This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. SuiteProcurement

To set up and use the SuiteProcurement SuiteApp, read the following topics:

- [SuiteProcurement Overview](#)
- [Prerequisites for the SuiteProcurement SuiteApp](#)
- [Installing the SuiteProcurement SuiteApp](#)
- [Setting Up SuiteProcurement Preferences](#)
- [Working with SuiteProcurement](#)
- [SuiteProcurement Support for Non-curated Trading Partners](#)

SuiteProcurement Overview

The SuiteProcurement SuiteApp lets you streamline and automate indirect procurement processes, from procuring items to creating purchase requests, managing approvals, and processing bills. Indirect procurement involves purchase of goods and services required to operate a business.

Using the SuiteApp, you can select and purchase items from trading partner stores, view purchase order acknowledgments and shipping details, and receive vendor bills.

 **Note:** The SuiteProcurement features are compatible with accounts without SuiteTax.

The SuiteProcurement SuiteApp lets you:

- Set procurement preferences at the subsidiary level.
- Sync trading partner data with NetSuite vendors.
- Browse and shop items from trading partner stores.
- Automatically create purchase requests for items being purchased.
- Send approved purchase requests to trading partners.
- Receive purchase request confirmation details, shipment details, and bills from trading partners.
- Generate an item receipt after receiving all items in a purchase request.

The SuiteProcurement SuiteApp works together with Oracle Business Network (OBN) and NetSuite Electronic Business (NSEB) SuiteApp to provide the indirect procurement features.

The SuiteApp supports both curated and non-curated vendors. The curated vendors include the following:

- Amazon United States
- Amazon Canada
- Staples Contract & Commercial, Inc.

If you want to procure items from a non-curated trading partner, ensure that your trading partners have completed the setup steps mentioned in [SuiteProcurement Support for Non-curated Trading Partners](#). You also must have Advanced Procurement provisioned in your account.

If you want to procure items from Amazon United States, see [Procuring Items from Amazon Using the SuiteProcurement SuiteApp](#).

If you want to procure items from Amazon Canada, see [Procuring items from Amazon Canada using SuiteProcurement SuiteApp](#)

For all other trading partners, see [Prerequisites for the SuiteProcurement SuiteApp](#).

Supported Items

The SuiteProcurement SuiteApp supports the following items:

- **Non-inventory item for purchase**
- **Non-inventory item for resale**

Before using the SuiteProcurement SuiteApp, you must complete the tasks in the following order.

1. [Prerequisites for the SuiteProcurement SuiteApp](#)
2. [Installing the SuiteProcurement SuiteApp](#)
3. [Setting Up SuiteProcurement Preferences](#)
4. [SuiteProcurement Roles and Permissions](#)

For information about using the SuiteProcurement SuiteApp for indirect procurement, see [Working with SuiteProcurement](#).

SuiteProcurement Roles and Permissions

If you have the Administrator role, you can set up, install, and work with the SuiteProcurement SuiteApp, and run scripts. Using the employee center role, you can only work with the SuiteApp.

To enable your custom roles to access the SuiteProcurement Stores portlet and create purchase requests, ensure that those roles have the required permissions to custom records.

The following table lists the custom records and the required permission levels.

Custom Record	Level
NSEB OBN Basic Auth Details	View
OBN Trading Partner Category Details	View
SP Category Mapping	View
SP Purchase Transaction Data	Edit
SuiteProcurement OBN Account Type	View
SuiteProcurement OBN Communication	Edit
SuiteProcurement OBN Response Details	Edit
SuiteProcurement PO Ack Data	Create
SuiteProcurement Ship Notice Data	View
SuiteProcurement Subsidiary Preferences	View
SuiteProcurement Trading Partner	View

In addition, provide Inventory Status permission to custom roles to receive items or create item receipts. To provide the Inventory Status permission, go to Setup > Users/Roles > Manage Roles.

On the **Permissions** subtab, under **Lists**, set the Inventory Status permission to **View**.

After assigning the required permissions, provide access to the following:

- Deployment records
- Purchase Order Acknowledgment Details
- SuiteProcurement Stores
- Shipment Details

Providing Access to SuiteProcurement Stores and Documents

To provide your custom roles access to SuiteProcurement stores and documents from trading partners, complete the following steps:

- Purchase Order Acknowledgment Details
- SuiteProcurement Stores
- Shipment Details

To provide access to SuiteProcurement stores and documents:

1. Go to Customization > Scripting > Single Page Applications.
2. Click the link to the page that you want to provide access to.
3. Click the **Configuration** subtab.
4. In the Release Audience section, click **Set Up Audience**.
5. Check the boxes of the roles that you want to add.
6. Click **Save**.

Providing Access to Deployment Records

The following table lists the script deployments included with the SuiteProcurement SuiteApp.

To provide your custom roles access to the script deployment records, complete the following steps.

Script ID	Deployment
customscript_sp_sl_create_item_receipt	customdeploy_sp_sl_create_item_receipt
customscript_sp_ue_tp_category	customdeploy_sp_ue_tp_category
customscript_sp_sl_punchout_po_to_obn	customdeploy_sp_sl_punchout_po_to_obn
customscript_sp_cs_vendor_details	customdeploy_sp_cs_vendor_details
customscript_sp_ue_vendor_details	customdeploy_sp_ue_vendor_details

Script ID	Deployment
customscript_sp_pl_stores_punchout	customdeploy_sp_pl_stores_punchout
customscript_sp_sl_get_supplier_site_url	customdeploy_sp_sl_get_supplier_site_url
customscript_sp_sl_approve_vendor_bills	customdeploy_sp_sl_approve_vendor_bills
customscript_sp_cs_purchase_order	customdeploy_sp_cs_purchase_order
customscript_sp_ue_purchase_order	customdeploy_sp_ue_purchase_order
customscript_sp_ue_purchase_requisition	customdeploy_sp_ue_purchase_requisition
customscript_sp_cs_purchase_requisition	customdeploy_sp_cs_purchase_requisition

To provide access to deployment records:

1. Go to Customization > Scripting > Script Deployments.
2. Locate the deployment record and click **Edit**.
3. Click the **Audience** subtab.
4. From the **Roles** list, select the custom role that you want to give access to the deployment record.
5. Click **Save**.

Prerequisites for the SuiteProcurement SuiteApp

The following table lists the steps you need to perform in the order specified before you install and start using the SuiteProcurement SuiteApp. You must perform the steps using the role mentioned in the table.

The SuiteProcurement SuiteApp supports both curated (Amazon US, Amazon Canada, and Staples) and non-curated trading partners.

If you want to procure items from a non-curated trading partner, ensure that your trading partners have completed the setup steps mentioned in [SuiteProcurement Support for Non-curated Trading Partners](#).

If you want to procure items from Amazon United States, you must follow the instructions in the [Procuring Items from Amazon Using the SuiteProcurement SuiteApp](#) guide.

For all other trading partners, refer the table. The following table lists the steps you need to perform before you install and use the SuiteProcurement SuiteApp. You must use the role mentioned to perform the steps in the order specified.

Step	Role	Related Help Topic
1. Log in to NetSuite	Administrator	—
2. Enable the required features	Administrator	Enabling Required Features for the SuiteProcurement SuiteApp
3. Activate the Employee Center role	Administrator	Activating the Employee Center Role
4. Install the NetSuite Electronic Business (NSEB) SuiteApp	Administrator	Installing the NetSuite Electronic Business SuiteApp
5. Connect your NetSuite account with Oracle Business Network (OBN)	OBN Manager	Connecting NetSuite with Oracle Business Network

Step	Role	Related Help Topic
6. Register your parent company and subsidiaries with OBN.	OBN Manager	Registering NetSuite Parent Company and Subsidiaries with Oracle Business Network

After the registration is complete, a successful completion message with the OBN registration ID displays on the OBN registration page. An email with user login credentials and the next steps to activate the OBN account is sent to your registered email ID.

The following table lists the steps you need to perform in the order specified after you log in to OBN.

Step	Related Help Topic
1. Log in to OBN	—
2. Activate transactions for SuiteProcurement purchases	Activating Transactions for SuiteProcurement Purchases
3. Add trading partner punch-outs	Adding Trading Partner Punch-outs

After performing all the steps, you can proceed to [Installing the SuiteProcurement SuiteApp](#), [Setting Up SuiteProcurement Preferences](#), and [Working with SuiteProcurement](#).

Enabling Required Features for the SuiteProcurement SuiteApp

Before you install the SuiteApp, ensure to enable the following features in your NetSuite account. To enable the features, go to Setup > Company > Enable Features.

