Time Clock**.

In Windows, the app is targeted to be renamed **SuitePeople Time Clock** in June 2024.

The **Action Required** window displays the modified contract hours for the employee. For example, this employee's modified contract hours are from 4 pm to 8 pm.

If an employee attempts to clock in with modified contract hours, an **Action Required** window will appear.

The **Action Required** window displays the employee's original contract hours and the proposed modified contract hours.

If the employee selects **Agree**, their shift begins with the modified contract hours.

To stop the clock-in attempt, the employee can select the arrow icon in the top-left corner to return them to the PIN entry screen. They won't be clocked in or clocked out.

If the employee selects **Decline**, their shift won't begin with the modified contract hours and SuitePeople Time Clock will return to the PIN entry screen. They must enter a reason for the decline and require a manager to authorize this decision.

If an employee enters a reason and tries to clock in with modified contract hours, it will then go the manager.

After the manager enters their PIN to approve the change in the employee's contract hours, they need to enter a reason for the change and accept or decline the variation in contract hours.

The employee can now successfully clock in to their shift.

For more information about contract hours, see [Contract Hours in SuitePeople Time Clock](#).

For information about contract hours in SuitePeople Time Clock for Windows, see [Contract Hours in SuitePeople Time Clock for Windows](#).

Workforce Management Reports

You can export data from SuitePeople Workforce Management (WFM) by generating any of the available reports under the following categories:

- [Shifts Reports](#)
- [Employee Reports](#)
- [Location Reports](#)

To access the report categories and audit logs, go to Workforce Management > Reports.

To find instructions and details about each report, see [Extracting Data Through WFM Reports](#).

Extracting Data Through WFM Reports

SuitePeople Workforce Management (WFM) lets you extract different reports for your own purpose and records. To extract data, select from the seven report types and generate the report.

Maximum Report Duration

For most report types, you can generate reports for up to two months at a time.

Depending on the report, you may need to generate multiple reports if you need to export data for more than two months.

Refer to the following table for details and instructions for each report.

Shifts Reports

Refer to the table for reports about employee shifts. For more information, see [Shifts Reports](#).

Report	Available Metrics	Help Topic with Instructions
Print Ready	■ Daily by Day ■ Daily Master ■ Daily ■ Actual Timesheet Report ■ Staff Report ■ Timesheet Report ■ Multi Unit Staff Report ■ Master Report ■ Actual Report	Print Ready
Hours	■ ID ■ First name ■ Last name ■ Payroll ID ■ Age ■ Location ■ Job ■ Date ■ Condition ■ Rate ■ Minimum hours top up ■ Blended OT ■ Leave metrics ■ Total hours ■ Total costs ■ Phone ■ Mobile ■ Email ■ Address metrics	Hours
Hours and Times	Various metrics based on the two report types: ■ Actual Shifts ■ Scheduled Shifts	Hours and Times

Report	Available Metrics	Help Topic with Instructions
Approved Hours, Times And Stats	■ ID ■ First Name ■ Last Name ■ Date ■ Start Time ■ Finish Time ■ Hours ■ Location ■ Job ■ Shift Metric ■ Tips	Approved Hours, Times, and Stats
Variance (Tardy+)	Various metrics based on the four report types: ■ Tardy ■ Company time fraud ■ Employee time fraud ■ Custom (Advanced)	Variance (Tardy+)
Timesheet	Various metrics based on two report types: ■ Hours summary ■ Punch events	Timesheet
Overtime Checks	Available metrics are: ■ Name ■ Date ■ Current employment ■ Location name ■ Job name ■ Shift Times ■ Employment Status ■ Wage Agreement/ Classification ■ Consecutive Day Count ■ Shift Length ■ Hours on day ■ Average hours/week ■ Clear break between shifts Allows for filtering and flagging based on: ■ Consecutive Days Worked ■ Hours on day worked ■ Average weekly hours ■ Clear break between days ■ Time since last shift	Overtime Checks

Report	Available Metrics	Help Topic with Instructions
Percent Approved	■ Location ID ■ Location Name ■ Week Start ■ % Approved ■ % Accepted ■ Unapproved ■ Approved ■ Approvable ■ Disputed ■ Accepted ■ Unaccepted ■ Unapproved Staff ■ Disputed Staff ■ Unaccepted Staff	Percent Approved
Weekday Split	■ ID ■ Staff member ■ % Weekday Scheduled ■ % Weekday Approved ■ % Weekend Scheduled ■ % Weekend Approved ■ % Sat Scheduled ■ % Sat Approved ■ % Sun Scheduled ■ % Sun Approved ■ Hours Weekday Scheduled ■ Hours Weekday Approved ■ Hours Sat Scheduled ■ Hours Sat Approved ■ Hours Sun Scheduled ■ Hours Sun Approved ■ Hours Total Scheduled ■ Hours Total Approved	Weekday Split
Allowances	■ ID ■ First name ■ Last name ■ Export status	Allowances
Employee Payroll Query	■ Location ■ Date ■ Start time ■ Finish time ■ Length	Employee Payroll Query

Report	Available Metrics	Help Topic with Instructions
	Status	
Day Worked Frequency	- Person ID - First name - Last name - Employment status - Wage type - Calculation type - Primary location name - Weekday - Total days - Total hours - Average day hours - Start date - Date of birth - Classification ID - Classification name - Age - Rate	Day Worked Frequency
Zero Hours	- ID - First name - Last name - Primary location - Access group name - Employment period start - Employment period finish	Zero Hours
DST Ambiguous Shifts	If it is identified that there are shifts that occur over the 2-hour window, these shifts are considered ambiguous and will be available to download in a report that includes: - Name - Location - Job - Start Time - Finish Time	DST Ambiguous Shifts
Punch Breaks	- First name - Preferred name - Last name - ID - Employment status - Date - Start - Finish	Punch Breaks

Report	Available Metrics	Help Topic with Instructions
	■ Paid breaks ■ Unpaid breaks ■ Staff said they took paid break	

Employee Reports

Refer to the table for reports about employee metrics. For more information, see [Employee Reports](#).

Report	Available Metrics	Help Topic with Instructions
All	■ ID ■ First name ■ Last name ■ Preferred name ■ Email ■ Mobile ■ Phone ■ Dob ■ Gender ■ Street ■ Postcode ■ Suburb ■ State ■ Country ■ Username ■ Group ■ Timesheet pin ■ Primary location ■ Employment date ■ Termination date ■ Wage calculation ■ Employment status ■ Payroll ID	All
Terminated	■ WFM ID ■ Employee ■ Start ■ Finish ■ Primary location ■ Termination reason ■ Updated by	Terminated
Wage Changes	■ Staff ID ■ First name ■ Last name	Wage Changes

Report	Available Metrics	Help Topic with Instructions
	- Change type - Age - Date - Base rate - Wage type - Classification name - Termination date	
Birthdays	- First name - Last name - Date of birth - Age on birthday - Primary location	Birthdays
Missing Details	- Employee - Primary location - Personal details	Missing Details
Average Ages	- First name - Last name - Date of birth - Age - State - Job - Location	Average Ages
Monthly Turnover	- Location ID - Location Name - Metric - Percentage - Short Employment Percentage - Terminated - Total - Short Employment	Monthly Turnover
Leave/Time-Off	- Person - Leave type - Location - Start and finish times - Hours - Reason	Leave/Time-Off
Work Permits	Content generated using the template provided by the Victorian State Government	Work Permits

Location Reports

Refer to the table for reports about location metrics. For more information, see [Location Reports](#).

Report	Available Metrics	Help Topic with Instructions
Location	- Scheduled shifts - Actual shifts - Wages - Hours - Average hourly cost - Labor cost % - Sales - Sales per man hour - Units - Productivity	Variance
Forecasting Analysis	- Location - Day - Stats type (sales or units) - Forecast - Actual - Mean Absolute Percentage Error (MAPE) - Symmetric Mean Absolute Percentage Error (SMAPE)	Forecasting Analysis
Percent Hours Per Location	- ID - Person name - Week	Percent Hours Per Location

Shifts Reports

With Workforce Management (WFM), you can generate reports about various shift metrics affecting your operations.

The available shifts reports are:

- [Print Ready](#)
- [Hours](#)
- [Hours and Times](#)
- [Approved Hours, Times, and Stats](#)
- [Variance \(Tardy+\)](#)
- [Timesheet](#)
- [Overtime Checks](#)
- [Percent Approved](#)
- [Weekday Split](#)
- [Allowances](#)
- [Employee Payroll Query](#)
- [Day Worked Frequency](#)
- [Zero Hours](#)

- [DST Ambiguous Shifts](#)
- [Punch Breaks](#)

For a list of all available metrics in each report, see [Extracting Data Through WFM Reports](#).

Print Ready

To access the **Print Ready** report, from the Workforce Management tab, go to Reports > Shifts > Print Ready.

For more information about the Print Ready report, see [Printing Schedules](#).

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Hours

To access the **Hours** report, from the Workforce Management tab, go to Reports > Shifts > Hours.

The **Hours** report lets you generate scheduled data and approved shift data.

You can change the shift type on the reporting screen. If you choose **Actual shifts**, it displays shifts approved shifts. If you choose **Schedule shifts**, it displays scheduled shifts.

You can filter the **Hours** report and **Hours and times** report by employment status and staff members' age. These filters are helpful if you want to run a report for only casual or junior-aged staff.

The **Hours** and **Hours and Times** reports are related to employees' scheduled, timesheet, and approved shifts. The Hours reports display the wage breakdown which includes penalty rates and overtime setup in your account.

After setting the Hours report options, you can print employees' shifts by downloading a PDF file of the report.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Blended Overtime

Note: Blended overtime is not available if your setup uses wage agreements, fixed hourly rates, or salary wages.

WFM can calculate a blended or weighted overtime rate for payroll.

The blended overtime rate is calculated using the following formula:

Blended OT Rate = (Total Wage of Regular Hours ÷ Total Number of Regular Hours Worked) × Overtime Rate

The Total Wage of Regular hours covers differing pay rates.

The Overtime Rate is 0.5, or the rate is halved.

Calculating for Blended Overtime

Refer to the following example:

Abbie Gibson works in an office as a Clerical Administrator for \$10 per hour. She answers phones from home at \$8 per hour. During the week, she works 44.5 hours of as a Clerical Administrator and 8 hours answering phones. She is paid overtime for any hours worked over 40 during the week.

Because Abbie worked a total of 52.5 hours during the week, she will be paid 12.5 hours of overtime.

Abbie's overtime rate multiplier is 1.5 times the regular rate.

In WFM, you can enter her extra hours for the fixed period type. For example, between 9 am and 11 am, for a total of 2 hours.

To calculate for blended overtime:

1. Calculate the employee's base pay without any overtime.

$$\text{Abbie's Base Pay} = (8 \text{ Hours} \times \$8 \text{ per Hour}) + (44.5 \text{ Hours} \times \$10 \text{ per Hour})$$

$$\text{Abbie's Base Pay} = \$509$$
2. Calculate the employee's weighted base rate.

$$\text{Abbie's Weighted Base Rate} = \text{Base Pay} \div \text{Total Number of Regular Hours Worked}$$

$$\text{Abbie's Weighted Base Rate} = \$509 \div 52.5 \text{ Hours}$$

$$\text{Abbie's Weighted Base Rate} = \$9.70 \text{ per Hour}$$
3. Calculate the additional loading for overtime.

$$\text{Additional OT Loading per Hour} = \text{Weighted Base Rate} \times 0.5 \text{ OT Multiplier}$$

$$\text{Additional OT Loading per Hour} = \$9.70 \text{ per Hour} \times 0.5 \text{ OT Multiplier}$$

$$\text{Additional OT Loading per Hour} = \$4.85$$
4. Calculate the cost of the overtime segments within the Clerical Admin shifts.

$$\text{Cost of Overtime Segments} = \text{Clerical Administrator Hourly Pay} + \text{Additional OT Loading per Hour}$$

$$\text{Cost of Overtime Segments} = \$10 \text{ per Hour} + \$4.85 \text{ per Hour}$$

$$\text{Cost of Overtime Segments} = \$14.85 \text{ per Hour}$$

Looking at the totals from the shift hours report, you can see that Abbie will be paid \$569.60.

Hours and Times

To access the **Hours and times** report, from the Workforce Management tab, go to Reports > Shifts > Hours And Times.

After setting the Hours and Times report options, you can print employees' shifts by downloading a PDF file of the report.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Approved Hours, Times, and Stats

To access the **Approved Hours, Times, and Stats** report, from the Workforce Management tab, go to Reports > Shifts > Approved Hours, Times, and Stats.

