2025.2

December 17, 2025

Copyright © 2005, 2025, Oracle and/or its affiliates.

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Except as expressly permitted in your license agreement or allowed by law, you may not use, copy, reproduce, translate, broadcast, modify, license, transmit, distribute, exhibit, perform, publish, or display any part, in any form, or by any means. Reverse engineering, disassembly, or decompilation of this software, unless required by law for interoperability, is prohibited.

The information contained herein is subject to change without notice and is not warranted to be error-free. If you find any errors, please report them to us in writing.

If this is software, software documentation, data (as defined in the Federal Acquisition Regulation), or related documentation that is delivered to the U.S. Government or anyone licensing it on behalf of the U.S. Government, then the following notice is applicable:

U.S. GOVERNMENT END USERS: Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs) and Oracle computer documentation or other Oracle data delivered to or accessed by U.S. Government end users are "commercial computer software," "commercial computer software documentation," or "limited rights data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, the use, reproduction, duplication, release, display, disclosure, modification, preparation of derivative works, and/or adaptation of i) Oracle programs (including any operating system, integrated software, any programs embedded, installed, or activated on delivered hardware, and modifications of such programs), ii) Oracle computer documentation and/or iii) other Oracle data, is subject to the rights and limitations specified in the license contained in the applicable contract. The terms governing the U.S. Government's use of Oracle cloud services are defined by the applicable contract for such services. No other rights are granted to the U.S. Government.

This software or hardware is developed for general use in a variety of information management applications. It is not developed or intended for use in any inherently dangerous applications, including applications that may create a risk of personal injury. If you use this software or hardware in dangerous applications, then you shall be responsible to take all appropriate fail-safe, backup, redundancy, and other measures to ensure its safe use. Oracle Corporation and its affiliates disclaim any liability for any damages caused by use of this software or hardware in dangerous applications.

Oracle®, Java, and MySQL are registered trademarks of Oracle and/or its affiliates. Other names may be trademarks of their respective owners.

Intel and Intel Inside are trademarks or registered trademarks of Intel Corporation. All SPARC trademarks are used under license and are trademarks or registered trademarks of SPARC International, Inc. AMD, Epyc, and the AMD logo are trademarks or registered trademarks of Advanced Micro Devices. UNIX is a registered trademark of The Open Group.

This software or hardware and documentation may provide access to or information about content, products, and services from third parties. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to third-party content, products, and services unless otherwise set forth in an applicable agreement between you and Oracle. Oracle Corporation and its affiliates will not be responsible for any loss, costs, or damages incurred due to your access to or use of third-party content, products, or services, except as set forth in an applicable agreement between you and Oracle.

If this document is in public or private pre-General Availability status:

This documentation is in pre-General Availability status and is intended for demonstration and preliminary use only. It may not be specific to the hardware on which you are using the software. Oracle Corporation and its affiliates are not responsible for and expressly disclaim all warranties of any kind with respect to this documentation and will not be responsible for any loss, costs, or damages incurred due to the use of this documentation.

If this document is in private pre-General Availability status:

The information contained in this document is for informational sharing purposes only and should be considered in your capacity as a customer advisory board member or pursuant to your pre-General Availability trial agreement only. It is not a commitment to deliver any material, code, or functionality, and should not be relied upon in making purchasing decisions. The development, release, timing, and pricing of any features or functionality described in this document may change and remains at the sole discretion of Oracle.

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle Master Agreement, Oracle License and Services Agreement, Oracle PartnerNetwork Agreement, Oracle distribution agreement, or other license agreement which has been executed by you and Oracle and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced, or distributed to anyone outside Oracle without prior written consent of Oracle. This document is not part of your license agreement nor can it be incorporated into any contractual agreement with Oracle or its subsidiaries or affiliates.

Documentation Accessibility

For information about Oracle's commitment to accessibility, visit the Oracle Accessibility Program website at <https://www.oracle.com/corporate/accessibility>.

Access to Oracle Support

Oracle customers that have purchased support have access to electronic support through My Oracle Support. For information, visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=info> or visit <http://www.oracle.com/pls/topic/lookup?ctx=acc&id=trs> if you are hearing impaired.

Sample Code

Oracle may provide sample code in SuiteAnswers, the Help Center, User Guides, or elsewhere through help links. All such sample code is provided "as is" and "as available", for use only with an authorized NetSuite Service account, and is made available as a SuiteCloud Technology subject to the SuiteCloud Terms of Service at www.netsuite.com/tos.