Subtab	Section	Feature
Accounting	Basic Features	Accounting
Employees	Time and Expenses	Purchase Requests
CRM	Marketing	Online Forms
SuiteCloud	SuiteBuilder	Custom Records
SuiteCloud	SuiteScript	Server SuiteScript

Activating the Employee Center Role

You must verify that the employee center is active in your NetSuite account to successfully install the NSEB and SuiteProcurement SuiteApps. All active roles appear in the Manage Roles list. If you can't find the employee center role in the list, use the following steps.

To activate the employee center role:

1. Go to Setup > Users/Roles > Manage Roles.
2. Check the **Show Inactives** box.
3. Clear the box beside **Employee Center** role.
4. Click **Submit**.

Installing the NetSuite Electronic Business SuiteApp

You must install the NetSuite Electronic Business (NSEB) SuiteApp using the Administrator role before you install the SuiteProcurement SuiteApp.

The NSEB SuiteApp provides the foundation for NetSuite users to configure and participate in global business networks like Oracle Business Network (OBN) and PEPPOL. It enables NetSuite users to connect with a potential customer or trading partner.

For information about installing the SuiteApp, see the help topic [Installing from the SuiteApp Marketplace](#).

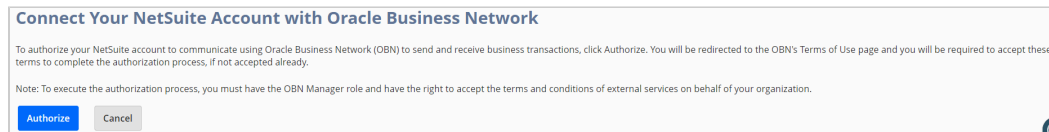

Installing the NSEB SuiteApp enables you to connect NetSuite with OBN to register your parent company and subsidiaries on OBN, and connect with trading partners.

Connecting NetSuite with Oracle Business Network

To use Oracle Business Network (OBN), you must authorize the connection between your NetSuite account and OBN.

To authorize connection between NetSuite and OBN:

1. Go to Set Up > Electronic Business > OBN Registration.
2. Click **Authorize** as shown in the following image.

3. On the Consent page, click **Allow**. You will be redirected to the OBN portal in a new tab.
4. You must accept the terms and conditions to allow OBN to access the following NetSuite data:
 - Access your personal information.
 - Access data and perform actions as OBN Manager

Note: The OBN Manager must be authorized to accept the terms and conditions on behalf of the organization.

5. Accept the Oracle Business Network policy and terms of use.

After the authorization is completed, the OBN Registration page opens with the parent company information and a successful authorization message.

To register a parent company or subsidiary in OBN, see [Registering NetSuite Parent Company and Subsidiaries with Oracle Business Network](#).

Registering NetSuite Parent Company and Subsidiaries with Oracle Business Network

You must register a parent company as a trading partner on the Oracle Business Network (OBN). After registering the parent company, you can also register the subsidiaries associated with the parent company.

The OBN registration is a one-time setup for a parent company or a subsidiary. The OBN manager can select a subsidiary for registration on the OBN Registration page. If the subsidiary is already registered, then the OBN manager can view the respective OBN registration ID on the OBN Registration page.

A OBN unique identifier is automatically assigned to each parent and its associated child subsidiaries. You must separately register each parent and child companies.

To register a parent company with OBN:

1. On the OBN Registration page, from the OBN Manager list, select the name of the person as primary contact for the trading partner.
2. Click **Register**.

OBN Registration

Company Information

You are registering US warehouse 1 subsidiary as a Trading Partner in the Oracle Business Network

SUBSIDIARY NAME	OBN UNIQUE IDENTIFIER *
US warehouse 1	NSGBU_8595686_7

Company Address

The following address will be used as the registered address in OBN for the trading partner record

ADDRESS 1	ADDRESS 2	CITY
STATE	COUNTRY	ZIP
AA	US	

Company Contact Information

Please select the person who will be the primary contact from OBN for this Trading Partner

OBN MANAGER *	TITLE	FIRST NAME
MIDDLE NAME	LAST NAME	EMAIL *
USER NAME 8595686_7		

Register
Cancel

Note: After the registration is completed, a successful completion message displays on the OBN Registration page with the OBN registration ID. An email with user credentials and next steps to activate the new OBN account is sent to your registered email ID.

To register a subsidiary with OBN:

1. On the OBN Registration page, from the Subsidiary list, select a subsidiary.

✓ **Tip:** You can use the Subsidiary Name filter to filter the required subsidiary from the Registered Subsidiaries table.

2. Click **Continue**.
3. In the Company Contact Information section, from the OBN Manager list, select the name of the person as primary contact for the trading partner.
4. Click **Register**.

📘 **Note:** After the registration is completed, a successful completion message displays on the OBN Registration page with the OBN registration ID. An email with user credentials and next steps to activate the new OBN account is sent to your registered email ID.

Adding Trading Partner Punch-outs

To procure items from a trading partner's store, you must first request for punch-out access from them.

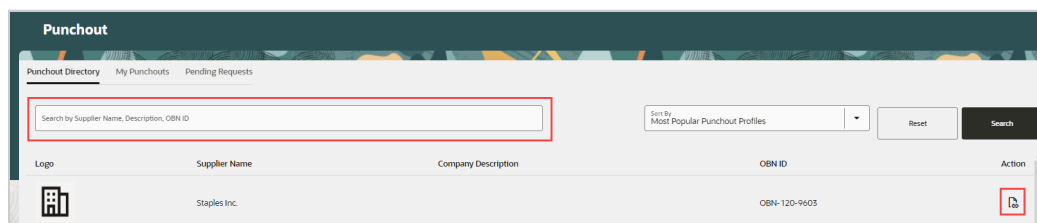

The SuiteProcurement SuiteApp supports both curated and non-curated trading partners.

Following are the curated trading partners that the SuiteApp supports:

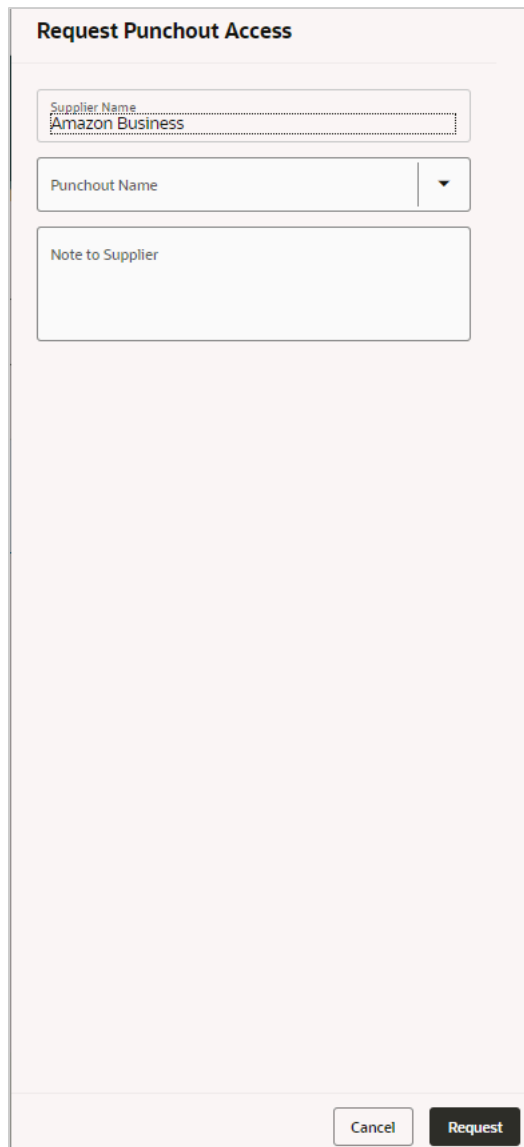

- Amazon.com
- Amazon.ca
- Staples Contract & Commercial, Inc.

To add a trading partner punch-out:

1. Log in to your OBN account.
2. At the bottom of the page, go to the **Punchout** tab.
3. Click the **Punchout Directory** tab.
4. In the **Search** field, enter trading partner's OBN ID. Following are the OBN IDs for the supported trading partners.
 - **Amazon Business – NetSuite**– OBN-100-8634
 - **Amazon Business CA - NetSuite**– OBN-105-6322
 - **Staples Advantage**– OBN-100-0021
5. Click **Search**.
6. Under the **Action** column, click the Request icon.

7. In the Request Punchout Access panel, in the **Punchout Name** field, select the trading partner's punch-out name.
8. In the **Note to Supplier** field, enter the identifier that you want to use for the trading partner.
9. Click **Request**.