The **Approved Hours, Times, and Stats** report shows a breakdown of approved times alongside shift metrics specified by the manager, and includes tips.

You can specify the period and locations that you want to appear in the report.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Variance (Tardy+)

To access the **Variance (Tardy+)** report, from the Workforce Management tab, go to Reports > Shifts > Variance (Tardy+).

The Variance (Tardy+) report lets you use presets of company or employee time fraud. You can also create your own report to compare two shift types over a period of time. For example, you can compare timesheet shifts to actual shifts for staff members.

The Variance (Tardy+) report will display the approvers' names for staff members' shifts. If the shift is automatically matched, there won't be an approver's name displayed.

The Variance (Tardy+) report also displays total shift costs. You can compare the variance of hours between the two shifts for a staff member and the cost variance of those shifts.

 **Note:** You'll only see costs for users in lower access groups.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Timesheet

To access the **Timesheet** report, from the Workforce Management tab, go to Reports > Shifts > Timesheet.

The Timesheet report allows you to generate a CSV file with time data from SuitePeople Time Clock or time and attendance data from SuitePeople Workforce Management.

For more information, see [Timesheet Report](#).

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Overtime Checks

To access the **Overtime Checks** report, from the Workforce Management tab, go to Reports > Shifts > Overtime Checks.

This report lets you flag consecutive work days, excessive hours, and clear breaks across specific locations and durations.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Percent Approved

To access the **Percent Approved** report, from the Workforce Management tab, go to Reports > Shifts > Percent Approved.

The report identifies the rate of shifts actioned or approved for each location.

You should have your time approved daily by your managers. The schedule should be 100% actioned or approved before processing the payroll.

You can download a CSV file of the data included in the report.

For more information, see [The Percent Approved Report](#).

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Weekday Split

To access the **Weekday Split** report, from the Workforce Management tab, go to Reports > Shifts > Weekday Split.

This report provides a summary of the percentage of hours each staff member in the company worked in the report period that fell on a weekday.

Only staff who have shifts during the report period will appear in the list.

The report lets you download a CSV file with detailed information and raw data used to calculate the percentages.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Allowances

To access the **Allowances** report, from the Workforce Management tab, go to Reports > Shifts > Allowances.

This report provides a summary of the allowances for your employees.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Employee Payroll Query

To access the **Employee Payroll Query** report, from the Workforce Management tab, go to Reports > Shifts > Employee Payroll Query.

The Employee Payroll Query report lets you view employees' scheduled, timesheet, and approved shifts.

You can download a CSV file of the data included in the report.

For more information, see [Employee Payroll Query Report](#).

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Day Worked Frequency

To access the **Day Worked Frequency** report, from the Workforce Management tab, go to Reports > Shifts > Day Worked Frequency.

The Day Worked Frequency report lets you identify the frequency that employees work on a specific day of the week.

The report lets you download a CSV file with detailed information and raw data used to calculate the frequency.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Zero Hours

To access the **Zero Hours** report, from the Workforce Management tab, go to Reports > Shifts > Zero Hours.

The Zero Hours Report allows you to track staff members who work intermittently or when staff members have stopped working altogether. It also tracks when staff members have not worked any shifts or taken leave.

You can select the start date and end date for the time period in which you want to view shifts or leave. This lists staff without any:

- Scheduled shifts
- Timesheet shifts
- Actual shifts
- Approved leave

You can download a CSV file of the data included in the report.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

DST Ambiguous Shifts

To access the **DST Ambiguous Shifts** report, from the Workforce Management tab, go to Reports > Shifts > DST Ambiguous Shifts.

During a daylight savings time (DST) backward transition, the times between 2:00 am and 3:00 am, or other times depending on your timezone, are repeated. Because of this, any punch in or out events that occur during this two-hour period can be ambiguous. This report shows all actual shifts at every location with events during this period on a selected DST transition day. It won't show any shifts if the selected day isn't a backward DST transition day.

You can download a CSV file of the data included in the report.

For more information, see [Daylight Savings Times \(DST\)](#).

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Punch Breaks

To access the **Punch Breaks** report, from the Workforce Management tab, go to Reports > Shifts > Punch Breaks.

This report lets you identify paid and unpaid breaks taken by employees. With this report, you can filter by punch breaks by location, break type, shift length, employment status, age range, and number of breaks.

When you run the report, you can filter by:

- Date range
- Locations
- Employment status
- Age range
- Shift Length (including breaks)
- Minimum unpaid breaks
- Minimum number of paid breaks
- Types of break taken

Note: If you don't select a type of break, shifts with that break type won't be included. For example, if you don't select unpaid breaks, shifts with unpaid breaks won't show up. The same goes for paid breaks, even if you selected the paid break option.

The report lets you download a CSV file with detailed information relevant to punch breaks.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Timesheet Report

To access the Timesheet report, from the Workforce Management tab, go to Reports > Shifts > Timesheet.

The Timesheet report allows you to generate a CSV file with time data from SuitePeople Time Clock or time and attendance data from SuitePeople Workforce Management.

You can generate the Timesheet report up to a maximum of two months at a time for any number of locations.

Note: This report includes raw timesheet data. If a manager approves a different time that a staff member worked, you'll still see the original clock-in and clock-out time here.

The two report types available to be generated are:

- Hours summary
- Punch events

Hours summary

The Hours summary report type displays information about shift hours for the staff member, including timesheet length and start and end times for shifts and breaks.

Punch events

The Punch events report type displays more shift information than the Hours summary report type. The Punch events report type displays a row for each punch event with detailed information about each shift punch.

The Punch events report type includes the following columns:

- **Time** – The time when the punch event occurred.
- **Event** – A punch event occurs when a staff member tracks time through SuitePeople Time Clock or Adi Insights mobile time and attendance. The events are recorded each time a staff member clocks in or out and records an action on the device. The types of actions include:
 - **Shift start** – Clock in to start a shift.
 - **Shift finish** – Clock out to finish a shift.
 - **Break start** – Clock in to start an unpaid break.
 - **Break finish** – Clock out to finish an unpaid break.
 - **Change job** – Some staff members may change their job roles in the middle of their shift.
 - **Server** – SuitePeople Workforce Management automatically clocks out staff members 24 hours after their shift ends if they have forgotten to clock out manually. Managers can also clock out staff members if they notice this during shift approvals on the Weekly.

- **Source** – The device type on which the punch event was made on. SuitePeople Workforce Management supports three different device types:
 - **SuitePeople Time Clock** – The app is available on Windows, iOS, or Android.
 - **SuitePeople Workforce Management mobile app** – The app is installed on staff members' mobile devices. This will only appear if enabled on the company configuration.
- **Geo** – Yes or No - This displays the GPS coordinates if a staff member clocks in or out from the app. These coordinates appear in the "Longitude" and "Latitude" columns. This will only appear as "Yes" if time punches in the Adi Insights phone app are available.

 **Note:** GPS coordinates aren't available from SuitePeople Time Clock. Staff members must physically be at the device to clock in and out of their shifts.

- **Authentication Method** – This only appears on punches completed in SuitePeople Time Clock. You will see the **PIN code** option or the **Left or Right (finger name)** option.
 - **PIN Code** – The punch-in event was completed by entering a PIN code.
 - **Left/Right** – SuitePeople Time Clock uses a fingerprint scanner to track which registered finger a staff member used for the punch event. For example, they can use their left index finger or right thumb to complete the punch event.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Employee Payroll Query Report

The Employee Payroll Query report lets you view information for staff members' scheduled shifts, timesheet shifts, and approved shifts.

You can run the report for one staff member at a time for any time period.

To run the Employee Payroll Query report:

1. From the Workforce Management tab, go to Reports > Shifts > Employee Payroll Query.
2. Choose the staff member whose shift you want to see, and select the start and end dates for the time period you want to view.
3. Choose whether you want to view the staff member's scheduled shifts, timesheet shifts, or approved shifts. You can also select all the options.
4. Select **Fetch**.

 **Note:** You can download this report as a CSV file.

Scheduled and Timesheet Shifts

Scheduled shifts and timesheet shifts can have the following statuses:

- **Approved** – Approved shifts have been approved by a manager. An approved shift has a thumbs-up icon or a dialog to edit and approve the shift.
- **Denied** – Denied shifts have been denied by a manager. A denied shift has a thumbs-down icon.
- **Unprocessed** – Unprocessed shifts have been neither approved nor denied by a manager.

If there is a matching scheduled shift and timesheet shift, one of them will be approved and the other will be unprocessed. New shifts appear on new lines.

Actual Shifts

Actual shifts are scheduled shifts or timesheet shifts which have been approved. Actual shifts may or may not have a matching scheduled shift or timesheet shift.

Actual shifts can have the following statuses:

- **Processed** – Processed shifts are exported to payroll, or the pay period has been entered in Adi Insights as a locked period.
- **Unprocessed** – Unprocessed shifts are not exported to payroll.

If an actual shift hasn't been processed, the "i" icon beside the shift will show which manager approved the shift and when it was approved.

For a list of all available metrics in each shifts report, see [Shifts Reports](#).

Employee Reports

With Workforce Management (WFM), you can generate reports about various employee metrics.

The available shifts reports are:

- [All](#)
- [Terminated](#)
- [Wage Changes](#)
- [Birthdays](#)
- [Missing Details](#)
- [Average Ages](#)
- [Monthly Turnover](#)
- [Leave/Time-Off](#)
- [Work Permits](#)

For a list of all available metrics in each report, see [Extracting Data Through WFM Reports](#).

All

To access the **All** report, from the Workforce Management tab, go to Reports > Employee > All.

This report lets you generate information about all available details about your employees.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Terminated

To access the **Terminated** report, from the Workforce Management tab, go to Reports > Employee > Terminated.

This report lets you generate a list of terminated employees during a specified period. It includes information relevant to their termination.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Wage Changes

To access the **Wage Changes** report, from the Workforce Management tab, go to Reports > Employee > Wage Changes.

This report lets you make a list of wage rate changes for all employees hire during a set period. It covers rate changes from birthdays that move employees to a new rate bracket, as well as updates from new agreement revisions. Employees with the wrong birth date might show the wrong rates.

This report will not include employees who did not have a change in wage during the selected period.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Birthdays

To access the **Birthdays** report, from the Workforce Management tab, go to Reports > Employee > Birthdays.

This report lets you generate a list of employee birthdays, ages, and primary locations during a specified period.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Missing Details

To access the **Missing Details** report, from the Workforce Management tab, go to Reports > Employee > Missing Details.

The Missing Staff details report identifies if any staff are missing required information such as personal details, bank account information, or emergency contacts.

You can notify the staff members that are listed in the Missing Staff details report by email or SMS.

You can run this report after onboarding new staff members to ensure all their details are entered in SuitePeople Workforce Management.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Average Ages

To access the **Average Ages** report, from the Workforce Management tab, go to Reports > Employee > Average Ages.

This report calculates average ages using the current age (in years) of each employee who has a date of birth on record. It can be used to view the average employee age and employee count by job, location, state, or by all these criteria.

To view a list of employees with their age and other information, select **Show staff ages and dates of birth**.

Including data about Job(s) will result in staff who are available to work multiple jobs to be counted for each job.

You may only view an aggregate report when reporting on a master brand.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Monthly Turnover

To access the **Monthly Turnover** report, from the Workforce Management tab, go to Reports > Employee > Monthly Turnover.

This report provides a breakdown of employee turnover for all active locations associated with the given brand.

Three rows are provided for each location, showing the monthly, annualized (year-to-date) and rolling 12-month turnover.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Leave/Time-Off

To access the **Leave/Time-Off** report, from the Workforce Management tab, go to Reports > Employee > Leave/Time-Off.

This report lets you see employees' leave periods by choosing a pay period when the leave happened. Pick the start and end dates for the pay period, then click **Fetch**.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Work Permits

To access the **Work Permits** report, from the Workforce Management tab, go to Reports > Employee > Work Permits.

This report lets you generate Permitted Worker Permits for employees working in Victoria. You're responsible for making sure you have the right address and shift information for all locations you generate reports for.

This report is generated using the template provided by the Victorian State Government.

You can download a ZIP file of the work permits that the report generates.

For a list of all available metrics in each employee report, see [Employee Reports](#).

Location Reports

With Workforce Management (WFM), you can generate reports about various location metrics affecting your operations.

The available location reports are:

- [Variance](#)
- [Forecasting Analysis](#)
- [Percent Hours Per Location](#)

For a list of all available metrics in each report, see [Extracting Data Through WFM Reports](#).

Variance

To access the **Variance** report, from the Workforce Management tab, go to Reports > Location > Variance.