Oracle may modify or remove sample code at any time without notice.

No Excessive Use of the Service

As the Service is a multi-tenant service offering on shared databases, Customer may not use the Service in excess of limits or thresholds that Oracle considers commercially reasonable for the Service. If Oracle reasonably concludes that a Customer's use is excessive and/or will cause immediate or ongoing performance issues for one or more of Oracle's other customers, Oracle may slow down or throttle Customer's excess use until such time that Customer's use stays within reasonable limits. If Customer's particular usage pattern requires a higher limit or threshold, then the Customer should procure a subscription to the Service that accommodates a higher limit and/or threshold that more effectively aligns with the Customer's actual usage pattern.

Beta Features

This software and related documentation are provided under a license agreement containing restrictions on use and disclosure and are protected by intellectual property laws. Order Guides

Order guides are predefined lists of items that customers can order on a regular basis. Order guides enable you to add any or all of the predefined items in bulk to a sales order.

Using the Order Guides SuiteApp, you can create an order guide per customer or a template that you can assign to multiple customers. You can create an order guide for a group of customers, like pizza restaurants. You can then add the list of items, like flour and cheese, which the customers may order on a regular basis. For each customer, you can further customize the list by adding items from their recent orders. On sales orders, you can use one order guide at a time to add the items. However, you can edit the sales order to use another order guide.

You can add the following item types in order guides:

- Assembly items
- Lot numbered assembly items
- Serialized assembly items
- Inventory Items
- Lot numbered inventory items
- Serialized inventory items
- Non-inventory items for sale
- Non-inventory items for resale
- Kit/Package items

For details on item types, refer to the topic [Item Types](#).

Installing Order Guides

You need the Administrator role or SuiteBundler permission to install the SuiteApp. The following are the bundle details:

- Bundle name: Order Guides
- Bundle ID: 275880

For more information about installing a bundle, see the help topic [Installing a Bundle](#).

The Order Guides SuiteApp automatically updates with new features and enhancements.

Prerequisites

The Order Guides SuiteApp is developed and tested mainly for use with NetSuite OneWorld.

You need to enable certain features to use the Order Guides SuiteApp.

To enable features:

1. Go to Setup > Company > Enable Features.
2. Check the boxes next to all the features listed in the following table.

Subtab on Enable Features Page	Feature Name
Analytics	SuiteAnalytics Workbook

Subtab on Enable Features Page	Feature Name
Web Presence (To give access to Customer Center role)	- Customer Access - Online Ordering
SuiteCloud	- Custom Records - Client SuiteScript - Server SuiteScript

- Click **Save**.

Supported Browsers for Order Guides

The Order Guides SuiteApp works with these browsers and operating systems:

Browser	Platform
Google Chrome 71 or newer	- Windows 10 - Windows 8.x - Windows 7
Microsoft Edge (Anniversary Update and later)	Windows 10 (Anniversary Update)
Mozilla Firefox 60 or newer	- Windows 10 - Windows 8.x - Windows 7 - Windows Vista

Creating or Customizing Roles to Use Order Guides

As an administrator, you can create new roles or customize roles to use order guides. For more information, see the help topics [Assigning Roles to an Employee](#) and [Customizing or Creating NetSuite Roles](#).

Here are the minimum access levels you need for different record types to use order guides.

Record	Minimum Access Level
Lists > Documents and Files	View
Lists > Items	View
Lists > Subsidiaries	View
Custom Record > Brands	View
Custom Record > Customer Group Record	View
Custom Record > Order Guide	View
Custom Record > Order Guide Item	Edit
Custom Record > Items Group	View

Record	Minimum Access Level
Custom Record > Order Guide Template	View
Customer Record > Packs Size	View
Reports > SuiteAnalytics Workbook	Edit

To give access to the Customer Center Price Settings page, you must provide the following permissions to the role:

- Customer Record > Customer Center Price Settings – View access
- Customer Record > Customer Price Setting – View access

Note: You cannot update linked order guides from roles that have restrictions applied on Order Guide custom record.

Adding Center Tab and Center Category

To set up a custom role, add the Order Guide tab and Order Guide Templates menu. Here's how to customize: create a center tab, categories, and links using the following information:

- Center tab – Name the center tab **Order Guide**.
- Center category – In the **Content** subtab, add these category labels:
 - Order Guide Templates
 - Customer Center Price Settings
- Center category link – In the center categories add the following links:
 - Order Guide Templates center category – Add the link **Order Guide Template** and label the link as **Order Guide Templates**.
 - Customer Center Price Setting center category – Add the link **Customer Center Price Settings** and label the link as **Customer Center Price Settings**.