The form is titled "Request Punchout Access". It contains three input fields: "Supplier Name" with the value "Amazon Business", "Punchout Name" with a dropdown arrow, and "Note to Supplier". At the bottom, there are two buttons: "Cancel" and "Request".

You can view the status of your punch-out request on the **Pending Requests** tab. Following are the punch-out request statuses:

- **Pending Acknowledgment** – Request is under review. After a request is acknowledged, a trading partner is added to the **Your Trading Partners** tab on OBN.
- **Pending Activation** – Request is acknowledged but activation is still pending. After punch-out is activated, you can view a trading partner on the **My Punchouts** tab and can start purchasing items from the trading partner.

The OBN manager receives an email after the punch-out access is granted and another when the punch-out access is ready for activation.

Activating Transactions for SuiteProcurement Purchases

You must activate the following transactions before procuring items using the SuiteProcurement SuiteApp. This action allows you to manage the documents you want to send and receive with your trading partner through OBN.

- Advance Shipment Notice
- Invoice
- Purchase Order
- Purchase Order (PO) Acknowledgment

To activate the transactions on OBN:

1. Log in to your OBN account.
2. At the bottom of the page, click the **Messaging** tab.
3. At the top of the page, click the **Transaction Setup** tab.
4. Under Send, edit **Purchase Order**.

Send: Setup documents you want to send from your ERP system through OBN to your suppliers						
Business Document	Status	Production Mode Document Format	Test Mode Document Format	Action		
Purchase Order	Active	NST 0.01	NST 0.01			
Change Order	Inactive					
Cancel Order	Inactive					
Application Response	Inactive					
Receive: Setup documents you want to receive in your ERP system via OBN from your suppliers						
Business Document	Status	Production Mode Document Format	Production Mode Delivery Method	Test Mode Document Format	Test Mode Delivery Method	Action
Advance Ship Notice	Active	NST 0.01	Netsuite Adapter	NST 0.01	Netsuite Adapter	
Invoice	Inactive					
Purchase Order Acknowledgment	Inactive					
Change Sales Order	Inactive					
Catalog	Inactive					

5. In the Add Business Document popup window, complete the following:
 - a. In the **Status** field, select **Active**.
 - b. Under Document Format, in the **Production Mode** and **Test Mode** fields, select **NST**.
 - c. Click **Add**.
6. Under Receive, edit **Invoice**.
7. In the Add Business Document popup window, complete the following:
 - a. In the **Status** field, select **Active**.
 - b. Under Production Mode, in the **Document Format** field select **NST**.
 - c. In the **Delivery Method Name** field, select **NetSuite Adapter**.

 **Note:** The value of the **Delivery Method Type** field must be **NetSuite Adapter** for both production and test modes. Do not change the value.

- d. Under Test Mode, in the **Document Format** field select **NST**.
- e. In the **Delivery Method Name** field, select **NetSuite Adapter**.
- f. Click **Add**.

8. Repeat Step 6 and Step 7 for advance ship notice and PO acknowledgment.

Now, you can proceed to [Installing the SuiteProcurement SuiteApp](#) and [Setting Up SuiteProcurement Preferences](#).

Installing the SuiteProcurement SuiteApp

The SuiteProcurement SuiteApp is a paid and managed SuiteApp. To purchase it, contact NetSuite Account Management Organization (AMO) or your Customer Support representative.

If you have the Administrator role, you can install the SuiteApp from the SuiteApp Marketplace. For information about installing the SuiteApp, see the help topic [Installing from the SuiteApp Marketplace](#).

After installing the SuiteProcurement SuiteApp, proceed to [Setting Up SuiteProcurement Preferences](#).

If you want to uninstall the SuiteApp, see [Uninstalling the SuiteProcurement SuiteApp](#).

Following table lists some of the errors encountered during installing the SuiteApp:

Errors	Solution
You must specify expense and income accounts for this item.	Create a non inventory purchase item manually with the name Default SuiteProcurement Category and try installing again.
You may not use duplicate accounts on an item.	
The subsidiary restrictions on this record are incompatible with those defined for account: <ExpenseAccount>. Subsidiary access on this record must be a subset of those permitted by the account.	

Tracking Expenses with SuiteProcurement SuiteApp

The SuiteProcurement SuiteApp includes **Default SuiteProcurement Expense Category** to record expenses for SuiteProcurement purchases. If you want to post expenses to a particular expense account, you can select an account for the default SuiteProcurement expense category.

You can select a specific account to post expenses for this category using the following steps.

To select an expense account for the default SuiteProcurement expense category:

1. Go to Setup > Accounting > Setup Tasks > Expense Categories.
2. Beside Default SuiteProcurement Expense Category, click **Edit**.
3. In the **Expense Account** field, select an account to post expense of this default category to the account.
4. Click **Save**.

Expense categories are crucial for accurate financial tracking. For example, you must set up specific categories like Shipping Charges and Sales Taxes to ensure these expenses are correctly tracked for each SuiteProcurement purchase.

The following procedure provides information about the steps to create an expense category for the different expense types.

To create a new expense category for an expense type:

1. Go to Setup > Accounting > Setup Tasks > Expense Categories > New.
2. In the **Name** field, enter a name for the expense category.
3. In the **Expense Account** field, select an account to post expenses of this particular category.
4. Check the **Include for SuiteProcurement Purchases** box to include this expense category for SuiteProcurement purchases.
5. In the **SuiteProcurement Expense Type** field, select an expense type.
6. Click **Save**.

Setting Up SuiteProcurement Preferences

The SuiteProcurement Preferences page enables you to set company-level preferences for working with the SuiteApp. These preferences include:

- **Company Preferences**– This preference allows you to automatically generate a purchase request or a requisition after purchasing items from a trading partner's store. To set these preferences, go to Setup > SuiteProcurement > Preferences.

If you want to change the setting for a particular trading partner, you can change the preference on the **Accounting** subtab. The settings at the trading partner level take precedence over company-level settings.

To set the preference at the trading partner level, see [Mapping Trading Partners with NetSuite Vendors](#).

- **Sync Trading Partners**– This preference enables you to sync the trading partners registered on OBN for a selected subsidiary. For more information, see [Syncing Trading Partners for a Subsidiary](#).
- **Account Mapping**– This preference lets you map trading partners with NetSuite vendors. For more information, see [Mapping Trading Partners with NetSuite Vendors](#).
- **Item Category Mapping**– This preference lets you map NetSuite vendor item categories with trading partner item categories. For more information, see [Mapping Item Categories](#).

Set the preferences in the order specified using the Administrator role only.

1. [Syncing Trading Partners for a Subsidiary](#)
2. [Mapping Trading Partners with NetSuite Vendors](#)
3. [Mapping Item Categories](#)

You can also set SuiteProcurement preferences at the vendor level. For more information, see [Setting Up SuiteProcurement Preferences at Vendor Level](#).

Syncing Trading Partners for a Subsidiary

On the SuiteProcurement Preferences page, you can sync trading partners registered on OBN for a subsidiary.

The SuiteProcurement SuiteApp supports both curated (Amazon US, Amazon Canada, and Staples) and non-curated trading partners.

After you sync trading partners, the **Account Mapping** subtab lists the trading partners associated with the selected subsidiary.

To sync trading partners for a subsidiary:

1. Go to Setup > SuiteProcurement > Preferences.
2. In the Set Up Trading Partners section, select a subsidiary. The field lists all subsidiaries registered on OBN.
3. Click **Sync Trading Partners**.

After syncing, proceed to connecting trading partners with NetSuite vendors. For more information, see [Mapping Trading Partners with NetSuite Vendors](#).

Mapping Trading Partners with NetSuite Vendors

You must connect each trading partner with a specific NetSuite vendor. This mapping ensures that purchase requests are created using the right vendor details when buying from a specific trading partner. For example, if you map trading partner XYZ to NetSuite vendor ABC, any purchases from XYZ will generate a purchase request under ABC's name in NetSuite. This mapping is also crucial to enable item category mapping between trading partner and NetSuite vendors.

The following image illustrates an example for trading partner and vendor mapping on the **Account Mapping** subtab.