This report lets you view the variance between the scheduled and actual figures for specific metrics, including wages, hours worked, average hourly cost, and others.

You can download a CSV file of the data included in the report.

For more information about running, see [Variance Report](#).

For a list of all available metrics in each location report, see [Location Reports](#).

Forecasting Analysis

To access the **Forecasting Analysis** report, from the Workforce Management tab, go to Reports > Location > Forecasting Analysis.

This report is used to evaluate the accuracy in forecasting for the selected period and locations.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each location report, see [Location Reports](#).

Percent Hours Per Location

To access the **Percent Hours Per Location** report, from the Workforce Management tab, go to Reports > Location > Percent Hours Per Location.

This report lets you view the percentage of hours that each staff member worked at each location. You can compare between two periods.

 **Note:** This report shows only approved and unscheduled shifts.

You can download a CSV file of the data included in the report.

For a list of all available metrics in each location report, see [Location Reports](#).

Variance Report

You can generate and configure a Variance report across different locations .

To run the Location variance report:

1. From the Workforce Management tab, go to Reports > Location > Variance.
2. Select the time period in which you want to view the variance of shifts and applicable KPIs.
3. Choose the locations you want to view.
4. Choose how you want the report to be grouped. This can be based on:
 - Location
 - Job/Leave Type
 - Day

- Week

5. You can choose from the following advanced options:

- Include leave in the totals
- Include modifiers or loadings
- Displays variances as percentages

You can also choose to hide or view the following KPIs:

- Wages
- Hours
- Average Hourly Cost
- Labor Cost %
- Sales
- Sales per Man hour
- Units
- Productivity

Approved and unapproved wages will appear in the Location variance report.

Since the Location variance report recalculates overnight, all approvals must be completed by end of day. If the approvals aren't completed then, they won't appear in the Location variance report until the following day.

Workforce Management Payroll

When the actual data is finalized it can be exported to payroll packages like Xero. For more information about the integration, see the following help topics:

- [ADP \(US\)](#)
- [ADP \(Canada\)](#)
- [MYOB AccountRight Live](#)
- [WageEasy](#)
- [Xero](#)
- [Paypac](#)
- [Attaché](#)

Linking Payroll Items in WFM

Workforce Management (WFM) lets you to link your wage agreements to your payroll system.

Make sure your payroll system's pay items are linked to WFM. These items may have different names depending on your payroll system. Proper linking ensures that WFM conditions, such as regular hours or public holidays, are recorded in the right place.

Before linking payroll items, make sure your wage agreements are set up on your account. For more information, see [Wage Setup](#).

WFM lets you link payroll items to the following configurations:

- **Conditions** – This configuration lets you link a single payroll item to a condition within your agreements. It's useful for payroll systems that don't have individual pay items for each age rate. For example, if all regular hours can be sent to the same item, you should use this configuration. Items linked here will be retained for each revision within your agreements, and will be applied to all classifications within the your agreements.
- **Classifications** – This configuration lets you link multiple pay items for each condition in your Payroll system. For example, if you have different regular hours for different age levels, you should use this configuration.
- **Allowances** – This configuration lets you link payroll items to allowances, like for laundry or food.
- **Penalties** – This configuration lets you link payroll items to penalties or time worked outside contract hours.

Employees with the Administrator role can link payroll items to WFM.

To link payroll items in WFM:

1. Go to Workforce Management.
2. Go to Setup > NetSuite Integration > Agreements.
The Link objects to Payrollitems page opens to the **Conditions** subtab.
3. Link items to conditions.
 - a. Locate the WFM wage agreement with conditions that you want to link to your payroll items.
The following conditions are available:
 - Regular Hours
 - Public Holiday
 - Saturday
 - Sunday
 - Standard Overtime
 - Extended Overtime
 - b. From each condition field, search then select the payroll item you want to link.

Note: This search will only display up to 15 items at a time, so you may need to increase your search terms if you're not seeing the item you're looking for.

When you select an item, that item is linked to WFM.

- c. If you want to unlink a payroll item from a condition, click **Unlink**.
4. Link items to classifications.
 - a. Click the **Classifications** subtab.
 - b. From the list on the upper left, select the wage agreement where you want to link payroll items.
 - c. From the list on the upper right, select the revision date. Generally, you should select the latest revision date to ensure you're linking payroll items to the current version of the agreement.
All classifications that belong to that agreement and revision appears, divided across multiple subtabs for each age or age range and across multiple condition levels.
 - d. Expand the classification level where the payroll item you want to link is mapped.

- e. From the appropriate classification, select the age or age range.
 - f. Repeat Steps 3a to 3c.
5. Link items to allowances.
- a. Click the **Allowances** subtab.
- All associated allowances for each wage agreement will appear on the page.

 **Note:** If an allowance or penalty doesn't load from the page, make sure that it's created within payroll.

- b. Repeat Steps 3a to 3c.
6. Link items to penalties.
- a. Click the **Penalties** subtab.
- All associated penalties for each wage agreement will appear on the page.
- b. Repeat Steps 3a to 3c.

ADP (US)

 **Important:** The ADP (US) integration is only available to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

With Workforce Management (WFM), you can export both leave and hours worked to a CSV file compatible with ADP (US).

For more information about setting up ADP (US) integrations in WFM, see the following help topics:

- [Creating an ADP \(US\) Configuration in WFM](#)
- [ADP \(US\) Configuration Settings in WFM](#)
- [Linking Employees to ADP \(US\)](#)
- [Linking Locations to ADP \(US\)](#)
- [Linking a Location and Job to ADP \(US\)](#)
- [Linking Leave Types to ADP \(US\)](#)
- [Linking Agreements to ADP \(US\)](#)
- [Exporting ADP \(US\) Reports](#)

Creating an ADP (US) Configuration in WFM

Follow the steps in the procedure below.

To create a new ADP (US) payroll configuration in WFM:

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **ADP (US)**.
3. On the ADP (US) configurations page, click **+ Create new**.
4. On the Create new ADP (US) Payroll configuration page, complete the fields.
 - **Company code** – Enter the two or three alphanumeric characters representing your company. ADP provides this code. You may also enter a dash (-) or ampersand (&).

- **Use expanded fields** – If this setting is enabled in your ADP company, check this box.
 - **Send rates** – If you want WFM to include wage rates with each row in the exported ADP files, check the box. If this box is cleared, exported file will include only the number of hours worked.
 - **Department length** – Choose the length of the department name which matches the setting in ADP. You can choose from:
 - Never send department
 - 3 characters
 - 6 characters
 - **Cost code** – If you want to override the default cost code on the exported hours and link location and job combinations, check the box.
 - **Export hours to calendar day** – If you want to export all hours to the calendar day where they belong instead of the work day, check the box. When checked, shifts may be split when they go over midnight.
 - **Auto link to new revisions** – If you want to automatically link allowances, penalties, rates, and multipliers from newly created revisions, check the box.
- WFM notifies you when any linked agreements, regions, or location overrides are revised.

5. Click **+ Create**.

After creating your ADP (US) configuration, you must link the following to an ADP code:

- Employees
- Locations
- Leave types
- Agreements

ADP (US) Configuration Settings in WFM

On the ADP configuration page, you'll see the following options:

- **Detail** – Adjust the initial settings you made when you created the configuration.
- **Employees** – Link your employees to an ADP code.
- **Locations** – Link WFM locations to an ADP department.
- **Location + Job** – Link WFM location and job combinations to the ADP cost codes.
- **Leave** – Link leave types to an ADP code.
- **Agreements** – Link WFM agreement to an ADP company.
- **Wages** – (Pending)
- **Report** – Export files about employee leave and work hours.
- **Deactivate** – Deactivate an ADP configuration that is no longer needed.

Linking Employees to ADP (US)

Follow the procedure below.

To link employees to ADP (US):

1. Go to Workforce Management > Setup > Integrations > ADP (US).
2. Click **Employees**.
3. Locate the employee or employees you want to link.
 - In the Search field, enter the name of the employee.
 - From the list beside the Search field, filter to view either:
 - All Employees
 - Unlinked Employees
 - Linked Employees
 - Linked to other ADP
 - From the list on the upper right of the page, filter to view employees:
 - Employed now or in the future
 - Terminated
4. In the **File #** column of the employee, enter the ADP code.
5. (Optional) To unlink an employee from a code, click **Unlink** on the corresponding row.

Linking Locations to ADP (US)

Follow the procedure below.

To link locations to ADP (US) in WFM:

1. Go to Workforce Management > Setup > Integrations > ADP (US).
2. Click **Locations**.
3. Find the locations you want to link.
 - In the Search field, enter the name of the location.
 - From the list beside the Search field, filter to view either:
 - All Locations
 - Unlinked Locations
 - Linked Locations
4. In the **Department number** column of the location, enter the ADP department number.
 Department numbers have either 3 or 6 characters, depending on what you have set this to in the initial setup of the integration. To change character count settings, go to Workforce Management > Payroll > ADP (US) > Detail.
5. (Optional) To unlink a location from a department, click **Unlink** on the corresponding row.

Linking a Location and Job to ADP (US)

Follow the procedure below.

To link a location and job to ADP (US) in WFM:

1. Go to Workforce Management > Setup > Integrations > ADP (US).
2. Click **Location + Job**.

3. Find the location and job combination you want to link.
 - In the Search field, enter the name of the location or job.
 - From the list beside the Search field, filter to view either:
 - **All** – Shows all location and job combinations.
 - **Unlinked** – Shows only unlinked combinations.
 - **Linked** – Shows only linked combinations.
4. In the **ADP cost code** column of the location, enter the code.
This code may have up to 50 characters.
5. (Optional) To unlink a combination from a cost code, click **Unlink** on the corresponding row.

Linking Leave Types to ADP (US)

Follow the procedure below.

To link a leave type to ADP (US) in WFM:

1. Go to Workforce Management > Setup > Integrations > ADP (US).
2. Click **Leave**.
3. Find the leave type you want to link.
 - In the Search field, enter the name of the leave type.
 - From the list beside the Search field, filter to view either:
 - All leave types
 - Unlinked leave types
 - Linked leave types
4. In the **Payroll ID** column of the leave type, select between **Hours 3 Code** or **Hours 4 Code**.
5. On the corresponding field beside the payroll ID, enter the ADP payroll code you want to link to the leave type.
If you're unsure of the payroll code, contact your ADP representative.
6. (Optional) To unlink a leave type from a payroll ID and code, click **Unlink** on the corresponding row.

Linking Agreements to ADP (US)

Linking agreements to ADP (US) can be done in the same way as linking payroll items in WFM.

To know more about these options, see [Linking Payroll Items in WFM](#).

The ADP Configuration Agreements page contain subtabs available for configuring conditions, allowances, penalties, and classifications.

To link agreements to ADP (US):

1. Go to Workforce Management > Setup > Integrations > ADP (US).
2. Click **Agreements**.
3. Select the subtab that matches the agreement you want to link to ADP (US).
4. After selecting the subtab, complete the required fields to configure items.

The ADP Configuration Agreements page has fewer conditions than the Link objects to Payrollitems page. On the ADP agreements page, you can link items for the following conditions:

- Regular Hours
- Public Holiday
 - Regular Hours
 - Overtime Hours
 - Hours 3 Code
 - Hours 4 Code
- Weekend

For more information about completing the fields, see [Linking Payroll Items in WFM](#).

Exporting ADP (US) Reports

After linking ADP (US) components to WFM, you can export a report containing leave and work hours.

To export ADP (US) reports:

1. Go to Workforce Management > (Pending).
2. Select the start and end dates of the period you would like to export.
3. On the **Available Choices** panel, select the locations that you want to include in the report. To select multiple locations, press and hold Ctrl as you click each location.
If you want to include all locations, click **Choose all**.
4. To move your selections to the **Chosen Items** panel, click the blue right arrow in the middle of the panels.
If you want to clear your selections, click **Clear All**.
5. To generate a copy of the data, click **Preview**.
6. To download a CSV file of the data, click **Download**.

You can also set a **Batch ID**, **Memo Code** or **Memo Amount** before exporting data. If you need more information about these fields, reach out to an ADP representative.

ADP (Canada)

Important: The ADP (Canada) integration is available only to accounts where it is already provisioned. It is not included with the current SuitePeople WFM solution.

With Workforce Management (WFM), you can export employee start and stop time to a file compatible with ADP (Canada). This file lets you export the approved actual hours that employees worked by day and let ADP (Canada) calculate pay for specific state and local holidays that may apply.

Note: Leaves must be added in both ADP (Canada) and WFM). This data is not currently exported to ADP (Canada) using the start and stop export format.