For more information, read the help topics [Creating Center Tabs](#) and [Creating Center Links](#).

Setting Up Order Guides

Before you start using Order Guides, set up record entries, item records, and saved searches to fit your business needs.

See the following topics:

- [Creating Order Guide Record Entries](#)
- [Setting Up Item Records for Order Guides](#)
- [Defining Item Saved Searches for Order Guides](#)

Creating Order Guide Record Entries

Order guides use fields on item and customer records that are added by the Order Guides feature. You can add entries to these fields:

- **Item Group** – An item group for order guides consists of items that customers order together. For example, you can create a group of items ordered by customers to create pizza. On item records, you can assign these groups to items.
- **Pack Size** – Pack sizes specify the quantity and unit of measure for the item in a pack.
- **Brand** – The brand of an item.

To create order guide record entries:

1. Go to Customization > Lists, Records, & Fields > Record Types.
2. On the Record Types page, click **New Record** in the row for one of these records:
 - Brands
 - Items Group
 - Packs Size

Check the topic overview for details on the customer and item fields.
3. On the record page, in the **Name** field, enter a name for the record.
This name appears as an entry in the list for the corresponding field on an item or customer record.
4. Click **Save**.
To view the list of entries for a record, click **List** at the upper right corner of the page.
For detailed instructions on creating and viewing entries, see the help topic [Using Custom Record Entries](#).

Setting Up Item Records for Order Guides

To add the items to an order guide, set these fields on the item record:

- **Base Price** – This is the default current price if no absolute price is set in the customer record.
For more information about absolute price, see the help topic [Absolute Pricing for Customers](#).
- **Display in Web Store** – This makes items available for customers to add to their own order guides.

To set up item records for order guides:

1. Create or edit an item record by doing one of the following:
 - To create an item record, go to Lists > Accounting > Items > New, and then select an item type.
 - To edit an item record, go to Lists > Accounting > Items, and then click **Edit** next to the item you want to update.
2. On the Item page, on the **Sales/Pricing** subtab, enter the base price for one or more currencies.
For more information, see the help topic [Setting Up Items for Multiple Price Levels](#).
3. On the **Web Store** subtab, check the **Display in Web Store** box.
For more information, see the help topic [Setting Up Items for the Web Site](#).
4. Click **Save**.

Defining Item Saved Searches for Order Guides

Create item saved searches to find specific items for your order guides. We provide some default item saved searches you can use as a starting point:

- **Invoiced Items Last Month** – Retrieves items from invoice and cash sale transactions created last month.
- **Invoiced Items Last Week** – Retrieves items from invoice and cash sale transactions created last week.

These saved searches only work for order guides created from a customer record, not from a template. To access these saved searches, go to Lists > Search > Saved Searches.

 **Note:** You can add only the first 1000 items from an item saved search to an order guide.

To define item saved searches for order guides:

1. Go to Lists > Search > Saved Searches > New.
2. On the New Saved Search list page, select **Item**.
3. On the Saved Item Search page, do the following:
 - a. In the **Search Title** field, enter a unique title for the saved search.
 - b. In the **ID** field, enter a unique identifier for the saved search.
 - c. Check the **Public** box.
4. On the **Criteria** subtab, set the filters that you want to apply when searching for the items. Refer to the sample settings in the saved search, Invoiced Items Last Month:

Filter	Description	Result
Date Created	Operator: after Selector: same day last month	Includes all transactions created after the same day of the previous month
Transaction fields Transaction Filter: Customer Sub of	Operator: any of Selector: none	Excludes all transactions that are not from parent customers
Transaction fields Transaction Filter: Type	Operator: any of Selector: invoice	Includes all invoice transactions only
Transaction fields Transaction Filter: Type	Operator: any of Selector: Cash sale	Includes all cash sales transactions

5. On the **Results** subtab, add the following columns: Name, Display Name, Description, Type, Base Price, Brand (Custom), and Order Guide Pack Size (Custom).
In order guides, items are retrieved along with these details and displayed in the item sublist.
If you want to add more settings to your saved search, see the help topic [Defining a Saved Search](#) for detailed instructions.
6. Click **Save**.