Logo	Trading Partner	NetSuite Vendor	Default Account
	Staples, Inc.	Tax Agency AL	Checking
	Amazon Business-NetSuite	Amazon	Payroll

To map trading partners with NetSuite vendors:

1. Go to Setup > SuiteProcurement > Preferences.
2. In the Manage Trading Partners section, click the **Account Mapping** subtab.
3. (Optional) In the **Trading Partner** field, select a trading partner.
4. To associate a NetSuite vendor with a trading partner, in the **NetSuite Vendor** field, select a vendor. The field lists all active NetSuite vendors for a subsidiary.
5. (Optional) To automatically generate a purchase requisition when buying from a specific trading partner, check the **Active** box. The settings at the trading partner level take precedence over company level settings.
6. In the **Default Account** field, select an account.
This account is set up to automatically record bill payments. The account types like Bank or Credit Card, listed in the field vary based on the subsidiary's settings.
7. Repeat Step 3 and Step 4 for each trading partner.

After mapping vendors, proceed to map item categories between NetSuite and your trading partners. For more information, see [Mapping Item Categories](#).

Mapping Item Categories

After mapping vendors, you must map item categories between NetSuite and your trading partners. You can perform the mapping on the **Item Category Mapping** subtab on the SuiteProcurement Preferences page.

To streamline procurement and financial tracking for non-inventory items, the SuiteProcurement SuiteApp uses the United Nations Standard Products and Services Code (UNSPSC) system to match item categories at the individual SKU level. This process connects the UNSPSC codes from the vendor catalog to the corresponding non-inventory item categories in NetSuite.

The UNSPSC L1 category, being the broadest, enables you to map high level expense categories with minimal configuration. For example, the L1 category 'Office Supplies and Equipment' can be mapped to Office Supplies item category (non-inventory item). If a UNSPSC category is not mapped, the Default SuiteProcurement Category will automatically be used to ensure that these items are still accounted for in the purchasing system. However, accurate mapping is vital for enabling businesses to analyze spending and create budgets, so you should map expense categories as necessary.

The following image illustrates item category mapping between NetSuite and trading partners.

Account Mapping		Item Category Mapping	
Trading Partner	Trading Partner Category	Category CSV Template	Upload Category CSV
☐ Trading Partner	NetSuite Vendor	Trading Partner Category	NetSuite Category
☐ Staples, Inc.	Tax Agency AL	Hard Drives & Data Storage	TestItem_ForResale
☐ Amazon Business-NetSuite	Amazon	Environmental Services	TestItem_ForResale
☐ Amazon Business-NetSuite	Amazon	Furniture and Furnishings	TestItem_ForPurchase
☐ Amazon Business-NetSuite	Amazon	Laboratory and Measuring and Observing and Testing Equipment	TestItem_ForPurchase

United Nations Standard Products and Services Code (UNSPSC)

The United Nations Standard Products and Services Code (UNSPSC) is a hierarchical convention that is used to classify products and services. It is an eight-digit numeric code that identifies products and services. For more information, see [UNSPSC FAQs](#).

Benefits of Coding Products and Services

Embedding UNSPSC classification standards into your product management systems — purchase requests, invoices, electronic documents, product catalogs, and websites — benefits all parties throughout the extended supply chain.

Procurement can track how much is spent buying what. This information is available to analyze the specifics in the buying process at the level of detail that most suits the business needs in a timely and precise manner.

It can significantly reduce the time it takes to search products by commodity code through brokers, online exchanges, business partners, or others, around the world. It allows organizations to spot buying patterns across departments or business units to leverage better conditions from suppliers and realize overall savings.

Finding a Code

You can find UNSPSC codes at [UNSPSC](#). You can retrieve the complete code list from participating vendors. For example, Amazon's UNSPSC code list can be downloaded from [UNSPSC codes for Amazon Business](#).

The SuiteApp includes **Default SuiteProcurement Category** to categorize items that do not have a predefined UNSPSC category. You must verify that an expense account associates with an item.

All subsidiaries in your account have access to this item list. To access the list, go to the **Trading Partner Category** column on the **Item Category Mapping** subtab on the SuiteProcurement Preferences page.

Creating NetSuite Item Categories for Item Category Mapping

The trading partner item categories are linked to non-inventory item categories in NetSuite. This setup enables you to associate specific expense accounts (GL accounts) with each item. On an item record, you can select the expense account on the **Accounting** subtab, which facilitates automated GL coding for each item purchased.

Note: You must set the purchase price to **zero** for non-inventory items used for SuiteProcurement purchases. This is required to display the rate and amount correctly on an order requisition.

The following image illustrates how to assign an expense account to a non-inventory item for purchase.

Display Name/Code

Classification

Primary Base Unit ☒ Include in NetSuite Category for SuiteProcurement Purchases

Purchasing Accounting Related Records Communication Preferences System Information Custom

Accounts

Price Variance Account Exchange Rate Variance Account

Quantity Variance Account Expense Account: Office Expense : Office Supplies

You can create as many non-inventory items as required to accommodate the level of detail needed when assigning categories to GL expenses accounts. Examples include the following:

- Office Supplies
- IT Supplies
- Janitorial Supplies
- MRO Supplies

To include any non-inventory item for SuiteProcurement purchases, check the following boxes on the item record.

- **Include in NetSuite Category for SuiteProcurement Purchases**
- **Can be Fulfilled/Received**
- **Generate Accruals**

When you check these boxes for an item, the **NetSuite Category** field lists the non-inventory item in the list.

To perform item category mapping:

1. Go to Setup > SuiteProcurement > Preferences.
2. In the Manage Trading Partners section, click the **Item Category** subtab.
3. In the **Trading Partner Category** field, select a category.
4. In the **NetSuite Category** field, select a category. If you leave this field blank, **Default SuiteProcurement Category** is selected by default.
5. Repeat Step 3 and Step 4 for each trading partner category and NetSuite category combination for each of the trading partners.
6. To save the mapping, click **Save**.

By default, the **Trading Partner Category** field lists the L1 categories, which are high level categories associated with a trading partner. UNSPSC L1 categories have been chosen because they provide the best balance between mapping maintenance and expense level detail. However, if you want to add

an additional trading partner category for a more granular level of mapping (expense) detail, use the Category CSV file upload functionality. For more information, see [Importing Item Categories through CSV](#).

Adding a Trading Partner Category

By default, the SuiteApp includes Level 1 UNSPSC Super categories. These L1 categories enable mapping a reasonable number of categories (current count is 55) to the list of created NetSuite categories (non-inventory items). However, there are thousands of potential UNSPSC codes that can be used. If you want to include a more granular level of detail, you can map additional trading partner categories by importing them through the Category CSV Template.

For example, following is the Level 1 category included for office equipment and accessories and supplies (Amazon Business) in the category list:

UNSPSC	Description	Level
44000000	Office Equipment and Accessories and Supplies	L1

There are an additional 220 Level 2 through Level 4 categories that you can use for office equipment and accessories and supplies (Amazon Business). The following table lists some of the categories.

UNSPSC	Description	Level
44101500	Duplicating machines	L3
44101501	Photocopiers	L4
44101503	Multifunction machines	L4
44101507	Inkjet Fax Machine	L4
44101508	Laser fax machine	L4
44101509	Thermal fax machine	L4
44101600	Paper processing machines and accessories	L3
44101601	Paper cutting machines or accessories	L4
44101602	Paper punching or binding machines	L4
44101603	Paper shredding machines or accessories	L4
44101608	Paper shredder bag	L4
44101905	Dry erase boards or accessories	L4
44111906	Chalk boards or accessories	L4
44111907	Bulletin boards or accessories	L4
44111908	Magnetic boards or accessories	L4
44111911	Interactive whiteboards or accessories	L4
44111912	Whiteboard eraser	L4
44112000	Planning systems	L3
44112001	Address books or refills	L4
44112002	Calendars	L4

UNSPSC	Description	Level
44112004	Meeting planners	L4
44112005	Appointment books or refills	L4
44112006	Diaries or refills	L4
44121614	Call bells	L4
44121615	Staplers	L4
44121617	Manual letter openers	L4
44121618	Scissors	L4
44121619	Manual pencil sharpener	L4
44121621	Desk pads or its accessories	L4
44121622	Moisteners	L4
44121625	Paper weights	L4
44121626	Adhesive remover	L4
44121627	Bookmarks	L4
44121628	Clip holders or dispensers	L4

In this example, the Level 1 Category 4400000 – Office Equipment and Accessories and Supplies will be used for all codes beginning with 44 below it. Therefore, the purchase of any item in any category beginning with 44 will use the Category Mapping configuration for the Level 1 Category, 4400000 – Office Equipment and Accessories and Supplies.

If you want to map any Level 2-4 UNSPSC category, (such as 44101501 – Photocopiers) to a different GL account than the Level 1 (4400000 – Office Equipment and Accessories and Supplies) is mapped to, you may upload a list of these codes with the Category CSV Template.

Importing Item Categories through CSV

To import item categories through a CSV file, follow these steps.