Creating an ADP (Canada) Configuration

Follow the steps in the procedure.

To create a new ADP (Canada) configuration:

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **ADP (Canada)**.
3. On the ADP (Canada) configurations page, click **+ Create new**.
4. On the Create new ADP (Canada) Payroll configuration page, complete the fields.
 - **Company code** – Enter the two or three alphanumeric characters representing your company. ADP provides this code. You may also enter a dash (-) or ampersand (&).
 - **Report format** – Select the format for the ADP report.
 - **Export by Earnings Code** – This option will send over total hours worked for the pay period.
 - **Export by Start/Stop Times** – This export will include the start and stops times by date, with total worked hours by date to ADP. This will allow for the payroll system, ADP, to account for any state and local holidays to be accounted for when processing payroll.
 - **Start/Stop times export options** – Set optional fields for exporting start and stop times.
 - **Department map** – Select how you want to allocate approved hours in WFM to ADP departments. You can choose between **Location** and **Job**.
 If you do not select an option, work hours will be allocated to the home department in ADP.
 If you link WFM locations to ADP departments, you can ensure that employees who may work at various locations are allocated to the correct departments for payment.
 - **Job map** – Select how you want to map WFM jobs to ADP jobs. You can choose between **Location** and **Job**. This map benefits is useful when you need to track pay to jobs.
5. Click **+Create**.

After you have created your configuration, you can link the following data from WFM to ADP (Canada):

- employees
- locations, available if you chose to link WFM locations to ADP departments
- jobs, available if you chose to link WFM jobs to ADP jobs

Linking Employees to ADP (Canada)

To link your Adi Staff to an ADP Badge Number, select the Staff menu item under Payroll Configuration. You can use the drop-down boxes at the top of this page to view All Staff, Unlinked Staff, Linked Staff.

You can also filter to staff who are employed now or in the future, or terminated.

Follow the procedure to link WFM employees.

To link employees to ADP (Canada):

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **ADP (Canada)**.
3. On the ADP (Canada) configurations page, click the configuration you created.
4. On the configuration page, click **Staff**.
5. Locate the employee or employees you want to link.
 - In the Search field, enter the name of the employee.
 - From the list beside the Search field, filter to view either:

- All Employees
 - Unlinked Employees
 - Linked Employees
- From the list on the upper right of the page, filter to view employees:
 - employed now or in the future
 - employment terminated
- 6. In the **ADP Badge Number** column of the employee you want to link, enter the ADP code.
- 7. To link the employee, press **Enter**.
- 8. (Optional) To unlink an employee from a code, click **Unlink** on the corresponding row.

Linking Locations to ADP (Canada)

If you chose to link WFM locations to ADP departments, follow the procedure.

To link locations to ADP (Canada):

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **ADP (Canada)**.
3. On the ADP (Canada) configurations page, click the configuration you created.
4. On the configuration page, click **Locations**.
5. Locate the locations you want to link.
 - In the Search field, enter the name of the location.
 - From the list beside the Search field, filter to view either:
 - All Locations
 - Unlinked Locations
 - Linked Locations
6. In the **ADP Department number** column of the employee you want to link, enter the number.
7. To link the location, press **Enter**.
8. (Optional) To unlink a location from a code, click **Unlink** on the corresponding row.

Linking Jobs to ADP (Canada)

If you've opted to link Workforce Management Jobs to ADP Jobs, click on the Jobs menu item. From there, you'll see a list of your Workforce Management Jobs. To link these Job to ADP Jobs, enter in the ADP Number associated with the Workforce Management Job you're wanting to link in the ADP Number data field.

After you link your Workforce Management Jobs to ADP Jobs, you can now export files and process payroll.

To link jobs to ADP (Canada):

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **ADP (Canada)**.

3. On the ADP (Canada) configurations page, click the configuration you created.
4. On the configuration page, click **Jobs**.
5. Locate the jobs you want to link.
 - In the Search field, enter the name of the job.
 - From the list beside the Search field, filter to view either:
 - All Jobs
 - Unlinked Jobs
 - Linked Jobs
6. In the **ADP Number** column of the employee you want to link, enter the number.
7. To link the job, press **Enter**.
8. (Optional) To unlink the job, click **Unlink** on the corresponding row.

Exporting Data to ADP (Canada)

Exporting to ADP (Canada)

After you've completed establishing the links between Workforce Management and ADP, you can export leave and hours worked.

To generate the export file, enter the start and finish dates of the period you'd like to export and select which Workforce Management locations are to be included in the export.

Also, if needed, you can select the type of Employment Status and OT Exemption status to export from Workforce Management to ADP by clicking on the arrow next to the Employment/Wage item.

To export data to ADP (Canada):

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **ADP (Canada)**.
3. On the ADP (Canada) configurations page, click the configuration you created.
4. On the configuration page, click **Report**.
5. On the **Period** section, select the start and finish dates for the report.
6. On the **Location** section, choose the locations you want to include in the report.
 - a. Set the filters.
 - b. From the **Available Choices** panel on the left, select the locations.

If you want to select all locations, click **Choose All**.
 - c. To move the chosen locations to the **Chosen Items** panel on the right, click the blue right arrow symbol at the middle of the panels.

If you want to clear your chosen items, click **Clear All**.
7. On the **Employment/wage** section, select the employment status or statuses.
 - Full-time
 - Part-time
 - Casual
 - Contract
8. From the Exemption status list, select a status.

- Both exempt and non-exempt
 - Only exempt from overtime
 - Only non-exempt from overtime
9. (Optional) On the **Employee(s)** section, enter the name of an employee. Click to add them. You can add multiple employees.
If you don't select employees, the report will include data for all employees.
 10. To view a sample of the report, click **Preview**.
 11. To export an ADP-compatible CSV file of the report, click **Download**.

MYOB AccountRight Live

Important: The MYOB AccountRight Live integration is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

With Workforce Management (WFM), you can export employee hours to a file compatible with MYOB AccountRight Live.

To integrate WFM with MYOB AccountRight Live, follow the steps in the table.

Step	Related Topic
1. Create an MYOB username and password.	text
2. Authenticate WFM.	Authenticating WFM for MYOB AccountRight Live
3. Set up company files.	Setting up MYOB Company Files
4. Link employees.	Linking Employees to MYOB
5. Link wage agreements.	Linking Wage Agreements to MYOB
6. Link leave types.	Linking Leave Types to MYOB
7.(Optional) Link locations to jobs.	Linking Locations to MYOB Jobs

Creating an MYOB Username and Password

Before you can authenticate WFM, you need to set up an offline username and password in MYOB.

Note: Check if you have MYOB cloud or online enabled.

To create an MYOB username and password:

1. In MYOB, go to Setup > User Access.
2. Follow the instructions to set up an offline password.

Authenticating WFM for MYOB AccountRight Live

To authenticate WFM for use with MYOB AccountRight Live, follow the procedure below.

To authenticate WFM for MYOB AccountRight Live:

1. Go to (navigation path).
2. On the (page), select **Get Company Files**.
3. Log in to the my.MYOB site.
WFM opens, and a list of your MYOB files appears.
4. For each company file that you want to integrate to WFM, click **Authorise**.
All authorized files appear on the left of the page. Each company file includes a menu that you can use to link employees, agreements, leaves, and locations to the file.

Setting up MYOB Company Files

After you've authenticated WFM for MYOB AccountRight Live, the authorized files appear on the left.

You must confirm settings for MYOB company files to properly sync with WFM.

To set up MYOB company files:

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **MYOB**.
3. On the MYOB page, click a company file.
4. On the company file page, confirm the settings.
 - a. In the **Authorisation Details** section, note the level of authorization and available fields.
 - b. (Optional) If you change the credentials used to access your company files, you should update them using the username and password fields.
 - c. (Optional) If you want to synchronize employee details between WFM and MYOB, check the **Sync employee details** box.
5. On the **Default Hourly Wage** section, choose the action that applies to you.
 - If you pay employees on the hourly wage classification, select an option from **The hourly wage category** field.
 - If you don't pay employees on the hourly wage classification, leave this field blank.

Linking Employees to MYOB

Follow the procedure below.

To link employees to MYOB:

1. Go to Workforce Management > Setup > Integrations > MYOB.
2. Click **Employees**.
3. Select the subtab that best fits your purpose.
 - **Link Employee** – Select this subtab if you want to link or unlink employees that are available in both WFM and MYOB.
 - **Import Employee** – Select this subtab if you want to import employees from MYOB to WFM.
 - **Export Employee** – Select this subtab if you want to export employees from WFM to MYOB.

4. If you're on the **Link Employee** subtab, a list of MYOB employees appear.
 - a. From the list, locate the employee to link to WFM. If they're not on the list, they're not listed in MYOB.
 - b. On the corresponding employee field, select the employee file in MYOB.
 - c. Click **Link**.
 - d. (Optional) If you want to unlink an employee, click **Unlink**.
 - e. (Optional) If you want to retrieve employee information from MYOB to WFM, click **Pull**.
 - f. (Optional) If you want to update employee information from WFM to MYOB, click **Push**.
5. If you're on the **Import Employee** subtab, a list of MYOB employees appears.
 - a. From the list, locate the employee to import to WFM. If they're not on the list, they're not listed in MYOB or they're already linked with WFM.
 - b. Import the locations where employees are available.
6. If you're on the **Export Employee** subtab, a list of WFM employees appears.
 From the list, locate the employee to export to MYOB. If they're not on the list, they're not listed in WFM or they're already linked to an MYOB staff card.

Linking Wage Agreements to MYOB

To export shifts, you must link wage agreements to MYOB.

To link wage agreements to MYOB:

1. Go to Workforce Management > Setup > Integrations > MYOB.
2. Click **Agreements**.
3. The Link objects to Payrollitems page opens to the **Conditions** subtab.
 Determine the payroll items you need to link with each condition, including age group, if required.
4. Link the payroll items. For more information, see [Linking Payroll Items in WFM](#).

Linking Leave Types to MYOB

Link at least one leave type from WFM to MYOB.

WFM uses the linked leave types for the following:

- To link leave types between WFM and MYOB when exporting payroll reports
- To show the available leave balances in each employee's leave page in WFM

When employees request for a leave, they can immediately see their available leave balance on their employee leave page.

To link leave types to MYOB

1. Go to Workforce Management > Setup > Integrations > MYOB.
2. Click **Leaves**.
3. Locate the leave type you need to link to MYOB.
4. On the corresponding WFM leave type field, select the leave type in MYOB.

5. Click **Link**.
6. (Optional) If you want to unlink a leave type, click **Unlink** next to the corresponding type.

Linking Locations to MYOB Jobs

If you use MYOB jobs, you can link them to WFM locations for tracking in MYOB.

This is optional to set up. When Workforce Management exports shifts to MYOB, shifts which are worked at each linked location will export for cost-tracking purposes.

To link locations to MYOB jobs:

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **MYOB**.
3. On the MYOB page, click a company file.
4. Click **Locations**.
WFM locations appear on the left, and MYOB jobs appear on the right with corresponding lists.
5. Locate the WFM location you want to link, then select the corresponding MYOB job from the list.
6. Click **Link**.

WageEasy

Important: The WageEasy integration is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

With Workforce Management (WFM), you can export worked time to WageEasy.

To set up and export hours to WageEasy, see the following procedures in this section.

1. [Setting Up Unique WFM IDs](#)
2. [Setting up WFM Schedules to Export to a WageEasy Department](#)
3. [Exporting Hours Worked to Import to WageEasy](#)
4. [Importing Hours Worked to WageEasy](#)

Setting Up Unique WFM IDs

All employees in WageEasy need to have their employee numbers and time cards set to the WFM unique ID.

To set up a unique WFM ID:

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **WageEasy**.
3. Select the Roster Locations and pay range.
4. Click **View Staff**.
5. The column titled ID is the unique ID.

Setting up WFM Schedules to Export to a WageEasy Department

To have the approved hours from WFM appear in WageEasy departments, contact NetSuite Customer Support.

When the setup is ready, you'll see a list of WFM Roster Units with the corresponding department numbers appears in WageEasy. If you try to export before these are set up, the schedules won't export correctly.

If you've created a new roster unit with exportable shifts before the linking is complete, you'll also be unable to export. Send an email message with the correct department ID to the address mentioned.

Exporting Hours Worked to Import to WageEasy

Follow the procedure below.