Setting Up Customer Center Price Preferences

Control how current prices appear in the Order Guide Entry popup for the Customer Center role.

To set up customer center price preferences:

1. Go to Order Guide > Customer Center Price Settings > Customer Center Price Settings.

2. On the Customer Center Price Settings List page, click **Edit**.
NetSuite displays the Customer Center Price Settings page.
3. In the Customer Price Setting sublist:
 - a. From the **Customer** list, select the customer
 - b. To show the current price for the customer, check the box in the **Display Price** column.
 - c. Click **Add**.
4. Click **Save**.

There's a **Display Price** box above the **Customer Price Setting** sublist. If you check this box, customers who don't have the display price checked in the sublist will show current price in the Customer Center role. When unchecked, current price does not appear for customers who don't have the display price checked in the sublist.

Creating Order Guides

Create an order guide from a customer record or make a template for multiple customers. Order guides made from a customer record are only for that customer. You can create an order guide template for each subsidiary. Use the template to create separate order guides for multiple customers in a subsidiary.

Best Practices for Creating Order Guides

Follow these best practices for order guides:

- Assign up to 50 customers at one time when creating order guide templates.
- Add up to 200 items to an order guide.

Creating an Order Guide from a Customer Record

You can create an order guide from a customer record.

To create an order guide from a customer record:

1. Go to Lists > Relationships > Customers.
2. From the list of customers, click **View** for the customer you want to assign to the order guide.
3. On the Customer page, click **Create Order Guide**.
4. On the Order Guide page, in the **Order Guide Name** field, enter a unique name for the order guide.
5. From the **Subsidiary** list, select the subsidiary that you want to associate with this order guide.
6. (Optional) To mark this as a preferred order guide, check the **Preferred** box.

 **Note:** On a transaction, items of a preferred order guide are preloaded when you open the Order Guide Entry popup window. For more information, see [Using Order Guides on Transactions](#).

7. (Optional), To mark this as a historical order guide for the customer, check the **Historical** box.
8. Add items to the order guide by doing either or both of the following:

- From the **Add Items from Saved Search** list, select an item saved search to retrieve multiple items.

If you select another item saved search, the retrieved items are added to the list.

The order guide is saved and opened in edit mode and the items display in the sublist.

If any items do not match the items filtering criteria, those items are not included. You can view the list of excluded items by clicking the link in the banner message.

Note: If using expressions in the saved search, enclose the entire expression in parentheses to prevent incorrect saved search results.

- On the **Items** subtab, in the **Item Code** field, select the item from the list, and then click **Add**.

Note: You can add duplicate items to the order guide. However, in the Order Guide Entry popup window of the sales order, the list is filtered to show only unique items.

9. (Optional) To set a default item quantity for the customer, enter a value in the **Quantity** field.
10. Click **Save**.

On a customer record, you can view the list of order guides on the **Order Guides** subtab.

Creating an Order Guide Template

Create an order guide template for multiple customers.

To create an order guide template:

1. Go to Order Guide > Order Guide Templates > Order Guide Templates > New.
2. On the Order Guide Template page, in the **Order Guide Template Name** field, enter a unique name for the order guide template.
3. From the **Subsidiary** list, select the subsidiary to associate with this order guide template.
4. To add items to the order guide, do either or both of the following:
 - From the **Add Items from Saved Search** list, select an item saved search to retrieve multiple items.

If you select another item saved search, the retrieved items are added to the list.

The order guide is saved and opened for editing, and the items appear in the sublist.

Items that don't match the filter criteria are excluded from the order guide. Click the link in the banner to see the excluded items.

Note: When using expressions in saved searches, enclose them in parentheses. Otherwise, you may get incorrect saved search results.

- On the **Items** subtab, in the **Item Code** field, select the item from the list, and then click **Add**.

To review the conditions for items that you can add to order guides, see [Order Guides](#).

Note: You can add duplicate items to the order guide template. In the Order Guide Entry popup window of the sales order, the list only shows unique items.

5. (Optional) To set a default item quantity for the customer, enter a value in the **Quantity** field.
6. Click **Save**.

Creating Order Guides from an Order Guide Template

After creating an order guide template, create order guides from the template and assign them to multiple customers in a subsidiary.

Each customer gets their own order guide when you assign a template to multiple customers. The order guide's internal ID is added to the name of each customer's order guide. Find the generated order guide on the customer's record, under the **Order Guide** subtab.