1. Download the Category CSV template. On the **Item Category Mapping** subtab, click the **Category CSV Template**.
2. Open the downloaded template, and review its content. Ensure the file contains the necessary details, including item categories and their corresponding codes or identifiers.
3. Upload the CSV file. On the **Item Category Mapping** subtab, click the **Category CSV Template** and select your file.
4. Save and confirm. After reviewing the accuracy of the mapping, click **Save** to complete the upload.

The SuiteApp will use the provided mappings for efficient data management.

When you map item categories, the system automatically updates the vendor details on the item record and the associated SuiteProcurement Category record.

To perform item category mapping:

1. Click the **Item Category Mapping** subtab and do the following.

- a. Download the Category CSV template.
 - b. Upload the category CSV.
 - c. After uploading the file, review the information in the **Trading Partner Category** and **NetSuite Category** fields.
 - d. Make the necessary changes.
2. Click **Save**.

The following table lists the columns included in the CSV template.

CSV Template Column	Value
Trading Partner OBN ID	Enter the OBN ID of the trading partner.
Trading Partner Category ID	Enter the UNSPSC for an item from the trading partner's website.
Trading Partner Category	Enter the trading partner category name/description from the list.
NetSuite Category	Enter the NetSuite Category. Ensure to create item categories in NetSuite before uploading the CSV. For information about creating NetSuite categories, see Creating NetSuite Item Categories for Item Category Mapping .

For more information about importing a CSV file, see the help topic [Importing CSV Files with the Import Assistant](#).

The following image illustrates the CSV template that you can use to perform item category mapping.

	A	B	C	D
1	Trading Partner OBN ID	Trading Partner Category ID	Trading Partner Category	NetSuite Category
2	OBN-100-1111	21	Keyboards & Mice	Computer Accessories

Setting Up SuiteProcurement Preferences at Vendor Level

The SuiteProcurement SuiteApp prioritizes item category mappings at the vendor level over the mappings set at the company level for that specific vendor. This ensures that vendor-specific category mappings take precedence.

To edit item category mapping on a vendor record:

1. Go to Lists > Relationships > Vendors.
2. Locate the vendor for whom you want to perform the mapping.
3. Click the **SuiteProcurement** subtab.
4. Click the **Item Category Mapping** subtab.
5. In the **Trading Partner Category** field, select a value.
6. In the **NetSuite Category** field, select a value.
7. Click **OK**.

To view the trading partners associated with a vendor, click the **Account Mapping** subtab.

 **Note:** You can't edit account mapping details on a vendor record.

Setting Approval Preferences for Purchase Requests

If you want send your requisitions or purchase requests for approval, use the following steps:

 **Note:** You must provision Advanced Procurement in your account to use the Requisition feature.

To set up approval preferences:

1. Go to the Setup> Accounting> Accounting Preferences.
2. Click the **Approval Routing** subtab and check the following boxes:
 - **Purchase Requests**
 - **Requisitions**
3. Click **Save**.

After saving the settings, any new purchase request or requisition will automatically have a **Pending Approval** status.

For more information about the approval routing settings, see the help topic [Approval Routing Accounting Preferences](#)

Working with SuiteProcurement

The SuiteProcurement SuiteApp is an indirect procurement solution designed to procure items online from trading partners. For more information about the SuiteApp, see [SuiteProcurement Overview](#).

Before using the SuiteApp, you must [Prerequisites for the SuiteProcurement SuiteApp](#), [Installing the SuiteProcurement SuiteApp](#), and [Setting Up SuiteProcurement Preferences](#).

To work with the SuiteProcurement SuiteApp, read the following topics:

- [Purchasing Items from Trading Partner Stores](#)
- [Reviewing and Saving SuiteProcurement Purchase Requests](#)
- [Receiving Documents from Trading Partners](#)
- [Receiving Items and Generating Item Receipts](#)

Purchasing Items from Trading Partner Stores

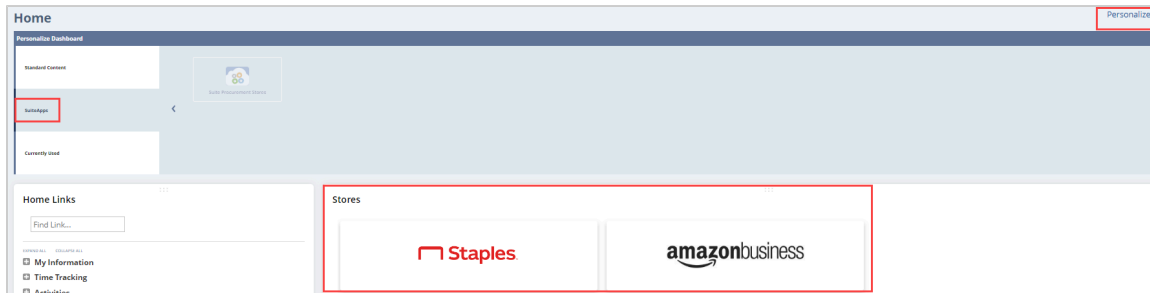

You can purchase items from trading partner stores using the employee center role only. Before you begin, add the SuiteProcurement stores to your dashboard.

To add the trading partner stores template to your dashboard:

1. Log in to NetSuite using the employee center role.
2. Click **Personalize**.
3. Click **SuiteApps**.

4. Click **SuiteProcurement Stores**.

The Stores portlet on your dashboard displays the trading partner stores that you added.

To purchase items from a trading partner store:

1. Log in to NetSuite using the employee center role.
2. In the Stores portlet, click the store you want to visit. The online store opens in a new tab.
3. Select and add items to cart.
4. During check out from the vendor store, you may be prompted to select a payment option. If option's available, select your preferred payment method.
Payment options may vary depending on the trading partner. For example, Amazon Business offers both corporate credit card and open credit terms, whereas Staples offers open credit terms.
5. Submit the order.

After submitting a purchase request, the SuiteProcurement SuiteApp automatically generates a purchase request or requisition based on your preference. To set this preference, see [Setting Up SuiteProcurement Preferences](#).

Reviewing and Saving SuiteProcurement Purchase Requests

After submitting your order on the trading partner portal, the SuiteApp automatically generates a requisition or purchase request based on your preferences. It then sends the request for approval or automatically approves it, depending on the approval routing settings.

If you want to configure the approval routing settings to keep requests in a **Pending Approval** state, see [Setting Approval Preferences for Purchase Requests](#).

Important: Currency conversion is not currently supported. The purchase request retains the requisition's currency.

Requisitions

If your requisition is approved and still in **Pending Order** status, you can convert the requisition into a purchase request.

Note: To use the Requisitions feature, ensure that Advanced Procurement is provisioned in your account.

If you want to add an item to an existing purchase requisition, see [Adding Items to an Existing SuiteProcurement Purchase Request or Requisition](#)

When working with a requisition, note the following points:

- **Partial/Bulk Orders**– These are permitted only if your vendor supports them.
- **Vendor consistency**– Ensure the vendor on the requisition matches the one in your shopping cart.
- **Pricing and contracts**– Purchase contracts don't apply to requisitions. Cart prices may override contract prices.

To convert a requisition with a single order:

1. Go to the requisition you want to convert.
2. To view a requisition, click **View**.
3. On the Requisitions page, click **Create Purchase Order**.
4. On the Order Requisitions page, select all the items.
5. Click **Submit**.

To convert requisitions with bulk orders, see the help topic [Ordering Requisitions in Bulk](#).

Purchase Requests

Ensure to review order details before saving your purchase request. If you want to add an item to an existing purchase request, see [Adding Items to an Existing SuiteProcurement Purchase Request or Requisition](#).

 **Note:** You should not customize the purchase order form and use the custom form included with the SuiteApp. Any customizations made will be ineffective, and you won't be able to use the form.

A SuiteProcurement purchase request contains the following information:

- **Items**– View the purchased items.
- **Expenses**– Review additional costs such as discounts and handling charges.
- **Billing**– Access vendor details such as address and email. By default, primary billing address is selected.
- **SuiteProcurement Transactions**– Provides transaction, shipping, and purchase order acknowledgment details.
 - **Shipping**– Displays shipping address (employee's primary address) and receiver name. You can edit shipping details.
- **SuiteProcurement Transaction**– When this box is checked, indicates generation of a purchase request by the SuiteProcurement SuiteApp.
- **Submitted to Trading Partner**– When this box is checked, confirms successful submission of your purchase request to the trading partner.

Adding Items to an Existing SuiteProcurement Purchase Request or Requisition

If a purchase request is pending approval and your trading partner supports these following actions, you can:

- Add new items.