To export hours worked from WFM:

1. Go to Workforce Management > Setup > Integrations.
2. From the **Payroll systems** list, select **WageEasy**.
3. Select the date range for the pay period.
4. Select the rosters you want to export.
5. To show all approved leave for the period, click **Leave Report**
6. Open WageEasy and enter the leave before importing the hours from WFM.
7. Go back to the WageEasy page in WFM.
8. To show the approved hours for the locations selected, click **Preview Shifts**.
Make sure the hours approved are correct.
9. To export the approved hours, click **Export Shifts**.
10. Save the file to a known location to import into WageEasy.

Importing Hours Worked to WageEasy

After you've saved a file of hours worked from WFM, you can import the hours to WageEasy.

To import hours worked to WageEasy:

1. Open WageEasy.
2. Enter any employee leaves.
3. In WageEasy, go to Wages > Auto.
4. To import the timesheets, follow the prompts.

Xero

Important: The Xero integration is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

With Workforce Management (WFM), you can export worked hours to Xero.

Linking WFM with Xero lets you:

- Export employee hours to Xero
- Create an employee in Xero from WFM
- Create an employee in WFM from Xero
- Automatically sync employee details updated in WFM with those in Xero
- Manually update employee details in WFM from the details in Xero

Linked data can then be used for payroll and can help you save time and avoid data entry errors.

To manage your Xero integration, see the following procedures in this section.

- [Setting up a Xero Integration](#)
- [Linking Multiple Xero Files to One WFM Account](#)
- Managing WFM Employees for Xero
- Exporting Shifts to Xero

Setting up a Xero Integration

Before you can export approved hours to Xero from WFM, you'll need to complete your initial setup.

To set up WFM with Xero, follow the steps in the table.

Step	Related Topic
1. Complete the requirements for the setup.	Prerequisites for Setting up Xero
2. Set up timesheet tracking in Xero.	Setting up Timesheet Tracking in Xero
3. Link WFM items to Xero.	Linking WFM Items to Xero

Prerequisites for Setting up Xero

Before you set up Xero for WFM, complete the following requirements:

- In Xero, ensure that you have access to the Payroll Administrator role.
- In WFM, ensure that you have access to a Finance Coordinator or higher level of access.

After completing your prerequisites, you can set up timesheet tracking in Xero.

Setting up Timesheet Tracking in Xero

To set up timesheet tracking In Xero:

1. Go to Xero.
2. On the top left, click your Xero file name. Click **Settings**.
3. Set up tracking categories and options. Refer to the table for specific settings.

Settings	Guidelines
Tracking Categories	Ensure that you set up options.

Settings	Guidelines
Category Options	Create one option for each WFM location.
Location	Each location in WFM must be mapped to a tracking category. Tracking categories and options may use the same names as your WFM locations.

For more information, see [Set up tracking categories and options](#) at Xero Central.

4. After saving your tracking categories, assign them to timesheet categories.
 - a. Go to Settings. Click **Payroll Settings**.
 - b. In the Payroll Tracking section, go to **Timesheet Categories**.

Note: When we export approved hours to Xero, the hours worked are allocated against a timesheet category. Don't map this to **Employee Groups** because these groups don't track hours.

If employees work across two stores, you can track this in Xero if you have one Xero file. Each store's hours will go to a different tracking category option.

- c. From the **Region** field, select the tracking category that you created.
 - d. Click **Save**.
5. Close Xero.
6. Go to Workforce Management.
7. Go to Setup > Integrations > Payroll Integrations > Xero.
8. Click **Link to new organisation**.
You'll be redirected to Xero.
9. Complete the steps to authenticate your Xero account.
You'll be redirected to WFM.
10. From the list that appears on the page, select your Xero file.

After opening your Xero file, you can link items in WFM to Xero.

Linking WFM Items to Xero

To ensure complete integration, you must link multiple WFM items to Xero. You only need to link most items the first time. If you create new employees, wages, or locations, you need to link them to Xero.

To continue linking WFM items, follow the procedure. You should already have your Xero file open on your screen.

To link WFM items to Xero:

1. From the Xero file page in Workforce Management, go to the **Defaults** subtab.
2. Complete the fields based on your setup in Xero.
 - Staff employment
 - Default ordinary earnings rate
 - Default payroll calendar
 - Superannuation
 - Default superannuation expense account
 - Default superannuation liability account

- Bank details
 - **Statement text** – This text appears on the employee's bank statement when they receive payment. WFM is required to send bank account details to Xero.
You're required to enter a statement text only if you have ESS Extended and want to send bank details to Xero.
- Wage revisions
 - **Auto link new revisions** – To automatically re-link allowances, penalties, rates, and multipliers from newly created revisions, check the box. WFM generates a notification when a new revision has been created for any linked agreements, regions, or location overrides.

3. Click **Save**.

4. Click the **Locations** subtab.

5. From each WFM location field, select the matching Xero tracking category option.

For example, for the **Harbour Town - Perth** location in WFM, select **Harbour Town - Perth** from the list of category options.

Ensure you select a timesheet category for each location to make sure that the hours for all locations are exported to Xero.

WFM automatically saves the mapping after you select a category.

If you want to add more tracking category options, you may do so then return to the Xero configuration page to select the option you added.

6. Link WFM employees to their Xero profiles.

For each Xero file, map the employees who will be paid from that file. You can't map an employee to multiple Xero files.

- a. Click the **Staff** subtab.
- b. Beside the name of the employee in WFM, select their corresponding name in Xero.
- c. Click **Link**.

 **Note:** When you link WFM employees to Xero, WFM applies changes made to employee profiles to their profiles in Xero.
For more information about applying Xero profile changes to WFM profiles and other ways to manage WFM employees with Xero, see [Managing WFM Employees for Xero](#).

7. Map WFM classifications or conditions to Xero payroll items. For more information, see [Linking Payroll Items in WFM](#).

If you have multiple locations in WFM and your employees regularly work at multiple locations, you can ensure that WFM transfers these hours to Xero. For more information, see [Linking Multiple Xero Files to One WFM Account](#).

Now that you've completed your integration setup and, if needed, linked multiple files to one account, you can export approved shifts. For more information about exporting, see [Exporting Shifts to Xero](#).

Linking Multiple Xero Files to One WFM Account

 **Note:** If you have only one Xero file that's set up with timesheet tracking category options matching WFM locations, no further actions are required.

If you have multiple locations in WFM and your employees regularly work at multiple locations, you can ensure that WFM transfers these hours to Xero.

If you have separate companies or ABNs for each location and use separate Xero files for them, you can link them to one WFM account. This account can capture all of your locations, so you can link the account to any employee record and ensure that you track their work across multiple locations.

The benefits of linking multiple Xero files or locations to one WFM account include:

- Easily sharing your employees across your locations
- Avoid over-scheduling your employees
- Calculating the correct wage triggers, like overtime, for hours worked across multiple locations

Before you begin linking Xero files, make sure that you have the correct access level so you can authorize access for each file.

To link multiple Xero files to one WFM account:

1. Go to Workforce Management.
2. Go to Setup > Integrations > Payroll Integrations > Xero.
3. Authenticate the Xero files you must link to the WFM account.
 - a. From the **Setup** menu, click **Link to new organisation**.
You'll be redirected to Xero.
 - b. Complete the steps to authenticate your Xero file.
You'll be redirected to WFM. The file you authorized is available from the dropdown field following the **Link to new organisation** button.
 - c. Repeat Steps 3 and 4 for each Xero file you must link to the account.
4. Configure the settings for each Xero file.
 - a. From the **Setup** menu, select the first Xero file from the list.
 - b. Configure mapping and options by linking WFM items to their corresponding settings in Xero. For more information, see [Linking WFM Items to Xero](#).

Guidelines for Linking Multiple Xero Files in WFM

For a proper integration, follow these guidelines:

- General
 - Correctly map the items in the Defaults, Agreements, and Locations subtabs. Make sure all of these options are correct for each Xero file. In general, the mapping on each Xero file is the same.
- Locations
 - Map locations to timesheet tracking category options. Each Xero file needs timesheet tracking setup so WFM can successfully send times to Xero.
 - Use tracking categories to track accurate allocation and reporting of employee hours and wages.
 - Each of the options that you set in timesheet tracking in each Xero file should match all locations you have in Xero.
- Employees
 - In WFM, **do not** map an employee to multiple Xero files. Map each employee to only one Xero organization. By mapping an employee to one organization, you ensure that Xero applies superannuation correctly.
 - Map employees to their primary work location.
 - Make sure that employee costs are applied and cross-invoiced to the correct Xero file.

■ Export

- Exporting staff approved hours works the same as when you're mapped to a single Xero file. After you've completed your payroll checks and mapped employees to Xero, you can click **Export** on the Xero configuration page.
- WFM exports all staff shift data for the same pay period and frequency at the same time.
- You don't need to run the export for each Xero file. You only need to click **Export** one time, and WFM creates the draft payruns in all your Xero files and exports the hours.
- If you have multiple pay frequencies of different pay periods for each file (or even in the same file) you'll need to run the export for them separately.

For example, if you have a weekly calendar starting on Monday at one Xero file and a two-week or fortnightly calendar starting on the first Tuesday of the month for other locations, first run an export for the weekly calendar. When that export is complete, run another export for the two-week or fortnightly calendar.

FAQ: Xero Integration with WFM

See the questions and answers below for information about the Xero integration in WFM.

Why do draft payruns from archived payroll calendars appear in export files?

The Xero Payroll API doesn't give an inactive status on payroll calendars, so when we create payruns, Xero is creating them for all payroll calendars including inactive payroll calendars.

It can be helpful to check with Xero support to see if you can completely delete a payroll calendar, and any ramifications in doing so.

How do I resolve a missing earnings rate or location error when exporting files?

If you run a payroll export and encounter an error about an archived or missing earnings rate or location linking, check your Xero mapping. For example, "There is one Earnings Rate that is archived or missing from Xero."

To resolve the error, go to Payroll Export > Setup, then select your organization.

Review the mapping based on the type of error you received.

- For earnings rate or allowance errors, go to **Agreements**
- For employees, go to **Staff**
- For timesheet tracking errors, go to **Locations**

When you find the mapping that's causing issues, remove this mapping and correct the error in Xero, if needed. On the mapping page, click **Refresh**, then correct the link.

How do I ensure the date field shows correct date by default when I load the payroll for the week?

In Xero, go to a list of your pay calendars. In each pay calendar you'll need to change the 'next payment date' and set it to the correct date (for example, pay date next week).

You'll also need to do this on any archived pay calendars. Re-enable these calendars and then change this setting. When you're done, archive the pay calendar again.

When they're all set to the same date, the next time you load payroll in WFM, the date will then show correctly on this page.

If you're unsure about where you can find your pay calendars in Xero, contact your Xero advisor.

How do I resolve a negative value in payruns when I try to export shifts?

Before running an export, WFM checks if there are any errors from Xero that could cause issues with the export.

You can't re-export timesheets if there was a partial export or a failure with the creation of allowances detected. This is a safety measure to ensure that hours worked are successfully exported while minimizing the chance of an error or manual entry of all hours for staff.

If WFM shows an error about a negative value in payruns, this indicates an issue in Xero where the pay template has a negative value. You must remove this value before running the export.

The negative value is generally a result of a deduction that has been applied to a staff member resulting in a negative value. For example, check if any new deductions were recently added to the employee.

Why do I need to set up tracking category mapping?

As a requirement for sending work hours to Xero, you need to set up tracking categories that break down these hours in WFM. Category mapping ensures you can track the accurate allocation of hours and wages in both WFM and Xero.

How do I resolve an issue where only part of the shifts for the week are exported?

WFM is unable to export hours to Xero when there's a timesheet for a payrun. In this case, you must manually update the data in Xero.

If only part of the week's hours have been exported, follow the steps to complete your payrun.

1. Run your export as normal. When all shifts have exported, click continue and head back to the export screen (with the list of staff names).
2. When all shifts have exported, click **Continue**.
3. Go to the Export page with the list of employee names.
You'll see the list of employees whose shifts were only partially exported to Xero.
4. Click each employee's name.
WFM shows the approved hours worked and how the hours are broken down and exported to Xero.
5. For each employee, note the hours that weren't exported and add them to the employee's pay run in Xero.

How can an employee sync their superannuation fund to Xero?

WFM lets linked employees select and update their superannuation fund details on their WFM profiles.

If your fund is not yet linked to Xero, you need to complete the following steps before you sync your fund.

1. Go to Workforce Management.
2. Go to Setup > Financial.
3. On the Superannuation fund details page, enter your super fund name, superannuation product identification number (SPIN), and account number.
4. Click **Save**.

After linking your fund, sync your superannuation fund to Xero by following the steps.