These order guides are linked to the order guide template by default. Changes to the template can be applied to the linked order guides. For information about updating order guides, see [Updating Order Guides](#).

To create order guides from an order guide template:

1. Go to Order Guide > Order Guide Templates > Order Guide Templates.
2. Next to the template you want to use, click **View**.
3. Click **Create Order Guides**.
4. In the Create Order Guides from Template window, select the saved search from the **List Customers from Saved Search** list.

If you select another customer saved search, the new customers are added to the list.

Tip: To change the customer selection, press **Shift** or **Ctrl** and update the list.

5. Click **OK** to continue.

A banner in the Order Guides Template page displays the status of the order guide creation. Click the **Refresh** button in the banner to update the completion status. When the order guides creation is done, you see a confirmation message in the banner. If some items don't match the items filtering criteria, those items are excluded from the order guides. You can view the list of excluded items by clicking the link in the banner message.

Note: If you try creating another order guide for a customer from the same order guide template, the SuiteApp creates a duplicate order guide. However, if you want to update an existing order guide created from an order guide template, you must update the linked order guides. For more information, read [Updating Linked Order Guides](#).

Creating Order Guides and Order Guide Templates Using CSV Import

Use the standard CSV Import feature to create order guides and templates. Keep the following in mind when using CSV import:

- Be sure to check the **Run Server SuiteScript and Trigger Workflows** box.
- When creating order guides:
 - Leave the **Order Guide Template** field blank.
 - The **Item Saved Search** field isn't available.
- The **Item Saved Search** field also isn't available for creating order guide templates.

Updating Order Guides

Update order guides made from customer records. You can also update templates and apply those changes to linked order guides.

Updating Order Guides Created from a Customer Record

You can update an order guide created from a customer record. On the Order Guide subtab of a customer record, click **Edit** next to the order guide. You can do the following:

- Rename the order guide
- Add or remove items from the order guide
- Update the status (Inactive, Preferred, or Historical)

Edit or delete items as needed. Changes won't affect past transactions that used this order guide.

For linked order guides, you can only update the **Preferred** status.

Updating Order Guide Templates

On the Order Guide Templates List page, click **Edit** next to the template you want to update. You can do the following:

- Rename the template
- Add or remove items from the template
- Update item quantities

Updating Linked Order Guides

Apply template changes to linked order guides.

To update linked order guides:

1. Go to Order Guide > Order Guide Templates > Order Guide Templates.
2. Next to the order guide template, click **View**.
3. Click **Update Order Guides**.
You'll see the **Update Order Guides** button if you have linked order guides.
4. Click **OK** to continue.

A banner shows the update status. Click **Refresh** to update the status. You'll see a confirmation message when the update is done. Items that don't match the filter criteria are excluded from the order guides. Click the link to see the excluded items.

Unlinking Order Guides

Unlink an order guide if you don't want it to be updated with changes in the order guide template. There are two ways that you can unlink an order guide:

- On the Order Guide page, click **Unlink From Template**.

- On the Order Guide Template page, on the **Linked Order Guides** subtab, click **Unlink** next to the order guide name.

Note: When unlinked, the order guide can't be linked again and works like a order guide works like an order guide created from a customer record. Alternatively, create a new order guide from the same template and assign it to the same customer.

Updating Order Guide Templates and Order Guides Using CSV Import

When updating order guides with CSV import, on the Scan & Upload CSV page, select the following:

- From the **Import Type** list, select **Custom Records**
- From the **Record Type** list, select **Order Guide**.

When updating order guide templates using CSV import, on the Scan & Upload CSV page, select the following:

- From the **Import Type** list, select **Custom Records**
- For template settings, from the **Record Type** list, select **Order Guide Template**.
- For template items, from the **Record Type** list, select **Order Guide Item**.

When adding items to an existing template, on the Import Options page, select **Add**.

Note: Order guides can have the same name for different customers or subsidiaries. When updating order guides with CSV import, be sure to include the correct order guide name, customer, and subsidiary in the CSV file. When creating a template, include the correct template name and subsidiary.

Deleting Order Guides

To delete an order guide, click **Delete** while in edit mode. After an order guide is deleted, it's gone for good. If you delete a template, its linked order guides are unlinked and work like regular order guides created from customer records.

Items Filtering Criteria

Items must meet certain criteria to be added to order guides. This section lists the criteria for adding items to order guides.