- Modify item quantities.
- Copy the purchase request or requisition.

Note: If you are procuring items from Amazon, you shouldn't re-punchout or modify a purchase order.

You can't edit a purchase request that's already approved and sent to the trading partner for order fulfillment. For more information, see [Submitting Purchase Requests to Trading Partners](#).

To add items to a SuiteProcurement purchase request or requisition:

1. Go to the requisition or purchase request.
2. Click **Edit** or **View**.
3. Click the **Items** subtab.
4. Click **Go to Trading Partner Website**. This button is available only if purchase requests or requisitions are pending approval.
5. Select the items and add to cart.
6. Submit the order.

Submitting Purchase Requests to Trading Partners

The SuiteProcurement SuiteApp submits approved purchase requests to trading partners automatically. Upon successful submission, the **Submitted to Trading Partner** box is checked. The box is not editable.

If the submission fails, there are two ways to detect issues with the purchase request:

- The SuiteApp sends an email to the requestor and administrators, alerting them of the error.
- The **Submitted to Trading Partner** box remains clear, indicating an issue.

Common reasons for errors include incorrect or missing EIN, OBN credentials, or document setup on OBN.

Resubmitting Failed Purchase Requests

If you have the Administrator role, you can resend incorrect purchase requests using the **Resend Approved PO to Trading Partner** script. This script processes failed orders from the last seven days.

To review and resend failed purchase requests:

1. Log in to NetSuite using the Administrator role.
2. Go to Customization > Scripting > Scripts.
3. Locate the **Resend Approved PO to Trading Partner** script.
4. Click **Deployments**.
5. Click **Edit** next to any of the deployment record.
6. Click the **Parameters** subtab.
7. Perform the following step only if you want to resend a particular purchase request.
 - a. From the **Purchase Order for OBN Punchout** list, select the purchase request that you want to resend.
8. Click **Save and Perform**.

When a purchase request is submitted, the trading partner sends order confirmation details, shipment details, and bill. For more information, see [Receiving Documents from Trading Partners](#).

Receiving Items and Generating Item Receipts

If you've received all items in a purchase request, you can generate an item receipt.

The SuiteProcurement SuiteApp includes the **Generate Item Receipt** button on a SuiteProcurement purchase request. Users with the employee center role can use this button to generate an item receipt for the complete request.

When all items in a purchase request are received, the bill status is set to **Approved**.

If you haven't receive all items on a purchase request, only users with Administrator role or roles with the required permissions can receive items. To partially receive items, see the help topic [Partially Receiving a Purchase Order](#).

Receiving Documents from Trading Partners

After receiving a SuiteProcurement purchase request, trading partners send the following documents.

- **Shipping Details** – It contains shipping details to help you track your shipment. To find the shipping details, click the **SuiteProcurement Transactions** subtab on a SuiteProcurement purchase request.
- **PO Acknowledgment Details** – It contains order confirmation details like quantity acknowledged, quantity accepted, item order status, rate, expenses, and others. To find the order confirmation details, click the **SuiteProcurement Transactions** subtab on a SuiteProcurement purchase request.
- **Vendor Bill** – It contains payment details for the orders sent. To view bills click the **Related Records** subtab on a purchase request, or go to Transactions > Payables > Enter Bills > List.

You can also view the taxes associated with a bill, on the **Expenses and Items** subtab, click **Tax Detail**. The Tax Detail popup window displays taxes on items, shipping, and any special handling charges.

- **Vendor Returns or Credit Memo** –

You can start the return process through the Trading Partner website. When a trading partner initiates the return and sends credit memo data to NetSuite, a bill credit is created.

The SuiteProcurement SuiteApp automatically associates the bill credit to the bill, ensuring no payment is required for returned items in the following cases:

- If your PO contains a single bill.
- If your bill is approved or open.

For multiple bills, unapproved bills, or bills already paid, you need to manually associate the bill credit with the bill. You will receive an email to use the bill credit amount.

If the bill for a returned item is already paid, you can associate a vendor credit with a deposit. For more information, see the help topic [Associating a Vendor Credit With a Deposit](#).

If the bill for a returned item isn't paid, you can associate vendor credit with a bill. For more information, see the help topic [Applying a Vendor Credit](#).

The SuiteProcurement SuiteApp includes a **SP MR NSEB Process Inbound Document** scheduled script that runs every four hours to process inbound documents. If a document encounters an issue during processing, an email is sent to the requester and users with the Administrator role. Users with the Administrator role can also manually run the script to process any failed documents with pending statuses.

When a purchase request is received, you can acknowledge and generate an item receipt. For information, see [Receiving Items and Generating Item Receipts](#).

SuiteProcurement Saved Searches

The SuiteProcurement SuiteApp provides the following saved searches:

- **SuiteProcurement Purchase Transactions** – You can add this saved search as a portlet to your dashboard. This portlet lets you view all SuiteProcurement purchase requests that you've created.
- **SuiteProcurement Purchase Orders for Approval**– You can select this saved search to filter out SuiteProcurement purchase requests for approval. To select the saved search, go to the Approve Purchase Request page, and click the **View** field.
- **SuiteProcurement Requisitions for Approval** – You can select this saved search to filter out SuiteProcurement requisitions for approval. To select the saved search, go to the Approve Purchase Request page, and click the **View** field.

To add the SuiteProcurement Purchase Transactions portlet:

1. Log in to NetSuite using the employee center role.
2. Click **Personalize**.
3. Click **Standard Content**.
4. Click **Custom Search**.
5. Click **Set Up**.
6. In the **Search** field, select **SuiteProcurement Purchase Transactions**.
7. Click **Save**.

Uninstalling the SuiteProcurement SuiteApp

If you want to uninstall the SuiteProcurement SuiteApp, perform the following steps.

To uninstall the SuiteApp:

1. Go to Customization > SuiteCloud Development > Installed SuiteApp List.
2. Hover over the Actions menu next to the SuiteProcurement SuiteApp and click **Uninstall**. The uninstallation process begins.

Uninstallation of a SuiteApp might take a while. When it's done, the SuiteApp is removed from the Installed SuiteApps list.

SuiteProcurement Support for Non-curated Trading Partners

Note: The intended audience for this guide includes:

- Non-curated trading partners who want to connect with NetSuite customers.
- NetSuite customers who are willing to procure items from non-curated trading partners.

The SuiteProcurement SuiteApp enables efficient procurement between buyers and sellers through the Oracle Business Network (OBN). This summary outlines the key steps and requirements for both parties to successfully exchange documents and conduct transactions.

To procure items from non-curated trading partner, ensure that Advanced Procurement is provisioned in your NetSuite account.

This guide provides detailed instructions on the setup to be performed by a non-curated trading partner. For NetSuite buyers, detailed instructions on setup are provided in [Prerequisites for the SuiteProcurement SuiteApp](#).

After completing the setup, you can proceed to [Working with SuiteProcurement](#).

NetSuite Customers Workflow

1. **Registration and setup**– Ensure you have a NetSuite account and access to the OBN. You must also complete the prerequisites.
2. **Adding trading partners**– Request punch-out access from your trading partners and add them to your OBN account.
3. **Activating transactions**– Activate the transactions (documents) you want to exchange with trading partners.
4. **Installing the SuiteApp and Setting Up Preferences**– Install the SuiteProcurement SuiteApp and set up procurement preferences.
5. **Punching out**– Browse the trading partner's online catalog, select items for purchase, and add them to a purchase requisition.
6. **Submitting purchase requests**– Submit the purchase requisition for approval, and after approval, ensure the purchase request is sent to the trading partner.
7. **Receiving and verifying documents**– Receive documents (PO Acknowledgment, Ship Notice, Invoice) from the trading partner through the OBN and verify the details of the received documents.

For more information about the steps, see [Steps to Perform by NetSuite Customers \(Buyer\)](#).

Noncurated Trading Partner's Flow

1. **Registration and setup**– Register on the OBN if you haven't already, and define your company identifier.
2. **Setting up delivery methods**– Configure how you'll exchange documents with buyers.
3. **Activating transactions**– Activate the transactions (documents) you want to exchange with buyers.
4. **Configuring punchout catalogs**– Set up at least one catalog to enable buyers to punch out to your online catalog and select items for purchase.
5. **Approving punchout requests**– Approve punchout requests sent by NetSuite customers.
6. **Receiving and processing purchase requests**– Receive purchase requests from buyers, process them, and send the necessary documents (PO Acknowledgment, Ship Notice, Invoice) back to the buyer.
7. **Transmitting documents**– Transmit documents to the buyer through the OBN, using the agreed-upon document formats.