1. Go to Workforce Management.

2. Go to Setup > Financial.
3. On the Superannuation fund details page, select the fund that you want to sync to Xero.
4. Enter your account number.
5. Click **Save**.

How do I onboard new employees so their superannuation details are sent to Xero?

Ensure that you link your employees to Xero before they fill in their superannuation details.

To properly onboard employees and their superannuation fund details:

1. Create the employee in WFM.
2. Export or link the WFM employee to Xero.
3. When the employee first logs in to their WFM profile, they can set their superannuation fund details, and these details will sync to Xero.

If employees fill in the fund details before you link or export them to Xero, the superannuation data won't sync with Xero when you try to run payroll for them. You'd need to enter the information to Xero.

How do I resolve a 'Super guarantee' error when exporting shifts?

Before processing the export, WFM checks if there are any errors from Xero that could cause issues. This error occurs when an employee in Xero is 18 or older and has a superannuation line on their payslip.

Find and correct the employee's superannuation line in Xero. Then check if any new employees were recently added to Xero or have recently turned 18. If you're unsure, contact your Xero representative or advisor.

This error occurs because you can't re-export timesheets if there was a partial export or a failure with the creation of allowances. This is a safety measure to ensure that hours worked are successfully exported while minimizing the chance of an error or manual entry of all hours for employees.

Paypac

Important: The Paypac integration is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

You can set up Workforce Management to integrate with Attaché.

After the setup, you can generate a Paypac-compatible file of approved hours worked to import for payroll.

Configuring Paypac with Workforce Management

The Paypac file format is available in the Generic Payroll exporter.

To configure Paypac with WFM

1. Go to Setup > Integrations > Payroll Integrations > Paypac.
2. Create a new payroll configuration.
 - a. Click **Create new**.
 - b. On the Create new payroll configuration page, complete the required fields.

- **Name** – Enter a name to identify this specific Paypac configuration. You can create multiple Paypac configurations, such as when you have multiple databases or files and need to generate separate ones.
 - **Icon** – Select an icon to identify this configuration.
 - **Report type** – From the list, select **Paypac**.
 - **Date format** – From the list, select **World Long**.
 - (Optional) **Hourly payroll id** – If you have employees on flat rates, enter their ID here. Staff on flat rates are those whose wage on their staff members profile is set to **Hourly**.
- c. Click **Create**.
- The Detail page appears.
3. (Optional) On the Detail page, verify your configured settings and change as needed.

Important: If the Detail page doesn't appear, you must link the data you want to export.

Linking Data from Paypac to WFM

After you've configured Paypac for WFM, you should see the Detail page with your chosen settings. If this isn't the case, link the data you intend to export.

To link data from Paypac to WFM

1. Go to Setup > Integrations > Payroll Integrations > Paypac.
 2. Click **Detail**.
 3. Link employees.
 - a. From the Detail page, click **Employees**.
 - b. (Optional) On the top of the page, use the filters to update the names that appear on the table.
 - c. From the employee list, find the employee whose data you need to export.
 - d. (Optional) On the top of the page, search for the name of a specific employee.
 - e. In the corresponding **Payroll ID** column, enter the unique Paypac payroll ID of the employee.
-  **Note:** You can also link Attaché IDs to employees on the Employee List page. To do so, go to Setup > Employees > List. For each employee you need to link to WFM, enter their Attaché IDs in the corresponding **Payroll ID** column.
- f. Click **Link**.

A page to link the employee to payroll will then appear.
 - g. From the **Config** list, select the name of the corresponding payroll configuration.
 - h. In the **Payroll id** field, enter the employee's Paypac ID.
 - i. Click **Link**.
 - j. Complete Steps E to I for all employees you need to export.
4. Link locations.
- a. From the Detail page, click **Locations**.
 - b. (Optional) On the top of the page, use the filters to update the locations that appear on the table.

- c. From the locations list, find the location you need to export.
 - d. (Optional) On the top of the page, search for the name of a specific location.
 - e. In the corresponding **Payroll ID** column, enter the unique location or department ID.
 - f. Click **Link**.
 - g. Complete Steps E to F for all locations you need to export.
5. Link leaves.
- a. From the Detail page, click **Leave**.
 - b. (Optional) On the top of the page, use the filters to update the leave types that appear on the table.
 - c. From the leave types list, find the type you need to export.
 - d. (Optional) On the top of the page, search for the name of a specific leave type.
 - e. In the corresponding **Payroll ID** column, enter the unique leave type ID.
 - f. Click **Link**.
 - g. Complete Steps E to F for all leave types you need to export.
6. Link agreements.
- a. From the Detail page, click **Agreements**.
 - b. Select from the following options:
 - **Conditions** – You should link conditions for instances when a single set of payroll ID apply to all the employees associated with the agreement, regardless of wage level and employment status.
 - Allowances
 - Penalties
 - **Classifications** – You should link classifications if your payment setup require multiple payroll IDs to be associated with employees depending on their employment conditions.
 - c. (Optional) Select **Conditions**.
 - d. On the Enterprise Agreement page, enter the payroll ID for each unlinked agreement.
 - e. (Optional) Select **Classifications**.
 - f. On the Classifications page, filter the results by wage agreement and revision.
Conditions are shown on the page based on the different classifications set up in WFM.
 - g. Find the condition that you need to identify.
 - h. Enter the payroll ID. Press **Enter**.
 - i. Repeat steps G to H for all the conditions you need to identify across the different classifications.

Attaché

Important: The Attaché integration is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

You can set up Workforce Management to integrate with Attaché.

After the setup, you can generate an Attaché-compatible file of approved hours worked to import for payroll.

Configuring Attaché with Workforce Management

The Attaché file format is available in the Generic Payroll exporter.

To configure Attaché with WFM

1. Go to Setup > Integrations > Payroll Integrations > Attaché.
2. Create a new payroll configuration.
 - a. Click **Create new**.
 - b. On the Create new payroll configuration page, complete the required fields.
 - **Name** – Enter a name to identify this specific Attaché configuration. You can create multiple Attaché configurations, such as when you have multiple Attaché files and need to generate separate export files.
 - **Icon** – Select an icon to identify this configuration.
 - **Report type** – From the list, select **Attaché**.
 - **Date format** – From the list, select **World Long**.
 - (Optional) **Hourly payroll id** – If you have staff on flat rates, enter their ID here. Staff on flat rates are those whose wage on their staff members profile is set to **Hourly**.
 - c. Click **Create**.
The Detail page appears.
3. (Optional) On the Detail page, verify your configured settings and change as needed.

Important: If the Detail page does not appear, you must link the data you intend to export.

Linking Data from Attaché to WFM

After you've configured Attaché for WFM, you should see the Detail page with your chosen settings. If this isn't the case, link the data you want to export.

To link data from Attaché to WFM

1. Go to Setup > Integrations > Payroll Integrations > Attaché.
2. Click **Detail**.
3. Link employees.
 - a. From the Detail page, click **Employees**.
 - b. (Optional) On the top of the page, use the filters to update the names that appear on the table.
 - c. From the employee list, find the employee whose data you need to export.
 - d. (Optional) On the top of the page, search for the name of a specific employee.
 - e. In the corresponding **Payroll ID** column, enter the unique Attaché payroll ID of the employee.

Note: You can also link Attaché IDs to employees on the Employee List page. To do so, go to Setup > Employees > List. For each employee you need to link to WFM, enter their Attaché IDs in the corresponding **Payroll ID** column.

- f. Click **Link**.

A page to link the employee to payroll will appear.

- g. From the **Config** list, select the name of the corresponding payroll configuration.
 - h. In the **Payroll id** field, enter the employee's Attaché ID.
 - i. Click **Link**.
 - j. Complete Steps E to I for all employees you need to export.
4. Link locations.
- a. From the Detail page, click **Locations**.
 - b. (Optional) On the top of the page, use the filters to update the locations that appear on the table.
 - c. From the locations list, find the location you need to export.
 - d. (Optional) On the top of the page, search for the name of a specific location.
 - e. In the corresponding **Payroll ID** column, enter the unique location or department ID.
 - f. Click **Link**.
 - g. Complete Steps E to F for all locations you need to export.
5. Link leaves.
- a. From the Detail page, click **Leave**.
 - b. (Optional) On the top of the page, use the filters to update the leave types that appear on the table.
 - c. From the leave types list, find the type you need to export.
 - d. (Optional) On the top of the page, search for the name of a specific leave type.
 - e. In the corresponding **Payroll ID** column, enter the unique leave type ID.
 - f. Click **Link**.
 - g. Complete Steps E to F for all leave types you need to export.
6. Link agreements.
- a. From the Detail page, click **Agreements**.
 - b. Select from the following options:
 - **Conditions** – You should link conditions for instances when a single set of payroll ID apply to all the employees associated with the agreement, regardless of wage level and employment status.
 - Allowances
 - Penalties
 - **Classifications** – You should link classifications if your payment setup requires multiple payroll IDs to be associated with employees depending on their employment conditions.
 - c. (Optional) Select **Conditions**.
 - d. On the Enterprise Agreement page, enter the payroll ID for each unlinked agreement.
 - e. (Optional) Select **Classifications**.
 - f. On the Classifications page, filter the results by wage agreement and revision.
Conditions are shown on the page based on the different classifications set up in WFM.
 - g. Find the condition that you need to identify.
 - h. Enter the payroll ID. Press **Enter**.
 - i. Repeat steps G to H for all the conditions you need to identify across the different classifications.

Workforce Management Integrations

SuitePeople Workforce Management (WFM) can integrate with many platforms for many purposes.

From the Workforce Management tab, go to Setup > Integrations for a full list of available platforms.

The following integrations are available:

- [Email Sales Importer](#)
- [Oracle Hospitality](#)
- [OrderMate](#)
- [World Manager](#)
- [Redcat POS](#)

Contact NetSuite Customer Support if you don't see an integration listed.

To know more about integrating NetSuite with WFM, see [Integrating Workforce Management with NetSuite](#).

Payroll

Direct integrations between Workforce Management and third-party payroll providers aren't supported in the U.S.

Payroll data can be shared by doing one of the following:

- You can export approved hours from Workforce Management to NetSuite. For more information, contact NetSuite Customer Support.
- If you are a cloud services customer, you can access the Workforce Management API. API keys are provided only to you, not to third-party partners. For more information, see <http://docs.adiinsights.info> and contact NetSuite Customer Support.
- Workforce Management has a range of generic CSV reports that aren't specific to any third-party partner's file specifications. For more information, see [Workforce Management Reports](#).

Point of Sales (POS)

WFM supports POS integrations with Oracle Hospitality.

Send sales data to Workforce Management by doing one of the following:

- [Email Sales Importer](#)
- If you are a cloud services customer, you can access the Workforce Management API. API keys are provided only to you, not to third-party partners. For more information, see <http://docs.adiinsights.info> and contact NetSuite Customer Support.

Email Sales Importer

You can configure an email to be imported automatically into WFM. You can schedule the import from your POS or system automatically. Otherwise, you can manually email this data each day, week, or at any point.

Note: Make sure each time row is correct based on the resolution that you set. Each row should be in a multiple of the start of the hour.

For example, refer to the following intervals:

- **15-minute interval** – 11:00:00, 11:15:00, 11:30:00, 11:45:00, 12:00:00
- **30-minute interval** – 11:00:00, 11:30:00, 12:00:00
- **60-minute interval** – 11:00:00, 12:00:00

Each interval contains sales and units from that time period. In the sample intervals, the row of 10:45:00 contains sales only from 10:31:00 to 10:45:00. WFM automatically aggregates sales throughout the day.

To automatically import an email into WFM, follow the procedures:

- [Creating an Email Configuration](#)
- [Formatting the CSV File for Email Sales Importer](#)
- [Setting up Email Sales Importer](#)

Creating an Email Configuration

Before you set up Email Sales Importer, create the required email configuration.

To create an email configuration:

1. Go to Workforce Management.
2. Go to Setup > Integrations.
3. On the Integrations with external systems page, click **Email**.
4. On the Active configurations page, click **Add**.
5. Complete the fields.
 - **Name** – Enter a name for the email configuration that you will use to identify it.
 - **Stats period** – Enter the resolution of your data. Choose from 15 minutes, 30 minutes, or 60 minutes.
 - **Import as** – Select the type of data you want to import, either **Actual** or **Forecast**.
 - **Location matching** – Select the location naming convention that will be applied on the CSV file.
The CSV file can contain one or more locations. WFM determines the locations based on what you select from the **Location** field.
Following are the Location matching options:
 - **WFM Location ID** – Needs to match the WFM location ID. This ID will appear beside the location names in the location selection.
 - **WFM Location name** – Needs to match exactly with the location name in WFM.
 - **Custom ID** – Needs to match the WFM location **Custom ID**. You can change or set the custom ID for each location at Setup > Locations > Select a location > Custom ID. This ID will appear next to the location names in the location selection.
 - **Locations** – Select the locations that will be added in the CSV file.