In the Order Guide Template page, items must meet these criteria:

- Items must be a supported type
- Items must be applicable to the selected subsidiary
- Items must have the **Display in Web Store** box checked
- Items must be active

When creating an order guide for a customer from the Create Order Guide page, items must meet these criteria:

- Items are of a type supported by order guides
- Items applicable to the selected subsidiary of the customer
- Items that have the **Display in Web Store** box checked
- Items must have a base price or absolute price defined in the customer's default currency
- Items that are not inactive

When creating an order guide from the Order Guide Template page, items must meet these criteria:

- Items are of a type supported by order guides
- Items applicable to the selected subsidiary of the customer
- Items that have the **Display in Web Store** box checked
- Items that have a base price or absolute price defined in the default currency of the customer
- Items that are not inactive

In the Order Guide Entry popup, items must meet these criteria:

- Items must be applicable to the customer's subsidiary
- Items must have a quantity greater than zero
- Items that are not inactive

Note: Don't remove an item's base price after adding it to an order guide. Otherwise, you won't be able to add the item to the sales order.

The current price won't be shown in these cases:

- If the item price isn't defined in customer's price level currency
- If you change the default currency in the **Currency** field of the sales order's **Accounting** subtab

Working with Historical Order Guides

A historical order guide keeps track of the items a customer has ordered before. This list is useful when creating a sales order, as you can reference the customer's past orders.

Guidelines for Historical Order Guides

Here are some guidelines for working with historical order guides:

- You can only mark order guides that aren't linked to templates as historical.
- You can only have one historical order guide per customer subsidiary at a time.
- An order guide can be both historical and preferred.
- Inactivating a historical order guide means it won't store the customer's ordered items.
- You can create a historical order guide even if it's empty.

Marking an Order Guide as Historical

Check the **Historical** box on the Order Guide page to mark it as historical.

To mark an order guide as historical:

1. On a customer record, go to the **Order Guide** subtab.
2. Next to the order guide you want to mark as historical, click **Edit**.
3. Check the **Historical** box.
4. Click **Save**.

 **Note:** If another order guide is already marked as historical, this one will replace it.

Adding Items to a Historical Order Guide

A script automatically adds the customer's ordered items to the historical order guide using a map/reduce script. The script is called Historic Order Guide MR. The script updates the historical order guide based on:

- New sales orders created after the last script run
- Items not already in the historical order guide

The script runs daily by default. On its first run, the script only includes sales orders created after the SuiteApp was installed. For information about scheduling the script, see the help topic [Scheduling a Map/Reduce Script Submission](#).

You can also add items to a historical order guide manually.

Using Order Guides on Transactions

You can only use one order guide when adding items to a sales order. But you can switch to a different order guide when editing the sales order. You can set the quantity and price of items before adding them to the transaction.

To use order guides on transactions:

1. Create or edit a sales order by doing one of the following:
 - To create a sales order, go to Transactions > Sales > Enter Sales Orders.
 - To edit a sales order, go to Transactions > Sales > Enter Sales Orders > List, and then click **Edit** next to the transaction you want to update.
2. On the sales order page, from the **Customer** list, select the customer.
3. From the **Subsidiary** field, select the subsidiary.
4. Click **Order Guide**.
5. In the Order Guide Entry popup, select the order guide you want to use.

 **Note:** If the customer has a preferred order guide for the subsidiary, NetSuite automatically adds those items. For more information about preferred order guides, see [Creating Order Guides](#).

You'll see a list of unique items from the order guide.

6. In the **Quantity** column, enter the quantity.

✓ **Tip:** You can use keyboard shortcuts to move between and edit the order guide fields. See [Keyboard Shortcuts for Order Guides](#).

7. Press **Enter** to move to the next row and then enter a new quantity.
Repeat this process for each item you want to add.
8. (Optional) You can also add more details for each item:
 - In the **Current Price** column, enter the item price.
The transaction calculates item amounts based on price and quantity.
 - In the **UOM** column, select the unit of measure.
9. After updating the items, click **Save**.

✓ **Tip:** You can click **Save** right after entering a quantity. The quantity is saved automatically, no need to press any other keys.

The sales order is now saved.

For detailed instructions on creating sales order transactions, see the help topic [Creating Sales Orders](#).

Keyboard Shortcuts for Order Guides

Here are the keyboard shortcuts for editing order guide items:

Keyboard Shortcut	What it does
Tab	Moves to the next field or button.
Shift + Enter	Saves the quantity and selects the previous row.
Enter	Saves the quantity and selects the next row.