To perform the following steps, go to [SuiteProcurement Support for Non-curated Trading Partners](#).

Common Requirements

The following requirements are common to both NetSuite customers and non-curated trading partners.

- **cXML Documents**– You must use cXML documents for exchanging documents, following the specified formats and required fields.
- **Testing and Validation**– You must test your setup to ensure successful document exchange.

Steps to Perform by NetSuite Customers (Buyer)

To procure items from a non-curated trading partner, you must install the required SuiteApps, activate the required roles, and enable the required features. Here's a summary of the steps that you must perform. For detailed instructions on the setup requirements, see [Prerequisites for the SuiteProcurement SuiteApp](#).

After completing the prerequisites, you can proceed to [Installing the SuiteProcurement SuiteApp](#), [Setting Up SuiteProcurement Preferences](#), and [Working with SuiteProcurement](#)

Registration and Setup

You must ensure you have a NetSuite account and access to the OBN. You must also complete the prerequisites before you start using the SuiteProcurement SuiteApp for procurement.

To do so, see the following help topics:

- [Connecting NetSuite with Oracle Business Network](#)
- [Registering NetSuite Parent Company and Subsidiaries with Oracle Business Network](#)

Adding Trading Partners

Request punch-out access from your trading partners and add them to your OBN account. For more information, see [Adding Trading Partner Punch-outs](#).

Activating Transactions

Activate the transactions (documents) you want to exchange with trading partners. For more information, see [Activating Transactions for SuiteProcurement Purchases](#).

Installing the SuiteProcurement SuiteApp and setting up preferences

Install the SuiteProcurement SuiteApp and set up the preferences. For more information, see [Installing the SuiteProcurement SuiteApp](#) and [Setting Up SuiteProcurement Preferences](#).

Punching Out

Browse the trading partner's online catalog, select items for purchase, and add them to a purchase requisition. For more information, see [Purchasing Items from Trading Partner Stores](#).

Submitting Purchase Requests

Submit the purchase requisition for approval and ensure the purchase request is sent to the trading partner after approval.

For more information, see the following help topics:

- [Reviewing and Saving SuiteProcurement Purchase Requests](#)

■ Submitting Purchase Requests to Trading Partners

Receiving and Verifying Documents

Receive documents (PO Acknowledgment, Ship Notice, Invoice) from the trading partner through the OBN. For more information, see [Receiving Documents from Trading Partners](#).

Steps to Perform by Non-curated Trading Partners (Seller)

If you're a noncurated trading partner, complete the following steps.

Registration and Setup

The Oracle Business Network has a self registration process for trading partners to register their company and begin sending and receiving transactions. To perform business transactions with a NetSuite customer using the SuiteProcurement SuiteApp, you must be a registered trading partner on the OBN.

- If your company is already registered, and has an OBN account, then follow the next steps.
- If you don't have an account on OBN, register your company to create one. To register as a trading partner on OBN, follow the steps in Trading Partner User Guide available in [OBN](#).
- If you are not sure whether your company has an OBN account, contact your company administrator.

After registering your company with OBN, define the primary identifier.

Defining Your Primary Identifier

Each trading partner registered on OBN is required to select a unique identifier. The sending and receiving trading partners use this identifier for any transaction (such as business documents, punch-out). You (trading partners) can use multiple identifiers for your account, but you must designate one of them as the primary identifier.

Defining Identifier for your Company

1. Log in to your OBN account.
2. At the bottom of the page, click the **Messaging** tab.

Messaging

Identifiers

Delivery Methods

Transaction Setup

Self Testing

Transmit Document

Data Mapping

Add

Identifier	Description	Value	Primary Identifier	Action
DUNS	DUNS Number	042447644		
NetworkID	Network Identifier	1234345435		

3. Click **Add** to open the Add Identifier window.
4. In the **Identifier Type** field, select an identifier type.
5. Enter an identifier value.
6. Click **Add**.

To set an identifier as primary:

1. Click **Edit** next to the identifier that you want to set as primary.
2. Check the **Mark as Primary?** box.
3. Click **Update**.

Setting Up Delivery Methods

For each trading partner, OBN requires the details of the destination server; the trading partner uses the destination server to receive business transactions from OBN (or other services).

This destination server needs to be configured for trading partners accounts. A trading partner can provide a destination server address for each delivery method. This is used for transmission of different transaction types. Each delivery method allows for separate URL addresses to be used for the test and production modes supported on OBN.

To set up a delivery method:

1. Log in to your OBN account.
2. At the bottom of the page, click the **Messaging** tab.
3. At the top of the page, click the **Delivery Methods** tab.
4. Under **Receive from OBN** tab, click **Add**.
5. In the Add Business Document window, complete the following fields:
 - a. In the **Delivery Method Type** field, select a delivery method.
 - b. In the **Delivery Method Name** field, enter a name.
6. Configure the settings for both **Production** and **Test** modes.
7. Click **Add**.

Activating Transactions

The OBN lets you manage the document types to be exchanged between buyers and suppliers. You can choose the document types that you want to support, specify the delivery method for each type of document, and specify whether you will send or receive the document.

The SuiteProcurement SuiteApp supports the following transaction types:

- Advance Shipment Notice
- Invoice
- Purchase Order
- Purchase Order (PO) Acknowledgment

To activate the transactions:

1. Log in to your OBN account.
2. At the bottom of the page, click the **Messaging** tab.
3. At the top of the page, click the **Transaction Setup** tab.

4. Under the **Send: Setup documents you want to send from your ERP system through OBN to your customers** section, edit the following business documents:

- Advance Ship Notice
- Invoice
- Purchase Order Acknowledgement

Send: Setup documents you want to send from your ERP system through OBN to your customers				
Business Document	Status	Production Mode Document Format	Test Mode Document Format	Action
Advance Ship Notice	Active	cXML 1.2x	cXML 1.2x	 
Invoice	Active	cXML 1.2x	cXML 1.2x	 
Purchase Order Acknowledgment	Active	cXML 1.2x	cXML 1.2x	 

5. In the Add Business Document popup window, complete the following:
- In the **Status** field, select **Active**.
 - Under Document Format, in the **Production Mode** and **Test Mode** fields, select **cXML 1.2x**.
 - Click **Add**.
6. To transmit documents from your server to OBN, under the **Receive: Setup documents you want to receive in your ERP system through OBN from your customers** section, edit **Purchase Order**.

Receive: Setup documents you want to receive in your ERP system via OBN from your customers						
Business Document	Status	Production Mode Document Format	Production Mode Delivery Method	Test Mode Document Format	Test Mode Delivery Method	Action
Purchase Order	Active	cXML 1.2x	Email	cXML 1.2x	Email	 

7. In the Add Business Document popup window, complete the following:
- In the **Status** field, select **Active**.
8. Under Production mode, complete the following fields:
- In the **Document Format** field, select **cXML 1.2x**.
 - In the **Delivery Method Name** field, select a value.
9. Under Test Mode, complete the following fields:
- In the **Document Format** field, select **cXML 1.2x**.
 - In the **Delivery Method Name** field, select a value.
10. Click **Update**.

Configuring a Punchout Catalog

Punchout is the process using which a buyer can browse a trading partner's online catalog of goods or services, select them for purchase, and add them to a purchase requisition. After submission and approval of the purchase requisition, a purchase request is generated. The purchase request is then sent to the trading partner for the delivery of the goods and services.

You must set up at least one catalog to enable NetSuite customers to punch out to the online catalog and select items for purchase.

Approving Punch-out Request from NetSuite Customers (Buyer)

Before you can start exchanging documents and conducting transactions with your NetSuite customers, you must approve the punch-out request sent by them. When a NetSuite customer selects your company, you receive a notification request to review.

Trading partners that initiated the request appears with the status **Pending Acknowledgment** in the following locations on OBN. You can choose any of the locations to approve the request.

- On the **Partners** tab, in the Pending Requests table.
- On the **Punchout** tab, in the Pending Customer Requests table.

The request contains the company contact, email address, OBN ID, customer identifier, and others.

To accept the request:

1. Select the customer from the **Partners** or **Punch-out** tab.
2. Under the **Action** column, click the **Review** icon.
3. In the Review Punch-out Request window, do the following
 - a. In the **Assign Punch-out Catalog** field, select a punch-out catalog. This is the catalog that your NetSuite customers will access when procuring goods or services from you.
 - b. (Optional) In the **Note from Customer** field, enter a comment.
4. Click **Acknowledge**. This action leads to the following steps.