- **Contact** – Enter the email address to contact if there are any import failures.
- 6. Click **Save**.
The configuration window closes.
- 7. Click **Show keys**.
- 8. To verify your identity, enter your password.
- 9. Note the secret key.

Warning: Do not share this key with unauthorized people.

Formatting the CSV File for Email Sales Importer

You can format your statistical data on a CSV file to set it up for the email sales importer.

On the CSV file, enter the information using the headers or columns on the table.

Important: Enter the header names as they are shown on the table. The headers are case-sensitive and must be exact.

Header	Description
location	This value tells WFM which location the row belongs to, based on your location matching setting.
date	This header shows the relevant date of the data according to the ISO-8601 format YYYY-MM-DD . For example, enter October 31st, 2023 as 2023-10-31 .
time	This header shows the time the data begins in the ISO-8601 string format hh:mm:ss . For example, enter 11:30 pm as 23:00:00 .
sales	Enter the total sales amount. It can contain 0 or any positive or negative number. Leave the cell blank if there's no data.
units	Enter the total unit count. It can contain 0 or any positive or negative number. Leave the cell blank if there's no data.

The following table is an example of a CSV file you can use to import data with location matching.

location	date	time	sales	units
1	2017-08-18	10:00:00	—	—
1	2017-08-18	10:15:00	0	0
1	2017-08-18	10:30:00	25.22	5
1	2017-08-18	10:45:00	33.54	5

Setting up Email Sales Importer

After you've set up your email, generated the secret key, and formatted your data on a CSV file, you can set up the email sales importer.

To set up email sales importer:

1. Schedule an email to **stats@adiinsights.com** and attach a CSV file with your statistical data.
2. In the subject line, use the format **WFM-IMPORTER:<secret key>** . Make sure to use the secret key you generated earlier.

For example, a complete subject heading is **WFM-IMPORTER:12345678-1234-1234-1234-123456789012**.

Oracle Hospitality

To interact with this integration in Workforce Management (WFM) head to Config > Integrations and select Oracle Hospitality from the list. If you haven't set up an Oracle Hospitality Integration before, you'll be prompted to create a new one.

Setting up a new integration

To set up a new integration, go to the Oracle Hospitality integration area (if you don't have one set up already) or just click New from the menu on the left.

Enter a name for the integration—this helps you tell different Oracle Hospitality setups apart.

Enter the base URL (the one you see when you're logged into Oracle Hospitality Report and Analytics) e.g. <https://mta4-ohra.oracleindustry.com/>

Enter the auth URL (the one you see for the login page for Reporting and Analytics. e.g. <https://mta4-ohra-idm.oracleindustry.com/>

Enter the username and password to generate the authentication token—they're only used for this step and aren't stored. You will need to generate an API account – see https://docs.oracle.com/en/industries/food-beverage/back-office/20.1/biapi/obtain_acct_info.html for more information.

Once you click Authenticate, a configuration is created. See below for more information about editing a configuration and what settings need to be applied.

Editing a configuration

To edit a configuration, select Config from the menu on the left. Here, you can change the config name, update brands, set up sales and units fields, and view the URLs.

When you pick brands from the list, you'll see all active locations from those brands that you can link. In a franchise setup, this includes locations from a franchisee account.

You can choose what data the sales and units fields pull from—just pick the right options from the dropdown.

Linking Locations

To link locations in WFM to locations from Oracle Hospitality, select locations from the menu on the left. You'll see a list of locations from WFM on the left and a search box to find a location from Oracle Hospitality. If the location from Oracle Hospitality isn't in the search list, click "Reload Locations" to update the list of linkable locations.

If a location is linked incorrectly, it can be unlinked by clicking Unlink next to the link option.

Importing Guest Checks

If you linked a location and need to import its historical data from Oracle Hospitality, you can refetch data that the automatic import missed.

To re-import guest checks, select "Import Guest Checks" from the menu on the left. Choose the start and end dates, choose the locations, and WFM will queue up the task and update sales and units once it's done.

Note: In a franchisee environment, a franchisee can only access the "Import Guest Checks" option for available locations in the WFM account.

OrderMate

Important: The OrderMate integration is available only to accounts where it is already provisioned. It isn't included with the current SuitePeople WFM solution.

Set up and manage your OrderMate integration in WFM. You can import your sales data to accurately forecast and know your labor cost percentage during the day on your dashboard.

Setting up OrderMate in WFM

To set up OrderMate in WFM, follow the procedure.

To set up OrderMate in WFM:

1. Go to Workforce Management.
2. Go to Setup > Integrations > OrderMate.
3. On the Create new OrderMate configuration page, choose an action.
 - If you have an existing OrderMate integration, select it from the left-hand panel.
 - If you need to create an integration, click **+ Create new**.
4. If you created an integration, complete the fields.
 - **Name** – Enter a name for the integration.
 - **Brand** – Select the brand or company that include the locations you need to map to WFM.
 - **User** – Enter the user name provided by OrderMate.
 - **Password** – Enter the password provided by OrderMate.
 - **Store id** – Enter the store ID provided by OrderMate.

Note: The store ID is unique for each location or venue. If you have multiple locations and venues, you may need to set up multiple integrations.

- **Add discounts** – To add any applied discounts back to the sales and show projected sales without discounts applied, check the box.
 - **Exclude surcharges** – To remove any applied surcharges to the sales and show sales without surcharges applied, check the box.
5. Click **+ Create**.

After you have selected an integration or finished creating a new one, the Edit page appears.

6. Map the locations to WFM.

- a. On the left-hand panel, click **Locations**.
- b. For the locations that will have the sales importing for this configuration, click **Link**.
After linking the location, all sales from today onwards will import to this location.

 **Note:** You can link any other locations you need, and their sales will import too.
For example, if FOH and BOH are both linked, they'll both import the venue's sales. All sales will show up in both locations.

- c. (Optional) To change the percentage of sales allocated to a linked location, click **Advanced** beside the location name.

The Advanced linking window for the location appears.

 **Note:** In the earlier example, you can split sales percentages between BOH and FOH, or leave it at the default (100%) if each department reports on total sales.

- **Fetch sales** – Click the box.
- **Sales percentage** – Enter the percentage of sales allotted for the location.
- **Units percentage** – Enter the percentage of units allotted for the location.

- d. Click **Save**.

7. Fetch historical data.

If there's an internet outage that delays data uploads, you can fetch the missing sales later.

- a. On the left-hand panel, click **Fetch Orders**.
- b. In the **Start** and **Finish** fields, select the dates to establish the duration of orders for import.
- c. Click **Fetch**.

 **Note:** Sales may not appear straight away. Data may be delayed, especially when fetching orders from long date ranges.

8. (Optional) If you're not using the OrderMate configuration anymore, click - **Deactivate**.

World Manager

 **Important:** The World Manager integration is available only to accounts where it's already provisioned. It is not included with the current SuitePeople WFM solution.

The World Manager integration gives your managers access to a fifth suite in the platform. This is a scheduling suite that includes shift drops and swaps.

When World Manager is integrated with WFM through Single Sign On, employees and managers experience a seamless onboarding process. Employees hired through World Manager are automatically created in WFM, where they can perform the following:

- Enter all personal and financial details
- See schedules
- Swap shifts
- Drop shifts

When new employees arrive for their first shift, everyone is aware that the person is on-site. The employee receives a PIN to clock on to time and attendance.

If you operate in a Franchise environment where your franchisor provides you with World Manager access, you must review the Importing Staff options.

Use the following links for more information about the integration:

- [Setting up World Manager for WFM](#)
- [Linking Locations to World Manager](#)
- [Importing Employees from World Manager](#)
- [Linking Employees to World Manager](#)
- [Syncing and Importing World Manager Fields](#)

Setting up World Manager for WFM

Before you can configure and manage World Manager for WFM, contact NetSuite Customer Support and request to enable the integration in your account.

After the integration is activated, you can continue to set up World Manager for WFM.

To set up World Manager for WFM:

1. Go to Workforce Management.
2. Go to Setup > Integrations > World Manager.
3. On the World Manager configuration page, complete the required details.
 - a. Enter the required data on the following fields:
 - **Name** – Enter the name of your World Manager platform.
 - **Base URL** – Enter the URL of the platform.
 - **Username** – Enter the username of a World Manager level user in World Manager.
 - **Password** – Enter the password of the username you entered.
 - **Create missing staff** – If you want WFM to automatically create staff from World Manager, check the box.
 - **Generate missing timesheet pin** – If you want employees to get a random four-digit pin for WFM, check the box.
 - **Send new staff emails** – If you want new staff to receive a welcome email to WFM, check the box.
 - b. Enter information from World Manager and enter them on the following fields:
 - API key
 - OAuth client id
 - OAuth client secret

For more information, go to [Get WFM Requirements from World Manager](#).

Get WFM Requirements from World Manager

Follow the procedure to get the API Key, OAuth client ID and OAuth secret from World Manager.

To get WFM requirements from World Manager:

1. Go to World Manager.
2. Create a new integration client and call it WFM Scheduling.
3. On the Update Integration Client page, complete the fields.
 - a. In the **Name** field, enter **WFM Scheduling**.
 - b. In the **Scopes** section, check all the boxes.
 - c. In the **Authorisation Message** box, enter the message that employees will see when they log into WFM from World Manager.
 A sample message is: When you sign in to Workforce Management using your World Manager login details, you can sign in without using your WFM username and password.
 - d. In the **Redirect URL** field, enter **https://go.adiinsights.com/complete/world_manager/**.
4. Copy the following fields to WFM:
 - **Client ID** – Use this as the **OAuth Client ID** in WFM.
 - **Client Secret** – Use this as the **API key** and **OAuth Client secret** in WFM.

Linking Locations to World Manager

To import staff from World Manager, you'll need to link a WFM Location with a World Manager Location.

If you're in a franchisee environment, your franchisor will manage this for you.

On the Link Locations to World Manager page, select a location from the drop down list to link the locations between the two systems.

Importing Employees from World Manager

Employees are automatically imported from World Manager to WFM.

If you need to import employees, follow the procedure.

To import employees from World Manager:

1. Go to Workforce Management.
2. Go to Setup > Integrations > World Manager.
 A list of employees that have not imported is available.
3. For each employee that you must import, click **Import** next to their name.
 The screen shows any issues that prevent the import of the employees.
4. In World Manager, fix the issues preventing the import.

After the issues are fixed, the employees are automatically imported to WFM. If the employees remain unavailable, complete the procedure to import them again.

Linking Employees to World Manager

When WFM imports employees from World Manager, it verifies that the employee to be imported doesn't currently exist in WFM.

If a similar name exists in your WFM account, the employee won't automatically import. To resolve the issue, link the existing WFM profile to the employee's World Manager profile rather than create duplicate profiles in WFM.

To link employees to World Manager:

1. Go to Workforce Management.
2. Go to Setup > Integrations > World Manager.
3. Click **Staff**.
4. Beside the name of the employee with an existing WFM profile, click **Select Person**.
The **Select Person** list shows WFM profiles that are not currently linked to a World Manager profile.
5. From the list, select the corresponding WFM profile.
6. Click **Link**.

Syncing and Importing World Manager Fields

When employee profiles are imported from World Manager, WFM imports a select set of fields and synchronizes a subset of these fields.

WFM imports the following World Manager fields:

- Name (Required to Import)
- Preferred Name (Custom Field in World Manager)
- Email address
- Phone
- Mobile
- Date Of Birth (Custom Field in World Manager)
- Gender (Custom Field in World Manager)
- Jobs (Based on Group Name)

After an employee profile is imported, WFM synchronizes the following fields between both platforms:

- Preferred Name (Custom Field)
- Email
- Phone
- Mobile
- DOB (Custom Field)
- Gender

Redcat POS

Important: The Redcat POS integration is available only to accounts where it's already provisioned. It's not included with the current SuitePeople WFM solution.

To set up the Redcat integration, you will need a Redcat login with access to API reporting. If you're unsure if you have access, contact your Redcat representative.

Creating a Redcat POS Integration

Follow the procedure.

To create a Redcat POS integration:

1. Go to Workforce Management.
2. Go to Setup > Integrations > Redcat.
3. On the Create page, complete the required fields.
 - **Base url** – Enter your Redcat cloud URL. Ensure that the format matches the following: **https://MYURL.redcatcloud.com.au**.
 - **Credentials** – Enter the username and password from your Redcat representative.
4. Click **Save**.