After you acknowledge a request from your buyer, the following actions takes place.

- The NetSuite customer is accepted as a trading partner but the punch-out connection is still pending.
- A notification is sent to your NetSuite customer informing them about the acknowledgment of the request.
- The request status changes to Pending Activation.
- The customer is added to the Your Trading Partners table on the Partner tab.

To activate the punch-out connection:

1. Click the **Punchout** tab.
2. Locate the NetSuite customer and under the **Action** column, click the **Review** icon.
3. In the Activate Punchout window, do the following:

- a. (Optional) In the **Note from Customer** field, enter a comment.
- b. In the **Assign Punchout Catalog** field, select a punchout catalog.
- c. In the **Identifier Type & Value** field, select the identifier received from the NetSuite customer.
- d. Click **Activate**. This action enables your NetSuite customers to access your catalog for procurement.

Note: The identifier type and value received from your NetSuite customer is the same in both the **Partners** and **Punchout** tab. If the value differs, ensure to update the identifier as per the identifier type and value received from your NetSuite customer.

Transmitting Documents

As a trading partner, you must use the following cXML formats for exchanging documents with your NetSuite customer. To download the cXML standard, see Cxml.org/.

For more information about each of the request types, see:

- [Punchout to Trading Partner Store \(Required\)](#)
- [Punchout back to NetSuite \(Required\)](#)
- [Purchase Order \(Required\)](#)
- [Purchase Order Acknowledgment \(Optional\)](#)
- [Invoice \(Required\)](#)
- [Credit Memo \(Required\)](#)
- [Shipment Notification \(Optional\)](#)

Document Formats

The following information specifies the required document formats and their respective fields to be exchanged between NetSuite customers and noncurated trading partners.

For each of the request types, ensure to follow the prescribed cXML document format and include the required fields when sending or receiving documents.

To download the cXML standard, see Cxml.org/.

Punchout to Trading Partner Store (Required)

The following is the required document format to send request from OBN to non-curated trading partners.

Request

The following table provides information about the required fields in the cXML document.

Attribute	Optional/Required	Notes
<ItemIn>	Required	This information is required for each of the item ordered.
<SupplierPartID>	Required	Refers to the Item ID. This information is included in the purchase request and sent back to the trading partner.
<SupplierPartAuxiliaryID>	Optional	Refers to the CART ID. This information is required only if the trading partner wants to include the cart ID in the purchase request.
<UnitPrice>	Required	Refers to money and currency.
<Description>	Required	—
<UnitOfMeasure>	Required	—
<Classification>	Required	This set up should be done in advance through the Item Categories in the preferences.
<ManufacturerPartID>	Optional	Refers to the ID of the seller in the marketplace. This information is required only if the trading partner want to include the ID in the purchase request.
<ManufacturerName>	Optional	Refers to the name of the seller in the marketplace. This information is required only if the trading partner want to include the ID in the purchase request.

Purchase Order (Required)

The following is the request format from OBN to trading partner. Based on the setup of delivery methods, it can be HTTP request, email (XML), or others.

```

The following table provides information about the required fields in the cXML document.

Attribute	Optional/Required	Notes
<ShipNoticeHeader shipmentID="" operation="new" noticeDate="" shipmentDate="" deliveryDate="" shipmentType=""/>	Required	Required attributes: - shipmentID - operation - noticeDate - shipmentDate

Attribute	Optional/Required	Notes
		deliveryDate
<CarrierIdentifier domain="companyName">	Required	—
<ShipmentIdentifier>	Required	—
<OrderReference orderID="" orderDate=""> <DocumentReference payloadID=""/> </OrderReference>	Required	—
<ShipNoticeItem quantity="" lineNumber="">	Required	Required attributes: - Quantity - Line Number

Testing and Validation

You are now ready to test the punch-out setup and send and receive some test orders. Here are some suggested test use cases using product and quantity variations:

Use Case 1: Verify if you (NetSuite customer) are able to sync noncurated trading partners on the SuiteProcurement Preferences page.

Following are the prerequisites before testing the use case.

1. Trigger punch-out request to trading partner by following the document.
2. Punch-out request is acknowledged and activated by trading partner.

Steps for Testing	Expected Result	Solution for testing failure
To test the use case: 1. Go to Setup > SuiteProcurement > Preferences. 2. Select the subsidiary for which OBN account is created and punch-out is requested. 3. Click Sync Trading Partners	You should be able to see non-curated vendors in the preference page.	Contact SuiteProcurement Support team if you can't see non-curated Trading Partner in the Preferences page.

Use Case 2: Verify if you (NetSuite customer) are able to punch out to noncurated trading partner's website

Following are the prerequisites before testing the use case.

1. Trigger punch-out request to trading partner by following the document.
2. Punch-out request is acknowledged and activated by trading partner.

Steps for Testing	Expected Result	Solution for testing failure
To test the use case:	You should be able to go to the Trading Partner's website.	Contact SuiteProcurement Support team if you can't punch out.

Steps for Testing	Expected Result	Solution for testing failure
1. Go to Setup > SuiteProcurement > Preferences. 2. Select the subsidiary for which OBN account is created and punchout is requested. 3. Click Sync Trading Partners 4. Perform mapping in the Account Mapping tab. 5. Click Save. 6. Switch to the Employee Center role. 7. Add the Stores portlet to your dashboard. 8. To shop from a trading partner, click the trading partner's logo on the Stores portlet.		

Use Case 3: Verify if you (NetSuite customer) are able to send approved PO details to trading partners.

Following are the prerequisites before testing the use case.

1. Trigger punch-out request to trading partner by following the document.
2. Punch-out request is acknowledged and activated by trading partner.
3. Activate the required transactions by following the document.

Steps for Testing	Expected Result	Solution for testing failure
To test the use case: 1. Go to Setup > SuiteProcurement > Preferences. 2. Perform account and item mapping on this page. 3. Switch to the Employee Center role. 4. From the Stores portlet on your dashboard, go to the trading partner's store. 5. Add items to cart. 6. Click Submit Order to go back to NetSuite. 7. Save the purchase request or requisition. If purchase requisition is created, convert the purchase requisition to purchase request after the requisition is approved. 8. Approve the purchase request.	In SuiteProcurement Transactions subtab, the Submitted To Trading Partner box should be checked. In buyer and trading partner OBN accounts, transaction status should be Success. To check the transaction status, buyers can log in to their OBN accounts and search for the documents under Sent to OBN. Trading partners can check the transaction status of the documents under Received from OBN.	If the testing fails, you can try the following solutions: ■ Check if the EIN number in the subsidiary record is correct. For existing users, EIN number is used as unique identifier but for new users, OBN Unique Identifier will be used. ■ Check if purchase request transaction is activated in your and trading partner's OBN accounts. ■ If mapping isn't successful even after transactions are activated, edit any transaction record in OBN's Messaging tab and click Update. To verify the mapping, go to the Partner tab and click the trading partner's name. Check whether the value of Routing Status column is configured for mapped Transactions. ■ If the issue still persists after following the preceding steps,

Steps for Testing	Expected Result	Solution for testing failure
		contact the SuiteProcurement Support team.

Use Case 4: Verify if you (NetSuite customer) are able to receive PO acknowledgment, ship notice, invoice, and credit memo documents

Following are the prerequisites before testing the use case.

1. Trigger punch-out request to trading partner by following the document.
2. Punch-out request is acknowledged and activated by trading partner.
3. Activate the required transactions by following the document.

Steps for Testing	Expected Result	Solution for testing failure
To test the use case: 1. Log in using the Employee Center role. 2. From the Stores portlet on your dashboard, go to the trading partner's store. 3. Add items to cart. 4. Click Submit Order to go back to NetSuite. 5. Save the purchase request or purchase requisition. If purchase requisition is created, convert the purchase requisition to purchase request after the requisition is approved. 6. Approve the purchase request. 7. Provide the required purchase request details to your trading partner requesting to send PO acknowledgment, ship notice, invoice, and credit memo documents.	After your trading partner processes the documents, you (buyer) should be able to receive the documents successfully. To check the transaction status, you can log in to your OBN account and search for the documents under Receive From OBN. The SP MR NSEB Process Inbound Document script processes the documents sent to NetSuite. After the documents are received, verify the details in the purchase request.	If the testing fails, you can try the following solutions: ■ Check if the Messaging Identifiers used to send the documents is the same in the Partner and Punchout tabs. ■ Check the corresponding transaction is activated in your and trading partner's OBN accounts. ■ Check if the delivery methods are configuration correctly. ■ If you receive an email about document processing failure from NetSuite, contact the SuiteProcurement Support team.