The following fields are available after you create the integration:

- Sales field
- Units field

The fields refer to sales and units in WFM. From each list, select the corresponding fields that you want to fetch from Redcat.

 **Note:** You can change this later, but you'll need to re-fetch any data you imported before.

Setting up Additional Redcat Sale Types

If you have additional sale types in Redcat and would like to use these in conjunction with your labor deployment model, contact NetSuite Customer Support.

After the sale types are set up, you'll see the **Sales subcategories** menu on the page. Subcategories are only for labor deployment.

For more information, see [Labor Deployment](#).

To set up additional Redcat sale types:

1. Go to Workforce Management.
2. Go to Setup > Integrations > Redcat.
3. Select **edit** next to the sales or unit field where you want to add additional subcategories.
4. (Optional) If you don't see what you're looking for, the field may already be mapped. To view linked fields, check the **Include items that are already linked** box at the top of the page.
5. Map WFM locations to Redcat locations.
 - a. On the left-hand panel, click **Locations**.
A list of locations appears.
 - b. From each location field, search the corresponding Redcat location.
 - c. Click **Save**.
Redcat sales will start fetching to the linked units.

Guidelines when Integrating Redcat with WFM

Note the following guidelines.

- Sales will update in WFM once per hour.

- WFM fetches data at a 15-minute resolution.
- Every time WFM fetches data, it pulls all of today's data. If sales change later (like when discounts are added), those updates will appear next time WFM fetches data.
- If you don't see any data after a successful fetch, make sure the data shows up in Redcat reporting, then try fetching historical data. For more information, see

Fetching Historical Data from Redcat

After you set up the Redcat integration you can fetch historical data to WFM. This data doesn't transfer automatically.

To fetch historical data from Redcat:

1. Go to Workforce Management.
2. Go to Setup > Integrations > Redcat.
3. From the left-hand panel, click **Fetch stats**.
4. Select the start and end date of the period you want to fetch. No date limit is applied.
5. Select the locations with historical data that you want to fetch.

If you're fetching data for a short period, such as one location for one week, the page updates to let you know when the process is complete.

If you're fetching data for longer periods (such as for multiple locations for more than two weeks), a message appears to inform you the process is working in the background. WFM notifies you when the process is complete.

Workforce Management Security Guide

The Workforce Management (WFM) Security Guide provides detailed guidelines that let you securely use and manage the WFM solution.

Audience

This guide is for WFM users who access, use, or manage the WFM solution, like administrators, managers, employees, and other company tasks.

Security as a Shared Responsibility

As a global provider of enterprise cloud computing, Oracle builds secure software through a rigorous set of formal, always evolving security standards and practices known as Oracle Software Security Assurance (OSSA). For more information, refer to [Oracle Corporate Security Practices](#).

If you use WFM for your tasks, you need to take an active role in keeping data secure shared across different cloud and on-premises endpoints. Review the topics in the WFM Security Guide to familiarize yourself with ways to secure your employee and shift data.

WFM provides features to help you enhance security, but they don't guarantee regulatory compliance. You should verify if the security settings cover the right rules for the business or industry and locations where you operate.

The security guide includes the following help topics:

- [Workforce Management Security Overview](#)
- [Workforce Management Installation Security](#)
- [Maintaining Workforce Management Security](#)
- [Using Workforce Management Securely](#)

WFM Security Documentation

The security guide includes the following help topics:

- [Workforce Management Security Overview](#)
- [Workforce Management Installation Security](#)
- [Maintaining Workforce Management Security](#)
- [Using Workforce Management Securely](#)

WFM Product Documentation

For more information about the use and management of WFM, see the following help topics:

- [Workforce Management Setup Guide](#)
- [Configuring Workforce Management](#)
- [Managing Workforce Management Employees](#)
- [Managing Workforce Management Shifts](#)
- [SuitePeople Workforce Management Phone App](#)
- [Workforce Management AdiOrg](#)
- [SuitePeople Time Clock](#)
- [Workforce Management Reports](#)
- [Workforce Management Payroll](#)
- [Workforce Management Integrations](#)

Workforce Management Security Overview

With Workforce Management (WFM), you can streamline shift scheduling, track time and attendance across your workforce, and calculate wages. You may use WFM to access, enter, and share employee and shift data across different platforms.

Applications

You can access WFM features and data using the following applications:

- [Workforce Management SuiteApp](#)
- [Stand-alone WFM website](#)
- [SuitePeople Time Clock for Windows](#)

- WFM apps

Operating Systems and Minimum Requirements

Refer to the following help topics:

- [Minimum Requirements for SuitePeople Time Clock Mobile Apps](#)
- [Minimum Requirements for WFM Mobile Apps](#)

Roles and Permissions

After the Workforce Management SuiteApp is installed to a NetSuite account, users may access WFM features using the Accounting Center or Employee Center roles. WFM also provides the SuitePeople WFM Integration role for users setting up an integration.

If employees need access to other roles, WFM permissions must be added on those roles. For more information, see [Assigning WFM Permissions to Roles](#).

Personal Information

The following table shows personal identifiable information captured and processed in WFM solutions.

Personal Information	Specific Data
Personal details	Name, date of birth, gender, marital status, number of children, names of children
Personal contact details	Home address, home telephone or mobile number, e-mail address, password, pin code
Photos or images	Profile images and punch-in images
Employee ID	Employee or staff ID
Wages	Salary and rates
Web attributes	IP addresses and visited pages
Electronic identifiers	Platform name, version, model, device fingerprint, and host operating system
Geolocation	GPS coordinates

Biometric Data

You can set up Time Clock for Windows to capture and record biometric data, like fingerprints, for employee punch-in.

Security Settings

You can enable two-factor authentication (2FA) to add a layer of security to your account.

- To enable 2FA for the WFM SuiteApp and stand-alone website, refer to Security Settings in WFM.

- To enable 2FA for Time Clock for Windows, refer to [Enabling Two-Factor Authentication in SuitePeople Time Clock for Windows](#).

Punch-in Authentication Methods

WFM provides multiple methods to authenticate users. Employees can punch in using a pin code, a finger scan, either one, or both methods.

Authentication options may vary across different applications and locations. In some locations, employees may be limited to certain authentication methods to meet regulatory requirements.

In Time Clock for Windows, managers can set up authentication methods for employees. For more information, see [Managing Settings in SuitePeople Time Clock for Windows](#).

Time Clock Device Activation

Installing SuitePeople Time Clock require managers to generate an activation code for each device you add. Activation codes are generated on the WFM SuiteApp or stand-alone website. You can also deactivate devices on the SuiteApp or site.

Product and Security Updates

WFM security updates may be shared with affected customers through feature change notifications, in-app messages, release notes, SuiteAnswers, and the NetSuite and Oracle Help Center.

Workforce Management Installation Security

This section includes recommendations about the installation and management of the WFM solution and its applications. Only users with administrator access should handle installation.

Installer Considerations

To securely install WFM applications, refer to the following guidelines:

- **SuitePeople Workforce Management SuiteApp** – Install the latest version available on the SuiteApp Marketplace. For more information, see [Installing the SuitePeople Workforce Management SuiteApp](#).
Stop using older Adi Insights SuiteApps, Adi Insights (Bundle ID: 317115) and Adi Insights – Embedded (Bundle ID: 401708), in your account. Be aware that, when your NetSuite account is upgraded to 2025.1, you won't be able to log in and use the older Adi Insights SuiteApps to access WFM features.
- **SuitePeople Time Clock for Windows** – Install Time Clock for Windows only from the Workforce Management SuiteApp or stand-alone website. For more information, see [Installing SuitePeople Time Clock Components for Windows](#).
- **WFM apps** – Install the WFM apps only from the official Apple and Google Play stores. See [Operating Systems and Minimum Requirements](#).

Account Password Considerations

When providing access to WFM for employees, administrators or managers can send an email with their username and a link to reset their password.

When resetting a password, note the following criteria:

- It can't be similar to other personal information, such as names, addresses, or birthdays.
- It can't be a commonly used password.
- It needs at least 10 characters.
- It should include letters, numbers, and special characters.
 - It can't be all numbers.
 - It needs at least one lowercase letter, one uppercase letter, one number, and one special character.

Password reset options are also available on the WFM SuiteApp or stand-alone website login pages.

Pin Code Considerations

WFM assigns randomly generated pin codes to employees, and managers can help employees change their codes. Pin codes can be 4, 5, or 6 digits long. When changing a code, managers should opt to set up a 6-digit code to enhance security.

Time Clock for Windows Installation Security

Note the following information when installing Time Clock for Windows:

- Use Time Clock with devices that meet minimum hardware and software requirements.
- When installing Time Clock for Windows, ensure that you have system administrator rights.
- Install Time Clock updates only from the application.
- Be aware that the Time Clock installer includes the Microsoft Visual C++ Redistributable component during installation. This component installs the essential libraries needed for the application to work smoothly on the computer or device.
- If you use the Futronic fingerprint scanner, use the installer to install the required components.
- After Time Clock is installed, data is synced with the WFM servers. When offline, WFM data is stored in an encrypted local database until the application goes online and uploads it to the central server.

WFM Mobile Apps Installation Security

Note the following guidance when installing WFM mobile apps:

- To maximize app security, avoid installing and using WFM mobile apps on rooted devices. These devices may be more exposed to malware attacks and other security threats.
- Use WFM mobile apps with the devices that meet minimum hardware and software requirements.
- After installing the mobile apps, always keep the operating systems up to date.
- If possible, enable the auto-update feature on mobile devices to receive new versions on time.

Maintaining Workforce Management Security

For managers and administrators, refer to the guidelines in this section to ensure that WFM applications are maintained securely.

Policies for Maintaining Security

The following are some guidelines for organizational policies to help maintain WFM data security:

- Check which employees have access and know how to securely grant or remove it.
- Set reasonable password expiration and reset policies for WFM pins and passwords. Changing passwords too often can lead to reuse or predictable patterns.
- Monitor WFM product and security updates in community channels and take action when needed.
- When registering user biometric data, ensure that a manager is present to validate it.
- Strongly discourage sharing of pin codes and passwords among employees.
- Discourage users from using the same mobile device to punch in on mobile apps.
- Plan to sign WFM applications out of devices when employees aren't using them.

Guidelines for Managing Application Security

The following are some guidelines to manage and configure WFM applications.

- To better secure access to WFM, take advantage of available security settings, including longer pin code options and 2FA authentication.
- Regularly patch and update device operating systems.
- For efficient tracking of security incidents, encourage use of the **Notes** field when punching in to WFM applications.

Using Workforce Management Securely

For employees, refer to the guidelines in this section to securely use WFM applications.

Securing WFM Accounts

The following are some guidelines to secure WFM accounts:

- Never share your pin code and password with other employees.
- Punch in to WFM applications using only your own account.
- Always sign out of your WFM account after punching in or out.

Using Time Clock for Windows Securely

The following are some considerations for using Time Clock for Windows securely:

- Keep your pin code or password secure, and don't write them down so others can't get them.
When entering your pin code or password on company premises, make sure no one sees your screen.

Using WFM Mobile Apps Securely

The following are some guidelines for using WFM mobile apps securely:

- If you need visual verification, make sure your face is facing the camera for a clear image.
To avoid other employees hijacking your account, lock your personal device when not in use.

Workforce Management Data Management

Note: This topic applies to data management and personal information management for SuitePeople Workforce Management.

This topic does not relate to the Personal Information (PI) Removal feature available for NetSuite fields, records, and audit logs. For more information about that feature, see the help topic [Personal Information \(PI\) Removal](#).

This topic is intended to assist you in addressing your obligations related to privacy laws such as GDPR, CCPA, and other similar regulations.

Personal Information Removal

If you're a Workforce Management (WFM) customer, you must contact NetSuite Customer Support to request for the removal of personal information (PI). A NetSuite authorized contact must make the request.

Guidelines for Personal Information Removal

Before you initiate the request, note the following guidelines:

- If you have configured WFM to sync data with NetSuite records, such as employee records, prepare to share this information with NetSuite Customer Support. You may need to conduct additional steps to help you comply with your PI removal obligations.
- If you have third-party payroll integrations, you may need to manage data that may flow through them. Refer to available third-party documentation or reach out to the solution's support department, as needed. Sample integrations include API, payroll, and onboarding.
- Verify whether PI removal affects your compliance with any applicable local or federal labor laws. Consult your own attorney or expert on the applicable rules for your business or industry in all jurisdictions in which you operate.
